APPLICATION NOTE

Configuring a Device via the SMBus

AN2030 Rev 1.00 Apr 1, 2016

Abstract

This application note provides a methodology for loading the configuration file into an Intersil Digital-DC™ device via the SMBus for commercial device programmers capable of supporting the I²C bus protocol.

Configuring the Intersil Controller via the SMBus

The configuration parameters can be stored in an Intersil Digital-DC device using PMBus protocol via the SDA and SCL pins. SDA and SCL are a standard $\rm I^2C$ interface.

TABLE 1. SMBus SIGNALS

PIN SYMBOL	1/0	DESCRIPTION
SCL	I/O	SMBus clock pin
SDA	I/O	SMBus data pin

The procedure for configuring a device is described on the following page.

Intersil provides a parser program called ZLHLD, which takes the device configuration file as an input. The output file is in ZLHLD format (Zilker Labs Hex Line Delimited). Figure 3 shows an example of an output file in ZLHLD format.

The pin assignments and configuration circuits for the Intersil Digital-DC devices are shown in Appendix III. All other pins must be connected to ground through a $22k\Omega$ resistor. For any device, wait 20ms prior to the start of device programming.

When configuring a device, all standard SMBus protocols must be followed, including clock stretching. Additionally, a 2ms delay between every SMBus transmission (between every stop and start condition) must occur. Refer to the System Management Bus (SMBus) Specification, from SBS Implementers Forum for SMBus electrical and timing requirements

Configuring Intersil Devices

Below is a sequence of steps following from design to production:

- A configuration file is generated by the design engineer (example - Figure 2).
- A parser (ZLHLD Generator) supplied by Intersil will convert this configuration file into a Zilker Labs Hex Line Delimited. This parser will calculate and append a Packet Error Checking (PEC) byte for all write transactions. A checksum of the ZLHLD file is also generated in a separate file for verification by the programmer.
- An Intersil supplied low volume programmer or an industry standard high volume memory programmer, such as from BP Microsystems, may be used for configuring the devices.
- 4. The programmers will do the following:
 - a. Verify the Device ID:
 - All Intersil devices have a unique identifier, which is loaded into the nonvolatile memory at final test. The device ID should always be checked prior to start of configuring by the following method:
 - Read DEVICE_ID (0xE4), a 16-byte identifier. The bytes written before reading are "40E441", with a repeated start performed before byte 0x41 is issued.
 - Compare the first 7 bytes of the response to the Device ID under test. These first 7 bytes should be something such as "ZL2005-", "ZL2105-", "ZL2006-", etc.

- b. Insert a 6 byte serial number into the configuration file. The placement of this command is device dependent, as shown in "Appendix I" on page 6. Upon generating the serial number, calculate the PEC (Note 1) and append it after the serial number. See "Appendix II" on page 7 for example code on calculating the PEC. Note that for BPMicro systems, the Zilker Labs External Serialization Program (ZL_ESP) is used to write the serial number in ASCII at the correct locations.
- c. Load ZLHLD File (Note 2) Example in Figure 3 on page 5 via I²C Bus, using SMBus protocol.
 - Verification that the data was written to the device is done by checking the CML bit (Bit [1]) of the STATUS_WORD register as well as checking the contents of STATUS_CML register to be equal to 0x00.
 - ii. After the entire config file is loaded, read STATUS_WORD (0x79), Bit [1].
 - 1. If this bit is set (1), the data transfer failed and the device needs to be rejected.
 - 2. If this bit is clear (0), we will do a second test to verify the data communication and flash write, as shown in Step 3.
 - 3. Read the STATUS_CML (0x7E) register.
 - If the single-byte data of STATUS_CML does NOT equal 0x00, the data transfer failed and the device needs to be rejected
 - 5. If the single-byte data of STATUS_CML equals 0x00, the data transfer has succeeded.

NOTES:

- When loading the configuration file, always insert a 50ms wait prior to or after the 000440F10087 string.
- On DDC-enabled devices such as the ZL2004, ZL2006, and ZL2106, an EVENT command is inserted at the beginning of the file to put the device into a manufacturing mode. This addition is performed automatically by the ZLHLD generator when the appropriate device is selected.

FIGURE 3. EXAMPLE ZL2005 HEX FORMAT CONFIGURATION FILE

000440F10087

Appendix I

TABLE 2. LINE LOCATIONS OF SERIAL NUMBER, BY DEVICE TYPE

PRODUCT	CONFIG FILE LINE LOCATION (Note 4)	ZLHLD FILE SERIAL DATA BYTE LOCATION (Note 3)	COMMENTS
ZL2005	5	0x31	
ZL2005-02		0x31	
ZL2005P		0x31	
ZL2105	_	0x31	
ZL2004		0x37	ZLHLD Byte location accounts for EVENT command insertion.
ZL2004-01		0x37	ZLHLD Byte location accounts for EVENT command insertion.
ZL2006		0x37	ZLHLD Byte location accounts for EVENT command insertion.
ZL2106		0x37	ZLHLD Byte location accounts for EVENT command insertion.

NOTES:

- 3. The above ZLHLD serial data byte locations are calculated with the inclusion of device address, 2-byte length preamble, CRC-command delay after STORE/RESTORE commands, and PEC bytes.
- 4. Configuration file line location does not account for the EVENT command, as it is automatically inserted by the ZLHLD Generator. Accounting for this will increase the configuration file line location by one line.

Appendix II

```
/* PEC.c
* Implements a CRC-8 checksum using the direct method.
/* public global values */
extern unsigned char PEC_CurrentCRC; //CRC calculation of all bytes called //through CRC_Process_Byte since last call to CRC_Reset
#define CRCPoly 0x8380 //polynomial of x^8 + x^2 + x^1 + 1 in most significant 9 bits
#define CRCDone 0x0083 //CRC is done after polynomial shifts one byte
/* function prototypes */

Revision History

DATE	REVISION #	DESCRIPTION			
September 2007	0.5	Initial Release			
October 28, 2007	0.6	Added ZL2005 and ZL2105 pin assignment diagrams Added ZL2105 configuration circuit			
October 31, 2007	0.75	Added updated ZLHDC support for passwords and final Hex file format			
November 27, 2007	0.8	Updated Figure 2 and Figure 4 pin configuration Added PEC to description on Page 3			
December 6, 2007	0.85	Added configuration flowchart Added example code for calculating PEC			
March 6, 2008	0.95	Modified Configuration Example Circuits to avoid factory VIN fault limits from causing SALRT to prematurely drop			
April 1, 2008	0.96	Added ZL2006, ZL2004 schematics			
April 30, 2008	0.97	Changed verification from SALRT to READ STATUS WORD			
May 30, 2008	0.98	Updated to include additional STATUS_CML read, change to serial data byte locations			
June 16, 2008	1.0	Added ZL2106 device			
May 1, 2009	AN2030.0	Assigned file number AN2030 to app note as this will be the first release with an Intersil file number. Replaced header and footer with Intersil header and footer. Updated disclaimer information to read "Intersil and it's subsidiaries including Zilker Labs, Inc." No changes to application content.			
April 1, 2016	AN2030.1	Applied Intersil's current standards throughout the document. On page 2, updated 750µs delay to 2ms delay in fifth paragraph.			

Notice

- 1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system, Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information
- 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application
- 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
- Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc. Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or

- 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified
- 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
- e contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or
- 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
- 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
