

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

Manual for Using Sample Program Functions Timer ENC (V850E/IA3, V850E/IA4)

This manual explains the sample program functions of the 16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC) for the V850E/IA4 microcontroller.

The explanations are based on usage with the V850E/IA4 microcontroller. Refer to this manual when using the V850E/IA3 microcontroller.

Caution

This sample program is provided for reference purposes only and operations are therefore not subject to guarantee by NEC Electronics Corporation. When using this sample program, customers are kindly advised to sufficiently evaluate this product based on their system before usage.

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ POWER ON/OFF SEQUENCE

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ INPUT OF SIGNAL DURING POWER OFF STATE

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

These commodities, technology or software, must be exported in accordance with the export administration regulations of the exporting country. Diversion contrary to the law of that country is prohibited.

• **The information in this document is current as of July, 2006. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).

INTRODUCTION

- Cautions**
1. Download the program used in this manual from the NEC Electronics Website (<http://www.necel.com/>).
 2. When using this sample program, reference the following startup file and link directive file and adjust them if as necessary.
 - Startup file: IA4_start.s
 - Link directive file: IA4_link.dir

Note The function lists are structured as follows.

Hardware name (symbol)

[Function]	Function description
[Function name]	Name of sample function
[Argument(s)]	Type and overview of argument
[Processing content]	Processing content of sample function
[Starting method]	Conditions for calling a function
[SFR(s) used]	Register name and setting content
[call function(s)]	Name and function of call function(s)
[Variable(s)]	Type, name, and overview of variable(s) used in sample function
[Interrupt(s)]	Name of function
[Interrupt source(s)]	Name
[File name]	Name of corresponding sample program file
[Caution(s)]	Caution(s) upon function usage

Interrupt function(s)

[Function name]	Name of interrupt function
[Overview]	Processing content
[Factor(s)]	Name of interrupt and conditions for occurrence
[call function(s)]	None
[Variable(s)]	Name of variable, function
[File name]	Name of corresponding sample program file
[Caution(s)]	None

Product Differences The differences between the V850E/IA4 and the V850E/IA3 related to the 16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC)

Item	V850E/IA4	V850E/IA3
No. of channels	2	1

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n) (n = 0, 1)

General-purpose timer mode: Interval operation

[Functions]	Performs count operation based on the clock selected by software, and generates an interrupt request signal (INTCM00) upon match detection between the values of the counter (TMENC10) and the compare register (CM100). Clears TMENC10 upon the count clock subsequent to the matched count clock.	
[Function name]	timerenc_gen_interval	
[Argument]	None	
[Processing content]	Performs count operation of an fxx/32 count clock, and generates an interrupt when the value of TMENC10 reaches 249 (1 ms).	
[Starting method]	Starts by calling the timerenc_gen_interval_st function.	
[SFRs used]	TUM10	Specifies the operation mode of TMENC10.
	TMC10	Controls the clear operation of TMENC10.
	PRM10	Selects the count clock.
	CM100	Compare register
[call function]	main main function	
[Variable]	None	
[Interrupt]	timerenc_CM00_int	
[Interrupt source]	INTCM00	
[File name]	timerenc_gen_interval\timerenc_gen_0.c, timerenc_gen_interval\MAIN.C	
[Caution]	None	

The interval cycle can be calculated by the following formula.

$$\text{Interval cycle} = (\text{value of CM100 register} + 1) \times \text{Count clock rate of TMENC10}$$

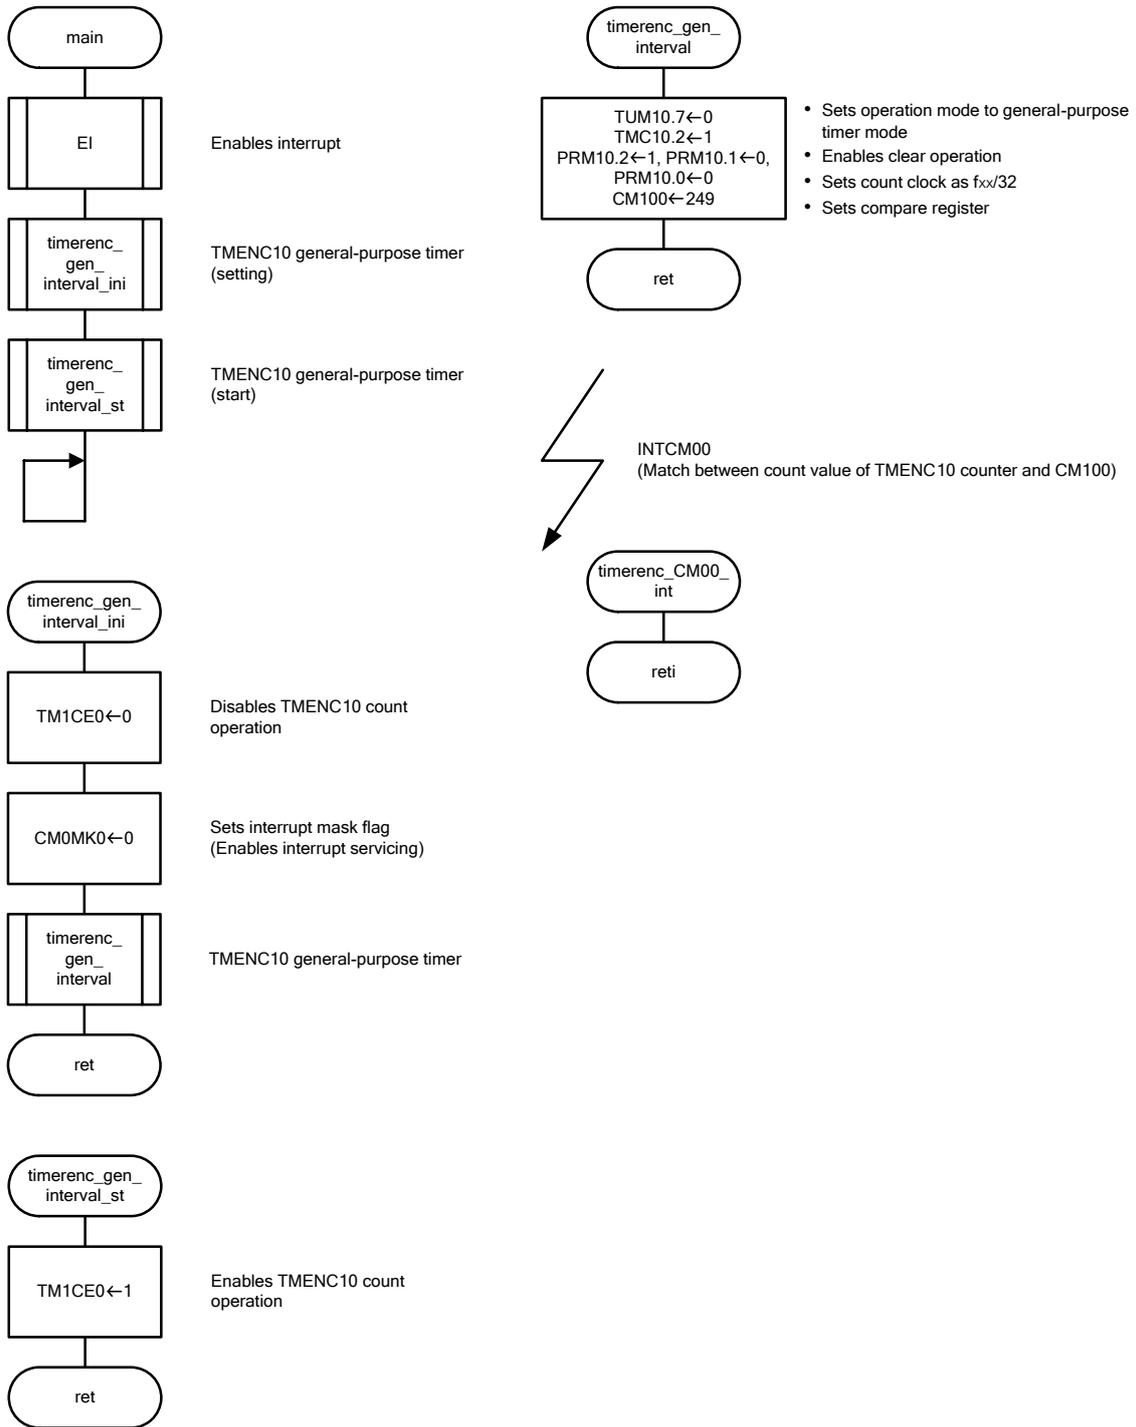

[Function name]	timerenc_gen_interval_st
[Argument]	None
[Processing content]	Starting function of timerenc_gen_interval
[Starting method]	Call this function after calling the timerenc_gen_interval function.
[SFR used]	TMC10.TM1CE0 Controls TMENC10 operation.
[call function]	None
[Variable]	None
[File name]	timerenc_gen_interval\timerenc_gen_0.c
[Caution]	None

Interrupt function

[Function name]	timerenc_CM00_int
[Overview]	Defined by the user.
[Factor]	INTCM00 Match between the values of the TMENC10 counter and CM100
[call function]	None
[Variable]	None
[File name]	timerenc_gen_interval\timerenc_gen_0.c
[Caution]	None

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n)

General-purpose timer mode: Interval operation

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n) (n = 0, 1)

General-purpose timer mode: Free-running operation

[Function]	Performs count operation based on the clock selected by software, and generates an interrupt request signal (INTCM00) upon match detection between the values of the counter (TMENC10) and the compare register (CM100).	
[Function name]	timerenc_gen_freerun	
[Argument]	None	
[Processing content]	Performs count operation of an fxx/32 count clock, and generates an interrupt when the value of TMENC10 reaches 0x8000.	
[Starting method]	Starts by calling the timerenc_gen_freerun_st function.	
[SFRs used]	TUM10	Specifies the operation mode of TMENC10.
	TMC10	Controls the clear operation of TMENC10.
	PRM10	Selects the count clock.
	CM100	Compare register
[call function]	main	main function
[Variable]	None	
[Interrupt]	timerenc_CM00_int	
[Interrupt source]	INTCM00	
[File name]	timerenc_gen_freerun\timerenc_gen_1.c, timerenc_gen_freerun\MAIN.C	
[Caution]	None	

The free-running cycle can be calculated by the following formula.

$$\text{Free-running cycle} = 65,536 \times \text{Count clock rate of TMENC10}$$

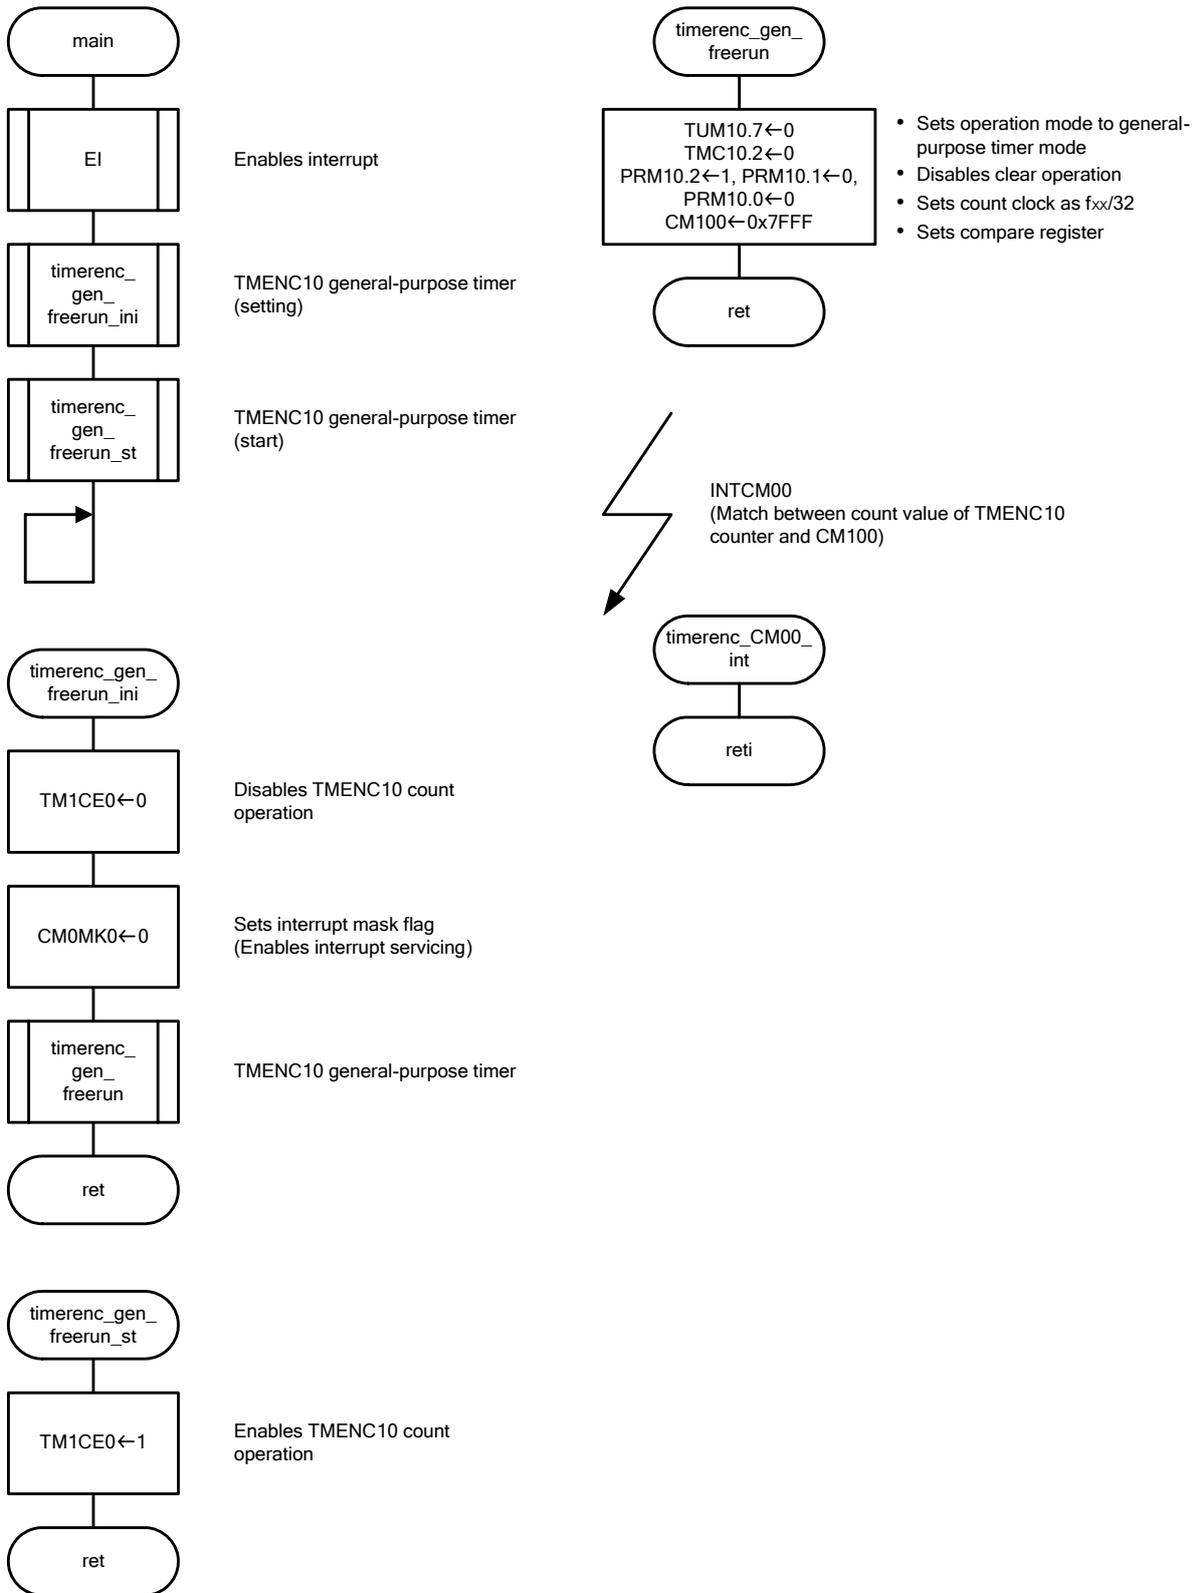

[Function name]	timerenc_gen_freerun_st
[Argument]	None
[Processing content]	Starting function of timerenc_gen_freerun
[Starting method]	Call this function after calling the timerenc_gen_freerun function.
[SFR used]	TMC10.TM1CE0 Controls TMENC10 operation.
[call function]	None
[Variable]	None
[File name]	timerenc_gen_freerun\timerenc_gen_1.c
[Caution]	None

Interrupt function

[Function name]	timerenc_CM00_int
[Overview]	Defined by the user.
[Factor]	INTCM00 Match between the values of the TMENC10 counter and CM100
[call function]	None
[Variable]	None
[File name]	timerenc_gen_freerun\timerenc_gen_1.c
[Caution]	None

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n)

General-purpose timer mode: Free-running operation

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n) (n = 0, 1)

General-purpose timer mode: Compare function

[Functions]	Performs count operation based on the clock selected by software, and generates an interrupt request signal upon match detection between the values of the counter (TMENC10) and the compare register. Interrupt request signals INTCM00, INTCM01, INTCC00, and INTCC01 are generated for compare registers CM100, CM101, CC100, and CC101 respectively.
[Function name]	timerenc_gen_compare
[Argument]	None
[Processing content]	Performs count operation of an fxx/32 count clock, and generates an interrupt upon the count subsequent to which the values of TMENC10 match their respective compare register values.
[Starting method]	Starts by calling the timerenc_gen_compare_st function.
[SFRs used]	TUM10 Specifies the operation mode of TMENC10. CCR10 Specifies the operation mode of the CC100 register. Specifies the operation mode of the CC101 register. TMC10 Controls the clear operation of TMENC10. PRM10 Selects the count clock. CM100 Compare register CM101 Compare register CC100 Compare register CC101 Compare register
[call function]	main main function
[Variable]	None
[Interrupts]	timerenc_CM00_int timerenc_CM01_int timerenc_CC00_int timerenc_CC01_int
[Interrupt sources]	INTCM00 INTCM01 INTCC00 INTCC01
[File name]	timerenc_gen_compare\timerenc_gen_2.c, timerenc_gen_compare\MAIN.C
[Caution]	None

[Function name]	timerenc_gen_compare_st
[Argument]	None
[Processing content]	Starting function of timerenc_gen_comapre
[Starting method]	Call this function after calling the timerenc_gen_compare function.
[SFR used]	TMC10.TM1CE0 Controls TMENC10 operation.
[call function]	None
[Variable]	None
[File name]	timerenc_gen_compare\timerenc_gen_2.c
[Caution]	None

Interrupt functions

[Function name]	timerenc_CM00_int
[Overview]	Defined by the user.
[Factor]	INTCM00 Match between the values of the TMENC10 counter and CM100
[call function]	None
[Variable]	None
[File name]	timerenc_gen_compare\timerenc_gen_2.c
[Caution]	None

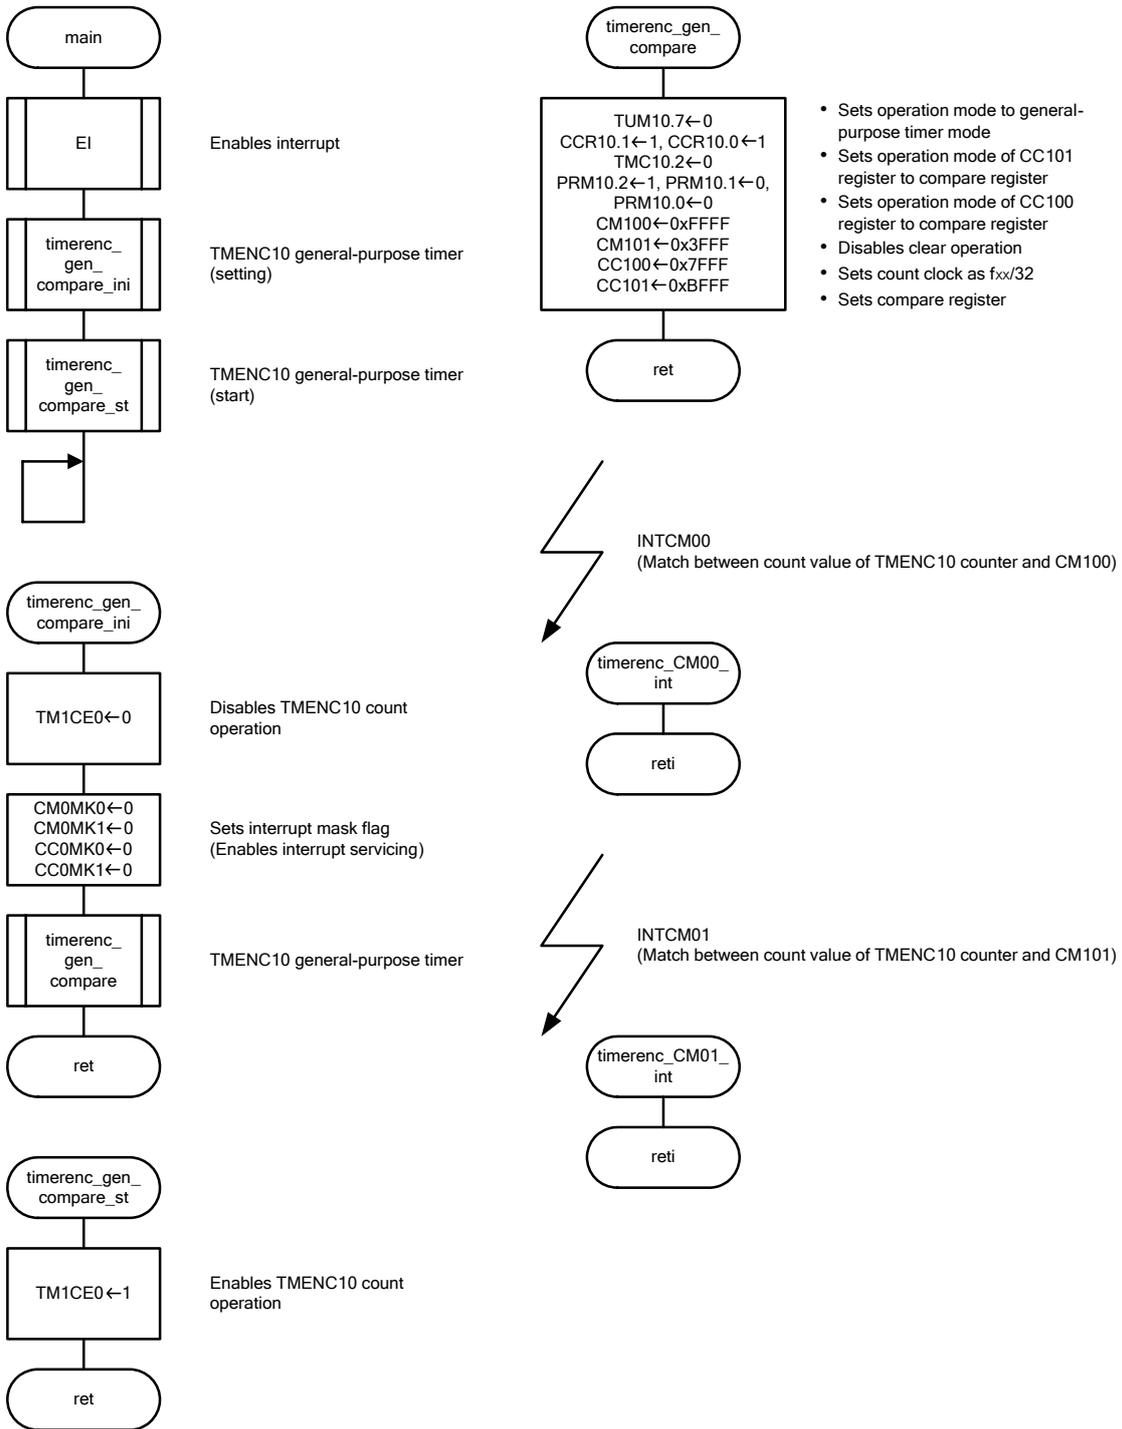

[Function name]	timerenc_CM01_int
[Overview]	Defined by the user.
[Factor]	INTCM01 Match between the values of the TMENC10 counter and CM101.
[call function]	None
[Variable]	None
[File name]	timerenc_gen_compare\timerenc_gen_2.c
[Caution]	None

[Function name]	timerenc_CC00_int
[Overview]	Defined by the user.
[Factor]	INTCC00 Match between the values of the TMENC10 counter and CC100.
[call function]	None
[Variable]	None
[File name]	timerenc_gen_compare\timerenc_gen_2.c
[Caution]	None

[Function name]	timerenc_CC01_int
[Overview]	Defined by the user.
[Factor]	INTCC01 Match between the values of the TMENC10 counter and CC101.
[call function]	None
[Variable]	None
[File name]	timerenc_gen_compare\timerenc_gen_2.c
[Caution]	None

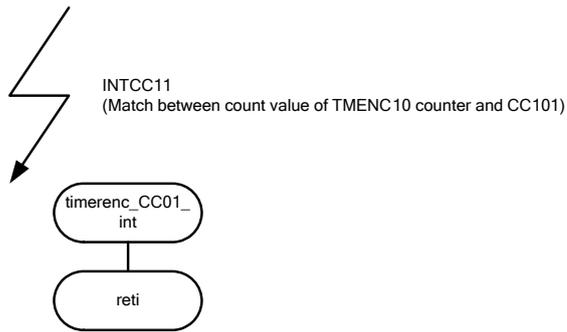

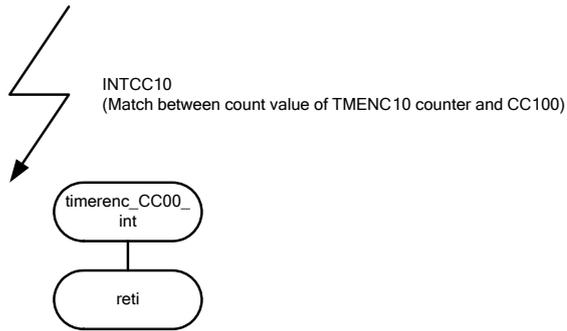

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n)

General-purpose timer mode: Compare function (1/2)

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n)

General-purpose timer mode: Compare function (2/2)

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n) (n = 0, 1)

General-purpose timer mode: Capture function

[Functions]	Performs count operation based on the clock selected by software, and captures the counter (TMENC10) value to the capture registers CC100 and CC101 upon valid edge of the TCUD10 and TCLR10 input signals that are specified as the capture trigger signals. Generates interrupt request signals (INTCC00 and INTCC01) during capture operation.
[Function name]	timerenc_gen_capture
[Argument]	None
[Processing content]	Generates an interrupt upon valid edge detection of the capture trigger signal, via count operation of an fxx/32 count clock.
[Starting method]	Starts by calling the timerenc_gen_capture_st function.
[SFRs used]	<p>TUM10 Specifies the operation mode of TMENC10.</p> <p>SESA10 • Specifies the valid edge of the capture trigger of the CC100 register. • Specifies the valid edge of the capture trigger of the CC101 register.</p> <p>CCR10 • Specifies the operation mode of the CC100 register. • Specifies the operation mode of the CC101 register.</p> <p>CSL10 Selects the capture input signal of the CC101 register.</p> <p>TMC10 Controls the clear operation of TMENC10.</p> <p>PRM10 Selects the count clock.</p> <p>CC100 Capture register</p> <p>CC101 Capture register</p>

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n)

General-purpose timer mode: Capture function

16-bit 2-phase encoder input up/down counter/general-purpose timer (TMENC1n) (n = 0, 1)

UDC mode A: interval/transfer operation

[Functions]	<p>Performs a count up/down of the counter (TMENC10) for the number of clock pulses input from the external input pin.</p> <p>Performs a count up/down according to the mode specified by the PRM10 register, clears TMENC10 upon the count clock subsequent to which the value of the compare register (CM100) matches, and generates an interrupt request signal (INTCM00).</p> <p>Transfers the value of CM100 to TMENC10 upon the subsequent count clock to which if the count value of TMENC10 becomes 0 during count down.</p>
[Function name]	timerenc_udca_interval
[Argument]	None
[Processing content]	Performs a count up/down by loading the clock pulse input from the external input pin, and generates an interrupt upon the count clock subsequent to which the values of TMENC10 and CM100 match. Transfers the value of CM100 upon the count subsequent to which if the value of TMENC10 becomes 0 during count down.
[Starting method]	Starts by calling the timerenc_udca_interval_st function.
[SFRs used]	<p>TUM10 • Specifies the operation mode of TMENC10.</p> <p> • Specifies the operation during UDC mode.</p> <p>SESA10 • Specifies the valid edges of the TIUD10 and TCUD10 pins.</p> <p> • Specifies the valid edge of the TCLR10 pin.</p> <p>TMC10 • Specifies the clear factor of TMENC10.</p> <p> • Specifies the transfer operation from the CM100 register to TMENC10.</p> <p>PRM10 Selects the count operation mode.</p> <p>CM100 Sets compare register.</p>

[Caution]

- CC100 and CC101 registers must not be read successively.
- CM100 and CM101 registers function as compare registers.

Thus, the counter is cleared if the counter (TMENC10) value matches the value of the CM101 register during count up, or matches the value of the CM100 register during count down.

The counter starts from 0000H.

Thus, the counter practically stands still because it is cleared by each count when the CM100 and CM101 register values are set to 0000H.

Therefore, set appropriate values to the CM100 and CM101 registers.
