Function Documentation

◆ mbedtls_platform_setup()

```
int mbedtls_platform_setup ( mbedtls_platform_context * ctx)
```

This function initializes the SCE and the TRNG. It **must** be invoked before the crypto library can be used. This implementation is used if MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT is defined.

Example:

```

mbedtls_platform_context ctx = {0};

/* Setup the platform; initialize the SCE and the TRNG */
if (PSA_SUCCESS != mbedtls_platform_setup(&ctx))

```

Return values

| | |
|--------------------------------------|--------------------------------|
| 0 | Initialization was successful. |
| MBEDTLS_ERR_PLATFORM_HW_ACCEL_FAILED | SCE Initialization error. |

◆ mbedtls_platform_teardown()

```
void mbedtls_platform_teardown ( mbedtls_platform_context * ctx)
```

This implementation is used if MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT is defined. It is intended to de-initialize any items that were initialized in the `mbedtls_platform_setup()` function, but currently is only a placeholder function.

Example:

```

/* De-initialize the platform. This is currently a placeholder function which does
not do anything. */
mbedtls_platform_teardown(&ctx);

```

Return values

| | |
|-----|--|
| N/A | |
|-----|--|

◆ RM_PSA_CRYPTO_TRNG_Read()

```
fsp_err_t RM_PSA_CRYPTO_TRNG_Read ( uint8_t *const p_rngbuf, uint32_t num_req_bytes,
uint32_t * p_num_gen_bytes )
```

Reads requested length of random data from the TRNG. Generate nbytes of random bytes and store them in p_rngbuf buffer.

Return values

| | |
|------------------------|-------------------------------------|
| FSP_SUCCESS | Random number generation successful |
| FSP_ERR_ASSERTION | NULL input parameter(s). |
| FSP_ERR_CRYPTO_UNKNOWN | An unknown error occurred. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- s_generate_16byte_random_data

Detailed Description

Driver for the Renesas Secure IP (RSIP) peripheral on RA MCUs.

Overview

This module provides RSIP functions in protected mode.

HW Overview

| Crypto Peripheral version | Devices |
|---------------------------|---------|
| RSIP-E51A | RA8M1 |

Features

The RSIP module supports for the following features.

- Cryptography
 - Symmetric Encryption/Decryption
 - AES
 - ECB 128/256bit
 - CBC 128/256bit
 - CTR 128/256bit
 - GCM 128/256bit
 - CCM 128/256bit
 - XTS 128/256bit
 - Asymmetric Encryption/Decryption
 - RSA
 - RSAES-PKCS1-V1_5 2048/3072/4096bit
 - RSAES-OAEP 2048/3072/4096bit
 - RSASSA-PKCS1-V1_5 2048/3072/4096bit
 - RSASSA-PSS 2048/3072/4096bit
 - ECC
 - ECDSA secp256r1/secp384r1
 - Hash Functions
 - SHA-2
 - SHA-256/384
- Message Authentication Code
 - HMAC-SHA256bit
 - AES-CMAC 128/256bit
- Key Manage
 - Key Support
 - AES 128/256bit
 - RSA 2048bit
 - RSA 3072/4096bit (Except key pair generation)
 - ECC secp256r1/secp384r1
 - HMAC-SHA256bit
- Random Number Generate

Key Management

The following key management functions are available on each devices.

| Key type (rsip_key_type_t) | R_RSIP_EncryptedKeyW rap() | Generate | Export |
|-------------------------------|-------------------------------|----------|--------|
| RSIP_KEY_TYPE_INVALID | - | - | - |

| | | | |
|-------------------------------------|---|--------------------------|--------------------------|
| RSIP_KEY_TYPE_AES_128 | Y | R_RSIP_KeyGenerate() | - |
| RSIP_KEY_TYPE_AES_256 | Y | R_RSIP_KeyGenerate() | - |
| RSIP_KEY_TYPE_XTS_AES_128 | Y | R_RSIP_KeyGenerate() | - |
| RSIP_KEY_TYPE_XTS_AES_256 | Y | R_RSIP_KeyGenerate() | - |
| RSIP_KEY_TYPE_ECC_SECP256R1_PUBLIC | Y | R_RSIP_KeyPairGenerate() | R_RSIP_PublicKeyExport() |
| RSIP_KEY_TYPE_ECC_SECP256R1_PRIVATE | Y | R_RSIP_KeyPairGenerate() | - |
| RSIP_KEY_TYPE_ECC_SECP384R1_PUBLIC | Y | R_RSIP_KeyPairGenerate() | R_RSIP_PublicKeyExport() |
| RSIP_KEY_TYPE_ECC_SECP384R1_PRIVATE | Y | R_RSIP_KeyPairGenerate() | - |
| RSIP_KEY_TYPE_RSA_2048_PUBLIC | Y | R_RSIP_KeyPairGenerate() | R_RSIP_PublicKeyExport() |
| RSIP_KEY_TYPE_RSA_2048_PRIVATE | Y | R_RSIP_KeyPairGenerate() | - |
| RSIP_KEY_TYPE_RSA_3072_PUBLIC | Y | - | R_RSIP_PublicKeyExport() |
| RSIP_KEY_TYPE_RSA_3072_PRIVATE | Y | - | - |
| RSIP_KEY_TYPE_RSA_4096_PUBLIC | Y | - | R_RSIP_PublicKeyExport() |
| RSIP_KEY_TYPE_RSA_4096_PRIVATE | Y | - | - |
| RSIP_KEY_TYPE_HMAC_SHA256 | Y | R_RSIP_KeyGenerate() | - |

| Key pair type (rsip_key_pair_type_t) | R_RSIP_KeyPairGenerate() | Corresponding public key type | Corresponding private key type |
|--------------------------------------|--------------------------|------------------------------------|-------------------------------------|
| RSIP_KEY_PAIR_TYPE_INVALID | - | - | - |
| RSIP_KEY_PAIR_TYPE_ECC_SECP256R1 | Y | RSIP_KEY_TYPE_ECC_SECP256R1_PUBLIC | RSIP_KEY_TYPE_ECC_SECP256R1_PRIVATE |
| RSIP_KEY_PAIR_TYPE_ECC_SECP384R1 | Y | RSIP_KEY_TYPE_ECC_SECP384R1_PUBLIC | RSIP_KEY_TYPE_ECC_SECP384R1_PRIVATE |
| RSIP_KEY_PAIR_TYPE_RSA_2048 | Y | RSIP_KEY_TYPE_RSA_2048_PUBLIC | RSIP_KEY_TYPE_RSA_2048_PRIVATE |
| RSIP_KEY_PAIR_TYPE_RSA_3072 | - | RSIP_KEY_TYPE_RSA_3072_PUBLIC | RSIP_KEY_TYPE_RSA_3072_PRIVATE |

RSIP_KEY_PAIR_TYPE_RSA_4096

RSIP_KEY_TYPE_RSA_4096_PUBLIC RSIP_KEY_TYPE_RSA_4096_PRIVATE

RSIP Operational States

RSIP Protected Mode driver has the following states.

| State Name | Details |
|----------------|--|
| STATE_INITIAL | Driver is not open. |
| STATE_MAIN | Ready to Compute. |
| STATE_AES | Computing AES (unauthenticated cipher) |
| STATE_AES_AEAD | Computing AES (AEAD). |
| STATE_AES_MAC | Computing AES (MAC). |
| STATE_SHA | Computing SHA. |
| STATE_HMAC | Computing HMAC. |

There are two types of APIs provided by the RSIP driver for accelerating cryptographic operations: those that provide cryptographic operations in a single API and those that provide them in multiple APIs. In this document, the former is referred to as single-part operations and the latter as multi-part operations. Each corresponds to the following algorithms :

□single-part operations : DRBG, Key management, RSA, ECDSA, SHA (Compute), HMAC (Compute&Verify)

□multi-part operations : AES (include AEAD, MAC), SHA, HMAC

Multi-part operations are APIs which split a single cryptographic operation into a sequence of separate steps (Init-Update-Finish). This enables fine control over the configuration of the cryptographic operation, and allows the message data to be processed in fragments instead of all at once.

Due to the above characteristics, it is necessary to manage the operational states in the multi-part operations.

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating a RSIP Protected Mode Project

Start by creating a new project in e² studio or RASC. On the Stacks tab, add New > Security > RSIP Protected Mode (r_rsip).

Examples

AES Example

This is an example of AES-256 encryption and decryption.

```
void r_rsip_example_aes ()
{
    fsp_err_t          err;

    static const uint8_t plain[RSIP_PRV_BYTE_SIZE_AES_BLOCK * 2] =
    {
        0x52, 0x65, 0x6e, 0x65, 0x73, 0x61, 0x73, 0x20, 0x45, 0x6c, 0x65, 0x63, 0x74,
0x72, 0x6f, 0x6e,
        0x69, 0x63, 0x73, 0x20, 0x43, 0x6f, 0x72, 0x70, 0x6f, 0x72, 0x61, 0x74, 0x69,
0x6f, 0x6e, 0x00
    };

    uint8_t iv[RSIP_PRV_BYTE_SIZE_AES_BLOCK] = {0};
    uint8_t cipher_calculated[RSIP_PRV_BYTE_SIZE_AES_BLOCK * 2] = {0};
    uint8_t plain_calculated[RSIP_PRV_BYTE_SIZE_AES_BLOCK * 2] = {0};

    /* Prepare wrapped key data area */
    uint8_t          wrapped_key[RSIP_BYTE_SIZE_WRAPPED_KEY_AES_256];
    rsip_wrapped_key_t * p_wrapped_key = (rsip_wrapped_key_t *) wrapped_key;

    /* Initialize the driver */
    err = R_RSIP_Open(&g_rsip_ctrl, &g_rsip_cfg);
    assert(FSP_SUCCESS == err);

    /* Generate a aes 256-bit key */
    err = R_RSIP_KeyGenerate(&g_rsip_ctrl, RSIP_KEY_TYPE_AES_256, p_wrapped_key);
    assert(FSP_SUCCESS == err);

    /* Generate a nonce */
    err = R_RSIP_RandomNumberGenerate(&g_rsip_ctrl, iv);
    assert(FSP_SUCCESS == err);

    /* Encrypt a plaintext */
    err = R_RSIP_AES_Cipher_Init(&g_rsip_ctrl, RSIP_AES_CIPHER_MODE_CBC_ENC,
p_wrapped_key, iv);
    assert(FSP_SUCCESS == err);

    err = R_RSIP_AES_Cipher_Update(&g_rsip_ctrl, plain, cipher_calculated,
```

```

 */  
/* Generate the message hash */  
    err = R_RSIP_SHA_Compute(&g_rsip_ctrl, RSIP_HASH_TYPE_SHA256, message,  
sizeof(message), hash);  
    assert(FSP_SUCCESS == err);  
/* Generate the signature */  
    err = R_RSIP_RSASSA_PSS_Sign(&g_rsip_ctrl,  
                                p_wrapped_private_key,  
                                RSIP_HASH_TYPE_SHA256,  
                                RSIP_MGF_TYPE_MGF1_SHA256,  
                                RSIP_RSA_SALT_LENGTH_AUTO,  
                                hash,  
                                signature);  
    assert(FSP_SUCCESS == err);  
/* Verify the signature*/  
    err = R_RSIP_RSASSA_PSS_Verify(&g_rsip_ctrl,  
                                   p_wrapped_public_key,  
                                   RSIP_HASH_TYPE_SHA256,  
                                   RSIP_MGF_TYPE_MGF1_SHA256,  
                                   RSIP_RSA_SALT_LENGTH_AUTO,  
                                   hash,  
                                   signature);  
    assert(FSP_SUCCESS == err);  
/* Close the driver */
```

```
err = R_RSIP_Close(&g_rsip_ctrl);  
assert(FSP_SUCCESS == err);  
}
```

HASH Example

This is an example of calculating the SHA256 hash.

```
#define SHA256_HASH_SIZE (32)  
void r_rsip_example_hash ()  
{  
    fsp_err_t err;  
    static const uint8_t message[] =  
    {  
        0x00, 0x01, 0x02, 0x03, 0x04, 0x05, 0x06, 0x07, 0x08, 0x09, 0x0a, 0x0b, 0x0c,  
0x0d, 0x0e, 0x0f,  
        0x10, 0x11, 0x12, 0x13, 0x14, 0x15, 0x16, 0x17, 0x18, 0x19, 0x1a, 0x1b, 0x1c,  
0x1d, 0x1e, 0x1f,  
    };  
    static const uint8_t hash[] =  
    {  
        0x63, 0x0d, 0xcd, 0x29, 0x66, 0xc4, 0x33, 0x66, 0x91, 0x12, 0x54, 0x48, 0xbb,  
0xb2, 0x5b, 0x4f,  
        0xf4, 0x12, 0xa4, 0x9c, 0x73, 0x2d, 0xb2, 0xc8, 0xab, 0xc1, 0xb8, 0x58, 0x1b,  
0xd7, 0x10, 0xdd  
    };  
    uint8_t digest_single[SHA256_HASH_SIZE] = {0};  
    uint8_t digest_multi[SHA256_HASH_SIZE] = {0};  
    /* Initialize the driver */  
    err = R_RSIP_Open(&g_rsip_ctrl, &g_rsip_cfg);  
    assert(FSP_SUCCESS == err);  
    /* (1) Calculate SHA-256 digests with single-part API */  
    err = R_RSIP_SHA_Compute(&g_rsip_ctrl, RSIP_HASH_TYPE_SHA256, message,  
sizeof(message), digest_single);  
    assert(FSP_SUCCESS == err);
```

```
/* Compare digest and hash */
    assert(0 == memcmp(digest_single, hash, SHA256_HASH_SIZE));
/* (2) Calculate SHA-256 digests with multi-part API */
    err = R_RSIP_SHA_Init(&g_rsip_ctrl, RSIP_HASH_TYPE_SHA256);
    assert(FSP_SUCCESS == err);
    err = R_RSIP_SHA_Update(&g_rsip_ctrl, message, sizeof(message));
    assert(FSP_SUCCESS == err);
    err = R_RSIP_SHA_Finish(&g_rsip_ctrl, digest_multi);
    assert(FSP_SUCCESS == err);
/* Compare digest and hash */
    assert(0 == memcmp(digest_multi, hash, SHA256_HASH_SIZE));
/* Close the driver */
    err = R_RSIP_Close(&g_rsip_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct [rsip_instance_ctrl_t](#)

Data Structure Documentation

◆ rsip_instance_ctrl_t

struct rsip_instance_ctrl_t

RSIP private control block. DO NOT MODIFY. Initialization occurs when [R_RSIP_Open\(\)](#) is called.

Function Documentation

◆ **R_RSIP_Open()**

```
fsp_err_t R_RSIP_Open ( rsip_ctrl_t *const p_ctrl, rsip_cfg_t const *const p_cfg )
```

Enables use of Renesas Secure IP functionality.
Implements `rsip_api_t::open`.

<Operational State>

This API can only be executed in the STATE_INITIAL, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_MAIN |
| Others | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_CRYPTO_RSIP_KEY_SET_FAIL | Internal key value is illegal. |
| FSP_ERR_CRYPTO_RSIP_FAIL | Hardware initialization is failed. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption or hardware fault is detected. |

Note

This version does not have an optional feature to disable TRNG initialization.

◆ **R_RSIP_Close()**

```
fsp_err_t R_RSIP_Close ( rsip_ctrl_t *const p_ctrl)
```

Disables use of Renesas Secure IP functionality.
Implements `rsip_api_t::close`.

<Operational State>

This API can be executed in except STATE_INITIAL, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_INITIAL |
| Others | No change |

Return values

| | |
|---------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_RandomNumberGenerate()**

```
fsp_err_t R_RSIP_RandomNumberGenerate ( rsip_ctrl_t *const p_ctrl, uint8_t *const p_random )
```

Generates a 128-bit random number.
Implements `rsip_api_t::randomNumberGenerate`.

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_KeyGenerate()

```
fsp_err_t R_RSIP_KeyGenerate ( rsip_ctrl_t *const p_ctrl, rsip_key_type_t const key_type,
rsip_wrapped_key_t *const p_wrapped_key )
```

Generate a wrapped symmetric key from a random number. In this API, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Implements [rsip_api_t::keyGenerate](#).

<Usage Precautions>

- Valid key types.

key_type

RSIP_KEY_TYPE_AES_128
 RSIP_KEY_TYPE_AES_256
 RSIP_KEY_TYPE_XTS_AES_128
 RSIP_KEY_TYPE_XTS_AES_256
 RSIP_KEY_TYPE_HMAC_SHA256

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_KeyPairGenerate()

```
fsp_err_t R_RSIP_KeyPairGenerate ( rsip_ctrl_t *const p_ctrl, rsip_key_pair_type_t const
key_pair_type, rsip_wrapped_key_t *const p_wrapped_public_key, rsip_wrapped_key_t *const
p_wrapped_private_key )
```

Generate a wrapped asymmetric key pair from a random number. In this API, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Implements [rsip_api_t::keyPairGenerate](#).

<Usage Precautions>

- Valid key pair types.

key_pair_type

RSIP_KEY_PAIR_TYPE_ECC_SECP256R1
 RSIP_KEY_PAIR_TYPE_ECC_SECP384R1
 RSIP_KEY_PAIR_TYPE_RSA_2048
 RSIP_KEY_PAIR_TYPE_RSA_3072
 RSIP_KEY_PAIR_TYPE_RSA_4096

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_EncryptedKeyWrap()

```
fsp_err_t R_RSIP_EncryptedKeyWrap ( rsip_ctrl_t *const p_ctrl, rsip_key_update_key_t const *const
p_key_update_key, uint8_t const *const p_initial_vector, rsip_key_type_t const key_type, uint8_t
const *const p_encrypted_key, rsip_wrapped_key_t *const p_wrapped_key )
```

Decrypt the encrypted user key with Key Update Key (KUK) and wrap it with the Hardware Unique Key (HUK).

Implements [rsip_api_t::encryptedKeyWrap](#).

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|--|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | Input parameter is invalid. |
| FSP_ERR_CRYPTTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ R_RSIP_PublicKeyExport()

```
fsp_err_t R_RSIP_PublicKeyExport ( rsip_wrapped_key_t const *const p_wrapped_public_key, uint8_t
*const p_raw_public_key )
```

Exports public key parameters from a wrapped key.

Implements [rsip_api_t::publicKeyExport](#).

<Usage Precautions>

- The key type of p_wrapped_public_key must be RSIP_KEY_TYPE_ECC_xxx_PUBLIC or RSIP_KEY_TYPE_RSA_xxx_PUBLIC
- For ECC public keys, raw_public_key has QX placed first and QY placed after that.
- For RSA public keys, raw_public_key has N placed first and E placed after that.
- The value location of each elements in public key is shown in below:

| | | |
|--------------------------|---------------------|---------------------|
| ECC bit lengt h | QX lo catio n | QY lo catio n |
|--------------------------|---------------------|---------------------|

| | | |
|-------------|---|----|
| 192(*)) | 0 | 24 |
| 224(*)) | 0 | 28 |
| 256 | 0 | 32 |
| 384 | 0 | 48 |
| 512(*)) | 0 | 64 |
| 521(*)) | 0 | 66 |

| RSA bit length | N location | E location |
|----------------|------------|------------|
| 1024(*) | 0 | 128 |
| 2048 | 0 | 256 |
| 3072 | 0 | 384 |
| 4096 | 0 | 512 |

(*) These bit lengths are not supported in V.5.2.0.

<Operational State>

This API can be executed in any state including STATE_INITIAL, and there are no state transitions.

Return values

| | |
|-----------------------------------|-------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_CRYPTOR_RSIP_KEY_SET_FAIL | Input key value is illegal. |

See also

Section [Key Management](#)

◆ **R_RSIP_AES_Cipher_Init()**

```
fsp_err_t R_RSIP_AES_Cipher_Init ( rsip_ctrl_t *const p_ctrl, rsip_aes_cipher_mode_t const mode,
rsip_wrapped_key_t const *const p_wrapped_key, uint8_t const *const p_initial_vector )
```

Set parameters of AES cipher.
Implements `rsip_api_t::aesCipherInit`.

<Usage Precautions>

- `p_initial_vector` is not required for ECB mode.
- `p_initial_vector` is IV for CBC mode or XTS mode.
- `p_initial_vector` is nonce for CTR mode.

<Operational State>

This API can only be executed in the STATE_MAIN, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_AES |
| Others | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_AES_Cipher_Update()**

```
fsp_err_t R_RSIP_AES_Cipher_Update ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_input,
uint8_t *const p_output, uint32_t const length )
```

Encrypts plaintext.
Implements `rsip_api_t::aesCipherUpdate`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_AES_Cipher_Init or R_RSIP_AES_Cipher_Update results in FSP_SUCCESS.
- The length is as follows:

length

| | |
|-------------|--|
| ECB,CBC,CTR | Must be 0 or a multiple of 16. |
| XTS | Must be 0 or greater than or equal to 16. After an integer not divisible by 16 is input, update will no longer be able to execute. |

<Operational State>

This API can only be executed in the STATE_AES, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| Any | No change |

Return values

| | |
|-----------------------|-------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_SIZE | Input length is illegal. |

◆ **R_RSIP_AES_Cipher_Finish()**

```
fsp_err_t R_RSIP_AES_Cipher_Finish ( rsip_ctrl_t *const p_ctrl)
```

Finalize AES operation.
Implements `rsip_api_t::aesCipherFinish`.

<Operational State>

This API can only be executed in the STATE_AES, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE | No change |
| Others | STATE_MAIN |

Return values

| | |
|-----------------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_AES_AEAD_Init()**

```
fsp_err_t R_RSIP_AES_AEAD_Init ( rsip_ctrl_t *const p_ctrl, rsip_aes_aead_mode_t mode,
rsip_wrapped_key_t const *const p_wrapped_key, uint8_t const *const p_nonce, uint32_t const
nonce_length )
```

Prepares an AES-AEAD function.
Implements `rsip_api_t::aesAeadInit`.

<Usage Precautions>

- The key type of `p_wrapped_key` must be `RSIP_KEY_TYPE_AES_xxx`.

<Operational State>

This API can only be executed in the `STATE_MAIN`, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_AES_AEAD |
| Others | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type is illegal. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_AES_AEAD_LengthsSet()

```
fsp_err_t R_RSIP_AES_AEAD_LengthsSet ( rsip_ctrl_t *const p_ctrl, uint32_t const total_aad_length,
uint32_t const total_text_length, uint32_t const tag_length )
```

Set text and tag lengths for specific mode.
Implements `rsip_api_t::aesAeadLengthsSet`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_AES_AEAD_Init results in FSP_SUCCESS.
- The lengths are as follows:

| | |
|------------------|---|
| total_aad_length | Must be 110 or less. |
| tag_length | The following values are allowed 4, 6, 8, 10, 12, 14, 16 |

<Operational State>

This API can only be executed in the STATE_AES_AEAD, and there are no state transitions.
However, this function can only be called once.

<About CCM processing>

This API must be called directly after executing R_RSIP_AES_AEAD_Init API.

<About GCM processing>

This API must NOT be called. Each input length is indeterminate and output tag length is fixed to 16 bytes.

If called, FSP_ERR_INVALID_STATE will be returned.

Return values

| | |
|-----------------------|----------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_SIZE | Input length is illegal. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |

◆ R_RSIP_AES_AEAD_AADUpdate()

```
fsp_err_t R_RSIP_AES_AEAD_AADUpdate ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_aad,
uint32_t const aad_length )
```

Inputs additional authentication data.
Implements `rsip_api_t::aesAeadAadUpdate`.

<Usage Precautions>

- For GCM processing requires prerequisite that R_RSIP_AES_AEAD_Init or R_RSIP_AES_AEAD_AADUpdate results in FSP_SUCCESS.
- For CCM processing requires prerequisite that R_RSIP_AES_AEAD_LengthsSet or R_RSIP_AES_AEAD_AADUpdate results in FSP_SUCCESS.
- This API can be called repeatedly, and in the case of CCM, it must be called at least once.
- This API cannot be called after the R_RSIP_AES_AEAD_Update API has been executed.

<Operational State>

This API can only be executed in the STATE_AES_AEAD, and there are no state transitions.

<About GCM processing>

For GCM processing, this API can be skipped.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |
| FSP_ERR_CRYPTO_RSIP_FAIL | Internal error. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |

◆ R_RSIP_AES_AEAD_Update()

```
fsp_err_t R_RSIP_AES_AEAD_Update ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_input,
uint32_t const input_length, uint8_t *const p_output, uint32_t *const p_output_length )
```

Inputs additional authentication data.
Implements `rsip_api_t::aesAeadUpdate`.

<Usage Precautions>

- For GCM processing requires prerequisite that `R_RSIP_AES_AEAD_Init`, `R_RSIP_AES_AEAD_AADUpdate`, or `R_RSIP_AES_AEAD_Update` results in `FSP_SUCCESS`.
- For CCM processing requires prerequisite that `R_RSIP_AES_AEAD_AADUpdate` or `R_RSIP_AES_AEAD_Update` results in `FSP_SUCCESS`.
- In the case of CCM, it must be called at least once.
- This API must be called after all input by `R_RSIP_AES_AEAD_AADUpdate` API is complete.

<Operational State>

This API can only be executed in the `STATE_AES_AEAD`, and there are no state transitions.

<About GMAC processing>

GMAC processing can be performed by skipping this API.

For detailed usage, refer to the example code.

Return values

| | |
|-----------------------|-------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_SIZE | Input length is illegal. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |

◆ **R_RSIP_AES_AEAD_Finish()**

```
fsp_err_t R_RSIP_AES_AEAD_Finish ( rsip_ctrl_t *const p_ctrl, uint8_t *const p_output, uint32_t
*const p_output_length, uint8_t *const p_tag )
```

Finalizes an AES-AEAD encryption.
Implements `rsip_api_t::aesAeadFinish`.

<Usage Precautions>

- RSIP_AES_AEAD_MODE_GCM_ENC or RSIP_AES_AEAD_MODE_CCM_ENC must be input as the mode in R_RSIP_AES_AEAD_Init.
- For GCM processing, requires prerequisite that R_RSIP_AES_AEAD_Init, R_RSIP_AES_AEAD_AADUpdate, or R_RSIP_AES_AEAD_Update results in FSP_SUCCESS.
- For CCM processing, requires prerequisite that R_RSIP_AES_AEAD_Update results in FSP_SUCCESS.

<Operational State>

This API can be executed in the STATE_AES_AEAD, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE | No change |
| Any | STATE_MAIN |

Return values

| | |
|----------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTOR_RSIP_FAIL | Internal error. |
| FSP_ERR_CRYPTOR_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_AES_AEAD_Verify()**

```
fsp_err_t R_RSIP_AES_AEAD_Verify ( rsip_ctrl_t *const p_ctrl, uint8_t *const p_output, uint32_t
*const p_output_length, uint8_t const *const p_tag, uint32_t const tag_length )
```

Finalizes an AES-AEAD decryption.
Implements `rsip_api_t::aesAeadVerify`.

<Usage Precautions>

- RSIP_AES_AEAD_MODE_GCM_DEC or RSIP_AES_AEAD_MODE_CCM_DEC must be input as the mode in R_RSIP_AES_AEAD_Init.
- For GCM processing, requires prerequisite that R_RSIP_AES_AEAD_Init, R_RSIP_AES_AEAD_AADUpdate, or R_RSIP_AES_AEAD_Update results in FSP_SUCCESS.
- For CCM processing, requires prerequisite that R_RSIP_AES_AEAD_Update results in FSP_SUCCESS.

<Operational State>

This API can be executed in the STATE_AES_AEAD, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE | No change |
| Any | STATE_MAIN |

If there is 16-byte fractional data indicated by the total data length of the value of p_cipher that was input by R_RSIP_AES_GCM_DecryptUpdate(), this API will output the result of decrypting that fractional data to p_cipher. Here, the portion that does not reach 16 bytes will be padded with zeros.

Return values

| | |
|-------------------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_SIZE | tag_length is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | Internal error. |
| FSP_ERR_CRYPTTO_RSIP_AUTHENTICATION | Authentication is failed. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_AES_MAC_Init()**

```
fsp_err_t R_RSIP_AES_MAC_Init ( rsip_ctrl_t *const p_ctrl, rsip_aes_mac_mode_t const mode,
rsip_wrapped_key_t const *const p_wrapped_key )
```

Prepares an AES-MAC generation and verification.
Implements `rsip_api_t::aesMacInit`.

<Usage Precautions>

- The key type of `p_wrapped_key` must be `RSIP_KEY_TYPE_AES_xxx`.
- The argument `mode` only supports the feature listed below.

| Mode | Corresponding Parameter |
|------|-------------------------|
| CMAC | RSIP_AES_MAC_MODE_CMAC |

- GMAC processing can be performed with `R_RSIP_AES_AEAD_xxx` API.
Refer to the description about [R_RSIP_AES_AEAD_Update\(\)](#) API.

<Operational State>

This API can only be executed in the `STATE_MAIN`, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_AES_MAC |
| Others | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_AES_MAC_Update()**

```
fsp_err_t R_RSIP_AES_MAC_Update ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_message,
uint32_t const message_length )
```

Input message.

Implements `rsip_api_t::aesMacUpdate`.

Inside this function, the data that is input by the user is buffered until the input value of `p_message` exceeds 16 bytes. If the input value, `p_message`, is not a multiple of 16 bytes, it will be padded within the function.

<Usage Precautions>

- Requires prerequisite that `R_RSIP_AES_MAC_Init` or `R_RSIP_AES_MAC_Update` results in `FSP_SUCCESS`.

<Operational State>

This API can only be executed in the `STATE_AES_MAC`, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| Any | No change |

Return values

| | |
|------------------------------------|-------------------------------|
| <code>FSP_SUCCESS</code> | Normal termination. |
| <code>FSP_ERR_ASSERTION</code> | A required parameter is NULL. |
| <code>FSP_ERR_NOT_OPEN</code> | Module is not open. |
| <code>FSP_ERR_INVALID_STATE</code> | Internal state is illegal. |

◆ **R_RSIP_AES_MAC_SignFinish()**

```
fsp_err_t R_RSIP_AES_MAC_SignFinish ( rsip_ctrl_t *const p_ctrl, uint8_t *const p_mac )
```

Finalizes an AES-MAC generation.
Implements `rsip_api_t::aesMacSignFinish`.

<Usage Precautions>

- Requires prerequisite that `R_RSIP_AES_MAC_Init` or `R_RSIP_AES_MAC_Update` results in `FSP_SUCCESS`.

<Operational State>

This API can only be executed in the `STATE_AES_MAC`, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE | No change |
| Others | STATE_MAIN |

Return values

| | |
|----------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_SIZE | Input length is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | Internal error. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_AES_MAC_VerifyFinish()**

```
fsp_err_t R_RSIP_AES_MAC_VerifyFinish ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_mac,
uint32_t const mac_length )
```

Finalizes an AES-MAC verification.
Implements `rsip_api_t::aesMacVerifyFinish`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_AES_MAC_Init or R_RSIP_AES_MAC_Update results in FSP_SUCCESS.

<Operational State>

This API can only be executed in the STATE_AES_MAC, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE FSP_ERR_INVALID_SIZE | No change |
| Others | STATE_MAIN |

Return values

| | |
|-------------------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_SIZE | mac_length is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | Internal error. |
| FSP_ERR_CRYPTTO_RSIP_AUTHENTICATION | Authentication is failed. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ R_RSIP_ECDSA_Sign()

```
fsp_err_t R_RSIP_ECDSA_Sign ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, uint8_t const *const p_hash, uint8_t *const p_signature )
```

Signs a hashed message. The message hash should be generated in advance.
Implements `rsip_api_t::ecdsaSign`.

<Usage Precautions>

- The key type of `p_wrapped_private_key` must be `RSIP_KEY_TYPE_ECC_xxx_PRIVATE`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|--|
| 256 bit | <code>RSIP_KEY_TYPE_ECC_SECP256R1_PRIVATE</code> |
| 384 bit | <code>RSIP_KEY_TYPE_ECC_SECP384R1_PRIVATE</code> |

- The hash value must be computed and passed to the argument `p_hash` before executing this API.
In the case of hash length is less than the key length, padding is required to make it the same as the key length.

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|--|--|
| <code>FSP_SUCCESS</code> | Normal termination. |
| <code>FSP_ERR_ASSERTION</code> | A required parameter is NULL. |
| <code>FSP_ERR_NOT_OPEN</code> | Module is not open. |
| <code>FSP_ERR_INVALID_STATE</code> | Internal state is illegal. |
| <code>FSP_ERR_NOT_ENABLED</code> | Input key type is disabled in this function by configuration. |
| <code>FSP_ERR_INVALID_ARGUMENT</code> | Input key type or mode is illegal. |
| <code>FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL</code> | Input key value is illegal. |
| <code>FSP_ERR_CRYPTOR_SIP_FAIL</code> | <ul style="list-style-type: none"> • Input parameter is illegal. • Signature generation is failed. |
| <code>FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT</code> | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| <code>FSP_ERR_CRYPTOR_SIP_FATAL</code> | Software corruption is detected. |

◆ R_RSIP_ECDSA_Verify()

```
fsp_err_t R_RSIP_ECDSA_Verify ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, uint8_t const *const p_hash, uint8_t const *const p_signature )
```

Verifies a hashed message. The message hash should be generated in advance.
Implements `rsip_api_t::ecdsaVerify`.

<Usage Precautions>

- The key type of `p_wrapped_public_key` must be `RSIP_KEY_TYPE_ECC_xxx_PUBLIC`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|------------------------------------|
| 256 bit | RSIP_KEY_TYPE_ECC_SECP256R1_PUBLIC |
| 384 bit | RSIP_KEY_TYPE_ECC_SECP384R1_PUBLIC |

- The hash value must be computed and passed to the argument `p_hash` before executing this API.
In the case of hash length is less than the key length, padding is required to make it the same as the key length.

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|--|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | <ul style="list-style-type: none"> • Input parameter is illegal. • Signature verification is failed. |
| FSP_ERR_CRYPTTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ R_RSIP_RSA_Encrypt()

```
fsp_err_t R_RSIP_RSA_Encrypt ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, uint8_t const *const p_plain, uint8_t *const p_cipher )
```

Encrypts plaintext with raw RSA.
Implements `rsip_api_t::rsaEncrypt`.

<Usage Precautions>

- The key type of `p_wrapped_public_key` must be `RSIP_KEY_TYPE_RSA_xxx_PUBLIC`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|-------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PUBLIC |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PUBLIC |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PUBLIC |

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_FAIL | Input parameter is invalid. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

Note

This API provides RSA low-level primitives (RSAEP/RSAPV1). It should be used in conjunction with any padding scheme.

◆ R_RSIP_RSA_Decrypt()

```
fsp_err_t R_RSIP_RSA_Decrypt ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, uint8_t const *const p_cipher, uint8_t *const p_plain )
```

Decrypts ciphertext with raw RSA.
Implements `rsip_api_t::rsaDecrypt`.

<Usage Precautions>

- The key type of `p_wrapped_private_key` must be `RSIP_KEY_TYPE_RSA_xxx_PRIVATE`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|--------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PRIVATE |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PRIVATE |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PRIVATE |

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_FAIL | Input parameter is invalid. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

Note

This API provides RSA low-level primitives (RSADP/RSASPI). It should be used in conjunction with any padding scheme.

◆ R_RSIP_RSAES_PKCS1_V1_5_Encrypt()

```
fsp_err_t R_RSIP_RSAES_PKCS1_V1_5_Encrypt ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_public_key, uint8_t const *const p_plain, uint32_t const plain_length, uint8_t
*const p_cipher )
```

Encrypts plaintext with RSAES-PKCS1-v1_5.
Implements `rsip_api_t::rsaesPkcs1V15Encrypt`.

<Usage Precautions>

- The key type of `p_wrapped_public_key` must be `RSIP_KEY_TYPE_RSA_xxx_PUBLIC`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|-------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PUBLIC |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PUBLIC |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PUBLIC |

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

`mLen` (`plain_length`) and `k` (RSA key length) must meet the following condition.

$mLen \leq k - 11$

Return values

| | |
|--|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ R_RSIP_RSAES_PKCS1_V1_5_Decrypt()

```
fsp_err_t R_RSIP_RSAES_PKCS1_V1_5_Decrypt ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_private_key, uint8_t const *const p_cipher, uint8_t *const p_plain, uint32_t
*const p_plain_length, uint32_t const plain_buffer_length )
```

Decrypts with RSAES-PKCS1-v1_5.
Implements `rsip_api_t::rsaesPkcs1V15Decrypt`.

<Usage Precautions>

- The key type of `p_wrapped_private_key` must be `RSIP_KEY_TYPE_RSA_xxx_PRIVATE`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|---|
| 2048 bit | <code>RSIP_KEY_TYPE_RSA_2048_PRIVATE</code> |
| 3072 bit | <code>RSIP_KEY_TYPE_RSA_3072_PRIVATE</code> |
| 4096 bit | <code>RSIP_KEY_TYPE_RSA_4096_PRIVATE</code> |

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|--|--|
| <code>FSP_SUCCESS</code> | Normal termination. |
| <code>FSP_ERR_ASSERTION</code> | A required parameter is NULL. |
| <code>FSP_ERR_NOT_OPEN</code> | Module is not open. |
| <code>FSP_ERR_INVALID_STATE</code> | Internal state is illegal. |
| <code>FSP_ERR_NOT_ENABLED</code> | Input key type is disabled in this function by configuration. |
| <code>FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL</code> | Input key value is illegal. |
| <code>FSP_ERR_CRYPTOR_SIP_FAIL</code> | Input parameter is invalid. |
| <code>FSP_ERR_INVALID_SIZE</code> | Any length is illegal. |
| <code>FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT</code> | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| <code>FSP_ERR_CRYPTOR_SIP_FATAL</code> | Software corruption is detected. |

Note

The stack usage of this function depends on the maximum key length for RSA decryption enabled in configuration. For example, if RSA-2048 is enabled, this function uses at least 256 bytes (2048 bits) of stack. To shrink the stack size, please disable unused key length in configuration.

This API skips the ciphertext length checking at RFC8017 (PKCS#1 v2.2) Section 7.2.2 Step 1.

◆ R_RSIP_RSAES_OAEP_Encrypt()

```
fsp_err_t R_RSIP_RSAES_OAEP_Encrypt ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint8_t const *const p_label, uint32_t const label_length, uint8_t const
*const p_plain, uint32_t const plain_length, uint8_t *const p_cipher )
```

Encrypts plaintext with RSAES-OAEP.
Implements `rsip_api_t::rsaesOaepEncrypt`.

<Usage Precautions>

- The key type of `p_wrapped_public_key` must be `RSIP_KEY_TYPE_RSA_xxx_PUBLIC`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|-------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PUBLIC |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PUBLIC |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PUBLIC |

- Argument `hash_function` only supports the features listed below.

| Hash Function | Corresponding Parameter |
|---------------|-------------------------|
| SHA256 | RSIP_HASH_TYPE_SHA256 |
| SHA384 | RSIP_HASH_TYPE_SHA384 |

- Argument `mask_generation_function` only supports the features listed below.

| Mask Generation Function | Corresponding Parameter |
|--------------------------|---------------------------|
| SHA256 | RSIP_MGF_TYPE_MGF1_SHA256 |
| SHA384 | RSIP_MGF_TYPE_MGF1_SHA384 |

A384

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

mLen (plain_length), hLen (output length of hash_function), and k (RSA key length) must meet the following condition.

$$mLen \leq k - 2 \cdot hLen - 2$$

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_RSAES_OAEP_Decrypt()

```
fsp_err_t R_RSIP_RSAES_OAEP_Decrypt ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint8_t const *const p_label, uint32_t const label_length, uint8_t const
*const p_cipher, uint8_t *const p_plain, uint32_t *const p_plain_length, uint32_t const
plain_buffer_length )
```

Decrypts ciphertext with RSAES-OAEP.
Implements `rsip_api_t::rsaesOaepDecrypt`.

<Usage Precautions>

- The key type of `p_wrapped_private_key` must be `RSIP_KEY_TYPE_RSA_xxx_PRIVATE`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|--------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PRIVATE |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PRIVATE |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PRIVATE |

- Argument `hash_function` only supports the features listed below.

| Hash Function | Corresponding Parameter |
|---------------|-------------------------|
| SHA256 | RSIP_HASH_TYPE_SHA256 |
| SHA384 | RSIP_HASH_TYPE_SHA384 |

- Argument `mask_generation_function` only supports the features listed below.

| Mask Generation Function | Corresponding Parameter |
|--------------------------|---------------------------|
| SHA256 | RSIP_MGF_TYPE_MGF1_SHA256 |
| SHA384 | RSIP_MGF_TYPE_MGF1_SHA384 |

1_SH
A384

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

hLen (output length of hash_function) and k (RSA key length) must meet the following condition.

$$k \geq 2 \text{ hLen} + 2$$

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

Note

The stack usage of this function depends on the maximum key length for RSA decryption enabled in configuration. For example, if RSA-2048 is enabled, this function uses at least 256 bytes (2048 bits) of stack. To shrink the stack size, please disable unused key length in configuration.

This API skips the ciphertext length checking at RFC8017 (PKCS#1 v2.2) Section 7.1.2 Step 1.

◆ R_RSIP_RSASSA_PKCS1_V1_5_Sign()

```
fsp_err_t R_RSIP_RSASSA_PKCS1_V1_5_Sign ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_private_key, rsip_hash_type_t const hash_function, uint8_t const *const
p_hash, uint8_t *const p_signature )
```

Signs message with RSASSA-PKCS1-v1_5.
Implements [rsip_api_t::rsassaPkcs1V15Sign](#).

<Usage Precautions>

- The key type of p_wrapped_private_key must be RSIP_KEY_TYPE_RSA xxx PRIVATE.
- This version supports the following key types:

| Key Length | Key Type |
|------------|--------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PRIVATE |

| | |
|----------|--------------------------------|
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PRIVATE |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PRIVATE |

- Argument hash_function only supports the features listed below.

| Hash Function | Corresponding Parameter |
|---------------|-------------------------|
| SHA256 | RSIP_HASH_TYPE_SHA256 |
| SHA384 | RSIP_HASH_TYPE_SHA384 |

- The hash value must be computed and passed to the argument p_hash before executing this API.
Also, the argument hash_function must specify the one used when computing the hash value above.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_RSASSA_PKCS1_V1_5_Verify()

```
fsp_err_t R_RSIP_RSASSA_PKCS1_V1_5_Verify ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_public_key, rsip_hash_type_t const hash_function, uint8_t const *const p_hash,
uint8_t const *const p_signature )
```

Verifies signature with RSASSA-PKCS1-v1_5.
Implements `rsip_api_t::rsassaPkcs1V15Verify`.

<Usage Precautions>

- The key type of `p_wrapped_public_key` must be `RSIP_KEY_TYPE_RSA_xxx_PUBLIC`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|-------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PUBLIC |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PUBLIC |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PUBLIC |

- Argument `hash_function` only supports the features listed below.

| Hash Function | Corresponding Parameter |
|---------------|-------------------------|
| SHA256 | RSIP_HASH_TYPE_SHA256 |
| SHA384 | RSIP_HASH_TYPE_SHA384 |

- The hash value must be computed and passed to the argument `p_hash` before executing this API.
Also, the argument `hash_function` must specify the one used when computing the hash value above.

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|----------------------------------|---|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |

| | |
|---------------------------------------|--|
| FSP_ERR_CRYPTO_RSIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |

Note

The stack usage of this function depends on the maximum key length for RSA decryption enabled in configuration. For example, if RSA-2048 is enabled, this function uses at least 512 bytes (2048 bits * 2) of stack. To shrink the stack size, please disable unused key length in configuration.

◆ R_RSIP_RSASSA_PSS_Sign()

```
fsp_err_t R_RSIP_RSASSA_PSS_Sign ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint32_t const salt_length, uint8_t const *const p_hash, uint8_t *const
p_signature )
```

Signs message with RSASSA-PSS.
Implements `rsip_api_t::rsassaPssSign`.

<Usage Precautions>

- The key type of `p_wrapped_private_key` must be `RSIP_KEY_TYPE_RSA_xxx_PRIVATE`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|---|
| 2048 bit | <code>RSIP_KEY_TYPE_RSA_2048_PRIVATE</code> |
| 3072 bit | <code>RSIP_KEY_TYPE_RSA_3072_PRIVATE</code> |
| 4096 bit | <code>RSIP_KEY_TYPE_RSA_4096_PRIVATE</code> |

- Argument `hash_function` only supports the features listed below.

| Hash Function | Corresponding Parameter |
|---------------|------------------------------------|
| SHA256 | <code>RSIP_HASH_TYPE_SHA256</code> |
| SHA384 | <code>RSIP_HASH_TYPE_SHA384</code> |

- Argument `mask_generation_function` only supports the features listed below.

| Mask Generation Function | Corresponding Parameter |
|--------------------------|-------------------------|
| | |

| nction | meter |
|--------|---------------------------|
| SHA256 | RSIP_MGF_TYPE_MGF1_SHA256 |
| SHA384 | RSIP_MGF_TYPE_MGF1_SHA384 |

- Argument salt_length must follow the list below.

| Parameter | Description |
|---------------------------|---|
| RSIP_RSA_SALT_LENGTH_AUTO | The salt length is set to RSIP_RSA_SALT_LENGTH_MAX or RSIP_RSA_SALT_LENGTH_HASH, whichever is shorter. When verifying, the salt length is detected automatically. |
| RSIP_RSA_SALT_LENGTH_HASH | The salt length is set to the hash length. |
| RSIP_RSA_SALT_LENGTH_MAX | The salt length is set to emLen - hLen - 2, where emLen is the same as the key length and hLen is the hash length. |
| zero or positive integers | The following conditions must be satisfied. salt_length <= emLen - hLen - 2 where emLen is the same as the key length and hLen is the hash length. |

- The hash value must be computed and passed to the argument p_hash before executing this API.
Also, the argument hash_function must specify the one used when computing the hash value above.

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ R_RSIP_RSASSA_PSS_Verify()

```
fsp_err_t R_RSIP_RSASSA_PSS_Verify ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint32_t const salt_length, uint8_t const *const p_hash, uint8_t const
*const p_signature )
```

Verifies signature with RSASSA-PSS.
Implements `rsip_api_t::rsassaPssVerify`.

<Usage Precautions>

- The key type of `p_wrapped_public_key` must be `RSIP_KEY_TYPE_RSA_xxx_PUBLIC`.
- This version supports the following key types:

| Key Length | Key Type |
|------------|-------------------------------|
| 2048 bit | RSIP_KEY_TYPE_RSA_2048_PUBLIC |
| 3072 bit | RSIP_KEY_TYPE_RSA_3072_PUBLIC |
| 4096 bit | RSIP_KEY_TYPE_RSA_4096_PUBLIC |

- Argument `hash_function` only supports the features listed below.

| Hash Function | Corresponding Parameter |
|---------------|-------------------------|
| SHA256 | RSIP_HASH |

| | |
|--------|-------------------------------|
| | _TYPE_SHA 256 |
| SHA384 | RSIP_HASH _TYPE_SHA 384 |

- Argument mask_generation_function only supports the features listed below.

| Mask Generation Function | Corresponding Parameter |
|--------------------------|---------------------------|
| SHA256 | RSIP_MGF_TYPE_MGF1_SHA256 |
| SHA384 | RSIP_MGF_TYPE_MGF1_SHA384 |

- Argument salt_length must follow the list below.

| Parameter | Description |
|---------------------------|---|
| RSIP_RSA_SALT_LENGTH_AUTO | The salt length is set to RSIP_RSA_SALT_LENGTH_MAX or RSIP_RSA_SALT_LENGTH_HASH, whichever is shorter. When verifying, the salt length is detected automatically. |
| RSIP_RSA_SALT_LENGTH_HASH | The salt length is set to the hash length. |
| RSIP_RSA_SALT_LENGTH_MAX | The salt length is set to emLen - hLen - 2, where emLen is the same as the key length and hLen is the hash length. |
| zero or positive integers | The following conditions must be satisfied. |

| |
|--|
| <p>salt_length <= emLen - hLen - 2 where emLen is the same as the key length and hLen is the hash length.</p> |
|--|

- The hash value must be computed and passed to the argument p_hash before executing this API.
Also, the argument hash_function must specify the one used when computing the hash value above.

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|--|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_CRYPTTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTTO_RSIP_FAIL | Input parameter is invalid. |
| FSP_ERR_INVALID_SIZE | Any length is illegal. |
| FSP_ERR_CRYPTTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

Note

*The stack usage of this function depends on the maximum key length for RSA decryption enabled in configuration. For example, if RSA-2048 is enabled, this function uses at least 512 bytes (2048 bits * 2) of stack. To shrink the stack size, please disable unused key length in configuration.*

◆ R_RSIP_SHA_Compute()

```
fsp_err_t R_RSIP_SHA_Compute ( rsip_ctrl_t *const p_ctrl, rsip_hash_type_t const hash_type,
uint8_t const *const p_message, uint32_t const message_length, uint8_t *const p_digest )
```

Generates SHA message digest.
Implements `rsip_api_t::shaCompute`.

<Usage Precautions>

- Hash type must follow the list below.

| Hash Type | Corresponding Parameter |
|-----------|-------------------------|
| SHA256 | RSIP_HASH_TYPE_SHA256 |
| SHA384 | RSIP_HASH_TYPE_SHA384 |

- The length of message digest is the list below.

| Hash Type | digest length |
|-----------|---------------|
| SHA256 | 32 |
| SHA384 | 48 |

<Operational State>

This API can only be executed in the STATE_MAIN, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |

◆ **R_RSIP_SHA_Init()**

```
fsp_err_t R_RSIP_SHA_Init ( rsip_ctrl_t *const p_ctrl, rsip_hash_type_t const hash_type )
```

Prepares a SHA generation.
Implements `rsip_api_t::shalnit`.

<Usage Precautions>

- Hash type must follow the list below.

| Hash Type | Corresponding Parameter |
|-----------|-------------------------|
| SHA256 | RSIP_HASH_TYPE_SHA256 |
| SHA384 | RSIP_HASH_TYPE_SHA384 |

<Operational State>

This API can only be executed in the STATE_MAIN, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_SHA |
| Others | No change |

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |

◆ **R_RSIP_SHA_Update()**

```
fsp_err_t R_RSIP_SHA_Update ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_message, uint32_t
const message_length )
```

Inputs message.

Implements `rsip_api_t::shaUpdate`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_SHA_Init, R_RSIP_SHA_Update, or R_RSIP_SHA_Resume results in FSP_SUCCESS.

<Operational State>

This API can only be executed in the STATE_SHA, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| Any | No change |

Return values

| | |
|--|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_SHA_Finish()**

```
fsp_err_t R_RSIP_SHA_Finish ( rsip_ctrl_t *const p_ctrl, uint8_t *const p_digest )
```

Finalizes a SHA generation.
Implements `rsip_api_t::shaFinish`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_SHA_Init, R_RSIP_SHA_Update, or R_RSIP_SHA_Resume results in FSP_SUCCESS.
- The length of message digest is the list below.

| Hash Type | digest length |
|-----------|---------------|
| SHA256 | 32 |
| SHA384 | 48 |

<Operational State>

This API can only be executed in the STATE_SHA, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|---------------------------------------|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN | No change |
| Others | STATE_MAIN |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_SHA_Suspend()**

```
fsp_err_t R_RSIP_SHA_Suspend ( rsip_ctrl_t *const p_ctrl, rsip_sha_handle_t *const p_handle )
```

Suspend SHA generation. This API allows you to suspend processing, for example, if you are in the middle of computing digest value for successive chunks of the message and need to perform another process.

Implements `rsip_api_t::shaSuspend`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_SHA_Init, R_RSIP_SHA_Update, or R_RSIP_SHA_Resume results in FSP_SUCCESS.

<Operational State>

This API can only be executed in the STATE_SHA, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_SUCCESS FSP_ERR_CRYPTO_RSIP_FATAL | STATE_MAIN |
| Others | No change |

Return values

| | |
|---------------------------|----------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_SHA_Resume()**

```
fsp_err_t R_RSIP_SHA_Resume ( rsip_ctrl_t *const p_ctrl, rsip_sha_handle_t const *const p_handle )
```

Resume SHA generation. This API allows you to resume a process that has been suspended by [R_RSIP_SHA_Suspend\(\)](#) API.
Implements [rsip_api_t::shaResume](#).

<Operational State>

This API can only be executed in the STATE_MAIN, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_SHA |
| Others | No change |

Return values

| | |
|-----------------------|-------------------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |

◆ **R_RSIP_HMAC_Compute()**

```
fsp_err_t R_RSIP_HMAC_Compute ( rsip_ctrl_t *const p_ctrl, const rsip_wrapped_key_t *
p_wrapped_key, uint8_t const *const p_message, uint32_t const message_length, uint8_t *const
p_mac )
```

Generates HMAC.

Implements `rsip_api_t::hmacCompute`.

<Usage Precautions>

- The key type of `p_wrapped_key` must be `RSIP_KEY_TYPE_HMAC_xxx`.
- The length of MAC is the list below.

| HMAC Type | MAC length |
|-------------|------------|
| HMAC-SHA256 | 32 |

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type is illegal. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_HMAC_Verify()**

```
fsp_err_t R_RSIP_HMAC_Verify ( rsip_ctrl_t *const p_ctrl, const rsip_wrapped_key_t *
p_wrapped_key, uint8_t const *const p_message, uint32_t const message_length, uint8_t const
*const p_mac, uint32_t const mac_length )
```

Verifies HMAC.

Implements `rsip_api_t::hmacVerify`.

<Usage Precautions>

- The key type of `p_wrapped_key` must be `RSIP_KEY_TYPE_HMAC_xxx`.
- The length of MAC must follow the list below.

| HMAC Type | MAC length |
|-------------|------------|
| HMAC-SHA256 | 4 to 32 |

<Operational State>

This API can only be executed in the `STATE_MAIN`, and there are no state transitions.

Return values

| | |
|--|--|
| <code>FSP_SUCCESS</code> | Normal termination. |
| <code>FSP_ERR_ASSERTION</code> | A required parameter is NULL. |
| <code>FSP_ERR_NOT_OPEN</code> | Module is not open. |
| <code>FSP_ERR_INVALID_STATE</code> | Internal state is illegal. |
| <code>FSP_ERR_INVALID_SIZE</code> | <code>mac_length</code> is illegal. |
| <code>FSP_ERR_NOT_ENABLED</code> | Input key type is disabled in this function by configuration. |
| <code>FSP_ERR_INVALID_ARGUMENT</code> | Input key type is illegal. |
| <code>FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL</code> | Input key value is illegal. |
| <code>FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT</code> | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| <code>FSP_ERR_CRYPTOR_SIP_FATAL</code> | Software corruption is detected. |

◆ **R_RSIP_HMAC_Init()**

```
fsp_err_t R_RSIP_HMAC_Init ( rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_key )
```

Prepares a HMAC generation.
Implements `rsip_api_t::hmaclnit`.

<Usage Precautions>

- The key type of `p_wrapped_key` must be `RSIP_KEY_TYPE_HMAC_xxx`.

<Operational State>

This API can only be executed in the `STATE_MAIN`, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_HMAC |
| Others | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type is illegal. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_HMAC_Update()**

```
fsp_err_t R_RSIP_HMAC_Update ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_message, uint32_t const message_length )
```

Inputs message.

Implements `rsip_api_t::hmacUpdate`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_HMAC_Init, R_RSIP_HMAC_Update, or R_RSIP_HMAC_Resume results in FSP_SUCCESS.

<Operational State>

This API can only be executed in the STATE_HMAC, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| Any | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_HMAC_SignFinish()**

```
fsp_err_t R_RSIP_HMAC_SignFinish ( rsip_ctrl_t *const p_ctrl, uint8_t *const p_mac )
```

Finalizes a HMAC generation.
Implements `rsip_api_t::hmacSignFinish`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_HMAC_Init, R_RSIP_HMAC_Update, or R_RSIP_HMAC_Resume results in FSP_SUCCESS.
- The length of MAC is the list below.

| HMAC Type | MAC length |
|-------------|------------|
| HMAC-SHA256 | 32 |

<Operational State>

This API can only be executed in the STATE_HMAC, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE | No change |
| Others | STATE_MAIN |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTOR_SIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTOR_SIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOR_SIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_HMAC_VerifyFinish()**

```
fsp_err_t R_RSIP_HMAC_VerifyFinish ( rsip_ctrl_t *const p_ctrl, uint8_t const *const p_mac, uint32_t const mac_length )
```

Finalizes a HMAC verification.
Implements `rsip_api_t::hmacVerifyFinish`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_HMAC_Init, R_RSIP_HMAC_Update, or R_RSIP_HMAC_Resume results in FSP_SUCCESS.
- The length of MAC must follow the list below.

| HMAC Type | MAC length |
|-------------|------------|
| HMAC-SHA256 | 4 to 32 |

<Operational State>

This API can only be executed in the STATE_HMAC, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_ERR_ASSERTION FSP_ERR_NOT_OPEN FSP_ERR_INVALID_STATE FSP_ERR_INVALID_SIZE | No change |
| Others | STATE_MAIN |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_INVALID_SIZE | mac_length is illegal. |
| FSP_ERR_CRYPTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTO_RSIP_FAIL | MAC verification is failed. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_HMAC_Suspend()**

```
fsp_err_t R_RSIP_HMAC_Suspend ( rsip_ctrl_t *const p_ctrl, rsip_hmac_handle_t *const p_handle )
```

Suspend HMAC generation. This API allows you to suspend processing, for example, if you are in the middle of computing HMAC for successive chunks of the message and need to perform another process.

Implements `rsip_api_t::hmacSuspend`.

<Usage Precautions>

- Requires prerequisite that R_RSIP_HMAC_Init, R_RSIP_HMAC_Update, or R_RSIP_HMAC_Resume results in FSP_SUCCESS.

<Operational State>

This API can only be executed in the STATE_HMAC, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--|-----------------------|
| FSP_SUCCESS FSP_ERR_CRYPTO_RSIP_FATAL | STATE_MAIN |
| Others | No change |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTO_RSIP_FATAL | Software corruption is detected. |

◆ **R_RSIP_HMAC_Resume()**

```
fsp_err_t R_RSIP_HMAC_Resume ( rsip_ctrl_t *const p_ctrl, rsip_hmac_handle_t const *const p_handle )
```

Resume HMAC generation. This API allows you to resume a process that has been suspended by [R_RSIP_HMAC_Suspend\(\)](#) API.
Implements `rsip_api_t::hmacResume`.

<Operational State>

This API can only be executed in the STATE_MAIN, and the state after execution changes as follows depending on the return value.

| Return Value | State after execution |
|--------------|-----------------------|
| FSP_SUCCESS | STATE_HMAC |
| Others | No change |

Return values

| | |
|--|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_ASSERTION | A required parameter is NULL. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_STATE | Internal state is illegal. |
| FSP_ERR_NOT_ENABLED | Input key type is disabled in this function by configuration. |
| FSP_ERR_INVALID_ARGUMENT | Input key type or mode is illegal. |
| FSP_ERR_CRYPTTO_RSIP_KEY_SET_FAIL | Input key value is illegal. |
| FSP_ERR_CRYPTTO_RSIP_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTTO_RSIP_FATAL | Software corruption is detected. |

Detailed Description

Driver for the Secure Crypto Engine (SCE9) on RA MCUs.

Overview

This module provides SCE functions in protected mode.

Note

For a detailed description of the different SCE9 operating modes, refer to Application Note R11AN0498.

HW Overview

| Crypto Peripheral version | Devices |
|---------------------------|----------------------------|
| SCE9 (Protected mode) | RA4M2, RA4M3, RA6M4, RA6M5 |

Features

The SCE module supports for the following features.

- Cryptography
 - Symmetric Encryption/Decryption
 - AES
 - ECB 128/256bit
 - CBC 128/256bit
 - GCM 128/256bit
 - CCM 128/256bit
 - Asymmetric Encryption/Decryption
 - RSA
 - RSAES-PKCS1-V1_5 1024/2048bit
 - RSAES-PKCS1-V1_5 3072/4096bit (Encryption only)
 - RSASSA-PKCS1-V1_5 1024/2048bit
 - RSASSA-PKCS1-V1_5 3072/4096bit (Verification only)
 - ECC
 - ECDSA secp192r1/secp224r1/secp256r1/secp384r1
 - ECDH secp256r1
 - Hash Functions
 - SHA-2
 - SHA-256
- Message Authentication Code
 - HMAC-SHA256bit
 - AES-CMAC 128/256bit
- Key Support
 - AES 128/256bit
 - AES Key Wrap/Key Unwrap 128/256bit
 - RSA 1024/2048bit
 - RSA 3072/4096bit (public key only)
 - ECC secp192r1/secp224r1/secp256r1/secp384r1
 - HMAC-SHA256bit
- TRNG
- TLS
 - SSL / TLS support function (TLS1.2 compliant)

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating a SCE Protected Mode Project

Start by creating a new project in e² studio or RASC. On the Stacks tab, add New > Security > SCE Protected Mode. For information on how to install and update secure keys, refer to the Application Note R11AN0496.

Reducing initialization time

The SCE initialization sequence can be modified to support a smaller subset of features and allow for a shorter initialization period. This is particularly useful in cases where startup time is important and the cryptographic features that are required are known in advance. The current fast boot configuration option supports the cryptographic primitives required by MCUBoot including:

- RSA 3K/4K signature verification
- ECC P256 signature verification
- SHA224/256 and GHASH calculation

Limitations

Usage of R_SCE_ECDSA_secp384r1_SignatureGenerate/Verify

The SCE does not support SHA-384 in hardware, so the APIs listed below require the user to create a SHA-384 function for signature generation and verification. To use the APIs listed below, enable SCE_USER_SHA_384_ENABLED on RA Smart Configurator and prepare a function called SCE_USER_SHA_384_FUNCTION. The interface of SCE_USER_SHA_384_FUNCTION, which is called by the following APIs, is described below.

- R_SCE_ECDSA_secp384r1_SignatureGenerate()
- R_SCE_ECDSA_secp384r1_SignatureVerify()

SCE_USER_SHA_384_FUNCTION()

```
uint32_t SCE_USER_SHA_384_FUNCTION(uint8_t *message, uint8_t* digest, uint32_t message_length)
```

SHA-384 hash calculation is performed for an area extending the number of bytes specified by the argument message_length from the address specified by the argument message. The calculation result should be stored at the address specified by the argument digest.

Parameters

| | |
|----------------|---|
| message | [in] Start address of message |
| digest | [in,out] address for storing hash calculation result (48 bytes) |
| message_length | [in] Effective byte count of message |

Return values

| | |
|--------|---------------------------------|
| 0 | Hash value stored successfully. |
| others | Storing of hash value failed. |

Examples

AES Example

This is an example of AES-256 encryption and decryption.

```
static uint8_t plain[BLOCK * 2] =
{
    0x52, 0x65, 0x6e, 0x65, 0x73, 0x61, 0x73, 0x20, 0x45, 0x6c, 0x65, 0x63, 0x74,
    0x72, 0x6f, 0x6e,
    0x69, 0x63, 0x73, 0x20, 0x43, 0x6f, 0x72, 0x70, 0x6f, 0x72, 0x61, 0x74, 0x69,
    0x6f, 0x6e, 0x00
};
void r_sce_example_aes ()
{
    sce_aes_handle_t      handle;
    sce_aes_wrapped_key_t wrapped_key;
    uint8_t               cipher_calculated[32] = {0};
    uint8_t               plain_calculated[32] = {0};
    uint32_t              dummy;
    /* SCE power on */
    R_SCE_Open(&sce_ctrl, &sce_cfg);
    /* Generate a random key */
    R_SCE_AES256_WrappedKeyGenerate(&wrapped_key);
    /* Encrypt a plain text */
    R_SCE_AES256ECB_EncryptInit(&handle, &wrapped_key);
    R_SCE_AES256ECB_EncryptUpdate(&handle, plain, cipher_calculated, BLOCK * 2);
    R_SCE_AES256ECB_EncryptFinal(&handle, cipher_calculated, &dummy);
    /* Decrypt a cipher text using same key as Encryption */
    R_SCE_AES256ECB_DecryptInit(&handle, &wrapped_key);
    R_SCE_AES256ECB_DecryptUpdate(&handle, cipher_calculated, plain_calculated, BLOCK *
2);
```

```
R_SCE_AES256ECB_DecryptFinal(&handle, plain_calculated, &dummy);

/* SCE power off */
R_SCE_Close(&sce_ctrl);

/* Compare plain and plain_calculated */
if (memcmp(plain, plain_calculated, BLOCK * 2))
    {
while (1)
    {
/* plain and plain_calculated are different (incorrect) */
    }
}
else
    {
while (1)
    {
/* plain and plain_calculated are the same (correct) */
    }
}
}
}
```

ECC Example

This is an example of ECC secp-256 signature generate and verify.

```
uint8_t ecc256_data_msg[] =
{
    's', 'a', 'm', 'p', 'l', 'e'
};

void r_sce_example_ecc ()
{
    sce_ecc_wrapped_pair_key_t wrapped_pair_key;
    sce_ecdsa_byte_data_t      message_hash =
    {
        0
    };
};
```

```
sce_ecdsa_byte_data_t signature;

uint8_t          out_data[HW_SCE_ECDSA_DATA_BYTE_SIZE];

fsp_err_t        return_code;

message_hash.data_length = sizeof(ecc256_data_msg);
message_hash.pdata      = (uint8_t *) ecc256_data_msg;
signature.pdata        = out_data;

/* SCE power on */
R_SCE_Open(&sce_ctrl, &sce_cfg);
/* Generate a random pair key */
R_SCE_ECC_secp256r1_WrappedKeyPairGenerate(&wrapped_pair_key);
/* Generate a Signature */
R_SCE_ECDSA_secp256r1_SignatureGenerate(&message_hash, &signature,
&wrapped_pair_key.priv_key);
/* Verify Signature and Public wrapped key */
return_code = R_SCE_ECDSA_secp256r1_SignatureVerify(&signature, &message_hash,
&wrapped_pair_key.pub_key);
/* SCE power off */
R_SCE_Close(&sce_ctrl);
if (FSP_SUCCESS != return_code)
{
while (1)
{
/* Verify Fail */
}
}
else
{
while (1)
{
/* Verify Success */
}
}
}
```

RSA Example

This is an example of RSA-2048 encryption and decryption.

```
uint8_t rsa_msg[256] =
{
    0x00, 0x01, 0x02, 0x03, 0x04, 0x05, 0x06, 0x07, 0x08, 0x09, 0x0a, 0x0b, 0x0c,

}
}
}
```

Data Structures

struct [sce_instance_ctrl_t](#)

Data Structure Documentation

◆ [sce_instance_ctrl_t](#)

struct [sce_instance_ctrl_t](#)

SCE private control block. DO NOT MODIFY. Initialization occurs when [R_SCE_Open\(\)](#) is called.

Function Documentation

◆ R_SCE_Open()

```
fsp_err_t R_SCE_Open ( sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg )
```

Enables use of SCE functionality.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | The error-detection self-test failed to terminate normally. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_RETRY | Indicates that an entropy evaluation failure occurred. Run the function again. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

Note

The valid pre-run state is SCE disabled. The pre-run state is SCE Disabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_Close()

```
fsp_err_t R_SCE_Close ( sce_ctrl_t *const p_ctrl )
```

Stops supply of power to the SCE.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

Return values

| | |
|-------------|--------------------|
| FSP_SUCCESS | Normal termination |
|-------------|--------------------|

Note

The pre-run state is any state. After the function runs the state transitions to SCE Disabled State.

◆ R_SCE_SoftwareReset()

fsp_err_t R_SCE_SoftwareReset (void)

Software reset to SCE.

Reverts the state to the SCE initial state.

Return values

| | |
|-------------|--------------------|
| FSP_SUCCESS | Normal termination |
|-------------|--------------------|

Note

The pre-run state is any state. After the function runs the state transitions to SCE Disabled State.

◆ R_SCE_AES128_WrappedKeyGenerate()

fsp_err_t R_SCE_AES128_WrappedKeyGenerate (sce_aes_wrapped_key_t * wrapped_key)

This API outputs 128-bit AES wrapped key from a random number.

This API generates a wrapped key from a random number in the SCE. Accordingly, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | wrapped_key | 128-bit AES wrapped key |
|----------|-------------|-------------------------|

Return values

| | |
|--------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Disabled State.

◆ **R_SCE_AES256_WrappedKeyGenerate()**

```
fsp_err_t R_SCE_AES256_WrappedKeyGenerate ( sce_aes_wrapped_key_t * wrapped_key)
```

This API outputs 256-bit AES wrapped key from a random number.

This API generates a wrapped key from a random number in the SCE. Accordingly, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | wrapped_key | 256-bit AES wrapped key |
|----------|-------------|-------------------------|

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Disabled State.

◆ **R_SCE_RSA1024_WrappedKeyPairGenerate()**

```
fsp_err_t R_SCE_RSA1024_WrappedKeyPairGenerate ( sce_rsa1024_wrapped_pair_key_t *
wrapped_pair_key)
```

This API outputs a wrapped key pair for a 1024-bit RSA public key and private key pair. These keys are generated from a random value produced internally by the SCE. Consequently, there is no need to input a user key. Dead copying of data can be prevented by encrypting the data using the wrapped key output by this API. A public wrapped key is generated by wrapped_pair_key->pub_key, and a private wrapped key is generated by wrapped_pair_key->priv_key. As the public key exponent, only 0x00010001 is generated.

Parameters

| | | |
|----------|------------------|---|
| [in,out] | wrapped_pair_key | User key index for RSA 1024-bit public key and private key pair |
|----------|------------------|---|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. Key generation failed. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_RSA2048_WrappedKeyPairGenerate()**

```
fsp_err_t R_SCE_RSA2048_WrappedKeyPairGenerate ( sce_rsa2048_wrapped_pair_key_t *
wrapped_pair_key)
```

This API outputs a wrapped key pair for a 2048-bit RSA public key and private key pair. These keys are generated from a random value produced internally by the SCE. Consequently, there is no need to input a user key. Dead copying of data can be prevented by encrypting the data using the wrapped key output by this API. A public wrapped key is generated by wrapped_pair_key->pub_key, and a private wrapped key is generated by wrapped_pair_key->priv_key. As the public key exponent, only 0x00010001 is generated.

Parameters

| | | |
|----------|------------------|---|
| [in,out] | wrapped_pair_key | User key index for RSA 2048-bit public key and private key pair |
|----------|------------------|---|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. Key generation failed. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp192r1_WrappedKeyPairGenerate()

`fsp_err_t R_SCE_ECC_secp192r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * wrapped_pair_key)`

This is an API for outputting a wrapped key pair for secp192r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in `wrapped_pair_key->pub_key`, and the private key index is generated in `wrapped_pair_key->priv_key`.

Parameters

| | | |
|----------|-------------------------------|--|
| [in,out] | <code>wrapped_pair_key</code> | Wrapped pair key for secp192r1 public key and private key pair |
|----------|-------------------------------|--|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp224r1_WrappedKeyPairGenerate()

`fsp_err_t R_SCE_ECC_secp224r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * wrapped_pair_key)`

This is an API for outputting a wrapped key pair for secp224r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in `wrapped_pair_key->pub_key`, and the private key index is generated in `wrapped_pair_key->priv_key`.

Parameters

| | | |
|----------|-------------------------------|--|
| [in,out] | <code>wrapped_pair_key</code> | Wrapped pair key for secp224r1 public key and private key pair |
|----------|-------------------------------|--|

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_WrappedKeyPairGenerate()

`fsp_err_t R_SCE_ECC_secp256r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * wrapped_pair_key)`

This is an API for outputting a wrapped key pair for secp256r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in `wrapped_pair_key->pub_key`, and the private key index is generated in `wrapped_pair_key->priv_key`.

Parameters

| | | |
|----------|-------------------------------|--|
| [in,out] | <code>wrapped_pair_key</code> | Wrapped pair key for secp256r1 public key and private key pair |
|----------|-------------------------------|--|

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_WrappedKeyPairGenerate()

```
fsp_err_t R_SCE_ECC_secp384r1_WrappedKeyPairGenerate ( sce_ecc_wrapped_pair_key_t *
wrapped_pair_key)
```

This is an API for outputting a wrapped key pair for secp384r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in wrapped_pair_key->pub_key, and the private key index is generated in wrapped_pair_key->priv_key.

Parameters

| | | |
|----------|------------------|--|
| [in,out] | wrapped_pair_key | Wrapped pair key for secp384r1 public key and private key pair |
|----------|------------------|--|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RandomNumberGenerate()

```
fsp_err_t R_SCE_RandomNumberGenerate ( uint32_t * random)
```

This API can generate 4 words random number.

Parameters

| | | |
|----------|--------|---------------------------------------|
| [in,out] | random | Stores 4words (16 bytes) random data. |
|----------|--------|---------------------------------------|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128_EncryptedKeyWrap()

```
fsp_err_t R_SCE_AES128_EncryptedKeyWrap ( uint8_t* initial_vector, uint8_t* encrypted_key,
sce_key_update_key_t* key_update_key, sce_aes_wrapped_key_t* wrapped_key )
```

This API wraps 128-bit AES key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256_EncryptedKeyWrap()

```
fsp_err_t R_SCE_AES256_EncryptedKeyWrap ( uint8_t* initial_vector, uint8_t* encrypted_key,
sce_key_update_key_t* key_update_key, sce_aes_wrapped_key_t* wrapped_key )
```

This API wraps 256-bit AES key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128_RFC3394KeyWrap()

```
fsp_err_t R_SCE_AES128_RFC3394KeyWrap ( sce_aes_wrapped_key_t* master_key, uint32_t
target_key_type, sce_aes_wrapped_key_t* target_key, uint32_t* rfc3394_wrapped_key )
```

This API wraps 128-bit AES key within the user routine.

Parameters

| | | |
|-------|---------------------|--------------------------------|
| [in] | master_key | AES-128 key used for wrapping. |
| [in] | target_key_type | Selects key to be wrapped. |
| [in] | target_key | Key to be wrapped. |
| [out] | rfc3394_wrapped_key | Wrapped key. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | Resource conflict. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal user Key Generation Information. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

◆ R_SCE_AES256_RFC3394KeyWrap()

```
fsp_err_t R_SCE_AES256_RFC3394KeyWrap ( sce_aes_wrapped_key_t* master_key, uint32_t
target_key_type, sce_aes_wrapped_key_t* target_key, uint32_t* rfc3394_wrapped_key )
```

This API wraps 256-bit AES key within the user routine.

Parameters

| | | |
|-------|---------------------|--------------------------------|
| [in] | master_key | AES-256 key used for wrapping. |
| [in] | target_key_type | Selects key to be wrapped. |
| [in] | target_key | Key to be wrapped. |
| [out] | rfc3394_wrapped_key | Wrapped key. |

Return values

| | |
|---------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | Resource conflict. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Input illegal user Key Generation Information. |
| FSP_ERR_CRYPTTO_SCE_FAIL | Internal error occurred. |

◆ R_SCE_AES128_RFC3394KeyUnwrap()

```
fsp_err_t R_SCE_AES128_RFC3394KeyUnwrap ( sce_aes_wrapped_key_t * master_key, uint32_t
target_key_type, uint32_t * rfc3394_wrapped_key, sce_aes_wrapped_key_t * target_key )
```

This API unwraps 128-bit AES key within the user routine.

Parameters

| | | |
|-------|---------------------|----------------------------------|
| [in] | master_key | AES-128 key used for unwrapping. |
| [in] | target_key_type | Selects key to be unwrapped. |
| [in] | rfc3394_wrapped_key | Wrapped key. |
| [out] | target_key | Key to be unwrapped. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | Resource conflict. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal user Key Generation Information. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

◆ R_SCE_AES256_RFC3394KeyUnwrap()

```
fsp_err_t R_SCE_AES256_RFC3394KeyUnwrap ( sce_aes_wrapped_key_t * master_key, uint32_t
target_key_type, uint32_t * rfc3394_wrapped_key, sce_aes_wrapped_key_t * target_key )
```

This API unwraps 256-bit AES key within the user routine.

Parameters

| | | |
|-------|---------------------|----------------------------------|
| [in] | master_key | AES-256 key used for unwrapping. |
| [in] | target_key_type | Selects key to be unwrapped. |
| [in] | rfc3394_wrapped_key | Wrapped key. |
| [out] | target_key | Key to be unwrapped. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | Resource conflict. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal user Key Generation Information. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

◆ **R_SCE_SHA256HMAC_EncryptedKeyWrap()**

```
fsp_err_t R_SCE_SHA256HMAC_EncryptedKeyWrap ( uint8_t* initial_vector, uint8_t*
encrypted_key, sce_key_update_key_t* key_update_key, sce_hmac_sha_wrapped_key_t*
wrapped_key )
```

This API wraps HMAC-SHA256 key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | HMAC-SHA256 wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_RSA1024_EncryptedPublicKeyWrap()**

```
fsp_err_t R_SCE_RSA1024_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_rsa1024_public_wrapped_key_t *
wrapped_key )
```

This API wraps 1024-bit RSA public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 1024-bit RSA public wrapped key |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_RSA1024_EncryptedPrivateKeyWrap()**

```
fsp_err_t R_SCE_RSA1024_EncryptedPrivateKeyWrap ( uint8_t* initial_vector, uint8_t*
encrypted_key, sce_key_update_key_t* key_update_key, sce_rsa1024_private_wrapped_key_t*
wrapped_key )
```

This API wraps 1024-bit RSA private key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 1024-bit RSA private wrapped key |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_RSA2048_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_rsa2048_public_wrapped_key_t *
wrapped_key )
```

This API wraps 2048-bit RSA public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 1024-bit RSA public wrapped key |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_RSA2048_EncryptedPrivateKeyWrap()**

```
fsp_err_t R_SCE_RSA2048_EncryptedPrivateKeyWrap ( uint8_t* initial_vector, uint8_t*
encrypted_key, sce_key_update_key_t* key_update_key, sce_rsa2048_private_wrapped_key_t*
wrapped_key )
```

This API wraps 2048-bit RSA private key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 2048-bit RSA private wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA3072_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_RSA3072_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_rsa3072_public_wrapped_key_t *
wrapped_key )
```

This API wraps 3072-bit RSA public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 3072-bit RSA public wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA4096_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_RSA4096_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_rsa4096_public_wrapped_key_t *
wrapped_key )
```

This API wraps 4096-bit RSA public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 1024-bit RSA public wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_public_wrapped_key_t *
wrapped_key )
```

This API wraps secp192r1 public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp192r1 public wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_public_wrapped_key_t *
wrapped_key )
```

This API wraps secp224r1 public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp224r1 public wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_public_wrapped_key_t *
wrapped_key )
```

This API wraps secp256r1 public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp256r1 public wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_public_wrapped_key_t *
wrapped_key )
```

This API wraps secp384r1 public key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp384r1 public wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_private_wrapped_key_t *
wrapped_key )
```

This API wraps secp192r1 private key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp192r1 private wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_private_wrapped_key_t *
wrapped_key )
```

This API wraps secp224r1 private key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp224r1 private wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_private_wrapped_key_t *
wrapped_key )
```

This API wraps secp256r1 private key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp256r1 private wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap ( uint8_t * initial_vector, uint8_t *
encrypted_key, sce_key_update_key_t * key_update_key, sce_ecc_private_wrapped_key_t *
wrapped_key )
```

This API wraps secp384r1 private key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp384r1 private wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128ECB_EncryptInit()**

```
fsp_err_t R_SCE_AES128ECB_EncryptInit ( sce_aes_handle_t* handle, sce_aes_wrapped_key_t* wrapped_key )
```

The `R_SCE_AES128ECB_EncryptInit()` function performs preparations for the execution of an AES calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128ECB_EncryptUpdate()` function and `R_SCE_AES128ECB_EncryptFinal()` function.

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_EncryptUpdate()

```
fsp_err_t R_SCE_AES128ECB_EncryptUpdate ( sce_aes_handle_t * handle, uint8_t * plain, uint8_t *
cipher, uint32_t plain_length )
```

The `R_SCE_AES128ECB_EncryptUpdate()` function encrypts the second argument, `plain`, utilizing the key index stored in the handle specified in the first argument, `handle`, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, `cipher`. After plaintext input is completed, call `R_SCE_AES128ECB_EncryptFinal()`.

Specify areas for `plain` and `cipher` that do not overlap. For `plain` and `cipher`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|---------------------------|--|
| [in,out] | <code>handle</code> | AES handler (work area) |
| [in] | <code>plain</code> | plaintext data area |
| [in,out] | <code>cipher</code> | ciphertext data area |
| [in,out] | <code>plain_length</code> | plaintext data length (must be a multiple of 16) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128ECB_EncryptFinal()**

```
fsp_err_t R_SCE_AES128ECB_EncryptFinal ( sce_aes_handle_t * handle, uint8_t * cipher, uint32_t * cipher_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES128ECB_EncryptFinal\(\)](#) function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_DecryptInit()

```
fsp_err_t R_SCE_AES128ECB_DecryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES128ECB_DecryptInit()` function performs preparations for the execution of an AES calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128ECB_DecryptUpdate()` function and `R_SCE_AES128ECB_DecryptFinal()` function.

Parameters

| | | |
|----------|--------------------------|-------------------------|
| [in,out] | <code>handle</code> | AES handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_DecryptUpdate()

```
fsp_err_t R_SCE_AES128ECB_DecryptUpdate ( sce_aes_handle_t * handle, uint8_t * cipher, uint8_t * plain, uint32_t cipher_length )
```

The `R_SCE_AES128ECB_DecryptUpdate()` function decrypts the second argument, `cipher`, utilizing the key index stored in the handle specified in the first argument, `handle`, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, `plain`. After plaintext input is completed, call `R_SCE_AES128ECB_DecryptFinal()`.

Specify areas for `plain` and `cipher` that do not overlap. For `plain` and `cipher`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128ECB_DecryptFinal()**

```
fsp_err_t R_SCE_AES128ECB_DecryptFinal ( sce_aes_handle_t * handle, uint8_t * plain, uint32_t * plain_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES128ECB_DecryptFinal\(\)](#) function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256ECB_EncryptInit()**

```
fsp_err_t R_SCE_AES256ECB_EncryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES256ECB_EncryptInit()` function performs preparations for the execution of an AES calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES256ECB_EncryptUpdate()` function and `R_SCE_AES256ECB_EncryptFinal()` function.

Parameters

| | | |
|----------|--------------------------|-------------------------|
| [in,out] | <code>handle</code> | AES handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_EncryptUpdate()

```
fsp_err_t R_SCE_AES256ECB_EncryptUpdate ( sce_aes_handle_t * handle, uint8_t * plain, uint8_t *
cipher, uint32_t plain_length )
```

The `R_SCE_AES256ECB_EncryptUpdate()` function encrypts the second argument, `plain`, utilizing the key index stored in the handle specified in the first argument, `handle`, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, `cipher`. After plaintext input is completed, call `R_SCE_AES256ECB_EncryptFinal()`.

Specify areas for `plain` and `cipher` that do not overlap. For `plain` and `cipher`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|--------------|--|
| [in,out] | handle | AES handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in,out] | plain_length | plaintext data length (must be a multiple of 16) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPT_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_EncryptFinal()

```
fsp_err_t R_SCE_AES256ECB_EncryptFinal ( sce_aes_handle_t * handle, uint8_t * cipher, uint32_t * cipher_length )
```

Using the handle specified in the first argument, handle, the R_SCE_AES256ECB_EncryptFinal() function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256ECB_DecryptInit()**

```
fsp_err_t R_SCE_AES256ECB_DecryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES128ECB_DecryptInit()` function performs preparations for the execution of an AES calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128ECB_DecryptUpdate()` function and `R_SCE_AES128ECB_DecryptFinal()` function.

Parameters

| | | |
|----------|--------------------------|-------------------------|
| [in,out] | <code>handle</code> | AES handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256ECB_DecryptUpdate()**

```
fsp_err_t R_SCE_AES256ECB_DecryptUpdate ( sce_aes_handle_t * handle, uint8_t * cipher, uint8_t * plain, uint32_t cipher_length )
```

The **R_SCE_AES256ECB_DecryptUpdate()** function decrypts the second argument, cipher, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, plain. After plaintext input is completed, call **R_SCE_AES256ECB_DecryptFinal()**.

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256ECB_DecryptFinal()**

```
fsp_err_t R_SCE_AES256ECB_DecryptFinal ( sce_aes_handle_t * handle, uint8_t * plain, uint32_t * plain_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES256ECB_DecryptFinal\(\)](#) function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_EncryptInit()

```
fsp_err_t R_SCE_AES128CBC_EncryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector )
```

The R_SCE_AES128CBC_EncryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128CBC_EncryptUpdate() function and R_SCE_AES128CBC_EncryptFinal() function.

Parameters

| | | |
|----------|----------------|-------------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | initial_vector | initialization vector area (16byte) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128CBC_EncryptUpdate()**

```
fsp_err_t R_SCE_AES128CBC_EncryptUpdate ( sce_aes_handle_t * handle, uint8_t * plain, uint8_t *
cipher, uint32_t plain_length )
```

The **R_SCE_AES128CBC_EncryptUpdate()** function encrypts the second argument, *plain*, utilizing the key index stored in the *handle* specified in the first argument, *handle*, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, *cipher*. After plaintext input is completed, call **R_SCE_AES128CBC_EncryptFinal()**.

Specify areas for *plain* and *cipher* that do not overlap. For *plain* and *cipher*, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|---------------------|--|
| [in,out] | <i>handle</i> | AES handler (work area) |
| [in] | <i>plain</i> | plaintext data area |
| [in,out] | <i>cipher</i> | ciphertext data area |
| [in,out] | <i>plain_length</i> | plaintext data length (must be a multiple of 16) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128CBC_EncryptFinal()**

```
fsp_err_t R_SCE_AES128CBC_EncryptFinal ( sce_aes_handle_t * handle, uint8_t * cipher, uint32_t * cipher_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES128CBC_EncryptFinal\(\)](#) function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_DecryptInit()

```
fsp_err_t R_SCE_AES128CBC_DecryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector )
```

The R_SCE_AES128CBC_DecryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128CBC_DecryptUpdate() function and R_SCE_AES128CBC_DecryptFinal() function.

Parameters

| | | |
|----------|----------------|-------------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | initial_vector | initialization vector area (16byte) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_DecryptUpdate()

```
fsp_err_t R_SCE_AES128CBC_DecryptUpdate ( sce_aes_handle_t* handle, uint8_t* cipher, uint8_t* plain, uint32_t cipher_length )
```

The `R_SCE_AES128CBC_DecryptUpdate()` function decrypts the second argument, `cipher`, utilizing the key index stored in the handle specified in the first argument, `handle`, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, `plain`. After plaintext input is completed, call `R_SCE_AES128CBC_DecryptFinal()`.

Specify areas for `plain` and `cipher` that do not overlap. For `plain` and `cipher`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128CBC_DecryptFinal()**

```
fsp_err_t R_SCE_AES128CBC_DecryptFinal ( sce_aes_handle_t * handle, uint8_t * plain, uint32_t * plain_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES128CBC_DecryptFinal\(\)](#) function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_EncryptInit()

```
fsp_err_t R_SCE_AES256CBC_EncryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector )
```

The R_SCE_AES256CBC_EncryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256CBC_EncryptUpdate() function and R_SCE_AES256CBC_EncryptFinal() function.

Parameters

| | | |
|----------|----------------|------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | initial_vector | initial vector area (16byte) |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Input illegal wrapped key. |
| FSP_ERR_CRYPTTO_SCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_EncryptUpdate()

```
fsp_err_t R_SCE_AES256CBC_EncryptUpdate ( sce_aes_handle_t * handle, uint8_t * plain, uint8_t *
cipher, uint32_t plain_length )
```

The `R_SCE_AES256CBC_EncryptUpdate()` function encrypts the second argument, `plain`, utilizing the key index stored in the handle specified in the first argument, `handle`, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, `cipher`. After plaintext input is completed, call `R_SCE_AES256CBC_EncryptFinal()`.

Specify areas for `plain` and `cipher` that do not overlap. For `plain` and `cipher`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|--------------|--|
| [in,out] | handle | AES handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in,out] | plain_length | plaintext data length (must be a multiple of 16) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256CBC_EncryptFinal()**

```
fsp_err_t R_SCE_AES256CBC_EncryptFinal ( sce_aes_handle_t * handle, uint8_t * cipher, uint32_t * cipher_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES256CBC_EncryptFinal\(\)](#) function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_DecryptInit()

```
fsp_err_t R_SCE_AES256CBC_DecryptInit ( sce_aes_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector )
```

The `R_SCE_AES256CBC_DecryptInit()` function performs preparations for the execution of an AES calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES256CBC_DecryptUpdate()` function and `R_SCE_AES256CBC_DecryptFinal()` function.

Parameters

| | | |
|----------|-----------------------------|-------------------------------------|
| [in,out] | <code>handle</code> | AES handler (work area) |
| [in] | <code>wrapped_key</code> | 256-bit AES wrapped key |
| [in] | <code>initial_vector</code> | initialization vector area (16byte) |

Return values

| | |
|--|---|
| <code>FSP_SUCCESS</code> | Normal termination |
| <code>FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT</code> | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| <code>FSP_ERR_CRYPTOSCE_KEY_SET_FAIL</code> | Input illegal wrapped key. |
| <code>FSP_ERR_CRYPTOSCE_FAIL</code> | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_DecryptUpdate()

```
fsp_err_t R_SCE_AES256CBC_DecryptUpdate ( sce_aes_handle_t* handle, uint8_t* cipher, uint8_t* plain, uint32_t cipher_length )
```

The `R_SCE_AES256CBC_DecryptUpdate()` function decrypts the second argument, `cipher`, utilizing the key index stored in the `handle` specified in the first argument, `handle`, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, `plain`. After plaintext input is completed, call `R_SCE_AES256CBC_DecryptFinal()`.

Specify areas for `plain` and `cipher` that do not overlap. For `plain` and `cipher`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|----------------------------|---|
| [in,out] | <code>handle</code> | AES handler (work area) |
| [in] | <code>cipher</code> | ciphertext data area |
| [in,out] | <code>plain</code> | plaintext data area |
| [in,out] | <code>cipher_length</code> | ciphertext data length (must be a multiple of 16) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256CBC_DecryptFinal()**

```
fsp_err_t R_SCE_AES256CBC_DecryptFinal ( sce_aes_handle_t * handle, uint8_t * plain, uint32_t * plain_length )
```

Using the handle specified in the first argument, handle, the [R_SCE_AES256CBC_DecryptFinal\(\)](#) function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_EncryptInit()

```
fsp_err_t R_SCE_AES128GCM_EncryptInit ( sce_gcm_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector, uint32_t initial_vector_length )
```

The `R_SCE_AES128GCM_EncryptInit()` function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128GCM_EncryptUpdate()` function and `R_SCE_AES128GCM_EncryptFinal()` function.

Parameters

| | | |
|----------|------------------------------------|---|
| [in,out] | <code>handle</code> | AES-GCM handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |
| [in] | <code>initial_vector</code> | initialization vector area (<code>initial_vector_length</code> byte) |
| [in] | <code>initial_vector_length</code> | initialization vector length (1 or more bytes) |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_EncryptUpdate()

```
fsp_err_t R_SCE_AES128GCM_EncryptUpdate ( sce_gcm_handle_t * handle, uint8_t * plain, uint8_t * cipher, uint32_t plain_data_length, uint8_t * aad, uint32_t aad_length )
```

The `R_SCE_AES128GCM_EncryptUpdate()` function encrypts the plaintext specified in the second argument, `plain`, in GCM mode using the values specified for `wrapped_key` and `initial_vector` in `R_SCE_AES128GCM_EncryptInit()`, along with the additional authentication data specified in the fifth argument, `aad`. Inside this function, the data that is input by the user is buffered until the input values of `aad` and `plain` exceed 16 bytes. After the input data from `plain` reaches 16 bytes or more, the encryption result is output to the ciphertext data area specified in the third argument, `cipher`. The lengths of the `plain` and `aad` data to input are respectively specified in the fourth argument, `plain_data_length`, and the sixth argument, `aad_length`. For these, specify not the total byte count for the `aad` and `plain` input data, but rather the data length to input when the user calls this function. If the input values `plain` and `aad` are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from `aad`, and then process the data that is input from `plain`. If `aad` data is input after starting to input `plain` data, an error will occur. If `aad` data and `plain` data are input to this function at the same time, the `aad` data will be processed, and then the function will transition to the `plain` data input state.

Specify areas for `plain` and `cipher` that do not overlap. For `plain`, `cipher`, `initial_vector`, and `aad`, specify RAM addresses that are multiples of 4

Parameters

| | | |
|----------|-------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_data_length | plaintext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PARAMETER | After the data from <code>plain</code> was input, an invalid handle was input from <code>aad</code> . |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_EncryptFinal()

```
fsp_err_t R_SCE_AES128GCM_EncryptFinal ( sce_gcm_handle_t * handle, uint8_t * cipher, uint32_t * cipher_data_length, uint8_t * atag )
```

If there is 16-byte fractional data indicated by the total data length of the value of plain that was input by R_SCE_AES128GCM_EncryptUpdate (), the R_SCE_AES128GCM_EncryptFinal() function will output the result of encrypting that fractional data to the ciphertext data area specified in the second argument, cipher. Here, the portion that does not reach 16 bytes will be padded with zeros. The authentication tag is output to the fourth argument, atag. For cipher and atag, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|--------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area (cipher_data_length byte) |
| [in,out] | cipher_data_length | ciphertext data length (0 always written here) |
| [in,out] | atag | authentication tag area |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_DecryptInit()

```
fsp_err_t R_SCE_AES128GCM_DecryptInit ( sce_gcm_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector, uint32_t initial_vector_length )
```

The `R_SCE_AES128GCM_DecryptInit()` function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128GCM_DecryptUpdate()` function and `R_SCE_AES128GCM_DecryptFinal()` function.

Parameters

| | | |
|----------|------------------------------------|---|
| [in,out] | <code>handle</code> | AES-GCM handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |
| [in] | <code>initial_vector</code> | initialization vector area (<code>initial_vector_length</code> byte) |
| [in] | <code>initial_vector_length</code> | initialization vector length (1 or more bytes) |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_DecryptUpdate()

```
fsp_err_t R_SCE_AES128GCM_DecryptUpdate ( sce_gcm_handle_t* handle, uint8_t* cipher,
uint8_t* plain, uint32_t cipher_data_length, uint8_t* aad, uint32_t aad_length )
```

The `R_SCE_AES128GCM_DecryptUpdate()` function decrypts the ciphertext specified in the second argument, `cipher`, in GCM mode using the values specified for `wrapped_key` and `initial_vector` in `R_SCE_AES128GCM_DecryptInit()`, along with the additional authentication data specified in the fifth argument, `aad`. Inside this function, the data that is input by the user is buffered until the input values of `aad` and `plain` exceed 16 bytes. After the input data from `cipher` reaches 16 bytes or more, the decryption result is output to the plaintext data area specified in the third argument, `plain`. The lengths of the `cipher` and `aad` data to input are respectively specified in the fourth argument, `cipher_data_length`, and the sixth argument, `aad_length`. For these, specify not the total byte count for the `aad` and `cipher` input data, but rather the data length to input when the user calls this function. If the input values `cipher` and `aad` are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from `aad`, and then process the data that is input from `cipher`. If `aad` data is input after starting to input `cipher` data, an error will occur. If `aad` data and `cipher` data are input to this function at the same time, the `aad` data will be processed, and then the function will transition to the `cipher` data input state. Specify areas for `plain` and `cipher` that do not overlap. For `plain`, `cipher`, `stage`, `initial_vector`, and `aad`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|---------------------------------|--|
| [in,out] | <code>handle</code> | AES-GCM handler (work area) |
| [in,out] | <code>cipher</code> | ciphertext data area |
| [in] | <code>plain</code> | plaintext data area |
| [in] | <code>cipher_data_length</code> | ciphertext data length (0 or more bytes) |
| [in] | <code>aad</code> | additional authentication data (<code>aad_length</code> byte) |
| [in] | <code>aad_length</code> | additional authentication data length (0 or more bytes) |

Return values

| | |
|--|---|
| <code>FSP_SUCCESS</code> | Normal termination |
| <code>FSP_ERR_CRYPTTO_SCE_PARAMETER</code> | After the data from <code>plain</code> was input, an invalid handle was input from <code>aad</code> . |
| <code>FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION</code> | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_DecryptFinal()

```
fsp_err_t R_SCE_AES128GCM_DecryptFinal ( sce_gcm_handle_t* handle, uint8_t* plain, uint32_t* plain_data_length, uint8_t* atag, uint32_t atag_length )
```

The `R_SCE_AES128GCM_DecryptFinal()` function decrypts, in GCM mode, the fractional ciphertext specified by `R_SCE_AES128GCM_DecryptUpdate()` that does not reach 16 bytes, and ends GCM decryption. The encryption data and authentication tag are respectively output to the plaintext data area specified in the second argument, `plain`, and the authentication tag area specified in the fourth argument, `atag`. The decoded data length is output to the third argument, `plain_data_length`. If authentication fails, the return value will be `TSIP_ERR_AUTHENTICATION`. For the fourth argument, `atag`, input 16 bytes or less. If it is less than 16 bytes, it will be padded with zeros inside the function. For `plain` and `atag`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|-------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | plain | plaintext data area (cipher_data_length byte) |
| [in,out] | plain_data_length | plaintext data length (0 always written here) |
| [in,out] | atag | authentication tag area (atag_length byte) |
| [in] | atag_length | authentication tag length (4,8,12,13,14,15,16 bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_EncryptInit()

```
fsp_err_t R_SCE_AES256GCM_EncryptInit ( sce_gcm_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector, uint32_t initial_vector_length )
```

The `R_SCE_AES256GCM_EncryptInit()` function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES256GCM_EncryptUpdate()` function and `R_SCE_AES256GCM_EncryptFinal()` function.

Parameters

| | | |
|----------|------------------------------------|---|
| [in,out] | <code>handle</code> | AES-GCM handler (work area) |
| [in] | <code>wrapped_key</code> | 256-bit AES wrapped key |
| [in] | <code>initial_vector</code> | initialization vector area (<code>initial_vector_length</code> byte) |
| [in] | <code>initial_vector_length</code> | initialization vector length (1 or more bytes) |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_EncryptUpdate()

```
fsp_err_t R_SCE_AES256GCM_EncryptUpdate ( sce_gcm_handle_t * handle, uint8_t * plain, uint8_t * cipher, uint32_t plain_data_length, uint8_t * aad, uint32_t aad_length )
```

The `R_SCE_AES256GCM_EncryptUpdate()` function encrypts the plaintext specified in the second argument, `plain`, in GCM mode using the values specified for `wrapped_key` and `initial_vector` in `R_SCE_AES256GCM_EncryptInit()`, along with the additional authentication data specified in the fifth argument, `aad`. Inside this function, the data that is input by the user is buffered until the input values of `aad` and `plain` exceed 16 bytes. After the input data from `plain` reaches 16 bytes or more, the encryption result is output to the ciphertext data area specified in the third argument, `cipher`. The lengths of the `plain` and `aad` data to input are respectively specified in the fourth argument, `plain_data_length`, and the sixth argument, `aad_length`. For these, specify not the total byte count for the `aad` and `plain` input data, but rather the data length to input when the user calls this function. If the input values `plain` and `aad` are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from `aad`, and then process the data that is input from `plain`. If `aad` data is input after starting to input `plain` data, an error will occur. If `aad` data and `plain` data are input to this function at the same time, the `aad` data will be processed, and then the function will transition to the `plain` data input state.

Specify areas for `plain` and `cipher` that do not overlap. For `plain`, `cipher`, `initial_vector`, and `aad`, specify RAM addresses that are multiples of 4

Parameters

| | | |
|----------|-------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_data_length | plaintext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PARAMETER | After the data from <code>plain</code> was input, an invalid handle was input from <code>aad</code> . |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_EncryptFinal()

```
fsp_err_t R_SCE_AES256GCM_EncryptFinal ( sce_gcm_handle_t * handle, uint8_t * cipher, uint32_t * cipher_data_length, uint8_t * atag )
```

If there is 16-byte fractional data indicated by the total data length of the value of plain that was input by R_SCE_AES256GCM_EncryptUpdate (), the R_SCE_AES256GCM_EncryptFinal() function will output the result of encrypting that fractional data to the ciphertext data area specified in the second argument, cipher. Here, the portion that does not reach 16 bytes will be padded with zeros. The authentication tag is output to the fourth argument, atag. For cipher and atag, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|--------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area (cipher_data_length byte) |
| [in,out] | cipher_data_length | ciphertext data length (0 always written here) |
| [in,out] | atag | authentication tag area |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_DecryptInit()

```
fsp_err_t R_SCE_AES256GCM_DecryptInit ( sce_gcm_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * initial_vector, uint32_t initial_vector_length )
```

The `R_SCE_AES256GCM_DecryptInit()` function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES256GCM_DecryptUpdate()` function and `R_SCE_AES256GCM_DecryptFinal()` function.

Parameters

| | | |
|----------|------------------------------------|---|
| [in,out] | <code>handle</code> | AES-GCM handler (work area) |
| [in] | <code>wrapped_key</code> | 256-bit AES wrapped key |
| [in] | <code>initial_vector</code> | initialization vector area (<code>initial_vector_length</code> byte) |
| [in] | <code>initial_vector_length</code> | initialization vector length (1 or more bytes) |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_DecryptUpdate()

```
fsp_err_t R_SCE_AES256GCM_DecryptUpdate ( sce_gcm_handle_t* handle, uint8_t* cipher,
uint8_t* plain, uint32_t cipher_data_length, uint8_t* aad, uint32_t aad_length )
```

The `R_SCE_AES256GCM_DecryptUpdate()` function decrypts the ciphertext specified in the second argument, `cipher`, in GCM mode using the values specified for `wrapped_key` and `initial_vector` in `R_SCE_AES256GCM_DecryptInit()`, along with the additional authentication data specified in the fifth argument, `aad`. Inside this function, the data that is input by the user is buffered until the input values of `aad` and `plain` exceed 16 bytes. After the input data from `cipher` reaches 16 bytes or more, the decryption result is output to the plaintext data area specified in the third argument, `plain`. The lengths of the cipher and `aad` data to input are respectively specified in the fourth argument, `cipher_data_length`, and the sixth argument, `aad_length`. For these, specify not the total byte count for the `aad` and cipher input data, but rather the data length to input when the user calls this function. If the input values `cipher` and `aad` are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from `aad`, and then process the data that is input from `cipher`. If `aad` data is input after starting to input cipher data, an error will occur. If `aad` data and cipher data are input to this function at the same time, the `aad` data will be processed, and then the function will transition to the cipher data input state. Specify areas for `plain` and `cipher` that do not overlap. For `plain`, `cipher`, `stage`, `initial_vector`, and `aad`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|--------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in] | plain | plaintext data area |
| [in] | cipher_data_length | ciphertext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | After the data from <code>plain</code> was input, an invalid handle was input from <code>aad</code> . |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_DecryptFinal()

```
fsp_err_t R_SCE_AES256GCM_DecryptFinal ( sce_gcm_handle_t* handle, uint8_t* plain, uint32_t* plain_data_length, uint8_t* atag, uint32_t atag_length )
```

The `R_SCE_AES256GCM_DecryptFinal()` function decrypts, in GCM mode, the fractional ciphertext specified by `R_SCE_AES256GCM_DecryptUpdate()` that does not reach 16 bytes, and ends GCM decryption. The encryption data and authentication tag are respectively output to the plaintext data area specified in the second argument, `plain`, and the authentication tag area specified in the fourth argument, `atag`. The decoded data length is output to the third argument, `plain_data_length`. If authentication fails, the return value will be `TSIP_ERR_AUTHENTICATION`. For the fourth argument, `atag`, input 16 bytes or less. If it is less than 16 bytes, it will be padded with zeros inside the function. For `plain` and `atag`, specify RAM addresses that are multiples of 4.

Parameters

| | | |
|----------|-------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | plain | plaintext data area (cipher_data_length byte) |
| [in,out] | plain_data_length | plaintext data length (0 always written here) |
| [in,out] | atag | authentication tag area (atag_length byte) |
| [in] | atag_length | authentication tag length (4,8,12,13,14,15,16 bytes) |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTTO_SCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_EncryptInit()

```
fsp_err_t R_SCE_AES128CCM_EncryptInit ( sce_ccm_handle_t* handle, sce_aes_wrapped_key_t* wrapped_key, uint8_t* nonce, uint32_t nonce_length, uint8_t* adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length )
```

The R_SCE_AES128CCM_EncryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES128CCM_EncryptUpdate() and R_SCE_AES128CCM_EncryptFinal() use handle as an argument.

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_EncryptUpdate()

```
fsp_err_t R_SCE_AES128CCM_EncryptUpdate ( sce_ccm_handle_t * handle, uint8_t * plain, uint8_t * cipher, uint32_t plain_length )
```

The `R_SCE_AES128CCM_EncryptUpdate()` function encrypts the plaintext specified in the second argument, `plain`, in CCM mode using the values specified by `wrapped_key`, `nonce`, and `adata` in `R_SCE_AES128CCM_EncryptInit()`. This function buffers internally the data input by the user until the input value of `plain` exceeds 16 bytes. Once the amount of `plain` input data is 16 bytes or greater, the encrypted result is output to `cipher`, which is specified in the third argument. Use `payload_length` in `R_SCE_AES128CCM_EncryptInit()` to specify the total data length of `plain` that will be input. Use `plain_length` in this function to specify the data length to be input when the user calls this function. If the input value of `plain` is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to `plain` and `cipher` do not overlap. Also, specify RAM addresses that are multiples of 4 for `plain` and `cipher`.

Parameters

| | | |
|----------|--------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_length | plaintext data length |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPT_SCE_PARAMETER | An invalid handle was input. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_EncryptFinal()

```
fsp_err_t R_SCE_AES128CCM_EncryptFinal ( sce_ccm_handle_t * handle, uint8_t * cipher, uint32_t
* cipher_length, uint8_t * mac, uint32_t mac_length )
```

If the data length of plain input in `R_SCE_AES128CCM_EncryptUpdate()` results in leftover data after 16 bytes, the `R_SCE_AES128CCM_EncryptFinal()` function outputs the leftover encrypted data to `cipher`, which is specified in the second argument. The MAC value is output to the fourth argument, `mac`. Set the fifth argument, `mac_length` to the same value as that specified for the argument `mac_length` in `Aes128CcmEncryptInit()`. Also, specify RAM addresses that are multiples of 4 for `cipher` and `mac`.

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in,out] | cipher_length | ciphertext data length |
| [in,out] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_DecryptInit()

```
fsp_err_t R_SCE_AES128CCM_DecryptInit ( sce_ccm_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * nonce, uint32_t nonce_length, uint8_t * adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length )
```

The R_SCE_AES128CCM_DecryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES128CCM_DecryptUpdate() and R_SCE_AES128CCM_DecryptFinal() use handle as an argument.

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_DecryptUpdate()

```
fsp_err_t R_SCE_AES128CCM_DecryptUpdate ( sce_ccm_handle_t * handle, uint8_t * cipher,
uint8_t * plain, uint32_t cipher_length )
```

The `R_SCE_AES128CCM_DecryptUpdate()` function decrypts the ciphertext specified by the second argument, `cipher`, in CCM mode using the values specified by `wrapped_key`, `nonce`, and `adata` in `R_SCE_AES128CCM_DecryptInit()`. This function buffers internally the data input by the user until the input value of `cipher` exceeds 16 bytes. Once the amount of `cipher` input data is 16 bytes or greater, the decrypted result is output to `plain`, which is specified in the third argument. Use `payload_length` in `R_SCE_AES128CCM_DecryptInit()` to specify the total data length of `cipher` that will be input. Use `cipher_length` in this function to specify the data length to be input when the user calls this function. If the input value of `cipher` is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to `cipher` and `plain` do not overlap. Also, specify RAM addresses that are multiples of 4 for `cipher` and `plain`.

Parameters

| | | |
|----------|---------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in] | cipher_length | ciphertext data length |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128CCM_DecryptFinal()**

```
fsp_err_t R_SCE_AES128CCM_DecryptFinal ( sce_ccm_handle_t * handle, uint8_t * plain, uint32_t * plain_length, uint8_t * mac, uint32_t mac_length )
```

If the data length of cipher input in [R_SCE_AES128GCM_DecryptUpdate\(\)](#) results in leftover data after 16 bytes, the [R_SCE_AES128GCM_DecryptFinal\(\)](#) function outputs the leftover decrypted data to cipher, which is specified in the second argument. In addition, the function verifies the fourth argument, mac. Set the fifth argument, mac_length, to the same value as that specified for the argument mac_length in [Aes128CcmDecryptInit\(\)](#).

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | plain | plaintext data area |
| [in,out] | plain_length | plaintext data length |
| [in] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error, or authentication failed. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_EncryptInit()

```
fsp_err_t R_SCE_AES256CCM_EncryptInit ( sce_ccm_handle_t* handle, sce_aes_wrapped_key_t* wrapped_key, uint8_t* nonce, uint32_t nonce_length, uint8_t* adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length )
```

The R_SCE_AES256CCM_EncryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES256CCM_EncryptUpdate() and R_SCE_AES256CCM_EncryptFinal() use handle as an argument.

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_EncryptUpdate()

```
fsp_err_t R_SCE_AES256CCM_EncryptUpdate ( sce_ccm_handle_t * handle, uint8_t * plain, uint8_t * cipher, uint32_t plain_length )
```

The `R_SCE_AES256CCM_EncryptUpdate()` function encrypts the plaintext specified in the second argument, `plain`, in CCM mode using the values specified by `wrapped_key`, `nonce`, and `adata` in `R_SCE_AES256CCM_EncryptInit()`. This function buffers internally the data input by the user until the input value of `plain` exceeds 16 bytes. Once the amount of `plain` input data is 16 bytes or greater, the encrypted result is output to `cipher`, which is specified in the third argument. Use `payload_length` in `R_SCE_AES256CCM_EncryptInit()` to specify the total data length of `plain` that will be input. Use `plain_length` in this function to specify the data length to be input when the user calls this function. If the input value of `plain` is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to `plain` and `cipher` do not overlap. Also, specify RAM addresses that are multiples of 4 for `plain` and `cipher`.

Parameters

| | | |
|----------|---------------------------|-----------------------------|
| [in,out] | <code>handle</code> | AES-CCM handler (work area) |
| [in] | <code>plain</code> | plaintext data area |
| [in,out] | <code>cipher</code> | ciphertext data area |
| [in] | <code>plain_length</code> | plaintext data length |

Return values

| | |
|--|---------------------------------|
| <code>FSP_SUCCESS</code> | Normal termination |
| <code>FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION</code> | An invalid function was called. |
| <code>FSP_ERR_CRYPT_SCE_PARAMETER</code> | An invalid handle was input. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_EncryptFinal()

```
fsp_err_t R_SCE_AES256CCM_EncryptFinal ( sce_ccm_handle_t * handle, uint8_t * cipher, uint32_t
* cipher_length, uint8_t * mac, uint32_t mac_length )
```

If the data length of plain input in `R_SCE_AES256CCM_EncryptUpdate()` results in leftover data after 16 bytes, the `R_SCE_AES256CCM_EncryptFinal()` function outputs the leftover encrypted data to `cipher`, which is specified in the second argument. The MAC value is output to the fourth argument, `mac`. Set the fifth argument, `mac_length` to the same value as that specified for the argument `mac_length` in `Aes256CcmEncryptInit()`. Also, specify RAM addresses that are multiples of 4 for `cipher` and `mac`.

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in,out] | cipher_length | ciphertext data length |
| [in,out] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_DecryptInit()

```
fsp_err_t R_SCE_AES256CCM_DecryptInit ( sce_ccm_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key, uint8_t * nonce, uint32_t nonce_length, uint8_t * adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length )
```

The `R_SCE_AES256CCM_DecryptInit()` function prepares to perform CCM computation and writes the result to the first argument, `handle`. The succeeding functions `R_SCE_AES256CCM_DecryptUpdate()` and `R_SCE_AES256CCM_DecryptFinal()` use `handle` as an argument.

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_DecryptUpdate()

```
fsp_err_t R_SCE_AES256CCM_DecryptUpdate ( sce_ccm_handle_t * handle, uint8_t * cipher,
uint8_t * plain, uint32_t cipher_length )
```

The `R_SCE_AES256CCM_DecryptUpdate()` function decrypts the ciphertext specified by the second argument, `cipher`, in CCM mode using the values specified by `wrapped_key`, `nonce`, and `adata` in `R_SCE_AES256CCM_DecryptInit()`. This function buffers internally the data input by the user until the input value of `cipher` exceeds 16 bytes. Once the amount of `cipher` input data is 16 bytes or greater, the decrypted result is output to `plain`, which is specified in the third argument. Use `payload_length` in `R_SCE_AES256CCM_DecryptInit()` to specify the total data length of `cipher` that will be input. Use `cipher_length` in this function to specify the data length to be input when the user calls this function. If the input value of `cipher` is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to `cipher` and `plain` do not overlap. Also, specify RAM addresses that are multiples of 4 for `cipher` and `plain`.

Parameters

| | | |
|----------|---------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in] | cipher_length | ciphertext data length |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPT_SCE_PARAMETER | An invalid handle was input. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256CCM_DecryptFinal()**

```
fsp_err_t R_SCE_AES256CCM_DecryptFinal ( sce_ccm_handle_t * handle, uint8_t * plain, uint32_t * plain_length, uint8_t * mac, uint32_t mac_length )
```

If the data length of cipher input in [R_SCE_AES256GCM_DecryptUpdate\(\)](#) results in leftover data after 16 bytes, the [R_SCE_AES256GCM_DecryptFinal\(\)](#) function outputs the leftover decrypted data to cipher, which is specified in the second argument. In addition, the function verifies the fourth argument, mac. Set the fifth argument, mac_length, to the same value as that specified for the argument mac_length in [Aes256CcmDecryptInit\(\)](#).

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | plain | plaintext data area |
| [in,out] | plain_length | plaintext data length |
| [in] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error, or authentication failed. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_GenerateInit()

```
fsp_err_t R_SCE_AES128CMAC_GenerateInit ( sce_cmac_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES128CMAC_GenerateInit()` function performs preparations for the execution of an CMAC calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128CMAC_GenerateUpdate()` function and `R_SCE_AES128CMAC_GenerateFinal()` function.

Parameters

| | | |
|----------|--------------------------|------------------------------|
| [in,out] | <code>handle</code> | AES-CMAC handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_GenerateUpdate()

```
fsp_err_t R_SCE_AES128CMAC_GenerateUpdate ( sce_cmac_handle_t * handle, uint8_t * message,
uint32_t message_length )
```

The `R_SCE_AES128CMAC_GenerateUpdate()` function performs MAC value generation based on the message specified in the second argument, `message`, using the value specified for `wrapped_key` in `R_SCE_AES128CMAC_GenerateInit()`. Inside this function, the data that is input by the user is buffered until the input value of `message` exceeds 16 bytes. The length of the message data to input is specified in the third argument, `message_len`. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, `message`, is not a multiple of 16 bytes, it will be padded within the function. For `message`, specify a RAM address that are multiples of 4.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_GenerateFinal()

```
fsp_err_t R_SCE_AES128CMAC_GenerateFinal ( sce_cmac_handle_t* handle, uint8_t* mac )
```

The R_SCE_AES128CMAC_GenerateFinal() function outputs the MAC value to the MAC data area specified in the second argument, mac, and ends CMAC mode.

Parameters

| | | |
|----------|--------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (16byte) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Not used. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_VerifyInit()

```
fsp_err_t R_SCE_AES128CMAC_VerifyInit ( sce_cmac_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES128CMAC_VerifyInit()` function performs preparations for the execution of a CMAC calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES128CMAC_VerifyUpdate()` function and `R_SCE_AES128CMAC_VerifyFinal()` function.

Parameters

| | | |
|----------|--------------------------|------------------------------|
| [in,out] | <code>handle</code> | AES-CMAC handler (work area) |
| [in] | <code>wrapped_key</code> | 128-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128CMAC_VerifyUpdate()**

```
fsp_err_t R_SCE_AES128CMAC_VerifyUpdate ( sce_cmact_handle_t* handle, uint8_t* message,
uint32_t message_length )
```

The **R_SCE_AES128CMAC_VerifyUpdate()** function performs MAC value generation based on the message specified in the second argument, `message`, using the value specified for `wrapped_key` in **R_SCE_AES128CMAC_VerifyInit()**. Inside this function, the data that is input by the user is buffered until the input value of `message` exceeds 16 bytes. The length of the message data to input is specified in the third argument, `message_len`. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, `message`, is not a multiple of 16 bytes, it will be padded within the function. For `message`, specify a RAM address that are multiples of 4.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPT_SCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES128CMAC_VerifyFinal()**

```
fsp_err_t R_SCE_AES128CMAC_VerifyFinal ( sce_cmact_handle_t* handle, uint8_t* mac, uint32_t mac_length )
```

The `R_SCE_AES128CMAC_VerifyFinal()` function inputs the MAC value in the MAC data area specified in the second argument, `mac`, and verifies the MAC value. If authentication fails, the return value will be `TSIP_ERR_AUTHENTICATION`. If the MAC value is less than 16 bytes, it will be padded with zeros inside the function.

Parameters

| | | |
|----------|------------|---------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (mac_length byte) |
| [in,out] | mac_length | MAC data length (2 to 16 bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_GenerateInit()

```
fsp_err_t R_SCE_AES256CMAC_GenerateInit ( sce_cmac_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES256CMAC_GenerateInit()` function performs preparations for the execution of an CMAC calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES256CMAC_GenerateUpdate()` function and `R_SCE_AES256CMAC_GenerateFinal()` function.

Parameters

| | | |
|----------|--------------------------|------------------------------|
| [in,out] | <code>handle</code> | AES-CMAC handler (work area) |
| [in] | <code>wrapped_key</code> | 256-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_GenerateUpdate()

```
fsp_err_t R_SCE_AES256CMAC_GenerateUpdate ( sce_cmac_handle_t* handle, uint8_t* message,
uint32_t message_length )
```

The `R_SCE_AES256CMAC_GenerateUpdate()` function performs MAC value generation based on the message specified in the second argument, `message`, using the value specified for `wrapped_key` in `R_SCE_AES256CMAC_GenerateInit()`. Inside this function, the data that is input by the user is buffered until the input value of `message` exceeds 16 bytes. The length of the message data to input is specified in the third argument, `message_len`. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, `message`, is not a multiple of 16 bytes, it will be padded within the function. For `message`, specify a RAM address that are multiples of 4.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256CMAC_GenerateFinal()**

```
fsp_err_t R_SCE_AES256CMAC_GenerateFinal ( sce_cmac_handle_t* handle, uint8_t* mac )
```

The `R_SCE_AES256CMAC_GenerateFinal()` function outputs the MAC value to the MAC data area specified in the second argument, `mac`, and ends CMAC mode.

Parameters

| | | |
|----------|--------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (16byte) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Not used. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_VerifyInit()

```
fsp_err_t R_SCE_AES256CMAC_VerifyInit ( sce_cmac_handle_t * handle, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_AES256CMAC_VerifyInit()` function performs preparations for the execution of a CMAC calculation, and writes the result to the first argument, `handle`. The value of `handle` is used as an argument in the subsequent `R_SCE_AES256CMAC_VerifyUpdate()` function and `R_SCE_AES256CMAC_VerifyFinal()` function.

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256CMAC_VerifyUpdate()**

```
fsp_err_t R_SCE_AES256CMAC_VerifyUpdate ( sce_cmact_handle_t* handle, uint8_t* message,
uint32_t message_length )
```

The **R_SCE_AES256CMAC_VerifyUpdate()** function performs MAC value generation based on the message specified in the second argument, `message`, using the value specified for `wrapped_key` in **R_SCE_AES256CMAC_VerifyInit()**. Inside this function, the data that is input by the user is buffered until the input value of `message` exceeds 16 bytes. The length of the message data to input is specified in the third argument, `message_len`. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, `message`, is not a multiple of 16 bytes, it will be padded within the function. For `message`, specify a RAM address that are multiples of 4.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPT_SCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_AES256CMAC_VerifyFinal()**

```
fsp_err_t R_SCE_AES256CMAC_VerifyFinal ( sce_cmec_handle_t* handle, uint8_t* mac, uint32_t mac_length )
```

The **R_SCE_AES256CMAC_VerifyFinal()** function inputs the MAC value in the MAC data area specified in the second argument, *mac*, and verifies the MAC value. If authentication fails, the return value will be **TSIP_ERR_AUTHENTICATION**. If the MAC value is less than 16 bytes, it will be padded with zeros inside the function.

Parameters

| | | |
|----------|------------|---------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (mac_length byte) |
| [in,out] | mac_length | MAC data length (2 to 16 bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPT_SCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPT_SCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPT_SCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPT_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_SHA256_Init()**

```
fsp_err_t R_SCE_SHA256_Init ( sce_sha_md5_handle_t* handle)
```

The **R_SCE_SHA256_Init()** function performs preparations for the execution of an SHA-256 hash calculation, and writes the result to the first argument, *handle*. The value of *handle* is used as an argument in the subsequent **R_SCE_SHA256_Update()** function and **R_SCE_SHA256_Final()** function.

Parameters

| | | |
|----------|--------|-------------------------|
| [in,out] | handle | SHA handler (work area) |
|----------|--------|-------------------------|

Return values

| | |
|-------------|--------------------|
| FSP_SUCCESS | Normal termination |
|-------------|--------------------|

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256_Update()

```
fsp_err_t R_SCE_SHA256_Update ( sce_sha_md5_handle_t * handle, uint8_t * message, uint32_t message_length )
```

The R_SCE_SHA256_Update() function calculates a hash value based on the second argument, message, and the third argument, message_length, and writes the ongoing status to the first argument, handle. After message input is completed, call R_SCE_SHA256_Final().

Parameters

| | | |
|----------|----------------|-------------------------|
| [in,out] | handle | SHA handler (work area) |
| [in] | message | message data area |
| [in] | message_length | message data length |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256_Final()

```
fsp_err_t R_SCE_SHA256_Final ( sce_sha_md5_handle_t * handle, uint8_t * digest, uint32_t *
digest_length )
```

Using the handle specified in the first argument, handle, the R_SCE_SHA256_Final() function writes the calculation result to the second argument, digest, and writes the length of the calculation result to the third argument, digest_length.

Parameters

| | | |
|----------|---------------|----------------------------|
| [in,out] | handle | SHA handler (work area) |
| [in,out] | digest | hasha data area |
| [in,out] | digest_length | hash data length (32bytes) |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_SHA256HMAC_GenerateInit()**

```
fsp_err_t R_SCE_SHA256HMAC_GenerateInit ( sce_hmac_sha_handle_t* handle,
sce_hmac_sha_wrapped_key_t* wrapped_key )
```

The `R_SCE_SHA256HMAC_GenerateInit()` function uses the second argument `wrapped_key` to prepare for execution of SHA256-HMAC calculation, then writes the result to the first argument `handle`. The argument `handle` is used by the subsequent `R_SCE_SHA256HMAC_GenerateUpdate()` function or `R_SCE_SHA256HMAC_GenerateFinal()` function.

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | SHA-HMAC handler (work area) |
| [in] | wrapped_key | MAC wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | An invalid MAC wrapped key was input. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_GenerateUpdate()

```
fsp_err_t R_SCE_SHA256HMAC_GenerateUpdate ( sce_hmac_sha_handle_t* handle, uint8_t* message, uint32_t message_length )
```

The `R_SCE_SHA256HMAC_GenerateUpdate()` function uses the handle specified by the first argument `handle`, calculates a hash value from the second argument `message` and third argument `message_length`, then writes the intermediate result to the first argument `handle`. After message input finishes, call the `R_SCE_SHA256HMAC_GenerateFinal()` function.

Parameters

| | | |
|----------|----------------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in] | message | Message area |
| [in] | message_length | Message length |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_GenerateFinal()

```
fsp_err_t R_SCE_SHA256HMAC_GenerateFinal ( sce_hmac_sha_handle_t* handle, uint8_t* mac )
```

The `R_SCE_SHA256HMAC_GenerateFinal()` function uses the handle specified by the first argument `handle` and writes the calculation result to the second argument `mac`.

Parameters

| | | |
|----------|--------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in,out] | mac | HMAC area (32 bytes) |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_VerifyInit()

```
fsp_err_t R_SCE_SHA256HMAC_VerifyInit ( sce_hmac_sha_handle_t* handle,
sce_hmac_sha_wrapped_key_t* wrapped_key )
```

The R_SCE_SHA256HMAC_VerifyInit() function uses the second argument wrapped_key to prepare for execution of SHA256-HMAC calculation, then writes the result to the first argument handle. The argument handle is used by the subsequent R_SCE_SHA256HMAC_VerifyUpdate() function or R_SCE_SHA256HMAC_VerifyFinal() function.

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | SHA-HMAC handler (work area) |
| [in] | wrapped_key | MAC wrapped key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | An invalid MAC wrapped key was input. |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_VerifyUpdate()

```
fsp_err_t R_SCE_SHA256HMAC_VerifyUpdate ( sce_hmac_sha_handle_t * handle, uint8_t *
message, uint32_t message_length )
```

The R_SCE_SHA256HMAC_VerifyUpdate() function uses the handle specified by the first argument handle, calculates a hash value from the second argument message and third argument message_length, then writes the intermediate result to the first argument handle. After message input finishes, call the R_SCE_SHA256HMAC_VerifyFinal() function.

Parameters

| | | |
|----------|----------------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in] | message | Message area |
| [in] | message_length | Message length |

Return values

| | |
|---------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTTO_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_SHA256HMAC_VerifyFinal()**

```
fsp_err_t R_SCE_SHA256HMAC_VerifyFinal ( sce_hmac_sha_handle_t* handle, uint8_t* mac,
uint32_t mac_length )
```

The `R_SCE_SHA256HMAC_VerifyFinal()` function uses the handle specified by the first argument handle and verifies the mac value from the second argument mac and third argument mac_length. Input a value in bytes from 4 to 32 as mac_length.

Parameters

| | | |
|----------|------------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in] | mac | HMAC area |
| [in] | mac_length | HMAC length |

Return values

| | |
|-------------------------------------|---------------------------------|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_RSASSA_PKCS1024_SignatureGenerate()**

```
fsp_err_t R_SCE_RSASSA_PKCS1024_SignatureGenerate ( sce_rsa_byte_data_t* message_hash,
sce_rsa_byte_data_t* signature, sce_rsa1024_private_wrapped_key_t* wrapped_key, uint8_t
hash_type )
```

The `R_SCE_RSASSA_PKCS1024_SignatureGenerate()` function generates, in accordance with RSASSA-PKCS1-V1_5, a signature from the message text or hash value that is input in the first argument, message_hash, using the private wrapped key input to the third argument, wrapped_key, and writes the signature text to the second argument, signature. When a message is specified in the first argument, message_hash->data_type, a hash value is calculated for the message as specified by the fourth argument, hash_type. When specifying a hash value in the first argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

| | | |
|------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value |
|------|--------------|--|

| | | | |
|----------|-------------|--|--|
| | | | <ul style="list-style-type: none"> message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in,out] | signature | | Signature text storage destination information <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing the signature text signature->data_length : data length |
| [in] | wrapped_key | | Inputs the 1024-bit RSA private wrapped key. |
| [in] | hash_type | | Only HW_SCE_RSA_HASH_SHA256 is supported |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS1024_SignatureVerify()

```
fsp_err_t R_SCE_RSASSA_PKCS1024_SignatureVerify ( sce_rsa_byte_data_t * signature,
sce_rsa_byte_data_t * message_hash, sce_rsa1024_public_wrapped_key_t * wrapped_key, uint8_t
hash_type )
```

The R_SCE_RSASSA_PKCS1024_SignatureVerify() function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument signature, and the message text or hash value input to the second argument, message_hash, using the public wrapped key input to the third argument, wrapped_key. When a message is specified in the second argument, message_hash->data_type, a hash value is calculated using the public wrapped key input to the third argument, wrapped_key, and as specified by the fourth argument, hash_type. When specifying a hash value in the second argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

| | | |
|------|--------------|--|
| [in] | signature | Signature text information to verify <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing the signature text signature->data_length : Specifies effective data length of the array |
| [in] | message_hash | Message text or hash value to verify <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | Inputs the 1024-bit RSA public wrapped key. |
| [in] | hash_type | Only |

| | | |
|--|--|-------------------------------------|
| | | HW_SCE_RSA_HASH_SHA256 is supported |
|--|--|-------------------------------------|

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS2048_SignatureGenerate()

```
fsp_err_t R_SCE_RSASSA_PKCS2048_SignatureGenerate ( sce_rsa_byte_data_t* message_hash,
sce_rsa_byte_data_t* signature, sce_rsa2048_private_wrapped_key_t* wrapped_key, uint8_t
hash_type )
```

The `R_SCE_RSASSA_PKCS2048_SignatureGenerate()` function generates, in accordance with RSASSA-PKCS1-V1_5, a signature from the message text or hash value that is input in the first argument, `message_hash`, using the private wrapped key input to the third argument, `wrapped_key`, and writes the signature text to the second argument, `signature`. When a message is specified in the first argument, `message_hash->data_type`, a hash value is calculated for the message as specified by the fourth argument, `hash_type`. When specifying a hash value in the first argument, `message_hash->data_type`, a hash value calculated with a hash algorithm as specified by the fourth argument, `hash_type`, must be input to `message_hash->pdata`.

Parameters

| | | |
|------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature <ul style="list-style-type: none"> • <code>message_hash->pdata</code> : Specifies pointer to array storing the message or hash value • <code>message_hash->data_length</code> : Specifies effective data length of the array (Specify only when Message is selected) • <code>message_hash->data_type</code> : Selects the |
|------|--------------|--|

| | | |
|----------|-------------|---|
| | | data type of message_hash (Message: 0 Hash value: 1) |
| [in,out] | signature | Signature text storage destination information <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing the signature text signature->data_length : data length |
| [in] | wrapped_key | Inputs the 2048-bit RSA private wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS2048_SignatureVerify()

```
fsp_err_t R_SCE_RSASSA_PKCS2048_SignatureVerify ( sce_rsa_byte_data_t * signature,
sce_rsa_byte_data_t * message_hash, sce_rsa2048_public_wrapped_key_t * wrapped_key, uint8_t
hash_type )
```

The `R_SCE_RSASSA_PKCS2048_SignatureVerify()` function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument `signature`, and the message text or hash value input to the second argument, `message_hash`, using the public wrapped key input to the third argument, `wrapped_key`. When a message is specified in the second argument, `message_hash->data_type`, a hash value is calculated using the public wrapped key input to the third argument, `wrapped_key`, and as specified by the fourth argument, `hash_type`. When specifying a hash value in the second argument, `message_hash->data_type`, a hash value calculated with a hash algorithm as specified by the fourth argument, `hash_type`, must be input to `message_hash->pdata`.

Parameters

| | | |
|------|--------------|--|
| [in] | signature | Signature text information to verify <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing the signature text signature->data_length : Specifies effective data length of the array |
| [in] | message_hash | Message text or hash value to verify <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | Inputs the 1024-bit RSA public wrapped key. |
| [in] | hash_type | Only |

| | | |
|--|--|-------------------------------------|
| | | HW_SCE_RSA_HASH_SHA256 is supported |
|--|--|-------------------------------------|

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS3072_SignatureVerify()

```
fsp_err_t R_SCE_RSASSA_PKCS3072_SignatureVerify ( sce_rsa_byte_data_t * signature,
sce_rsa_byte_data_t * message_hash, sce_rsa3072_public_wrapped_key_t * wrapped_key, uint8_t
hash_type )
```

The `R_SCE_RSASSA_PKCS3072_SignatureVerify()` function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument `signature`, and the message text or hash value input to the second argument, `message_hash`, using the public wrapped key input to the third argument, `wrapped_key`. When a message is specified in the second argument, `message_hash->data_type`, a hash value is calculated using the public wrapped key input to the third argument, `wrapped_key`, and as specified by the fourth argument, `hash_type`. When specifying a hash value in the second argument, `message_hash->data_type`, a hash value calculated with a hash algorithm as specified by the fourth argument, `hash_type`, must be input to `message_hash->pdata`.

Parameters

| | | |
|------|--------------|--|
| [in] | signature | Signature text information to verify <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing the signature text signature->data_length : Specifies effective data length of the array |
| [in] | message_hash | Message text or hash value to verify <ul style="list-style-type: none"> message_hash->pdata |

| | | | |
|------|-------------|--|---|
| | | | <p>ta : Specifies pointer to array storing the message or hash value</p> <ul style="list-style-type: none"> message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | | Inputs the 3072-bit RSA public wrapped key. |
| [in] | hash_type | | Only HW_SCE_RSA_HASH_SHA256 is supported |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS4096_SignatureVerify()

```
fsp_err_t R_SCE_RSASSA_PKCS4096_SignatureVerify ( sce_rsa_byte_data_t * signature,
sce_rsa_byte_data_t * message_hash, sce_rsa4096_public_wrapped_key_t * wrapped_key, uint8_t
hash_type )
```

The `R_SCE_RSASSA_PKCS4096_SignatureVerify()` function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument `signature`, and the message text or hash value input to the second argument, `message_hash`, using the public wrapped key input to the third argument, `wrapped_key`. When a message is specified in the second argument, `message_hash->data_type`, a hash value is calculated using the public wrapped key input to the third argument, `wrapped_key`, and as specified by the fourth argument, `hash_type`. When specifying a hash value in the second argument, `message_hash->data_type`, a hash value calculated with a hash algorithm as specified by the fourth argument, `hash_type`, must be input to `message_hash->pdata`.

Parameters

| | | |
|------|--------------|--|
| [in] | signature | Signature text information to verify <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing the signature text signature->data_length : Specifies effective data length of the array |
| [in] | message_hash | Message text or hash value to verify <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | Inputs the 1024-bit RSA public wrapped key. |
| [in] | hash_type | Only |

| | | |
|--|--|-------------------------------------|
| | | HW_SCE_RSA_HASH_SHA256 is supported |
|--|--|-------------------------------------|

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_AUTHENTICATION | Authentication failed |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_RSAES_PKCS1024_Encrypt()**

```
fsp_err_t R_SCE_RSAES_PKCS1024_Encrypt ( sce_rsa_byte_data_t* plain, sce_rsa_byte_data_t*
cipher, sce_rsa1024_public_wrapped_key_t* wrapped_key )
```

The `R_SCE_RSAES_PKCS1024_Encrypt()` function RSA-encrypts the plaintext input to the first argument, `plain`, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, `cipher`.

Parameters

| | | |
|----------|--------------------------|--|
| [in] | <code>plain</code> | plaintext <ul style="list-style-type: none"> <code>plain->pdata</code> : Specifies pointer to array containing plaintext. <code>plain->data_length</code> : Specifies valid data length of plaintext array. data size \leq public key n size - 11 |
| [in,out] | <code>cipher</code> | ciphertext <ul style="list-style-type: none"> <code>cipher->pdata</code> : Specifies pointer to array containing ciphertext. <code>cipher->data_length</code> : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size). |
| [in] | <code>wrapped_key</code> | Inputs the 1024-bit RSA public wrapped key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Incorrect wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS1024_Decrypt()

```
fsp_err_t R_SCE_RSAES_PKCS1024_Decrypt ( sce_rsa_byte_data_t* cipher, sce_rsa_byte_data_t*
plain, sce_rsa1024_private_wrapped_key_t* wrapped_key )
```

The R_SCE_RSAES_PKCS1024_Decrypt() function RSA-decrypts the ciphertext input to the first argument, cipher, according to RSAES-PKCS1-V1_5. It writes the decryption result to the second argument, plain.

Parameters

| | | |
|----------|-------------|--|
| [in] | cipher | ciphertext <ul style="list-style-type: none"> • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size). |
| [in,out] | plain | plaintext <ul style="list-style-type: none"> • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Inputs plaintext buffer size. The following size is required. Plaintext buffer size >= public key n size -11. Outputs valid data length after decryption (public key n size). |
| [in] | wrapped_key | Inputs the 1024-bit RSA private wrapped key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Incorrect wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |

| | |
|-------------------------|-----------------------------|
| FSP_ERR_CRYPT0_SCE_FAIL | An internal error occurred. |
|-------------------------|-----------------------------|

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS2048_Encrypt()

```
fsp_err_t R_SCE_RSAES_PKCS2048_Encrypt ( sce_rsa_byte_data_t* plain, sce_rsa_byte_data_t*
cipher, sce_rsa2048_public_wrapped_key_t* wrapped_key )
```

The R_SCE_RSAES_PKCS2048_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

| | | |
|----------|-------------|--|
| [in] | plain | plaintext <ul style="list-style-type: none"> plain->pdata : Specifies pointer to array containing plaintext. plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11 |
| [in,out] | cipher | ciphertext <ul style="list-style-type: none"> cipher->pdata : Specifies pointer to array containing ciphertext. cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size). |
| [in] | wrapped_key | Inputs the 2048-bit RSA public wrapped key. |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_KEY_SET_FAIL | Incorrect wrapped key was input. |
| FSP_ERR_CRYPTTO_SCE_PARAMETER | Input data is illegal. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS2048_Decrypt()

```
fsp_err_t R_SCE_RSAES_PKCS2048_Decrypt ( sce_rsa_byte_data_t* cipher, sce_rsa_byte_data_t*
plain, sce_rsa2048_private_wrapped_key_t* wrapped_key )
```

The R_SCE_RSAES_PKCS2048_Decrypt() function RSA-decrypts the ciphertext input to the first argument, cipher, according to RSAES-PKCS1-V1_5. It writes the decryption result to the second argument, plain.

Parameters

| | | |
|----------|-------------|--|
| [in] | cipher | ciphertext <ul style="list-style-type: none"> • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size). |
| [in,out] | plain | plaintext <ul style="list-style-type: none"> • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Inputs plaintext buffer size. The following size is required. Plaintext buffer size >= public key n size -11. Outputs valid data length after decryption (public key n size). |
| [in] | wrapped_key | Inputs the 1024-bit RSA private wrapped key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Incorrect wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |

| | |
|-------------------------|-----------------------------|
| FSP_ERR_CRYPT0_SCE_FAIL | An internal error occurred. |
|-------------------------|-----------------------------|

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS3072_Encrypt()

```
fsp_err_t R_SCE_RSAES_PKCS3072_Encrypt ( sce_rsa_byte_data_t* plain, sce_rsa_byte_data_t*
cipher, sce_rsa3072_public_wrapped_key_t* wrapped_key )
```

The R_SCE_RSAES_PKCS3072_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

| | | |
|----------|-------------|--|
| [in] | plain | plaintext <ul style="list-style-type: none"> plain->pdata : Specifies pointer to array containing plaintext. plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11 |
| [in,out] | cipher | ciphertext <ul style="list-style-type: none"> cipher->pdata : Specifies pointer to array containing ciphertext. cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size). |
| [in] | wrapped_key | Inputs the 3072-bit RSA public wrapped key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Incorrect wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS4096_Encrypt()

```
fsp_err_t R_SCE_RSAES_PKCS4096_Encrypt ( sce_rsa_byte_data_t* plain, sce_rsa_byte_data_t*
cipher, sce_rsa4096_public_wrapped_key_t* wrapped_key )
```

The R_SCE_RSAES_PKCS4096_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

| | | |
|----------|-------------|--|
| [in] | plain | plaintext <ul style="list-style-type: none"> plain->pdata : Specifies pointer to array containing plaintext. plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11 |
| [in,out] | cipher | ciphertext <ul style="list-style-type: none"> cipher->pdata : Specifies pointer to array containing ciphertext. cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size). |
| [in] | wrapped_key | Inputs the 4096-bit RSA public wrapped key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Incorrect wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is illegal. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp192r1_SignatureGenerate()

```
fsp_err_t R_SCE_ECDSA_secp192r1_SignatureGenerate ( sce_ecdsa_byte_data_t* message_hash,
sce_ecdsa_byte_data_t* signature, sce_ecc_private_wrapped_key_t* wrapped_key )
```

When a message is specified in the first argument, message_hash->data_type, a SHA-256 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp192r1 using the private wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 24 bytes of the SHA-256 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp192r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|----------|--------------|---|
| [in] | message_hash | <p>Message or hash value to which to attach signature</p> <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in,out] | signature | <p>Signature text storage destination information</p> <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (64 bits) signature r (192 bits) 0 padding (64 bits) signature s (192 bits)". signature->data_length : Data length (byte units) |

| | | |
|------|-------------|---|
| [in] | wrapped_key | Input wrapped key of secp192r1 private key. |
|------|-------------|---|

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp224r1_SignatureGenerate()

```
fsp_err_t R_SCE_ECDSA_secp224r1_SignatureGenerate ( sce_ecdsa_byte_data_t* message_hash,
sce_ecdsa_byte_data_t* signature, sce_ecc_private_wrapped_key_t* wrapped_key )
```

When a message is specified in the first argument, message_hash->data_type, a SHA-256 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp224r1 using the private wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 28 bytes of the SHA-256 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp224r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|------|--------------|---|
| [in] | message_hash | Message or hash value to which to attach signature <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash |
|------|--------------|---|

| | | |
|----------|-------------|--|
| | | (Message: 0 Hash value: 1) |
| [in,out] | signature | Signature text storage destination information <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (32 bits) signature r (224 bits) 0 padding (32 bits) signature s (224 bits)". signature->data_length : Data length (byte units) |
| [in] | wrapped_key | Input wrapped key of secp224r1 private key. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp256r1_SignatureGenerate()

```
fsp_err_t R_SCE_ECDSA_secp256r1_SignatureGenerate ( sce_ecdsa_byte_data_t* message_hash,
sce_ecdsa_byte_data_t* signature, sce_ecc_private_wrapped_key_t* wrapped_key )
```

When a message is specified in the first argument, message_hash->data_type, a SHA-256 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp256r1 using the private wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 32 bytes of the SHA-256 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp256r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|----------|--------------|---|
| [in] | message_hash | <p>Message or hash value to which to attach signature</p> <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in,out] | signature | <p>Signature text storage destination information</p> <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (256 bits) signature s (256 bits)". signature->data_length : Data length (byte units) |
| [in] | wrapped_key | Input wrapped key of secp256r1 private key. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp384r1_SignatureGenerate()

```
fsp_err_t R_SCE_ECDSA_secp384r1_SignatureGenerate ( sce_ecdsa_byte_data_t* message_hash,
sce_ecdsa_byte_data_t* signature, sce_ecc_private_wrapped_key_t* wrapped_key )
```

When a message is specified in the first argument, message_hash->data_type, a SHA-384 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp384r1 using the private wrapped key input as the third argument, wrapped_key.

To use message input, prepare a user-defined function for SHA384.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 48 bytes of the SHA-384 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp384r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|------|--------------|---|
| [in] | message_hash | <p>Message or hash value to which to attach signature</p> <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash |
|------|--------------|---|

| | | |
|----------|-------------|--|
| | | value: 1) |
| [in,out] | signature | Signature text storage destination information <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (384 bits) signature s (384 bits)". signature->data_length : Data length (byte units) |
| [in] | wrapped_key | Input wrapped key of secp384r1 private key. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp192r1_SignatureVerify()

```
fsp_err_t R_SCE_ECDSA_secp192r1_SignatureVerify ( sce_ecdsa_byte_data_t* signature,
sce_ecdsa_byte_data_t* message_hash, sce_ecc_public_wrapped_key_t* wrapped_key )
```

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp192r1 using the public wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 24 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp192r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|----------|--------------|--|
| [in] | signature | Signature text information to be verified <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (64 bits) signature r (192 bits) 0 padding (64 bits) signature s (192 bits)". signature->data_length : Specifies the data length (byte units) (nonuse) |
| [in,out] | message_hash | Message or hash value to be verified <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |

| | | |
|------|-------------|--|
| [in] | wrapped_key | Input wrapped key of secp192r1 public key. |
|------|-------------|--|

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred or signature verification failed. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp224r1_SignatureVerify()

```
fsp_err_t R_SCE_ECDSA_secp224r1_SignatureVerify ( sce_ecdsa_byte_data_t * signature,
sce_ecdsa_byte_data_t * message_hash, sce_ecc_public_wrapped_key_t * wrapped_key )
```

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp224r1 using the public wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 28 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp224r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|------|-----------|--|
| [in] | signature | Signature text information to be verified <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (32 bits) signature r (224 bits) 0 padding (32 bits) signature s (224 bits)". signature->data_length : Specifies the data length (byte units) (nonuse) |
|------|-----------|--|

| | | |
|----------|--------------|--|
| [in,out] | message_hash | <p>Message or hash value to be verified</p> <ul style="list-style-type: none"> message_hash->data : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | Input wrapped key of secp224r1 public key. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred or signature verification failed. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp256r1_SignatureVerify()

```
fsp_err_t R_SCE_ECDSA_secp256r1_SignatureVerify ( sce_ecdsa_byte_data_t* signature,
sce_ecdsa_byte_data_t* message_hash, sce_ecc_public_wrapped_key_t* wrapped_key )
```

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp256r1 using the public wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 32 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp256r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|----------|--------------|--|
| [in] | signature | Signature text information to be verified <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (256 bits) signature s (256 bits)". signature->data_length : Specifies the data length (byte units) (nonuse) |
| [in,out] | message_hash | Message or hash value to be verified <ul style="list-style-type: none"> message_hash->pdata : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | Input wrapped key of |

secp256r1 public key.

Return values

| | |
|--------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPT0_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPT0_SCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPT0_SCE_FAIL | An internal error occurred or signature verification failed. |
| FSP_ERR_CRYPT0_SCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPT0_SCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp384r1_SignatureVerify()

```
fsp_err_t R_SCE_ECDSA_secp384r1_SignatureVerify ( sce_ecdsa_byte_data_t* signature,
sce_ecdsa_byte_data_t* message_hash, sce_ecc_public_wrapped_key_t* wrapped_key )
```

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp384r1 using the public wrapped key input as the third argument, wrapped_key.

To use message input, prepare a user-defined function for SHA384.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 48 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp384r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

| | | |
|------|-----------|--|
| [in] | signature | Signature text information to be verified <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (384 bits) signature s (384 bits)". signature->data_length : Specifies the data length (byte units) (nonuse) |
|------|-----------|--|

| | | |
|----------|--------------|--|
| [in,out] | message_hash | <p>Message or hash value to be verified</p> <ul style="list-style-type: none"> message_hash->data : Specifies pointer to array storing the message or hash value message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1) |
| [in] | wrapped_key | Input wrapped key of secp384r1 public key. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred or signature verification failed. |
| FSP_ERR_CRYPTOSCE_PARAMETER | Input data is invalid. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_Init()

```
fsp_err_t R_SCE_ECDH_secp256r1_Init ( sce_ecdh_handle_t * handle, uint32_t key_type, uint32_t use_key_id )
```

The R_SCE_ECDH_secp256r1_Init() function prepares to perform ECDH key exchange computation and writes the result to the first argument, handle. The succeeding functions R_SCE_ECDH_secp256r1_PublicKeySign(), R_SCE_ECDH_secp256r1_PublicKeyVerify(), R_SCE_ECDH_secp256r1_SharedSecretCalculate(), and R_SCE_ECDH_secp256r1_KeyDerivation() use handle as an argument.

Use the second argument, key_type, to select the type of ECDH key exchange. When ECDHE is selected, the R_SCE_ECDH_secp256r1_PublicKeySign() function uses the SCE's random number generation functionality to generate an secp256r1 key pair. When ECDH is selected, keys installed beforehand are used for key exchange.

Input 1 as the third argument, use_key_id, to use key_id when key exchange is performed. key_id is for applications conforming to the DLMS/COSEM standard for smart meters.

Parameters

| | | |
|----------|------------|--|
| [in,out] | handle | ECDH handler (work area) |
| [in] | key_type | Key exchange type (0: ECDHE, 1: ECDH, 2:ECDH(AES-GCM-128 with IV)) |
| [in] | use_key_id | 0: key_id not used, 1: key_id used |

Return values

| | |
|-----------------------------|------------------------|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPT_SCE_PARAMETER | Input data is invalid. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_PublicKeySign()

```
fsp_err_t R_SCE_ECDH_secp256r1_PublicKeySign ( sce_ecdh_handle_t * handle,
sce_ecc_public_wrapped_key_t * ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t *
ecc_private_wrapped_key, uint8_t * public_key, sce_ecdsa_byte_data_t * signature,
sce_ecc_private_wrapped_key_t * wrapped_key )
```

The `R_SCE_ECDH_secp256r1_PublicKeySign()` function calculates a signature for a public key user wrapped key used for ECDH key exchange.

If ECDHE is specified by the `key_type` argument of the `R_SCE_ECDH_secp256r1_Init()` function, the SCE's random number generation functionality is used to generate an secp256r1 key pair. The public key is output to `public_key` and the private key is output to `wrapped_key`.

If ECDH is specified by the `key_type` argument of the `R_SCE_ECDH_secp256r1_Init()` function, the public key input as `ecc_public_wrapped_key` is output to `public_key` and nothing is output to `wrapped_key`.

The succeeding function `R_SCE_ECDH_secp256r1_SharedSecretCalculate()` uses the first argument, `handle`, as an argument. `R_SCE_ECDH_secp256r1_SharedSecretCalculate()` function uses `wrapped_key` as input to calculate Z.

Parameters

| | | |
|----------|-------------------------|---|
| [in,out] | handle | ECDH handler (work area) When using <code>key_id</code> , input <code>handle->key_id</code> after running <code>R_SCE_ECDH_secp256r1_Init()</code> . |
| [in] | ecc_public_wrapped_key | For ECDHE, input a null pointer. For ECDH, input the wrapped key of a secp256r1 public key. |
| [in] | ecc_private_wrapped_key | secp256r1 private key for signature generation |
| [in,out] | public_key | User secp256r1 public key (512-bit) for key exchange. When using <code>key_id</code> , <code>key_id</code> (8-bit) public key (512-bit) 0 padding (24-bit) |
| [in,out] | signature | Signature text storage destination information <ul style="list-style-type: none"> signature->pdata : Specifies pointer to array storing signature text. The signature format is "signature r (256 bits) signature s (256 bits)" signature->data_leng |

| | | |
|----------|-------------|---|
| | | th : Data length (in byte units) |
| [in,out] | wrapped_key | For ECDHE, a private wrapped key generated from a random number. Not output for ECDH. |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_PublicKeyVerify()

```
fsp_err_t R_SCE_ECDH_secp256r1_PublicKeyVerify ( sce_ecdh_handle_t* handle,
sce_ecc_public_wrapped_key_t* ecc_public_wrapped_key, uint8_t* public_key_data,
sce_ecdsa_byte_data_t* signature, sce_ecc_public_wrapped_key_t* wrapped_key )
```

The R_SCE_ECDH_secp256r1_PublicKeyVerify() function verifies the signature of the secp256r1 public key of the other ECDH key exchange party. If the signature is correct, it outputs the public wrapped key to the fifth argument. The first argument, handle, is used as an argument in the subsequent function R_SCE_ECDH_secp256r1_SharedSecretCalculate().

R_SCE_ECDH_secp256r1_SharedSecretCalculate() uses wrapped_key as input to calculate Z.

Parameters

| | | |
|----------|------------------------|---|
| [in,out] | handle | ECDH handler (work area) |
| [in] | ecc_public_wrapped_key | Public wrapped key area for signature verification |
| [in] | public_key_data | secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) public key (512-bit) |
| [in] | signature | ECDSA secp256r1 signature of ecc_public_wrapped_key |
| [in,out] | wrapped_key | wrapped key of ecc_public_wrapped_key |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred or signature verification failed. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature()

```
fsp_err_t R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature ( sce_ecdh_handle_t* handle,
uint8_t* public_key_data, sce_ecc_public_wrapped_key_t* wrapped_key )
```

The R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature() function reads the secp256r1 public key of the other ECDH key exchange party and outputs the public wrapped key to the third argument. The first argument, handle, is used as an argument in the subsequent function R_SCE_ECDH_secp256r1_SharedSecretCalculate(). R_SCE_ECDH_secp256r1_SharedSecretCalculate() uses wrapped_key as input to calculate Z. This API does not verify signature of public_key_data, please protect this data by upper layer software.

Parameters

| | | |
|----------|-----------------|---|
| [in,out] | handle | ECDH handler (work area) |
| [in] | public_key_data | secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) public key (512-bit) |
| [in,out] | wrapped_key | wrapped key of public_key_data |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State. Please note that this is slightly contrary to the protected mode policy as it omits signature verification.

◆ R_SCE_ECDH_secp256r1_SharedSecretCalculate()

```
fsp_err_t R_SCE_ECDH_secp256r1_SharedSecretCalculate ( sce_ecdh_handle_t* handle,
sce_ecc_public_wrapped_key_t* ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t*
ecc_private_wrapped_key, sce_ecdh_wrapped_key_t* shared_secret_wrapped_key )
```

The `R_SCE_ECDH_secp256r1_SharedSecretCalculate()` function uses the ECDH key exchange algorithm to output the wrapped key of the shared secret Z derived from the public key of the other key exchange party and your own private key. Input as the second argument, `ecc_public_wrapped_key`, the public wrapped key whose signature was verified by `R_SCE_ECDH_secp256r1_PublicKeyVerify()`. When `key_type` of `R_SCE_ECDH_secp256r1_Init()` is 0, input as the third argument, `ecc_private_wrapped_key`, the private wrapped key generated from a random number by `R_SCE_ECDH_secp256r1_PublicKeySign()`, and when `key_type` is other than 0, input the private wrapped key that forms a pair with the second argument of `R_SCE_ECDH_secp256r1_PublicKeySign()`. The subsequent `R_SCE_ECDH_secp256r1_KeyDerivation()` function uses `shared_secret_wrapped_key` as key material for outputting the wrapped key.

Parameters

| | | |
|----------|---------------------------|--|
| [in,out] | handle | ECDH handler (work area) |
| [in] | ecc_public_wrapped_key | Public wrapped key whose signature was verified by <code>R_SCE_ECDH_secp256r1_PublicKeyVerify()</code> |
| [in] | ecc_private_wrapped_key | Private wrapped key |
| [in,out] | shared_secret_wrapped_key | Wrapped key of shared secret Z calculated by ECDH key exchange |

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_KeyDerivation()

```
fsp_err_t R_SCE_ECDH_secp256r1_KeyDerivation ( sce_ecdh_handle_t * handle,
sce_ecdh_wrapped_key_t * shared_secret_wrapped_key, uint32_t key_type, uint32_t kdf_type,
uint8_t * other_info, uint32_t other_info_length, sce_hmac_sha_wrapped_key_t *
salt_wrapped_key, sce_aes_wrapped_key_t * wrapped_key )
```

The `R_SCE_ECDH_secp256r1_KeyDerivation()` function uses the shared secret "Z (shared_secret_index)" calculated by the `R_SCE_ECDH_secp256r1_SharedSecretCalculate()` function as the key material to derive the wrapped key specified by the third argument, `key_type`. The key derivation algorithm is one-step key derivation as defined in NIST SP800-56C. Either SHA-256 or SHA-256 HMAC is specified by the fourth argument, `kdf_type`. When SHA-256 HMAC is specified, the wrapped key output by the `R_SCE_SHA256HMAC_EncryptedKeyWrap()` function is specified as the seventh argument, `salt_wrapped_key`. Enter a fixed value for deriving a key shared with the key exchange partner in the fifth argument, `other_info`. A wrapped key corresponding to `key_type` is output as the eighth argument, `wrapped_key`. The correspondences between the types of derived wrapped_key and the functions with which they can be used as listed below.

- AES-128: All AES-128 Init functions
- AES-256: All AES-256 Init functions
- SHA256-HMAC: `R_SCE_SHA256HMAC_GenerateInit()` function and `R_SCE_SHA256HMAC_VerifyInit()` function

Parameters

| | | |
|----------|---------------------------|---|
| [in,out] | handle | ECDH handler (work area) |
| [in] | shared_secret_wrapped_key | Z wrapped key calculated by <code>R_SCE_ECDH_secp256r1_SharedSecretCalculate</code> |
| [in] | key_type | Derived key type (0: AES-128, 1: AES-256, 2:SHA256-HMAC, 3: AES-GCM-128 with IV) |
| [in] | kdf_type | Algorithm used for key derivation calculation (0: SHA-256, 1:SHA256-HMAC) |
| [in] | other_info | Additional data used for key derivation calculation: AlgorithmID PartyUInfo PartyVInfo |
| [in] | other_info_length | Data length of other_info (up to 147 byte units) |
| [in] | salt_wrapped_key | Salt wrapped key (Input NULL when <code>kdf_type</code> is 0.) |
| [in,out] | wrapped_key | Wrapped key corresponding to <code>key_type</code> . When the value of <code>key_type</code> is 2, an SHA256-HMAC wrapped key is output. <code>wrapped_key</code> can be specified by casting the start address of the area |

| | | |
|--|--|--|
| | | reserved beforehand by the <code>sce_hmac_sha_wrapped_key_t</code> type with the <code>(sce_aes_wrapped_key_t*)</code> type. |
|--|--|--|

Return values

| | |
|-------------------------------------|--|
| FSP_SUCCESS | Normal end |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource required by the processing is in use by other processing. |
| FSP_ERR_CRYPTOSCE_KEY_SET_FAIL | Invalid wrapped key was input. |
| FSP_ERR_CRYPTOSCE_PARAMETER | An invalid handle was input. |
| FSP_ERR_CRYPTOSCE_FAIL | Internal error occurred. |
| FSP_ERR_CRYPTOSCE_PROHIBIT_FUNCTION | An invalid function was called. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall()

```
fsp_err_t R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall ( uint8_t *
encrypted_provisioning_key, uint8_t * initial_vector, uint8_t * encrypted_key,
sce_tls_ca_certification_public_wrapped_key_t * wrapped_key )
```

Generate TLS RSA Public key index data

Parameters

| | | |
|-------|----------------------------|--|
| [in] | encrypted_provisioning_key | the provisioning key includes encrypted CBC/CBC-MAC key for user key |
| [in] | initial_vector | the initial_vector for user key CBC encrypt |
| [in] | encrypted_key | the user key encrypted with AES128-ECB mode |
| [out] | wrapped_key | the user Key Generation Information (141 words) of RSA2048 bit |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate()**

```
fsp_err_t R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate (
sce_tls_p256_ecc_wrapped_key_t* tls_p256_ecc_wrapped_key, uint8_t*
ephemeral_ecdh_public_key )
```

Generate TLS ECC key pair

Parameters

| | | |
|------|---------------------------|----------------------------|
| [in] | tls_p256_ecc_wrapped_key | P256 ECC key index for TLS |
| [in] | ephemeral_ecdh_public_key | ephemeral ECDH public key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_RootCertificateVerify()

```
fsp_err_t R_SCE_TLS_RootCertificateVerify ( uint32_t public_key_type, uint8_t* certificate,
uint32_t certificate_length, uint32_t public_key_n_start_position, uint32_t
public_key_n_end_position, uint32_t public_key_e_start_position, uint32_t
public_key_e_end_position, uint8_t* signature, uint32_t* encrypted_root_public_key )
```

Verify root CA certificate.

Parameters

| | | |
|-------|-----------------------------|---------------------------------|
| [in] | public_key_type | key type |
| [in] | certificate | certificates. |
| [in] | certificate_length | byte size of certificates. |
| [in] | public_key_n_start_position | start position of public key n. |
| [in] | public_key_n_end_position | end position of public key n. |
| [in] | public_key_e_start_position | start position of public key e. |
| [in] | public_key_e_end_position | end position of public key e. |
| [in] | signature | signature for certificates. |
| [out] | encrypted_root_public_key | public key for RSA 2048bit. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_CertificateVerify()

```
fsp_err_t R_SCE_TLS_CertificateVerify ( uint32_t public_key_type, uint32_t *
encrypted_input_public_key, uint8_t * certificate, uint32_t certificate_length, uint8_t * signature,
uint32_t public_key_n_start_position, uint32_t public_key_n_end_position, uint32_t
public_key_e_start_position, uint32_t public_key_e_end_position, uint32_t *
encrypted_output_public_key )
```

Verify server certificate and intermediate certificate.

Parameters

| | | |
|-------|-----------------------------|---------------------------------|
| [in] | public_key_type | key type |
| [in] | encrypted_input_public_key | public key. |
| [in] | certificate | certificates. |
| [in] | certificate_length | byte size of certificates. |
| [in] | signature | signature for certificates. |
| [in] | public_key_n_start_position | start position of public key n. |
| [in] | public_key_n_end_position | end position of public key n. |
| [in] | public_key_e_start_position | start position of public key e. |
| [in] | public_key_e_end_position | end position of public key e. |
| [out] | encrypted_output_public_key | public key for RSA 2048bit. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_TLS_PreMasterSecretEncryptWithRSA2048()**

`fsp_err_t R_SCE_TLS_PreMasterSecretEncryptWithRSA2048 (uint32_t * encrypted_public_key, uint32_t * sce_pre_master_secret, uint8_t * encrypted_pre_master_secret)`

Output the result encrypted pre-master secret with RSA 2048bit

Parameters

| | | |
|-------|-----------------------------|--|
| [in] | encrypted_public_key | public key data. |
| [in] | sce_pre_master_secret | pre-master secret value. |
| [out] | encrypted_pre_master_secret | the value encrypted pre-master secret. |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_TLS_PreMasterSecretGenerateForRSA2048()**

`fsp_err_t R_SCE_TLS_PreMasterSecretGenerateForRSA2048 (uint32_t * sce_pre_master_secret)`

Generate encrypted pre-master secret.

Parameters

| | | |
|-------|-----------------------|----------------------------------|
| [out] | sce_pre_master_secret | pre-master secret value for SCE. |
|-------|-----------------------|----------------------------------|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_MasterSecretGenerate()

```
fsp_err_t R_SCE_TLS_MasterSecretGenerate ( uint32_t select_cipher_suite, uint32_t *
sce_pre_master_secret, uint8_t * client_random, uint8_t * server_random, uint32_t *
sce_master_secret )
```

Generate encrypted master secret.

Parameters

| | | |
|-------|-----------------------|---|
| [in] | select_cipher_suite | cipher suite type |
| [in] | sce_pre_master_secret | pre-master secret value for SCE. |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [out] | sce_master_secret | master secret value with SCE-specific conversion. |

Return values

| | |
|--------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

Generate encrypted master secret.

Parameters

| | | |
|-------|-----------------------|------------------------------------|
| [in] | select_cipher_suite | cipher suite type |
| [in] | sce_pre_master_secret | pre-master secret value for SCE. |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [out] | sce_master_secret | master secret value for SCE. |

Return values

| | |
|--------------------------------------|--|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a |

| | |
|-------------------------|--|
| T | hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTO_SCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_SessionKeyGenerate()

```
fsp_err_t R_SCE_TLS_SessionKeyGenerate ( uint32_t select_cipher_suite, uint32_t*
sce_master_secret, uint8_t* client_random, uint8_t* server_random, uint8_t* nonce_explicit,
sce_hmac_sha_wrapped_key_t* client_mac_wrapped_key, sce_hmac_sha_wrapped_key_t*
server_mac_wrapped_key, sce_aes_wrapped_key_t* client_crypto_wrapped_key,
sce_aes_wrapped_key_t* server_crypto_wrapped_key, uint8_t* client_initial_vector, uint8_t*
server_initial_vector )
```

Output various key information.

Parameters

| | | |
|-------|---------------------------|--|
| [in] | select_cipher_suite | Key suite information number. |
| [in] | sce_master_secret | master secret value. |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [in] | nonce_explicit | nonce value |
| [out] | client_mac_wrapped_key | the mac key during communication from client to server. |
| [out] | server_mac_wrapped_key | the mac key during communication from server to client. |
| [out] | client_crypto_wrapped_key | the crypto key during communication from client to server. |
| [out] | server_crypto_wrapped_key | the crypto key during communication from server to client. |
| [in] | client_initial_vector | not use. |
| [in] | server_initial_vector | not use. |

Return values

| | |
|-------------|--------------------|
| FSP_SUCCESS | Normal termination |
|-------------|--------------------|

| | |
|-------------------------------------|---|
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_VerifyDataGenerate()

```
fsp_err_t R_SCE_TLS_VerifyDataGenerate ( uint32_t select_verify_data, uint32_t *
sce_master_secret, uint8_t * hand_shake_hash, uint8_t * verify_data )
```

Generate verify data.

Parameters

| | | |
|-------|--------------------|---|
| [in] | select_verify_data | Select Client/Server data. |
| [in] | sce_master_secret | master secret data. |
| [in] | hand_shake_hash | TLS hand shake message SHA256 HASH value. |
| [out] | verify_data | verify data. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_ServerKeyExchangeVerify()

```
fsp_err_t R_SCE_TLS_ServerKeyExchangeVerify ( uint32_t public_key_type, uint8_t *
client_random, uint8_t * server_random, uint8_t * server_ephemeral_ecdh_public_key, uint8_t *
server_key_exchange_signature, uint32_t * encrypted_public_key, uint32_t *
encrypted_ephemeral_ecdh_public_key )
```

Retrives ECDH public key.

Parameters

| | | |
|-------|-------------------------------------|--|
| [in] | public_key_type | key type |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [in] | server_ephemeral_ecdh_public_key | Ephemeral ECDH public key from Server. |
| [in] | server_key_exchange_signature | Server Key Exchange signature. |
| [in] | encrypted_public_key | encrypted public key. |
| [out] | encrypted_ephemeral_ecdh_public_key | encrypted Ephemeral ECDH public key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1()

```
fsp_err_t R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1 ( uint32_t *
encrypted_public_key, sce_tls_p256_ecc_wrapped_key_t * tls_p256_ecc_wrapped_key, uint32_t *
sce_pre_master_secret )
```

Generate encrypted pre-master secret.

Parameters

| | | |
|-------|--------------------------|--|
| [in] | encrypted_public_key | encrypted public key |
| [in] | tls_p256_ecc_wrapped_key | P-256 ECC key index. |
| [out] | sce_pre_master_secret | encrypted pre-master secret value for SCE. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

5.2.15.6 Secure Crypto Engine (r_sce_protected_cavp)

Modules » Security

Driver for the CAVP Certified Secure Crypto Engine (SCE) on RA MCUs.

Version

v1.0.0

The version that appears on the Components tab of the FSP Configuration editor is v1.0.0+fsp.<fsp_version>. The <fsp_version> metadata reflects tooling support files only and does not indicate any changes to the CAVP certified code. See [Module Versioning](#) for more information about component versioning in FSP.

Functions

The user documentation for the functions in this module.

- [SCE Protected Mode](#)

Overview

This module provides SCE CAVP Certified functions.

HW Overview

Obtained device certification with RA6M4.

| Crypto Peripheral version | Devices |
|---------------------------|----------------------------|
| SCE9 (Protected mode) | RA4M2, RA4M3, RA6M4, RA6M5 |

Features

The SCE module supports for the following features.

- Cryptography
 - Symmetric Encryption/Decryption
 - AES
 - ECB 128/256bit
 - CBC 128/256bit
 - GCM 128/256bit
 - CCM 128/256bit
 - Asymmetric Encryption/Decryption
 - RSA
 - RSAES-PKCS1-V1_5 1024/2048bit
 - RSAES-PKCS1-V1_5 3072/4096bit (Encryption only)
 - RSASSA-PKCS1-V1_5 1024/2048bit
 - RSASSA-PKCS1-V1_5 3072/4096bit (Verification only)
 - ECC
 - ECDSA secp192r1/secp224r1/secp256r1/secp384r1
 - ECDH secp256r1
 - Hash Functions
 - SHA-2
 - SHA-256
- Message Authentication Code
 - HMAC-SHA256bit
 - AES-CMAC 128/256bit
- Key Support
 - AES 128/256bit
 - RSA 1024/2048bit
 - RSA 3072/4096bit (public key only)
 - ECC secp192r1/secp224r1/secp256r1/secp384r1
 - HMAC-SHA256bit
- TRNG
- TLS
 - SSL / TLS support function (TLS1.2 compliant)

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating a SCE Protected Mode Project

Start by creating a new project in e² studio or RASC. On the Stacks tab, add New > Security > SCE Protected Mode(CAVP Certified). For information on how to install and update secure keys, refer to the Application Note R11AN0496.

Limitations

Usage of R_SCE_ECDSA_secp384r1_SignatureGenerate/Verify

The SCE does not support SHA-384 in hardware, so the APIs listed below require the user to create a SHA-384 function for signature generation and verification. To use the APIs listed below, enable SCE_USER_SHA_384_ENABLED on RA Smart Configurator and prepare a function called SCE_USER_SHA_384_FUNCTION. The interface of SCE_USER_SHA_384_FUNCTION, which is called by the following APIs, is described below.

- [R_SCE_ECDSA_secp384r1_SignatureGenerate\(\)](#)
- [R_SCE_ECDSA_secp384r1_SignatureVerify\(\)](#)

SCE_USER_SHA_384_FUNCTION()

```
uint32_t SCE_USER_SHA_384_FUNCTION(uint8_t * message, uint8_t * digest, uint32_t
message_length)
```

SHA-384 hash calculation is performed for an area extending the number of bytes specified by the argument message_length from the address specified by the argument message. The calculation result should be stored at the address specified by the argument digest.

Parameters

| | |
|----------------|---|
| message | [in] Start address of message |
| digest | [in,out] address for storing hash calculation result (48 bytes) |
| message_length | [in] Effective byte count of message |

Return values

| | |
|--------|---------------------------------|
| 0 | Hash value stored successfully. |
| others | Storing of hash value failed. |

Examples

AES Example

This is an example of AES-256 encryption and decryption.

```
#include <string.h>
#include "r_sce.h"
#define BLOCK 16
void r_sce_example_aes();
sce_instance_ctrl_t sce_ctrl;
sce_cfg_t sce_cfg =
{
    .lifecycle = SCE_SSD
};
static uint8_t plain[BLOCK * 2] =
{
    0x52, 0x65, 0x6e, 0x65, 0x73, 0x61, 0x73, 0x20, 0x45, 0x6c, 0x65, 0x63, 0x74,
    0x72, 0x6f, 0x6e,
    0x69, 0x63, 0x73, 0x20, 0x43, 0x6f, 0x72, 0x70, 0x6f, 0x72, 0x61, 0x74, 0x69,
    0x6f, 0x6e, 0x00
};
void r_sce_example_aes ()
{
    sce_aes_handle_t      handle;
    sce_aes_wrapped_key_t wrapped_key;
    uint8_t                cipher_calculated[32] = {0};
    uint8_t                plain_calculated[32] = {0};
    uint32_t               dummy;
    /* SCE power on */
    R_SCE_Open(&sce_ctrl, &sce_cfg);
    /* Generate a random key */
    R_SCE_AES256_WrappedKeyGenerate(&wrapped_key);
    /* Encrypt a plain text */
    R_SCE_AES256ECB_EncryptInit(&handle, &wrapped_key);
    R_SCE_AES256ECB_EncryptUpdate(&handle, plain, cipher_calculated, BLOCK * 2);
}
```

```

R_SCE_AES256ECB_EncryptFinal(&handle, cipher_calculated, &dummy);
/* Decrypt a cipher text using same key as Encryption */
R_SCE_AES256ECB_DecryptInit(&handle, &wrapped_key);
R_SCE_AES256ECB_DecryptUpdate(&handle, cipher_calculated, plain_calculated, BLOCK *
2);
R_SCE_AES256ECB_DecryptFinal(&handle, plain_calculated, &dummy);
/* SCE power off */
R_SCE_Close(&sce_ctrl);
/* Compare plain and plain_calculated */
if (memcmp(plain, plain_calculated, BLOCK * 2))
{
while (1)
{
/* plain and plain_calculated are different (incorrect) */
}
}
else
{
while (1)
{
/* plain and plain_calculated are the same (correct) */
}
}
}

```

5.2.15.7 Secure Key Injection (r_rsip_key_injection)

Detailed Description

Driver for the Secure Key Injection on RA MCUs.

Overview

This module provides RSIP functions in PSA Crypto.

HW Overview

| Crypto Peripheral version | Devices |
|---------------------------|---------|
| RSIP-E51A | RA8M1 |

Features

The RSIP Key Injection Module has two types of APIs, InitialKeyWrap and EncryptedKeyWrap. The available APIs differ depending on used RSIP. Please refer to the following for details.

- Key Support
 - AES Key Injection
 - RSA Key Injection
 - ECC Key Injection

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Module activation

RSIP Key Umport for PSA Crypto Module is off by default. To use it, please On the Stacks tab, add New > Security > MbedTLS or MbedTLS (Crypto Only), Add Requires RSIP Driver > New > (*1), Add Key Injection for RSA Crypto (Optional) > New > Key Injectin for RSA Crypto for PSA Crypto Module after adding MbedTLS. For information on how to injection and update secure keys, refer to the Application Note R11AN0496.

Hardware Initialization

Please refer to Hardware Initialization in [Mbed Crypto H/W Acceleration \(rm_psa_crypto\)](#).

Function Documentation

◆ R_RSIP_AES128_InitialKeyWrap()

```
fsp_err_t R_RSIP_AES128_InitialKeyWrap ( rsip_key_injection_type_t const key_injection_type,
uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const *const
p_initial_vector, uint8_t const *const p_user_key, rsip_aes_wrapped_key_t *const p_wrapped_key )
```

This API generates 128-bit AES key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 128-bit AES wrapped key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ **R_RSIP_AES192_InitialKeyWrap()**

```
fsp_err_t R_RSIP_AES192_InitialKeyWrap ( rsip_key_injection_type_t const key_injection_type,
uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const *const
p_initial_vector, uint8_t const *const p_user_key, rsip_aes_wrapped_key_t *const p_wrapped_key )
```

This API generates 192-bit AES key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 192-bit AES wrapped key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_AES256_InitialKeyWrap()

```
fsp_err_t R_RSIP_AES256_InitialKeyWrap ( rsip_key_injection_type_t const key_injection_type,
uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const *const
p_initial_vector, uint8_t const *const p_user_key, rsip_aes_wrapped_key_t *const p_wrapped_key )
```

This API generates 256-bit AES key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit AES wrapped key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTTO_SCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTTO_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_RSA2048_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_RSA2048_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa2048_public_wrapped_key_t
*const p_wrapped_key )
```

This API generates 2048-bit RSA public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 2048-bit RSA wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_RSA2048_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_RSA2048_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa2048_private_wrapped_key_t
*const p_wrapped_key )
```

This API generates 2048-bit RSA private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 2048-bit RSA wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_RSA3072_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_RSA3072_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa3072_public_wrapped_key_t
*const p_wrapped_key )
```

This API generates 3072-bit RSA public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 3072-bit RSA wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_RSA3072_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_RSA3072_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa3072_private_wrapped_key_t
*const p_wrapped_key )
```

This API generates 3072-bit RSA private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 3072-bit RSA wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_RSA4096_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_RSA4096_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa4096_public_wrapped_key_t
*const p_wrapped_key )
```

This API generates 4096-bit RSA public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 4096-bit RSA wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_RSA4096_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_RSA4096_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa4096_private_wrapped_key_t
*const p_wrapped_key )
```

This API generates 4096-bit RSA private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 4096-bit RSA wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_secp256r1_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_ECC_secp256r1_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_public_wrapped_key_t *const
p_wrapped_key )
```

This API generates 256-bit ECC public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit ECC wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTO_SCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTO_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_secp256r1_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_ECC_secp256r1_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_private_wrapped_key_t *const
p_wrapped_key )
```

This API generates 256-bit ECC private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit ECC wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_secp384r1_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_ECC_secp384r1_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_public_wrapped_key_t *const
p_wrapped_key )
```

This API generates 384-bit ECC public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 384-bit ECC wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_secp384r1_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_ECC_secp384r1_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_private_wrapped_key_t *const
p_wrapped_key )
```

This API generates 384-bit ECC private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 384-bit ECC wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_secp256k1_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_ECC_secp256k1_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_public_wrapped_key_t *const
p_wrapped_key )
```

This API generates 256-bit ECC public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit ECC wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_secp256k1_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_ECC_secp256k1_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_private_wrapped_key_t *const
p_wrapped_key )
```

This API generates 256-bit ECC private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit ECC wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_brainpoolP256r1_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_ECC_brainpoolP256r1_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_public_wrapped_key_t *const
p_wrapped_key )
```

This API generates 256-bit brainpool ECC public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit ECC wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_brainpoolP256r1_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_ECC_brainpoolP256r1_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_private_wrapped_key_t *const
p_wrapped_key )
```

This API generates 256-bit brainpool ECC private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 256-bit ECC wrapped private key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_brainpoolP384r1_InitialPublicKeyWrap()

```
fsp_err_t R_RSIP_ECC_brainpoolP384r1_InitialPublicKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_public_wrapped_key_t *const
p_wrapped_key )
```

This API generates 384-bit brainpool ECC public key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 384-bit ECC wrapped public key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTO_SCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTO_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

◆ R_RSIP_ECC_brainpoolP384r1_InitialPrivateKeyWrap()

```
fsp_err_t R_RSIP_ECC_brainpoolP384r1_InitialPrivateKeyWrap ( rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_ecc_private_wrapped_key_t *const
p_wrapped_key )
```

This API generates 384-bit brainpool ECC private key within the user routine.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it is encrypted and MAC appended |
| [out] | p_wrapped_key | 128-bit AES wrapped key |

Return values

| | |
|-------------|---------------------|
| FSP_SUCCESS | Normal termination. |
|-------------|---------------------|

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_ASSERTION A required parameter is NULL.
- FSP_ERR_CRYPTOSCE_FAIL MAC anomaly detection.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT Resource conflict.
- FSP_ERR_CRYPTOSCE_UNKNOWN An unknown error occurred.
- FSP_ERR_INVALID_STATE Internal state is illegal.

Note

The pre-run state is RSIP Enabled State. After the function runs the state transitions to RSIP Enabled State.

Detailed Description

Driver for the Secure Key Injection on RA MCUs.

Overview

This module provides SCE functions in PSA Crypto.

HW Overview

| Crypto Peripheral version | Devices |
|---------------------------|----------------------------|
| SCE9 | RA6M5, RA6M4, RA4M3, RA4M2 |
| SCE7 | RA6M3, RA6M2, RA6M1, RA6T1 |
| SCE5 | RA4W1, RA4M1 |
| SCE5B | RA6T2 |

Features

The SCE Key Injection Module has two types of APIs, InitialKeyWrap and EncryptedKeyWrap. The available APIs differ depending on used SCE. Please refer to the following for details.

- Key Support
 - AES 128/256bit

| Crypto Peripheral version | 128 bit | 192 bit | 256 bit |
|---------------------------|---------------------|---------------------|---------------------|
| SCE9 | InitialKeyWrap Only | InitialKeyWrap Only | InitialKeyWrap Only |

| | | | |
|-------|---------------------|------------|---------------------|
| SCE7 | Support | Support | Support |
| SCE5 | Support | No support | Support |
| SCE5B | InitialKeyWrap Only | No support | InitialKeyWrap Only |

- RSA 2048/3072/4096bit

| Crypto Peripheral version | 2048 bit | 3072 bit (public) | 4096 bit (public) |
|---------------------------|----------|-------------------|-------------------|
|---------------------------|----------|-------------------|-------------------|

| | | | |
|-------|---------------------|---------------------|---------------------|
| SCE9 | InitialKeyWrap Only | InitialKeyWrap Only | InitialKeyWrap Only |
| SCE7 | Support | No support | No support |
| SCE5 | No support | No support | No support |
| SCE5B | No support | No support | No support |

- ECC secp256r1/secp256k1/secp384r1

| Crypto Peripheral version | secp256r1 | secp256k1 | secp384r1 | secp256r1 Brainpool | secp384r1 Brainpool |
|---------------------------|-----------|-----------|-----------|---------------------|---------------------|
|---------------------------|-----------|-----------|-----------|---------------------|---------------------|

| | | | | | |
|-------|---------------------|---------------------|---------------------|---------------------|---------------------|
| SCE9 | InitialKeyWrap Only |
| SCE7 | Support | Support | Support | Support | Support |
| SCE5 | No support |
| SCE5B | No support |

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Module activation

SCE Key Injection for PSA Crypto Module is off by default. To use it, please On the Stacks tab, add New > Security > MbedTLS or MbedTLS (Crypto Only), Add Requires SCE Driver > New > (*1), Add Key Injection for RSA Crypto (Optional) > New > Key Injection for RSA Crypto for PSA Crypto Module after adding MbedTLS. For information on how to import and update secure keys, refer to the Application Note R11AN0496.

(*1)

| Crypto Peripheral version | String displayed in the Stacks tab |
|---------------------------|------------------------------------|
| SCE9 | SCE Compatibility Mode |
| SCE7 | SCE7 |
| SCE5 | SCE5 |
| SCE5B | SCE5B |

Hardware Initialization

Please refer to Hardware Initialization in [Mbed Crypto H/W Acceleration \(rm_psa_crypto\)](#).

Function Documentation

◆ **R_SCE_AES128_InitialKeyWrap()**

```
fsp_err_t R_SCE_AES128_InitialKeyWrap ( const uint8_t *const key_type, const uint8_t *const
wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const
encrypted_key, sce_aes_wrapped_key_t *const wrapped_key )
```

This API generates 128-bit AES key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 128-bit AES wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES192_InitialKeyWrap()

```
fsp_err_t R_SCE_AES192_InitialKeyWrap ( const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_aes_wrapped_key_t *const wrapped_key )
```

This API generates 192-bit AES key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 192-bit AES wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256_InitialKeyWrap()

```
fsp_err_t R_SCE_AES256_InitialKeyWrap ( const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_aes_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit AES key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit AES wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_KeyUpdateKeyWrap()

```
fsp_err_t R_SCE_KeyUpdateKeyWrap ( const uint8_t *const
wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const
encrypted_key, sce_key_update_key_t *const key_update_key )
```

This API generates a key update key which is used for functions of the key updating.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | key_update_key | Key update key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128_EncryptedKeyWrap()

```
fsp_err_t R_SCE_AES128_EncryptedKeyWrap ( const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_aes_wrapped_key_t *const wrapped_key )
```

This API wraps 128-bit AES key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 128-bit AES wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES192_EncryptedKeyWrap()

```
fsp_err_t R_SCE_AES192_EncryptedKeyWrap ( const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_aes_wrapped_key_t *const wrapped_key )
```

This API wraps 192-bit AES key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 192-bit AES wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

- If an error occurs, the return value will be as follows.
- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
 - FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256_EncryptedKeyWrap()

```
fsp_err_t R_SCE_AES256_EncryptedKeyWrap ( const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_aes_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit AES key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit AES wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_RSA2048_InitialPublicKeyWrap ( const uint8_t *const key_type, const uint8_t
*const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, sce_rsa2048_public_wrapped_key_t *const wrapped_key )
```

This API generates 2048-bit RSA key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA3072_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_RSA3072_InitialPublicKeyWrap ( const uint8_t *const key_type, const uint8_t
*const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, sce_rsa3072_public_wrapped_key_t *const wrapped_key )
```

This API generates 3072-bit RSA key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 3072-bit RSA wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA4096_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_RSA4096_InitialPublicKeyWrap ( const uint8_t *const key_type, const uint8_t
*const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, sce_rsa4096_public_wrapped_key_t *const wrapped_key )
```

This API generates 4096-bit RSA key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 4096-bit RSA wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_InitialPrivateKeyWrap()

```
fsp_err_t R_SCE_RSA2048_InitialPrivateKeyWrap ( const uint8_t *const key_type, const uint8_t
*const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, sce_rsa2048_private_wrapped_key_t *const wrapped_key )
```

This API generates 2048-bit RSA key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_RSA2048_EncryptedPublicKeyWrap ( const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_rsa2048_public_wrapped_key_t *const wrapped_key )
```

This API wraps 2048-bit RSA key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_RSA2048_EncryptedPrivateKeyWrap ( const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_rsa2048_private_wrapped_key_t *const wrapped_key )
```

This API wraps 2048-bit RSA key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256r1_InitialPublicKeyWrap ( const uint8_t *const key_type, const uint8_t
*const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256k1_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256k1_InitialPublicKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp384r1_InitialPublicKeyWrap ( const uint8_t *const key_type, const uint8_t
*const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t
*const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API generates 384-bit ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 364-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_InitialPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256r1_InitialPrivateKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256k1_InitialPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256k1_InitialPrivateKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ **R_SCE_ECC_secp384r1_InitialPrivateKeyWrap()**

```
fsp_err_t R_SCE_ECC_secp384r1_InitialPrivateKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API generates 384-bit ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap ( const uint8_t *const initial_vector,
const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|-----------------------|--|
| [in] | <i>initial_vector</i> | Initialization vector when generating <i>encrypted_key</i> |
| [in] | <i>encrypted_key</i> | User key encrypted and MAC appended |
| [in] | <i>key_update_key</i> | Key update keyring |
| [in,out] | <i>wrapped_key</i> | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256k1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256k1_EncryptedPublicKeyWrap ( const uint8_t *const initial_vector,
const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap ( const uint8_t *const initial_vector,
const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API wraps 384-bit ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap ( const uint8_t *const initial_vector,
const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256k1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp256k1_EncryptedPrivateKeyWrap ( const uint8_t *const initial_vector,
const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap ( const uint8_t *const initial_vector,
const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key,
sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API wraps 384-bit ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

- If an error occurs, the return value will be as follows.
- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
 - FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP256r1_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP256r1_InitialPublicKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP256r1_InitialPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP256r1_InitialPrivateKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API generates 256-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP384r1_InitialPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP384r1_InitialPublicKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API generates 384-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 364-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP384r1_InitialPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP384r1_InitialPrivateKeyWrap ( const uint8_t *const key_type, const
uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const
uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API generates 384-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Selection key type when generating wrapped key (0: for encrypted key, 1: for plain key) |
| [in] | wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | initial_vector | Initialization vector when generating encrypted_key. When key_type is 1 as plain key, this is not required and any value can be specified. |
| [in] | encrypted_key | Encrypted user key and MAC appended |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP256r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP256r1_EncryptedPublicKeyWrap ( const uint8_t *const
initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP256r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP256r1_EncryptedPrivateKeyWrap ( const uint8_t *const
initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API wraps 256-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP384r1_EncryptedPublicKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP384r1_EncryptedPublicKeyWrap ( const uint8_t *const
initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key )
```

This API wraps 384-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTTO_SCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_brainpoolP384r1_EncryptedPrivateKeyWrap()

```
fsp_err_t R_SCE_ECC_brainpoolP384r1_EncryptedPrivateKeyWrap ( const uint8_t *const
initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key )
```

This API wraps 384-bit Brainpool ECC key within the user routine.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

Return values

| | |
|---------------------|---------------------|
| FSP_SUCCESS | Normal termination. |
| FSP_ERR_UNSUPPORTED | API not supported. |

Returns

If an error occurs, the return value will be as follows.

- FSP_ERR_CRYPTOSCE_FAIL Internal I/O buffer is not empty.
- FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT A resource conflict occurred because a hardware resource needed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

5.2.15.9 TinyCrypt H/W Acceleration (rm_tinycrypt_port)

Modules » Security

Functions

fsp_err_t RM_TINYCRYPT_PORT_Init ()

fsp_err_t RM_TINYCRYPT_PORT_TRNG_Read (uint8_t *const p_rngbuf, uint32_t num_req_bytes)

Reads requested length of random data from the TRNG. Generate num_req_bytes of random bytes and store them in p_rngbuf buffer. [More...](#)

int default_CSPRNG (uint8_t *dest, unsigned int size)

Implements the Cryptographically Secure Pseudo-Random Number Generator function required by TinyCrypt. [More...](#)

Detailed Description

AES128 Hardware acceleration for TinyCrypt on the RA2 family.

Overview

Note

The TinyCrypt port module does not provide any interfaces to the user. Consult the documentation at <https://github.com/intel/tinycrypt/blob/master/documentation/tinycrypt.rst> for further information.

TinyCrypt is designed as a small footprint software crypto implementation to be used on resource constrained devices. The software only module is available in FSP on all RA devices. Hardware acceleration for AES-128 is provided only for the RA2 family. This release uses TinyCrypt v0.2.8.

Hardware Overview

| Crypto Peripheral version | Devices |
|---------------------------|---------------------|
| AES Engine | RA2A1, RA2E1, RA2L1 |

Features

For features supported by the software-only version, refer to the TinyCrypt documentation.

The TinyCrypt port module provides hardware support for the following operations

- AES
 - Keybits - 128, 192, 256
 - ECB, CBC, CTR, CCM, GCM and CMAC modes -TRNG

Configuration

Build Time Configurations for TinyCrypt_Acceleration

The following build time configurations are defined in fsp_cfg/rm_tinycrypt_port_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

AES Configuration

To enable hardware acceleration for the AES128 operation, choose TinyCrypt (H/W Accelerated) from the stack options . This feature is only supported on the RA2 family.

Usage Notes

Hardware Initialization

Invoke RM_TINCRYPT_PORT_Init () to initialize the hardware before using Tinycrypt if either

hardware acceleration or the TRNG is to be used.

Random Number Generation

There are two Pseudo-random Number Generators (PRNG) provided in TinyCrypt

- CTR-PRNG which uses AES128 internally in its implementation. Enabling AES128 hardware acceleration will improve the performance of this module.
- HMAC-PRNG which uses SHA256 internally in its implementation.

Both these implementations will only be able to provide a random pseudo-random number sequence if they are seeded with truly random data. The TRNG module that is present in hardware and available in `rm_tinycrypt_port` must be used to seed these modules. When using CTR-PRNG or HMAC-PRNG, use the `RM_TINYCRYPT_PORT_TRNG_Read()` function to obtain random data from the TRNG hardware and use that to seed the PRNG modules before invoking the pseudo-random number generation. If purely random data is sufficient for the application, then `RM_TINYCRYPT_PORT_TRNG_Read()` can be used directly instead. The hardware TRNG implements the CTR_DRBG spec.

Default CSPRNG

The TinyCrypt ECC implementation requires a platform specific implementation of the `default_CSPRNG()` function. This function has been implemented using the hardware TRNG in the port to support software ECC usage. When using TinyCrypt in S/W mode, it is necessary to implement `default_CSPRNG()` if using ECC signature generation (ECDSA) or key derivation (ECDH).

AES-128 Usage

The AES ECB mode implementation is provided in `aes_encrypt.decrypt.c`. All the other modes of AES operation including CBC, CCN, CMAC and CTR use the ECB mode for the block operation. On the RA2, the ECB mode has been hardware accelerated which improves performance of the other modes as well. Additionally the CBC and CTR modes are also accelerated.

To use the different AES modes, first initialize the hardware (on the RA2) and then use the functions defined in the header file of each AES mode. Note that TinyCrypt does not provide any type of padding or buffering so the data provided to these modes should be multiples of AES block size.

Usage with RA2A2

On the RA2A2, the TinyCrypt API has been expanded to support GCM mode operation. Key lengths of 128, 192 and 256 are supported. GCM mode operation is not supported on other MCUs in hardware or software in the TinyCrypt API.

Memory Usage

TinyCrypt does not use dynamic allocation so there is no heap requirement.

Limitations

Usage with RA4 and RA6 devices

TinyCrypt (S/W Only) can be used on RA4 and RA6 devices. However, since ECC signature generation (ECDSA) and key derivation (ECDH) requires a random number source, that operation is currently not supported on these devices when using TinyCrypt (S/W Only). In order to support those operations the function `default_CSPRNG()` must be implemented in the user code.

TinyCrypt

- No padding is supported; the user is expected to provide adequately padded data depending on the algorithm used.
- AES Key generation is not supported.
- Key encoding/decoding is not supported.

Using TinyCrypt with TrustZone

Unlike FSP drivers, TinyCrypt cannot be configured as Non-secure callable in the RA Configurator for a secure project. The reason for this is that in order to achieve the security objective of controlling access to protected keys, both the crypto code as well as the keys must be placed in the secure region. Since the tinyCrypt API requires access to the keys directly during initialization and later via a key handle, allowing non-secure code to use the API by making it Non-secure callable will require the keys to be stored in non-secure memory.

This limitation is identical to that for PSA Crypto. Refer to the documentation of that module on how to create a crypto Non-Secure Callable layer to be used in such situations.

Examples

AES-CBC Example

This is an example on using TinyCrypt to encrypt and decrypt data using an AES-128 key in CBC mode.

```
#define TC_INPUT_PLAINTEXT_SIZE 64U
#define TF_AES_IV_SIZE TC_AES_BLOCK_SIZE
#define TC_OUTPUT_CIPHERTEXT_SIZE (TC_INPUT_PLAINTEXT_SIZE + TF_AES_IV_SIZE)

    /* Operation successful. */
    while (1)
    {
        ;
    }
}
/* Below is a example of using tc_cmac_setup_extended instead of tc_cmac_setup*/
void tinycrypt_aes128cmac_example_setup_extended (void)
{
```

```
struct tc_cmac_struct      state;
struct tc_aes_key_sched_struct sched;
    uint8_t Tag[BUF_LEN];
    if (TC_CRYPTTO_SUCCESS != tc_cmac_setup_extended(&state, cmac_key_128, &sched,
sizeof(cmac_key_128)))
    {
        debugger_break();
    }
else if (TC_CRYPTTO_SUCCESS != tc_cmac_init(&state))
    {
        debugger_break();
    }
else if (TC_CRYPTTO_SUCCESS != tc_cmac_update(&state, msg, sizeof(msg)))
    {
        debugger_break();
    }
else if (TC_CRYPTTO_SUCCESS != tc_cmac_final(Tag, &state))
    {
        debugger_break();
    }
else if (TC_CRYPTTO_SUCCESS != memcmp(Tag, tag, BUF_LEN))
    {
        debugger_break();
    }
else
    {
        /* Operation successful. */
        while (1)
            {
                ;
            }
    }
}
```

Function Documentation

◆ RM_TINCRYPT_PORT_Init()

```
fsp_err_t RM_TINCRYPT_PORT_Init ( )
```

Initialize the SCE.

◆ RM_TINCRYPT_PORT_TRNG_Read()

```
fsp_err_t RM_TINCRYPT_PORT_TRNG_Read ( uint8_t *const p_rngbuf, uint32_t num_req_bytes )
```

Reads requested length of random data from the TRNG. Generate num_req_bytes of random bytes and store them in p_rngbuf buffer.

Return values

| | |
|------------------------|-------------------------------------|
| FSP_SUCCESS | Random number generation successful |
| FSP_ERR_ASSERTION | NULL input parameter(s). |
| FSP_ERR_CRYPTO_UNKNOWN | An unknown error occurred. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ default_CSPRNG()

```
int default_CSPRNG ( uint8_t * dest, unsigned int size )
```

Implements the Cryptographically Secure Pseudo-Random Number Generator function required by TinyCrypt.

Return values

| | |
|------------------|-------------------------------------|
| TC_CRYPTOSUCCESS | Random number generation successful |
| TC_CRYPTOFAIL | Random number generation failed. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- RM_TINCRYPT_PORT_TRNG_Read

5.2.16 Sensor

Modules

Detailed Description

Sensor Modules.

Modules

[FS1015 Flow Sensor \(rm_fs1015\)](#)

Middleware to implement the FS1015 sensor interface. This module implements the [FSXXXX Middleware Interface](#).

[FS2012 Flow Sensor \(rm_fs2012\)](#)

Middleware to implement the FS2012 sensor interface. This module implements the [FSXXXX Middleware Interface](#).

[FS3000 Flow Sensor \(rm_fs3000\)](#)

Middleware to implement the FS3000 sensor interface. This module implements the [FSXXXX Middleware Interface](#).

[HS300X Temperature/Humidity Sensor \(rm_hs300x\)](#)

Middleware to implement the HS300X sensor interface. This module implements the [HS300X Middleware Interface](#).

[HS400X Temperature/Humidity Sensor \(rm_hs400x\)](#)

Middleware to implement the HS400X sensor interface. This module implements the [HS400X Middleware Interface](#).

[OB1203 Light/Proximity/PPG Sensor \(rm_ob1203\)](#)

Middleware to implement the OB1203 sensor interface. This module implements the [OB1203 Middleware Interface](#).

[ZMOD4XXX Gas Sensor \(rm_zmod4xxx\)](#)

Middleware to implement the ZMOD4XXX sensor interface. This module implements the [ZMOD4XXX Middleware Interface](#).

5.2.16.1 FS1015 Flow Sensor (rm_fs1015)

[Modules](#) » [Sensor](#)

Functions

`fsp_err_t RM_FS1015_Open (rm_fsxxxx_ctrl_t *const p_api_ctrl,`

```
rm_fsxxxx_cfg_t const *const p_cfg)
```

Opens and configures the FS1015 Middle module. Implements [rm_fsxxxx_api_t::open](#). [More...](#)

```
fsp_err_t RM_FS1015_Close (rm_fsxxxx_ctrl_t *const p_api_ctrl)
```

Disables specified FS1015 control block. Implements [rm_fsxxxx_api_t::close](#). [More...](#)

```
fsp_err_t RM_FS1015_Read (rm_fsxxxx_ctrl_t *const p_api_ctrl,
rm_fsxxxx_raw_data_t *const p_raw_data)
```

Reads ADC data from FS1015. Implements [rm_fsxxxx_api_t::read](#). [More...](#)

```
fsp_err_t RM_FS1015_DataCalculate (rm_fsxxxx_ctrl_t *const p_api_ctrl,
rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const
p_fs1015_data)
```

Calculates flow [m/sec] from ADC data. Implements [rm_fsxxxx_api_t::dataCalculate](#). [More...](#)

Detailed Description

Middleware to implement the FS1015 sensor interface. This module implements the [FSXXXX Middleware Interface](#).

Overview

Features

The FS1015 sensor interface implementation has the following key features:

- Getting ADC data from the sensor
- Calculating flow value from ADC data

Configuration

Build Time Configurations for rm_fs1015

The following build time configurations are defined in `fsp_cfg/rm_fs1015_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

| | | | |
|-------------|-------------|-------------|----------------------------|
| Device Type | FS1015-1005 | FS1015-1005 | Select FS1015 device used. |
|-------------|-------------|-------------|----------------------------|

Configurations for Sensor > FS1015 Flow Sensor (rm_fs1015)

This module can be added to the Stacks tab via New Stack > Sensor > FS1015 Flow Sensor (rm_fs1015).

| Configuration | Options | Default | Description |
|---------------|-------------------------------|------------------|---|
| Name | Name must be a valid C symbol | g_fs1015_sensor0 | Module name. |
| Callback | Name must be a valid C symbol | fs1015_callback | A user callback function can be provided. |

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[FS1015 datasheet is here.](#)

If ADC data is invalid, it is needed to read ADC data from FS1015 again. The module only supports FS1015-1005.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The FS1015 interface expects a bus instance to be opened before opening any FS1015 device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of FS1015 sensor implementation in an application.

```
void rm_fs1015_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    rm_fsxxxx_raw_data_t fs1015_raw_data;
    rm_fsxxxx_data_t   fs1015_data;
    uint8_t            calculated_flag = 0;
```

```
rm_comms_i2c_bus_extended_cfg_t * p_extend =
    (rm_comms_i2c_bus_extended_cfg_t *) g_fs1015_cfg.p_instance->p_cfg->p_extend;
i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;

p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#if BSP_CFG_RTOS
/* Create a semaphore for blocking if a semaphore is not NULL */
if (NULL != p_extend->p_blocking_semaphore)
{
#if BSP_CFG_RTOS == 1 // AzureOS
    tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
        p_extend->p_blocking_semaphore->p_semaphore_name,
        (ULONG) 0);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
    *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
        xSemaphoreCreateCountingStatic((UBaseType_t) 1,
            (UBaseType_t) 0,
p_extend->p_blocking_semaphore->p_semaphore_memory);
#endif
}

/* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
if (NULL != p_extend->p_bus_recursive_mutex)
{
#if BSP_CFG_RTOS == 1 // AzureOS
    tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
        p_extend->p_bus_recursive_mutex->p_mutex_name,
        TX_INHERIT);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
    *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
        xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
#endif
}
```

```
    }
#endif

    err = RM_FS1015_Open(&g_fs1015_ctrl, &g_fs1015_cfg);
/* Handle any errors. This function should be defined by the user. */
    handle_error(err);

while (true)
    {
do
    {
        g_flag = 0;
/* Read ADC Data from FS1015 */
RM_FS1015_Read(&g_fs1015_ctrl, &fs1015_raw_data);
while (0 == g_flag)
    {
/* Wait callback */
    }

/* Calculate Flow value from ADC data */
        err = RM_FS1015_DataCalculate(&g_fs1015_ctrl, &fs1015_raw_data,
&fs1015_data);
    if (FSP_SUCCESS == err)
        {
            calculated_flag = 1;
        }
    else if (FSP_ERR_SENSOR_INVALID_DATA == err) /* Checksum error */
        {
            calculated_flag = 0;
        }
    else
        {
            handle_error(err);
        }
        } while (0 == calculated_flag);

/* Wait 125 milliseconds. See table 4 on the page 3 of the datasheet. */
R_BSP_SoftwareDelay(FS1015_DELAY_125, BSP_DELAY_UNITS_MILLISECONDS);
```

```

}
}

```

Data Structures

struct [rm_fs1015_instance_ctrl_t](#)

Data Structure Documentation

◆ [rm_fs1015_instance_ctrl_t](#)

Function Documentation

◆ **RM_FS1015_Open()**

```
fsp_err_t RM_FS1015_Open ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_cfg_t const *const p_cfg )
```

Opens and configures the FS1015 Middle module. Implements `rm_fsxxxx_api_t::open`.

Example:

```
err = RM_FS1015_Open(&g_fs1015_ctrl, &g_fs1015_cfg);
```

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | FS1015 successfully configured. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. This module can only be opened once. |

◆ **RM_FS1015_Close()**

```
fsp_err_t RM_FS1015_Close ( rm_fsxxxx_ctrl_t *const p_api_ctrl)
```

Disables specified FS1015 control block. Implements `rm_fsxxxx_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully closed. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_FS1015_Read()**

```
fsp_err_t RM_FS1015_Read ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data )
```

Reads ADC data from FS1015. Implements `rm_fsxxxx_api_t::read`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ RM_FS1015_DataCalculate()

```
fsp_err_t RM_FS1015_DataCalculate ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t
*const p_raw_data, rm_fsxxxx_data_t *const p_fs1015_data )
```

Calculates flow [m/sec] from ADC data. Implements `rm_fsxxxx_api_t::dataCalculate`.

Return values

| | |
|-----------------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_SENSOR_INVALID_DATA | Data is invalid. |

5.2.16.2 FS2012 Flow Sensor (rm_fs2012)

Modules » [Sensor](#)

Functions

```
fsp_err_t RM_FS2012_Open (rm_fsxxxx_ctrl_t *const p_api_ctrl,
rm_fsxxxx_cfg_t const *const p_cfg)
```

Opens and configures the FS2012 Middle module. Implements `rm_fsxxxx_api_t::open`. [More...](#)

```
fsp_err_t RM_FS2012_Close (rm_fsxxxx_ctrl_t *const p_api_ctrl)
```

Disables specified FS2012 control block. Implements `rm_fsxxxx_api_t::close`. [More...](#)

```
fsp_err_t RM_FS2012_Read (rm_fsxxxx_ctrl_t *const p_api_ctrl,
rm_fsxxxx_raw_data_t *const p_raw_data)
```

Reads ADC data from FS2012. Implements `rm_fsxxxx_api_t::read`. [More...](#)

fsp_err_t RM_FS2012_DataCalculate (rm_fsxxxx_ctrl_t *const p_api_ctrl,
rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const
p_fs2012_data)
```

Calculates flow from ADC data. Unit of Gas flow is SLPM (Standard liter per minute) Unit of Liquid flow is SCCM (Standard cubic centimeter per minute) Implements `rm_fsxxxx_api_t::dataCalculate`. [More...](#)

Detailed Description

Middleware to implement the FS2012 sensor interface. This module implements the [FSXXXX Middleware Interface](#).

Overview

Features

The FS2012 sensor interface implementation has the following key features:

- Getting ADC data from the sensor
- Calculating flow value from ADC data

Configuration

Build Time Configurations for rm_fs2012

The following build time configurations are defined in fsp_cfg/rm_fs2012_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|----------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Device Type | <ul style="list-style-type: none"> • FS2012-1020-N G • FS2012-1100-N G | FS2012-1100-NG | Select FS2012 device type. |

Configurations for Sensor > FS2012 Flow Sensor (rm_fs2012)

This module can be added to the Stacks tab via New Stack > Sensor > FS2012 Flow Sensor (rm_fs2012).

| Configuration | Options | Default | Description |
|---------------|-------------------------------|------------------|---|
| Name | Name must be a valid C symbol | g_fs2012_sensor0 | Module name. |
| Callback | Name must be a valid C symbol | fs2012_callback | A user callback function can be provided. |

Pin Configuration

This module uses SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[FS2012 datasheet is here](#). The module only supports FS2012-1020-NG and FS2012-1100-NG.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The FS2012 interface expects a bus instance to be opened before opening any FS2012 device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of FS2012 sensor implementation in an application.

```
void rm_fs2012_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    rm_fsxxxx_raw_data_t fs2012_raw_data;
    rm_fsxxxx_data_t   fs2012_data;
    /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend =
        (rm_comms_i2c_bus_extended_cfg_t *) g_fs2012_cfg.p_instance->p_cfg->p_extend;
    i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;
    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#ifdef BSP_CFG_RTOS
    /* Create a semaphore for blocking if a semaphore is not NULL */
    if (NULL != p_extend->p_blocking_semaphore)
    {
#ifdef BSP_CFG_RTOS == 1 // AzureOS
        tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
            p_extend->p_blocking_semaphore->p_semaphore_name,
            (ULONG) 0);
#elseif BSP_CFG_RTOS == 2 // FreeRTOS
        *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
            xSemaphoreCreateCountingStatic((UBaseType_t) 1,
```

```
        (UBaseType_t) 0,

p_extend->p_blocking_semaphore->p_semaphore_memory);

#endif

    }

/* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
if (NULL != p_extend->p_bus_recursive_mutex)
    {
#ifdef BSP_CFG_RTOS == 1 // AzureOS
        tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
                        p_extend->p_bus_recursive_mutex->p_mutex_name,
                        TX_INHERIT);
#elif BSP_CFG_RTOS == 2 // FreeRTOS
        *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
            xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
#endif
    }
#endif

    err = RM_FS2012_Open(&g_fs2012_ctrl, &g_fs2012_cfg);
/* Handle any errors. This function should be defined by the user. */
    handle_error(err);

    while (true)
    {
        g_flag = 0;

/* Read ADC Data from FS2012 */
        RM_FS2012_Read(&g_fs2012_ctrl,
                       &fs2012_raw_data);

        while (0 == g_flag)
        {
/* Wait callback */
        }

/* Calculate Flow value from ADC data */
        RM_FS2012_DataCalculate(&g_fs2012_ctrl, &fs2012_raw_data, &fs2012_data);
```

```

/* FS2012 sample rate. See table 4 on the page 5 of the datasheet. */
/* Gas : 409.6ms, Liquid : 716.8ms */
R_BSP_SoftwareDelay(FS2012_GAS_SAMPLE_RATE, BSP_DELAY_UNITS_MICROSECONDS);
}
}

```

Data Structures

```
struct rm_fs2012_instance_ctrl_t
```

Data Structure Documentation

Function Documentation

◆ **RM_FS2012_Open()**

```
fsp_err_t RM_FS2012_Open ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_cfg_t const *const p_cfg )
```

Opens and configures the FS2012 Middle module. Implements `rm_fsxxxx_api_t::open`.

Example:

```
err = RM_FS2012_Open(&g_fs2012_ctrl, &g_fs2012_cfg);
```

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | FS2012 successfully configured. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. This module can only be opened once. |

◆ **RM_FS2012_Close()**

```
fsp_err_t RM_FS2012_Close ( rm_fsxxxx_ctrl_t *const p_api_ctrl)
```

Disables specified FS2012 control block. Implements `rm_fsxxxx_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully closed. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_FS2012_Read()**

```
fsp_err_t RM_FS2012_Read ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data )
```

Reads ADC data from FS2012. Implements `rm_fsxxxx_api_t::read`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ RM_FS2012_DataCalculate()

```
fsp_err_t RM_FS2012_DataCalculate ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t
*const p_raw_data, rm_fsxxxx_data_t *const p_fs2012_data )
```

Calculates flow from ADC data. Unit of Gas flow is SLPM (Standard liter per minute) Unit of Liquid flow is SCCM (Standard cubic centimeter per minute) Implements [rm_fsxxxx_api_t::dataCalculate](#).

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

```

Reads ADC data from FS3000. Implements [rm_fsxxxx_api_t::read](#). [More...](#)

```
fsp_err_t RM_FS3000_DataCalculate (rm_fsxxxx_ctrl_t *const p_api_ctrl,
rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const
p_fs3000_data)
```

Calculates flow [m/sec] from ADC data. Implements [rm_fsxxxx_api_t::dataCalculate](#). [More...](#)

Detailed Description

Middleware to implement the FS3000 sensor interface. This module implements the [FSXXX Middleware Interface](#).

Overview

Features

The FS3000 sensor interface implementation has the following key features:

- Getting ADC data from the sensor
- Calculating flow value from ADC data

Configuration

Build Time Configurations for rm_fs3000

The following build time configurations are defined in fsp_cfg/rm_fs3000_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Device Type | FS3000-1005 | FS3000-1005 | Select FS3000 device used. |

Configurations for Sensor > FS3000 Flow Sensor (rm_fs3000)

This module can be added to the Stacks tab via New Stack > Sensor > FS3000 Flow Sensor (rm_fs3000).

| Configuration | Options | Default | Description |
|---------------|-------------------------------|------------------|---|
| Name | Name must be a valid C symbol | g_fs3000_sensor0 | Module name. |
| Callback | Name must be a valid C symbol | fs3000_callback | A user callback function can be provided. |

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[FS3000 datasheet is here.](#)

If ADC data is invalid, it is needed to read ADC data from FS3000 again. The module only supports FS3000-1005.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The FS3000 interface expects a bus instance to be opened before opening any FS3000 device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of FS3000 sensor implementation in an application.

```
void rm_fs3000_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;

Function Documentation

◆ `RM_FS3000_Open()`

```
fsp_err_t RM_FS3000_Open ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_cfg_t const *const p_cfg )
```

Opens and configures the FS3000 Middle module. Implements `rm_fsxxxx_api_t::open`.

Example:

```
err = RM_FS3000_Open(&g_fs3000_ctrl, &g_fs3000_cfg);
```

Return values

| | |
|-----------------------------------|--|
| <code>FSP_SUCCESS</code> | FS3000 successfully configured. |
| <code>FSP_ERR_ASSERTION</code> | Null pointer, or one or more configuration options is invalid. |
| <code>FSP_ERR_ALREADY_OPEN</code> | Module is already open. This module can only be opened once. |

◆ `RM_FS3000_Close()`

```
fsp_err_t RM_FS3000_Close ( rm_fsxxxx_ctrl_t *const p_api_ctrl)
```

Disables specified FS3000 control block. Implements `rm_fsxxxx_api_t::close`.

Return values

| | |
|--------------------------------|-------------------------------------|
| <code>FSP_SUCCESS</code> | Successfully closed. |
| <code>FSP_ERR_ASSERTION</code> | Null pointer passed as a parameter. |
| <code>FSP_ERR_NOT_OPEN</code> | Module is not open. |

◆ RM_FS3000_Read()

```
fsp_err_t RM_FS3000_Read ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data )
```

Reads ADC data from FS3000. Implements `rm_fsxxxx_api_t::read`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ RM_FS3000_DataCalculate()

```
fsp_err_t RM_FS3000_DataCalculate ( rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fs3000_data )
```

Calculates flow [m/sec] from ADC data. Implements `rm_fsxxxx_api_t::dataCalculate`.

Return values

| | |
|-----------------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_SENSOR_INVALID_DATA | Data is invalid. |

5.2.16.4 HS300X Temperature/Humidity Sensor (rm_hs300x)

Modules » [Sensor](#)

Functions

```
fsp_err_t RM_HS300X_Open (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_cfg_t const *const p_cfg)
```

Opens and configures the HS300X Middle module. Implements `rm_hs300x_api_t::open`. [More...](#)

```
fsp_err_t RM_HS300X_Close (rm_hs300x_ctrl_t *const p_api_ctrl)
```

Disables specified HS300X control block. Implements `rm_hs300x_api_t::close`. [More...](#)

`fsp_err_t RM_HS300X_MeasurementStart (rm_hs300x_ctrl_t *const p_api_ctrl)`

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the hs300x and start a measurement. Implements `rm_hs300x_api_t::measurementStart`. [More...](#)

`fsp_err_t RM_HS300X_Read (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data)`

Reads ADC data from HS300X. Implements `rm_hs300x_api_t::read`. [More...](#)

`fsp_err_t RM_HS300X_DataCalculate (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)`

Calculates humidity [RH] and temperature [Celsius] from ADC data. Implements `rm_hs300x_api_t::dataCalculate`. [More...](#)

`fsp_err_t RM_HS300X_ProgrammingModeEnter (rm_hs300x_ctrl_t *const p_api_ctrl)`

This function must be called within 10ms after applying power to the sensor. Sends the commands to enter the programming mode. After calling this function, please wait 120us. Implements `rm_hs300x_api_t::programmingModeEnter`. [More...](#)

`fsp_err_t RM_HS300X_ResolutionChange (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)`

This function must be called after calling the `RM_HS300X_ProgrammingModeEnter` function. Changes the sensor resolution. This function blocks for 120 us software delay plus 9 bytes on the I2C bus. After calling this function, 14ms must be waited. Failure to comply with these times may result in data corruption and introduce errors in sensor measurements. Implements `rm_hs300x_api_t::resolutionChange`. [More...](#)

`fsp_err_t RM_HS300X_SensorIdGet (rm_hs300x_ctrl_t *const p_api_ctrl, uint32_t *const p_sensor_id)`

This function must be called after calling the `RM_HS300X_ProgrammingModeEnter` function. Gets the sensor ID. This function blocks for 240 us software delay plus 12 bytes on the I2C bus. Implements `rm_hs300x_api_t::sensorIdGet`. [More...](#)

`fsp_err_t RM_HS300X_ProgrammingModeExit (rm_hs300x_ctrl_t *const`

p_api_ctrl)

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. This function must be called to return to normal sensor operation and perform measurements. Sends the commands to exit the programming mode. Implements `rm_hs300x_api_t::programmingModeExit`. [More...](#)

Detailed Description

Middleware to implement the HS300X sensor interface. This module implements the [HS300X Middleware Interface](#).

Overview

Features

The HS300X sensor interface implementation has the following key features:

- Starting a measurement at any time
- Getting ADC data from the sensor
- Calculating humidity and temperature value from getting ADC data
- Changing the sensor resolution
- Getting the sensor ID

Configuration

Build Time Configurations for rm_hs300x

The following build time configurations are defined in `fsp_cfg/rm_hs300x_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|-------------------------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Data type | <ul style="list-style-type: none"> • Both humidity and temperature • Humidity only | Both humidity and temperature | Select Getting humidity only and both humidity and temperature. |
| Programming Mode | <ul style="list-style-type: none"> • ON • OFF | OFF | If selected the programming mode can be entered. |

Configurations for Sensor > HS300X Temperature/Humidity Sensor (rm_hs300x)

This module can be added to the Stacks tab via `New Stack > Sensor > HS300X Temperature/Humidity Sensor (rm_hs300x)`.

| Configuration | Options | Default | Description |
|---------------|---------|---------|-------------|
|---------------|---------|---------|-------------|

| | | | |
|----------|-------------------------------|------------------|---|
| Name | Name must be a valid C symbol | g_hs300x_sensor0 | Module name. |
| Callback | Name must be a valid C symbol | hs300x_callback | A user callback function can be provided. |

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[HS300x datasheet is here.](#)

If ADC data is valid and calculating humidity and temperature is finished, it is needed to start a measurement again. If ADC data is invalid, it is needed to read ADC data from HS300x again.

If changing the sensor resolution and getting the sensor ID, RM_HS300X_ProgrammingModeEnter function must be called within 10ms after applying power to the sensor. Entering the programming mode takes 120us. Thresore, after calling RM_HS300X_ProgrammingModeEnter function, please wait 120us. After calling RM_HS300X_ResolutionChange function, 14ms must be waited because failure to comply with these times may result in data corruption and introduce errors in sensor measurements.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The HS300X interface expects a bus instance to be opened before opening any HS300X device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Examples

Basic Example

This is a basic example of minimal use of HS300X sensor implementation in an application.

```
void rm_hs300x_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    rm_hs300x_raw_data_t hs300x_raw_data;
    rm_hs300x_data_t   hs300x_data;
    uint8_t           calculated_flag = 0;
    /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend =
```

```
(rm_comms_i2c_bus_extended_cfg_t *) g_hs300x_cfg.p_instance->p_cfg->p_extend;
i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;

p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#if BSP_CFG_RTOS
/* Create a semaphore for blocking if a semaphore is not NULL */
if (NULL != p_extend->p_blocking_semaphore)
{
#if BSP_CFG_RTOS == 1 // AzureOS

Function Documentation

◆ **RM_HS300X_Open()**

```
fsp_err_t RM_HS300X_Open ( rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_cfg_t const *const p_cfg )
```

Opens and configures the HS300X Middle module. Implements `rm_hs300x_api_t::open`.

Example:

```
err = RM_HS300X_Open(&g_hs300x_ctrl, &g_hs300x_cfg);
```

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | HS300X successfully configured. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. This module can only be opened once. |

◆ **RM_HS300X_Close()**

```
fsp_err_t RM_HS300X_Close ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

Disables specified HS300X control block. Implements `rm_hs300x_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully closed. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_HS300X_MeasurementStart()**

```
fsp_err_t RM_HS300X_MeasurementStart ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the hs300x and start a measurement. Implements `rm_hs300x_api_t::measurementStart`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_HS300X_Read()**

```
fsp_err_t RM_HS300X_Read ( rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data )
```

Reads ADC data from HS300X. Implements `rm_hs300x_api_t::read`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_HS300X_DataCalculate()**

```
fsp_err_t RM_HS300X_DataCalculate ( rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data )
```

Calculates humidity [RH] and temperature [Celsius] from ADC data. Implements `rm_hs300x_api_t::dataCalculate`.

Return values

| | |
|-----------------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_SENSOR_INVALID_DATA | Data is invalid. |

◆ **RM_HS300X_ProgrammingModeEnter()**

```
fsp_err_t RM_HS300X_ProgrammingModeEnter ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

This function must be called within 10ms after applying power to the sensor. Sends the commands to enter the programming mode. After calling this function, please wait 120us. Implements `rm_hs300x_api_t::programmingModeEnter`.

Return values

| | |
|---------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_UNSUPPORTED | Programming mode is not supported. |

◆ **RM_HS300X_ResolutionChange()**

```
fsp_err_t RM_HS300X_ResolutionChange ( rm_hs300x_ctrl_t *const p_api_ctrl,
rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution )
```

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Changes the sensor resolution. This function blocks for 120 us software delay plus 9 bytes on the I2C bus. After calling this function, 14ms must be waited. Failure to comply with these times may result in data corruption and introduce errors in sensor measurements. Implements [rm_hs300x_api_t::resolutionChange](#).

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_MODE | Module is not entering the programming mode. |
| FSP_ERR_ABORTED | Communication is aborted. |
| FSP_ERR_TIMEOUT | Communication is timeout. |
| FSP_ERR_UNSUPPORTED | Programming mode is not supported. |

◆ **RM_HS300X_SensorIdGet()**

```
fsp_err_t RM_HS300X_SensorIdGet ( rm_hs300x_ctrl_t *const p_api_ctrl, uint32_t *const
p_sensor_id )
```

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Gets the sensor ID. This function blocks for 240 us software delay plus 12 bytes on the I2C bus. Implements [rm_hs300x_api_t::sensorIdGet](#).

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_MODE | Module is not entering the programming mode. |
| FSP_ERR_ABORTED | Communication is aborted. |
| FSP_ERR_TIMEOUT | Communication is timeout. |
| FSP_ERR_UNSUPPORTED | Programming mode is not supported. |

◆ RM_HS300X_ProgrammingModeExit()

```
fsp_err_t RM_HS300X_ProgrammingModeExit ( rm_hs300x_ctrl_t *const p_api_ctrl)
```

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. This function must be called to return to normal sensor operation and perform measurements. Sends the commands to exit the programming mode. Implements [rm_hs300x_api_t::programmingModeExit](#).

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_INVALID_MODE | Module is not entering the programming mode. |
| FSP_ERR_UNSUPPORTED | Programming mode is not supported. |

5.2.16.5 HS400X Temperature/Humidity Sensor (rm_hs400x)

Modules » Sensor

Functions

```
fsp_err_t RM_HS400X_Open (rm_hs400x_ctrl_t *const p_api_ctrl,
                          rm_hs400x_cfg_t const *const p_cfg)
```

Opens and configures the HS400X middleware module. Implements [rm_hs400x_api_t::open](#). [More...](#)

```
fsp_err_t RM_HS400X_Close (rm_hs400x_ctrl_t *const p_api_ctrl)
```

Disables specified HS400X control block. Implements [rm_hs400x_api_t::close](#). [More...](#)

```
fsp_err_t RM_HS400X_MeasurementStart (rm_hs400x_ctrl_t *const p_api_ctrl)
```

This function should be called when start one shot measurement. Sends the command of measurement to HS400X and start a measurement. This function supports No-Hold measurement and Periodic measurement only. If Hold measurement is enabled, please call [RM_HS400X_Read\(\)](#) without calling this function. In Periodic measurement, if the periodic measurement has already run, RM_HS400X_EVENT_ERROR is received in callback because HS400x device replies with NACK. Implements [rm_hs400x_api_t::measurementStart](#). [More...](#)

`fsp_err_t RM_HS400X_MeasurementStop (rm_hs400x_ctrl_t *const p_api_ctrl)`

Stop a periodic measurement. Sends the command of stopping periodic measurement to HS400X. This function supports periodic measurement only. If a periodic measurement is not running, `RM_HS400X_EVENT_ERROR` is received in callback because HS400x device replies with NACK. Implements `rm_hs400x_api_t::measurementStop`. [More...](#)

`fsp_err_t RM_HS400X_Read (rm_hs400x_ctrl_t *const p_api_ctrl, rm_hs400x_raw_data_t *const p_raw_data)`

Reads ADC data from HS400X. If Hold measurement is enabled, HS400X holds the SCL line low during the measurement and releases the SCL line when the measurement is complete. If No-Hold measurement is enabled and the measurement result is not ready, `RM_HS400X_EVENT_MEASUREMENT_NOT_COMPLETE` is received in callback. Implements `rm_hs400x_api_t::read`. [More...](#)

`fsp_err_t RM_HS400X_DataCalculate (rm_hs400x_ctrl_t *const p_api_ctrl, rm_hs400x_raw_data_t *const p_raw_data, rm_hs400x_data_t *const p_hs400x_data)`

Calculates temperature [Celsius] and humidity [RH] from ADC data. Implements `rm_hs400x_api_t::dataCalculate`. [More...](#)

Detailed Description

Middleware to implement the HS400X sensor interface. This module implements the [HS400X Middleware Interface](#).

Overview

Features

The HS400X sensor interface implementation has the following key features:

- Starting a measurement at any time
- Selecting one shot or a periodic measurement
- Getting ADC data from the sensor
- Calculating humidity and temperature value from getting ADC data

Limitations

- Alert feature is not supported. It will be supported in the future.
- [I2C Master \(r_sau_i2c\)](#) is not supported. Please refer to Limitations of [I2C Master \(r_sau_i2c\)](#)

Notifications

The minimum frequency for the SCL clock in Hold measurement is 200kHz. Please configure

I2C_MASTER_RATE_FAST or I2C_MASTER_RATE_FASTPLUS to "Rate" in I2C Master (r_iic_master) or I2C Master (r_sci_i2c).

Configuration

Build Time Configurations for rm_hs400x

The following build time configurations are defined in fsp_cfg/rm_hs400x_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|---|-------------------------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Measurement Type | <ul style="list-style-type: none"> Hold Measurement No-Hold Measurement Periodic Measurement | No-Hold Measurement | Select measurement type. |
| Data type | <ul style="list-style-type: none"> Both humidity and temperature Temperature only | Both humidity and temperature | Select getting temperature only or both humidity and temperature. |

Configurations for Sensor > HS400X Temperature/Humidity Sensor (rm_hs400x)

This module can be added to the Stacks tab via New Stack > Sensor > HS400X Temperature/Humidity Sensor (rm_hs400x).

| Configuration | Options | Default | Description |
|------------------------------------|---|---------------------------|---|
| Name | Name must be a valid C symbol | g_hs400x_sensor0 | Module name. |
| Temperature Resolution | <ul style="list-style-type: none"> 8-bit 10-bit 12-bit 14-bit | 14-bit | Set resolution of temperature. |
| Humidity Resolution | <ul style="list-style-type: none"> 8-bit 10-bit 12-bit 14-bit | 14-bit | Set resolution of humidity. |
| Frequency for Periodic Measurement | <ul style="list-style-type: none"> 0.4Hz 1Hz 2Hz | 1Hz | Set frequency for periodic measurement. |
| Comms I2C Callback | Name must be a valid C symbol | hs400x_comms_i2c_callback | A user COMMS I2C callback function can be provided. |

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[HS400x datasheet is here.](#)

This module supports three measurement type :

- Hold measurement
- No-Hold measurement
- Periodic measurement

Hold and no-hold measurements also support measuring temperature data only. However, a periodic measurement only supports measuring both humidity and temperature data.

Hold Measurement

A hold measurement sequence consists of the following steps.

1. Wake up the HS400x series sensor from sleep mode by sending its I2C address with a write bit, and initiate a measurement by sending the desired hold measurement command.
2. Change the direction of communication by sending a start bit, the HS400x I2C address, and a read bit. The SCL line is held low by the sensor during the measurement process, which prevents the master from initiating any communications with other slaves on the bus.
3. Once the requested measurement is completed by the HS400x series sensor, the SCL line is released and the chip waits for the SCL clock signal to send the results. The sensor will then transmit the requested measurement data on the bus for the master to capture.

No-Hold Measurement

A no-hold measurement sequence consists of the following steps.

1. Wake up the HS400x series sensor from sleep mode by sending its I2C address with a write bit, and initiate a measurement by sending the desired no-hold measurement command.
2. To read the result from the HS400x series sensor, the master has to send the chip its I2C address and a read bit. If the measurement is completed and the result is ready, the chip will send an ACK bit and starts to send the result over the bus. If the measurement is still in progress, the chip will send a NACK bit and the master will need to try to read the result again.

Periodic Measurement

The HS400x sensors can also be configured to measure at regular intervals without user intervention. In this mode, the user can read the latest relative humidity / temperature data by issuing a data fetch sequence, which consists of sending the HS400x I2C address with a read bit. The sensor will then send the latest measurement result over the I2C bus.

When the periodic measurement mode is active, the only commands the chip will respond to are the data fetch command, and a command to stop the periodic measurements. The command to stop periodic measurements is issued by sending the I2C address with a write bit, followed by the command 0x30. Sequence to Stop Periodic Measurements. Once the periodic measurements have been stopped, the chip returns to sleep and is ready to accept all valid I2C commands.

Bus Initialization

The HS400X interface expects a I2C bus instance to be opened before opening any I2C device. The

interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Initialization

Initialize with [RM_HS400X_Open\(\)](#).

From measurement start to data acquisition

After normal completion, start the each measurement.

Hold Measurement

In hold measurement, the HS400x series sensor holds the SCL line low during the measurement and releases the SCL line when the measurement is complete.

1. Call [RM_HS400X_Read\(\)](#). This function will start a measurement and read the ADC data.
2. Wait until `RM_HS400X_EVENT_SUCCESS` is received.
3. Call [RM_HS400X_DataCalculate\(\)](#). This function will calculate temperature and humidity data from the ADC data.

No-Hold Measurement

In no-hold measurement, the HS400x series sensor does not hold the SCL line low, and the master is free to initiate communication with other slaves while the chip is performing the measurement.

1. Call [RM_HS400X_MeasurementStart\(\)](#). This function will start a measurement.
2. Wait until `RM_HS400X_EVENT_SUCCESS` is received.
3. Call [RM_HS400X_Read\(\)](#). This function will read the ADC data.
4. If the measurement result is not ready, `RM_HS400X_EVENT_MEASUREMENT_NOT_COMPLETE` is received in callback. User should call [RM_HS400X_Read\(\)](#) again. If the measurement is completed, `RM_HS400X_EVENT_SUCCESS` is received in callback.
5. Wait until `RM_HS400X_EVENT_SUCCESS` is received.
6. Call [RM_HS400X_DataCalculate\(\)](#). This function will calculate temperature and humidity data from the ADC data.

Periodic Measurement

In periodic measurement, the HS400x sensors measure at regular intervals without user intervention. If a periodic measurement is running, the resolution and the frequency cannot be changed. please stop the periodic measurement with [RM_HS400X_MeasurementStop\(\)](#).

1. Call [RM_HS400X_MeasurementStart\(\)](#). This function will start a measurement. If the function is called once, a second call is not required.
2. Wait until `RM_HS400X_EVENT_SUCCESS` is received.
3. Wait for frequency for periodic measurement.
4. Call [RM_HS400X_Read\(\)](#). This function will read the ADC data.
5. Wait until `RM_HS400X_EVENT_SUCCESS` is received.

6. Call `RM_HS400X_DataCalculate()`. This function will calculate temperature and humidity data from the ADC data.

Examples

Basic Example

This is a basic examples of minimal use of HS400X sensor implementation in an application.

```
void rm_hs400x_basic_example (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    rm_hs400x_raw_data_t hs400x_raw_data;
    rm_hs400x_data_t   hs400x_data;
    bool               measurement_complete = false;
    bool               calculated           = false;
    /* Open the I2C bus if it is not already open. */

Function Documentation

◆ **RM_HS400X_Open()**

```
fsp_err_t RM_HS400X_Open ( rm_hs400x_ctrl_t *const p_api_ctrl, rm_hs400x_cfg_t const *const p_cfg )
```

Opens and configures the HS400X middleware module. Implements `rm_hs400x_api_t::open`.

Example:

```
err = RM_HS400X_Open(&g_hs400x_ctrl, &g_hs400x_cfg);
```

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | HS400X successfully configured. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. This module can only be opened once. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |

◆ **RM_HS400X_Close()**

```
fsp_err_t RM_HS400X_Close ( rm_hs400x_ctrl_t *const p_api_ctrl)
```

Disables specified HS400X control block. Implements `rm_hs400x_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully closed. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_HS400X_MeasurementStart()**

```
fsp_err_t RM_HS400X_MeasurementStart ( rm_hs400x_ctrl_t *const p_api_ctrl)
```

This function should be called when start one shot measurement. Sends the command of measurement to HS400X and start a measurement. This function supports No-Hold measurement and Periodic measurement only. If Hold measurement is enabled, please call [RM_HS400X_Read\(\)](#) without calling this function. In Periodic measurement, if the periodic measurement has already run, RM_HS400X_EVENT_ERROR is received in callback because HS400x device replies with NACK. Implements [rm_hs400x_api_t::measurementStart](#).

Return values

| | |
|---------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |
| FSP_ERR_UNSUPPORTED | Hold measurement is unsupported. |

◆ **RM_HS400X_MeasurementStop()**

```
fsp_err_t RM_HS400X_MeasurementStop ( rm_hs400x_ctrl_t *const p_api_ctrl)
```

Stop a periodic measurement. Sends the command of stopping periodic measurement to HS400X. This function supports periodic measurement only. If a periodic measurement is not running, RM_HS400X_EVENT_ERROR is received in callback because HS400x device replies with NACK. Implements [rm_hs400x_api_t::measurementStop](#).

Return values

| | |
|---------------------|---|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |
| FSP_ERR_UNSUPPORTED | Hold and No-Hold measurement are unsupported. |

◆ RM_HS400X_Read()

```
fsp_err_t RM_HS400X_Read ( rm_hs400x_ctrl_t *const p_api_ctrl, rm_hs400x_raw_data_t *const p_raw_data )
```

Reads ADC data from HS400X. If Hold measurement is enabled, HS400X holds the SCL line low during the measurement and releases the SCL line when the measurement is complete. If No-Hold measurement is enabled and the measurement result is not ready, RM_HS400X_EVENT_MEASUREMENT_NOT_COMPLETE is received in callback. Implements [rm_hs400x_api_t::read](#).

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ RM_HS400X_DataCalculate()

```
fsp_err_t RM_HS400X_DataCalculate ( rm_hs400x_ctrl_t *const p_api_ctrl, rm_hs400x_raw_data_t *const p_raw_data, rm_hs400x_data_t *const p_hs400x_data )
```

Calculates temperature [Celsius] and humidity [RH] from ADC data. Implements [rm_hs400x_api_t::dataCalculate](#).

Return values

| | |
|-----------------------------|--|
| FSP_SUCCESS | Successfully data decoded. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_SENSOR_INVALID_DATA | Data is invalid. |

5.2.16.6 OB1203 Light/Proximity/PPG Sensor (rm_ob1203)

Modules » Sensor

Functions

```
fsp_err_t RM_OB1203_Open (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_cfg_t const *const p_cfg)
```

Opens and configures the OB1203 Middle module. Implements [rm_ob1203_api_t::open](#). [More...](#)

`fsp_err_t` [RM_OB1203_Close](#) ([rm_ob1203_ctrl_t](#) *const p_api_ctrl)

Disables specified OB1203 control block. Implements [rm_ob1203_api_t::close](#). [More...](#)

`fsp_err_t` [RM_OB1203_MeasurementStart](#) ([rm_ob1203_ctrl_t](#) *const p_api_ctrl)

Start measurement. Implements [rm_ob1203_api_t::measurementStart](#). [More...](#)

`fsp_err_t` [RM_OB1203_MeasurementStop](#) ([rm_ob1203_ctrl_t](#) *const p_api_ctrl)

Stop measurement. If device interrupt is enabled, interrupt bits are cleared after measurement stop. If PPG mode, FIFO information is also reset after measurement stop. In RTOS and Light/Proximity/Light Proximity mode, if device interrupt is enabled, blocks 2 bytes on the I2C bus. In RTOS and PPG mode, if device interrupt is enabled, blocks 6 bytes on the I2C bus. If device interrupt is disabled, blocks 4 bytes on the I2C bus. Implements [rm_ob1203_api_t::measurementStop](#). [More...](#)

`fsp_err_t` [RM_OB1203_LightRead](#) ([rm_ob1203_ctrl_t](#) *const p_api_ctrl, [rm_ob1203_raw_data_t](#) *const p_raw_data, [rm_ob1203_light_data_type_t](#) type)

Reads Light ADC data from OB1203 device. If device interrupt is enabled, interrupt bits are cleared after data read. In RTOS and Light mode, if device interrupt is enabled, blocks 2 bytes on the I2C bus. Implements [rm_ob1203_api_t::lightRead](#). [More...](#)

`fsp_err_t` [RM_OB1203_LightDataCalculate](#) ([rm_ob1203_ctrl_t](#) *const p_api_ctrl, [rm_ob1203_raw_data_t](#) *const p_raw_data, [rm_ob1203_light_data_t](#) *const p_ob1203_data)

Calculate light data from raw data. Implements [rm_ob1203_api_t::lightDataCalculate](#). [More...](#)

`fsp_err_t` [RM_OB1203_ProxRead](#) ([rm_ob1203_ctrl_t](#) *const p_api_ctrl, [rm_ob1203_raw_data_t](#) *const p_raw_data)

Reads Proximity ADC data from OB1203 device. If device interrupt is enabled, interrupt bits are cleared after data read. In RTOS and Proximity mode, if device interrupt is enabled, blocks 2 bytes on the I2C bus. Implements [rm_ob1203_api_t::proxRead](#). [More...](#)

`fsp_err_t RM_OB1203_ProxDDataCalculate (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_prox_data_t *const p_ob1203_data)`

Calculate proximity data from raw data. Implements `rm_ob1203_api_t::proxDataCalculate`. [More...](#)

`fsp_err_t RM_OB1203_PpgRead (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, uint8_t const number_of_samples)`

Reads PPG ADC data from OB1203 device. One sample requires three bytes. 0 cannot set to the number of samples. Implements `rm_ob1203_api_t::ppgRead`. [More...](#)

`fsp_err_t RM_OB1203_PpgDataCalculate (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_ppg_data_t *const p_ob1203_data)`

Calculate PPG data from raw data. Implements `rm_ob1203_api_t::ppgDataCalculate`. [More...](#)

`fsp_err_t RM_OB1203_GainSet (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_gain_t const gain)`

Set gain. This function should be called after calling `RM_OB1203_MeasurementStop()`. In RTOS and Light Proximity mode, blocks 2 bytes on the I2C bus. Implements `rm_ob1203_api_t::gainSet`. [More...](#)

`fsp_err_t RM_OB1203_LedCurrentSet (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_led_current_t const led_current)`

Set currents. This function should be called after calling `RM_OB1203_MeasurementStop()`. Implements `rm_ob1203_api_t::ledCurrentSet`. [More...](#)

`fsp_err_t RM_OB1203_DeviceInterruptCfgSet (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_device_interrupt_cfg_t const interrupt_cfg)`

Set device interrupt configurations. This function should be called after calling `RM_OB1203_MeasurementStop()`. Implements `rm_ob1203_api_t::deviceInterruptCfgSet`. [More...](#)

`fsp_err_t RM_OB1203_FifoInfoGet (rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_fifo_info_t *const p_fifo_info)`

Get FIFO information from OB1203 device. Implements `rm_ob1203_api_t::fifoInfoGet`. [More...](#)

```
fsp_err_t RM_OB1203_DeviceStatusGet (rm_ob1203_ctrl_t *const p_api_ctrl,
rm_ob1203_device_status_t *const p_status)
```

Get device status from OB1203 device. Clear all interrupt bits.
Implements `rm_ob1203_api_t::deviceStatusGet`. [More...](#)

Detailed Description

Middleware to implement the OB1203 sensor interface. This module implements the [OB1203 Middleware Interface](#).

Overview

This module provides APIs for configuring and controlling the OB1203 sensor operation modes. Supported OB1203 sensor operation modes are below.

- Light mode
- Proximity mode
- Light Proximity mode
- PPG mode

Features

The OB1203 sensor interface implementation has the following key features:

- Initialize the sensor for measurement
- Start and stop a measurement at any time
- Get the ADC data from the sensor
- Calculate the Light/Proximity/PPG values.
- Software reset

Limitations

- [I2C Master \(r_sau_i2c\)](#) is not supported. Please refer to Limitations of [I2C Master \(r_sau_i2c\)](#)

Configuration

Build Time Configurations for rm_ob1203

The following build time configurations are defined in `fsp_cfg/rm_ob1203_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Sensor > OB1203 Light/Proximity/PPG Sensor (rm_ob1203)

This module can be added to the Stacks tab via `New Stack > Sensor > OB1203 Light/Proximity/PPG Sensor (rm_ob1203)`.

| Configuration | Options | Default | Description |
|-------------------------------|--------------------------------------|---------------------------|---|
| Name | Name must be a valid C symbol | g_ob1203_sensor0 | Module name. |
| Semaphore Timeout (RTOS only) | Value must be a non-negative integer | 0xFFFFFFFF | Set timeout for blocking in using RTOS. |
| Comms I2C Callback | Name must be a valid C symbol | ob1203_comms_i2c_callback | A user COMMS I2C callback function can be provided. |
| IRQ Callback | Name must be a valid C symbol | ob1203_irq_callback | A user IRQ callback function can be provided. |

Configurations for Sensor > OB1203 Light mode (rm_ob1203)

| Configuration | Options | Default | Description |
|--|---|---|---|
| Operation Mode | <ul style="list-style-type: none"> LS mode CS mode | LS mode | Set operation mode. |
| Interrupt Type | <ul style="list-style-type: none"> Threshold Variation | Threshold | Set interrupt type. |
| Interrupt Source | <ul style="list-style-type: none"> Clear channel Green channel Red channel (CS mode only) Blue channel (CS mode only) | Clear channel | Set interrupt source. |
| The Number of Similar Consecutive Interrupt Events | Value must be a non-negative integer | 0x02 | The number of similar consecutive Light mode interrupt events that must occur before the interrupt is asserted (4bits). Min = 0x0 and Max = 0xF |
| Sleep after Interrupt | <ul style="list-style-type: none"> Enabled Disabled | Disabled | Set sleep after interrupt. |
| Gain | <ul style="list-style-type: none"> 1 3 6 | 3 | Set gain for detection range. |
| Resolution and Measurement Period | Refer to the RA Configuration tool for available options. | Resolution:18bit. Measurement Period:100ms | Set resolution and measurement period. |
| Upper Threshold | Value must be a non-negative integer | 0x00CCC | Set upper threshold value (20bits). Min = 0x00000 and Max = 0xFFFFF. |
| Lower Threshold | Value must be a non-negative integer | 0x00000 | Set lower threshold value (20bits). Min = 0x00000 and Max = |

0xFFFFFFFF.

| | | | |
|--------------------|--|----------------|---|
| Variance Threshold | <ul style="list-style-type: none"> • +/- 8 counts • +/- 16 counts • +/- 32 counts • +/- 64 counts • +/- 128 counts • +/- 256 counts • +/- 512 counts • +/- 1024 counts | +/- 128 counts | Set variance threshold. New data varies by selected counts compared to previous result. |
|--------------------|--|----------------|---|

Configurations for Sensor > OB1203 Proximity mode (rm_ob1203)

| Configuration | Options | Default | Description |
|--|---|------------------------------|---|
| Interrupt Type | <ul style="list-style-type: none"> • Normal • Logic | Normal | Set interrupt type. |
| The Number of Similar Consecutive Interrupt Events | Value must be a non-negative integer | 0x02 | The number of similar consecutive Proximity mode interrupt events that must occur before the interrupt is asserted (4bits). Min = 0x0 and Max = 0xF |
| Sleep after Interrupt | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Set sleep after interrupt. |
| Gain | <ul style="list-style-type: none"> • 1 • 1.5 • 2 • 4 | 1 | Set gain of ADC output and noise. |
| LED Current | Value must be a non-negative integer | 0x100 | Set Current for LED (10bits). Min = 0x000 and Max = 0x3FF |
| LED Order | <ul style="list-style-type: none"> • IR LED first, Red LED second • Red LED first, IR LED second | IR LED first, Red LED second | Set LED order. |
| LED Analog Cancellation | <ul style="list-style-type: none"> • Enabled (50% offset of the full-scale value) • Disabled | Disabled | Set analog cancellation level. |
| LED Digital Cancellation | Value must be a non-negative integer | 0x100 | Set digital cancellation level (16bits). Min = 0x0000 and Max = 0xFFFF |
| Number of LED pulses | <ul style="list-style-type: none"> • 1 pulse • 2 pulses • 4 pulses • 8 pulses • 16 pulses • 32 pulses | 8 pulses | Set number of LED pulses. |

| | | | |
|------------------------------------|---|---|--|
| Pulse Width and Measurement Period | Refer to the RA Configuration tool for available options. | Pulse width:42us. Measurement Period:100ms | Set pulse width and measurement period. |
| Moving Average | <ul style="list-style-type: none"> Enabled Disabled | Disabled | Set moving average. |
| Hysteresis | Value must be a non-negative integer | 0x00 | Set hysteresis level (7bits). Min = 0x00 and Max = 0x7F. |
| Upper Threshold | Value must be a non-negative integer | 0x0600 | Set upper threshold value (16bits). Min = 0x0000 and Max = 0xFFFF. |
| Lower Threshold | Value must be a non-negative integer | 0x0000 | Set lower threshold value (16bits). Min = 0x0000 and Max = 0xFFFF. |

| Moving Average | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Set moving average. |
| Hysteresis | Value must be a non-negative integer | 0x00 | Set hysteresis level (7bits). Min = 0x00 and Max = 0x7F. |
| Upper Threshold | Value must be a non-negative integer | 0x0600 | Set upper threshold value (16bits). Min = 0x0000 and Max = 0xFFFF. |
| Lower Threshold | Value must be a non-negative integer | 0x0000 | Set lower threshold value (16bits). Min = 0x0000 and Max = 0xFFFF. |

Pin Configuration

This module uses I2C Master, SCI I2C and IRQ drivers. Therefore, this module uses SDA and SCL pins of I2C Master and SCI I2C and an IRQ pin.

Usage Notes

[OB1203 datasheet is here.](#)

The OB1203 has four operation modes.

Light mode

Light mode has two operation modes.

| Operation mode | Red | Green | Blue | Clear | Comp *1 |
|----------------|-----|-------|------|-------|---------|
| LS mode | | ✓ | | ✓ | ✓ |
| CS mode | ✓ | ✓ | ✓ | ✓ | ✓ |

*1 : Temperature compensation data

Light mode features are below.

- High lux accuracy over different light sources
- Absolute sensitivity: 0.06 lux to > 150000 lux
- Output resolution: 13 to 20 bits
- Three LS/CS gain modes: x1 to x6
- Highly linear output, 50Hz/60Hz light and fluorescent light flicker immunity
- Four parallel channels (red, green, blue, clear)
- Accurate Correlated Color Temperature (CCT)
- Accurate CIE 1931 XYZ (RGB) color measurement
- Very stable spectral response over angle of light incidence

Proximity mode

Proximity mode features are below.

- Integrated and trimmed LED source, driver, and photodetector
- Programmable pulsed LED up to 250mA output current
- High resolution (12 to 16 bits)
- Object movement detection (in/out)
- Ambient light suppression > 100klx sun light
- Crosstalk cancelation (analog and digital)

PPG mode

PPG mode has two operation modes.

| Operation mode | Discription |
|----------------|--|
| PPG1 mode | Only one LED is used. This mode allows determination of parameters related to heart rate with an appropriate algorithm |
| PPG2 mode | Two LED are used. Second LED is used as a transmitter. This mode supports further analysis, such as SpO2 and respiration rate determination. |

PPG mode features are below.

- SpO2 measurement behind visibly dark, IR transmissive ink
- Industry's smallest optical biosensor module
- Fully integrated and trimmed module, including two LEDs, 250mA maximum drive current, and photodetectors
- Output resolution PPG: 16 to 18 bits
- Data stored in 18-bit wide, 32-sample FIFO memory
- Integrated averaging function for higher signal-to-noise ratio(SNR) and data rate reduction
- Programmable measurement rate: up to 3200 samples per second
- High SNR

Light Proximity mode

Light mode and Proximity mode can be used in parallel.

Bus Initialization

The OB1203 interface expects a bus instance to be opened before opening any OB1203 device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

If an RTOS is used, blocking and bus lock for I2C bus are available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Initialization

Initialize with [RM_OB1203_Open\(\)](#).

From measurement start to data acquisition

After normal completion, start the measurement with [RM_OB1203_MeasurementStart\(\)](#).

Light mode

If IRQ is enabled

1. Wait until [RM_OB1203_EVENT_THRESHOLD_CROSSED](#) is received via IRQ callback.
2. Call [RM_OB1203_LightRead\(\)](#). This function will read the ADC data and clear the interrupt bits.
3. Wait until [RM_OB1203_EVENT_SUCCESS](#) is received.
4. Call [RM_OB1203_LightDataCalculate\(\)](#). This function will calculate light data from the ADC data.

If IRQ is disabled

1. Wait for measurement period configured.
2. Call [RM_OB1203_LightRead\(\)](#). This function will read the ADC data.
3. Wait until [RM_OB1203_EVENT_SUCCESS](#) is received.
4. Call [RM_OB1203_LightDataCalculate\(\)](#). This function will calculate light data from the ADC data.

Proximity mode

If IRQ is enabled

1. Wait until `RM_OB1203_EVENT_THRESHOLD_CROSSED` or `RM_OB1203_EVENT_OBJECT_NEAR` is received via IRQ callback.
2. Call `RM_OB1203_ProxRead()`. This function will read the ADC data and clear the interrupt bits.
3. Wait until `RM_OB1203_EVENT_SUCCESS` is received.
4. Call `RM_OB1203_ProxDataCalculate()`. This function will calculate proximity data from the ADC data.

If IRQ is disabled

1. Wait for measurement period configured.
2. Call `RM_OB1203_ProxRead()`. This function will read the ADC data.
3. Wait until `RM_OB1203_EVENT_SUCCESS` is received.
4. Call `RM_OB1203_ProxDataCalculate()`. This function will calculate proximity data from the ADC data.

PPG mode

If IRQ is enabled

1. Wait until `RM_OB1203_EVENT_MEASUREMENT_COMPLETE` is received via IRQ callback.
2. Call `RM_OB1203_PpgRead()`. This function will read the ADC data and clear the interrupt bits. In PPG2 mode, the number of read FIFO samples must be even value because two samples is one pair.
3. Wait until `RM_OB1203_EVENT_SUCCESS` is received.
4. Call `RM_OB1203_PpgDataCalculate()`. This function will calculate PPG data from the ADC data.

If IRQ is disabled

1. Wait for measurement period configured.
2. Call `RM_OB1203_PpgRead()`. This function will read the ADC data. In PPG2 mode, the number of read FIFO samples must be even value because two samples is one pair.
3. Wait until `RM_OB1203_EVENT_SUCCESS` is received.
4. Call `RM_OB1203_PpgDataCalculate()`. This function will calculate PPG data from the ADC data.

Light Proximity mode

Combination of the above Light mode and Proximity mode.

Getting device status

Call `RM_OB1203_DeviceStatusGet()`. This function will get device status over I2C.

- If `power_on_reset_occur` is true, the part has had a power-up event, either because the part was turned on or because there was a power-supply voltage disturbance.
- If `light_interrupt_occur` is true, Light mode interrupt condition has occurred.
- If `light_measurement_complete` is true, Light mode measurement is complete.
- If `ts_measurement_complete` is true, TS measurement is complete.
- If `fifo_afull_interrupt_occur` is true, FIFO almost full interrupt condition has occurred.

- If `ppg_measurement_complete` is true, PPG mode measurement is complete.
- If `object_near` is true, an object is near.
- If `prox_interrupt_occur` is true, Proximity mode interrupt condition has occurred.
- If `prox_measurement_complete` is true, Proximity mode measurement is complete.

Clearing interrupt bits

If interrupt bits are needed to clear without calling `RM_OB1203_LightRead()`, `RM_OB1203_ProxRead()`, `RM_OB1203_PpgRead()` and `RM_OB1203_MeasurementStop()`, please call `RM_OB1203_DeviceStatusGet()`. Interrupt bits are reset by `STATUS_0` and `STATUS_1` registers read.

Sleep after interrupt

Sleep after interrupt is valid in Light mode and Proximity mode. If a sleep after interrupt bit are set, a measurement will be stopped after an interrupt occurs. After `STATUS_0` and `STATUS_1` registers are read, a measurement will be started. please call `RM_OB1203_DeviceStatusGet()`.

PPG FIFO

PPG FIFO data is stored in 18-bit wide, 32-sample FIFO memory.

The FIFO almost full interrupt is triggered when a certain number of free FIFO registers are remaining.

If FIFO informations (write index, read index, overflow counter, unread_samples) are got, Call `RM_OB1203_FifoInfoGet()`.

- `write_index` is the FIFO index where the next sample of PPG data will be written in the FIFO.
- `read_index` is the index of the next sample to be read from the `FIFO_DATA` register.
- `overflow_counter` is the number of old samples (up to 15) which are overwritten by new data. If the FIFO Rollover is enabled, the FIFO overflow counter counts.
- `unread_samples` is the number of unread FIFO samples, which can be calculated by write index and read index.

Reconfiguration

The interface supports the following APIs for reconfiguration.

| API | Discription |
|--|---|
| <code>RM_OB1203_GainSet()</code> | Set gain |
| <code>RM_OB1203_LedCurrentSet()</code> | Set LED currents. Proximity mode and Light Proximity mode: LED Current is 10bits. Min = 0x000 and Max = 0x3FF PPG mode: IR/Red LED currents are 10bits/9bits. Min = 0x000/0x000 and Max = 0x3FF/0x1FF |
| <code>RM_OB1203_DeviceInterruptCfgSet()</code> | Set interrupt configurations. |

Relationship between APIs and registers

The relationship between APIs and registers accessed by the API is below.

| API | Registers |
|---|---|
| <code>RM_OB1203_MeasurementStart()</code> | <code>MAIN_CTRL_0</code> and <code>MAIN_CTRL_1</code> |

| | |
|---|---|
| RM_OB1203_MeasurementStop() | MAIN_CTRL_0, MAIN_CTRL_1, STATUS_0, STATUS_1, FIFO_WR_PTR, FIFO_RD_PTR and FIFO_OVF_CNT |
| RM_OB1203_LightRead() | LS_CLEAR_DATA, LS_GREEN_DATA, LS_BULE_DATA, LS_RED_DATA, COMP_DATA, STATUS_0 and STATUS_1 |
| RM_OB1203_ProxRead() | PS_DATA, STATUS_0 and STATUS_1 |
| RM_OB1203_PpgRead() | FIFO_DATA |
| RM_OB1203_DeviceStatusGet() | STATUS_0 and STATUS_1 |
| RM_OB1203_GainSet() | LS_GAIN and PPG_PS_GAIN |
| RM_OB1203_LedCurrentSet() | PS_LED_CURR, PPG_IRLED_CURR and PPG_RLED_CURR |
| RM_OB1203_DeviceInterruptCfgSet() | INT_CFG_0, INT_CFG_1 and INT_PST |
| RM_OB1203_FifoInfoGet() | FIFO_WR_PTR, FIFO_RD_PTR and FIFO_OVF_CNT |

Notifications

The application note [R01AN6311] using this module has an algorithm for biometric data calculation. The algorithm has the constraint of sampling rate (default: 100 samples per second). Please refer to the application note [R36AN0001EU] and OB1203 sensor page

(<https://www.renesas.com/jp/en/products/sensor-products/biosensors/ob1203-heart-rate-blood-oxygen-concentration-pulse-oximetry-proximity-light-and-color-sensor>)

R01AN6311 : <https://www.renesas.com/document/apn/ob1203-sample-application-sample-code>

R36AN0001EU : <https://www.renesas.com/document/apn/ob1203-pulse-oximeter-algorithm-spo2-heart-rate-and-respiration-rate>

If multiple operation modes is used with a single OB1203 sensor device, rm_ob1203 modules need to be used while switching between operation modes because modules cannot work in parallel. Therefore, a current rm_ob1203 module must be closed with [RM_OB1203_Close\(\)](#) before another rm_ob1203 module is opened with [RM_OB1203_Open\(\)](#).

Examples

Basic Example

These are basic examples of minimal use of OB1203 sensor implementation in an application.

Light mode

```
void rm_ob1203_light_mode_basic_example (void)

Function Documentation

◆ **RM_OB1203_Open()**

```
fsp_err_t RM_OB1203_Open ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_cfg_t const *const p_cfg )
```

Opens and configures the OB1203 Middle module. Implements `rm_ob1203_api_t::open`.

Example:

```
err = RM_OB1203_Open(&g_ob1203_ctrl, &g_ob1203_cfg);
```

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | OB1203 successfully configured. |
| FSP_ERR_ASSERTION | Null pointer, or one or more configuration options is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. This module can only be opened once. |
| FSP_ERR_TIMEOUT | Communication is timeout. |
| FSP_ERR_ABORTED | Communication is aborted. |

◆ **RM_OB1203_Close()**

```
fsp_err_t RM_OB1203_Close ( rm_ob1203_ctrl_t *const p_api_ctrl)
```

Disables specified OB1203 control block. Implements `rm_ob1203_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully closed. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_OB1203_MeasurementStart()**

```
fsp_err_t RM_OB1203_MeasurementStart ( rm_ob1203_ctrl_t *const p_api_ctrl)
```

Start measurement. Implements `rm_ob1203_api_t::measurementStart`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ RM_OB1203_MeasurementStop()

```
fsp_err_t RM_OB1203_MeasurementStop ( rm_ob1203_ctrl_t *const p_api_ctrl)
```

Stop measurement. If device interrupt is enabled, interrupt bits are cleared after measurement stop. If PPG mode, FIFO information is also reset after measurement stop. In RTOS and Light/Proximity/Light Proximity mode, if device interrupt is enabled, blocks 2 bytes on the I2C bus. In RTOS and PPG mode, if device interrupt is enabled, blocks 6 bytes on the I2C bus. If device interrupt is disabled, blocks 4 bytes on the I2C bus. Implements [rm_ob1203_api_t::measurementStop](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ RM_OB1203_LightRead()

```
fsp_err_t RM_OB1203_LightRead ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_light_data_type_t type )
```

Reads Light ADC data from OB1203 device. If device interrupt is enabled, interrupt bits are cleared after data read. In RTOS and Light mode, if device interrupt is enabled, blocks 2 bytes on the I2C bus. Implements [rm_ob1203_api_t::lightRead](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ RM_OB1203_LightDataCalculate()

```
fsp_err_t RM_OB1203_LightDataCalculate ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_light_data_t *const p_ob1203_data )
```

Calculate light data from raw data. Implements [rm_ob1203_api_t::lightDataCalculate](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_ProxRead()**

```
fsp_err_t RM_OB1203_ProxRead ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data )
```

Reads Proximity ADC data from OB1203 device. If device interrupt is enabled, interrupt bits are cleared after data read. In RTOS and Proximity mode, if device interrupt is enabled, blocks 2 bytes on the I2C bus. Implements `rm_ob1203_api_t::proxRead`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_ProxDataCalculate()**

```
fsp_err_t RM_OB1203_ProxDataCalculate ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_prox_data_t *const p_ob1203_data )
```

Calculate proximity data from raw data. Implements `rm_ob1203_api_t::proxDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_PpgRead()**

```
fsp_err_t RM_OB1203_PpgRead ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_raw_data_t *const p_raw_data, uint8_t const number_of_samples )
```

Reads PPG ADC data from OB1203 device. One sample requires three bytes. 0 cannot set to the number of samples. Implements `rm_ob1203_api_t::ppgRead`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_PpgDataCalculate()**

```
fsp_err_t RM_OB1203_PpgDataCalculate ( rm_ob1203_ctrl_t *const p_api_ctrl,
rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_ppg_data_t *const p_ob1203_data )
```

Calculate PPG data from raw data. Implements `rm_ob1203_api_t::ppgDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_GainSet()**

```
fsp_err_t RM_OB1203_GainSet ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_gain_t const gain )
```

Set gain. This function should be called after calling `RM_OB1203_MeasurementStop()`. In RTOS and Light Proximity mode, blocks 2 bytes on the I2C bus. Implements `rm_ob1203_api_t::gainSet`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_LedCurrentSet()**

```
fsp_err_t RM_OB1203_LedCurrentSet ( rm_ob1203_ctrl_t *const p_api_ctrl,
rm_ob1203_led_current_t const led_current )
```

Set currents. This function should be called after calling `RM_OB1203_MeasurementStop()`. Implements `rm_ob1203_api_t::ledCurrentSet`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_DeviceInterruptCfgSet()**

```
fsp_err_t RM_OB1203_DeviceInterruptCfgSet ( rm_ob1203_ctrl_t *const p_api_ctrl,
rm_ob1203_device_interrupt_cfg_t const interrupt_cfg )
```

Set device interrupt configurations. This function should be called after calling [RM_OB1203_MeasurementStop\(\)](#). Implements [rm_ob1203_api_t::deviceInterruptCfgSet](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_FifoInfoGet()**

```
fsp_err_t RM_OB1203_FifoInfoGet ( rm_ob1203_ctrl_t *const p_api_ctrl, rm_ob1203_fifo_info_t
*const p_fifo_info )
```

Get FIFO information from OB1203 device. Implements [rm_ob1203_api_t::fifoInfoGet](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_OB1203_DeviceStatusGet()**

```
fsp_err_t RM_OB1203_DeviceStatusGet ( rm_ob1203_ctrl_t *const p_api_ctrl,
rm_ob1203_device_status_t *const p_status )
```

Get device status from OB1203 device. Clear all interrupt bits. Implements [rm_ob1203_api_t::deviceStatusGet](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |
| FSP_ERR_TIMEOUT | Communication is timeout. |
| FSP_ERR_ABORTED | Communication is aborted. |

5.2.16.7 ZMOD4XXX Gas Sensor (rm_zmod4xxx)

Modules » Sensor

Functions

`fsp_err_t RM_ZMOD4XXX_Open (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg)`

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the zmod4xxx and start a measurement. Implements `rm_zmod4xxx_api_t::open`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_Close (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function should be called when close the sensor. Implements `rm_zmod4xxx_api_t::close`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_MeasurementStart (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function should be called when start a measurement. Implements `rm_zmod4xxx_api_t::measurementStart`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_MeasurementStop (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function should be called when stop a measurement. Implements `rm_zmod4xxx_api_t::measurementStop`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_StatusCheck (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function should be called when polling is used. It reads the status of sensor. Implements `rm_zmod4xxx_api_t::statusCheck`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_Read (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::read`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_Iaq1stGenDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check

measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::iaq1stGenDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_Iaq2ndGenDataCalculate](#) (`rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const p_zmod4xxx_data`)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::iaq2ndGenDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_OdorDataCalculate](#) (`rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data`)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::odorDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_SulfurOdorDataCalculate](#) (`rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const p_zmod4xxx_data`)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::sulfurOdorDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_Oaq1stGenDataCalculate](#) (`rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const p_zmod4xxx_data`)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::oaq1stGenDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_Oaq2ndGenDataCalculate](#) (`rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const p_zmod4xxx_data`)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::oaq2ndGenDataCalculate](#). [More...](#)

`fsp_err_t` [RM_ZMOD4XXX_RaqDataCalculate](#) (`rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_raq_data_t *const p_zmod4xxx_data`)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::raqDataCalculate](#). [More...](#)

`fsp_err_t RM_ZMOD4XXX_RellaqDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_rel_iaq_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::relaqDataCalculate`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_PbaqDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_pbaq_data_t *const p_zmod4xxx_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::pbaqDataCalculate`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_TemperatureAndHumiditySet (rm_zmod4xxx_ctrl_t *const p_api_ctrl, float temperature, float humidity)`

This function is valid only for OAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before DataCalculate. Humidity and temperature measurements are needed for ambient compensation. Implements `rm_zmod4xxx_api_t::temperatureAndHumiditySet`. [More...](#)

`fsp_err_t RM_ZMOD4XXX_DeviceErrorCheck (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function is valid only for IAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before Read and DataCalculate. Check for unexpected reset occurs or getting invalid ADC data. Implements `rm_zmod4xxx_api_t::deviceErrorCheck`. [More...](#)

Detailed Description

Middleware to implement the ZMOD4XXX sensor interface. This module implements the [ZMOD4XXX Middleware Interface](#).

Overview

This module provides an API for configuring and controlling the ZMOD4XXX sensor. Supported ZMOD4XXX sensors are below.

- ZMOD4410
- ZMOD4450
- ZMOD4510

I2C communication with the ZMOD4XXX sensor is realized by connecting with the `rm_comms_i2c` module.

Features

The ZMOD4XXX sensor interface implementation has the following key features:

- Initialize the sensor for measurement
- Start a measurement at any time
- Read status register for wait until the measurement is done. This will also be signaled by an interrupt
- Get the ADC data from the sensor
- Input the ADC data and acquire the air quality values by calculation in the library.

Limitations

- [I2C Master \(r_sau_i2c\)](#) is not supported. Please refer to Limitations of [I2C Master \(r_sau_i2c\)](#)

Configuration

Build Time Configurations for rm_zmod4xxx

The following build time configurations are defined in fsp_cfg/rm_zmod4xxx_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Sensor > ZMOD4XXX Gas Sensor (rm_zmod4xxx)

This module can be added to the Stacks tab via New Stack > Sensor > ZMOD4XXX Gas Sensor (rm_zmod4xxx).

| Configuration | Options | Default | Description |
|--------------------|-------------------------------|-----------------------------|---|
| Name | Name must be a valid C symbol | g_zmod4xxx_sensor0 | Module name. |
| Comms I2C Callback | Name must be a valid C symbol | zmod4xxx_comms_i2c_callback | A user COMMS I2C callback function can be provided. |
| IRQ Callback | Name must be a valid C symbol | zmod4xxx_irq_callback | A user IRQ callback function can be provided. |

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

[ZMOD4410 datasheet is here.](#)

The ZMOD4410 has five modes of operation.

The ZMOD4410 will respond to TVOC immediately upon start-up; however, a conditioning period of 48 hours followed by a sensor module restart in an ambient environment is recommended to

improve stability and obtain maximum performance.

Best results are achieved with continuous operation because the module algorithm can learn about the environment over time.

| Method | Description |
|------------------------------------|---|
| IAQ 1st Generation Continuous | Measurement of UBA levels for IAQ and eCO ₂ , provides continuous data |
| IAQ 1st Generation Low Power | Measurement of UBA levels for IAQ and eCO ₂ , fixed sampling interval of 6 seconds |
| IAQ 2nd Generation | Using AI for improved ppm TVOC, IAQ and eCO ₂ functionality (recommended for new designs) |
| IAQ 2nd Generation Ultra Low Power | Using AI for improved ppm TVOC, IAQ and eCO ₂ functionality. This method offers a much lower power consumption |
| Relative IAQ | Lightweight algorithm reacts to air quality changes and outputs a relative IAQ |
| Relative IAQ Ultra Low Power | Lightweight algorithm reacts to air quality changes and outputs a relative IAQ. This method offers a much lower power consumption |
| Public Building AQ Standard (PBAQ) | For highly accurate and consistent sensor readings to fulfill public building standards. |
| Odor | Control signal based on Air Quality Changes |
| Sulfur-based Odor Discrimination | The odors in "sulfur" (sulfur based) and "acceptable" (organic based) and shows an intensity level of the smell |

[ZMOD4450 datasheet is here.](#)

The ZMOD4450 has one modes of operation.

The response time for a gas stimulation is always within a few seconds, depending on the gas and its concentration. An active or direct airflow onto the sensor module is not necessary since diffusion of ambient gas does not limit the sensor module response time. The ZMOD4450 will respond to typical refrigeration gases immediate upon start-up; however, a conditioning period of 48 hours in a refrigeration environment is recommended to improve stability and get maximum performance, as the module algorithm is able to learn about the refrigeration environment over time.

| Method | Description |
|--------|--|
| RAQ | Control signal based on Refrigerator Air Quality Changes |

[ZMOD4510 datasheet is here.](#)

The ZMOD4510 has two modes of operation.

The ZMOD4510 in OAQ 1st Gen operation will respond to typical outdoor gases after a warm-up time of 60 min, consisting of 20 min for stabilization and 40 min for baseline finding.

For OAQ 2nd Gen operation a response to ozone will be seen after a warmup time of 30 min.

In all operation modes a conditioning period of 48 hours followed by a sensor module restart in an ambient environment is recommended to improve stability and obtain maximum performance.

| Method | Description |
|--------|-------------|
| | |

| Method | Description |
|--------------------|---|
| OAQ 1st Generation | Measurement of Air Quality |
| OAQ 2nd Generation | Selective Ozone featuring Ultra-Low Power |

A library corresponding to each of these modes is required. By setting in RA Configuration, the library will be generated in the ra/fsp/lib/rm_zmod4xxx folder of your project.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Notifications

The ZMOD4xxx sensor needs a reset before operation; please input a reset signal to the RES_N pin (active low).

Program flow for OAQ 2nd gen is changed in FSP v4.0.0. Please refer to the programming manual [R36US0004EU] and the application note[R01AN5899].

R01AN5899 : <https://www.renesas.com/document/apn/zmod4xxx-sample-application>

R36US0004EU : <https://www.renesas.com/document/mat/zmod4510-programming-manual-read-me>

Bus Initialization

The ZMOD4XXX interface expects a bus instance to be opened before opening any ZMOD4XXX device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate [I2C Master Interface](#) open call.

Initialization

Initialize with [RM_ZMOD4XXX_Open\(\)](#). One channel of timer is required to measure the waiting time at initialization.

From measurement start to data acquisition

After normal completion, start the measurement with [RM_ZMOD4XXX_MeasurementStart\(\)](#). An endless loop continuously checks the status of the ZMOD4XXX sensor and reads its data. The raw data is subsequently processed, and the air quality values are calculated.

If IRQ is enabled

1. Call [RM_ZMOD4XXX_MeasurementStart\(\)](#).
2. Wait until `RM_ZMOD4XXX_EVENT_MEASUREMENT_COMPLETE` is received via IRQ callback.
3. Call [RM_ZMOD4XXX_Read\(\)](#). This function will read the ADC data.
4. Wait until `RM_ZMOD4XXX_EVENT_SUCCESS` is received.
5. Call the DataCalculate API according to the mode.

If IRQ is disabled

1. Call [RM_ZMOD4XXX_MeasurementStart\(\)](#).
2. Wait until `RM_ZMOD4XXX_EVENT_SUCCESS` is received.

3. Call `RM_ZMOD4XXX_StatusCheck()`. This function will execute a status check over I2C.
4. If `RM_ZMOD4XXX_EVENT_MEASUREMENT_NOT_COMPLETE` is received in callback, user should wait some time and then call `RM_ZMOD4XXX_StatusCheck()` again.
5. Wait until `RM_ZMOD4XXX_EVENT_MEASUREMENT_COMPLETE` is received.
6. Call `RM_ZMOD4XXX_Read()` and read the ADC data.
7. Wait until `RM_ZMOD4XXX_EVENT_SUCCESS` is received.
8. Call the DataCalculate API according to the mode.

Checking device error for IAQ 2nd Gen.

1. Call `RM_ZMOD4XXX_DeviceErrorCheck()`. This function will execute a device error check over I2C.
2. If any device error occurs, `RM_ZMOD4XXX_EVENT_DEV_ERR_POWER_ON_RESET` or `RM_ZMOD4XXX_EVENT_DEV_ERR_ACCESS_CONFLICT` are received in callback. If no device error, `RM_ZMOD4XXX_EVENT_SUCCESS` is received in callback.

Examples

Basic Example

These are basic examples of minimal use of ZMOD4XXX sensor implementation in an application.

IAQ 1st Gen. Continuous mode

```

Enumeration Type Documentation

◆ **rm_zmod4xxx_lib_type_t**enum `rm_zmod4xxx_lib_type_t`

ZMOD4XXX Library type

Function Documentation◆ **RM_ZMOD4XXX_Open()**

```
fsp_err_t RM_ZMOD4XXX_Open ( rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg )
```

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the zmod4xxx and start a measurement. Implements `rm_zmod4xxx_api_t::open`.

Return values

| | |
|----------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_UNSUPPORTED | Unsupport product ID. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |

◆ **RM_ZMOD4XXX_Close()**

```
fsp_err_t RM_ZMOD4XXX_Close ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when close the sensor. Implements `rm_zmod4xxx_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully closed. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_ZMOD4XXX_MeasurementStart()**

```
fsp_err_t RM_ZMOD4XXX_MeasurementStart ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when start a measurement. Implements [rm_zmod4xxx_api_t::measurementStart](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |

◆ **RM_ZMOD4XXX_MeasurementStop()**

```
fsp_err_t RM_ZMOD4XXX_MeasurementStop ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function should be called when stop a measurement. Implements [rm_zmod4xxx_api_t::measurementStop](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |

◆ RM_ZMOD4XXX_StatusCheck()

`fsp_err_t RM_ZMOD4XXX_StatusCheck (rm_zmod4xxx_ctrl_t *const p_api_ctrl)`

This function should be called when polling is used. It reads the status of sensor. Implements `rm_zmod4xxx_api_t::statusCheck`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully started. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |

◆ RM_ZMOD4XXX_Read()

`fsp_err_t RM_ZMOD4XXX_Read (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data)`

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::read`.

Return values

| | |
|---|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |
| FSP_ERR_TIMEOUT | Communication is timeout. |
| FSP_ERR_ABORTED | Communication is aborted. |
| FSP_ERR_SENSOR_MEASUREMENT_NOT_FINISHED | Measurement is not finished. |

◆ **RM_ZMOD4XXX_Iaq1stGenDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_Iaq1stGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::iaq1stGenDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_Iaq2ndGenDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_Iaq2ndGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::iaq2ndGenDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_OdorDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_OdorDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::odorDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_SulfurOdorDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_SulfurOdorDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::sulfurOdorDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_Oaq1stGenDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_Oaq1stGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::oaq1stGenDataCalculate](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_Oaq2ndGenDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_Oaq2ndGenDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements [rm_zmod4xxx_api_t::oaq2ndGenDataCalculate](#).

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_RaqDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_RaqDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_raq_data_t *const p_zmod4xxx_data
)
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::raqDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_RellaqDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_RellaqDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_rel_iaq_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::rellaqDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ **RM_ZMOD4XXX_PbaqDataCalculate()**

```
fsp_err_t RM_ZMOD4XXX_PbaqDataCalculate ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_pbaq_data_t *const
p_zmod4xxx_data )
```

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements `rm_zmod4xxx_api_t::pbaqDataCalculate`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ RM_ZMOD4XXX_TemperatureAndHumiditySet()

```
fsp_err_t RM_ZMOD4XXX_TemperatureAndHumiditySet ( rm_zmod4xxx_ctrl_t *const p_api_ctrl,
float temperature, float humidity )
```

This function is valid only for OAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before DataCalculate. Humidity and temperature measurements are needed for ambient compensation. Implements `rm_zmod4xxx_api_t::temperatureAndHumiditySet`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |

◆ RM_ZMOD4XXX_DeviceErrorCheck()

```
fsp_err_t RM_ZMOD4XXX_DeviceErrorCheck ( rm_zmod4xxx_ctrl_t *const p_api_ctrl)
```

This function is valid only for IAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before Read and DataCalculate. Check for unexpected reset occurs or getting unvalid ADC data. Implements `rm_zmod4xxx_api_t::deviceErrorCheck`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successfully results are read. |
| FSP_ERR_ASSERTION | Null pointer passed as a parameter. |
| FSP_ERR_NOT_OPEN | Module is not opened configured. |
| FSP_ERR_TIMEOUT | communication is timeout. |
| FSP_ERR_ABORTED | communication is aborted. |

5.2.17 Storage

Modules

Detailed Description

Storage Modules.

Modules

Block Media Custom Implementation (`rm_block_media_user`)

Middleware that implements a block media interface on the media of your choice. This module implements the [Block Media Interface](#).

[Block Media RAM \(rm_block_media_ram\)](#)

Middleware that implements a block media interface on the media of your choice. This module implements the [Block Media Interface](#).

[Block Media SD/MMC \(rm_block_media_sdmmc\)](#)

Middleware to implement the block media interface on SD cards. This module implements the [Block Media Interface](#).

[Block Media SPI Flash \(rm_block_media_spi\)](#)

Middleware to implement the block media interface on SPI flash memory. This module implements the [Block Media Interface](#).

[Block Media USB \(rm_block_media_usb\)](#)

Middleware to implement the block media interface on USB mass storage devices. This module implements the [Block Media Interface](#).

[FileX I/O \(rm_filex_block_media\)](#)

Middleware for the Azure RTOS FileX File System control using Block Media on RA MCUs.

[FileX I/O \(rm_filex_levelx_nor\)](#)

Middleware for the Azure RTOS FileX File System control using LevelX NOR on RA MCUs.

[Flash \(r_flash_hp\)](#)

Driver for the flash memory on RA high-performance MCUs. This module implements the [Flash Interface](#).

[Flash \(r_flash_lp\)](#)

Driver for the flash memory on RA low-power MCUs. This module implements the [Flash Interface](#).

[FreeRTOS+FAT Port for RA \(rm_freertos_plus_fat\)](#)

Middleware for the FAT File System control on RA MCUs.

[LevelX NOR Port \(rm_levelx_nor_spi\)](#)

Middleware for using Azure RTOS LevelX on NOR SPI memory.

[LittleFS on Flash \(rm_littlefs_flash\)](#)

Middleware for the LittleFS File System control on RA MCUs.

[OSPI Flash \(r_ospi\)](#)

Driver for the OSPI peripheral on RA MCUs. This module implements the [SPI Flash Interface](#).

[OSPI Flash \(r_ospi_b\)](#)

Driver for the OSPI_B peripheral on RA MCUs. This module implements the [SPI Flash Interface](#).

[QSPI \(r_qspi\)](#)

Driver for the QSPI peripheral on RA MCUs. This module implements the [SPI Flash Interface](#).

[SD/MMC \(r_sdhi\)](#)

Driver for the SD/MMC Host Interface (SDHI) peripheral on RA MCUs. This module implements the [SD/MMC Interface](#).

[Virtual EEPROM on Flash \(rm_vee_flash\)](#)

Virtual EEPROM on RA MCUs. This module implements the [Virtual EEPROM Interface](#).

5.2.17.1 Block Media Custom Implementation (rm_block_media_user)

[Modules](#) » [Storage](#)

Middleware that implements a block media interface on the media of your choice. This module implements the [Block Media Interface](#).

Overview

Features

This module is for using Block media with user-selected media.

Configuration

Block Media User has no output config settings.

The user is required to create the config settings etc. in the application.

The figure below is an example of the config definition when the user media in USB PMSC is RAM.

```
const rm_block_media_api_t g_rm_block_media_on_user_media =
{
    .open      = RM_BLOCK_MEDIA_RAM_Open,
    .mediaInit = RM_BLOCK_MEDIA_RAM_MediaInit,
    .read      = RM_BLOCK_MEDIA_RAM_Read,
    .write     = RM_BLOCK_MEDIA_RAM_Write,
    .erase     = RM_BLOCK_MEDIA_RAM_Erase,
    .infoGet   = RM_BLOCK_MEDIA_RAM_InfoGet,
    .statusGet = RM_BLOCK_MEDIA_RAM_StatusGet,
    .close     = RM_BLOCK_MEDIA_RAM_Close,
};

extern void r_usb_pmsc_block_media_event_callback(rm_block_media_callback_args_t *
p_args);

const rm_block_media_cfg_t g_rm_block_media0_cfg =
{.p_extend = NULL, .p_callback = r_usb_pmsc_block_media_event_callback, .p_context =
NULL, };

rm_block_media_instance_t g_rm_block_media0 =
{.p_api = &g_rm_block_media_on_user_media, .p_ctrl = NULL, .p_cfg =
&g_rm_block_media0_cfg, };
```

Note

If you use `block_media_user`, you need to create a function that matches the media you are using.

In the above example, this is the function with `RM_BLOCK_MEDIA_`.

Register the created function in `rm_block_media_api_t`.

The registered `rm_block_media_api_t` is registered in `p_api`, which is a member of `rm_block_media_instance_t`.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

Please refer to [USB PMSC \(r_usb_pmesc\)](#) for the PMSC application given as an example.

5.2.17.2 Block Media RAM (rm_block_media_ram)

`fsp_err_t` [RM_BLOCK_MEDIA_RAM_Close](#) (`rm_block_media_ctrl_t *const p_ctrl`)

Detailed Description

Middleware that implements a block media interface on the media of your choice. This module implements the [Block Media Interface](#).

Overview

Features

- This module is for using internal RAM as a media area.

Note

When using PMSC driver in combination with this module, the API of this module is called from the PMSC driver.

Configuration

Build Time Configurations for rm_block_media_ram

The following build time configurations are defined in fsp_cfg/rm_block_media_ram_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| RAM Media Size | Please enter the RAM media size. | 65536 | Enter a RAM media size of 20K bytes or more. |

Configurations for Storage > Block Media RAM Implementation (rm_block_media_ram)

This module can be added to the Stacks tab via New Stack > Storage > Block Media RAM Implementation (rm_block_media_ram).

| Configuration | Options | Default | Description |
|---------------|-------------------------------|-------------------|--|
| Name | Name must be a valid C symbol | g_rm_block_media0 | Module name. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed. |

Note

Specify RAM media size of 20 Kbytes or more. This module cannot be used with an MCU that cannot allocate at least 20 Kbytes of RAM as media area.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Function Documentation

◆ **RM_BLOCK_MEDIA_RAM_Open()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_Open ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg )
```

Opens the module.

Implements `rm_block_media_api_t::open()`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Module is available and is now open. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_ALREADY_OPEN | Module has already been opened with this instance of the control structure. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_RAM_MediaInit()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the RAM media area.

Implements `rm_block_media_api_t::mediaInit()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_RAM_Read()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const
p_dest_address, uint32_t const block_address, uint32_t const num_blocks )
```

Reads data from RAM media.

Implements `rm_block_media_api_t::read()`.

This function blocks until the data is read into the destination buffer.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Data read successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_RAM_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const
p_src_address, uint32_t const block_address, uint32_t const num_blocks )
```

Writes data to RAM media.

Implements `rm_block_media_api_t::write()`.

This function blocks until the write operation completes.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Write finished successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_RAM_Erase()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks )
```

Erases sectors of RAM media.

Implements `rm_block_media_api_t::erase()`.

This function blocks until erase is complete.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_RAM_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_StatusGet ( rm_block_media_ctrl_t *const p_api_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status.

Implements `rm_block_media_api_t::statusGet()`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Status stored in p_status. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_BLOCK_MEDIA_RAM_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information.

Implements `rm_block_media_api_t::infoGet()`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_BLOCK_MEDIA_RAM_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_RAM_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes the module.

Implements `rm_block_media_api_t::close()`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

5.2.17.3 Block Media SD/MMC (rm_block_media_sdmmc)

Detailed Description

Middleware to implement the block media interface on SD cards. This module implements the [Block Media Interface](#).

Overview

Features

The SD/MMC implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from an SD card
- Callback called when card insertion or removal is detected
- Provides media information such as sector size and total number of sectors.

Configuration

Build Time Configurations for rm_block_media_sdmmc

The following build time configurations are defined in driver/rm_block_media_sdmmc_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Storage > Block Media SD/MMC (rm_block_media_sdmmc)

This module can be added to the Stacks tab via New Stack > Storage > Block Media SD/MMC (rm_block_media_sdmmc). Non-secure callable guard functions can be generated for this module by

right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|-------------------------------|-------------------|--|
| Name | Name must be a valid C symbol | g_rm_block_media0 | Module name. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed. |

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the SD/MMC block media implementation in an application.

```
#define RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE (512)
uint8_t g_dest[RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint32_t g_transfer_complete = 0;
void rm_block_media_sdmmc_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the RM_BLOCK_MEDIA_SDMMC driver. */
    fsp_err_t err = RM_BLOCK_MEDIA_SDMMC_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

```

/* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
 * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
/* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
err = RM_BLOCK_MEDIA_SDMMC_MediaInit(&g_rm_block_media0_ctrl);
assert(FSP_SUCCESS == err);
/* Write a block of data to sector 3 of an SD card. */
err = RM_BLOCK_MEDIA_SDMMC_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
assert(FSP_SUCCESS == err);
/* Read a block of data from sector 3 of an SD card. */
err = RM_BLOCK_MEDIA_SDMMC_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
assert(FSP_SUCCESS == err);
}

```

Function Documentation

◆ RM_BLOCK_MEDIA_SDMMC_Open()

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Open ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg )
```

Opens the module.

Implements `rm_block_media_api_t::open()`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Module is available and is now open. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_ALREADY_OPEN | Module has already been opened with this instance of the control structure. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `sdmmc_api_t::open`

◆ RM_BLOCK_MEDIA_SDMMC_MediaInit()

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the SD or eMMC device. This procedure requires several sequential commands. This function blocks until all identification and configuration commands are complete.

Implements [rm_block_media_api_t::mediaInit\(\)](#).

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [sdmmc_api_t::mediaInit](#)

◆ RM_BLOCK_MEDIA_SDMMC_Read()

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks )
```

Reads data from an SD or eMMC device. Up to 0x10000 sectors can be read at a time. Implements [rm_block_media_api_t::read\(\)](#).

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Data read successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [sdmmc_api_t::read](#)

◆ **RM_BLOCK_MEDIA_SDMMC_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const
*const p_src_address, uint32_t const block_address, uint32_t const num_blocks )
```

Writes data to an SD or eMMC device. Up to 0x10000 sectors can be written at a time. Implements [rm_block_media_api_t::write\(\)](#).

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Write finished successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [sdmmc_api_t::write](#)

◆ **RM_BLOCK_MEDIA_SDMMC_Erase()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks )
```

Erases sectors of an SD card or eMMC device. Implements [rm_block_media_api_t::erase\(\)](#).

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [sdmmc_api_t::erase](#)
- [sdmmc_api_t::statusGet](#)

◆ **RM_BLOCK_MEDIA_SDMMC_CallbackSet()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_CallbackSet ( rm_block_media_ctrl_t *const p_ctrl,
void(*) (rm_block_media_callback_args_t *) p_callback, void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `rm_block_media_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

◆ **RM_BLOCK_MEDIA_SDMMC_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_StatusGet ( rm_block_media_ctrl_t *const p_api_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status. Implements `rm_block_media_api_t::statusGet()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Status stored in <code>p_status</code> . |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_BLOCK_MEDIA_SDMMC_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information. Implements `rm_block_media_api_t::infoGet()`.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

◆ **RM_BLOCK_MEDIA_SDMMC_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_SDMMC_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes an open SD/MMC device. Implements `rm_block_media_api_t::close()`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

5.2.17.4 Block Media SPI Flash (rm_block_media_spi)

p_callback_memory)
```

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Close (rm_block_media_ctrl_t *const p_ctrl)
```

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Erase (rm_block_media_ctrl_t *const p_ctrl,
uint32_t const start_block, uint32_t const num_blocks)
```

Detailed Description

Middleware to implement the block media interface on SPI flash memory. This module implements the [Block Media Interface](#).

Overview

Features

The SPI implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from SPI flash memory
- Provides media information such as sector size and total number of sectors.

Note

By default, Block Media SPI Read, Write, and Erase are blocking operations. Non-blocking operation may be achieved by yielding control within the optional callback function.

Configuration

Build Time Configurations for rm_block_media_spi

The following build time configurations are defined in driver/rm_block_media_spi_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected, code for parameter checking is included in the build |

Configurations for Storage > Block Media SPI Flash (rm_block_media_spi)

This module can be added to the Stacks tab via New Stack > Storage > Block Media SPI Flash (rm_block_media_spi).

| Configuration | Options | Default | Description |
|----------------------|---|-------------------|---|
| Module Instance Name | Name must be a valid C symbol | g_rm_block_media0 | Module name |
| Block size (bytes) | Manual Entry | 4096 | Specify the size of a block in bytes. |
| Block count | Minimum block count is 1, maximum is defined by hardware and software design. | 8192 | Number of blocks available for use by this driver instance. |
| Base Address | Manual Entry | 0 | Base address offset (bytes) for instance memory region. |
| Callback Function | Name must be a valid C symbol | NULL | A user callback function can be |

provided. If this callback is provided, it will be called after the completion of Read, Write, and Erase operations, or anytime these functions are waiting on hardware.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Limitations

Developers should be aware of the following limitations when using RM_BLOCK_MEDIA_SPI:

- Getting and setting Block Protection or Advanced Sector Protection modes is not supported.
- Addressing QSPI memory address ranges greater than 64 MB (one bank) is not supported.

Examples

Basic Example

This is a basic example of minimal use of the SPI block media implementation in an application.

```
#define RM_BLOCK_MEDIA_SPI_BLOCK_SIZE (256U)
uint8_t g_dest[RM_BLOCK_MEDIA_SPI_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[RM_BLOCK_MEDIA_SPI_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
void rm_block_media_spi_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SPI_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the RM_BLOCK_MEDIA_SPI driver. */
    fsp_err_t err = RM_BLOCK_MEDIA_SPI_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

```
/* Initialize the SPI flash memory. */
err = RM_BLOCK_MEDIA_SPI_MediaInit(&g_rm_block_media0_ctrl);
assert(FSP_SUCCESS == err);

/* Write a block of data to block 3 of the SPI flash memory. */
err = RM_BLOCK_MEDIA_SPI_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
assert(FSP_SUCCESS == err);

/* Read a block of data from block 3 of the SPI flash memory. */
err = RM_BLOCK_MEDIA_SPI_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
assert(FSP_SUCCESS == err);
}
```

Non-Blocking Example

This is a basic example of using the optional SPI callback to impliment non-blocking operation.

```
#define RM_BLOCK_MEDIA_EXAMPLE_DEVICE_BLOCK_COUNT 0x1000
void rm_block_media_spi_non_blocking_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SPI_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the RM_BLOCK_MEDIA_SPI driver. This enables the card detection interrupt. */
    fsp_err_t err = RM_BLOCK_MEDIA_SPI_Open(&g_rm_block_media0_ctrl,
    &g_rm_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize the Block Media SPI driver. */
    err = RM_BLOCK_MEDIA_SPI_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);

    /* Erase a large quantity of data from SPI Flash Memory */
    err = RM_BLOCK_MEDIA_SPI_Erase(&g_rm_block_media0_ctrl, 0,
    RM_BLOCK_MEDIA_EXAMPLE_DEVICE_BLOCK_COUNT);
    assert(FSP_SUCCESS == err);
}
```

```
}  
  
/* The optional callback is invoked for Read, Write, and Erase operations, whenever  
the operation completes or has  
* been blocked by the lower level SPI driver busy indication.  
*/  
  
void rm_block_media_spi_example_callback (rm_block_media_callback_args_t * p_args)  
{  
    if (RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE == p_args->event)  
    {  
        /* Process operation complete. */  
    }  
    else if (RM_BLOCK_MEDIA_EVENT_POLL_STATUS == p_args->event)  
    {  
        rm_block_media_status_t status;  
        rm_block_media_ctrl_t * p_ctrl = (rm_block_media_ctrl_t *) p_args->p_context;  
        fsp_err_t err = RM_BLOCK_MEDIA_SPI_StatusGet(p_ctrl, &status);  
        assert(FSP_SUCCESS == err);  
        if (true == status.busy)  
        {  
            /* Run waiting tasks */  
            vTaskSuspend(xTaskGetCurrentTaskHandle());  
        }  
    }  
    else  
    {  
        assert(RM_BLOCK_MEDIA_EVENT_ERROR == p_args->event);  
        /* Process Read, Write, or Erase error. */  
    }  
}
```

Function Documentation

◆ **RM_BLOCK_MEDIA_SPI_Open()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Open ( rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t
const *const p_cfg )
```

Parameter checking and Acquires mutex, then handles driver initialization at the HAL SPI layer and marking the open flag in control block.

Implements [rm_block_media_api_t::open](#).

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Block media for SPI framework is successfully opened. |
| FSP_ERR_ASSERTION | One of the input parameters or their data references may be null. |
| FSP_ERR_ALREADY_OPEN | The channel specified has already been opened. See HAL driver for other possible causes. |

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- [spi_flash_api_t::open](#)

◆ **RM_BLOCK_MEDIA_SPI_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information.

Implements [rm_block_media_api_t::infoGet](#).

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

◆ **RM_BLOCK_MEDIA_SPI_MediaInit()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the Block Media SPI Flash device.

Implements `rm_block_media_api_t::mediaInit`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_BLOCK_MEDIA_SPI_Read()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest,
uint32_t const start_block, uint32_t const num_blocks )
```

Reads a number of blocks from spi flash memory. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements `rm_block_media_api_t::read`.

Return values

| | |
|-------------------------|---|
| FSP_SUCCESS | SPI data read successfully |
| FSP_ERR_ASSERTION | p_ctrl or p_dest is NULL, or num_blocks is zero |
| FSP_ERR_NOT_OPEN | Block Media SPI module is not yet open |
| FSP_ERR_INVALID_ADDRESS | Invalid address range for read operation |
| FSP_ERR_NOT_INITIALIZED | Block Media SPI module is not yet initialized |

◆ **RM_BLOCK_MEDIA_SPI_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_StatusGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status.

Implements `rm_block_media_api_t::statusGet`.

Return values

| | |
|-------------------|----------------------------|
| FSP_SUCCESS | Status stored in p_status. |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_NOT_OPEN | Module is not open. |

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::statusGet`

◆ **RM_BLOCK_MEDIA_SPI_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const
p_src, uint32_t const start_block, uint32_t const num_blocks )
```

Writes provided data to a number of blocks of spi flash memory. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements `rm_block_media_api_t::write`.

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Flash write finished successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_src is NULL. Or num_blocks is zero. |
| FSP_ERR_NOT_OPEN | Block media SPI Framework module is not yet initialized. |
| FSP_ERR_INVALID_ADDRESS | Invalid address range |
| FSP_ERR_NOT_INITIALIZED | Block Media SPI module is not yet initialized |

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::write`

◆ **RM_BLOCK_MEDIA_SPI_CallbackSet()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_CallbackSet ( rm_block_media_ctrl_t *const p_ctrl,
void(*) (rm_block_media_callback_args_t *) p_callback, void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. API not supported.

Implements `rm_block_media_api_t::callbackSet`.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | API not supported by RM_BLOCK_MEDIA_SPI. |
|---------------------|--|

◆ **RM_BLOCK_MEDIA_SPI_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes the Block Media SPI device. Implements `rm_block_media_api_t::close`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | One of the following parameters may be null: <code>p_ctrl</code> . |
| FSP_ERR_NOT_OPEN | Block media SPI Framework module is not yet initialized. |

Returns

See [Common Error Codes](#) or HAL driver for other possible return codes or causes. This function calls

- `spi_flash_api_t::close`

◆ RM_BLOCK_MEDIA_SPI_Erase()

```
fsp_err_t RM_BLOCK_MEDIA_SPI_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
start_block, uint32_t const num_blocks )
```

This function erases blocks of the SPI device. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements [rm_block_media_api_t::erase](#).

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |
| FSP_ERR_INVALID_ADDRESS | Invalid address range |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [spi_flash_api_t::erase](#)
- [spi_flash_api_t::statusGet](#)

Detailed Description

Middleware to implement the block media interface on USB mass storage devices. This module implements the [Block Media Interface](#).

Overview

Features

The USB implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from a USB mass storage device
- Callback called when device insertion or removal is detected
- Provides media information such as sector size and total number of sectors.

Configuration

Build Time Configurations for rm_block_media_usb

The following build time configurations are defined in driver/rm_block_media_usb_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Storage > Block Media USB (rm_block_media_usb)

This module can be added to the Stacks tab via New Stack > Storage > Block Media USB (rm_block_media_usb). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|-------------------------------|-------------------|---------------------------------|
| Name | Name must be a valid C symbol | g_rm_block_media0 | Module name. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be |

provided. If this callback function is provided, it will be called when a device is attached or removed.

A user context can be provided. If this context is provided, it will be passed to callback function when a device is attached or removed.

Pointer to user context Name must be a valid C symbol NULL

Note

RM_BLOCK_MEDIA_USB_MediaInit function must be called after receiving the insert event notification.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the USB mass storage block media implementation in an application.

```
#define RM_BLOCK_MEDIA_USB_BLOCK_SIZE (512)
volatile bool g_usb_inserted = false;
uint8_t      g_dest[RM_BLOCK_MEDIA_USB_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t      g_src[RM_BLOCK_MEDIA_USB_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
void rm_block_media_usb_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < RM_BLOCK_MEDIA_USB_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the RM_BLOCK_MEDIA_USB driver. */
    fsp_err_t err = RM_BLOCK_MEDIA_USB_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);
```

```
/* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
while (!g_usb_inserted)
    {
/* Wait for a card insertion interrupt. */
    }

/* Initialize the mass storage device. This should not be done until the device is
plugged in and initialized. */
    err = RM_BLOCK_MEDIA_USB_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);

/* Write a block of data to sector 3 of an USB mass storage device. */
    err = RM_BLOCK_MEDIA_USB_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);

/* Read a block of data from sector 3 of an USB mass storage device. */
    err = RM_BLOCK_MEDIA_USB_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
}
```

Device Insertion

This is an example of using a callback to determine when a mass storage device is plugged in and enumerated.

```
/* The callback is called when a media insertion event occurs. */
void rm_block_media_usb_media_insertion_example_callback
(rm_block_media_callback_args_t * p_args)
{
    if (RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED == p_args->event)
        {
            g_usb_inserted = true;
        }
    if (RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED == p_args->event)
        {
            g_usb_inserted = false;
        }
}
```

}

Function Documentation

◆ RM_BLOCK_MEDIA_USB_Open()

```
fsp_err_t RM_BLOCK_MEDIA_USB_Open ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg )
```

Opens the module.

Implements `rm_block_media_api_t::open()`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Module is available and is now open. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_ALREADY_OPEN | Module has already been opened with this instance of the control structure. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_MediaInit()

```
fsp_err_t RM_BLOCK_MEDIA_USB_MediaInit ( rm_block_media_ctrl_t *const p_ctrl)
```

Initializes the USB device.

Implements `rm_block_media_api_t::mediaInit()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **RM_BLOCK_MEDIA_USB_Read()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Read ( rm_block_media_ctrl_t *const p_ctrl, uint8_t *const
p_dest_address, uint32_t const block_address, uint32_t const num_blocks )
```

Reads data from an USB device. Implements `rm_block_media_api_t::read()`.

This function blocks until the data is read into the destination buffer.

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Data read successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |
| FSP_ERR_USB_FAILED | The message could not received completed successfully. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_USB_Write()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Write ( rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const
p_src_address, uint32_t const block_address, uint32_t const num_blocks )
```

Writes data to an USB device. Implements `rm_block_media_api_t::write()`.

This function blocks until the write operation completes.

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Write finished successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |
| FSP_ERR_USB_FAILED | The message could not received completed successfully. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_Erase()

```
fsp_err_t RM_BLOCK_MEDIA_USB_Erase ( rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks )
```

Erases sectors of an USB device. Implements `rm_block_media_api_t::erase()`.

This function blocks until erase is complete.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_CallbackSet()

```
fsp_err_t RM_BLOCK_MEDIA_USB_CallbackSet ( rm_block_media_ctrl_t *const p_api_ctrl,
void(*) (rm_block_media_callback_args_t *) p_callback, void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `rm_block_media_api_t::callbackSet`.

Note

This function is currently unsupported for Block Media over USB.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | CallbackSet is not currently supported for Block Media over USB. |
|---------------------|--|

◆ **RM_BLOCK_MEDIA_USB_StatusGet()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_StatusGet ( rm_block_media_ctrl_t *const p_api_ctrl,
rm_block_media_status_t *const p_status )
```

Provides driver status. Implements `rm_block_media_api_t::statusGet()`.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Status stored in p_status. |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ **RM_BLOCK_MEDIA_USB_InfoGet()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_InfoGet ( rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info )
```

Retrieves module information. Implements `rm_block_media_api_t::infoGet()`.

Return values

| | |
|-------------------------|----------------------------------|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_INITIALIZED | Module has not been initialized. |

◆ **RM_BLOCK_MEDIA_USB_Close()**

```
fsp_err_t RM_BLOCK_MEDIA_USB_Close ( rm_block_media_ctrl_t *const p_ctrl)
```

Closes an open USB device. Implements `rm_block_media_api_t::close()`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module is not open. |

5.2.17.6 FileX I/O (rm_filex_block_media)

Access Block Media device functions open, close, read, write and control. [More...](#)

Detailed Description

Middleware for the Azure RTOS FileX File System control using Block Media on RA MCUs.

Overview

This module provides the hardware port layer for FileX file system. After initializing this module, refer to the FileX API reference to use the file system: <https://docs.microsoft.com/en-us/azure/rtos/filex/>

Features

The FileX Block Media module supports the following features:

- Callbacks for insertion and removal for removable devices.
- ThreadX is typically required for FileX. To use FileX without ThreadX `FX_STANDALONE_ENABLE` must be defined.
- Unless `FX_SINGLE_THREAD` or `FX_STANDALONE_ENABLE` are defined, all FileX operations are thread safe.

Configuration

Build Time Configurations for rm_filex_block_media

The following build time configurations are defined in `fsp_cfg/middleware/rm_filex_block_media_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|--|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | Selects if code for parameter checking is to be included in the build. |

Configurations for Storage > FileX I/O (rm_filex_block_media)

| Configuration | Options | Default | Description |
|------------------|--|-----------------------------------|---|
| Name | Name must be a valid C symbol | g_rm_filex_block_media_0 | Module name. |
| Callback | Name must be a valid C symbol | g_rm_filex_block_media_0_callback | A user callback function can be provided. If this callback function is provided, it will be called when media is inserted or removed. It will also be called during operations by the lower level block media as a way for the user to provide their desired waiting functionality. |
| Partition Number | <ul style="list-style-type: none"> • 0 • 1 • 2 • 3 | 0 | The partition to use for partitioned media. This partition will only be used if a Master Boot Record with partition table exists at block 0 of the media, otherwise the FileX FAT boot record should exist or be formatted to block 0. |

Build Time Configurations for fx

The following build time configurations are defined in fsp_cfg/azure/fx/fx_user.h:

| Configuration | Options | Default | Description |
|-------------------|--|---------|--|
| Common | | | |
| Max Long Name Len | Value must be an integer greater than or equal to 13 and less than or equal to 256, or empty | | Specifies the maximum file name size for FileX. If left blank the default value is 256. Legal values range between 13 and 256. |
| Max Last Name Len | Value must be an integer greater than or equal to 13 and less than or equal to 256, or empty | | This value defines the maximum file name length, which includes full path name. If left blank the default value is 256. Legal values range between 13 and 256. |

| | | | |
|-----------------------|---|--------------------|--|
| Max Sector Cache | Value must be an integer greater than 0 and power of 2 or empty | | Specifies the maximum number of logical sectors that can be cached by FileX. The actual number of sectors that can be cached is lesser of this constant and how many sectors can fit in the amount of memory supplied at <code>fx_media_open</code> . The default value if left blank is 256. All values must be a power of 2. |
| Fat Map Size | Value must be an integer greater than 0 or empty | | Specifies the number of sectors that can be represented in the FAT update map. The default value if left blank is 256. Larger values help reduce unneeded updates of secondary FAT sectors. |
| Max Fat Cache | Value must be an integer greater than 0 and power of 2 or empty | | Specifies the number of entries in the internal FAT cache. The default value if left blank is 16. All values must be a power of 2. |
| Threading | | | |
| Update Rate (Seconds) | Value must be an integer greater than 0 or empty | | Specifies rate at which system time in FileX is adjusted. Default value if left blank is 10, specifying that the FileX system time is updated every 10 seconds. |
| No Timer | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Eliminates the ThreadX timer setup to update the FileX system time and date. Doing so causes default time and date to be placed on all file operations. |
| Single Thread | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Eliminates ThreadX protection logic from the FileX source. It should be used if FileX is being used only from |

one thread.

| | | | |
|-----------------------------|---|--------------------|--|
| Standalone | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Enables FileX to be used in standalone mode (without Azure RTOS). |
| Extra Features | | | |
| Don't Update Open Files | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, FileX does not update already opened files. |
| Media Search Cache | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When disabled, the file search cache optimization is disabled. |
| Direct Data Read Cache Fill | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When disabled, the direct read sector update of cache is disabled. |
| Media Statistics | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When disabled, gathering of media statistics is disabled. |
| Single Open Legacy | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, legacy single open logic for the same file is enabled. |
| Rename Path Inherit | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, renaming inherits path information. |
| No Local Path | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, removes local path logic from FileX, resulting in smaller code size. |
| 64-bit LBA | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, 64-bits sector addresses are used in I/O driver. |
| Cache | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables the cache, default is enabled. |
| File Close | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables file close, default is enabled. |
| Fast Close | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables fast open, default is enabled. |
| Force Memory Operation | <ul style="list-style-type: none"> • Enabled (default) | Enabled (default) | Enables or disables force memory |

| | | | |
|------------------------|---|--------------------|---|
| | <ul style="list-style-type: none"> • Disabled | | operation, default is enabled. |
| Build Options | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables build options, default is enabled. |
| One Line Function | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables one line function, default is enabled. |
| FAT Entry Refresh | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables FAT entry refresh, default is enabled. |
| Consecutive Detect | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables consecutive detect, default is enabled. |
| Enable exFAT | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Enables exFAT support in FileX. |
| Fault Tolerant | | | |
| Fault Tolerant Service | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, enables the FileX Fault Tolerant Module. Enabling Fault Tolerant automatically defines the symbol <code>FX_FAULT_TOLERANT</code> and <code>FX_FAULT_TOLERANT_DATA</code> . |
| Fault Tolerant Data | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, FileX immediately passes all file data write requests to the media's driver. This potentially decreases performance, but helps limit lost file data. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately. |
| Fault Tolerant | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, FileX immediately passes write requests of all system sectors (boot, FAT, and directory sectors) to the media's driver. This potentially decreases performance, but helps |

limit corruption to lost clusters. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.

Defines byte offset in the boot sector where the cluster for the fault tolerant log is. By default if left blank this value is 116. This field takes 4 bytes. Bytes 116 through 119 are chosen because they are marked as reserved by FAT 12/16/32/exFAT specification.

| | | |
|---------------------------|---|-------------------|
| Fault Tolerant Boot Index | Value must be an integer greater than or equal to 116 and less than or equal to 119 | |
| Error Checking | <ul style="list-style-type: none"> Enabled (default) Disabled | Enabled (default) |

Configurations for Storage > Azure RTOS FileX on Block Media

This module can be added to the Stacks tab via New Stack > Storage > Azure RTOS FileX on Block Media.

| Configuration | Options | Default | Description |
|-------------------|---|-------------|--|
| Name | Name must be a valid C symbol | g_fx_media0 | Symbol used for media_ptr parameter in FileX APIs |
| Volume Name | Name must be a maximum of 11 characters | Volume 1 | Volume name string, which is a maximum of 11 characters. |
| Number of FATs | Number of FATs must be an integer greater than 0 | 1 | Number of FATs in the media. The minimal value is 1 for the primary FAT. Values greater than 1 result in additional FAT copies being maintained at run-time. |
| Directory Entries | Number of Directory Entries must be an integer greater than 0 | 256 | Number of directory entries in the root directory. |
| Hidden Sectors | Number of Hidden Sectors must be an | 0 | Number of sectors hidden before this |

| | | | |
|-----------------------------------|--|-------|--|
| | integer | | media's boot sector. If using media formatted with multiple partitions this number should correspond to the starting block number for the desired partition. |
| Total Sectors | Total Sectors must be an integer greater than 0 | 65536 | Total number of sectors in the media. When using a Renesas provided block media implementation, total sectors can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info. |
| Bytes per Sector | Bytes per Sector must be multiple of 32 | 512 | Number of bytes per sector, which is typically 512. FileX requires this to be a multiple of 32. When using a Renesas provided block media implementation, bytes per sector can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info. |
| Sectors per Cluster | Sectors per Cluster must be an integer greater than 0 | 1 | Number of sectors in each cluster. The cluster is the minimum allocation unit in a FAT file system. |
| Volume Serial Number (exFAT only) | Volume Serial Number must be an integer greater than 0 | 12345 | Serial number to be used for this volume. exFAT only. |
| Boundary Unit (exFAT only) | Boundary unit must be an integer greater than 0 | 128 | Physical data area alignment size, in number of sectors. exFAT only. |
| Working media memory size | Memory size must be an integer greater than or equal to the size of one sector | 512 | Memory allocated for file system. Memory size must be an integer greater than or equal |

to the size of one sector.

Usage Notes

Pending during Read/Write

The FileX Block Media driver provides a number of events in the user callback to handle waiting or pending while it is doing blocking operations. The events received in the callback will differ depending on the lower level block media driver in use.

If the lower level block media driver is `rm_block_media_spi` (SPI blocks on read/write operations):

- The user will receive `RM_BLOCK_MEDIA_EVENT_POLL_STATUS` in the user callback while the lower level driver is polling for the read/write operation to be complete. The user can choose to do a thread sleep or software delay upon receiving this event in the callback.
- Once the operation is complete no other callbacks will be received.

If the lower level block media driver is `rm_block_media_sdmmc` (SDMMC is interrupt based, the FileX Block Media driver will still block while waiting for interrupts from SDMMC):

- The user will receive `RM_BLOCK_MEDIA_EVENT_WAIT` in the user callback when the FileX Block Media driver begins waiting for an interrupt event from SDMMC. This is sent from a thread context. The user can choose to pend on a semaphore, sleep the thread, or do a software delay upon receiving this event in the callback. The FileX Block Media driver thread will block until an interrupt is received.
- Once an SDMMC interrupt is received the user will receive `RM_BLOCK_MEDIA_EVENT_WAIT_END` in the user callback. This is sent from an interrupt context. The user can choose to give a semaphore on this event or do nothing.
- If SDMMC is busy on a long erase after receiving the interrupt the FileX Block Media driver will send `RM_BLOCK_MEDIA_EVENT_POLL_STATUS` to the user callback and proceed to do a blocking poll on SDMMC status. The user can choose to do a thread sleep or software delay upon receiving this event in the callback. This event will not be received by the user on typical operations by FileX.

Partitioned Media

When using `fx_format` to format a partition the number of hidden sectors should match the starting block number of the partition and the total number of sectors should be equal to the number of sectors in the partition.

Unused User Callback Events

Certain events are defined in `rm_block_media_event_t` but not returned by the FileX Block Media user callback:

- `RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE`: This event is handled internally and operation success is indicated by FileX API calls returning `FX_SUCCESS`.
- `RM_BLOCK_MEDIA_EVENT_ERROR`: This event is handled internally and operation failure will be indicated by an error return code from FileX API calls.

Erasing Flash Memory Prior to Usage

The area of the flash memory being used for the FileX instance should be erased using the lower

level flash API prior to usage. Otherwise, FileX open operation may fail when `fx_media_open()` is called.

Examples

Basic Example

This is a basic example of FileX Block Media in an application.

```
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_PARTITION_NUMBER (0)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_BLOCK_SIZE (512)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES (128)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS (0)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS (1073741824)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE (512)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK (1)
extern rm_filex_block_media_instance_t g_filex_block_media0;
extern rm_filex_block_media_instance_ctrl_t g_filex_block_media0_ctrl;
extern rm_filex_block_media_cfg_t g_filex_block_media0_cfg;
extern FX_MEDIA g_fx_media0;
extern uint8_t g_fx_media0_memory[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BLOCK_SIZE];
extern uint8_t g_file_data[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_filex_block_media_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Initialize FileX */
    fx_system_initialize();
}
```

```
/* Open the media. If the media is removable, it must be inserted before calling
 * fx_media_open. This assumes the disk is already partitioned and formatted. */
UINT fx_err = fx_media_open(&g_fx_media0,
"filex_example_media",
RM_FILEX_BLOCK_MEDIA_BlockDriver,
                                &g_filex_block_media0,
                                g_fx_media0_memory,
sizeof(g_fx_media0_memory));
    handle_fx_error(fx_err);
/* Create a file */
    fx_err = fx_file_create(&g_fx_media0, RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME);
    handle_fx_error(fx_err);
/* Open source file for writing. */
    FX_FILE sourceFile;
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME, FX_OPEN_FOR_WRITE);
    handle_fx_error(fx_err);
/* Write file data. */
    fx_err = fx_file_write(&sourceFile, g_file_data, sizeof(g_file_data));
    handle_fx_error(fx_err);
/* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
/* Open the source file in read mode. */
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME, FX_OPEN_FOR_READ);
    handle_fx_error(fx_err);
/* Read file data. */
    ULONG actual_size_read;
    fx_err = fx_file_read(&sourceFile, g_read_buffer, sizeof(g_file_data),
&actual_size_read);
    handle_fx_error(fx_err);
    assert(sizeof(g_file_data) == actual_size_read);
/* Close the file. */
```

```
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);

    /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));

    /* Close the Media */
    fx_err = fx_media_close(&g_fx_media0);
    handle_fx_error(fx_err);
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
void rm_filex_block_media_format_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Format the media */
    UINT fx_err =
fx_media_format(&g_fx_media0, // Pointer to
FileX media control block.
    RM_FILEX_BLOCK_MEDIA_BlockDriver, // Driver entry
    &g_filex_block_media0, // Pointer to Block Media
Driver
    g_fx_media0_memory, // Media buffer pointer
    sizeof(g_fx_media0_memory), // Media buffer size
    "EXAMPLE_VOLUME", // Volume Name
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS,
// Number of FATs
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS,
```

```
// Hidden sectors

RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS,          // Total sectors
                RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE,
// Sector size

RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER,    // Sectors per cluster
                RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS,
// Heads
                RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}
```

Callback Pend Example

This shows how to use the I/O driver callback with ThreadX in order to wait/pend for operations to complete.

```
TX_SEMAPHORE g_operation_wait_semaphore;
/* Callback called by FileX block media I/O driver needs to pend on operation. */
void rm_filex_block_media_test_callback_pend (rm_filex_block_media_callback_args_t *
p_args)
{
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_WAIT)
    {
        /* Interrupt has not happened for operation, get semaphore to wait for it. This will
be called from the FileX I/O driver thread. */
        tx_semaphore_get(&g_operation_wait_semaphore, TX_WAIT_FOREVER);
    }
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_WAIT_END)
    {
        /* Interrupt has occurred for operation, post semaphore so that wait will end. This
will be called from an interrupt context. */
        tx_semaphore_put(&g_operation_wait_semaphore);
    }
}
```

```
    }
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_POLL_STATUS)
    {
        /* Interrupt has been received from block media device but operation is still
        ongoing. The FileX I/O driver will wait on the driver busy status.
        * This event can be used to put the thread to sleep while waiting. This will be
        called from the FileX I/O driver thread. */
        tx_thread_sleep(1);
    }
}

void rm_filex_block_media_callback_pend_example (void)
{
    /* Create semaphore for driver use */
    tx_semaphore_create(&g_operation_wait_semaphore, "operation_wait_semaphore", 0);
    /* Open media driver.*/
    fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
    &g_filex_block_media0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Format the media */
    UINT fx_err =
    fx_media_format(&g_fx_media0,                               // Pointer to
    FileX media control block.
    RM_FILEX_BLOCK_MEDIA_BlockDriver,                          // Driver entry
    &g_filex_block_media0, // Pointer to Block Media
    Driver
    g_fx_media0_memory, // Media buffer pointer
    sizeof(g_fx_media0_memory),                               // Media buffer size
    "EXAMPLE_VOLUME", // Volume Name
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS,
    // Number of FATs
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES,
    // Directory Entries
    RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS,
```

```
// Hidden sectors

RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS,          // Total sectors
                RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE,
// Sector size

RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER,    // Sectors per cluster
                RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS,
// Heads
                RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}
```

Media Insertion Example

This shows how to use the callback to wait for media insertion.

```
volatile uint32_t g_rm_filex_block_media_insertion_events = 0;
volatile uint32_t g_rm_filex_block_media_removal_events = 0;
/* Callback called by media driver when a removable device is inserted or removed. */
void rm_filex_block_media_test_callback (rm_filex_block_media_callback_args_t *
p_args)
{
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED)
    {
        g_rm_filex_block_media_insertion_events++;
    }
    if (p_args->event & RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED)
    {
        g_rm_filex_block_media_removal_events++;
    }
}
void rm_filex_block_media_media_insertion_example (void)
{
```

```
/* Open media driver.*/
fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* Wait for media insertion. */
while (0U == g_rm_filex_block_media_insertion_events)
{
/* Wait for media insertion. */
}

/* Open the media. If the media is removable, it must be inserted before calling
* fx_media_open. This assumes the disk is already partitioned and formatted. */
UINT fx_err = fx_media_open(&g_fx_media0,
"filex_example_media",
RM_FILEX_BLOCK_MEDIA_BlockDriver,
&g_filex_block_media0,
g_fx_media0_memory,
sizeof(g_fx_media0_memory));
handle_fx_error(fx_err);
}
```

Using FileX with Custom Block Media Implementations

When using a Custom Block Media implementation with `rm_filex_block_media` the custom implementation must call `rm_filex_block_media_memory_callback` upon the completion of a read/write operation. This callback should be called with an event of `RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE` and `p_context` of `rm_filex_block_media_instance_ctrl_t` *. The following example shows how this should be done in the context of a demo RAM block media read function.

```
#define EXAMPLE_BLOCK_MEDIA_RAM_START_ADDR (0x20004AFE)
#define EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES (512)

/* Example implementation of rm_block_media_api_t::read(), user should define custom
block media RAM implementation. */
fsp_err_t RM_BLOCK_MEDIA_CUSTOM_RAM_Read (rm_block_media_ctrl_t * const p_ctrl,
uint8_t * const
p_dest_address,
```

```

uint32_t const
block_address,
uint32_t const          num_blocks)
{
    FSP_PARAMETER_NOT_USED(p_ctrl);
    memcpy(p_dest_address,
           (void *) (EXAMPLE_BLOCK_MEDIA_RAM_START_ADDR + (block_address *
EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES)),
           (EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES * num_blocks));
    /* Notify FileX port of operation complete through calling the callback, this is
required for custom block media/FileX port integration */
    rm_block_media_callback_args_t args;
    args.event      = RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE;
    args.p_context = (void *) &g_filex_block_media0_ctrl;
    rm_filex_block_media_memory_callback(&args);
    return FSP_SUCCESS;
}

```

Data Structures

```
struct  rm_filex_block_media_instance_ctrl_t
```

Data Structure Documentation

◆ rm_filex_block_media_instance_ctrl_t

```
struct rm_filex_block_media_instance_ctrl_t
```

Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. FileX block media private control block. DO NOT MODIFY. Initialization occurs when RM_FILEX_BLOCK_MEDIA_Open is called.

Function Documentation

◆ RM_FILEX_BLOCK_MEDIA_Open()

```
fsp_err_t RM_FILEX_BLOCK_MEDIA_Open ( rm_filex_block_media_ctrl_t *const p_ctrl,
rm_filex_block_media_cfg_t const *const p_cfg )
```

The file system relies on the media to be formatted prior to creating directories and files. The sector size and sector count will change depending on the media type and size.

The File Allocation Table (FAT) starts after the reserved sectors in the media. The FAT area is basically an array of 12-bit, 16-bit, or 32-bit entries that determine if that cluster is allocated or part of a chain of clusters comprising a subdirectory or a file. The size of each FAT entry is determined by the number of clusters that need to be represented. If the number of clusters (derived from the total sectors divided by the sectors per cluster) is less than 4,086, 12-bit FAT entries are used. If the total number of clusters is greater than 4,086 and less than or equal to 65,525, 16-bit FAT entries are used. Otherwise, if the total number of clusters is greater than 65,525, 32-bit FAT entries are used. Initializes callback and configuration for FileX Block Media interface. Call this before calling any FileX functions.

Implements `rm_filex_block_media_api_t::open()`.

Return values

| | |
|----------------------|---------------------------------|
| FSP_SUCCESS | Success. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_FILEX_BLOCK_MEDIA_Close()

```
fsp_err_t RM_FILEX_BLOCK_MEDIA_Close ( rm_filex_block_media_ctrl_t *const p_ctrl)
```

Closes media device.

Implements `rm_filex_block_media_api_t::close()`.

Return values

| | |
|-------------------|---------------------------------|
| FSP_SUCCESS | Media device closed. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_NOT_OPEN | Module not open. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes.

◆ RM_FILEX_BLOCK_MEDIA_BlockDriver()

```
void RM_FILEX_BLOCK_MEDIA_BlockDriver ( FX_MEDIA * p_fx_media)
```

Access Block Media device functions open, close, read, write and control.

The RM_FILEX_BLOCK_MEDIA_BlockDriver function is called from the FileX file system driver and issues requests to a Block Media device through the FSP Block Media Interface. Uses block media driver for accesses.

Parameters

| | | |
|----------|------------|---|
| [in,out] | p_fx_media | FileX media control block. All information about each open media device are maintained in the FX_MEDIA data type. The I/O driver communicates the success or failure of the request through the fx_media_driver_status member of FX_MEDIA (p_fx_media->fx_media_driver_status). Possible values are documented in the FileX User Guide. |
|----------|------------|---|

Return values

| | |
|------|--|
| None | |
|------|--|

Returns

Nothing, but updates FileX media control block.

5.2.17.7 FileX I/O (rm_filex_levelx_nor)

Modules » [Storage](#)

Functions

```
void RM_FILEX_LEVELX_NOR_DeviceDriver (FX_MEDIA *p_fx_media)
```

Access LevelX NOR device functions open, close, read, write and control. [More...](#)

Detailed Description

Middleware for the Azure RTOS FileX File System control using LevelX NOR on RA MCUs.

Overview

This module provides the hardware port layer for FileX file system. After initializing this module, refer to the FileX API reference to use the file system: <https://docs.microsoft.com/en-us/azure/rtos/filex/>

Features

The FileX LevelX NOR module supports the following features:

- ThreadX is typically required for FileX. To use FileX without ThreadX `FX_STANDALONE_ENABLE` must be defined.
- Unless `FX_SINGLE_THREAD` or `FX_STANDALONE_ENABLE` are defined, all FileX operations are thread safe.

Configuration

Build Time Configurations for `rm_filex_levelx_nor`

The following build time configurations are defined in `fsp_cfg/middleware/rm_filex_levelx_nor_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|--|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | Selects if code for parameter checking is to be included in the build. |

Configurations for Storage > FileX I/O (`rm_filex_levelx_nor`)

| Configuration | Options | Default | Description |
|--------------------------|-------------------------------|---|---|
| Name | Name must be a valid C symbol | <code>g_rm_filex_levelx_nor0</code> | Module name. |
| Callback | Name must be a valid C symbol | <code>g_rm_filex_levelx_nor_0_callback</code> | A user callback function can be provided. If this callback function is provided, it will be called during operations by the lower level block media as a way for the user to provide their desired waiting functionality. |
| LevelX NOR Name (String) | Manual Entry | <code>g_rm_filex_levelx_nor_0</code> | String name to be input into LevelX API. |

Build Time Configurations for `fx`

The following build time configurations are defined in `fsp_cfg/azure/fx/fx_user.h`:

| Configuration | Options | Default | Description |
|-------------------|------------------|---------|-----------------------|
| Common | | | |
| Max Long Name Len | Value must be an | | Specifies the maximum |

| | | |
|-----------------------|--|--|
| | integer greater than or equal to 13 and less than or equal to 256, or empty | file name size for FileX. If left blank the default value is 256. Legal values range between 13 and 256. |
| Max Last Name Len | Value must be an integer greater than or equal to 13 and less than or equal to 256, or empty | This value defines the maximum file name length, which includes full path name. If left blank the default value is 256. Legal values range between 13 and 256. |
| Max Sector Cache | Value must be an integer greater than 0 and power of 2 or empty | Specifies the maximum number of logical sectors that can be cached by FileX. The actual number of sectors that can be cached is lesser of this constant and how many sectors can fit in the amount of memory supplied at <code>fx_media_open</code> . The default value if left blank is 256. All values must be a power of 2. |
| Fat Map Size | Value must be an integer greater than 0 or empty | Specifies the number of sectors that can be represented in the FAT update map. The default value if left blank is 256. Larger values help reduce unneeded updates of secondary FAT sectors. |
| Max Fat Cache | Value must be an integer greater than 0 and power of 2 or empty | Specifies the number of entries in the internal FAT cache. The default value if left blank is 16. All values must be a power of 2. |
| Threading | | |
| Update Rate (Seconds) | Value must be an integer greater than 0 or empty | Specifies rate at which system time in FileX is adjusted. Default value if left blank is 10, specifying that the FileX system time is updated every 10 |

seconds.

| | | | |
|-----------------------------|---|--------------------|---|
| No Timer | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Eliminates the ThreadX timer setup to update the FileX system time and date. Doing so causes default time and date to be placed on all file operations. |
| Single Thread | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Eliminates ThreadX protection logic from the FileX source. It should be used if FileX is being used only from one thread. |
| Standalone | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Enables FileX to be used in standalone mode (without Azure RTOS). |
| Extra Features | | | |
| Don't Update Open Files | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, FileX does not update already opened files. |
| Media Search Cache | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When disabled, the file search cache optimization is disabled. |
| Direct Data Read Cache Fill | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When disabled, the direct read sector update of cache is disabled. |
| Media Statistics | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When disabled, gathering of media statistics is disabled. |
| Single Open Legacy | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, legacy single open logic for the same file is enabled. |
| Rename Path Inherit | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, renaming inherits path information. |
| No Local Path | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, removes local path logic from FileX, resulting in smaller code size. |
| 64-bit LBA | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled (default) | When enabled, 64-bits sector addresses are |

| | | | |
|------------------------|---|--------------------|--|
| | (default) | | used in I/O driver. |
| Cache | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables the cache, default is enabled. |
| File Close | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables file close, default is enabled. |
| Fast Close | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables fast open, default is enabled. |
| Force Memory Operation | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables force memory operation, default is enabled. |
| Build Options | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables build options, default is enabled. |
| One Line Function | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables one line function, default is enabled. |
| FAT Entry Refresh | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables FAT entry refresh, default is enabled. |
| Consecutive Detect | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables or disables consecutive detect, default is enabled. |
| Enable exFAT | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | Enables exFAT support in FileX. |
| Fault Tolerant | | | |
| Fault Tolerant Service | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, enables the FileX Fault Tolerant Module. Enabling Fault Tolerant automatically defines the symbol <code>FX_FAULT_TOLERANT</code> and <code>FX_FAULT_TOLERANT_DATA</code> . |
| Fault Tolerant Data | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, FileX immediately passes all file data write requests to the media's driver. This potentially decreases performance, but helps limit lost file data. Note that enabling this |

feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.

| | | | |
|---------------------------|---|--------------------|---|
| Fault Tolerant | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, FileX immediately passes write requests of all system sectors (boot, FAT, and directory sectors) to the media's driver. This potentially decreases performance, but helps limit corruption to lost clusters. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately. |
| Fault Tolerant Boot Index | Value must be an integer greater than or equal to 116 and less than or equal to 119 | | Defines byte offset in the boot sector where the cluster for the fault tolerant log is. By default if left blank this value is 116. This field takes 4 bytes. Bytes 116 through 119 are chosen because they are marked as reserved by FAT 12/16/32/exFAT specification. |
| Error Checking | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | |

Configurations for Storage > Azure RTOS FileX on LevelX NOR

This module can be added to the Stacks tab via New Stack > Storage > Azure RTOS FileX on LevelX NOR.

| Configuration | Options | Default | Description |
|---------------|-------------------------------|-------------|--|
| Name | Name must be a valid C symbol | g_fx_media0 | Symbol used for media_ptr parameter in FileX APIs |
| Volume Name | Name must be a valid C symbol | Volume 1 | Volume name string, which is a maximum of 11 characters. |

| | | | |
|-----------------------------------|--|-------|---|
| Number of FATs | Number of FATs must be an integer greater than 0 | 1 | Number of FATs in the media. The minimal value is 1 for the primary FAT. Values greater than 1 result in additional FAT copies being maintained at run-time. |
| Directory Entries | Number of Directory Entries must be an integer greater than 0 | 256 | Number of directory entries in the root directory. |
| Hidden Sectors | Number of Hidden Sectors must be an integer | 0 | Number of sectors hidden before this media's boot sector. If using media formatted with multiple partitions this number should correspond to the starting block number for the desired partition. |
| Total Sectors | Total Sectors must be an integer greater than 0 | 57337 | Total number of sectors in the media. When using a Renesas provided block media implementation, total sectors can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info. |
| Sectors per Cluster | Sectors per Cluster must be an integer greater than 0 | 1 | Number of sectors in each cluster. The cluster is the minimum allocation unit in a FAT file system. |
| Volume Serial Number (exFAT only) | Volume Serial Number must be an integer greater than 0 | 12345 | Serial number to be used for this volume. exFAT only. |
| Boundary Unit (exFAT only) | Boundary unit must be an integer greater than 0 | 128 | Physical data area alignment size, in number of sectors. exFAT only. |
| Working media memory size | Memory size must be an integer greater than or equal to the size of one sector | 512 | Memory allocated for file system. Memory size must be an integer greater than or equal to the size of one sector. |

Usage Notes

Pending during Write/Erase

If the underlying LevelX NOR driver performs a blocking operation that requires waiting to complete (such as a long write/erase on NOR SPI), a callback can be provided to provide a way to wait with an OS-specific thread wait. This callback will also pass up block erase events.

Partitioned Media

Partitioned media is not supported directly by the FileX LevelX NOR port.

Examples

Basic Example

This is a basic example of FileX Block Media in an application.

```
#define RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_PARTITION_NUMBER (0)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_BLOCK_SIZE (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES (128)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS (0)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK (1)
extern rm_filex_levelx_nor_instance_t g_filex_levelx_nor0;
extern rm_filex_levelx_nor_instance_ctrl_t g_filex_levelx_nor0_ctrl;
extern rm_filex_levelx_nor_cfg_t g_filex_levelx_nor0_cfg;
extern FX_MEDIA g_fx_media0;
extern uint8_t g_fx_media0_memory[RM_FILEX_LEVELX_NOR_EXAMPLE_BLOCK_SIZE];
extern uint8_t g_file_data[RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_filex_levelx_nor_example (void)
{
    /* Initialize FileX */
```

```
    fx_system_initialize();
/* Initialize LevelX */
    lx_nor_flash_initialize();
/* Open the media. This assumes the flash is already formatted. */
    UINT fx_err = fx_media_open(&g_fx_media0,
    "filex_example_media",
    RM_FILEX_LEVELX_NOR_DeviceDriver,
                                &g_filex_levelx_nor0,
                                g_fx_media0_memory,
    sizeof(g_fx_media0_memory));
    handle_fx_error(fx_err);
/* Create a file */
    fx_err = fx_file_create(&g_fx_media0, RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME);
    handle_fx_error(fx_err);
/* Open source file for writing. */
    FX_FILE sourceFile;
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
    RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME, FX_OPEN_FOR_WRITE);
    handle_fx_error(fx_err);
/* Write file data. */
    fx_err = fx_file_write(&sourceFile, g_file_data, sizeof(g_file_data));
    handle_fx_error(fx_err);
/* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
/* Open the source file in read mode. */
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
    RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME, FX_OPEN_FOR_READ);
    handle_fx_error(fx_err);
/* Read file data. */
    ULONG actual_size_read;
    fx_err = fx_file_read(&sourceFile, g_read_buffer, sizeof(g_file_data),
    &actual_size_read);
    handle_fx_error(fx_err);
```

```
    assert(sizeof(g_file_data) == actual_size_read);

    /* Close the file. */
    fx_err = fx_file_close(&sourceFile);

    handle_fx_error(fx_err);

    /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));

    /* Close the Media */
    fx_err = fx_media_close(&g_fx_media0);

    handle_fx_error(fx_err);
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
extern rm_levelx_nor_spi_cfg_t g_levelx_nor_spi0_cfg;
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE (4096)
void rm_filex_levelx_nor_format_example (void)
{
    spi_flash_instance_t * p_spi_flash_instance = (spi_flash_instance_t *)
g_levelx_nor_spi0_cfg.p_lower_lvl;

    spi_flash_status_t    status;

    /* Erase flash prior to usage */

    fsp_err_t err = p_spi_flash_instance->p_api->open(p_spi_flash_instance->p_ctrl,
p_spi_flash_instance->p_cfg);

    assert(FSP_SUCCESS == err);

    for (uint32_t i = g_levelx_nor_spi0_cfg.address_offset;
        i < g_levelx_nor_spi0_cfg.size;
        i += RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE)
    {
        err = p_spi_flash_instance->p_api->erase(p_spi_flash_instance->p_ctrl,
                                                (uint8_t *)
g_levelx_nor_spi0_cfg.base_address + i,
RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE);
    }
}
```

```
    assert(FSP_SUCCESS == err);
    status.write_in_progress = true;
while (status.write_in_progress)
    {
        err =
p_spi_flash_instance->p_api->statusGet(p_spi_flash_instance->p_ctrl, &status);
        assert(FSP_SUCCESS == err);
    }
}
err = p_spi_flash_instance->p_api->close(p_spi_flash_instance->p_ctrl);
assert(FSP_SUCCESS == err);
/* Format the media */
UINT fx_err = fx_media_format(&g_fx_media0,
// Pointer to FileX media control block.
RM_FILEX_LEVELX_NOR_DeviceDriver, // Driver entry
&g_filex_levelx_nor0, // Pointer to Block Media
Driver
g_fx_media0_memory, // Media buffer pointer
sizeof(g_fx_media0_memory), // Media buffer size
"EXAMPLE_VOLUME", // Volume Name
RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS,
// Number of FATs
RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries
RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors
RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS, // Total sectors
RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE,
// Sector size
RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER, // Sectors per cluster
RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS,
// Heads
```

```

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK);

// Sectors per track
    handle_fx_error(fx_err);
}

```

Callback Wait Example

This shows how to use the I/O driver callback with ThreadX in order to wait for operations to complete.

```

/* Callback called by FileX block media I/O driver needs to wait on operation. */
void rm_filex_levelx_nor_test_callback_wait (rm_filex_levelx_nor_callback_args_t *
p_args)
{
    if (p_args->event & RM_FILEX_LEVELX_NOR_EVENT_BUSY)
    {
        /* Put the thread to sleep while waiting for operation to complete. */
        tx_thread_sleep(1);
    }
}

void rm_filex_levelx_nor_callback_wait_example (void)
{
    /* Format the media */
    UINT fx_err = fx_media_format(&g_fx_media0,
// Pointer to FileX media control block.
    RM_FILEX_LEVELX_NOR_DeviceDriver, // Driver entry
    &g_filex_levelx_nor0, // Pointer to Block Media
Driver
    g_fx_media0_memory, // Media buffer pointer
    sizeof(g_fx_media0_memory), // Media buffer size
    "EXAMPLE_VOLUME", // Volume Name
    RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS,
// Number of FATs
    RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries

```

```

RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS,

// Hidden sectors

RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS,          // Total sectors

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE,

// Sector size

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER,    // Sectors per cluster

RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS,

// Heads

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK);

// Sectors per track

    handle_fx_error(fx_err);
}

```

Function Documentation

◆ RM_FILEX_LEVELX_NOR_DeviceDriver()

```
void RM_FILEX_LEVELX_NOR_DeviceDriver ( FX_MEDIA * p_fx_media)
```

Access LevelX NOR device functions open, close, read, write and control.

The RM_FILEX_LEVELX_NOR_DeviceDriver function is called from the FileX file system driver and issues requests to a LevelX NOR device through the LevelX API.

Parameters

| | | |
|----------|------------|---|
| [in,out] | p_fx_media | FileX media control block. All information about each open media device are maintained in the FX_MEDIA data type. The I/O driver communicates the success or failure of the request through the fx_media_driver_status member of FX_MEDIA (p_fx_media->fx_media_driver_status). Possible values are documented in the FileX User Guide. |
|----------|------------|---|

Return values

| | |
|------|--|
| None | |
|------|--|

Returns

Nothing, but updates FileX media control block.

Detailed Description

Driver for the flash memory on RA high-performance MCUs. This module implements the [Flash Interface](#).

Overview

The Flash HAL module APIs allow an application to write, erase and blank check both the data and ROM flash areas that reside within the MCU. The amount of flash memory available varies across MCU parts.

Features

The R_FLASH_HP module has the following key features:

- Blocking and non-blocking erasing, writing and blank-checking of data flash.
- Blocking erasing, writing and blank-checking of code flash.
- Callback functions for completion of non-blocking data flash operations.
- Access window (write protection) for ROM Flash, allowing only specified areas of code flash to be erased or written.
- Boot block-swapping.
- ID code programming support.

Configuration

Build Time Configurations for r_flash_hp

The following build time configurations are defined in fsp_cfg/r_flash_hp_cfg.h:

| Configuration | Options | Default | Description |
|-------------------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Code Flash Programming Enable | <ul style="list-style-type: none"> Enabled Disabled | Disabled | Controls whether or not code-flash programming is enabled. Disabling reduces the amount of ROM and RAM used by the API. |
| Data Flash Programming Enable | <ul style="list-style-type: none"> Enabled Disabled | Enabled | Controls whether or not data-flash programming is enabled. Disabling reduces the amount of ROM used by the API. |

Configurations for Storage > Flash (r_flash_hp)

This module can be added to the Stacks tab via New Stack > Storage > Flash (r_flash_hp). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------------------------|---|----------|---|
| Name | Name must be a valid C symbol | g_flash0 | Module name. |
| Data Flash Background Operation | <ul style="list-style-type: none"> Enabled Disabled | Enabled | Enabling allows Flash API calls that reference data-flash to return immediately, with the operation continuing in the background. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be specified. Callback function called when a Data Flash Background Operation completes or errors. |
| Flash Ready Interrupt Priority | MCU Specific Options | | Select the flash ready interrupt priority. |
| Flash Error Interrupt | MCU Specific Options | | Select the flash error |

Priority

interrupt priority.

Clock Configuration

Flash uses FCLK as the clock source depending on the MCU. When writing and erasing the clock source must be at least 4 MHz.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Warning

It is highly recommended that the developer reviews sections 5 and 6 of the Flash Memory section of the target MCUs Hardware User's Manual prior to using the `r_flash_hp` module. In particular, understanding ID Code and Access Window functionality can help avoid unrecoverable flash scenarios.

Data Flash Background Operation (BGO) Precautions

When using the data flash BGO (Background Operation) mode, you can still access the user ROM, RAM and external memory. You must ensure that the data flash is not accessed during a data flash operation. This includes interrupts that may access the data flash.

Code Flash Precautions

Code flash cannot be accessed while writing, erasing or blank checking code flash. Code flash cannot be accessed while modifying the access window, selecting the startup area or setting the ID code. In order to support modifying code flash all supporting code must reside in RAM. This is only done when code flash programming is enabled. BGO mode is not supported for code flash, so a code flash operation will not return before the operation has completed. By default, the vector table resides in the code flash. If an interrupt occurs during the code flash operation, then code flash will be accessed to fetch the interrupt's starting address and an error will occur. The simplest work-around is to disable interrupts during code flash operations. Another option is to copy the vector table to RAM, update the VTOR (Vector Table Offset Register) accordingly and ensure that any interrupt service routines execute out of RAM. Similarly, you must insure that if in a multi-threaded environment, threads running from code flash cannot become active while a code flash operation is in progress.

Flash Clock (FCLK)

The flash clock source is the clock used by the Flash peripheral in performing all Flash operations. As part of the `flash_api_t::open` function the Flash clock source is checked will return `FSP_ERR_FCLK` if it is invalid. Once the Flash API has been opened, if the flash clock source frequency is changed, the `flash_api_t::updateFlashClockFreq` API function must be called to inform the API of the change. Failure to do so could result in flash operation failures and possibly damage the part.

Interrupts

Enable the flash ready interrupt only if you plan to use the data flash BGO. In this mode, the application can initiate a data flash operation and then be asynchronously notified of its completion, or an error, using a user supplied-callback function. The callback function is passed a structure containing event information that indicates the source of the callback event (for example, `flash_api_t::FLASH_EVENT_ERASE_COMPLETE`) When the FLASH FRDYI interrupt is enabled, the

corresponding ISR will be defined in the flash driver. The ISR will call a user-callback function if one was registered with the `flash_api_t::open` API.

Note

The Flash HP supports an additional flash-error interrupt and if the BGO mode is enabled for the FLASH HP then both the Flash Ready Interrupt and Flash Error Interrupts must be enabled (assigned a priority).

Viewing flash contents in e2 studio

By default, the contents of data flash and code flash are cached by e² studio. This means that during a debug session, modifications to these memory regions will not be observed by e² studio. When debugging applications using e² studio, disable the "Allow caching of flash contents" option in the debug configuration in order to view modified flash contents (Debug Configuration > Debugger > Debug Tool Settings > Allow caching of flash contents).

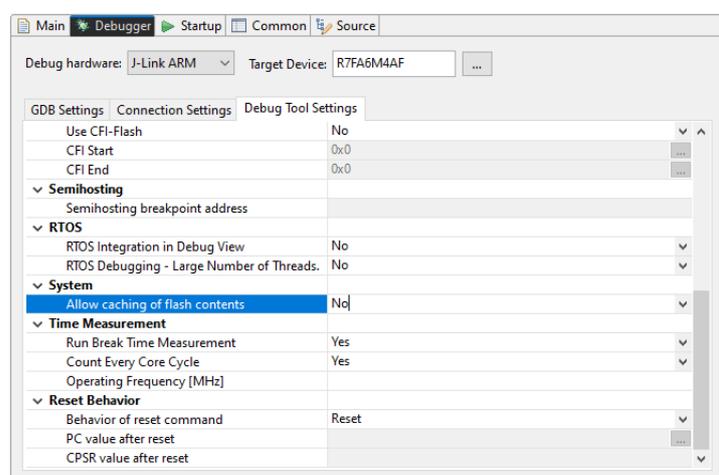

Figure 288: Debug Configuration

Limitations

- Write operations must be aligned on page boundaries and must be a multiple of the page boundary size.
- Erase operations will erase the entire block the provided address resides in.
- Data flash is better suited for storing data as it can be erased and written to while code is still executing from code flash. Data flash is also guaranteed for a larger number of reprogramming/erasure cycles than code flash.
- Read values of erased data flash blocks are not guaranteed to be 0xFF. Blank check should be used to determine if memory has been erased but not yet programmed.

Examples

High-Performance Flash Basic Example

This is a basic example of erasing and writing to data flash and code flash.

```
#define FLASH_DF_BLOCK_0 0x40100000U /* 64 B: 0x40100000 - 0x4010003F */
#define FLASH_CF_BLOCK_8 0x00010000 /* 32 KB: 0x00010000 - 0x00017FFF */
#define FLASH_DATA_BLOCK_SIZE (1024)
```

```
#define FLASH_HP_EXAMPLE_WRITE_SIZE 32
uint8_t      g_dest[TRANSFER_LENGTH];
uint8_t      g_src[TRANSFER_LENGTH];
flash_result_t blank_check_result;
void r_flash_hp_basic_example (void)
{
    /* Initialize p_src to known data */
    for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the flash hp instance. */
    fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_cfg);
    assert(FSP_SUCCESS == err);

    /* Erase 1 block of data flash starting at block 0. */
    err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
    assert(FSP_SUCCESS == err);

    /* Check if block 0 is erased. */
    err = R_FLASH_HP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
    assert(FSP_SUCCESS == err);

    /* Verify the previously erased area is blank */
    assert(FLASH_RESULT_BLANK == blank_check_result);

    /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE));

    /* Disable interrupts to prevent vector table access while code flash is in P/E
mode. */
    __disable_irq();

    /* Erase 1 block of code flash starting at block 10. */
    err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_CF_BLOCK_8, 1);
```

```
    assert(FSP_SUCCESS == err);

    /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_CF_BLOCK_8,
FLASH_HP_EXAMPLE_WRITE_SIZE);

    assert(FSP_SUCCESS == err);

    /* Enable interrupts after code flash operations are complete. */
    __enable_irq();

    assert(0 == memcmp(g_src, (uint8_t *) FLASH_CF_BLOCK_8,
FLASH_HP_EXAMPLE_WRITE_SIZE));
}
```

High-Performance Flash Advanced Example

This example demonstrates using BGO to do non-blocking operations on the data flash.

```
bool interrupt_called;
flash_event_t flash_event;
static flash_cfg_t g_flash_bgo_example_cfg =
{
    .p_callback    = flash_callback,
    .p_context     = 0,
    .p_extend      = NULL,
    .data_flash_bgo = true,
    .ipl           = 5,
    .irq           = BSP_VECTOR_FLASH_HP_FRDYI_ISR,
};

void r_flash_hp_bgo_example (void)
{
    /* Initialize p_src to known data */
    for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the flash hp instance. */
    fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_bgo_example_cfg);
```

```
/* Handle any errors. */
assert(FSP_SUCCESS == err);
interrupt_called = false;

/* Erase 1 block of data flash starting at block 0. */
err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
assert(FSP_SUCCESS == err);
while (!interrupt_called)
{
    ;
}
assert(FLASH_EVENT_ERASE_COMPLETE == flash_event);
interrupt_called = false;

/* Write 32 bytes to the first block of data flash. */
err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE);
assert(FSP_SUCCESS == err);
flash_status_t status;
/* Wait until the current flash operation completes. */
do
{
    err = R_FLASH_HP_StatusGet(&g_flash_ctrl, &status);
} while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
/* If the interrupt wasn't called process the error. */
assert(interrupt_called);
/* If the event wasn't a write complete process the error. */
assert(FLASH_EVENT_WRITE_COMPLETE == flash_event);
/* Verify the data was written correctly. */
assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE));

{
    interrupt_called = true;
    flash_event      = p_args->event;
```

}

High-Performance Flash Bank Swap Example

This example demonstrates swapping which flash bank is located at address 0. This feature is only on select MCUs.

```
void r_flash_hp_bankswap_example (void)
{
    /* Open the flash hp instance. */
    fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_cfg);
    /* Handle any errors. */
    assert(FSP_SUCCESS == err);
    /* Write the new application starting at 0x00200000. */
    /* Swap the block at address 0 with the one at 0x00200000 after the next restart.
     * The application at 0x00200000 must be written there by application code. */
    err = R_FLASH_HP_BankSwap(&g_flash_ctrl);
    /* Handle any errors. */
    assert(FSP_SUCCESS == err);
    /* Handle any pre-reset operations here */
    /* Reset the MCU to swap to the other bank */
    __NVIC_SystemReset();
}
```

Data Structures

struct [flash_hp_instance_ctrl_t](#)

Enumerations

enum [flash_bgo_operation_t](#)

Data Structure Documentation

◆ flash_hp_instance_ctrl_t

struct flash_hp_instance_ctrl_t

Flash HP instance control block. DO NOT INITIALIZE.

Data Fields

| | |
|----------|------------------------|
| uint32_t | opened |
| | |

| | |
|------------------------------------|---|
| | To check whether api has been opened or not. |
| <code>flash_bgo_operation_t</code> | <code>current_operation</code> |
| | Operation in progress, for example, FLASH_OPERATION_CF_ERASE. |

Enumeration Type Documentation

◆ `flash_bgo_operation_t`

| |
|---|
| enum <code>flash_bgo_operation_t</code> |
| Possible Flash operation states |

Function Documentation

◆ `R_FLASH_HP_Open()`

| | |
|--|--|
| <code>fsp_err_t R_FLASH_HP_Open (flash_ctrl_t *const p_api_ctrl, flash_cfg_t const *const p_cfg)</code> | |
| Initializes the high performance flash peripheral. Implements <code>flash_api_t::open</code> . | |
| The Open function initializes the Flash. | |
| Example: | |
| <pre>/* Open the flash hp instance. */ fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_cfg);</pre> | |
| Return values | |
| <code>FSP_SUCCESS</code> | Initialization was successful and timer has started. |
| <code>FSP_ERR_ALREADY_OPEN</code> | The flash control block is already open. |
| <code>FSP_ERR_ASSERTION</code> | NULL provided for <code>p_ctrl</code> or <code>p_cfg</code> . |
| <code>FSP_ERR_IRQ_BSP_DISABLED</code> | Caller is requesting BGO but the Flash interrupts are not enabled. |
| <code>FSP_ERR_FCLK</code> | FCLK must be a minimum of 4 MHz for Flash operations. |

◆ **R_FLASH_HP_Write()**

```
fsp_err_t R_FLASH_HP_Write ( flash_ctrl_t *const p_api_ctrl, uint32_t const src_address, uint32_t
flash_address, uint32_t const num_bytes )
```

Writes to the specified Code or Data Flash memory area. Implements `flash_api_t::write`.

Example:

```
/* Write 32 bytes to the first block of data flash. */
err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE);
```

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Operation successful. If BGO is enabled this means the operation was started successfully. |
| FSP_ERR_IN_USE | The Flash peripheral is busy with a prior on-going transaction. |
| FSP_ERR_NOT_OPEN | The Flash API is not Open. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of attempting to Write an area that is protected by an Access Window. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. This may be returned if the requested Flash area is not blank. |
| FSP_ERR_TIMEOUT | Timed out waiting for FCU operation to complete. |
| FSP_ERR_INVALID_SIZE | Number of bytes provided was not a multiple of the programming size or exceeded the maximum range. |
| FSP_ERR_INVALID_ADDRESS | Invalid address was input or address not on programming boundary. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit P/E mode. |

◆ R_FLASH_HP_Erase()

```
fsp_err_t R_FLASH_HP_Erase ( flash_ctrl_t *const p_api_ctrl, uint32_t const address, uint32_t const num_blocks )
```

Erases the specified Code or Data Flash blocks. Implements `flash_api_t::erase` by the `block_erase_address`.

Note

Code flash may contain blocks of different sizes. When erasing code flash it is important to take this into consideration to prevent erasing a larger address space than desired.

Example:

```
/* Erase 1 block of data flash starting at block 0. */
err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
```

Return values

| | |
|-------------------------|---|
| FSP_SUCCESS | Successful open. |
| FSP_ERR_INVALID_BLOCKS | Invalid number of blocks specified |
| FSP_ERR_INVALID_ADDRESS | Invalid address specified. If the address is in code flash then code flash programming must be enabled. |
| FSP_ERR_IN_USE | Other flash operation in progress, or API not initialized |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of attempting to Erase an area that is protected by an Access Window. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | The Flash API is not Open. |
| FSP_ERR_ERASE_FAILED | Status is indicating a Erase error. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit P/E mode. |

◆ **R_FLASH_HP_BlankCheck()**

```
fsp_err_t R_FLASH_HP_BlankCheck ( flash_ctrl_t *const p_api_ctrl, uint32_t const address, uint32_t
num_bytes, flash_result_t * p_blank_check_result )
```

Performs a blank check on the specified address area. Implements `flash_api_t::blankCheck`.

Example:

```
/* Check if block 0 is erased. */
err = R_FLASH_HP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|----------------------------|---|
| FSP_SUCCESS | Blank check operation completed with result in p_blank_check_result, or blank check started and in-progress (BGO mode). |
| FSP_ERR_INVALID_ADDRESS | Invalid data flash address was input. |
| FSP_ERR_INVALID_SIZE | 'num_bytes' was either too large or not aligned for the CF/DF boundary size. |
| FSP_ERR_IN_USE | Other flash operation in progress or API not initialized. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of attempting to Erase an area that is protected by an Access Window. |
| FSP_ERR_NOT_OPEN | The Flash API is not Open. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit P/E mode. |
| FSP_ERR_BLANK_CHECK_FAILED | Blank check operation failed. |

◆ R_FLASH_HP_StatusGet()

`fsp_err_t R_FLASH_HP_StatusGet (flash_ctrl_t *const p_api_ctrl, flash_status_t *const p_status)`

Query the FLASH peripheral for its status. Implements `flash_api_t::statusGet`.

Example:

```
flash_status_t status;

/* Wait until the current flash operation completes. */
do
{
    err = R_FLASH_HP_StatusGet(&g_flash_ctrl, &status);
} while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
```

Return values

| | |
|-------------------|-----------------------------------|
| FSP_SUCCESS | FLASH peripheral is ready to use. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_NOT_OPEN | The Flash API is not Open. |

◆ **R_FLASH_HP_IdCodeSet()**

```
fsp_err_t R_FLASH_HP_IdCodeSet ( flash_ctrl_t *const p_api_ctrl, uint8_t const *const p_id_code,
flash_id_code_mode_t mode )
```

Implements `flash_api_t::idCodeSet`.

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | ID Code successfully configured. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit Code Flash P/E mode. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of having received an illegal command. |

◆ R_FLASH_HP_AccessWindowSet()

```
fsp_err_t R_FLASH_HP_AccessWindowSet ( flash_ctrl_t *const p_api_ctrl, uint32_t const start_addr,
uint32_t const end_addr )
```

Configure an access window for the Code Flash memory using the provided start and end address. An access window defines a contiguous area in Code Flash for which programming/erase is enabled. This area is on block boundaries. The block containing start_addr is the first block. The block containing end_addr is the last block. The access window then becomes first block -> last block inclusive. Anything outside this range of Code Flash is then write protected.

Note

If the start address and end address are set to the same value, then the access window is effectively removed. This accomplishes the same functionality as R_FLASH_HP_AccessWindowClear().

Implements [flash_api_t::accessWindowSet](#).

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Access window successfully configured. |
| FSP_ERR_INVALID_ADDRESS | Invalid settings for start_addr and/or end_addr. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit Code Flash P/E mode. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of having received an illegal command. |

◆ **R_FLASH_HP_AccessWindowClear()**

```
fsp_err_t R_FLASH_HP_AccessWindowClear ( flash_ctrl_t *const p_api_ctrl)
```

Remove any access window that is currently configured in the Code Flash. Subsequent to this call all Code Flash is writable. Implements `flash_api_t::accessWindowClear`.

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Access window successfully removed. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit Code Flash P/E mode. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of having received an illegal command. |

◆ **R_FLASH_HP_Reset()**

```
fsp_err_t R_FLASH_HP_Reset ( flash_ctrl_t *const p_api_ctrl)
```

Reset the FLASH peripheral. Implements `flash_api_t::reset`.

No attempt is made to check if the flash is busy before executing the reset since the assumption is that a reset will terminate any existing operation.

Return values

| | |
|--------------------|--|
| FSP_SUCCESS | Flash circuit successfully reset. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_NOT_OPEN | The control block is not open. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit P/E mode. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of having received an illegal command. |

◆ R_FLASH_HP_StartUpAreaSelect()

```
fsp_err_t R_FLASH_HP_StartUpAreaSelect ( flash_ctrl_t *const p_api_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary )
```

Selects which block, Default (Block 0) or Alternate (Block 1), is used as the startup area block. The provided parameters determine which block will become the active startup block and whether that action will be immediate (but temporary), or permanent subsequent to the next reset. Doing a temporary switch might appear to have limited usefulness. If there is an access window in place such that Block 0 is write protected, then one could do a temporary switch, update the block and switch them back without having to touch the access window. Implements [flash_api_t::startupAreaSelect](#).

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Start-up area successfully toggled. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_NOT_OPEN | The control block is not open. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit Code Flash P/E mode. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of having received an illegal command. |

◆ **R_FLASH_HP_BankSwap()**

```
fsp_err_t R_FLASH_HP_BankSwap ( flash_ctrl_t *const p_api_ctrl)
```

Swaps the flash bank located at address 0x00000000 and address 0x00200000. This can only be done when in dual bank mode. Dual bank mode can be enabled in the FSP Configuration Tool under BSP Properties. After a bank swap is done the MCU will need to be reset for the changes to take place. [flash_api_t::bankSwap](#).

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Start-up area successfully toggled. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_NOT_OPEN | The control block is not open. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_PE_FAILURE | Failed to enter or exit Code Flash P/E mode. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_INVALID_MODE | Cannot switch banks while flash is in Linear mode. |
| FSP_ERR_WRITE_FAILED | Flash write operation failed. |
| FSP_ERR_CMD_LOCKED | FCU is in locked state, typically as a result of having received an illegal command. |

◆ **R_FLASH_HP_UpdateFlashClockFreq()**

```
fsp_err_t R_FLASH_HP_UpdateFlashClockFreq ( flash_ctrl_t *const p_api_ctrl)
```

Indicate to the already open Flash API that the FCLK has changed. Implements `flash_api_t::updateFlashClockFreq`.

This could be the case if the application has changed the system clock, and therefore the FCLK. Failure to call this function subsequent to changing the FCLK could result in damage to the flash macro.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Start-up area successfully toggled. |
| FSP_ERR_IN_USE | Flash is busy with an on-going operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_FCLK | FCLK is not within the acceptable range. |

◆ **R_FLASH_HP_InfoGet()**

```
fsp_err_t R_FLASH_HP_InfoGet ( flash_ctrl_t *const p_api_ctrl, flash_info_t *const p_info )
```

Returns the information about the flash regions. Implements `flash_api_t::infoGet`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Successful retrieved the request information. |
| FSP_ERR_NOT_OPEN | The control block is not open. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl or p_info. |

◆ **R_FLASH_HP_Close()**

```
fsp_err_t R_FLASH_HP_Close ( flash_ctrl_t *const p_api_ctrl)
```

Releases any resources that were allocated by the Open() or any subsequent Flash operations. Implements `flash_api_t::close`.

Return values

| | |
|-------------------|------------------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_NOT_OPEN | The control block is not open. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl or p_cfg. |

◆ **R_FLASH_HP_CallbackSet()**

```
fsp_err_t R_FLASH_HP_CallbackSet ( flash_ctrl_t *const p_api_ctrl, void(*) (flash_callback_args_t *)
p_callback, void const *const p_context, flash_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `flash_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

Detailed Description

Driver for the flash memory on RA low-power MCUs. This module implements the [Flash Interface](#).

Overview

The Flash HAL module APIs allow an application to write, erase and blank check both the data and code flash areas that reside within the MCU. The amount of flash memory available varies across MCU parts.

Features

The Low-Power Flash HAL module has the following key features:

- Blocking and non-blocking erasing, writing and blank-checking of data flash.
- Blocking erasing, writing and blank checking of code flash.
- Callback functions for completion of non-blocking data flash operations.
- Access window (write protection) for code flash, allowing only specified areas of code flash to be erased or written.
- Boot block-swapping.
- ID code programming support.

Configuration

Build Time Configurations for r_flash_lp

The following build time configurations are defined in fsp_cfg/r_flash_lp_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|--|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled | Default (BSP) | If selected code for parameter checking is |

| | | | |
|---|---|----------|--|
| | <ul style="list-style-type: none"> • Disabled | | included in the build. |
| Code Flash Programming | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Controls whether or not code-flash programming is enabled. Disabling reduces the amount of ROM and RAM used by the API. |
| Data Flash Programming | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Controls whether or not data-flash programming is enabled. Disabling reduces the amount of ROM used by the API. |
| Data Flash Background Operation Support | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Controls whether or not Data Flash Background Operation support is included in the build. Disabling reduces the amount of ROM used by the API. |

Configurations for Storage > Flash (r_flash_lp)

This module can be added to the Stacks tab via New Stack > Storage > Flash (r_flash_lp).

| Configuration | Options | Default | Description |
|---------------------------------|---|----------|---|
| Name | Name must be a valid C symbol | g_flash0 | Module name. |
| Data Flash Background Operation | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Enabling allows Flash API calls that reference data-flash to return immediately, with the operation continuing in the background. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be specified. Callback function called when a Data Flash Background Operation completes or errors. |
| Flash Ready Interrupt Priority | MCU Specific Options | | Select the flash ready interrupt priority. |

Clock Configuration

Flash either uses FCLK or ICLK as the clock source depending on the MCU. When writing and erasing the clock source must be at least 4 MHz.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Warning

It is highly recommended that the developer reviews sections 5 and 6 of the Flash Memory section of the target MCUs Hardware User's Manual prior to using the r_flash_lp module. In particular, understanding ID Code and Access Window functionality can help avoid unrecoverable flash scenarios.

Data Flash Background Operation (BGO) Precautions

When using the data flash BGO, the code flash, RAM and external memory can still be accessed. You must ensure that the data flash is not accessed during a data flash operation. This includes interrupts that may access the data flash.

Code Flash Precautions

Code flash cannot be accessed while writing, erasing or blank checking code flash. Code flash cannot be accessed while modifying the access window, selecting the startup area or setting the ID code. In order to support modifying code flash all supporting code must reside in RAM. This is only done when code flash programming is enabled. BGO mode is not supported for code flash, so a code flash operation will not return before the operation has completed. By default, the vector table resides in the code flash. If an interrupt occurs during the code flash operation, then code flash will be accessed to fetch the interrupt's starting address and an error will occur. The simplest work-around is to disable interrupts during code flash operations. Another option is to copy the vector table to RAM, update the VTOR (Vector Table Offset Register) accordingly and ensure that any interrupt service routines execute out of RAM. Similarly, you must insure that if in a multi-threaded environment, threads running from code flash cannot become active while a code flash operation is in progress.

Flash Clock Source

The flash clock source is the clock used by the Flash peripheral in performing all Flash operations. As part of the [flash_api_t::open](#) function the Flash clock source is checked will return FSP_ERR_FCLK if it is invalid. Once the Flash API has been opened, if the flash clock source frequency is changed, the [flash_api_t::updateFlashClockFreq](#) API function must be called to inform the API of the change. Failure to do so could result in flash operation failures and possibly damage the part.

Interrupts

Enable the flash ready interrupt only if you plan to use the data flash BGO. In this mode, the application can initiate a data flash operation and then be asynchronously notified of its completion, or an error, using a user supplied-callback function. The callback function is passed a structure containing event information that indicates the source of the callback event (for example, [flash_api_t::FLASH_EVENT_ERASE_COMPLETE](#)) When the FLASH FRDYI interrupt is enabled, the corresponding ISR will be defined in the flash driver. The ISR will call a user-callback function if one was registered with the [flash_api_t::open](#) API.

Note

The Flash HP supports an additional flash-error interrupt and if the BGO mode is enabled for the FLASH HP then both the Flash Ready Interrupt and Flash Error Interrupts must be enabled (assigned a priority).

Viewing flash contents in e2 studio

By default, the contents of data flash and code flash are cached by e² studio. This means that during a debug session, modifications to these memory regions will not be observed by e² studio. When debugging applications using e² studio, disable the "Allow caching of flash contents" option in the debug configuration in order to view modified flash contents (Debug Configuration > Debugger > Debug Tool Settings > Allow caching of flash contents).

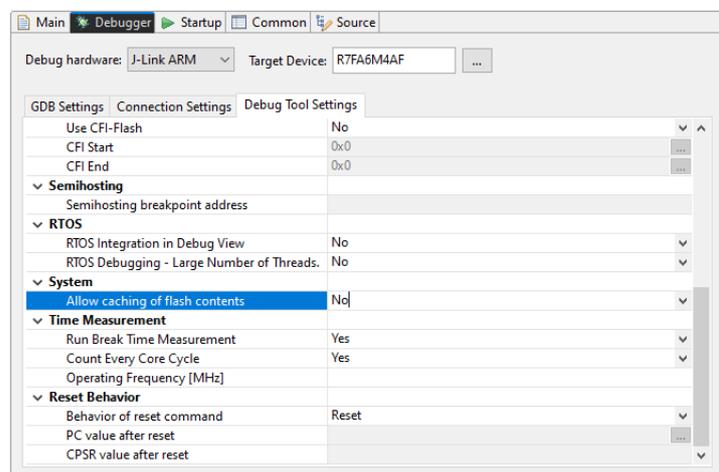

Figure 289: Debug Configuration

Limitations

- Write operations must be aligned on page boundaries and must be a multiple of the page boundary size.
- Erase operations will erase the entire block the provided address resides in.
- Data flash is better suited for storing data as it can be erased and written to while code is still executing from code flash. Data flash is also guaranteed for a larger number of reprogramming/erasure cycles than code flash.
- Read values of erased blocks are not guaranteed to be 0xFF. Blank check should be used to determine if memory has been erased but not yet programmed.

Examples

Low-Power Flash Basic Example

This is a basic example of erasing and writing to data flash and code flash.

```
#define FLASH_DF_BLOCK_0 0x40100000U /* 1 KB: 0x40100000 - 0x401003FF */
#define FLASH_CF_BLOCK_10 0x00005000 /* 2 KB: 0x00005000 - 0x000057FF */
#define FLASH_DATA_BLOCK_SIZE (1024)
#define FLASH_LP_EXAMPLE_WRITE_SIZE 32
uint8_t      g_dest[TRANSFER_LENGTH];
uint8_t      g_src[TRANSFER_LENGTH];
flash_result_t blank_check_result;
```

```
void R_FLASH_LP_basic_example (void)
{
    /* Initialize p_src to known data */
    for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the flash lp instance. */
    fsp_err_t err = R_FLASH_LP_Open(&g_flash_ctrl, &g_flash_cfg);
    assert(FSP_SUCCESS == err);

    /* Erase 1 block of data flash starting at block 0. */
    err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
    assert(FSP_SUCCESS == err);

    /* Check if block 0 is erased. */
    err = R_FLASH_LP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
    assert(FSP_SUCCESS == err);

    /* Verify the previously erased area is blank */
    assert(FLASH_RESULT_BLANK == blank_check_result);

    /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE));

    /* Disable interrupts to prevent vector table access while code flash is in P/E
mode. */
    __disable_irq();

    /* Erase 1 block of code flash starting at block 10. */
    err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_CF_BLOCK_10, 1);
    assert(FSP_SUCCESS == err);

    /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_CF_BLOCK_10,
FLASH_LP_EXAMPLE_WRITE_SIZE);
```

```
    assert(FSP_SUCCESS == err);

    /* Enable interrupts after code flash operations are complete. */
    __enable_irq();

    assert(0 == memcmp(g_src, (uint8_t *) FLASH_CF_BLOCK_10,
FLASH_LP_EXAMPLE_WRITE_SIZE));
}
```

Low-Power Flash Advanced Example

This example demonstrates using BGO to do non-blocking operations on the data flash.

```
bool interrupt_called;
flash_event_t flash_event;
static flash_cfg_t g_flash_bgo_example_cfg =
{
    .p_callback    = flash_callback,
    .p_context     = 0,
    .p_extend      = NULL,
    .data_flash_bgo = true,
    .ipl           = 5,
    .irq           = BSP_VECTOR_FLASH_LP_FRDYI_ISR,
};

void R_FLASH_LP_bgo_example (void)
{
    /* Initialize p_src to known data */
    for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }

    /* Open the flash lp instance. */
    fsp_err_t err = R_FLASH_LP_Open(&g_flash_ctrl, &g_flash_bgo_example_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    interrupt_called = false;

    /* Erase 1 block of data flash starting at block 0. */
}
```

```
err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
assert(FSP_SUCCESS == err);
while (!interrupt_called)
{
    ;
}
assert(FLASH_EVENT_ERASE_COMPLETE == flash_event);
interrupt_called = false;
/* Write 32 bytes to the first block of data flash. */
err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE);
assert(FSP_SUCCESS == err);
flash_status_t status;
/* Wait until the current flash operation completes. */
do
{
    err = R_FLASH_LP_StatusGet(&g_flash_ctrl, &status);
} while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
/* If the interrupt wasn't called process the error. */
assert(interrupt_called);
/* If the event wasn't a write complete process the error. */
assert(FLASH_EVENT_WRITE_COMPLETE == flash_event);
/* Verify the data was written correctly. */
assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE));
}
void flash_callback (flash_callback_args_t * p_args)
{
    interrupt_called = true;
    flash_event      = p_args->event;
}
```

Data Structures

```
struct flash_lp_instance_ctrl_t
```

Data Structure Documentation

◆ flash_lp_instance_ctrl_t

```
struct flash_lp_instance_ctrl_t
```

Flash instance control block. DO NOT INITIALIZE. Initialization occurs when `R_FLASH_LP_Open()` is called.

Function Documentation

◆ R_FLASH_LP_Open()

```
fsp_err_t R_FLASH_LP_Open ( flash_ctrl_t *const p_api_ctrl, flash_cfg_t const *const p_cfg )
```

Initialize the Low Power flash peripheral. Implements `flash_api_t::open`.

The Open function initializes the Flash.

This function must be called once prior to calling any other FLASH API functions. If a user supplied callback function is supplied, then the Flash Ready interrupt will be configured to call the users callback routine with an Event type describing the source of the interrupt for Data Flash operations.

Example:

```
/* Open the flash lp instance. */
fsp_err_t err = R_FLASH_LP_Open(&g_flash_ctrl, &g_flash_cfg);
```

Note

Providing a callback function in the supplied `p_cfg->callback` field automatically configures the Flash for Data Flash to operate in non-blocking background operation (BGO) mode.

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Initialization was successful and timer has started. |
| FSP_ERR_ASSERTION | NULL provided for <code>p_ctrl</code> , <code>p_cfg</code> or <code>p_callback</code> if BGO is enabled. |
| FSP_ERR_IRQ_BSP_DISABLED | Caller is requesting BGO but the Flash interrupts are not enabled. |
| FSP_ERR_FCLK | FCLK must be a minimum of 4 MHz for Flash operations. |
| FSP_ERR_ALREADY_OPEN | Flash Open() has already been called. |
| FSP_ERR_TIMEOUT | Failed to exit P/E mode after configuring flash. |
| FSP_ERR_INVALID_STATE | The system is not running from the required clock. |

◆ **R_FLASH_LP_Write()**

```
fsp_err_t R_FLASH_LP_Write ( flash_ctrl_t *const p_api_ctrl, uint32_t const src_address, uint32_t
flash_address, uint32_t const num_bytes )
```

Write to the specified Code or Data Flash memory area. Implements `flash_api_t::write`.

Example:

```
/* Write 32 bytes to the first block of data flash. */
err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE);
```

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Operation successful. If BGO is enabled this means the operation was started successfully. |
| FSP_ERR_IN_USE | The Flash peripheral is busy with a prior on-going transaction. |
| FSP_ERR_NOT_OPEN | The Flash API is not Open. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. This may be returned if the requested Flash area is not blank. |
| FSP_ERR_TIMEOUT | Timed out waiting for FCU operation to complete. |
| FSP_ERR_INVALID_SIZE | Number of bytes provided was not a multiple of the programming size or exceeded the maximum range. |
| FSP_ERR_INVALID_ADDRESS | Invalid address was input or address not on programming boundary. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |

◆ **R_FLASH_LP_Erase()**

```
fsp_err_t R_FLASH_LP_Erase ( flash_ctrl_t *const p_api_ctrl, uint32_t const address, uint32_t const num_blocks )
```

Erase the specified Code or Data Flash blocks. Implements `flash_api_t::erase`.

Example:

```
/* Erase 1 block of data flash starting at block 0. */
err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
```

Return values

| | |
|-------------------------|---|
| FSP_SUCCESS | Successful open. |
| FSP_ERR_INVALID_BLOCKS | Invalid number of blocks specified |
| FSP_ERR_INVALID_ADDRESS | Invalid address specified |
| FSP_ERR_IN_USE | Other flash operation in progress, or API not initialized |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | The Flash API is not Open. |
| FSP_ERR_TIMEOUT | Timed out waiting for FCU to be ready. |
| FSP_ERR_ERASE_FAILED | Status is indicating a Erase error. |

◆ **R_FLASH_LP_BlankCheck()**

```
fsp_err_t R_FLASH_LP_BlankCheck ( flash_ctrl_t *const p_api_ctrl, uint32_t const address, uint32_t
num_bytes, flash_result_t * p_blank_check_result )
```

Perform a blank check on the specified address area. Implements `flash_api_t::blankCheck`.

Example:

```
/* Check if block 0 is erased. */
err = R_FLASH_LP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|----------------------------|---|
| FSP_SUCCESS | Blankcheck operation completed with result in p_blank_check_result, or blankcheck started and in-progress (BGO mode). |
| FSP_ERR_INVALID_ADDRESS | Invalid data flash address was input |
| FSP_ERR_INVALID_SIZE | 'num_bytes' was either too large or not aligned for the CF/DF boundary size. |
| FSP_ERR_IN_USE | Flash is busy with an on-going operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_BLANK_CHECK_FAILED | An error occurred during blank checking. |

◆ R_FLASH_LP_StatusGet()

```
fsp_err_t R_FLASH_LP_StatusGet ( flash_ctrl_t *const p_api_ctrl, flash_status_t *const p_status )
```

Query the FLASH for its status. Implements `flash_api_t::statusGet`.

Example:

```
flash_status_t status;

/* Wait until the current flash operation completes. */
do
{
    err = R_FLASH_LP_StatusGet(&g_flash_ctrl, &status);
} while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Flash is ready and available to accept commands. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |

◆ R_FLASH_LP_AccessWindowSet()

```
fsp_err_t R_FLASH_LP_AccessWindowSet ( flash_ctrl_t *const p_api_ctrl, uint32_t const start_addr,
uint32_t const end_addr )
```

Configure an access window for the Code Flash memory. Implements `flash_api_t::accessWindowSet`.

An access window defines a contiguous area in Code Flash for which programming/erase is enabled. This area is on block boundaries. The block containing `start_addr` is the first block. The block containing `end_addr` is the last block. The access window then becomes first block (inclusive) -> last block (exclusive). Anything outside this range of Code Flash is then write protected. As an example, if you wanted to place an accesswindow on Code Flash Blocks 0 and 1, such that only those two blocks were writable, you would need to specify (address in block 0, address in block 2) as the respective start and end address.

Note

If the start address and end address are set to the same value, then the access window is effectively removed. This accomplishes the same functionality as `R_FLASH_LP_AccessWindowClear()`.

The invalid address and programming boundaries supported and enforced by this function are dependent on the MCU in use as well as the part package size. Please see the User manual and/or requirements document for additional information.

Parameters

| | | |
|------|-------------------------|-------------------|
| | <code>p_api_ctrl</code> | The p api control |
| [in] | <code>start_addr</code> | The start address |
| [in] | <code>end_addr</code> | The end address |

Return values

| | |
|--------------------------------------|---|
| <code>FSP_SUCCESS</code> | Access window successfully configured. |
| <code>FSP_ERR_INVALID_ADDRESS</code> | Invalid settings for <code>start_addr</code> and/or <code>end_addr</code> . |
| <code>FSP_ERR_IN_USE</code> | FLASH peripheral is busy with a prior operation. |
| <code>FSP_ERR_ASSERTION</code> | NULL provided for <code>p_ctrl</code> . |
| <code>FSP_ERR_UNSUPPORTED</code> | Code Flash Programming is not enabled. |
| <code>FSP_ERR_NOT_OPEN</code> | Flash API has not yet been opened. |
| <code>FSP_ERR_TIMEOUT</code> | Timed out waiting for the FCU to become ready. |
| <code>FSP_ERR_WRITE_FAILED</code> | Status is indicating a Programming error for the requested operation. |

◆ **R_FLASH_LP_AccessWindowClear()**

```
fsp_err_t R_FLASH_LP_AccessWindowClear ( flash_ctrl_t *const p_api_ctrl)
```

Remove any access window that is configured in the Code Flash. Implements `flash_api_t::accessWindowClear`. On successful return from this call all Code Flash is writable.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Access window successfully removed. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |

◆ **R_FLASH_LP_IdCodeSet()**

```
fsp_err_t R_FLASH_LP_IdCodeSet ( flash_ctrl_t *const p_api_ctrl, uint8_t const *const p_id_code, flash_id_code_mode_t mode )
```

Write the ID code provided to the id code registers. Implements `flash_api_t::idCodeSet`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | ID code successfully configured. |
| FSP_ERR_IN_USE | FLASH peripheral is busy with a prior operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_TIMEOUT | Timed out waiting for completion of extra command. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |

◆ **R_FLASH_LP_Reset()**

```
fsp_err_t R_FLASH_LP_Reset ( flash_ctrl_t *const p_api_ctrl)
```

Reset the FLASH peripheral. Implements `flash_api_t::reset`.

No attempt is made to check if the flash is busy before executing the reset since the assumption is that a reset will terminate any existing operation.

Return values

| | |
|-------------------|------------------------------------|
| FSP_SUCCESS | Flash circuit successfully reset. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |

◆ **R_FLASH_LP_StartUpAreaSelect()**

```
fsp_err_t R_FLASH_LP_StartUpAreaSelect ( flash_ctrl_t *const p_api_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary )
```

Select which block is used as the startup area block. Implements `flash_api_t::startupAreaSelect`.

Selects which block - Default (Block 0) or Alternate (Block 1) is used as the startup area block. The provided parameters determine which block will become the active startup block and whether that action will be immediate (but temporary), or permanent subsequent to the next reset. Doing a temporary switch might appear to have limited usefulness. If there is an access window in place such that Block 0 is write protected, then one could do a temporary switch, update the block and switch them back without having to touch the access window.

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Start-up area successfully toggled. |
| FSP_ERR_IN_USE | Flash is busy with an on-going operation. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_WRITE_FAILED | Status is indicating a Programming error for the requested operation. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |
| FSP_ERR_UNSUPPORTED | Code Flash Programming is not enabled. Cannot set FLASH_STARTUP_AREA_BTFLG when the temporary flag is false. |

◆ **R_FLASH_LP_BankSwap()**

```
fsp_err_t R_FLASH_LP_BankSwap ( flash_ctrl_t *const p_api_ctrl)
```

Swap the Code Flash bank to update new program. Implement `flash_api_t::bankSwap`.

Swap the flash bank located at address 0x00000000 and address 0x00040000. After a bank swap is done the MCU will need to be reset for the changes to take place.

To use this API, Code Flash Programming in the FSP Configuration Tool under Stack Properties must be enabled.

Note

*This function only available on MCUs which support bank swap feature.
When active bank is bank 1, startup program protection function is invalid.*

Parameters

| | | |
|------|------------|---------------------------|
| [in] | p_api_ctrl | The api control instance. |
|------|------------|---------------------------|

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | Banks were swapped. |
| FSP_ERR_UNSUPPORTED | Module does not support Bank Swap. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl. |
| FSP_ERR_NOT_OPEN | The control block is not open. |
| FSP_ERR_IN_USE | Extra area is being used by other command. |

◆ **R_FLASH_LP_UpdateFlashClockFreq()**

```
fsp_err_t R_FLASH_LP_UpdateFlashClockFreq ( flash_ctrl_t *const p_api_ctrl)
```

Indicate to the already open Flash API that the FCLK has changed. Implements `flash_api_t::updateFlashClockFreq`.

This could be the case if the application has changed the system clock, and therefore the FCLK. Failure to call this function subsequent to changing the FCLK could result in damage to the flash macro.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Start-up area successfully toggled. |
| FSP_ERR_IN_USE | Flash is busy with an on-going operation. |
| FSP_ERR_FCLK | Invalid flash clock source frequency. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_TIMEOUT | Timed out waiting for the FCU to become ready. |

◆ **R_FLASH_LP_InfoGet()**

```
fsp_err_t R_FLASH_LP_InfoGet ( flash_ctrl_t *const p_api_ctrl, flash_info_t *const p_info )
```

Returns the information about the flash regions. Implements `flash_api_t::infoGet`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Successful retrieved the request information. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl or p_info. |
| FSP_ERR_NOT_OPEN | The flash is not open. |

◆ **R_FLASH_LP_Close()**

```
fsp_err_t R_FLASH_LP_Close ( flash_ctrl_t *const p_api_ctrl)
```

Release any resources that were allocated by the Flash API. Implements `flash_api_t::close`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | NULL provided for p_ctrl or p_cfg. |
| FSP_ERR_NOT_OPEN | Flash API has not yet been opened. |
| FSP_ERR_IN_USE | The flash is currently in P/E mode. |

◆ **R_FLASH_LP_CallbackSet()**

```
fsp_err_t R_FLASH_LP_CallbackSet ( flash_ctrl_t *const p_api_ctrl, void(*) (flash_callback_args_t *) p_callback, void const *const p_context, flash_callback_args_t *const p_callback_memory )
```

Stub function Implements `flash_api_t::callbackSet`.

Return values

| | |
|---------------------|------------------------------------|
| FSP_ERR_UNSUPPORTED | Function has not been implemented. |
|---------------------|------------------------------------|

fsp_err_t RM_FREERTOS_PLUS_FAT_Close (rm_freertos_plus_fat_ctrl_t *const p_ctrl)

Detailed Description

Middleware for the FAT File System control on RA MCUs.

Overview

This module provides the hardware port layer for FreeRTOS+FAT file system. After initializing this module, refer to the FreeRTOS+FAT API reference to use the file system:

https://www.freertos.org/FreeRTOS-Plus/FreeRTOS_Plus_FAT/index.html

Features

The FreeRTOS+FAT port module supports the following features:

- Callbacks for insertion and removal for removable devices.
- Helper function to initialize FF_Disk_t
- Blocking read and write port functions that use FreeRTOS task notification to pend if FreeRTOS is used
- FreeRTOS is optional

Configuration

Build Time Configurations for rm_freertos_plus_fat

The following build time configurations are defined in fsp_cfg/middleware/rm_freertos_plus_fat_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Storage > FreeRTOS+FAT Port for RA (rm_freertos_plus_fat)

| Configuration | Options | Default | Description |
|-------------------------|--------------------------------------|-----------------------------|--|
| Name | Name must be a valid C symbol | g_rm_freertos_plus_fat 0 | Module name. |
| Total Number of Sectors | Must be a non-negative integer | 31293440 | Enter the total number of sectors on the device. If this is not known, update <code>rm_freertos_plus_fat_disk_cfg_t::num_blocks</code> after calling RM_FREERTOS_PLUS_FAT_MediaInit() . |
| Sector Size (bytes) | Must be a power of 2 multiple of 512 | 512 | Select the sector size. Must match the underlying media sector size and at least 512. If this is not known, update <code>rm_freertos_plus_fat_disk_cfg_t::num_blocks</code> after calling RM_FREERTOS_PLUS_FAT_MediaInit() . |
| Cache Size (bytes) | Must be a power of 2 multiple of 512 | 1024 | Select the cache size. Must be a multiple of the sector size and at least 2 times the sector size. |
| Partition Number | Must be a non-negative integer | 0 | Select the partition number for this disk. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed. |

Usage Notes

Pending during Read/Write

If the underlying driver supports non-blocking operations, the FreeRTOS+FAT port pends the active FreeRTOS task during read and write operations so other tasks can run in the background.

If FreeRTOS is not used, the FreeRTOS+FAT port spins in a while loop waiting for read and write operations to complete.

FreeRTOS+FAT without FreeRTOS

To use FreeRTOS+FAT without FreeRTOS, copy FreeRTOSConfigMinimal.h to one of your project's include paths and rename it FreeRTOSConfig.h.

Also, update the Malloc function to malloc and the Free function to free in the Common configurations.

Examples

Basic Example

This is a basic example of FreeRTOS+FAT in an application.

```
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER (0)
extern rm_freertos_plus_fat_instance_ctrl_t g_freertos_plus_fat0_ctrl;
extern const rm_freertos_plus_fat_cfg_t g_freertos_plus_fat0_cfg;
extern rm_freertos_plus_fat_disk_cfg_t g_rm_freertos_plus_fat_disk_cfg;
extern uint8_t g_file_data[RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_freertos_plus_fat_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
    * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);
    assert(FSP_SUCCESS == err);
    /* Initialize one disk for each partition used in the application. */
    FF_Disk_t disk;
    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);
```

```
    assert(FSP_SUCCESS == err);

    /* Mount each disk. This assumes the disk is already partitioned and formatted. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);

    handle_ff_error(ff_err);

    /* Add the disk to the file system. */
    FF_FS_Add("/", &disk);

    /* Open a source file for writing. */
    FF_FILE * pxSourceFile = ff_fopen((const char *)
RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME, "w");

    assert(NULL != pxSourceFile);

    /* Write file data. */
    size_t size_return = ff_fwrite(g_file_data, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);

    /* Close the file. */
    int close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);

    /* Open the source file in read mode. */
    pxSourceFile = ff_fopen((const char *) RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME,
"r");

    assert(NULL != pxSourceFile);

    /* Read file data. */
    size_return = ff_fread(g_read_buffer, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);

    /* Close the file. */
    close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);

    /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
void rm_freertos_plus_fat_format_example (void)
{
    /* Open media driver.*/
    fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
    * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);
    assert(FSP_SUCCESS == err);
    /* Initialize one disk for each partition used in the application. */
    FF_Disk_t disk;
    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);
    assert(FSP_SUCCESS == err);
    /* Try to mount the disk. If the disk is not formatted, mount will fail. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
    if (FF_isERR((uint32_t) ff_err))
    {
        /* The disk is likely not formatted. Partition and format the disk, then mount
again. */
        FF_PartitionParameters_t partition_params;
        partition_params.ulSectorCount =
g_rm_freertos_plus_fat_disk_cfg.device.sector_count;
        partition_params.ulHiddenSectors = 1;
        partition_params.ulInterSpace = 0;
        memset(partition_params.xSizes, 0, sizeof(partition_params.xSizes));
        partition_params.xSizes[RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER] =
            (BaseType_t) partition_params.ulSectorCount - 1;
        partition_params.xPrimaryCount = 1;
    }
}
```

```
    partition_params.eSizeType    = eSizeIsSectors;
    ff_err = FF_Partition(&disk, &partition_params);
    handle_ff_error(ff_err);

    ff_err = FF_Format(&disk, RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER,
pdFALSE, pdFALSE);

    handle_ff_error(ff_err);

    ff_err = FF_Mount(&disk, RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
    handle_ff_error(ff_err);
}
}
```

Media Insertion Example

This shows how to use the callback to wait for media insertion.

```
#if 2 == BSP_CFG_RTOS
static EventGroupHandle_t xUSBEventGroupHandle = NULL;
#else
volatile uint32_t g_rm_freertos_plus_fat_insertion_events = 0;
volatile uint32_t g_rm_freertos_plus_fat_removal_events = 0;
#endif

/* Callback called by media driver when a removable device is inserted or removed. */
void rm_freertos_plus_fat_test_callback (rm_freertos_plus_fat_callback_args_t *
p_args)
{

    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
}
```

Data Structures

struct [rm_freertos_plus_fat_instance_ctrl_t](#)

Data Structure Documentation

◆ [rm_freertos_plus_fat_instance_ctrl_t](#)

struct [rm_freertos_plus_fat_instance_ctrl_t](#)

FreeRTOS plus FAT private control block. DO NOT MODIFY. Initialization occurs when [RM_FREERTOS_PLUS_FAT_Open](#) is called.

Function Documentation

◆ RM_FREERTOS_PLUS_FAT_Open()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_Open ( rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_cfg_t const *const p_cfg )
```

Initializes lower layer media device.

Implements `rm_freertos_plus_fat_api_t::open()`.

Return values

| | |
|-----------------------|--|
| FSP_SUCCESS | Success. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_OUT_OF_MEMORY | Not enough memory to create semaphore. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `rm_block_media_api_t::open`

◆ RM_FREERTOS_PLUS_FAT_MediaInit()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_MediaInit ( rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_device_t *const p_device )
```

Initializes the media device. This function blocks until all identification and configuration commands are complete.

Implements `rm_freertos_plus_fat_api_t::mediaInit()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module has not been initialized. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `rm_block_media_api_t::mediaInit`
- `rm_block_media_api_t::infoGet`

◆ **RM_FREERTOS_PLUS_FAT_DiskInit()**

```
fsp_err_t RM_FREERTOS_PLUS_FAT_DiskInit ( rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk )
```

Initializes a FreeRTOS+FAT disk structure. This function calls FF_CreateIOManger.

Implements `rm_freertos_plus_fat_api_t::diskInit()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module has not been initialized. |
| FSP_ERR_INTERNAL | Call to FF_CreateIOManger failed. |

◆ **RM_FREERTOS_PLUS_FAT_DiskDeinit()**

```
fsp_err_t RM_FREERTOS_PLUS_FAT_DiskDeinit ( rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t
*const p_disk )
```

Deinitializes a FreeRTOS+FAT disk structure. This function calls FF_DeleteIOManger.

Implements `rm_freertos_plus_fat_api_t::diskDeinit()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Module is initialized and ready to access the memory device. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Module has not been initialized. |

◆ RM_FREERTOS_PLUS_FAT_InfoGet()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_InfoGet ( rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t
*const p_disk, rm_freertos_plus_fat_info_t *const p_info )
```

Get partition information. This function can only be called after [rm_freertos_plus_fat_api_t::diskInit\(\)](#)

Implements [rm_freertos_plus_fat_api_t::infoGet\(\)](#).

Return values

| | |
|-------------------|-----------------------------------|
| FSP_SUCCESS | Information stored in p_info. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_NOT_OPEN | Module not open. |
| FSP_ERR_NOT_FOUND | The value of p_iomanager is NULL. |

◆ RM_FREERTOS_PLUS_FAT_Close()

```
fsp_err_t RM_FREERTOS_PLUS_FAT_Close ( rm_freertos_plus_fat_ctrl_t *const p_ctrl)
```

Closes media device.

Implements [rm_freertos_plus_fat_api_t::close\(\)](#).

Return values

| | |
|-------------------|---------------------------------|
| FSP_SUCCESS | Media device closed. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_NOT_OPEN | Module not open. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- [rm_block_media_api_t::close](#)

5.2.17.11 LevelX NOR Port (rm_levelx_nor_spi)

Modules » [Storage](#)

Functions

```
fsp_err_t RM_LEVELX_NOR_SPI_Open (rm_levelx_nor_spi_instance_ctrl_t *const
p_ctrl, rm_levelx_nor_spi_cfg_t const *const p_cfg)
```

Initializes LevelX NOR SPI port read/write and control. [More...](#)

`fsp_err_t` [RM_LEVELX_NOR_SPI_Read](#) (`rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG *const p_flash_addr, ULONG *const p_dest, ULONG word_count`)

LevelX NOR driver "read sector" service. [More...](#)

`fsp_err_t` [RM_LEVELX_NOR_SPI_Write](#) (`rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG *const p_flash_addr, ULONG *const p_src, ULONG word_count`)

LevelX NOR driver "write sector" service. [More...](#)

`fsp_err_t` [RM_LEVELX_NOR_SPI_BlockErase](#) (`rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG block, ULONG erase_count`)

LevelX NOR driver "block erase" service. [More...](#)

`fsp_err_t` [RM_LEVELX_NOR_SPI_BlockErasedVerify](#) (`rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG block`)

LevelX NOR driver "block erased verify" service. [More...](#)

`fsp_err_t` [RM_LEVELX_NOR_SPI_Close](#) (`rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl`)

LevelX NOR driver close service. [More...](#)

Detailed Description

Middleware for using Azure RTOS LevelX on NOR SPI memory.

Overview

This module provides the hardware port layer for LevelX on NOR SPI flash memory. Setup for this module is done solely through calling LevelX APIs. Please refer to the LevelX API reference: <https://docs.microsoft.com/en-us/azure/rtos/levelx/>

Configuration

Build Time Configurations for `rm_levelx_nor_spi`

The following build time configurations are defined in `fsp_cfg/middleware/rm_levelx_nor_spi_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | Selects if code for parameter checking is to be included in the |

build.

| | | | |
|--------------------------|---|----------|--|
| Write Verify | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | When enabled reads back data written to SPI memory in order to verify it. |
| Page Buffer Size (bytes) | Size should be greater than zero | 256 | When direct read is enabled in LevelX a situation can occur where the driver has to write to SPI memory with the source location also being within the SPI memory address range. In this situation the driver needs a buffer that is at least the same size as a page in order to temporarily store data to write out. |

Configurations for Storage > LevelX NOR Port (rm_levelx_nor_spi)

| Configuration | Options | Default | Description |
|-------------------------------------|---|----------------------|--|
| Name | Name must be a valid C symbol | g_rm_levelx_nor_spi0 | Module name. |
| Memory Start Address Offset (bytes) | Offset should be greater than or equal to zero | 0 | Enter the starting offset to use in the SPI memory. The starting address for LevelX memory will be the SPI memory base address plus this offset. |
| Memory Size (bytes) | Size should be greater than zero | 33554432 | Enter the size that the LevelX Memory should be. This can be smaller than the SPI memory size in order to use a subset of SPI memory. |
| Poll Status Count | Poll Status Count should be greater than or equal to zero | 0xFFFFFFFF | Number of times to poll for operation complete status for blocking memory operations. |

Build Time Configurations for lx

The following build time configurations are defined in fsp_cfg/azure/lx/lx_user.h:

| Configuration | Options | Default | Description |
|---------------|---------|---------|-------------|
|---------------|---------|---------|-------------|

NOR

| | | | |
|----------------------------|---|--------------------|--|
| Direct Read | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | When enabled, this option bypasses the NOR flash driver read routine in favor of reading the NOR memory directly, resulting in a significant performance increase. |
| Free Sector Data Verify | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, this causes the LevelX NOR instance open logic to verify free NOR sectors are all ones. |
| Extended Cache | <ul style="list-style-type: none"> • Enabled (default) • Disabled | Enabled (default) | Enables the extended NOR cache. |
| Extended Cache Size | Manual Entry | | If not set this value defaults to 8, which represents a maximum of 8 sectors that can be cached in a NOR instance. |
| Sector Mapping Cache Size | Value must be greater than or equal to 8 and a power of 2, or empty | | If not set this value defaults to 16 and defines the logical sector mapping cache size. Large values improve performance, but cost memory. The minimum size is 8 and all values must be a power of 2. |
| NAND | | | |
| Sector Mapping Cache Size | Value must be greater than or equal to 8 and a power of 2, or empty | | If not set this value defaults to 128 and defines the logical sector mapping cache size. Large values improve performance, but cost memory. The minimum size is 8 and all values must be a power of 2. |
| Flash Direct Mapping Cache | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, this creates a direct mapping cache, such that there are no cache misses. It also required that LX_NAND_SECTOR_MAPPING_CACHE_SIZE |

represents the exact number of total pages in your flash device.

| | | | |
|-----------------|---|--------------------|---|
| Thread Safe | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, this makes LevelX thread-safe by using a ThreadX mutex object throughout the API. |
| Standalone Mode | <ul style="list-style-type: none"> • Enabled • Disabled (default) | Disabled (default) | When enabled, allows LevelX to be used in standalone mode (without Azure RTOS). |

Usage Notes

Pending during Erase/Write

The LevelX NOR SPI driver is blocking on all SPI operations and will poll device status for operation completion on Writes and Erases. A callback can be provided by the user to wait with an OS-specific thread wait in these instances.

Closing the driver

When `lx_nor_flash_close` is called to close the LevelX instance it does not call any services within the LevelX NOR SPI driver to close out the driver instance. The user should call the generated close function (i.e. `g_rm_levelx_nor_spi0_close`) in order to close out the driver instance.

Erasing Flash Memory Prior to Usage

The area of the flash memory being used for the LevelX instance should be erased using the lower level flash API prior to usage. Otherwise, LevelX API may fail on `lx_nor_flash_open` due to any areas in flash memory that have been written/set.

Examples

Basic Example

This is a basic example of using the LevelX NOR SPI driver with the LevelX API in an application.

```
#define RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE (512)
#define RM_LEVELX_NOR_SPI_EXAMPLE_BUFFER_FILL_VALUE (0xA5)
#define RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE (4096)
extern rm_levelx_nor_spi_instance_ctrl_t g_levelx_nor_spi0_ctrl;
extern rm_levelx_nor_spi_cfg_t g_levelx_nor_spi0_cfg;
extern LX_NOR_FLASH g_lx_nor_flash0;
void rm_levelx_nor_spi_example (void)
{
```

```
uint8_t          read_buffer[RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE];
uint8_t          write_buffer[RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE];
spi_flash_instance_t * p_spi_flash_instance = (spi_flash_instance_t *)
g_levelx_nor_spi0_cfg.p_lower_lvl;
spi_flash_status_t status;

memset(write_buffer, RM_LEVELX_NOR_SPI_EXAMPLE_BUFFER_FILL_VALUE, sizeof
(write_buffer));

/* Erase flash prior to usage */
fsp_err_t err = p_spi_flash_instance->p_api->open(p_spi_flash_instance->p_ctrl,
p_spi_flash_instance->p_cfg);
assert(FSP_SUCCESS == err);

for (uint32_t i = g_levelx_nor_spi0_cfg.address_offset;
    i < g_levelx_nor_spi0_cfg.size;
    i += RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE)
{
    err = p_spi_flash_instance->p_api->erase(p_spi_flash_instance->p_ctrl,
                                           (uint8_t *)
g_levelx_nor_spi0_cfg.base_address + i,
RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE);
    assert(FSP_SUCCESS == err);
    status.write_in_progress = true;
    while (status.write_in_progress)
    {
        err =
p_spi_flash_instance->p_api->statusGet(p_spi_flash_instance->p_ctrl, &status);
        assert(FSP_SUCCESS == err);
    }
}
err = p_spi_flash_instance->p_api->close(p_spi_flash_instance->p_ctrl);
assert(FSP_SUCCESS == err);

/* Initialize LevelX */
lx_nor_flash_initialize();
UINT lx_err = lx_nor_flash_open(&g_lx_nor_flash0, "LX_NOR_SPI_EXAMPLE",
```

```
g_levelx_nor_spi0_initialize);
    handle_lx_error(lx_err);

    /* Write test value to sector 0 then read back to verify */
    lx_err = lx_nor_flash_sector_write(&g_lx_nor_flash0, 0, write_buffer);
    handle_lx_error(lx_err);
    lx_err = lx_nor_flash_sector_read(&g_lx_nor_flash0, 0, read_buffer);
    handle_lx_error(lx_err);
    assert(0 == memcmp(read_buffer, write_buffer, sizeof(read_buffer)));
}
```

Callback Wait Example

This shows how to use the LevelX NOR SPI driver callback with ThreadX in order to wait for operations to complete.

```
/* Callback called by LevelX NOR SPI driver needs to wait on operation. */
void rm_levelx_nor_spi_callback_wait_example (rm_levelx_nor_spi_callback_args_t *
p_args)
{
    if (p_args->event & RM_LEVELX_NOR_SPI_EVENT_BUSY)
    {
        /* Put the thread to sleep while waiting for operation to complete. */
        tx_thread_sleep(1);
    }
}
```

| uint32_t | minimum_erase_size | Minimum erase size of SPI memory. |
| uint8_t | page_buffer[RM_LEVELX_NOR_S PI_CFG_BUFFER_SIZE] | Page buffer for situations when writing to SPI memory from a source within SPI memory. |
| uint32_t | open | Used to determine if module is initialized. |

Enumeration Type Documentation

◆ rm_levelx_nor_spi_event_t

| | |
|---|--|
| enum rm_levelx_nor_spi_event_t | |
| Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. Options for the callback events. | |
| Enumerator | |
| RM_LEVELX_NOR_SPI_EVENT_BUSY | Pending operation, user can define their own wait functionality. |

Function Documentation

◆ **RM_LEVELX_NOR_SPI_Open()**

```
fsp_err_t RM_LEVELX_NOR_SPI_Open ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl,
rm_levelx_nor_spi_cfg_t const *const p_cfg )
```

Initializes LevelX NOR SPI port read/write and control.

Calls lower level SPI memory functions.

Parameters

| | | |
|----------|--------|--|
| [in,out] | p_ctrl | Control block for the LevelX NOR SPI instance. |
| [in,out] | p_cfg | Configuration for LevelX NOR SPI port. |

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | LevelX NOR driver is successfully opened. |
| FSP_ERR_ASSERTION | p_ctrl or p_cfg is NULL. |
| FSP_ERR_ALREADY_OPEN | Driver is already in OPEN state. |

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- spi_flash_api_t:open

◆ **RM_LEVELX_NOR_SPI_Read()**

```
fsp_err_t RM_LEVELX_NOR_SPI_Read ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG
*const p_flash_addr, ULONG *const p_dest, ULONG word_count )
```

LevelX NOR driver "read sector" service.

This is responsible for reading a specific sector in a specific block of the NOR flash. All error checking and correcting logic is the responsibility of this service.

Parameters

| | | |
|----------|--------------|---|
| [in] | p_ctrl | Control block for the LevelX NOR SPI instance. |
| [in] | p_flash_addr | Specifies the address of a logical sector within a NOR flash block of memory. |
| [in,out] | p_dest | Specifies where to place the sector contents. |
| [in] | word_count | Specifies how many 32-bit words to read. |

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | LevelX NOR flash sector read successful. |
| FSP_ERR_ASSERTION | p_ctrl, p_flash_addr or p_dest is NULL. |
| FSP_ERR_NOT_OPEN | Driver not in OPEN state for reading. |

Returns

See `Common_Error_Codes` or lower level drivers for other possible return codes.

◆ RM_LEVELX_NOR_SPI_Write()

```
fsp_err_t RM_LEVELX_NOR_SPI_Write ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl, ULONG
*const p_flash_addr, ULONG *const p_src, ULONG word_count )
```

LevelX NOR driver "write sector" service.

This is responsible for writing a specific sector into a block of the NOR flash. All error checking is the responsibility of the this service.

Parameters

| | | |
|----------|--------------|---|
| [in] | p_ctrl | Control block for the LevelX NOR SPI instance. |
| [in,out] | p_flash_addr | Specifies the address of a logical sector within a NOR flash block of memory. |
| [in] | p_src | Specifies the source of the write. |
| [in] | word_count | Specifies how many 32-bit words to write. |

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | LevelX NOR flash sector write successful. |
| FSP_ERR_ASSERTION | p_ctrl, p_flash_addr or p_src is NULL. |
| FSP_ERR_NOT_OPEN | Driver not in OPEN state for writing. |
| FSP_ERR_TIMEOUT | Timeout occurred while waiting for operation to complete. |
| FSP_ERR_WRITE_FAILED | Verification of Write operation failed. |
| FSP_ERR_INVALID_ADDRESS | Write address or size falls outside of flash memory range. |

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- [spi_flash_api_t:write](#)

◆ **RM_LEVELX_NOR_SPI_BlockErase()**

```
fsp_err_t RM_LEVELX_NOR_SPI_BlockErase ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl,
ULONG block, ULONG erase_count )
```

LevelX NOR driver "block erase" service.

This is responsible for erasing the specified block of the NOR flash.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Control block for the LevelX NOR SPI instance. |
| [in] | block | Specifies which NOR block to erase. |
| [in] | erase_count | Provided for diagnostic purposes(currently unused). |

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | LevelX NOR flash block erase successful. |
| FSP_ERR_ASSERTION | p_ctrl is NULL. |
| FSP_ERR_NOT_OPEN | Driver not in OPEN state for erasing. |
| FSP_ERR_TIMEOUT | Timeout occurred while waiting for operation to complete. |

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- spi_flash_api_t:erase

◆ **RM_LEVELX_NOR_SPI_BlockErasedVerify()**

```
fsp_err_t RM_LEVELX_NOR_SPI_BlockErasedVerify ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl,
ULONG block )
```

LevelX NOR driver "block erased verify" service.

This is responsible for verifying the specified block of the NOR flash is erased.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block for the LevelX NOR SPI instance. |
| [in] | block | Specifies which block to verify that it is erased. |

Return values

| | |
|--------------------|---|
| FSP_SUCCESS | LevelX flash block erase verification successful. |
| FSP_ERR_ASSERTION | p_ctrl or lower level driver is NULL. |
| FSP_ERR_NOT_OPEN | Driver not in OPEN state for verifying. |
| FSP_ERR_NOT_ERASED | The block is not erased properly. |

Returns

See `Common_Error_Codes` or lower level drivers for other possible return codes.

◆ **RM_LEVELX_NOR_SPI_Close()**

```
fsp_err_t RM_LEVELX_NOR_SPI_Close ( rm_levelx_nor_spi_instance_ctrl_t *const p_ctrl)
```

LevelX NOR driver close service.

This is responsible for closing the driver properly.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block for the LevelX NOR SPI instance. |
|------|--------|--|

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | LevelX flash is available and is now open for read, write, and control access. |
| FSP_ERR_ASSERTION | p_ctrl is NULL. |
| FSP_ERR_NOT_OPEN | Driver not in OPEN state for closing. |

Returns

See `Common_Error_Codes` or lower level drivers for other possible return codes. This function calls

- `spi_flash_api_t:close`

5.2.17.12 LittleFS on Flash (rm_littlefs_flash)

Modules » Storage

Functions

```
fsp_err_t RM_LITTLEFS_FLASH_Open (rm_littlefs_ctrl_t *const p_ctrl,
rm_littlefs_cfg_t const *const p_cfg)
```

```
fsp_err_t RM_LITTLEFS_FLASH_Close (rm_littlefs_ctrl_t *const p_ctrl)
```

Detailed Description

Middleware for the LittleFS File System control on RA MCUs.

Overview

This module provides the hardware port layer for the LittleFS file system. After initializing this module, refer to the LittleFS documentation to use the file system:

<https://github.com/ARMmbed/littlefs>

Configuration

Build Time Configurations for rm_littlefs_flash

The following build time configurations are defined in fsp_cfg/rm_littlefs_flash_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Storage > LittleFS on Flash (rm_littlefs_flash)

| Configuration | Options | Default | Description |
|---------------|--------------------------------|----------------|---|
| Name | Name must be a valid C symbol | g_rm_littlefs0 | Module name. |
| Read Size | Must be a non-negative integer | 1 | Minimum size of a block read. All read operations will be a multiple of this value. |
| Program Size | Must be a non-negative integer | 4 | Minimum size of a block program. All program operations will be a multiple of this value. |

| | | | |
|--------------------|--------------------------------------|---------------------------------|---|
| Block Size (bytes) | Must be a multiple of 64 | 128 | Size of an erasable block. This does not impact RAM consumption and may be larger than the physical erase size. However, non-inlined files take up at minimum one block. Must be a multiple of the read and program sizes. |
| Block Count | Manual Entry | (BSP_DATA_FLASH_SIZE_BYTES/128) | Number of erasable blocks on the device. |
| Block Cycles | Must be an integer | 1024 | Number of erase cycles before LittleFS evicts metadata logs and moves the metadata to another block. Suggested values are in the range 100-1000, with large values having better performance at the cost of less consistent wear distribution. Set to -1 to disable block-level wear-leveling. |
| Cache Size | Must be a non-negative integer | 64 | Size of block caches. Each cache buffers a portion of a block in RAM. The LittleFS needs a read cache, a program cache, and one additional cache per file. Larger caches can improve performance by storing more data and reducing the number of disk accesses. Must be a multiple of the read and program sizes, and a factor of the block size. |
| Lookahead Size | Must be a non-negative multiple of 8 | 16 | Size of the lookahead buffer in bytes. A larger lookahead buffer increases the number of blocks found during an allocation pass. The lookahead buffer is |

stored as a compact bitmap, so each byte of RAM can track 8 blocks. Must be a multiple of 8.

Common LittleFS Configuration

Build Time Configurations for LittleFS

The following build time configurations are defined in arm/littlefs/lfs_util.h:

| Configuration | Options | Default | Description |
|---------------------------------|---|----------------|--|
| Custom lfs_util.h | Manual Entry | | Add a path to your custom lfs_util.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations. |
| Thread Safe | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Enables thread safety in LittleFS. |
| Use Malloc | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Configures the use of malloc by LittleFS. |
| Use Assert | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Configures the use of assert by LittleFS. |
| Debug Messages | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Configures debug messages. |
| Warning Messages | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Configures warning messages. |
| Error Messages | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Configures error messages. |
| Trace Messages | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Configures trace messages. |
| Intrinsics | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Configures intrinsic functions such as <code>__builtin_clz</code> . |
| Instance Name for STDIO wrapper | Name must be a valid C symbol | g_rm_littlefs0 | The <code>rm_littlefs</code> instance name to use with the STDIO wrapper. |

Usage Notes

Blocking Read/Write/Erase

The LittleFS port blocks on Read/Write/Erase calls until the operation has completed.

Memory Constraints

The block size defined in the LittleFS configuration must be a multiple of the data flash erase size of the MCU. It must be greater than 104bytes which is the minimum block size of a LittleFS block. For information about data flash erase sizes refer to the "Specifications of the code flash memory and data flash memory" table of the "Flash Memory" chapter's "Overview" section.

Limitations

This module is not thread safe.

Examples

Basic Example

This is a basic example of LittleFS on Flash in an application.

```
extern const rm_littlefs_cfg_t g_rm_littlefs_flash0_cfg;
#ifdef LFS_NO_MALLOC
static uint8_t g_file_buffer[LFS_CACHE_SIZE];
static struct lfs_file_config g_file_cfg =
{
    .buffer = g_file_buffer
};
#endif
void rm_littlefs_example (void)
{
    uint8_t    buffer[30];
    lfs_file_t file;
    /* Open LittleFS Flash port.*/
    fsp_err_t err = RM_LITTLEFS_FLASH_Open(&g_rm_littlefs_flash0_ctrl,
&g_rm_littlefs_flash0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Format the filesystem. */
    int lfs_err = lfs_format(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
    /* Mount the filesystem. */
    lfs_err = lfs_mount(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
}
```

```
/* Create a breakfast directory. */
    lfs_err = lfs_mkdir(&g_rm_littlefs_flash0_lfs, "breakfast");
    handle_lfs_error(lfs_err);

/* Create a file toast in the breakfast directory. */
const char * path = "breakfast/toast";
#ifdef LFS_NO_MALLOC
/*****
*****
* By default LittleFS uses malloc to allocate buffers. This can be disabled in the
RA Configuration editor.
* Buffers will be generated from the configuration for the read, program and
lookahead buffers.
* When opening a file a unique buffer must be passed in for use as a file buffer.
* The buffer size must be equal to the cache size.
*****
*****/
    lfs_err = lfs_file_opencfg(&g_rm_littlefs_flash0_lfs,
                              &file,
                              path,
                              LFS_O_WRONLY | LFS_O_CREAT | LFS_O_APPEND,
                              &g_file_cfg);

    handle_lfs_error(lfs_err);
#else
    lfs_err = lfs_file_open(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_WRONLY |
LFS_O_CREAT | LFS_O_APPEND);
    handle_lfs_error(lfs_err);
#endif
const char * contents = "butter";
    lfs_size_t len = strlen(contents);
/* Apply butter to toast 10 times. */
for (uint32_t i = 0; i < 10; i++)
{
    lfs_err = lfs_file_write(&g_rm_littlefs_flash0_lfs, &file, contents, len);
    if (lfs_err < 0)
```

```
    {
        handle_lfs_error(lfs_err);
    }
}

/* Close the file. */
lfs_err = lfs_file_close(&g_rm_littlefs_flash0_lfs, &file);
handle_lfs_error(lfs_err);

/* Unmount the filesystem. */
lfs_err = lfs_unmount(&g_rm_littlefs_flash0_lfs);
handle_lfs_error(lfs_err);

/* Remount the filesystem. */
lfs_err = lfs_mount(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
handle_lfs_error(lfs_err);

/* Open breakfast/toast. */
#ifdef LFS_NO_MALLOC
    lfs_err = lfs_file_opencfg(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_RDONLY,
&g_file_cfg);
    handle_lfs_error(lfs_err);
#else
    lfs_err = lfs_file_open(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_RDONLY);
    handle_lfs_error(lfs_err);
#endif
    handle_lfs_error(lfs_err);

/* Verify the toast is buttered the correct amount. */
for (uint32_t i = 0; i < 10; i++)
    {
        lfs_err = lfs_file_read(&g_rm_littlefs_flash0_lfs, &file, buffer, len);
        if (lfs_err < 0)
            {
                handle_lfs_error(lfs_err);
            }
        assert(0 == memcmp(buffer, contents, len));
    }

/* Close the file. */
```

```

lfs_err = lfs_file_close(&g_rm_littlefs_flash0_lfs, &file);

handle_lfs_error(lfs_err);

}

```

Function Documentation

◆ RM_LITTLEFS_FLASH_Open()

`fsp_err_t RM_LITTLEFS_FLASH_Open (rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)`

Opens the driver and initializes lower layer driver.

Implements `rm_littlefs_api_t::open()`.

Return values

| | |
|--------------------------|-------------------------------------|
| FSP_SUCCESS | Success. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_INVALID_SIZE | The provided block size is invalid. |
| FSP_ERR_INVALID_ARGUMENT | Flash BGO mode must be disabled. |
| FSP_ERR_INTERNAL | Failed to create the semaphore. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `flash_api_t::open`

◆ RM_LITTLEFS_FLASH_Close()

`fsp_err_t RM_LITTLEFS_FLASH_Close (rm_littlefs_ctrl_t *const p_ctrl)`

Closes the lower level driver.

Implements `rm_littlefs_api_t::close()`.

Return values

| | |
|-------------------|---------------------------------|
| FSP_SUCCESS | Media device closed. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_NOT_OPEN | Module not open. |

Returns

See [Common Error Codes](#) or functions called by this function for other possible return codes. This function calls:

- `flash_api_t::close`

Detailed Description

Driver for the OSPI peripheral on RA MCUs. This module implements the [SPI Flash Interface](#).

Overview

The OSPI peripheral interfaces with an external OctaFlash and/or OctaRAM chip(s) to perform data I/O Operations. When both OctaFlash and OctaRAM devices are interfaced, they must be connected to their own chip-select lines. The devices cannot share a single chip-select line.

Features

The OSPI driver has the following key features to support the **OctaFlash** device:

- Perform data I/O Operation in both SPI and OPI modes
- Can be configured with OctaFlash device on either of the 2 channels
- Memory mapped read access to the OctaFlash
- Programming the OctaFlash device using single continuous write
- Erasing the OctaFlash device
- Sending device specific commands and reading back responses
- Entering and exiting XIP (Single Continuous Read) mode
- 3 byte addressing for SPI
- 4 byte addressing for SPI and OPI
- Auto-calibration for OPI mode (SOPI and DOPI)

The OSPI driver has the following key features to support the **OctaRAM** device:

- Perform data I/O Operation in DOPI mode
- Can be configured with OctaRAM device on either of the 2 channels
- Memory mapped read and write access to the OctaRAM using single continuous mode
- Sending device specific commands and reading back responses
- Auto-calibration for DOPI mode
- Uninitialized global variables or buffers can be allocated in the OSPI RAM address space.

Additional build-time features:

- Optional (build-time) DMAC support for data transmission when used with OctaFlash.

Note

For OctaFlash, use of DMAC for data transmission is strongly recommended. Without the use of DMAC, due to the high-speed hardware design of the OSPI peripheral, data transmission can be sensitive to timing variance, which could cause software-based memory-mapped operations to fail unexpectedly.

Configuration

OSPI Flash:

Build Time Configurations for r_ospi

The following build time configurations are defined in driver/r_ospi_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| DMAC Support | <ul style="list-style-type: none"> • Enable • Disable | Disable | Enable DMAC support for the OSPI module. |

Configurations for Storage > OSPI Flash (r_ospi)

This module can be added to the Stacks tab via New Stack > Storage > OSPI Flash (r_ospi).

| Configuration | Options | Default | Description |
|----------------------------------|---|------------|---|
| General | | | |
| General > Single Continuous Mode | | | |
| Read Idle Time | Must be an integer greater than 0 with maximum configurable value of 127 | 100 | Specify the read idle time. |
| Write Idle Time | Must be an integer greater than 0 with maximum configurable value of 127 | 100 | Specify the write idle time. |
| Name | Name must be a valid C symbol | g_ospi0 | Module name. |
| Channel | Channel should be 0 or 1 | 0 | Specify the OSPI chip select line to use. |
| Flash Size | Must be an integer greater than 0 with maximum configurable value of 0x3FFFFFFF | 0x04000000 | Specify the OctaFlash size in bytes. |
| SPI Protocol | <ul style="list-style-type: none"> SPI Single data rate OPI Dual data rate OPI | SPI | Select the initial SPI protocol. SPI protocol can be changed on the OctaFlash using R_OSPI_DirectTransfer() . |

| Pull-down Timing | <ul style="list-style-type: none"> • 3 SPI/SOPI, 2.5 DOPI • 4 SPI/SOPI, 3.5 DOPI • 5 SPI/SOPI, 4.5 DOPI | 3 SPI/SOPI, 2.5 DOPI | Signal pull-down timing setting in OCTACLK units |

Note

The user is expected to modify the command definitions based on the OctaFlash chip and SPI communication mode. The default mode is SPI mode and default erase commands are set for OPI mode based on Macronix OctaFlash MX25LM51245G.

OSPI RAM:**Build Time Configurations for r_ospi**

The following build time configurations are defined in driver/r_ospi_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| DMAC Support | <ul style="list-style-type: none"> • Enable • Disable | Disable | Enable DMAC support for the OSPI module. |

Configurations for Storage > OSPI RAM (r_ospi)

This module can be added to the Stacks tab via New Stack > Storage > OSPI RAM (r_ospi).

| Configuration | Options | Default | Description |
|----------------------------------|---|---------|-----------------------------|
| General | | | |
| General > Single Continuous Mode | | | |
| Read Idle Time | Must be an integer greater than 0 with maximum configurable | 127 | Specify the read idle time. |

| | | | |
|--------------------------|--|--------------------|---|
| | value of 127 | | |
| Write Idle Time | Must be an integer greater than 0 with maximum configurable value of 127 | 127 | Specify the write idle time. |
| Name | Name must be a valid C symbol | g_ospi_ram0 | Module name. |
| Channel | Channel should be 0 or 1 [Channel 0 recommended] | 0 | Specify the OSPI chip select line to use. |
| RAM Size | Must be an integer greater than 0 with maximum configurable value of 0x00800000 | 0x00800000 | Specify the OctaRam size in bytes. |
| SPI Protocol | Dual data rate OPI | Dual data rate OPI | Select the initial SPI protocol. OctaRAM only supports DOPI mode. |
| Address Bytes | 4 | 4 | Select the number of address bytes. OctaRAM only supports 4 byte addresses in DOPI mode. |
| Auto-Calibration | | | |
| Data latching delay | Must be a valid non-negative integer with maximum configurable value of 0xFF | 0x80 | Set this to 0 to enable auto-calibration. 0x80 is the default value calculated at 3.3V and 25°C |
| Auto-Calibration Address | Must be a valid non-negative integer with maximum configurable value of 0xFFFFFFFF | 0x00 | Set the address of the read/write destination to be performed for auto-calibration. |
| Command Definitions | | | |
| Memory Read Command | Must be a 16-bit OSPI Dual Read Command under Command Definitions | 0xA000 | The command to read in DOPI mode. |
| Memory Write Command | Must be a 16-bit OSPI Write Command under Command Definitions | 0x2000 | The command to write in DOPI mode. |
| OM_DQS Enable Counter | | | |
| DOPI | Must be an integer between 0 and 255 | 3 | OM_DQS enable counter for memory access. Setting for DOPI mode. |

Chip Select Timing Setting

| | | | |
|--------------------------------------|--|----------|---|

| Pull-down Timing | <ul style="list-style-type: none"> • 2.5 DOPI | 2.5 DOPI | Signal pull-down timing |

| | | | |
|-----------------------------------|--|----------------------------|--------------------------------------|
| | <ul style="list-style-type: none"> • 3.5 DOPI • 4.5 DOPI | | setting in OCTACLK units |
| Command Length Bytes | Must be an integer between 1 and 2 | 2 | Command length in bytes |
| Memory Read Dummy Cycles | Must be an integer between 3 and 8 | 4 | Memory read dummy cycles |
| Memory Write Dummy Cycles | Must be an integer between 3 and 8 | 4 | Memory write dummy cycles |
| DOPI Byte Order | <ul style="list-style-type: none"> • Byte0, Byte1, Byte2, Byte3 • Byte1, Byte0, Byte3, Byte2 | Byte1, Byte0, Byte3, Byte2 | Byte order on the external bus |
| Chip Select Maximum Low Time (us) | Must be an integer between 0 to 511 | 4 | Chip Select Maximum Low Time (tCSM). |

Clock Configuration

PCLKB is the Octal-SPI bus interface, and PCLKA is used to set OSPI registers.

The signals to the OSPI device are derived from OCTASPICLK. The OMSCLK signal is OCTASPICLK / 2. Data can be output at the OCTASPICLK rate if SPI Protocol is set to Dual Data Rate OPI.

The PCLKB, PCLKA, and OCTASPICLK frequencies can be set on the **Clocks** tab of the RA Configuration editor.

Pin Configuration

The following pins are available to connect to an external OSPI device:

- OMSCLK: OSPI clock output (OCTASPICLK / 2)
- OMDQS: OSPI data strobe signal
- OMCS0: OSPI device 0 select
- OMCS1: OSPI device 1 select
- OMSIO0: Data 0 I/O
- OMSIO1: Data 1 I/O
- OMSIO2: Data 2 I/O
- OMSIO3: Data 3 I/O
- OMSIO4: Data 4 I/O
- OMSIO5: Data 5 I/O
- OMSIO6: Data 6 I/O
- OMSIO7: Data 7 I/O

Note

*Data pins must be configured with IOPORT_CFG_DRIVE_HS_HIGH.
Chip Select pins should be configured with at least IOPORT_CFG_DRIVE_MEDIUM.*

Usage Notes

Usage Notes for OctaFlash support

Enabling DMAC

DMAC data transmission support is configurable for OSPI Flash and is disabled from the build by default. Use of a high-priority (low channel number) DMAC for data transmission is strongly recommended.

For further details on DMAC please refer [Transfer \(r_dmac\)](#).

OSPI Memory Mapped Access

After [R_OSPI_Open\(\)](#) completes successfully, the OctaFlash device contents are mapped to address 0x68000000 (channel 0) or 0x70000000 (channel 1) based on the channel configured and can be read like on-chip flash. Channel 0 supports 128 MB while Channel 1 supports 256 MB of address space.

Auto-calibration

Auto-calibration procedure is triggered automatically when the 'Data latching delay' field in the configurator properties is set to 0. The user application is responsible for setting the appropriate preamble pattern before calling [R_OSPI_Open\(\)](#) with SOPI/DOPI mode or changing the SPI protocol to SOPI/DOPI using [R_OSPI_SpiProtocolSet\(\)](#) API. The appropriate preamble pattern can be written to the desired address using the [R_OSPI_Write\(\)](#) API while in the SPI mode (recommended). Ensure that the same address is passed through the configurator. If the OctaFlash chip is already in SOPI/DOPI mode, the preamble pattern must be programmed using the debugger before calling [R_OSPI_Open\(\)](#).

Chip Select Latencies

Chip select latencies can be set through the configurator. The default settings support SOPI and SPI at minimum latency. In case the driver is opened in SPI mode and will be switched to DOPI mode later using [R_OSPI_SpiProtocolSet\(\)](#), please select latencies required for DOPI before calling [R_OSPI_Open\(\)](#).

OctaFlash Commands

- Set the erase commands based on intended mode of operation (SPI or OPI). These commands cannot be changed during run-time.
- Read, Write and Status commands for both SPI and OPI are configured allowing switching between the modes at run-time.

Usage Notes for OctaRAM support

OSPI Memory Mapped Access

After [R_OSPI_Open\(\)](#) completes successfully, the OctaRAM device contents are mapped to address 0x68000000 (channel 0) or 0x70000000 (channel 1) based on the channel configured and can be written to or read from like on-chip RAM. Channel 0 and 1 support 8 MB of address space.

Auto-calibration

Since the OctaRAM only supports DOPI mode, the driver allows the user to call [R_OSPI_Open\(\)](#) without performing the auto-calibration procedure automatically when 'Data latching delay' field is set to 0 in the configurator properties. This is done so that the user can write the appropriate preamble pattern to the desired address using memory mapped writes while in DOPI mode. Ensure that the same address is passed through the configurator. [R_OSPI_AutoCalibrate\(\)](#) should be then called to perform auto-calibration.

Chip Select Latencies

Chip select latencies can be set through the configurator. The default settings support DOPI at minimum latency.

Limitations

Developers should be aware of the following limitations when using the OSPI driver:

OctaFlash

- Single continuous read in SPI mode is not supported by the peripheral. The maximum amount of data that can be read using a single read command is 4-bytes (When doing a 32-bit access).
- Fast Reads would be slower than regular reads as the SPI mode cannot be operated with an OM_SCLK greater than 50MHz.

Examples

OSPI Flash:

Basic Example

This is a basic example of minimal use of the OSPI in an application with OctaFlash.

```
#define OSPI_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[OSPI_EXAMPLE_DATA_LENGTH];
/* Place data in the .ospi_flash section to flash it during programming. */
const uint8_t g_src[OSPI_EXAMPLE_DATA_LENGTH] BSP_PLACE_IN_SECTION(".ospi_flash") =
"ABCDEFGHIJKLMNOPQRSTUVWXYZ";
/* Place code in the .code_in_ospi section to flash it during programming. */
void r_ospi_example_function(void) BSP_PLACE_IN_SECTION(".code_in_ospi")
__attribute__((noinline));
void r_ospi_example_function (void)
{
    /* Add code here. */
}
void r_ospi_basic_example (void)
{
    /* Open the OSPI instancee */
    fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
    /* (Optional) Change SPI to DOPI mode */
    r_ospi_example_spi_to_dopi();
    /* After R_OSPI_Open() and any required device specific initialization, data can be
```

```
read directly from the OSPI flash. */
    memcpy(&g_dest[0], &g_src[0], OSPI_EXAMPLE_DATA_LENGTH);
/* After R_OSPI_Open() and any required device specific initialization, functions in
the OSPI flash can be called. */
    r_ospi_example_function();
}
```

Reading Status Register Example (R_OSPI_DirectTransfer)

This is an example of using R_OSPI_DirectWrite followed by R_OSPI_DirectRead to send the read status register command and read back the status register from the device.

```
#define OSPI_COMMAND_READ_STATUS_REGISTER (0x05U)
void r_ospi_direct_example (void)
{
    spi_flash_direct_transfer_t ospi_test_direct_transfer =
    {
        .command      = OSPI_TEST_READ_STATUS_COMMAND_SPI_MODE,
        .address      = 0U,
        .data         = 0U,
        .command_length = 1U,
        .address_length = 0U,
        .data_length  = 0U,
        .dummy_cycles = 0U
    };
/* Open the OSPI instance. */
    fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
/* Write Enable */
    err = R_OSPI_DirectTransfer(&g_ospi0_ctrl, &ospi_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);
    assert(FSP_SUCCESS == err);
/* Read Status Register */
    ospi_test_direct_transfer.command = OSPI_TEST_READ_STATUS_COMMAND_SPI_MODE;
    ospi_test_direct_transfer.data_length = 1U;
```

```

    err = R_OSPI_DirectTransfer(&g_ospi0_ctrl, &ospi_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_READ);

    assert(FSP_SUCCESS == err);

    /* Check if Write Enable is set */
    if (OSPI_WEN_BIT_MASK != (ospi_test_direct_transfer.data & OSPI_WEN_BIT_MASK))
    {
        __BKPT(0);
    }
}

```

Auto-calibration Example (R_OSPI_DirectTransfer, R_OSPI_Write, R_OSPI_SpiProtocolSet)

This is an example of using R_OSPI_SpiProtocolSet to change the operating mode from SPI to SOPI and allow the driver to initiate auto-calibration.

```

#define OSPI_DOPI_PREAMBLE_PATTERN_LENGTH_BYTES (16U)
#define OSPI_EXAMPLE_PREAMBLE_ADDRESS (0x68000000U) /* Device connected to CS0 */
const uint8_t g_preamble_bytes[OSPI_DOPI_PREAMBLE_PATTERN_LENGTH_BYTES] =
{
    0x00, 0x00, 0xFF, 0xFF, 0xFF, 0x00, 0x08, 0x00, 0x00, 0xF7, 0xFF, 0x00, 0x08,
    0xF7, 0x00, 0xF7
};

void ospi_example_wait_until_wip (void)
{
    fsp_err_t      err = FSP_SUCCESS;
    spi_flash_status_t status;

    status.write_in_progress = true;
    uint32_t timeout = UINT32_MAX;

    while ((status.write_in_progress) && (--timeout))
    {
        err = R_OSPI_StatusGet(&g_ospi0_ctrl, &status);
        assert(FSP_SUCCESS == err);
    }

    if (0 == timeout)
    {

```

```
    assert(FSP_SUCCESS == err);
}
}
void r_ospi_auto_calibrate_example (void)
{
    /* Open the OSPI instance. */
    /* Set data_latch_delay_clocks to 0x0 to enable auto-calibration */
    fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
    uint8_t * preamble_pattern_addr = (uint8_t *) OSPI_EXAMPLE_PREAMBLE_ADDRESS;
    err = R_OSPI_Write(&g_ospi0_ctrl, g_preamble_bytes, preamble_pattern_addr,
OSPI_EXAMPLE_PREAMBLE_ADDRESS);
    assert(FSP_SUCCESS == err);
    /* Wait until write has been completed */
    ospi_example_wait_until_wip();
    /* Change from SPI to DOPI mode */
    r_ospi_example_spi_to_dopi();
}
```

Octack Update Example (R_OSPI_SpiProtocolSet)

This is an example of using R_BSP_OctackUpdate to change the Octal-SPI clock frequency during run time. The OCTACK frequency must be updated before calling the R_OSPI_SpiProtocolSet with appropriate clock source and divider settings required to be set for the new SPI protocol mode. Ensure that the clock source selected is started.

```
static void ospi_example_change_omclk (void)
{
    /* Ensure clock source (PLL2 in this example) is running before changing the OCTACK
frequency */
    bsp_octack_settings_t octack_settings;
    octack_settings.source_clock = BSP_CLOCKS_CLOCK_PLL2;
    octack_settings.divider      = BSP_CLOCKS_OCTACK_DIV_2;
    R_BSP_OctackUpdate(&octack_settings);
}
```

OSPI Data and IAR

When using the IAR compiler, OSPI data must be const qualified to be downloaded by the debugger.

OSPI RAM:

Basic Example

This is a basic example of minimal use of the OSPI in an application with OctaRAM.

```
#define OSPI_RAM_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[OSPI_RAM_EXAMPLE_DATA_LENGTH];
/* Place uninitialized data buffers in the ospi_device_0_no_load section.
 * Use ospi_device_1_no_load section if the OctaRAM is configured on channel 1.
 */
uint8_t g_src_1[OSPI_RAM_EXAMPLE_DATA_LENGTH]
BSP_PLACE_IN_SECTION(".ospi_device_0_no_load");
uint8_t g_src_2[OSPI_RAM_EXAMPLE_DATA_LENGTH]
BSP_PLACE_IN_SECTION(".ospi_device_0_no_load");
void r_ospi_ram_basic_example (void)
{
    /* Open the OSPI instancee.
     * Ensure valid setting of the 'Data latching delay' field in the configurator.
     * To successfully perform OSPI RAM reads this value must not be 0.
     */
    fsp_err_t err = R_OSPI_Open(&g_ospi_ram0_ctrl, &g_ospi_ram0_cfg);
    assert(FSP_SUCCESS == err);
    /* After R_OSPI_Open() and any required device specific intiialization, data can be
read from or written to directly from the OSPI RAM. */
    memcpy(&g_dest[0], &g_src_1[0], OSPI_RAM_EXAMPLE_DATA_LENGTH);
    memcpy(&g_src_2[0], &g_src_1[0], OSPI_RAM_EXAMPLE_DATA_LENGTH);
}
```

Auto-calibration Example (R_OSPI_DirectTransfer, R_OSPI_AutoCalibrate)

This is an example of using R_OSPI_AutoCalibrate to calibrate OSPI peripheral to read data from the OctaRAM device.

```
#define OSPI_RAM_EXAMPLE_PREAMBLE_ADDRESS (0x68000000U) /* Device connected to CS0 */
```

```
#define OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENCY_COUNTER_MASK (0x00F0U)
#define OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENCY_COUNTER_POS (4U)
#define OSPI_RAM_EXAMPLE_OCTARAM_100MHZ_4CLOCKS_CR_SETTING (1U)

void r_ospi_ram_auto_calibrate_example (void)
{
    /* Open the OSPI instancee */
    fsp_err_t err = R_OSPI_Open(&g_ospi_ram0_ctrl, &g_ospi_ram0_cfg);
    assert(FSP_SUCCESS == err);

    /* OctaRAM Configuration Register (cr) read and write command definition */
    spi_flash_direct_transfer_t read_cr =
    {
        .command      = 0xC000U,    // NOLINT(readability-magic-numbers)
        .address      = 0x00040000U, // NOLINT(readability-magic-numbers)
        .data         = 0U,

Function Documentation

◆ **R_OSPI_Open()**

```
fsp_err_t R_OSPI_Open ( spi_flash_ctrl_t *const p_ctrl, spi_flash_cfg_t const *const p_cfg )
```

Open the OSPI driver module. After the driver is open, the OSPI can be accessed like internal flash memory.

Implements `spi_flash_api_t::open`.

Example:

```
/* Open the OSPI instancee */
fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Configuration was successful. |
| FSP_ERR_ASSERTION | The parameter <code>p_ctrl</code> or <code>p_cfg</code> is NULL. |
| FSP_ERR_ALREADY_OPEN | Driver has already been opened with the same <code>p_ctrl</code> . |
| FSP_ERR_CALIBRATE_FAILED | Failed to perform auto-calibrate. |
| FSP_ERR_INVALID_ARGUMENT | Attempting to open the driver with an invalid SPI protocol for OctaRAM. |

◆ **R_OSPI_DirectWrite()**

```
fsp_err_t R_OSPI_DirectWrite ( spi_flash_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write )
```

Writes raw data directly to the OctaFlash. API not supported. Use `R_OSPI_DirectTransfer`

Implements `spi_flash_api_t::directWrite`.

Return values

| | |
|---------------------|----------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by OSPI. |
|---------------------|----------------------------|

◆ **R_OSPI_DirectRead()**

```
fsp_err_t R_OSPI_DirectRead ( spi_flash_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes )
```

Reads raw data directly from the OctaFlash. API not supported. Use `R_OSPI_DirectTransfer`.

Implements `spi_flash_api_t::directRead`.

Return values

| | |
|---------------------|----------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by OSPI. |
|---------------------|----------------------------|

◆ **R_OSPI_DirectTransfer()**

```
fsp_err_t R_OSPI_DirectTransfer ( spi_flash_ctrl_t *const p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction )
```

Read/Write raw data directly with the OctaFlash/OctaRAM device.

Implements `spi_flash_api_t::directTransfer`.

Example:

```
/* Write Enable */
err = R_OSPI_DirectTransfer(&g_ospi0_ctrl, &ospi_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_OSPI_XipEnter()**

```
fsp_err_t R_OSPI_XipEnter ( spi_flash_ctrl_t *const p_ctrl)
```

Enters Single Continuous Read/Write mode.

Implements `spi_flash_api_t::xipEnter`.

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_UNSUPPORTED | API not supported by OSPI - OctaRAM. |

◆ **R_OSPI_XipExit()**

```
fsp_err_t R_OSPI_XipExit ( spi_flash_ctrl_t *const p_ctrl)
```

Exits XIP (execute in place) mode.

Implements `spi_flash_api_t::xipExit`.

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_UNSUPPORTED | API not supported by OSPI - OctaRAM. |

◆ **R_OSPI_Write()**

```
fsp_err_t R_OSPI_Write ( spi_flash_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count )
```

Program a page of data to the flash.

Implements `spi_flash_api_t::write`.

Example:

```
err = R_OSPI_Write(&g_ospi0_ctrl, g_preamble_bytes, preamble_pattern_addr,
OSPI_EXAMPLE_PREAMBLE_ADDRESS);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> , <code>p_dest</code> or <code>p_src</code> is NULL, or <code>byte_count</code> crosses a page boundary. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_DEVICE_BUSY | Another Write/Erase transaction is in progress. |
| FSP_ERR_INVALID_SIZE | Write operation crosses page-boundary. |
| FSP_ERR_UNSUPPORTED | API not supported by OSPI - OctaRAM. |
| FSP_ERR_WRITE_FAILED | The write enable bit was not set. |

◆ **R_OSPI_Erase()**

```
fsp_err_t R_OSPI_Erase ( spi_flash_ctrl_t *const p_ctrl, uint8_t *const p_device_address, uint32_t
byte_count )
```

Erase a block or sector of flash. The `byte_count` must exactly match one of the erase sizes defined in `spi_flash_cfg_t`. For chip erase, `byte_count` must be `SPI_FLASH_ERASE_SIZE_CHIP_ERASE`.

Implements `spi_flash_api_t::erase`.

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | The command to erase the flash was executed successfully. |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> or <code>p_device_address</code> is NULL, <code>byte_count</code> doesn't match an erase size defined in <code>spi_flash_cfg_t</code> , or <code>byte_count</code> is set to 0. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_DEVICE_BUSY | The device is busy. |
| FSP_ERR_UNSUPPORTED | API not supported by OSPI - OctaRAM. |
| FSP_ERR_WRITE_FAILED | The write enable bit was not set. |

◆ **R_OSPI_StatusGet()**

```
fsp_err_t R_OSPI_StatusGet ( spi_flash_ctrl_t *const p_ctrl, spi_flash_status_t *const p_status )
```

Gets the write or erase status of the flash.

Implements `spi_flash_api_t::statusGet`.

Example:

```
err = R_OSPI_StatusGet(&g_ospi0_ctrl, &status);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | The write status is in <code>p_status</code> . |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> or <code>p_status</code> is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_UNSUPPORTED | API not supported by OSPI - OctaRAM. |

◆ **R_OSPI_BankSet()**

```
fsp_err_t R_OSPI_BankSet ( spi_flash_ctrl_t *const p_ctrl, uint32_t bank )
```

Selects the bank to access.

Implements `spi_flash_api_t::bankSet`.

Return values

| | |
|---------------------|----------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by OSPI. |
|---------------------|----------------------------|

◆ **R_OSPI_SpiProtocolSet()**

```
fsp_err_t R_OSPI_SpiProtocolSet ( spi_flash_ctrl_t *const p_ctrl, spi_flash_protocol_t spi_protocol )
```

Sets the SPI protocol.

Implements `spi_flash_api_t::spiProtocolSet`.

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | SPI protocol updated on MCU peripheral. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_CALIBRATE_FAILED | Failed to perform auto-calibrate. |
| FSP_ERR_INVALID_ARGUMENT | Attempting to set an invalid SPI protocol for OctaRAM. |

◆ **R_OSPI_AutoCalibrate()**

```
fsp_err_t R_OSPI_AutoCalibrate ( spi_flash_ctrl_t *const p_ctrl)
```

Auto-calibrate the OctaRAM device using the preamble pattern.

Note

The preamble pattern must be written to the configured address before calling this API. Implements `spi_flash_api_t::autoCalibrate`.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | SPI protocol updated on MCU peripheral. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_CALIBRATE_FAILED | Failed to perform auto-calibrate. |
| FSP_ERR_UNSUPPORTED | API not supported by OSPI - OctaFlash. |

◆ **R_OSPI_Close()**

```
fsp_err_t R_OSPI_Close ( spi_flash_ctrl_t *const p_ctrl)
```

Close the OSPI driver module.

Implements `spi_flash_api_t::close`.

Return values

| | |
|-------------------|-------------------------------|
| FSP_SUCCESS | Configuration was successful. |
| FSP_ERR_ASSERTION | p_instance_ctrl is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

```

Detailed Description

Driver for the OSPI_B peripheral on RA MCUs. This module implements the [SPI Flash Interface](#).

Overview

The OSPI_B peripheral supports xSPI (or OSPI) compatible external memory devices, and it interfaces with these devices to perform data I/O Operations. The OSPI_B peripheral does not support addressable devices, so all connected memory devices must be connected to an individual chip-select pin. Please note that this document will reference the xSPI protocol to which OSPI is a subset. The OSPI_B peripheral is compatible with a variety of xSPI protocol operating modes.

Features

The OSPI_B driver has the following key features to support the **xSPI** device:

- Perform data I/O Operation in both SPI and DOPI modes
- Direct memory-mapped access to the xSPI device memory up to 256 MB.
- Can be configured with xSPI devices on either of the 2 channels
- Programming the xSPI device using combination write (up to 64 bytes)
- Erasing the xSPI device
- Sending device specific commands and reading back responses of up to 8 bytes
- 3 byte addressing for SPI
- 4 byte addressing for SPI and DOPI
- Auto-calibration for DOPI mode
- Decryption-on-the-fly

Additional build-time features:

- Optional (build-time) DMAC support for data transmission when used with OSPI_B.
- Optional (build-time) XiP support for entering/exiting XiP mode of the target device.
- Optional (build-time) Data-strobe (DS) auto-calibration support for target devices using the DS signal.
- Optional (build-time) Decryption on the fly (DOTF)

Note

For OSPI_B, use of DMAC for data transmission is strongly recommended. Without the use of DMAC, due to the high-speed hardware design of the OSPI peripheral, data transmission can be sensitive to timing variance, which could cause software-based memory-mapped operations to fail unexpectedly.

Configuration

OSPI_B Flash:

Build Time Configurations for r_ospi_b

The following build time configurations are defined in fsp_cfg/r_ospi_b_cfg.h:

| Configuration | Options | Default | Description |
|-------------------------|--|---------------|---|
| Memory-mapping Support | | | |
| Prefetch Function | <ul style="list-style-type: none"> Enable Disable | Enable | Enable prefetch function on memory-mapped reads. |
| Combination Function | Refer to the RA Configuration tool for available options. | 64 Byte | Enable combination function on memory-mapped writes. |
| XiP Support | <ul style="list-style-type: none"> Enable Disable | Disable | Enable the use of XiP enter and exit codes. |
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| DMAC Support | <ul style="list-style-type: none"> Enable Disable | Disable | Enable DMAC support for the OSPI module. |
| Autocalibration Support | <ul style="list-style-type: none"> Enable Disable | Disable | Enable DS autocalibration for dual-data-rate modes. |
| DOTF Support | <ul style="list-style-type: none"> Enable Disable | Disable | Enable DOTF support for the OSPI module. |

Configurations for Storage > OSPI Flash (r_ospi_b)

This module can be added to the Stacks tab via New Stack > Storage > OSPI Flash (r_ospi_b).

| Configuration | Options | Default | Description |
|-----------------------|--|----------------|--|
| General | | | |
| Name | Name must be a valid C symbol | g_ospi0 | Module name. |
| Channel | Channel should be 0 or 1 | 0 | Specify the OSPI chip select line to use. |
| Initial Protocol Mode | <ul style="list-style-type: none"> SPI (1S-1S-1S) DSPI (1S-2S-2S) DSPI (2S-2S-2S) QSPI (1S-4S-4S) QSPI (4S-4S-4S) QSPI (4S-4D-4D) Dual data rate OPI (8D-8D-8D) | SPI (1S-1S-1S) | Select the initial protocol mode of the xSPI target device. Please see the documentation for examples of changing the protocol mode. |
| Initial Address Bytes | <ul style="list-style-type: none"> 3 4 | 4 | Select the number of address bytes. |

| | | | |
|--------------------------|--|--------|---|
| Write Status Bit | Must be an integer between 0 and 7 | 0 | Which bit contains the write in progress status returned from the Write Status Command. |
| Write Enable Bit | Must be an integer between 0 and 7 | 1 | Which bit contains the write enable status returned from the Write Enable Command. |
| Sector Erase Size | Must be an integer greater than or equal to 0 | 4096 | The sector erase size. Set Sector Erase Size to 0 if Sector Erase is not supported. |
| Block Erase Size | Must be an integer greater than or equal to 0 | 262144 | The block erase size. Set Block Erase Size to 0 if Block Erase is not supported. |
| Command Set Table | Must be a valid C symbol | | Specify the custom command set table (ospi_b_xspi_command_set_t[]) to use. If provided, all properties for High-speed Mode will be ignored. |
| Command Set Table Length | Length must be an integer greater than or equal to zero. | 0 | Length of the custom command set table. |

Defaults

Defaults > Command Definitions

| | | | |
|----------------------|---|------|---|
| Page Program Command | Must be a 8-bit OSPI Page Program Command under SPI Mode Command Definitions | 0x12 | Default command to program a page. |
| Read Command | Must be a 8-bit OSPI Read Command under SPI Mode Command Definitions | 0x13 | Default command to read. |
| Write Enable Command | Must be a 16-bit OSPI Write Enable Command under SPI Mode Command Definitions | 0x06 | Default command to enable write. |
| Status Command | Must be a 16-bit OSPI Status Command under SPI Mode Command | 0x05 | Default command to query the status of a write or erase |

Definitions

command.

Defaults > Erase Command Definitions

| | | | |
|----------------------|--|--------|--|
| Sector Erase Command | Must be an integer between 0x01 and 0xFFFF, inclusive. | 0x2121 | Default command to erase a sector. The lower byte will be used for 1-byte commands. Set to 0 if unused. |
| Block Erase Command | Must be an integer between 0x01 and 0xFFFF, inclusive. | 0xDCDC | Default command to erase a block. The lower byte will be used for 1-byte commands. Set to 0 if unused. |
| Chip Erase Command | Must be an integer between 0x01 and 0xFFFF, inclusive. | 0x6060 | Default command to erase the entire chip. The lower byte will be used for 1-byte commands. Set to 0 if unused. |

Defaults > Dummy Cycles

| | | | |
|--------------------------|-------------------------------------|---|----------------------------------|
| Memory Read Dummy Cycles | Must be an integer between 0 and 31 | 0 | Default memory read dummy cycles |
| Status Read Dummy Cycles | Must be an integer between 0 and 31 | 0 | Default status read dummy cycles |

High-speed Mode

High-speed Mode > Auto-Calibration

| | | | |
|--------------------------|--|------|---|
| Data latching delay | Must be a valid non-negative integer with maximum configurable value of 0x1F | 0x08 | If auto-calibration support is enabled, set this to 0 to trigger auto-calibration when appropriate. |
| Auto-Calibration Address | Must be a valid non-negative integer with maximum configurable value of 0xFFFFFFFF | 0x00 | Set the address of the read/write destination to be performed for auto-calibration. |

High-speed Mode > Command Definitions

| | | | |
|----------------------|--|--------|---|
| Page Program Command | Must be a 16-bit OSPI Page Program Command under High-speed Mode Command Definitions | 0x1212 | The command to program a page in OPI mode. |
| Dual Read Command | Must be a 16-bit OSPI Dual Read Command under High-speed Mode Command | 0xEEEE | The command to read in High-speed mode (8DTRD). |

Definitions

| | | | |
|----------------------------|--|-------------------------------|--|
| Write Enable Command | Must be a 16-bit OSPI Write Enable Command under High-speed Mode Command Definitions | 0x0606 | The command to enable write in OPI mode. Set to 0 to ignore. |
| Status Command | Must be a 16-bit OSPI Status Command under High-speed Mode Command Definitions | 0x0505 | The command to query the status of a write or erase command in OPI mode. Set to 0 to ignore. |
| Sector Erase Command | Must be an integer between 0x01 and 0xFFFF, inclusive. | 0 | The command to erase a sector for high-speed mode. Set to 0 if unused. |
| Block Erase Command | Must be an integer between 0x01 and 0xFFFF, inclusive. | 0 | The command to erase a block for high-speed mode. Set to 0 if unused. |
| Chip Erase Command | Must be an integer between 0x01 and 0xFFFF, inclusive. | 0 | The command to erase the entire chip for high-speed mode. Set to 0 if unused. |

| Decryption end address | Value must be an integer between 0x80000000 and 0x9FFFFFFF | 0x90001FFF | OSPI decryption end address |

Note

The user is expected to modify the command definitions based on the xSPI chip and SPI communication mode. The default mode is SPI mode and default erase commands are set for DOPI mode based on Infineon S28HS256.

Clock Configuration

PCLKB is the Octal-SPI bus interface, and PCLKA is used to set OSPI registers.

The signals to the xSPI target device are derived from OCTASPICLK. The OMSCLK signal is OCTASPICLK / 2. Data can be output at the OCTASPICLK rate if protocol mode is set to a Dual Data Rate mode (8D-8D-8D or 4S-4D-4D).

The PCLKB, PCLKA, and OCTASPICLK frequencies can be set on the **Clocks** tab of the RA Configuration editor.

Pin Configuration

The following pins are available to connect to an external OSPI device:

- OMSCLK: OSPI clock output (OCTASPICLK / 2)
- OMDQS: OSPI data strobe signal
- OMCS0: OSPI device 0 select
- OMCS1: OSPI device 1 select

- OMSIO0: Data 0 I/O
- OMSIO1: Data 1 I/O
- OMSIO2: Data 2 I/O
- OMSIO3: Data 3 I/O
- OMSIO4: Data 4 I/O
- OMSIO5: Data 5 I/O
- OMSIO6: Data 6 I/O
- OMSIO7: Data 7 I/O

Note

Data pins must be configured with IOPORT_CFG_DRIVE_HS_HIGH.

Chip Select pins should be configured with at least IOPORT_CFG_DRIVE_MEDIUM.

Usage Notes

Usage Notes for xSPI support

After [R_OSPI_B_Open\(\)](#) completes successfully, the xSPI device contents are mapped to address 0x80000000 (bank CS0) or 0x90000000 (bank CS1) and can be read like on-chip flash. Bank CS0 is only accessible from OSPI_B channel/slave 0 and likewise, bank CS1 is only accessible from OSPI_B channel/slave 1. Bank CS0 and CS1 support up to 256 MB of address space each.

Auto-calibration

If support is enabled, auto-calibration procedures are triggered automatically when the 'Data latching delay' field in the configurator properties is set to 0. The user application is responsible for setting the appropriate preamble pattern before calling [R_OSPI_B_Open\(\)](#) when using a data strobe (DS) mode or changing the SPI protocol to a DS mode using the [R_OSPI_B_SpiProtocolSet\(\)](#) API. The appropriate preamble pattern can be written to the desired address using the [R_OSPI_B_Write\(\)](#) API while in simple SPI mode (recommended), or a non-DS mode. Ensure that the same address is passed through the configurator. If the xSPI device is already in a DS mode, the preamble pattern must be programmed using the debugger before calling [R_OSPI_B_Open\(\)](#).

The preamble pattern is expected to be { 0x00, 0x00, 0xFF, 0xFF, 0xFF, 0x00, 0x08, 0x00, 0x00, 0xF7, 0xFF, 0x00, 0x08, 0xF7, 0x00, 0xF7 }.

Chip Select Latencies

Chip select latencies can be set through the configurator. The default settings support SPI at minimum latency. In case the driver is opened in SPI mode and will be switched to DOPI mode later using [R_OSPI_B_SpiProtocolSet\(\)](#), please select latencies required for DOPI before calling [R_OSPI_B_Open\(\)](#).

XiP Support

OSPI_B supports eXecute in Place (XiP) modes of operation. This can be used for read-only memory-mapped accesses to reduce overall read latency by skipping the command sequence in the xSPI transaction. Separate XiP enter and exit codes may be specified for either attached target device. Upon calling [R_OSPI_B_XipEnter\(\)](#), the associated memory region for the target device is switched to read-only mode and the enter code sent to the device. Calling [R_OSPI_B_XipExit\(\)](#) will transmit the exit code and transition the memory region back to read-write access.

Only one flash device should be used after entering XiP mode. Once entered, XiP codes will be transmitted to all attached devices.

xSPI Commands

Command sets and erase commands may be specified individually for each supported protocol mode. By default, the configurator only supports an alternative command set for DOPI (8D-8D-8D) mode. The command sets cannot be changed during run-time. The appropriate command set will be selected when changing protocol modes. If a command set is not found, it defaults to the SPI command set.

If custom DOPI erase commands are not specified, ensure the erase commands are the appropriate 2-byte DOPI commands. The lower byte will be used for 1-byte command protocols.

DOTF Support

Decryption-On-The-Fly is configurable for OSPI Flash and is disabled from the build by default. Using the DOTF feature requires first creating the encrypted blob on the PC and then configuring the DOTF module with the appropriate parameters to allow decryption of the blob once it is programmed into OSPI. Use the Security Key Management Tool

(<https://www.renesas.com/us/en/software-tool/security-key-management-tool>) to create the encrypted blob. Example: To encrypt a 4096 byte area in a input srec file from 0x90000000 to 0x90000FFF using a 128 AES encryption key "FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF" and iv "00000000000000000000000000000000" use SKMT with the following arguments: skmt.exe /encdotf /keytype "AES-128" /enckey "FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF" /nonce "00000000000000000000000000000000" /startaddr "90000000" /endaddr "90000FFF" /prg "input.srec" /inclplain /output "encrypted_output.srec"

The values for key, iv and decryption area start and end addresses that were used to create the blob using SKMT must be set in the DOTF configuration in FSP.

Limitations

Developers should be aware of the following limitations when using the OSPI_B driver:

OSPI_B

- Problems may occur with using CS0/bank0. OSPI_B channel 1 with CS1/bank1 has been tested and confirmed working.
- Prefetch and combination support for memory-mapped access is applied globally to all slave devices.
- Combination writes are limited to a maximum of 64 bytes. The user should verify the write has completed before attempting to write more bytes.
- Writing to the memory-mapped regions with the CPU is restricted to 64-bit accesses with 8-byte destination alignments. This restriction is not applicable to other bus masters (e.g. DTC or DMAC).
- When using Arm LLVM ensure any read-only (const) data used with `R_OSPI_B_Write()` is word (4-byte) aligned if the DMAC is not being used. If parameter checking is enabled, the source pointer alignment will be verified for calls to `R_OSPI_B_Write()`.
- Take care to restrict concurrent accesses of the OSPI memory area. Collisions on the bus can occur if other bus masters attempt to write to the OSPI memory area while another master is reading the OSPI memory area.
- When using 8D-8D-8D mode, care should be taken to access on even-aligned addresses. Problems may occur if odd address alignment is used. This restriction applies to all bus masters using OSPI_B.

Examples

OSPI Flash:

Basic Example

This is a basic example of minimal use of the OSPI in an application with OctaFlash.

```
#define OSPI_B_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[OSPI_B_EXAMPLE_DATA_LENGTH];
/* Place data in the .ospi_flash section to flash it during programming. */
const uint8_t g_src[OSPI_B_EXAMPLE_DATA_LENGTH] BSP_PLACE_IN_SECTION(".ospi_flash") =
"ABCDEFGHIJKLMNPOQRSTUVWXYZ";
/* Place code in the .code_in_ospi section to flash it during programming. */
void r_ospi_b_example_function(void) BSP_PLACE_IN_SECTION(".code_in_ospi")
__attribute__((noinline));
void r_ospi_b_example_function (void)
{
    /* Add code here. */
}
void r_ospi_b_basic_example (void)
{
    /* Open the OSPI instancee */
    fsp_err_t err = R_OSPI_B_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
    /* (Optional) Change SPI to DOPI mode */
    r_ospi_b_example_spi_to_dopi();
    /* After R_OSPI_B_Open() and any required device specific initialization, data can
be read directly from the OSPI flash. */
    memcpy(&g_dest[0], &g_src[0], OSPI_B_EXAMPLE_DATA_LENGTH);
    /* After R_OSPI_B_Open() and any required device specific initialization, functions
in the OSPI flash can be called. */
    r_ospi_b_example_function();
}
```

Reading Status Register Example (R_OSPI_B_DirectTransfer)

This is an example of using R_OSPI_B_DirectWrite followed by R_OSPI_B_DirectRead to send the read status register command and read back the status register from the device.

```
#define OSPI_B_COMMAND_READ_STATUS_REGISTER (0x05U)

void r_ospi_b_direct_example (void)
{
    spi_flash_direct_transfer_t ospi_b_test_direct_transfer =
    {
        .command      = OSPI_B_TEST_READ_STATUS_COMMAND_SPI_MODE,
        .address      = 0U,
        .data         = 0U,
        .command_length = 1U,
        .address_length = 0U,
        .data_length  = 0U,
        .dummy_cycles = 0U
    };

    /* Open the OSPI instance. */
    fsp_err_t err = R_OSPI_B_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);

    /* Write Enable */
    err = R_OSPI_B_DirectTransfer(&g_ospi0_ctrl, &ospi_b_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);
    assert(FSP_SUCCESS == err);

    /* Read Status Register */
    ospi_b_test_direct_transfer.command =
OSPI_B_TEST_READ_STATUS_COMMAND_SPI_MODE;
    ospi_b_test_direct_transfer.data_length = 1U;
    err = R_OSPI_B_DirectTransfer(&g_ospi0_ctrl, &ospi_b_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_READ);
    assert(FSP_SUCCESS == err);

    /* Check if Write Enable is set */
    if (OSPI_B_WEN_BIT_MASK != (ospi_b_test_direct_transfer.data & OSPI_B_WEN_BIT_MASK))
    {
        __BKPT(0);
    }
}
```

Auto-calibration Example (R_OSPI_B_DirectTransfer, R_OSPI_B_Write, R_OSPI_B_SpiProtocolSet)

This is an example of using R_OSPI_B_SpiProtocolSet to change the operating mode from SPI to DOPI and allow the driver to initiate auto-calibration.

```
#define OSPI_B_DOPI_PREAMBLE_PATTERN_LENGTH_BYTES (16U)
#define OSPI_B_EXAMPLE_PREAMBLE_ADDRESS (0x90000000U) /* Device connected to CS1 */
const uint8_t g_preamble_bytes[OSPI_B_DOPI_PREAMBLE_PATTERN_LENGTH_BYTES] =
{
    0x00, 0x00, 0xFF, 0xFF, 0xFF, 0x00, 0x08, 0x00, 0x00, 0xF7, 0xFF, 0x00, 0x08,
    0xF7, 0x00, 0xF7
};
void ospi_b_example_wait_until_wip (void)
{
    fsp_err_t          err = FSP_SUCCESS;
    spi_flash_status_t status;
    status.write_in_progress = true;
    uint32_t timeout = UINT32_MAX;
    while ((status.write_in_progress) && (--timeout))
    {
        err = R_OSPI_B_StatusGet(&g_ospi0_ctrl, &status);
        assert(FSP_SUCCESS == err);
    }
    if (0 == timeout)
    {
        assert(FSP_SUCCESS == err);
    }
}
void r_ospi_b_auto_calibrate_example (void)
{
    /* Open the OSPI instance. */
    /* Set data_latch_delay_clocks to 0x0 to enable auto-calibration */
    fsp_err_t err = R_OSPI_B_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
    uint8_t * preamble_pattern_addr = (uint8_t *) OSPI_B_EXAMPLE_PREAMBLE_ADDRESS;
```

```
err = R_OSPI_B_Write(&g_ospi0_ctrl, g_preamble_bytes, preamble_pattern_addr,
OSPI_B_EXAMPLE_PREAMBLE_ADDRESS);

assert(FSP_SUCCESS == err);

/* Wait until write has been completed */

ospi_b_example_wait_until_wip();

/* Change from SPI to DOPI mode */

r_ospi_b_example_spi_to_dopi();
}
```

Octack Update Example (R_OSPI_B_SpiProtocolSet)

This is an example of using R_BSP_OctackUpdate to change the Octal-SPI clock frequency during run time. The OCTACK frequency must be updated before calling the R_OSPI_B_SpiProtocolSet with appropriate clock source and divider settings required to be set for the new SPI protocol mode. Ensure that the clock source selected is started.

```
static void ospi_b_example_change_omclk (void)
{
    /* Ensure clock source (PLL2 in this example) is running before changing the OCTACK
frequency */

    bsp_octack_settings_t octack_settings;

    octack_settings.source_clock = BSP_CLOCKS_CLOCK_PLL2;

    octack_settings.divider      = BSP_CLOCKS_OCTACK_DIV_2;

    R_BSP_OctackUpdate(&octack_settings);
}
```

Change Protocol Mode Example (R_OSPI_B_DirectTransfer, R_OSPI_B_SpiProtocolSet)

This is an example of using R_OSPI_B_DirectTransfer to change the attached flash device to a new protocol mode during run time.

```
static void r_ospi_b_example_spi_to_dopi (void)
{
    r_ospi_b_write_enable_and_verify();

    spi_flash_direct_transfer_t ospi_b_test_direct_transfer =
    {
        .command      = OSPI_B_COMMAND_WRITE_REGISTER_SPI_MODE,
    }
```

```

        .address      = OSPI_B_CFR5V_ADDRESS,
        .data         = OSPI_B_DOPI_REGISTER_SETTING,
        .command_length = 1U,
        .address_length = 3U,
        .data_length   = 1U,
        .dummy_cycles  = 0U
    };

    /* The OctaFlash chip is in SPI mode. Change DOPI mode */
    fsp_err_t err = R_OSPI_B_DirectTransfer(&g_ospi0_ctrl,
                                           &ospi_b_test_direct_transfer,
                                           SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);

    assert(FSP_SUCCESS == err);

    /* Change OMCLK appropriately. */
    ospi_b_example_change_omclk();

    /* Transition the OSPI peripheral to DOPI mode. This will initiate auto calibration
as MDTR is 0 */
    err = R_OSPI_B_SpiProtocolSet(&g_ospi0_ctrl, SPI_FLASH_PROTOCOL_DOPI);
    assert(FSP_SUCCESS == err);

    /* Verify that the chip is in requested OPI mode */
    ospi_b_test_direct_transfer.command      = OSPI_B_COMMAND_READ_REGISTER_SPI_MODE;
    ospi_b_test_direct_transfer.dummy_cycles = 3U;

    err = R_OSPI_B_DirectTransfer(&g_ospi0_ctrl, &ospi_b_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_READ);
    assert(FSP_SUCCESS == err);

    if (OSPI_B_DOPI_REGISTER_SETTING != ospi_b_test_direct_transfer.data)
    {
        __BKPT(0);
    }
}

```

Using a Custom xSPI Command Set Example

This is an example of using custom command sets for 8D-8D-8D and 4S-4S-4S protocol modes.

```
spi_flash_cfg_t g_ospi0_cfg_w_table;
```

```
ospi_b_extended_cfg_t g_ospi0_ext_w_table;

/* Custom two-byte erase commands. */
spi_flash_erase_command_t g_2B_erase_commands[] =
{
    {.command = OSPI_B_TEST_BLOCK_ERASE_COMMAND_DOPI_MODE, .size =
OSPI_B_TEST_BLOCK_ERASE_SIZE },
    {.command = OSPI_B_TEST_SECTOR_ERASE_COMMAND_DOPI_MODE, .size =
OSPI_B_TEST_SECTOR_ERASE_SIZE },
    {.command = OSPI_B_TEST_CHIP_ERASE_COMMAND_DOPI_MODE, .size =
SPI_FLASH_ERASE_SIZE_CHIP_ERASE},
};

/* Custom command sets. */
ospi_b_xspi_command_set_t g_command_sets[] =
{
    /* 8D-8D-8D example with inverted lower command byte. */
    {
        .protocol                = SPI_FLASH_PROTOCOL_8D_8D_8D,
        .command_bytes           = OSPI_B_COMMAND_BYTES_2,
        .read_command            = OSPI_B_TEST_READ_COMMAND_DOPI_MODE,
        .page_program_command    = OSPI_B_TEST_PROGRAM_COMMAND_DOPI_MODE,
        .write_enable_command    = OSPI_B_TEST_WRITE_ENABLE_COMMAND_DOPI_MODE,
        .status_command          = OSPI_B_TEST_STATUS_COMMAND_DOPI_MODE,
        .read_dummy_cycles       = 20U,
        .program_dummy_cycles    = 0U,
        .status_dummy_cycles     = 3U,
        .erase_command_list_length = sizeof(g_2B_erase_commands) / sizeof
(g_2B_erase_commands[0]),
        .p_erase_command_list    = g_2B_erase_commands,
    },
    /* 4S-4S-4S example with different .read_command and dummy cycles. */
    {
        .protocol                = SPI_FLASH_PROTOCOL_4S_4S_4S,
        .command_bytes           = OSPI_B_COMMAND_BYTES_1,
        .read_command            = OSPI_B_TEST_READ_COMMAND_QSPI_MODE,
```

```

        .page_program_command      = OSPI_B_TEST_PROGRAM_COMMAND_QSPI_MODE,
        .write_enable_command     = OSPI_B_TEST_WRITE_ENABLE_COMMAND_QSPI_MODE,
        .status_command           = OSPI_B_TEST_STATUS_COMMAND_QSPI_MODE,
        .read_dummy_cycles        = 10U,
        .program_dummy_cycles     = 0U,
        .status_dummy_cycles      = 1U,
        .erase_command_list_length = 0U,
        .p_erase_command_list     = NULL, // Use the common erase definitions.
    },
};

void r_ospi_command_table_example (void)
{
    /* Open the OSPI instance.
     * Specify `g_command_sets` using the configurator. */
    fsp_err_t err = R_OSPI_B_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
    /* Change SPI to DOPI mode */
    r_ospi_b_example_spi_to_dopi();
    /* After R_OSPI_B_Open() and any required device specific initialization, data can
    be read directly from the OSPI flash. */
    memcpy(&g_dest[0], &g_src[0], OSPI_B_EXAMPLE_DATA_LENGTH);
    /* After R_OSPI_B_Open() and any required device specific initialization, functions
    in the OSPI flash can be called. */
    r_ospi_b_example_function();
    /* Change SPI to QSPI mode */
    r_ospi_b_example_spi_to_qspi();
    /* Read data from an external device, this time in QSPI mode. */
    memcpy(&g_dest[0], &g_src[0], OSPI_B_EXAMPLE_DATA_LENGTH);
    /* Run the example function again in QSPI mode. */
    r_ospi_b_example_function();
}

```

OSPI Data and IAR

When using the IAR compiler, OSPI data must be const qualified to be downloaded by the debugger.

| ospi_b_device_number_t | channel | Device number to be used for memory device. |
| ospi_b_timing_setting_t const * | p_timing_settings | Memory-mapped timing settings. |
| ospi_b_xspi_command_set_t const * | p_xspi_command_set_list | Additional protocol command sets; if additional protocol commands set are not used set this to NULL. |
| uint8_t | xspi_command_set_list_length | Number of additional protocol command set defined. |
| uint8_t * | p_autocalibration_preamble_pattern_addr | OctaFlash memory address holding the preamble pattern. |
| uint8_t | data_latch_delay_clocks | Specify delay between OM_DQS and OM_DQS Strobe. Set to 0 to auto-calibrate. Typical value is 0x80. |
| transfer_instance_t const * | p_lower_lvl_transfer | DMA Transfer instance used for data transmission. |
| uint8_t | read_dummy_cycles | Dummy cycles to be inserted for read commands. |

| | | |
|---------|----------------------|--|
| uint8_t | program_dummy_cycles | Dummy cycles to be inserted for page program commands. |
| uint8_t | status_dummy_cycles | Dummy cycles to be inserted for status read commands. |

◆ **ospi_b_instance_ctrl_t**

| |
|--|
| struct <code>ospi_b_instance_ctrl_t</code> |
| Instance control block. DO NOT INITIALIZE. Initialization occurs when <code>spi_flash_api_t::open</code> is called |

Enumeration Type Documentation

◆ **ospi_b_device_number_t**

| | |
|--|------------------------------------|
| enum <code>ospi_b_device_number_t</code> | |
| OSPI Flash chip select | |
| Enumerator | |
| OSPI_B_DEVICE_NUMBER_0 | Device connected to Chip-Select 0. |
| OSPI_B_DEVICE_NUMBER_1 | Device connected to Chip-Select 1. |

◆ **ospi_b_command_bytes_t**

| | |
|--|---------------------------------|
| enum <code>ospi_b_command_bytes_t</code> | |
| OSPI flash number of command code bytes. | |
| Enumerator | |
| OSPI_B_COMMAND_BYTES_1 | Command codes are 1 byte long. |
| OSPI_B_COMMAND_BYTES_2 | Command codes are 2 bytes long. |

◆ **ospi_b_command_interval_clocks_t**

| enum <code>ospi_b_command_interval_clocks_t</code> | |
|--|--------------------|
| OSPI frame to frame interval | |
| Enumerator | |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_1</code> | 1 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_2</code> | 2 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_3</code> | 3 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_4</code> | 4 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_5</code> | 5 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_6</code> | 6 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_7</code> | 7 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_8</code> | 8 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_9</code> | 9 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_10</code> | 10 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_11</code> | 11 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_12</code> | 12 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_13</code> | 13 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_14</code> | 14 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_15</code> | 15 interval clocks |
| <code>OSPI_B_COMMAND_INTERVAL_CLOCKS_16</code> | 16 interval clocks |

◆ **ospi_b_command_cs_pullup_clocks_t**

| | |
|---|------------------------------|
| enum <code>ospi_b_command_cs_pullup_clocks_t</code> | |
| OSPI chip select de-assertion duration | |
| Enumerator | |
| <code>OSPI_B_COMMAND_CS_PULLUP_CLOCKS_NO_EXTENSION</code> | CS asserting No extension. |
| <code>OSPI_B_COMMAND_CS_PULLUP_CLOCKS_1</code> | CS asserting Extend 1 cycle. |

◆ **ospi_b_command_cs_pulldown_clocks_t**

| | |
|---|-----------------------------|
| enum <code>ospi_b_command_cs_pulldown_clocks_t</code> | |
| OSPI chip select assertion duration | |
| Enumerator | |
| <code>OSPI_B_COMMAND_CS_PULLDOWN_CLOCKS_NO_EXTENSION</code> | CS negating No extension. |
| <code>OSPI_B_COMMAND_CS_PULLDOWN_CLOCKS_1</code> | CS negating Extend 1 cycle. |

◆ **ospi_b_prefetch_function_t**

| | |
|---|----------------------------|
| enum <code>ospi_b_prefetch_function_t</code> | |
| Prefetch function settings | |
| Enumerator | |
| <code>OSPI_B_PREFETCH_FUNCTION_DISABLE</code> | Prefetch function disable. |
| <code>OSPI_B_PREFETCH_FUNCTION_ENABLE</code> | Prefetch function enable. |

◆ **ospi_b_combination_function_t**

| enum <code>ospi_b_combination_function_t</code> | |
|--|-------------------------------|
| Combination function settings | |
| Enumerator | |
| <code>OSPI_B_COMBINATION_FUNCTION_DISABLE</code> | Combination function disable. |
| <code>OSPI_B_COMBINATION_FUNCTION_4BYTE</code> | Combine up to 4 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_8BYTE</code> | Combine up to 8 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_12BYTE</code> | Combine up to 12 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_16BYTE</code> | Combine up to 16 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_20BYTE</code> | Combine up to 20 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_24BYTE</code> | Combine up to 24 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_28BYTE</code> | Combine up to 28 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_32BYTE</code> | Combine up to 32 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_36BYTE</code> | Combine up to 36 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_40BYTE</code> | Combine up to 40 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_44BYTE</code> | Combine up to 44 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_48BYTE</code> | Combine up to 48 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_52BYTE</code> | Combine up to 52 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_56BYTE</code> | Combine up to 56 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_60BYTE</code> | Combine up to 60 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_64BYTE</code> | Combine up to 64 bytes. |
| <code>OSPI_B_COMBINATION_FUNCTION_2BYTE</code> | Combine up to 2 bytes. |

Function Documentation

◆ **R_OSPI_B_Open()**

```
fsp_err_t R_OSPI_B_Open ( spi_flash_ctrl_t *const p_ctrl, spi_flash_cfg_t const *const p_cfg )
```

Open the xSPI device. After the driver is open, the xSPI device can be accessed like internal flash memory.

Implements `spi_flash_api_t::open`.

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Configuration was successful. |
| FSP_ERR_ASSERTION | The parameter <code>p_ctrl</code> or <code>p_cfg</code> is NULL. |
| FSP_ERR_ALREADY_OPEN | Driver has already been opened with the same <code>p_ctrl</code> . |
| FSP_ERR_CALIBRATE_FAILED | Failed to perform auto-calibrate. |

◆ **R_OSPI_B_DirectWrite()**

```
fsp_err_t R_OSPI_B_DirectWrite ( spi_flash_ctrl_t * p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write )
```

Writes raw data directly to the OctaFlash. API not supported. Use `R_OSPI_B_DirectTransfer`

Implements `spi_flash_api_t::directWrite`.

Return values

| | |
|---------------------|----------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by OSPI. |
|---------------------|----------------------------|

◆ **R_OSPI_B_DirectRead()**

```
fsp_err_t R_OSPI_B_DirectRead ( spi_flash_ctrl_t * p_ctrl, uint8_t *const p_dest, uint32_t const bytes )
```

Reads raw data directly from the OctaFlash. API not supported. Use `R_OSPI_B_DirectTransfer`.

Implements `spi_flash_api_t::directRead`.

Return values

| | |
|---------------------|----------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by OSPI. |
|---------------------|----------------------------|

◆ **R_OSPI_B_DirectTransfer()**

```
fsp_err_t R_OSPI_B_DirectTransfer ( spi_flash_ctrl_t * p_ctrl, spi_flash_direct_transfer_t *const
p_transfer, spi_flash_direct_transfer_dir_t direction )
```

Read/Write raw data directly with the OctaFlash.

Implements `spi_flash_api_t::directTransfer`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_OSPI_B_XipEnter()**

```
fsp_err_t R_OSPI_B_XipEnter ( spi_flash_ctrl_t * p_ctrl)
```

Enters XiP (execute in place) mode.

Implements `spi_flash_api_t::xipEnter`.

Return values

| | |
|---------------------|------------------------------------|
| FSP_SUCCESS | XiP mode was entered successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_UNSUPPORTED | XiP support is not enabled. |

◆ **R_OSPI_B_XipExit()**

```
fsp_err_t R_OSPI_B_XipExit ( spi_flash_ctrl_t * p_ctrl)
```

Exits XiP (execute in place) mode.

Implements `spi_flash_api_t::xipExit`.

Return values

| | |
|---------------------|------------------------------------|
| FSP_SUCCESS | XiP mode was entered successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_UNSUPPORTED | XiP support is not enabled. |

◆ **R_OSPI_B_Write()**

```
fsp_err_t R_OSPI_B_Write ( spi_flash_ctrl_t * p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count )
```

Program a page of data to the flash.

Implements `spi_flash_api_t::write`.

Return values

| | |
|-------------------------|---|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> , <code>p_dest</code> or <code>p_src</code> is NULL, or <code>byte_count</code> crosses a page boundary. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_SIZE | Insufficient space remaining in page or write length is not a multiple of CPU access size when not using the DMAC. |
| FSP_ERR_DEVICE_BUSY | Another Write/Erase transaction is in progress. |
| FSP_ERR_WRITE_FAILED | Write operation failed. |
| FSP_ERR_INVALID_ADDRESS | Destination or source is not aligned to CPU access alignment when not using the DMAC. |

◆ **R_OSPI_B_Erase()**

```
fsp_err_t R_OSPI_B_Erase ( spi_flash_ctrl_t * p_ctrl, uint8_t *const p_device_address, uint32_t byte_count )
```

Erase a block or sector of flash. The `byte_count` must exactly match one of the erase sizes defined in `spi_flash_cfg_t`. For chip erase, `byte_count` must be `SPI_FLASH_ERASE_SIZE_CHIP_ERASE`.

Implements `spi_flash_api_t::erase`.

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | The command to erase the flash was executed successfully. |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> or <code>p_device_address</code> is NULL, <code>byte_count</code> doesn't match an erase size defined in <code>spi_flash_cfg_t</code> , or <code>byte_count</code> is set to 0. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_DEVICE_BUSY | The device is busy. |
| FSP_ERR_WRITE_FAILED | Write operation failed. |

◆ **R_OSPI_B_StatusGet()**

```
fsp_err_t R_OSPI_B_StatusGet ( spi_flash_ctrl_t* p_ctrl, spi_flash_status_t*const p_status )
```

Gets the write or erase status of the flash.

Implements `spi_flash_api_t::statusGet`.

Return values

| | |
|-------------------|--------------------------------------|
| FSP_SUCCESS | The write status is in p_status. |
| FSP_ERR_ASSERTION | p_instance_ctrl or p_status is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_OSPI_B_BankSet()**

```
fsp_err_t R_OSPI_B_BankSet ( spi_flash_ctrl_t* p_ctrl, uint32_t bank )
```

Selects the bank to access. Use `ospi_b_bank_select_t` as the bank value.

Implements `spi_flash_api_t::bankSet`.

Return values

| | |
|---------------------|-------------------------------|
| FSP_ERR_UNSUPPORTED | This function is unsupported. |
|---------------------|-------------------------------|

◆ **R_OSPI_B_SpiProtocolSet()**

```
fsp_err_t R_OSPI_B_SpiProtocolSet ( spi_flash_ctrl_t* p_ctrl, spi_flash_protocol_t spi_protocol )
```

Sets the SPI protocol.

Implements `spi_flash_api_t::spiProtocolSet`.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | SPI protocol updated on MPU peripheral. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_CALIBRATE_FAILED | Failed to perform auto-calibrate. |

◆ **R_OSPI_B_Close()**

```
fsp_err_t R_OSPI_B_Close ( spi_flash_ctrl_t * p_ctrl)
```

Close the OSPI driver module.

Implements [spi_flash_api_t::close](#).

Return values

| | |
|-------------------|-------------------------------|
| FSP_SUCCESS | Configuration was successful. |
| FSP_ERR_ASSERTION | p_instance_ctrl is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_OSPI_B_AutoCalibrate()**

```
fsp_err_t R_OSPI_B_AutoCalibrate ( spi_flash_ctrl_t *const p_ctrl)
```

AutoCalibrate the OSPI_B DS signal.

Implements [spi_flash_api_t::autoCalibrate](#).

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Autocalibration completed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_UNSUPPORTED | Autocalibration support is not enabled. |
| FSP_ERR_CALIBRATE_FAILED | Failed to perform auto-calibrate. |

| fsp_err_t | R_QSPI_Close (spi_flash_ctrl_t *p_ctrl) |

Detailed Description

Driver for the QSPI peripheral on RA MCUs. This module implements the [SPI Flash Interface](#).

Overview

Features

The QSPI driver has the following key features:

- Memory mapped read access to the QSPI flash
- Programming the QSPI flash device
- Erasing the QSPI flash device
- Sending device specific commands and reading back responses
- Entering and exiting QPI mode
- Entering and exiting XIP mode
- 3 or 4 byte addressing

Configuration

Build Time Configurations for r_qspi

The following build time configurations are defined in driver/r_qspi_cfg.h:

| Configuration | Options | Default | Description |
|--|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Support Multiple Line Program in Extended SPI Mode | <ul style="list-style-type: none"> Enabled Disabled | Disabled | If selected code for programming on multiple lines in extended SPI mode is included in the build. |

Configurations for Storage > QSPI (r_qspi)

This module can be added to the Stacks tab via New Stack > Storage > QSPI (r_qspi).

| Configuration | Options | Default | Description |
|----------------------------|--|--------------------|--|
| General | | | |
| Name | Name must be a valid C symbol | g_qspi0 | Module name. |
| SPI Protocol | <ul style="list-style-type: none"> Extended SPI QPI | Extended SPI | Select the initial SPI protocol. SPI protocol can be changed in R_QSPI_Direct(). |
| Address Bytes | <ul style="list-style-type: none"> 3 4 4 with 4-byte read code | 3 | Select the number of address bytes. Selecting '4 with 4-byte read code' converts the default read code determined in Read Mode to the 4-byte version. If 4-byte mode is selected without using 4-byte commands, the application must issue the EN4B command using R_QSPI_Direct(). |
| Read Mode | <ul style="list-style-type: none"> Standard Read Fast Read Fast Read Dual Output Fast Read Dual I/O Fast Read Quad Output Fast Read Quad I/O | Fast Read Quad I/O | Select the read mode for memory mapped access. |
| Dummy Clocks for Fast Read | Refer to the RA Configuration tool for available options. | Default | Select the number of dummy clocks for fast read operations. Default is 6 clocks for |

Fast Read Quad I/O, 4 clocks for Fast Read Dual I/O, and 8 clocks for other fast read instructions including Fast Read Quad Output, Fast Read Dual Output, and Fast Read

The maximum number of bytes allowed for a single write.

Page Size Bytes Must be an integer greater than 0 256

Command Definitions

Page Program Command Must be an 8-bit QSPI Page Program Command under Command Definitions 0x02

The command to program a page. If 'Support Multiple Line Program in Extended SPI Mode' is Enabled, this command must use the same number of data lines as the selected read mode.

Page Program Address Lines • 1
• 2
• 4 1

Select the number of lines to use for the address bytes during write operations. This can be determined by referencing the datasheet for the external QSPI. It should either be 1 or match the number of data lines used for memory mapped fast read operations.

Write Enable Command Must be an 8-bit QSPI Write Enable Command under Command Definitions 0x06

The command to enable write.

Status Command Must be an 8-bit QSPI Status Command under Command Definitions 0x05

The command to query the status of a write or erase command.

Write Status Bit Must be an integer between 0 and 7 0

Which bit contains the write in progress status returned from the Write Status Command.

Sector Erase Command Must be an 8-bit QSPI Sector Erase Command under Command Definitions 0x20

The command to erase a sector. Set Sector Erase Size to 0 if unused.

| | | | |
|------------------------------|--|----------|---|
| Sector Erase Size | Must be an integer greater than or equal to 0 | 4096 | The sector erase size. Set Sector Erase Size to 0 if Sector Erase is not supported. |
| Block Erase Command | Must be an 8-bit QSPI Block Erase Command under Command Definitions | 0xD8 | The command to erase a block. Set Block Erase Size to 0 if unused. |
| Block Erase Size | Must be an integer greater than or equal to 0 | 65536 | The block erase size. Set Block Erase Size to 0 if Block Erase is not supported. |
| Block Erase 32KB Command | Must be an 8-bit QSPI Block Erase 32KB Command under Command Definitions | 0x52 | The command to erase a 32KB block. Set Block Erase Size to 0 if unused. |
| Block Erase 32KB Size | Must be an integer greater than or equal to 0 | 32768 | The block erase 32KB size. Set Block Erase 32KB Size to 0 if Block Erase 32KB is not supported. |
| Chip Erase Command | Must be an 8-bit QSPI Chip Erase Command under Command Definitions | 0xC7 | The command to erase the entire chip. Set Chip Erase Command to 0 if unused. |
| XIP Enter M7-M0 | Must be an 8-bit QSPI XIP Enter M7-M0 command under Command Definitions | 0x20 | How to set M7-M0 to enter XIP mode. |
| XIP Exit M7-M0 | Must be an 8-bit QSPI XIP Exit M7-M0 command under Command Definitions | 0xFF | How to set M7-M0 exit XIP mode. |
| Bus Timing | | | |
| QSPKCLK Divisor | Refer to the RA Configuration tool for available options. | 2 | Select the divisor to apply to PCLK to get QSPKCLK. |
| Minimum QSSL Deselect Cycles | Refer to the RA Configuration tool for available options. | 4 QSPCLK | Define the minimum number of QSPCLK cycles for QSSL to remain high between operations. |

Clock Configuration

The QSPI clock is derived from PCLKA.

Pin Configuration

The following pins are available to connect to an external QSPI device:

- QSPCLK: QSPI clock output
- QSSL: QSPI slave select
- QIO0: Data 0 I/O
- QIO1: Data 1 I/O
- QIO2: Data 2 I/O
- QIO3: Data 3 I/O

Note

It is recommended to configure the pins with `IOPORT_CFG_DRIVE_HIGH`.

Usage Notes

QSPI Memory Mapped Access

After `R_QSPI_Open()` completes successfully, the QSPI flash device contents are mapped to address 0x60000000 and can be read like on-chip flash.

Limitations

Developers should be aware of the following limitations when using the QSPI driver:

- Only P305-P310 are currently supported by the J-Link driver to flash the QSPI.
- The default J-Link downloader requires the device to be in extended SPI mode (not QPI mode).

Examples

Basic Example

This is a basic example of minimal use of the QSPI in an application.

```
#define QSPI_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[QSPI_EXAMPLE_DATA_LENGTH];
/* Place data in the .qspi_flash section to flash it during programming. */
const uint8_t g_src[QSPI_EXAMPLE_DATA_LENGTH] BSP_PLACE_IN_SECTION(".qspi_flash") =
"ABCDEFGHIJKLMNPOQRSTUVWXYZ";
/* Place code in the .code_in_qspi section to flash it during programming. */
void r_qspi_example_function(void) BSP_PLACE_IN_SECTION(".code_in_qspi")
__attribute__((noinline));
void r_qspi_example_function (void)
{
/* Add code here. */
}
void r_qspi_basic_example (void)
```

```
{
/* Open the QSPI instance. */
fsp_err_t err = R_QSPI_Open(&g_qspi0_ctrl, &g_qspi0_cfg);
    assert(FSP_SUCCESS == err);
/* (Optional) Send device specific initialization commands. */
    r_qspi_example_init();
/* After R_QSPI_Open() and any required device specific initialization, data can be
read directly from the QSPI flash. */
    memcpy(&g_dest[0], &g_src[0], QSPI_EXAMPLE_DATA_LENGTH);
/* After R_QSPI_Open() and any required device specific initialization, functions in
the QSPI flash can be called. */
    r_qspi_example_function();
}
```

Initialization Command Structure Example

This is an example of the types of commands that can be used to initialize the QSPI.

```
#define QSPI_COMMAND_WRITE_ENABLE (0x06U)
#define QSPI_COMMAND_WRITE_STATUS_REGISTER (0x01U)
#define QSPI_COMMAND_ENTER_QPI_MODE (0x38U)
#define QSPI_EXAMPLE_STATUS_REGISTER_1 (0x40)
#define QSPI_EXAMPLE_STATUS_REGISTER_2 (0x00)
static void r_qspi_example_init (void)
{
/* Write status registers */
/* Write one byte to enable writing to the status register, then deassert QSSL. */
    uint8_t data[4];
    fsp_err_t err;
    data[0] = QSPI_COMMAND_WRITE_ENABLE;
    err = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 1, false);
    assert(FSP_SUCCESS == err);
/* Write 3 bytes, including the write status register command followed by values for
both status registers. In the
    * status registers, set QE to 1 and other bits to their default setting. After all
```

```

data is written, deassert the
* QSSL line. */
data[0] = QSPI_COMMAND_WRITE_STATUS_REGISTER;
data[1] = QSPI_EXAMPLE_STATUS_REGISTER_1;
data[2] = QSPI_EXAMPLE_STATUS_REGISTER_2;
err     = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 3, false);
assert(FSP_SUCCESS == err);
/* Wait for status register to update. */
spi_flash_status_t status;
do
{
    (void) R_QSPI_StatusGet(&g_qspi0_ctrl, &status);
} while (true == status.write_in_progress);
/* Write one byte to enter QSPI mode, then deassert QSSL. After entering QPI mode on
the device, change the SPI
* protocol to QPI mode on the MCU peripheral. */
data[0] = QSPI_COMMAND_ENTER_QPI_MODE;
err     = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 1, false);
assert(FSP_SUCCESS == err);
(void) R_QSPI_SpiProtocolSet(&g_qspi0_ctrl, SPI_FLASH_PROTOCOL_QPI);
}

```

Reading Status Register Example (R_QSPI_DirectWrite, R_QSPI_DirectRead)

This is an example of using R_QSPI_DirectWrite followed by R_QSPI_DirectRead to send the read status register command and read back the status register from the device.

```

#define QSPI_COMMAND_READ_STATUS_REGISTER (0x05U)
void r_qspi_direct_example (void)
{
    /* Read a status register. */
    /* Write one byte to read the status register. Do not deassert QSSL. */
    uint8_t data;
    fsp_err_t err;
    data = QSPI_COMMAND_READ_STATUS_REGISTER;

```

```
err = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data, 1, true);
assert(FSP_SUCCESS == err);

/* Read one byte. After all data is read, deassert the QSSL line. */
err = R_QSPI_DirectRead(&g_qspi0_ctrl, &data, 1);
assert(FSP_SUCCESS == err);

/* Status register contents are available in variable 'data'. */
}
```

Querying Device Size Example (R_QSPI_DirectWrite, R_QSPI_DirectRead)

This is an example of using R_QSPI_DirectWrite followed by R_QSPI_DirectRead to query the device size.

```
#define QSPI_EXAMPLE_COMMAND_READ_ID (0x9F)
#define QSPI_EXAMPLE_COMMAND_READ_SFDP (0x5A)
void r_qspi_size_example (void)
{
    /* Many QSPI devices support more than one way to query the device size. Consult the
    datasheet for your
    * QSPI device to determine which of these methods are supported (if any). */
    uint32_t device_size_bytes;
    fsp_err_t err;
#ifdef QSPI_EXAMPLE_COMMAND_READ_ID
    /* This example shows how to get the device size by reading the manufacturer ID. */
    uint8_t data[4];
    data[0] = QSPI_EXAMPLE_COMMAND_READ_ID;
    err = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 1, true);
    assert(FSP_SUCCESS == err);

    /* Read 3 bytes. The third byte often represents the size of the QSPI, where the
    size of the QSPI = 2 ^ N. */
    err = R_QSPI_DirectRead(&g_qspi0_ctrl, &data[0], 3);
    assert(FSP_SUCCESS == err);
    device_size_bytes = 1U << data[2];
    FSP_PARAMETER_NOT_USED(device_size_bytes);
#endif
}
```

```
#ifndef QSPI_EXAMPLE_COMMAND_READ_SFDP

/* Read the JEDEC SFDP header to locate the JEDEC flash parameters table. Reference
JESD216 "Serial Flash
* Discoverable Parameters (SFDP)". */

/* Send the standard 0x5A command followed by 3 address bytes (SFDP header is at
address 0). */

uint8_t buffer[16];
memset(&buffer[0], 0, sizeof(buffer));
buffer[0] = QSPI_EXAMPLE_COMMAND_READ_SFDP;

Function Documentation

◆ R_QSPI_Open()

```
fsp_err_t R_QSPI_Open ( spi_flash_ctrl_t * p_ctrl, spi_flash_cfg_t const *const p_cfg )
```

Open the QSPI driver module. After the driver is open, the QSPI can be accessed like internal flash memory starting at address 0x60000000.

Implements `spi_flash_api_t::open`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Configuration was successful. |
| FSP_ERR_ASSERTION | The parameter <code>p_instance_ctrl</code> or <code>p_cfg</code> is NULL. |
| FSP_ERR_ALREADY_OPEN | Driver has already been opened with the same <code>p_instance_ctrl</code> . |

◆ **R_QSPI_DirectWrite()**

```
fsp_err_t R_QSPI_DirectWrite ( spi_flash_ctrl_t* p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write )
```

Writes raw data directly to the QSPI.

Implements `spi_flash_api_t::directWrite`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_MODE | This function can't be called when XIP mode is enabled. |
| FSP_ERR_DEVICE_BUSY | The device is busy. |

◆ **R_QSPI_DirectRead()**

```
fsp_err_t R_QSPI_DirectRead ( spi_flash_ctrl_t* p_ctrl, uint8_t *const p_dest, uint32_t const bytes )
```

Reads raw data directly from the QSPI. This API can only be called after `R_QSPI_DirectWrite` with `read_after_write` set to true.

Implements `spi_flash_api_t::directRead`.

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_MODE | This function must be called after <code>R_QSPI_DirectWrite</code> with <code>read_after_write</code> set to true. |

◆ **R_QSPI_DirectTransfer()**

```
fsp_err_t R_QSPI_DirectTransfer ( spi_flash_ctrl_t * p_ctrl, spi_flash_direct_transfer_t *const
p_transfer, spi_flash_direct_transfer_dir_t direction )
```

Read/Write raw data directly with the OctaFlash/OctaRAM device. Unsupported by QSPI.

Implements `spi_flash_api_t::directTransfer`.

Return values

| | |
|---------------------|----------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by QSPI. |
|---------------------|----------------------------|

◆ **R_QSPI_XipEnter()**

```
fsp_err_t R_QSPI_XipEnter ( spi_flash_ctrl_t * p_ctrl)
```

Enters XIP (execute in place) mode.

Implements `spi_flash_api_t::xipEnter`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_QSPI_XipExit()**

```
fsp_err_t R_QSPI_XipExit ( spi_flash_ctrl_t * p_ctrl)
```

Exits XIP (execute in place) mode.

Implements `spi_flash_api_t::xipExit`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_QSPI_Write()**

```
fsp_err_t R_QSPI_Write ( spi_flash_ctrl_t* p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest,
uint32_t byte_count )
```

Program a page of data to the flash.

Implements `spi_flash_api_t::write`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | The flash was programmed successfully. |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> , <code>p_dest</code> or <code>p_src</code> is NULL, or <code>byte_count</code> crosses a page boundary. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_MODE | This function can't be called when XIP mode is enabled. |
| FSP_ERR_DEVICE_BUSY | The device is busy. |

◆ **R_QSPI_Erase()**

```
fsp_err_t R_QSPI_Erase ( spi_flash_ctrl_t* p_ctrl, uint8_t *const p_device_address, uint32_t
byte_count )
```

Erase a block or sector of flash. The `byte_count` must exactly match one of the erase sizes defined in `spi_flash_cfg_t`. For chip erase, `byte_count` must be `SPI_FLASH_ERASE_SIZE_CHIP_ERASE`.

Implements `spi_flash_api_t::erase`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | The command to erase the flash was executed successfully. |
| FSP_ERR_ASSERTION | <code>p_instance_ctrl</code> or <code>p_device_address</code> is NULL, or <code>byte_count</code> doesn't match an erase size defined in <code>spi_flash_cfg_t</code> , or device is in XIP mode. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_MODE | This function can't be called when XIP mode is enabled. |
| FSP_ERR_DEVICE_BUSY | The device is busy. |

◆ **R_QSPI_StatusGet()**

```
fsp_err_t R_QSPI_StatusGet ( spi_flash_ctrl_t * p_ctrl, spi_flash_status_t *const p_status )
```

Gets the write or erase status of the flash.

Implements `spi_flash_api_t::statusGet`.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | The write status is in p_status. |
| FSP_ERR_ASSERTION | p_instance_ctrl or p_status is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_MODE | This function can't be called when XIP mode is enabled. |

◆ **R_QSPI_BankSet()**

```
fsp_err_t R_QSPI_BankSet ( spi_flash_ctrl_t * p_ctrl, uint32_t bank )
```

Selects the bank to access. A bank is a 64MB sliding access window into the QSPI device flash memory space. To access chip address 0x4000000, select bank 1, then read from internal flash address 0x60000000. To access chip address 0x8001000, select bank 2, then read from internal flash address 0x60001000.

This function is not required for memory devices less than or equal to 512 Mb (64MB).

Implements `spi_flash_api_t::bankSet`.

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Bank successfully selected. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

◆ **R_QSPI_SpiProtocolSet()**

```
fsp_err_t R_QSPI_SpiProtocolSet ( spi_flash_ctrl_t * p_ctrl, spi_flash_protocol_t spi_protocol )
```

Sets the SPI protocol.

Implements [spi_flash_api_t::spiProtocolSet](#).

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | SPI protocol updated on MCU peripheral. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_ARGUMENT | Invalid SPI protocol requested. |

◆ **R_QSPI_AutoCalibrate()**

```
fsp_err_t R_QSPI_AutoCalibrate ( spi_flash_ctrl_t * p_ctrl)
```

Auto-calibrate the OctaRAM device using the preamble pattern. Unsupported by QSPI. Implements [spi_flash_api_t::autoCalibrate](#).

Return values

| | |
|---------------------|---------------------------|
| FSP_ERR_UNSUPPORTED | API not supported by QSPI |
|---------------------|---------------------------|

◆ **R_QSPI_Close()**

```
fsp_err_t R_QSPI_Close ( spi_flash_ctrl_t * p_ctrl)
```

Close the QSPI driver module.

Implements [spi_flash_api_t::close](#).

Return values

| | |
|-------------------|-------------------------------|
| FSP_SUCCESS | Configuration was successful. |
| FSP_ERR_ASSERTION | p_instance_ctrl is NULL. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |

Detailed Description

Driver for the SD/MMC Host Interface (SDHI) peripheral on RA MCUs. This module implements the [SD/MMC Interface](#).

Overview

Features

- Supports the following memory devices: SDSC (SD Standard Capacity), SDHC (SD High Capacity), SDXC (SD Extended Capacity) and eMMC (embedded Multi Media Card)
 - Supports reading, writing and erasing SD memory devices
 - Supports 1, 4 or 8-bit data bus (8-bit bus is supported for eMMC only)
 - Supports detection of device write protection (SD cards only)
 - Supports high speed mode
- Automatically configures the clock to the maximum clock rate supported by both host (MCU) and device
- Supports hardware acceleration using DMAC or DTC
- Supports callback notification when an operation completes or an error occurs

Configuration

Build Time Configurations for r_sdhi

The following build time configurations are defined in fsp_cfg/r_sdhi_cfg.h:

| Configuration | Options | Default | Description |
|--------------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Unaligned Access Support | <ul style="list-style-type: none"> • Disabled • Enabled | Enabled | If enabled, code for supporting buffers that are not aligned on a 4-byte boundary is included in the build. Only disable this if all buffers passed to the driver are 4-byte aligned. |
| SD Support | <ul style="list-style-type: none"> • Disabled • Enabled | Enabled | If selected code for SD card support is included in the build. |
| eMMC Support | <ul style="list-style-type: none"> • Disabled • Enabled | Disabled | If selected code for eMMC device support is included in the build. |

Configurations for Storage > SD/MMC (r_sdhi)

This module can be added to the Stacks tab via New Stack > Storage > SD/MMC (r_sdhi). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|-------------------------------|----------|--------------|
| Name | Name must be a valid C symbol | g_sdmmc0 | Module name. |

| | | | |
|---------------------------|--|--------|--|
| Channel | Value must be a non-negative integer | 0 | Select the channel. |
| Bus Width | MCU Specific Options | | Select the bus width. |
| Block Size | Value must be an integer between 1 and 512 | 512 | Select the media block size. Must be 512 for SD cards or eMMC devices. Must be 1-512 for SDIO. |
| Card Detection | <ul style="list-style-type: none"> • Not Used • CD Pin | CD Pin | Select the card detection method. |
| Write Protection | <ul style="list-style-type: none"> • Not Used • WP Pin | WP Pin | Select whether or not to use the write protect pin. Select Not Used if the MCU or device does not have a write protect pin. |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR). |
| Access Interrupt Priority | MCU Specific Options | | Select the access interrupt priority. |
| Card Interrupt Priority | MCU Specific Options | | Select the card interrupt priority. |
| DTC Interrupt Priority | MCU Specific Options | | Select the DTC interrupt priority. |

Interrupt Configurations:

The following interrupts are required to use the r_sdhi module:

Using SD/MMC with DTC:

- Access Interrupt
- DTC Interrupt

Using SD/MMC with DMAC:

- Access Interrupt
- DMAC Interrupt (in DMAC instance)

The Card interrupt is optional and only available on MCU packages that have the SDnCD pin (n = channel number).

Clock Configuration

The SDMMC MCU peripheral (SDHI) uses the PCLKA for its clock source. The SDMMC driver selects the optimal built-in divider based on the PCLKA frequency and the maximum clock rate allowed by the device obtained at media initialization.

Pin Configuration

The SDMMC driver supports the following pins (n = channel number):

- SDnCLK
- SDnCMD
- SDnDAT0
- SDnDAT1
- SDnDAT2
- SDnDAT3
- SDnDAT4 (not available on all MCUs)
- SDnDAT5 (not available on all MCUs)
- SDnDAT6 (not available on all MCUs)
- SDnDAT7 (not available on all MCUs)
- SDnCD (not available on all MCUs)
- SDnWP

The drive capacity for each pin should be set to "Medium" or "High" for most hardware designs. This can be configured in the **Pins** tab of the RA Configuration editor by selecting the pin under Pin Selection -> Ports.

Usage Notes

Card Detection

When Card Detection is configured to "CD Pin" in the RA Configuration editor, interrupt flags are cleared and card detection is enabled during [R_SDHI_Open\(\)](#).

[R_SDHI_StatusGet\(\)](#) can be called to retrieve the current status of the card (including whether a card is present). If the Card Interrupt Priority is enabled, a callback is called when a card is inserted or removed.

If a card is removed and reinserted, [R_SDHI_MediaInit\(\)](#) must be called before reading from the card or writing to the card.

Note

[R_SDHI_StatusGet\(\)](#) should be used to initially determine the card state after opening the interface.

DMA Request Interrupt Priority

When data transfers are not 4-byte aligned or not a multiple of 4 bytes, a software copy of the block size (up to 512 bytes) is done in the DMA Request interrupt. This blocks all other interrupts that are a lower or equal priority to the access interrupt until the software copy is complete.

Timing Notes for R_SDHI_MediaInit

The [R_SDHI_MediaInit\(\)](#) API completes the entire device identification and configuration process. This involves several command-response cycles at a bus width of 1 bit and a bus speed of 400 kHz or less.

Limitations

Developers should be aware of the following limitations when using the SDHI:

Blocking Calls

The following functions block execution until the response is received for at least one command:

- [R_SDHI_MediaInit](#)
- [R_SDHI_Erase](#)

Once the function returns the status of the operation can be determined via [R_SDHI_StatusGet](#) or through receipt of a callback.

Note

Due to the variability in clocking configurations it is recommended to determine blocking delays experimentally on the target system.

Data Alignment and Size

Data transfers should be 4-byte aligned and a multiple of 4 bytes in size whenever possible. This recommendation applies to the read(), write(), readloExt(), and writeloExt() APIs. When data transfers are 4-byte aligned and a multiple of 4-bytes, the r_sdhi driver is zero copy and takes full advantage of hardware acceleration by the DMAC or DTC. When data transfers are not 4-byte aligned or not a multiple of 4 bytes an extra CPU interrupt is required for each block transferred and a software copy is used to move data to the destination buffer.

Examples

Basic Example

This is a basic example of minimal use of the r_sdhi in an application.

```
uint8_t g_dest[SDHI_MAX_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[SDHI_MAX_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint32_t g_transfer_complete = 0;
void r_sdhi_basic_example (void)
{
    /* Initialize g_src to known data */
    for (uint32_t i = 0; i < SDHI_MAX_BLOCK_SIZE; i++)
    {
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }
    /* Open the SDHI driver. */
    fsp_err_t err = R_SDHI_Open(&g_sdmmc0_ctrl, &g_sdmmc0_cfg);
    assert(FSP_SUCCESS == err);
}
```

```
/* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
 * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
/* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
err = R_SDHI_MediaInit(&g_sdmmc0_ctrl, NULL);
assert(FSP_SUCCESS == err);
err = R_SDHI_Write(&g_sdmmc0_ctrl, g_src, 3, 1);
assert(FSP_SUCCESS == err);
while (!g_transfer_complete)
{
/* Wait for transfer. */
}
err = R_SDHI_Read(&g_sdmmc0_ctrl, g_dest, 3, 1);
assert(FSP_SUCCESS == err);
while (!g_transfer_complete)
{
/* Wait for transfer. */
}
}
/* The callback is called when a transfer completes. */
void r_sdhi_example_callback (sdmmc_callback_args_t * p_args)
{
if (SDMMC_EVENT_TRANSFER_COMPLETE == p_args->event)
{
g_transfer_complete = 1;
}
}
}
```

Card Detection Example

This is an example of using SDHI when the card may not be plugged in. The card detection interrupt must be enabled to use this example.

```
bool g_card_inserted = false;
void r_sdhi_card_detect_example (void)
{
    /* Open the SDHI driver. This enables the card detection interrupt. */
    fsp_err_t err = R_SDHI_Open(&g_sdmmc0_ctrl, &g_sdmmc0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Check if card is inserted. */
    sdmmc_status_t status;
    err = R_SDHI_StatusGet(&g_sdmmc0_ctrl, &status);
    assert(FSP_SUCCESS == err);
    if (!status.card_inserted)
    {
        while (!g_card_inserted)
        {
            /* Wait for a card insertion interrupt. */
        }
    }
    /* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
    * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
    R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
    /* Initialize the SD card after card insertion is detected. */
    err = R_SDHI_MediaInit(&g_sdmmc0_ctrl, NULL);
    assert(FSP_SUCCESS == err);
}
/* The callback is called when a card detection event occurs if the card detection
interrupt is enabled. */
void r_sdhi_card_detect_example_callback (sdmmc_callback_args_t * p_args)
{
    if (SDMMC_EVENT_CARD_INSERTED == p_args->event)
    {
        g_card_inserted = true;
    }
}
```

```

    }
    if (SDMMC_EVENT_CARD_REMOVED == p_args->event)
    {
        g_card_inserted = false;
    }
}

```

Function Documentation

◆ R_SDHI_Open()

```
fsp_err_t R_SDHI_Open ( sdmmc_ctrl_t *const p_api_ctrl, sdmmc_cfg_t const *const p_cfg )
```

Opens the driver. Resets SDHI, and enables card detection interrupts if card detection is enabled. [R_SDHI_MediaInit](#) must be called after this function before any other functions can be used.

Implements [sdmmc_api_t::open\(\)](#).

Example:

```

/* Open the SDHI driver. */
fsp_err_t err = R_SDHI_Open(&g_sdmmc0_ctrl, &g_sdmmc0_cfg);

```

Return values

| | |
|--------------------------------|--|
| FSP_SUCCESS | Module is now open. |
| FSP_ERR_ASSERTION | Null Pointer or block size is not in the valid range of 1-512. Block size must be 512 bytes for SD cards and eMMC devices. It is configurable for SDIO only. |
| FSP_ERR_ALREADY_OPEN | Driver has already been opened with this instance of the control structure. |
| FSP_ERR_IRQ_BSP_DISABLED | Access interrupt is not enabled. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | Requested channel does not exist on this MCU. |

◆ R_SDHI_MediaInit()

```
fsp_err_t R_SDHI_MediaInit ( sdmmc_ctrl_t *const p_api_ctrl, sdmmc_device_t *const p_device )
```

Initializes the SDHI hardware and completes identification and configuration for the SD or eMMC device. This procedure requires several sequential commands. This function blocks until all identification and configuration commands are complete.

Implements `sdmmc_api_t::mediaInit()`.

Example:

```
/* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
 * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
/* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
err = R_SDHI_MediaInit(&g_sdmmc0_ctrl, NULL);
```

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Module is now ready for read/write access. |
| FSP_ERR_ASSERTION | Null Pointer or block size is not in the valid range of 1-512. Block size must be 512 bytes for SD cards and eMMC devices. It is configurable for SDIO only. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_INIT_FAILED | Device was not identified as an SD card, eMMC device, or SDIO card. |
| FSP_ERR_RESPONSE | Device responded with an error. |
| FSP_ERR_TIMEOUT | Device did not respond. |
| FSP_ERR_DEVICE_BUSY | Device is holding DAT0 low (device is busy) or another operation is ongoing. |

◆ R_SDHI_Read()

```
fsp_err_t R_SDHI_Read ( sdmmc_ctrl_t *const p_api_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count )
```

Reads data from an SD or eMMC device. Up to 0x10000 sectors can be read at a time. Implements `sdmmc_api_t::read()`.

A callback with the event `SDMMC_EVENT_TRANSFER_COMPLETE` is called when the read data is available.

Example:

```
err = R_SDHI_Read(&g_sdmmc0_ctrl, g_dest, 3, 1);
```

Return values

| | |
|------------------------------|---|
| FSP_SUCCESS | Data read successfully. |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_DEVICE_BUSY | Driver is busy with a previous operation. |

◆ R_SDHI_Write()

```
fsp_err_t R_SDHI_Write ( sdmmc_ctrl_t *const p_api_ctrl, uint8_t const *const p_source, uint32_t const start_sector, uint32_t const sector_count )
```

Writes data to an SD or eMMC device. Up to 0x10000 sectors can be written at a time. Implements `sdmmc_api_t::write()`.

A callback with the event `SDMMC_EVENT_TRANSFER_COMPLETE` is called when the all data has been written and the device is no longer holding `DAT0` low to indicate it is busy.

Example:

```
err = R_SDHI_Write(&g_sdmmc0_ctrl, g_src, 3, 1);
```

Return values

| | |
|------------------------------|---|
| FSP_SUCCESS | Card write finished successfully. |
| FSP_ERR_ASSERTION | Handle or Source address is NULL. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_DEVICE_BUSY | Driver is busy with a previous operation. |
| FSP_ERR_CARD_WRITE_PROTECTED | SD card is Write Protected. |
| FSP_ERR_WRITE_FAILED | Write operation failed. |

◆ **R_SDHI_Readlo()**

```
fsp_err_t R_SDHI_Readlo ( sdmmc_ctrl_t *const p_api_ctrl, uint8_t *const p_data, uint32_t const
function, uint32_t const address )
```

The Read function reads a one byte register from an SDIO card. Implements `sdmmc_api_t::readlo()`.

This function blocks until the command is sent and the response is received. `p_data` contains the register value read when this function returns.

Return values

| | |
|------------------------------|---|
| FSP_SUCCESS | Data read successfully. |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_UNSUPPORTED | SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE. |
| FSP_ERR_RESPONSE | Device responded with an error. |
| FSP_ERR_TIMEOUT | Device did not respond. |
| FSP_ERR_DEVICE_BUSY | Device is holding DAT0 low (device is busy) or another operation is ongoing. |

◆ **R_SDHI_Writelo()**

```
fsp_err_t R_SDHI_Writelo ( sdmmc_ctrl_t *const p_api_ctrl, uint8_t *const p_data, uint32_t const
function, uint32_t const address, sdmmc_io_write_mode_t const read_after_write )
```

Writes a one byte register to an SDIO card. Implements `sdmmc_api_t::writelo()`.

This function blocks until the command is sent and the response is received. The register has been written when this function returns. If `read_after_write` is true, `p_data` contains the register value read when this function returns.

Return values

| | |
|------------------------------|--|
| FSP_SUCCESS | Card write finished successfully. |
| FSP_ERR_ASSERTION | Handle or Source address is NULL. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_WRITE_FAILED | Write operation failed. |
| FSP_ERR_UNSUPPORTED | SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE. |
| FSP_ERR_RESPONSE | Device responded with an error. |
| FSP_ERR_TIMEOUT | Device did not respond. |
| FSP_ERR_DEVICE_BUSY | Device is holding DAT0 low (device is busy) or another operation is ongoing. |

◆ **R_SDHI_ReadloExt()**

```
fsp_err_t R_SDHI_ReadloExt ( sdmmc_ctrl_t *const p_api_ctrl, uint8_t *const p_dest, uint32_t const
function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t
transfer_mode, sdmmc_io_address_mode_t address_mode )
```

Reads data from an SDIO card function. Implements `sdmmc_api_t::readloExt()`.

This function blocks until the command is sent and the response is received. A callback with the event `SDMMC_EVENT_TRANSFER_COMPLETE` is called when the read data is available.

Return values

| | |
|------------------------------|--|
| FSP_SUCCESS | Data read successfully. |
| FSP_ERR_ASSERTION | NULL pointer, or count is not in the valid range of 1-512 for byte mode or 1-511 for block mode. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_DEVICE_BUSY | Driver is busy with a previous operation. |
| FSP_ERR_UNSUPPORTED | SDIO support disabled in <code>SDHI_CFG_SDIO_SUPPORT_ENABLE</code> . |

◆ **R_SDHI_WriteloExt()**

```
fsp_err_t R_SDHI_WriteloExt ( sdmmc_ctrl_t *const p_api_ctrl, uint8_t const *const p_source,
uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t
transfer_mode, sdmmc_io_address_mode_t address_mode )
```

Writes data to an SDIO card function. Implements `sdmmc_api_t::writeloExt()`.

This function blocks until the command is sent and the response is received. A callback with the event `SDMMC_EVENT_TRANSFER_COMPLETE` is called when the all data has been written.

Return values

| | |
|------------------------------|--|
| FSP_SUCCESS | Card write finished successfully. |
| FSP_ERR_ASSERTION | NULL pointer, or count is not in the valid range of 1-512 for byte mode or 1-511 for block mode. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_DEVICE_BUSY | Driver is busy with a previous operation. |
| FSP_ERR_WRITE_FAILED | Write operation failed. |
| FSP_ERR_UNSUPPORTED | SDIO support disabled in <code>SDHI_CFG_SDIO_SUPPORT_ENABLE</code> . |

◆ **R_SDHI_IoIntEnable()**

```
fsp_err_t R_SDHI_IoIntEnable ( sdmmc_ctrl_t *const p_api_ctrl, bool enable )
```

Enables or disables the SDIO Interrupt. Implements `sdmmc_api_t::IoIntEnable()`.

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | Card enabled or disabled SDIO interrupts successfully. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_DEVICE_BUSY | Driver is busy with a previous operation. |
| FSP_ERR_UNSUPPORTED | SDIO support disabled in <code>SDHI_CFG_SDIO_SUPPORT_ENABLE</code> . |

◆ **R_SDHI_StatusGet()**

```
fsp_err_t R_SDHI_StatusGet ( sdmmc_ctrl_t *const p_api_ctrl, sdmmc_status_t *const p_status )
```

Provides driver status. Implements `sdmmc_api_t::statusGet()`.

Return values

| | |
|-------------------|----------------------------------|
| FSP_SUCCESS | Status stored in p_status. |
| FSP_ERR_ASSERTION | NULL pointer. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |

◆ **R_SDHI_Erase()**

```
fsp_err_t R_SDHI_Erase ( sdmmc_ctrl_t *const p_api_ctrl, uint32_t const start_sector, uint32_t const sector_count )
```

Erases sectors of an SD card or eMMC device. Implements `sdmmc_api_t::erase()`.

This function blocks until the erase command is sent. Poll the status to determine when erase is complete.

Return values

| | |
|------------------------------|--|
| FSP_SUCCESS | Erase operation requested. |
| FSP_ERR_ASSERTION | A required pointer is NULL or an argument is invalid. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |
| FSP_ERR_CARD_NOT_INITIALIZED | Card was unplugged. |
| FSP_ERR_CARD_WRITE_PROTECTED | SD card is Write Protected. |
| FSP_ERR_RESPONSE | Device responded with an error. |
| FSP_ERR_TIMEOUT | Device did not respond. |
| FSP_ERR_DEVICE_BUSY | Device is holding DAT0 low (device is busy) or another operation is ongoing. |

◆ **R_SDHI_CallbackSet()**

```
fsp_err_t R_SDHI_CallbackSet ( sdmmc_ctrl_t *const p_api_ctrl, void(*) (sdmmc_callback_args_t *)
p_callback, void const *const p_context, sdmmc_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `sdmmc_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

◆ **R_SDHI_Close()**

```
fsp_err_t R_SDHI_Close ( sdmmc_ctrl_t *const p_api_ctrl)
```

Closes an open SD/MMC device. Implements `sdmmc_api_t::close()`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | The parameter <code>p_ctrl</code> is NULL. |
| FSP_ERR_NOT_OPEN | Driver has not been initialized. |

```

Detailed Description

Virtual EEPROM on RA MCUs. This module implements the [Virtual EEPROM Interface](#).

Overview

This VEE module emulates basic EEPROM capabilities. Support is provided for reading and writing both common records and reference data (originally programmed during product assembly or test). A count of the number of segments erased throughout the lifetime of the application is maintained and can be accessed at any time. Wear leveling is handled automatically by the driver.

Features

- Writing and reading user defined records of any length to data flash.
- Wear leveling is handled automatically.
- Reference data such as calibration data programmed at assembly or test time is preserved.
- Reference data can be updated at run time.
- Fault resilient design.

Data Flash Segmentation

Wear leveling is handled by changing the location in the data flash where a record is stored every time that it is updated. This change in physical location of the record is transparent to the user. Any time an update for a specific record ID is written, it is written to the next unused location in data flash and its location is stored in RAM for quick look-up later. When required, only the most recent version of these records is automatically copied to the next blank segment in data flash. The data flash area is divided into a number of equal-size segments. There is only one segment active at a time. A segment contains two areas- the record area (which is the vast majority of the segment) and

the reference data area which contains optional data typically programmed during assembly or final test. Records and updated reference data are written to this segment until one of the two areas becomes full. The record area must be able to hold at least one of every record ID possible and still have space left over for record updates.

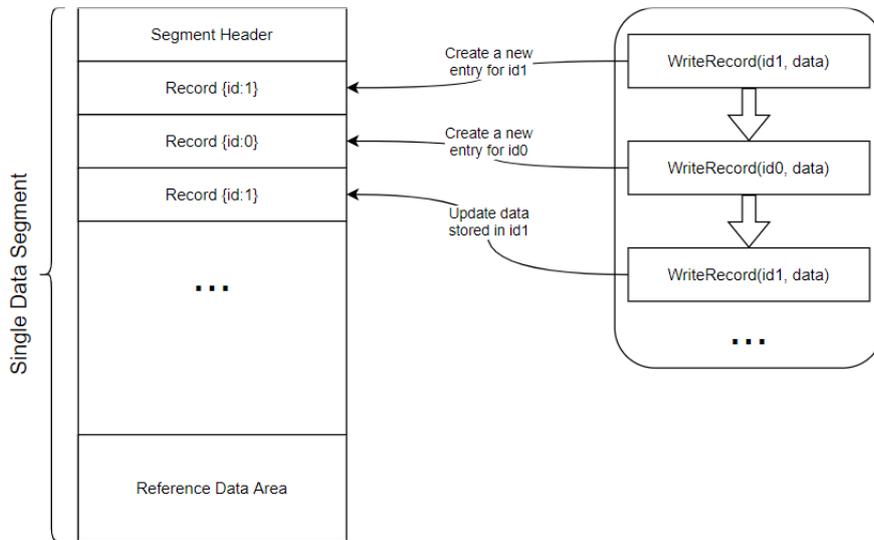

Figure 290: Segment Data Format

When a segment does not have sufficient space for additional records or updated reference data, a Refresh occurs. This process copies the most recent record for each ID as well as the latest version of reference data (if any) to the next segment. The very first time VEE runs on an MCU, it marks the last segment as active whether there is reference data configured or not. The end of VEE data flash area is used to provide an easily identified physical flash address that can be used while programming reference data without requiring Virtual EEPROM middleware.

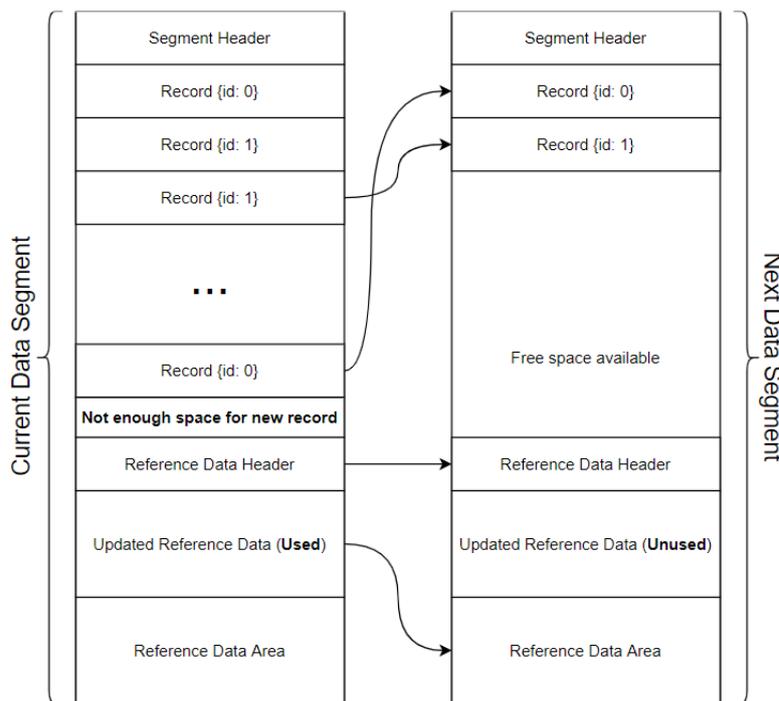

Figure 291: Refresh Operation

Record Format

Each record begins with a header that contains the record size, followed by the data, and the trailer. The trailer contains a validation code which is used for internal purposes only and is not a 16-bit CRC or ECC value. If that level of error checking is desired, the user should include that in the record data passed to the driver. Padding is added between the end of user data and the trailer to ensure the trailer is aligned properly.

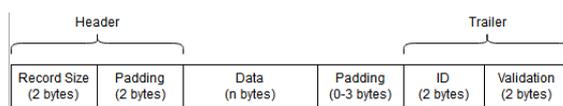

Figure 292: Record Format

Reference Data Area

VEE can be configured for the presence of reference data. The original programmed reference data must be located at the end of the VEE data flash area. An area of equal size is reserved below this in case updated reference data becomes available later. Below that is a header which indicates whether the update area has been written to.

Figure 293: Reference Data Area Format

Just as with records, the validation code is used for internal purposes only and is not a 16-bit CRC or ECC value. If that level of error checking is desired, the user should include that in the updated reference data passed to the driver.

Fault Tolerance

The Virtual EEPROM has a fault tolerant design. If for any reason an operation fails before it is completed the next time the module is opened a refresh will occur. Any corrupted data will be discarded.

Configuration

Build Time Configurations for rm_vee_flash

The following build time configurations are defined in fsp_cfg/rm_vee_flash_cfg.h:

| Configuration | Options | Default | Description |
|------------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Reference Data Support | <ul style="list-style-type: none"> Enabled Disabled | Disabled | Support writing reference data to the end of the segment. |

| | | | |
|---------------------|--|----|---|
| Refresh Buffer Size | Value must be an integer greater than 0 and a multiple of 4 bytes. | 32 | The size of the internal buffer used to copying data from one flash segment to another during a refresh operation. This is required because data flash to data flash transfers are not supported by the hardware. |
|---------------------|--|----|---|

Configurations for Storage > Virtual EEPROM on Flash (rm_vee_flash)

This module can be added to the Stacks tab via New Stack > Storage > Virtual EEPROM on Flash (rm_vee_flash). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------------|-------------------------------|------------------------------------|---|
| Name | Name must be a valid C symbol | g_vee0 | Module name. |
| Record Max ID | Value must be an integer. | 16 | Set this value to the highest record ID in use. |
| Number of Segments | Value must be an integer. | 2 | Set value to number of segments desired in data flash (minimum 2). The fewer the segments, the fewer refreshes occur, but the longer refreshes take to complete (erase time). |
| Start Address | Manual Entry | BSP_FEATURE_FLASH_DATA_FLASH_START | Start address of the flash area used by Virtual EEPROM. |
| Total Size | Manual Entry | BSP_DATA_FLASH_SIZE_BYTES | The total size (In bytes) of the flash area used by Virtual EEPROM. |
| Reference Data Size | Value must be an integer. | 0 | The size of the reference area (In bytes) used by Virtual EEPROM. |
| Callback | Name must be a valid C symbol | vee_callback | A user callback function can be provided. If this callback function is provided, it will be called from the flash interrupt service |

routine (ISR).

Clock Configuration

There is no clock configuration for the RM_VEE_FLASH module.

Pin Configuration

This module does not use I/O pins.

Usage Notes

A refresh buffer is required to copy data between segments. Data flash cannot be simultaneously read from and written to. Data will be temporarily copied into RAM during refresh operations.

Examples

Basic Example

This is a basic example of minimal use of the RM_VEE_FLASH module in an application.

```
volatile bool callback_called = false;
/* Record ID to use for storing pressure data. */
#define ID_PRESSURE (0U)
/* Example data structure. */
typedef struct st_pressure
{
    uint32_t timestamp;
    uint16_t low;
    uint16_t average;
    uint16_t high;
} pressure_t;
void rm_vee_example ()
{
    /* Open the Virtual EEPROM Module. */
    fsp_err_t err = RM_VEE_FLASH_Open(&g_vee_ctrl, &g_vee_cfg);
    if (FSP_SUCCESS != err)
    {
        error_handler();
    }
    /* Read pressure data from external sensor. */
```

```
    pressure_t pressure_data;
    get_pressure_data(&pressure_data);
    /* Write the pressure data to a Virtual EEPROM Record. */
    err = RM_VEE_FLASH_RecordWrite(&g_vee_ctrl, ID_PRESSURE, (uint8_t *)
&pressure_data, sizeof(pressure_t));
    if (FSP_SUCCESS != err)
    {
        error_handler();
    }
    /* Wait for the Virtual EEPROM callback to indicate it finished writing data. */
    while (false == callback_called)
    {
        ;
    }
    /* Get a pointer to the record that is stored in data flash. */
    uint32_t    length;
    pressure_t * p_pressure_data;
    err = RM_VEE_FLASH_RecordPtrGet(&g_vee_ctrl, ID_PRESSURE, (uint8_t **)
&p_pressure_data, &length);
    if (FSP_SUCCESS != err)
    {
        error_handler();
    }
    /* Close the Virtual EEPROM Module. */
    err = RM_VEE_FLASH_Close(&g_vee_ctrl);
    if (FSP_SUCCESS != err)
    {
        error_handler();
    }
}
void rm_vee_tests_callback (rm_vee_callback_args_t * p_args)
{
    callback_called = true;
    FSP_PARAMETER_NOT_USED(p_args);
}
```

}

Data Structures

```
struct rm_vee_flash_cfg_t
```

```
struct rm_vee_flash_instance_ctrl_t
```

Data Structure Documentation

◆ rm_vee_flash_cfg_t

```
struct rm_vee_flash_cfg_t
```

User configuration structure, used in open function

Data Fields

| | | |
|--|---------|------------------------------|
| flash_instance_t const * | p_flash | Pointer to a flash instance. |
|--|---------|------------------------------|

◆ rm_vee_flash_instance_ctrl_t

```
struct rm_vee_flash_instance_ctrl_t
```

Instance control block. This is private to the FSP and should not be used or modified by the application.

Function Documentation

◆ **RM_VEE_FLASH_Open()**

```
fsp_err_t RM_VEE_FLASH_Open ( rm_vee_ctrl_t *const p_api_ctrl, rm_vee_cfg_t const *const p_cfg )
```

Open the RM_VEE_FLASH driver module

Implements [rm_vee_api_t::open](#)

Initializes the driver's internal structures and opens the Flash driver. The Flash driver must be closed prior to opening VEE. The error code FSP_SUCCESS_RECOVERY indicates that VEE detected corrupted data; most likely due to a power loss during a data flash write or erase. In these cases, an automatic internal Refresh is performed and the partially written data is lost.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Successful. FSP_SUCCESS_RECOVERY changed to FSP_SUCCESS |
| FSP_ERR_ASSERTION | An input parameter is NULL. |
| FSP_ERR_ALREADY_OPEN | This function has already been called. |
| FSP_ERR_PE_FAILURE | This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware. |
| FSP_ERR_TIMEOUT | Interrupts disabled outside of VEE |
| FSP_ERR_NOT_INITIALIZED | Corruption found. A refresh is required. |
| FSP_ERR_INVALID_ARGUMENT | The supplied configuration is invalid. |

◆ **RM_VEE_FLASH_RecordWrite()**

```
fsp_err_t RM_VEE_FLASH_RecordWrite ( rm_vee_ctrl_t *const p_api_ctrl, uint32_t const rec_id,
uint8_t const *const p_rec_data, uint32_t const num_bytes )
```

Writes a record to data flash.

Implements `rm_vee_api_t::recordWrite`

This function writes `num_bytes` of data pointed to by `p_rec_data` to data flash. This function returns immediately after starting the flash write. BE SURE NOT TO MODIFY the data buffer contents until after the write completes. This includes exiting the calling function when the data buffer is a local variable (stack may be used by another function and corrupt the data buffer contents).

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Write started successfully. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_ASSERTION | An input parameter is NULL. |
| FSP_ERR_INVALID_ARGUMENT | An argument contains an illegal value. |
| FSP_ERR_INVALID_MODE | The operation cannot be started in the current mode. |
| FSP_ERR_IN_USE | Last API call still executing. |
| FSP_ERR_PE_FAILURE | This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware. |
| FSP_ERR_TIMEOUT | Flash write timed out (Should not be possible when flash bgo is used). |
| FSP_ERR_NOT_INITIALIZED | Corruption found. A refresh is required. |

◆ RM_VEE_FLASH_RefDataWrite()

```
fsp_err_t RM_VEE_FLASH_RefDataWrite ( rm_vee_ctrl_t *const p_api_ctrl, uint8_t const *const p_ref_data )
```

Writes new Reference data to the reference update area.

Implements `rm_vee_api_t::refDataWrite`

This function writes VEE_CFG_REF_DATA_SIZE bytes pointed to by p_ref_data to data flash. This function returns immediately after starting the flash write. BE SURE NOT TO MODIFY the data buffer contents until after the write completes.

Return values

| | |
|-------------------------|---|
| FSP_SUCCESS | Write started successfully. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_IN_USE | Last API call still executing. |
| FSP_ERR_ASSERTION | An input parameter is NULL. |
| FSP_ERR_INVALID_MODE | The operation cannot be started in the current mode. |
| FSP_ERR_PE_FAILURE | This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware. |
| FSP_ERR_TIMEOUT | Flash write timed out (Should not be possible when flash bgo is used). |
| FSP_ERR_UNSUPPORTED | Reference data is not supported in the current configuration. |
| FSP_ERR_NOT_INITIALIZED | Corruption found. A refresh is required. |

◆ **RM_VEE_FLASH_RecordPtrGet()**

```
fsp_err_t RM_VEE_FLASH_RecordPtrGet ( rm_vee_ctrl_t *const p_api_ctrl, uint32_t const rec_id,
uint8_t **const pp_rec_data, uint32_t *const p_num_bytes )
```

Gets a pointer to the most recent record data.

Implements `rm_vee_api_t::recordPtrGet`

This function sets the argument pointer to the most recent version of the record data in flash. Flash cannot be accessed for reading and writing at the same time. Therefore, reading the data at `p_ref_data` must be completed prior to initiating any type of Flash write.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Successful. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_IN_USE | Last API call still executing. |
| FSP_ERR_ASSERTION | <code>p_ref_data</code> is NULL. |
| FSP_ERR_INVALID_ARGUMENT | Record data not configured. |
| FSP_ERR_NOT_FOUND | The record associated with the requested ID could not be found. |

◆ **RM_VEE_FLASH_RefDataPtrGet()**

```
fsp_err_t RM_VEE_FLASH_RefDataPtrGet ( rm_vee_ctrl_t *const p_api_ctrl, uint8_t **const
pp_ref_data )
```

Gets a pointer to the most recent reference data.

Implements `rm_vee_api_t::recordPtrGet`

This function sets the argument pointer to the most recent version of the reference data in flash. Flash cannot be accessed for reading and writing at the same time.

Return values

| | |
|---------------------|---|
| FSP_SUCCESS | Successful. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_IN_USE | Last API call still executing. |
| FSP_ERR_ASSERTION | An input parameter is NULL. |
| FSP_ERR_UNSUPPORTED | Reference data is not supported in the current configuration. |
| FSP_ERR_NOT_FOUND | No reference data was found. |

◆ **RM_VEE_FLASH_Refresh()**

```
fsp_err_t RM_VEE_FLASH_Refresh ( rm_vee_ctrl_t *const p_api_ctrl)
```

Manually start a refresh operation

Implements `rm_vee_api_t::refresh`

This function is used to start a segment Refresh at any time. The Refresh process by default occurs automatically when no more record or reference data space is available and a Write is requested. However, the app may desire to force a refresh when it knows it is running low on space and large amounts of data are about to be recorded.

Return values

| | |
|-------------------------|---|
| FSP_SUCCESS | Successful. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_ASSERTION | An input parameter is NULL. |
| FSP_ERR_IN_USE | Last API call still executing. |
| FSP_ERR_PE_FAILURE | This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware. |
| FSP_ERR_INVALID_MODE | The operation cannot be started in the current mode. |
| FSP_ERR_TIMEOUT | Flash write timed out (Should not be possible when flash bgo is used). |
| FSP_ERR_NOT_INITIALIZED | Corruption found. A refresh is required. |

◆ **RM_VEE_FLASH_Format()**

```
fsp_err_t RM_VEE_FLASH_Format ( rm_vee_ctrl_t *const p_api_ctrl, uint8_t const *const p_ref_data )
```

Start a manual format operation.

Implements `rm_vee_api_t::format`

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Successful. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_IN_USE | Last API call still executing. |
| FSP_ERR_PE_FAILURE | This error indicates that a flash programming, erase, or blankcheck operation has failed |
| FSP_ERR_ASSERTION | An input parameter is NULL. |
| FSP_ERR_TIMEOUT | Flash write timed out (Should not be possible when flash bgo is used). |
| FSP_ERR_NOT_INITIALIZED | Corruption found. A refresh is required. |

◆ **RM_VEE_FLASH_CallbackSet()**

```
fsp_err_t RM_VEE_FLASH_CallbackSet ( rm_vee_ctrl_t *const p_api_ctrl, void(*) (rm_vee_callback_args_t *) p_callback, void const *const p_context, rm_vee_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure.

Implements `rm_vee_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

◆ RM_VEE_FLASH_StatusGet()

```
fsp_err_t RM_VEE_FLASH_StatusGet ( rm_vee_ctrl_t *const p_api_ctrl, rm_vee_status_t *const p_status )
```

Get the current status of the driver.

Implements [rm_vee_api_t::statusGet](#)

This command is typically used to verify that the last Write or Refresh command has completed before attempting to perform another API call.

Return values

| | |
|-------------------|---------------------------------|
| FSP_SUCCESS | Successful. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_ASSERTION | An input parameter is NULL. |

◆ RM_VEE_FLASH_Close()

```
fsp_err_t RM_VEE_FLASH_Close ( rm_vee_ctrl_t *const p_api_ctrl)
```

Closes the Flash driver and VEE driver.

Implements [rm_vee_api_t::close](#)

Return values

| | |
|-------------------|---------------------------------|
| FSP_SUCCESS | Successful. |
| FSP_ERR_NOT_OPEN | The module has not been opened. |
| FSP_ERR_ASSERTION | An input parameter is NULL. |

5.2.18 System

Modules

Detailed Description

System Modules.

Modules

Clock Generation Circuit (r_cgc)

Driver for the CGC peripheral on RA MCUs. This module implements the [CGC Interface](#).

Event Link Controller (r_elc)

Driver for the ELC peripheral on RA MCUs. This module implements the [ELC Interface](#).

I/O Port (r_ioport)

Driver for the I/O Ports peripheral on RA MCUs. This module implements the [I/O Port Interface](#).

fsp_err_t R_CGC_Close (cgc_ctrl_t *const p_ctrl)

Detailed Description

Driver for the CGC peripheral on RA MCUs. This module implements the [CGC Interface](#).

Note

This module is not required for the initial clock configuration. Initial clock settings are configurable on the **Clocks** tab of the RA Configuration editor. The initial clock settings are applied by the BSP during the startup process before main.

Overview

Features

The CGC module supports runtime modifications of clock settings. Key features include the following:

- Supports changing the system clock source to any of the following options (provided they are supported on the MCU):
 - High-speed on-chip oscillator (HOCO)
 - Middle-speed on-chip oscillator (MOCO)
 - Low-speed on-chip oscillator (LOCO)
 - Main oscillator (external resonator or external clock input frequency)
 - Sub-clock oscillator (external resonator)
 - PLL/PLL2 (not available on all MCUs)
- When the system core clock frequency changes, the following things are updated:
 - The CMSIS standard global variable SystemCoreClock is updated to reflect the new clock frequency.
 - Wait states for ROM and RAM are adjusted to the minimum supported value for the new clock frequency.
 - The operating power control mode is updated to the minimum supported value for the new clock settings.
- Supports starting or stopping any of the system clock sources
- Supports changing dividers for the internal clocks
- Supports the oscillation stop detection feature

Internal Clocks

The RA microcontrollers have up to seven internal clocks. Not all internal clocks exist on all MCUs. Each clock domain has its own divider that can be updated in [R_CGC_SystemClockSet\(\)](#). The dividers are subject to constraints described in the footnote of the table "Specifications of the Clock Generation Circuit for the internal clocks" in the hardware manual.

The internal clocks include:

- System clock (ICLK): core clock used for CPU, flash, internal SRAM, DTC, and DMAC
- PCLKA/PCLKB/PCLKC/PCLKD: Peripheral clocks, refer to the table "Specifications of the Clock Generation Circuit for the internal clocks" in the hardware manual to see which peripherals are controlled by which clocks.
- FCLK: Clock source for reading data flash and for programming/erasure of both code and data flash.
- BCLK: External bus clock

Configuration

Note

The initial clock settings are configurable on the **Clocks** tab of the RA Configuration editor.

There is a configuration to enable the HOCO on reset in the OFSI settings on the BSP tab.

The following clock related settings are configurable in the RA Common section on the BSP tab:

- Main Oscillator Wait Time
- Main Oscillator Clock Source (external oscillator or crystal/resonator)
- Subclock Populated
- Subclock Drive
- Subclock Stabilization Time (ms)

The default stabilization times are determined based on development boards provided by Renesas, but are generally valid for most designs. Depending on the target board hardware configuration and requirements these values may need to be adjusted for reliability or startup speed.

Build Time Configurations for r_cg

The following build time configurations are defined in fsp_cfg/r_cg_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for System > Clock Generation Circuit (r_cg)

This module can be added to the Stacks tab via New Stack > System > Clock Generation Circuit (r_cg). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|--|---|----------|--|
| Sub Clock Oscillation Stop Detection Settings | | | |
| Enable sub clock oscillator stop detection via the SOSC_STOP interrupt | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Oscillation Stop Detection for Sub Clock enabled. |
| Sub Clock Oscillation Stop Detection Time | Manual Entry | 0 | These bits specify the oscillation stop detection time. It is detected that oscillation has stopped when oscillation has been stopped for (A-2) to (A+1) clock cycles, where A refers to the time specified by these bits. Oscillation stop detection time = Low-speed on-chip oscillator clock (LOCO) cycle x ((value of OSDCCMP) + 1). |
| Sub Clock Oscillation Stop Detection | MCU Specific Options | | [Optional] Select the interrupt priority for |

| | | | |
|---|---|----------|---|
| Interrupt Priority | | | the Sub Clock Oscillation Stop Detection interrupt. |
| Main Oscillation Stop Detection Settings | | | |
| Enable main clock oscillator stop detection via the MOSC_STOP interrupt | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Oscillation Stop Detection for Main Clock enabled. |
| Main Oscillation Stop Detection Time | Manual Entry | 0 | These bits specify the oscillation stop detection time. It is detected that oscillation has stopped when oscillation has been stopped for (A - 2) to (A + 1) clock cycles, where A refers to the time specified by these bits. Oscillation stop detection time = High speed on-chip oscillator clock (HOCO) cycle x ((value of OSDCCMP) + 1). |
| Main Oscillation Stop Detection Interrupt Priority | MCU Specific Options | | [Optional] Select the interrupt priority for the Main Oscillation Stop Detection interrupt. |
| Oscillator Stop Detection Settings | | | |
| Clock Switch Enable for Oscillation Stop Detected of SDADCCLK | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | The OSTDCSE bit specifies the source clock of the 24-bit Sigma-delta A/D Converter Clock switched to HOCO when oscillation stop detected. |
| Name | Name must be a valid C symbol | g_cg0 | Module name. |
| Enable main oscillator stop detection via the NMI interrupt | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | Oscillation Stop Detection for System Clock enabled. |
| Oscillation Stop Detection Callback | Name must be a valid C symbol | NULL | A user callback function must be provided if oscillation stop detection for System Clock/Main Oscillation/Sub Clock |

Oscillation is used. If this callback function is provided, it is called from the NMI handler if the main oscillator stops.

Clock Configuration

This module is used to configure the system clocks. There are no module specific clock configurations required to use it.

Pin Configuration

The CGC module controls the output of the CLOCKOUT signal.

If an external oscillator is used the XTAL and EXTAL pins must be configured accordingly. When running from an on chip oscillator there is no requirement for the main clock external oscillator. In this case, the XTAL and EXTAL pins can be set to a different function in the RA Configuration editor.

The functionality of the subclock external oscillator pins XCIN and XCOU is fixed.

Usage Notes

Oscillation Stop Detection

CGC driver supports following oscillation stop detection function.

NMI Interrupt

The CGC driver uses the NMI for oscillation stop detection of the main oscillator after `R_CGC_OscStopDetectEnable` is called. The NMI is enabled by default. No special configuration is required. When the NMI is triggered, the callback function registered during `R_CGC_Open()` is called.

Main Oscillator Stop Detection Interrupt

A main clock oscillation stop detection interrupt (`MOSTD_STOP`) is generated when the Oscillation Stop Detection for Main Clock is enabled. The main oscillation stop detection interrupt is a maskable interrupt. When the `MOSTD_STOP` is triggered, the callback function registered during `R_CGC_Open()` is called.

Subclk Oscillator Stop Detection Interrupt

A sub clock oscillation stop detection interrupt (`SOSC_STOP`) is generated when the Oscillation Stop Detection for Sub Clock is enabled. The sub clock oscillation stop detection interrupt is a maskable interrupt. When the `SOSC_STOP` is triggered, the callback function registered during `R_CGC_Open()` is called.

ADC Clock Switching

When Clock Switch Enable for Oscillation Stop Detected is set.

- When MOSC stop is detected when MOSC is selected for SDADCCLK, SDADCCLK is switched to HOCO.
- When SOSC stop is detected when PLL is selected for SDADCCLK, SDADCCLK is switched to

HOCO.

Starting or Stopping the Subclock

If the Subclock Populated property is set to Populated on the BSP configuration tab, then the subclock is started in the BSP startup routine. Otherwise, it is stopped in the BSP startup routine. Starting and stopping the subclock at runtime is not recommended since the stabilization requirements typically negate the negligible power savings.

The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take up to several seconds to stabilize. RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. In this case the default wait time is 1000ms (1 second). When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation. Because there is no hardware stabilization status bit for the subclock R_CGC_ClockCheck cannot be used to optimize this wait.

Changing the subclock state during `R_CGC_ClocksCfg()` is not supported.

Low Power Operation

If "Use Low Voltage Mode" is enabled in the BSP MCU specific properties (not available on all MCUs), the MCU is always in low voltage mode and no other power modes are considered. The following conditions must be met for the MCU to run in low voltage mode:

- Requires HOCO to be running, so HOCO cannot be stopped in low voltage mode
- Requires PLL to be stopped, so PLL APIs are not available in low voltage mode
- Requires ICLK \leq 4 MHz
- If oscillation stop detection is used, dividers of 1 or 2 cannot be used for any clock

If "Use Low Voltage Mode" is not enabled, the MCU applies the lowest power mode by searching through the following list in order and applying the first power mode that is supported under the current conditions:

- Subosc-speed mode (lowest power)
 - Requires system clock to be LOCO or subclock
 - Requires MOCO, HOCO, main oscillator, and PLL (if present) to be stopped
 - Requires ICLK and FCLK dividers to be 1
- Low-speed mode
 - Requires PLL to be stopped
 - Requires ICLK \leq 1 MHz
 - If oscillation stop detection is used, dividers of 1, 2, 4, or 8 cannot be used for any clock
- Middle-speed mode (not supported on all MCUs)
 - Requires ICLK \leq 8 MHz
- High-speed mode
 - Default mode if no other operating mode is supported

Refer to the section "Function for Lower Operating Power Consumption" in the "Low Power Modes" chapter of the hardware manual for MCU specific information about operating power control modes.

Note

The DCDC regulator (if present) is only available in Middle- and High-speed modes. The BSP will automatically switch between DCDC and LDO when switching between compatible and incompatible modes if the DCDC regulator is in use. Switching to the LDO incurs a 60 microsecond critical section wherein all interrupts AND peripherals are stopped. Switching back to DCDC from the LDO incurs an additional 22 microsecond critical section (peripherals running).

When low voltage mode is not used, the following functions adjust the operating power control mode to ensure it remains within the hardware specification and to ensure the MCU is running at the optimal operating power control mode:

- [R_CGC_ClockStart\(\)](#)
- [R_CGC_ClockStop\(\)](#)
- [R_CGC_SystemClockSet\(\)](#)
- [R_CGC_OscStopDetectEnable\(\)](#)
- [R_CGC_OscStopDetectDisable\(\)](#)

Note

FSP APIs, including these APIs, are not thread safe. These APIs and any other user code that modifies the operating power control mode must not be allowed to interrupt each other. Proper care must be taken during application design if these APIs are used in threads or interrupts to ensure this constraint is met.

No action is required by the user of these APIs. This section is provided for informational purposes only.

Examples

Basic Example

This is a basic example of minimal use of the CGC in an application.

```
void cgc_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the CGC module. */
    err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Change the system clock to LOCO for power saving. */
    /* Start the LOCO. */
    err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_LOCO, NULL);
    assert(FSP_SUCCESS == err);
    /* Wait for the LOCO stabilization wait time.
    *
    * NOTE: The MOCO, LOCO and subclock do not have stabilization status bits, so any
    stabilization time must be
```

```
* performed via a software wait when starting these oscillators. For all other
oscillators, R_CGC_ClockCheck can
* be used to verify stabilization status.
*/
R_BSP_SoftwareDelay(BSP_FEATURE_CGC_LOCO_STABILIZATION_MAX_US,
BSP_DELAY_UNITS_MICROSECONDS);
/* Set divisors. Divisors for clocks that don't exist on the MCU are ignored. */
cgc_divider_cfg_t dividers =
{
/* PCLKB is not used in this application, so select the maximum divisor for lowest
power. */
.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_64,
/* PCLKD is not used in this application, so select the maximum divisor for lowest
power. */
.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_64,
/* ICLK is the MCU clock, allow it to run as fast as the LOCO is capable. */
.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1,
/* These clocks do not exist on some devices. If any clocks don't exist, set the
divider to 1. */
.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_1,
.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_1,
.sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_1,
.sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_1,
};
/* Switch the system clock to LOCO. */
err = R_CGC_SystemClockSet(&g_cgc0_ctrl, CGC_CLOCK_LOCO, &dividers);
assert(FSP_SUCCESS == err);
}
```

Configuring Multiple Clocks

This example demonstrates switching to a new source clock and stopping the previous source clock in a single function call using `R_CGC_ClocksCfg()`.

```
void cgc_clocks_cfg_example (void)
```

```
{
    fsp_err_t err = FSP_SUCCESS;

    /* Initializes the CGC module. */
    err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Change the system clock to PLL running from the main oscillator. */
    /* Assuming the system clock is MOCO, switch to HOCO. */
    cgc_clocks_cfg_t clocks_cfg;

    clocks_cfg.system_clock           = CGC_CLOCK_PLL;
    clocks_cfg.pll_state              = CGC_CLOCK_CHANGE_NONE;
    clocks_cfg.pll_cfg.source_clock   = CGC_CLOCK_MAIN_OSC; // unused
    clocks_cfg.pll_cfg.multiplier     = CGC_PLL_MUL_10_0;   // unused
    clocks_cfg.pll_cfg.divider        = CGC_PLL_DIV_2;      // unused
    clocks_cfg.divider_cfg.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1;
    clocks_cfg.divider_cfg.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.mainosc_state          = CGC_CLOCK_CHANGE_NONE;
    clocks_cfg.hoco_state              = CGC_CLOCK_CHANGE_START;
    clocks_cfg.moco_state              = CGC_CLOCK_CHANGE_STOP;
    clocks_cfg.loco_state              = CGC_CLOCK_CHANGE_NONE;

    err = R_CGC_ClocksCfg(&g_cgc0_ctrl, &clocks_cfg);
    assert(FSP_SUCCESS == err);
}

#if BSP_FEATURE_CGC_HAS_PLL
    /* Assuming the system clock is HOCO, switch to PLL running from main oscillator and
stop MOCO. */
    clocks_cfg.system_clock           = CGC_CLOCK_PLL;
    clocks_cfg.pll_state              = CGC_CLOCK_CHANGE_START;
    clocks_cfg.pll_cfg.source_clock   = CGC_CLOCK_MAIN_OSC;
    clocks_cfg.pll_cfg.multiplier     = (cgc_pll_mul_t) BSP_CFG_PLL_MUL;
```

```
clocks_cfg.pll_cfg.divider          = (cgc_pll_div_t) BSP_CFG_PLL_DIV;
clocks_cfg.divider_cfg.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1;
clocks_cfg.divider_cfg.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.mainosc_state             = CGC_CLOCK_CHANGE_START;
clocks_cfg.hoco_state                = CGC_CLOCK_CHANGE_STOP;
clocks_cfg.moco_state               = CGC_CLOCK_CHANGE_NONE;
clocks_cfg.loco_state               = CGC_CLOCK_CHANGE_NONE;

err = R_CGC_ClocksCfg(&g_cgc0_ctrl, &clocks_cfg);
assert(FSP_SUCCESS == err);

#endif
}
```

Oscillation Stop Detection

This example demonstrates registering a callback for oscillation stop detection of the main oscillator.

```
/* Example callback called when oscillation stop is detected. */
void oscillation_stop_callback (cgc_callback_args_t * p_args)
{
    FSP_PARAMETER_NOT_USED(p_args);

    fsp_err_t err = FSP_SUCCESS;

    /* (Optional) If the MCU was running on the main oscillator, the MCU is now running
    on MOCO. Switch clocks if
    * desired. This example shows switching to HOCO. */
    err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_HOCO, NULL);
    assert(FSP_SUCCESS == err);

    do
    {
        /* Wait for HOCO to stabilize. */
        err = R_CGC_ClockCheck(&g_cgc0_ctrl, CGC_CLOCK_HOCO);
    }
```

```
    } while (FSP_SUCCESS != err);
cgc_divider_cfg_t dividers =
{
    .sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4,
    .sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4,

    assert(FSP_SUCCESS == err);
}

```

Data Structures

struct [cgc_instance_ctrl_t](#)

Data Structure Documentation

◆ cgc_instance_ctrl_t

struct cgc_instance_ctrl_t

CGC private control block. DO NOT MODIFY. Initialization occurs when [R_CGC_Open\(\)](#) is called.

Data Fields

void const * [p_context](#)

Field Documentation

◆ p_context

void const* cgc_instance_ctrl_t::p_context

Placeholder for user data. Passed to the user callback in [cgc_callback_args_t](#).

Function Documentation

◆ **R_CGC_Open()**

```
fsp_err_t R_CGC_Open ( cgc_ctrl_t *const p_ctrl, cgc_cfg_t const *const p_cfg )
```

Initialize the CGC API. Implements `cgc_api_t::open`.

Example:

```
/* Initializes the CGC module. */
err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);
```

Return values

| | |
|----------------------|-------------------------------|
| FSP_SUCCESS | CGC successfully initialized. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |

◆ **R_CGC_ClocksCfg()**

```
fsp_err_t R_CGC_ClocksCfg ( cgc_ctrl_t *const p_ctrl, cgc_clocks_cfg_t const *const p_clock_cfg )
```

Reconfigures all main system clocks. This API can be used for any of the following purposes:

- start or stop clocks
- change the system clock source
- configure the PLL/PLL2 multiplication and division ratios when starting the PLL
- configure the division ratios when starting the HOCO/MOCO/MOSC
- change the system dividers

If the requested system clock source has a stabilization flag, this function blocks waiting for the stabilization flag of the requested system clock source to be set. If the requested system clock source was just started and it has no stabilization flag, this function blocks for the stabilization time required by the requested system clock source according to the Electrical Characteristics section of the hardware manual. If the requested system clock source has no stabilization flag and it is already running, it is assumed to be stable and this function will not block. If the requested system clock is the subclock, the subclock must be stable prior to calling this function.

The internal dividers (`cgc_clocks_cfg_t::divider_cfg`) are subject to constraints described in footnotes of the hardware manual table detailing specifications for the clock generation circuit for the internal clocks for the MCU. For example:

- RA6M3: see footnotes of Table 9.2 "Specifications of the clock generation circuit for the internal clocks" in the RA6M3 manual R01UH0886EJ0100
- RA2A1: see footnotes of Table 9.2 "Clock generation circuit specifications for the internal clocks" in the RA2A1 manual R01UH0888EJ0100

Do not attempt to stop the requested clock source or the source of a PLL if the PLL will be running after this operation completes.

Implements `cgc_api_t::clocksCfg`.

Example:

```
/* Assuming the system clock is MOCO, switch to HOCO. */
```

```

cgc_clocks_cfg_t clocks_cfg;

clocks_cfg.system_clock           = CGC_CLOCK_PLL;
clocks_cfg.pll_state              = CGC_CLOCK_CHANGE_NONE;
clocks_cfg.pll_cfg.source_clock   = CGC_CLOCK_MAIN_OSC; // unused
clocks_cfg.pll_cfg.multiplier     = CGC_PLL_MUL_10_0;   // unused
clocks_cfg.pll_cfg.divider        = CGC_PLL_DIV_2;      // unused
clocks_cfg.divider_cfg.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1;
clocks_cfg.divider_cfg.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.bclk_div  = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.divider_cfg.sckdivcr_b.fclk_div  = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.mainosc_state          = CGC_CLOCK_CHANGE_NONE;
clocks_cfg.hoco_state             = CGC_CLOCK_CHANGE_START;
clocks_cfg.moco_state             = CGC_CLOCK_CHANGE_STOP;
clocks_cfg.loco_state             = CGC_CLOCK_CHANGE_NONE;

err = R_CGC_ClocksCfg(&g_cgc0_ctrl, &clocks_cfg);

assert(FSP_SUCCESS == err);

```

Return values

| | |
|------------------------------|--|
| FSP_SUCCESS | Clock configuration applied successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_IN_USE | Attempt to stop the current system clock or the PLL source clock. |
| FSP_ERR_CLOCK_ACTIVE | PLL configuration cannot be changed while PLL is running. |
| FSP_ERR_OSC_STOP_DET_ENABLED | PLL multiplier must be less than 20 if oscillation stop detect is enabled and the input frequency is less than 12.5 MHz. |
| FSP_ERR_NOT_STABILIZED | PLL clock source is not stable. |
| FSP_ERR_PLL_SRC_INACTIVE | PLL clock source is not running. |
| FSP_ERR_INVALID_STATE | The subclock must be running before activating HOCO with FLL. |

◆ R_CGC_ClockStart()

```
fsp_err_t R_CGC_ClockStart ( cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_pll_cfg_t const
*const p_pll_cfg )
```

Start the specified clock if it is not currently active. The PLL configuration cannot be changed while the PLL is running. Implements `cgc_api_t::clockStart`.

The PLL source clock must be operating and stable prior to starting the PLL.

Example:

```
/* Start the LOCO. */
err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_LOCO, NULL);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|------------------------------|--|
| FSP_SUCCESS | Clock initialized successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_STABILIZED | The clock source is not stabilized after being turned off or PLL clock source is not stable. |
| FSP_ERR_PLL_SRC_INACTIVE | PLL clock source is not running. |
| FSP_ERR_CLOCK_ACTIVE | PLL configuration cannot be changed while PLL is running. |
| FSP_ERR_OSC_STOP_DET_ENABLED | PLL multiplier must be less than 20 if oscillation stop detect is enabled and the input frequency is less than 12.5 MHz. |
| FSP_ERR_INVALID_STATE | The subclock must be running before activating HOCO with FLL. |

◆ **R_CGC_ClockStop()**

```
fsp_err_t R_CGC_ClockStop ( cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source )
```

Stop the specified clock if it is active. Implements `cgc_api_t::clockStop`.

Do not attempt to stop the current system clock source. Do not attempt to stop the source clock of a PLL if the PLL is running.

Return values

| | |
|------------------------------|---|
| FSP_SUCCESS | Clock stopped successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_IN_USE | Attempt to stop the current system clock or the PLL source clock. |
| FSP_ERR_OSC_STOP_DET_ENABLED | Attempt to stop MOCO when Oscillation stop is enabled. |
| FSP_ERR_NOT_STABILIZED | Clock not stabilized after starting. |

◆ **R_CGC_SystemClockSet()**

```
fsp_err_t R_CGC_SystemClockSet ( cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source,
cgc_divider_cfg_t const *const p_divider_cfg )
```

Set the specified clock as the system clock and configure the internal dividers for ICLK, PCLKA, PCLKB, PCLKC, PCLKD, BCLK, and FCLK. Implements `cgc_api_t::systemClockSet`.

The requested clock source must be running and stable prior to calling this function. The internal dividers are subject to constraints described in the hardware manual table "Specifications of the Clock Generation Circuit for the internal clocks".

The internal dividers (`p_divider_cfg`) are subject to constraints described in footnotes of the hardware manual table detailing specifications for the clock generation circuit for the internal clocks for the MCU. For example:

- RA6M3: see footnotes of Table 9.2 "Specifications of the clock generation circuit for the internal clocks" in the RA6M3 manual R01UH0886EJ0100
- RA2A1: see footnotes of Table 9.2 "Clock generation circuit specifications for the internal clocks" in the RA2A1 manual R01UH0888EJ0100

This function also updates the RAM and ROM wait states, the operating power control mode, and the SystemCoreClock CMSIS global variable.

Example:

```
/* Set divisors. Divisors for clocks that don't exist on the MCU are ignored. */
cgc_divider_cfg_t dividers =
{
```

```

/* PCLKB is not used in this application, so select the maximum divisor for lowest
power. */
    .sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_64,
/* PCLKD is not used in this application, so select the maximum divisor for lowest
power. */
    .sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_64,
/* ICLK is the MCU clock, allow it to run as fast as the LOCO is capable. */
    .sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1,
/* These clocks do not exist on some devices. If any clocks don't exist, set the
divider to 1. */
    .sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_1,
    .sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_1,
    .sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_1,
    .sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_1,
};
/* Switch the system clock to LOCO. */
err = R_CGC_SystemClockSet(&g_cgc0_ctrl, CGC_CLOCK_LOCO, &dividers);
assert(FSP_SUCCESS == err);

```

Return values

| | |
|------------------------|---|
| FSP_SUCCESS | Operation performed successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_CLOCK_INACTIVE | The specified clock source is inactive. |
| FSP_ERR_NOT_STABILIZED | The clock source has not stabilized |

◆ **R_CGC_SystemClockGet()**

```
fsp_err_t R_CGC_SystemClockGet ( cgc_ctrl_t *const p_ctrl, cgc_clock_t *const p_clock_source,
cgc_divider_cfg_t *const p_divider_cfg )
```

Return the current system clock source and configuration. Implements `cgc_api_t::systemClockGet`.

Return values

| | |
|-------------------|-----------------------------------|
| FSP_SUCCESS | Parameters returned successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |

◆ **R_CGC_ClockCheck()**

```
fsp_err_t R_CGC_ClockCheck ( cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source )
```

Check the specified clock for stability. Implements `cgc_api_t::clockCheck`.

Return values

| | |
|------------------------|------------------------------|
| FSP_SUCCESS | Clock is running and stable. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_NOT_STABILIZED | Clock not stabilized. |
| FSP_ERR_CLOCK_INACTIVE | Clock not turned on. |

◆ **R_CGC_OscStopDetectEnable()**

```
fsp_err_t R_CGC_OscStopDetectEnable ( cgc_ctrl_t *const p_ctrl)
```

Enable the oscillation stop detection for the main clock. Implements `cgc_api_t::oscStopDetectEnable`.

The MCU will automatically switch the system clock to MOCO when a stop is detected if Main Clock is the system clock. If the system clock is the PLL, then the clock source will not be changed and the PLL free running frequency will be the system clock frequency.

Example:

```
/* Enable oscillation stop detection. The main oscillator must be running at this
point. */
err = R_CGC_OscStopDetectEnable(&g_cgc0_ctrl);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Operation performed successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_LOW_VOLTAGE_MODE | Settings not allowed in low voltage mode. |
| FSP_ERR_UNSUPPORTED | Function not supported. |

◆ **R_CGC_OscStopDetectDisable()**

```
fsp_err_t R_CGC_OscStopDetectDisable ( cgc_ctrl_t *const p_ctrl)
```

Disable the oscillation stop detection for the main clock. Implements `cgc_api_t::oscStopDetectDisable`.

Example:

```
/* (Optional) Oscillation stop detection must be disabled before entering any low
power mode. */
err = R_CGC_OscStopDetectDisable(&g_cgc0_ctrl);
assert(FSP_SUCCESS == err);
__WFI();
```

Return values

| | |
|---------------------------|---|
| FSP_SUCCESS | Operation performed successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_OSC_STOP_DETECTED | The Oscillation stop detect status flag is set. Under this condition it is not possible to disable the Oscillation stop detection function. |
| FSP_ERR_UNSUPPORTED | Function not supported. |

◆ R_CGC_OscStopStatusClear()

```
fsp_err_t R_CGC_OscStopStatusClear ( cgc_ctrl_t *const p_ctrl)
```

Clear the Oscillation Stop Detection Status register. This register is not cleared automatically if the stopped clock is restarted. Implements `cgc_api_t::oscStopStatusClear`.

After clearing the status, oscillation stop detection is no longer enabled.

This register cannot be cleared while the main oscillator is the system clock or the PLL source clock.

Example:

```
/* (Optional) Clear the error flag. Only clear this flag after switching the MCU
clock source away from the main
* oscillator and if the main oscillator is stable again. */
err = R_CGC_OscStopStatusClear(&g_cgc0_ctrl);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|-------------------------------|--|
| FSP_SUCCESS | Operation performed successfully. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |
| FSP_ERR_CLOCK_INACTIVE | Main oscillator must be running to clear the oscillation stop detection flag. |
| FSP_ERR_OSC_STOP_CLOCK_ACTIVE | The Oscillation Detect Status flag cannot be cleared if the Main Osc or PLL is set as the system clock. Change the system clock before attempting to clear this bit. |
| FSP_ERR_INVALID_HW_CONDITION | Oscillation stop status was not cleared. Check preconditions and try again. |
| FSP_ERR_UNSUPPORTED | Function not supported. |

◆ **R_CGC_CallbackSet()**

```
fsp_err_t R_CGC_CallbackSet ( cgc_ctrl_t *const p_api_ctrl, void(*) (cgc_callback_args_t *)
p_callback, void const *const p_context, cgc_callback_args_t *const p_callback_memory )
```

Updates the user callback and has option of providing memory for callback structure. Implements `cgc_api_t::callbackSet`

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |
| FSP_ERR_UNSUPPORTED | Function not supported. |

◆ **R_CGC_Close()**

```
fsp_err_t R_CGC_Close ( cgc_ctrl_t *const p_ctrl)
```

Closes the CGC module. Implements `cgc_api_t::close`.

Return values

| | |
|-------------------|------------------------------------|
| FSP_SUCCESS | The module is successfully closed. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Module is not open. |

`fsp_err_t` `R_ELC_Disable` (`elc_ctrl_t *const p_ctrl`)

Detailed Description

Driver for the ELC peripheral on RA MCUs. This module implements the [ELC Interface](#).

Overview

The event link controller (ELC) uses the event requests generated by various peripheral modules as source signals to connect (link) them to different modules, allowing direct cooperation between the modules without central processing unit (CPU) intervention. The conceptual diagram below illustrates a potential setup where a pin interrupt triggers a timer which later triggers an ADC conversion and CTSU scan, while at the same time a serial communication interrupt automatically starts a data transfer. These tasks would be automatically handled without the need for polling or interrupt management.

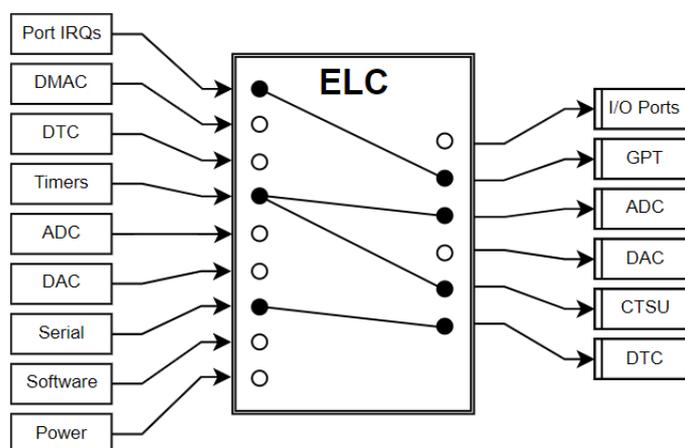

Figure 294: Event Link Controller Conceptual Diagram

In essence, the ELC is an array of multiplexers to route a wide variety of interrupt signals to a subset of peripheral functions. Events are linked by setting the multiplexer for the desired function to the desired signal (through `R_ELC_LinkSet`). The diagram below illustrates one peripheral output of the ELC. In this example, a conversion start is triggered for ADC0 Group A when the GPT0 counter overflows:

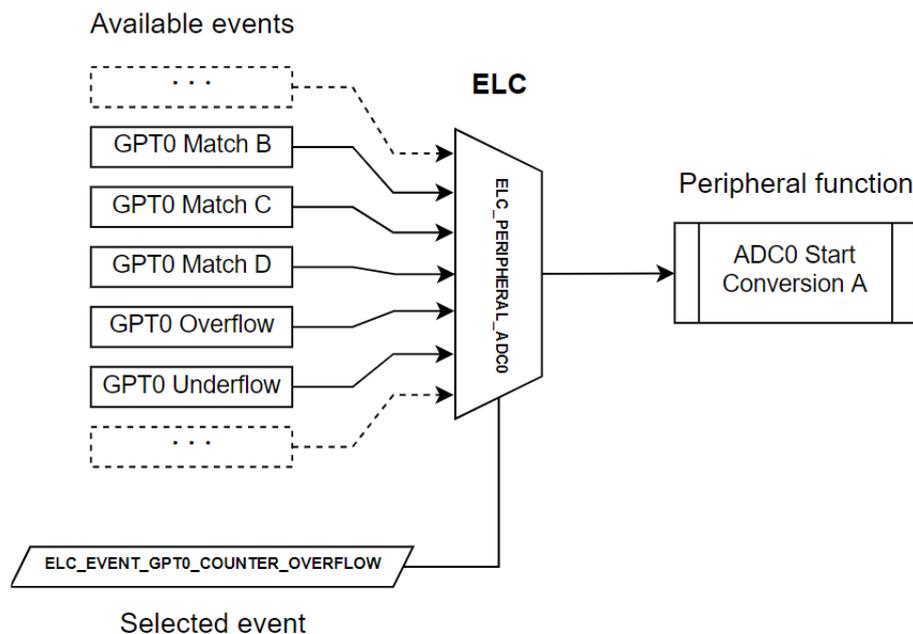

Figure 295: ELC Example

Features

The ELC HAL module can perform the following functions:

- Initialize the ELC to a pre-defined set of links
- Create an event link between two blocks
- Break an event link between two blocks
- Generate one of two software events that interrupt the CPU
- Globally enable or disable event links

A variety of functions can be activated via events, including:

- General-purpose timer (GPT) control
- ADC and DAC conversion start
- Synchronized I/O port output (ports 1-4 only)
- Capacitive touch unit (CTS) measurement activation

Note

The available sources and peripherals may differ between devices. A full list of selectable peripherals and events is available in the User's Manual for your device.

Some peripherals have specific settings related to ELC event generation and/or reception. Details on how to enable event functionality for each peripheral are located in the usage notes for the related module(s) as well as in the User's Manual for your device.

Configuration

Note

Event links will be automatically generated based on the selections made in module properties. To view the currently linked events check the [Event Links tab in the RA Configuration editor](#).

Calling [R_ELC_Open](#) followed by [R_ELC_Enable](#) will automatically link all events shown in the Event Links tab.

To manually link an event to a peripheral at runtime perform the following steps:

1. Configure the operation of the destination peripheral (including any configuration necessary to receive events)
2. Use `R_ELC_LinkSet` to set the desired event link to the peripheral
3. Use `R_ELC_Enable` to enable transmission of event signals
4. Configure the signaling module to output the desired event (typically an interrupt)

To disable the event, either use `R_ELC_LinkBreak` to clear the link for a specific event or `R_ELC_Disable` to globally disable event linking.

Note

The ELC module needs no pin, clocking or interrupt configuration; it is merely a mechanism to connect signals between peripherals. However, when linking I/O Ports via the ELC the relevant I/O pins need to be configured as inputs or outputs.

Build Time Configurations for r_elc

The following build time configurations are defined in `fsp_cfg/r_elc_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for System > Event Link Controller (r_elc)

This module can be added to the Stacks tab via `New Stack > System > Event Link Controller (r_elc)`. Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|--|--------------------|--|
| Name | ELC instance name must be <code>g_elc</code> to match <code>elc_cfg_t</code> data structure created in <code>elc_data.c</code> | <code>g_elc</code> | Module name. Fixed to <code>g_elc</code> . |

Usage Notes

Limitations

Developers should be aware of the following limitations when using the ELC:

- To link events it is necessary for the ELC and the related modules to be enabled. The ELC cannot operate if the related modules are in the module stop state or the MCU is in a low power consumption mode for which the module is stopped.
- If two modules are linked across clock domains there may be a 1 to 2 cycle delay between event signaling and reception. The delay timing is based on the frequency of the slowest clock.

Examples

Basic Example

Below is a basic example of minimal use of event linking in an application.

```
/* This struct is automatically generated based on the events configured by
peripherals in the RA Configuration editor. */
static const elc_cfg_t g_elc_cfg =
{
    .link[ELC_PERIPHERAL_GPT_A] = ELC_EVENT_ICU_IRQ0,
    .link[ELC_PERIPHERAL_IOPORT1] = ELC_EVENT_GPT4_COUNTER_OVERFLOW
};

void elc_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the software and sets the links defined in the control structure. */
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Create or modify a link between a peripheral function and an event source. */
    err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0,
ELC_EVENT_GPT4_COUNTER_OVERFLOW);
    assert(FSP_SUCCESS == err);
    /* Globally enable event linking in the ELC. */
    err = R_ELC_Enable(&g_elc_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Software-Generated Events

This example demonstrates how to use a software-generated event to signal a peripheral. This can be useful when the desired event source is not supported by the ELC hardware.

```
/* Interrupt handler for peripheral event not supported by the ELC */
void peripheral_isr (void)
{
    fsp_err_t err;
    /* Generate an event signal through software to the linked peripheral. */
```

```
err = R_ELC_SoftwareEventGenerate(&g_elc_ctrl, ELC_SOFTWARE_EVENT_0);
assert(FSP_SUCCESS == err);
}
void elc_software_event (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Open the module. */
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Link ADC0 conversion start to software event 0. */
    err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0,
ELC_EVENT_ELC_SOFTWARE_EVENT_0);
    assert(FSP_SUCCESS == err);
    while (true)
    {
        /* Application code here. */
    }
}
```

Data Structures

struct [elc_instance_ctrl_t](#)

Data Structure Documentation

◆ [elc_instance_ctrl_t](#)

struct [elc_instance_ctrl_t](#)

ELC private control block. DO NOT MODIFY. Initialization occurs when [R_ELC_Open\(\)](#) is called.

Function Documentation

◆ **R_ELC_Open()**

```
fsp_err_t R_ELC_Open ( elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg )
```

Initialize all the links in the Event Link Controller. Implements `elc_api_t::open`

The configuration structure passed in to this function includes links for every event source included in the ELC and sets them all at once. To set or clear an individual link use `R_ELC_LinkSet` and `R_ELC_LinkBreak` respectively.

Example:

```
/* Initializes the software and sets the links defined in the control structure. */
err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
```

Return values

| | |
|----------------------|-------------------------------|
| FSP_SUCCESS | Initialization was successful |
| FSP_ERR_ASSERTION | p_ctrl or p_cfg was NULL |
| FSP_ERR_ALREADY_OPEN | The module is currently open |

◆ **R_ELC_Close()**

```
fsp_err_t R_ELC_Close ( elc_ctrl_t *const p_ctrl)
```

Globally disable ELC linking. Implements `elc_api_t::close`

Return values

| | |
|-------------------|-----------------------------------|
| FSP_SUCCESS | The ELC was successfully disabled |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

◆ **R_ELC_SoftwareEventGenerate()**

```
fsp_err_t R_ELC_SoftwareEventGenerate ( elc_ctrl_t *const p_ctrl, elc_software_event_t
event_number )
```

Generate a software event in the Event Link Controller. Implements `elc_api_t::softwareEventGenerate`

Example:

```
/* Generate an event signal through software to the linked peripheral. */
err = R_ELC_SoftwareEventGenerate(&g_elc_ctrl, ELC_SOFTWARE_EVENT_0);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Initialization was successful |
| FSP_ERR_ASSERTION | Invalid event number or p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

◆ **R_ELC_LinkSet()**

```
fsp_err_t R_ELC_LinkSet ( elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal )
```

Create a single event link. Implements `elc_api_t::linkSet`

Example:

```
/* Create or modify a link between a peripheral function and an event source. */
err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0,
ELC_EVENT_GPT4_COUNTER_OVERFLOW);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Initialization was successful |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

◆ **R_ELC_LinkBreak()**

```
fsp_err_t R_ELC_LinkBreak ( elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral )
```

Break an event link. Implements `elc_api_t::linkBreak`

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Event link broken |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

◆ **R_ELC_Enable()**

```
fsp_err_t R_ELC_Enable ( elc_ctrl_t *const p_ctrl)
```

Enable the operation of the Event Link Controller. Implements `elc_api_t::enable`

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | ELC enabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

◆ **R_ELC_Disable()**

```
fsp_err_t R_ELC_Disable ( elc_ctrl_t *const p_ctrl)
```

Disable the operation of the Event Link Controller. Implements `elc_api_t::disable`

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | ELC disabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

5.2.18.3 I/O Port (r_ioport)

Modules » System

Functions

| fsp_err_t | R_IOPORT_PortWrite (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask) |
| fsp_err_t | R_IOPORT_PinWrite (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level) |
| fsp_err_t | R_IOPORT_PortDirectionSet (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask) |
| fsp_err_t | R_IOPORT_PortEventInputRead (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_event_data) |
| fsp_err_t | R_IOPORT_PinEventInputRead (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_event) |
| fsp_err_t | R_IOPORT_PortEventOutputWrite (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t event_data, ioport_size_t mask_value) |
| fsp_err_t | R_IOPORT_PinEventOutputWrite (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t pin_value) |

Detailed Description

Driver for the I/O Ports peripheral on RA MCUs. This module implements the [I/O Port Interface](#).

Overview

The I/O port pins operate as general I/O port pins, I/O pins for peripheral modules, interrupt input pins, analog I/O, port group function for the ELC, or bus control pins.

Features

The IOPORT HAL module can configure the following pin settings:

- Pin direction
- Default output state
- Pull-up
- NMOS/PMOS
- Drive strength
- Event edge trigger (falling, rising or both)
- Whether the pin is to be used as an IRQ pin
- Whether the pin is to be used as an analog pin
- Peripheral connection

The module also provides the following functionality:

- Read/write GPIO pins/ports
- Sets event output data
- Reads event input data

Configuration

The I/O PORT HAL module must be configured by the user for the desired operation. The operating state of an I/O pin can be set via the RA Configuration tool. When the project is built a pin configuration file is created. The BSP will automatically configure the MCU IO ports accordingly at startup using the same API functions mentioned in this document.

Build Time Configurations for r_ioport

The following build time configurations are defined in fsp_cfg/r_ioport_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for System > I/O Port (r_ioport)

This module can be added to the Stacks tab via New Stack > System > I/O Port (r_ioport).

| Configuration | Options | Default | Description |
|-----------------------------|-------------------------------|---------------|---|
| Name | Name must be a valid C symbol | g_ioport | Module name. |
| 1st Port ELC Trigger Source | MCU Specific Options | | ELC source that will trigger the 1st port |
| 2nd Port ELC Trigger Source | MCU Specific Options | | ELC source that will trigger the 2nd port |
| 3rd Port ELC Trigger Source | MCU Specific Options | | ELC source that will trigger the 3rd port |
| 4th Port ELC Trigger Source | MCU Specific Options | | ELC source that will trigger the 4th port |
| Pin Configuration Name | Name must be a valid | g_bsp_pin_cfg | Name for pin |

C symbol

configuration structure

Clock Configuration

The I/O PORT HAL module does not require a specific clock configuration.

Pin Configuration

The IOPORT module is used for configuring pins.

Usage Notes

Port Group Function for ELC

Depending on pin configuration, the IOPORT module can perform automatic reads and writes on 4 ports (RA2 and RA0 series support 2 ports only, see the table of ELC triggers below) on receipt of an ELC event.

| ELC triggers | RA6T2 | RA2XX, RA0XX | All others |
|--------------|--------|--------------|------------|
| 1st Port | Port B | Port 1 | Port 1 |
| 2nd Port | Port C | Port 2 | Port 2 |
| 3rd Port | Port D | NA | Port 3 |
| 4th Port | Port E | NA | Port 4 |

When an event is received by a port, the state of the input pins on the port is saved in a hardware register. Simultaneously, the state of output pins on the port is set or cleared based on settings configured by the user. The functions [R_IOPORT_PinEventInputRead](#) and [R_IOPORT_PortEventInputRead](#) allow reading the last event input state of a pin or port, and event-triggered pin output can be configured through [R_IOPORT_PinEventOutputWrite](#) and [R_IOPORT_PortEventOutputWrite](#).

In addition, each pin on these ports can be configured to trigger an ELC event on rising, falling or both edges. This event can be used to activate other modules when the pin changes state.

Note

The number of ELC-aware ports vary across MCUs. Refer to the Hardware User's Manual for your device for more details.

Examples

Basic Example

This is a basic example of minimal use of the IOPORT in an application.

```
void basic_example ()
{
    bsp_io_level_t readLevel;
    fsp_err_t      err;
```

```
/* Initialize the IOPORT module and configure the pins
 * Note: The default pin configuration name in the RA Configuration tool is
g_bsp_pin_cfg */
    err = R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
/* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
/* Call R_IOPORT_PinsCfg if the configuration was not part of initial configurations
made in open */
    err = R_IOPORT_PinsCfg(&g_ioport_ctrl, &g_runtime_pin_cfg);
    assert(FSP_SUCCESS == err);
/* Set Pin 00 of Port 06 to High */
    err = R_IOPORT_PinWrite(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00, BSP_IO_LEVEL_HIGH
);
    assert(FSP_SUCCESS == err);
/* Read Pin 00 of Port 06*/
    err = R_IOPORT_PinRead(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00, &readLevel);
    assert(FSP_SUCCESS == err);
}
```

Blinky Example

This example uses IOPORT to configure and toggle a pin to blink an LED.

```
void blinky_example ()
{
    fsp_err_t err;
/* Initialize the IOPORT module and configure the pins */
    err = R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
/* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
/* Configure Pin as output
 * Call the R_IOPORT_PinCfg if the configuration was not part of initial
configurations made in open */
    err = R_IOPORT_PinCfg(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00,
IOPORT_CFG_PORT_DIRECTION_OUTPUT);
```

```
    assert(FSP_SUCCESS == err);
    bsp_io_level_t level = BSP_IO_LEVEL_LOW;
    while (1)
    {
        /* Determine the next state of the LEDs */
        if (BSP_IO_LEVEL_LOW == level)
        {
            level = BSP_IO_LEVEL_HIGH;
        }
        else
        {
            level = BSP_IO_LEVEL_LOW;
        }
        /* Update LED on RA6M3-PK */
        err = R_IOPORT_PinWrite(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00, level);
        assert(FSP_SUCCESS == err);
        /* Delay */
        R_BSP_SoftwareDelay(100, BSP_DELAY_UNITS_MILLISECONDS); // NOLINT
    }
}
```

ELC Example

This is an example of using IOPORT with ELC events. The ELC event system allows the captured data to be stored when it occurs and then read back at a later time.

```
static elc_instance_ctrl_t g_elc_ctrl;
static elc_cfg_t g_elc_cfg;
void ioport_elc_example ()
{
    bsp_io_level_t eventValue;
    fsp_err_t err;
    /* Initializes the software and sets the links defined in the control structure. */
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
    /* Handle any errors. This function should be defined by the user. */
}
```

```

    assert(FSP_SUCCESS == err);

    /* Create or modify a link between a peripheral function and an event source. */
    err = R_ELC_LinkSet(&g_elc_ctrl, (elc_peripheral_t) ELC_PERIPHERAL_IOPORT2,
ELC_EVENT_ELC_SOFTWARE_EVENT_0);

    assert(FSP_SUCCESS == err);

    /* Globally enable event linking in the ELC. */
    err = R_ELC_Enable(&g_elc_ctrl);
    assert(FSP_SUCCESS == err);

    /* Initialize the IOPORT module and configure the pins */
    err = R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
    assert(FSP_SUCCESS == err);

    /* Call the R_IOPORT_PinCfg if the configuration was not part of initial
configurations made in open */
    err = R_IOPORT_PinCfg(&g_ioport_ctrl, BSP_IO_PORT_02_PIN_00,
IOPORT_CFG_PORT_DIRECTION_INPUT);

    assert(FSP_SUCCESS == err);

    /* Generate an event signal through software to the linked peripheral. */
    err = R_ELC_SoftwareEventGenerate(&g_elc_ctrl, ELC_SOFTWARE_EVENT_0);
    assert(FSP_SUCCESS == err);

    /* Read Pin Event Input. The data(BSP_IO_LEVEL_HIGH/ BSP_IO_LEVEL_LOW) from
BSP_IO_PORT_02_PIN_00 is read into the
    * EIDR bit */
    err = R_IOPORT_PinEventInputRead(&g_ioport_ctrl, BSP_IO_PORT_02_PIN_00,
&eventValue);

    assert(FSP_SUCCESS == err);
}

```

◆ ioport_peripheral_t

| | |
|---------------------------------------|--|
| enum ioport_peripheral_t | |
| Superset of all peripheral functions. | |
| Enumerator | |
| IOPORT_PERIPHERAL_IO | Pin will functions as an IO pin |
| IOPORT_PERIPHERAL_DEBUG | Pin will function as a DEBUG pin |
| IOPORT_PERIPHERAL_AGT | Pin will function as an AGT peripheral pin |
| IOPORT_PERIPHERAL_AGTW | Pin will function as an AGT peripheral pin |
| IOPORT_PERIPHERAL_AGT1 | Pin will function as an AGT peripheral pin |
| IOPORT_PERIPHERAL_GPT0 | Pin will function as a GPT peripheral pin |
| IOPORT_PERIPHERAL_GPT1 | Pin will function as a GPT peripheral pin |
| IOPORT_PERIPHERAL_SCI0_2_4_6_8 | Pin will function as an SCI peripheral pin |
| IOPORT_PERIPHERAL_SCI1_3_5_7_9 | Pin will function as an SCI peripheral pin |
| IOPORT_PERIPHERAL_SPI | Pin will function as a SPI peripheral pin |
| IOPORT_PERIPHERAL_IIC | Pin will function as a IIC peripheral pin |
| IOPORT_PERIPHERAL_KEY | Pin will function as a KEY peripheral pin |

| | |
|-----------------------------------|--|
| IOPORT_PERIPHERAL_CLKOUT_COMP_RTC | Pin will function as a clock/comparator/RTC peripheral pin |
| IOPORT_PERIPHERAL_CAC_AD | Pin will function as a CAC/ADC peripheral pin |
| IOPORT_PERIPHERAL_BUS | Pin will function as a BUS peripheral pin |
| IOPORT_PERIPHERAL_CTSU | Pin will function as a CTSU peripheral pin |
| IOPORT_PERIPHERAL_ACMPHS | Pin will function as a CMPS peripheral pin |
| IOPORT_PERIPHERAL_LCDC | Pin will function as a segment LCD peripheral pin |
| IOPORT_PERIPHERAL_DE_SCI0_2_4_6_8 | Pin will function as an SCI peripheral DEn pin |
| IOPORT_PERIPHERAL_DE_SCI1_3_5_7_9 | Pin will function as an SCI DEn peripheral pin |
| IOPORT_PERIPHERAL_DALI | Pin will function as a DALI peripheral pin |
| IOPORT_PERIPHERAL_CEU | Pin will function as a CEU peripheral pin |
| IOPORT_PERIPHERAL_CAN | Pin will function as a CAN peripheral pin |
| IOPORT_PERIPHERAL_QSPI | Pin will function as a QSPI peripheral pin |
| IOPORT_PERIPHERAL_SSI | Pin will function as an SSI peripheral pin |
| IOPORT_PERIPHERAL_USB_FS | Pin will function as a USB full speed peripheral pin |
| IOPORT_PERIPHERAL_USB_HS | Pin will function as a USB high speed peripheral pin |
| IOPORT_PERIPHERAL_GPT2 | Pin will function as a GPT peripheral pin |
| IOPORT_PERIPHERAL_SDHI_MMC | Pin will function as an SD/MMC peripheral pin |
| IOPORT_PERIPHERAL_GPT3 | Pin will function as a GPT peripheral pin |
| IOPORT_PERIPHERAL_ETHER_MII | Pin will function as an Ethernet MII peripheral pin |
| IOPORT_PERIPHERAL_GPT4 | Pin will function as a GPT peripheral pin |
| IOPORT_PERIPHERAL_ETHER_RMII | Pin will function as an Ethernet RMII peripheral pin |
| IOPORT_PERIPHERAL_PDC | Pin will function as a PDC peripheral pin |

| | |
|--------------------------------|--|
| IOPORT_PERIPHERAL_LCD_GRAPHICS | Pin will function as a graphics LCD peripheral pin |
| IOPORT_PERIPHERAL_CAC | Pin will function as a CAC peripheral pin |
| IOPORT_PERIPHERAL_TRACE | Pin will function as a debug trace peripheral pin |
| IOPORT_PERIPHERAL_OSPI | Pin will function as a OSPI peripheral pin |
| IOPORT_PERIPHERAL_CEC | Pin will function as a CEC peripheral pin |
| IOPORT_PERIPHERAL_PGAOUT0 | Pin will function as a PGAOUT peripheral pin |
| IOPORT_PERIPHERAL_PGAOUT1 | Pin will function as a PGAOUT peripheral pin |
| IOPORT_PERIPHERAL_ULPT | Pin will function as a ULPT peripheral pin |
| IOPORT_PERIPHERAL_MIPI | Pin will function as a MIPI DSI peripheral pin |

◆ ioport_cfg_options_t

| | |
|------------------------------------|---|
| enum ioport_cfg_options_t | |
| Options to configure pin functions | |
| Enumerator | |
| IOPORT_CFG_PORT_DIRECTION_INPUT | Sets the pin direction to input (default) |
| IOPORT_CFG_PORT_DIRECTION_OUTPUT | Sets the pin direction to output. |
| IOPORT_CFG_PORT_OUTPUT_LOW | Sets the pin level to low. |
| IOPORT_CFG_PORT_OUTPUT_HIGH | Sets the pin level to high. |
| IOPORT_CFG_PULLUP_ENABLE | Enables the pin's internal pull-up. |
| IOPORT_CFG_PIM_TTL | Enables the pin's input mode. |
| IOPORT_CFG_NMOS_ENABLE | Enables the pin's NMOS open-drain output. |
| IOPORT_CFG_IRQ_ENABLE | Sets pin as an IRQ pin. |
| IOPORT_CFG_ANALOG_ENABLE | Enables pin to operate as an analog pin. |
| IOPORT_CFG_PERIPHERAL_PIN | Enables pin to operate as a peripheral pin. |
| | |

| | |
|----------------------------------|---|
| IOPORT_CFG_PORT_DIRECTION_INPUT | Sets the pin direction to input (default) |
| IOPORT_CFG_PORT_DIRECTION_OUTPUT | Sets the pin direction to output. |
| IOPORT_CFG_PORT_OUTPUT_LOW | Sets the pin level to low. |
| IOPORT_CFG_PORT_OUTPUT_HIGH | Sets the pin level to high. |
| IOPORT_CFG_PULLUP_ENABLE | Enables the pin's internal pull-up. |
| IOPORT_CFG_PIM_TTL | Enables the pin's input mode. |
| IOPORT_CFG_NMOS_ENABLE | Enables the pin's NMOS open-drain output. |
| IOPORT_CFG_PMOS_ENABLE | Enables the pin's PMOS open-drain output. |
| IOPORT_CFG_DRIVE_MID | Sets pin drive output to medium. |
| IOPORT_CFG_DRIVE_HS_HIGH | Sets pin drive output to high along with supporting high speed. |
| IOPORT_CFG_DRIVE_MID_IIC | Sets pin to drive output needed for IIC on a 20mA port. |
| IOPORT_CFG_DRIVE_HIGH | Sets pin drive output to high. |
| IOPORT_CFG_EVENT_RISING_EDGE | Sets pin event trigger to rising edge. |
| IOPORT_CFG_EVENT_FALLING_EDGE | Sets pin event trigger to falling edge. |
| IOPORT_CFG_EVENT_BOTH_EDGES | Sets pin event trigger to both edges. |
| IOPORT_CFG_IRQ_ENABLE | Sets pin as an IRQ pin. |
| IOPORT_CFG_ANALOG_ENABLE | Enables pin to operate as an analog pin. |
| IOPORT_CFG_PERIPHERAL_PIN | Enables pin to operate as a peripheral pin. |

Function Documentation

◆ **R_IOPORT_Open()**

```
fsp_err_t R_IOPORT_Open ( ioport_ctrl_t *const p_ctrl, const ioport_cfg_t * p_cfg )
```

Initializes internal driver data, then calls pin configuration function to configure pins.

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Pin configuration data written to PFS register(s) |
| FSP_ERR_ASSERTION | NULL pointer |
| FSP_ERR_ALREADY_OPEN | Module is already open. |

◆ **R_IOPORT_Close()**

```
fsp_err_t R_IOPORT_Close ( ioport_ctrl_t *const p_ctrl)
```

Resets IOPORT registers. Implements `ioport_api_t::close`

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | The IOPORT was successfully uninitialized |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The module has not been opened |

◆ **R_IOPORT_PinsCfg()**

```
fsp_err_t R_IOPORT_PinsCfg ( ioport_ctrl_t *const p_ctrl, const ioport_cfg_t * p_cfg )
```

Configures the functions of multiple pins by loading configuration data into pin PFS registers. Implements `ioport_api_t::pinsCfg`.

This function initializes the supplied list of PmnPFS registers with the supplied values. This data can be generated by the Pins tab of the RA Configuration editor or manually by the developer. Different pin configurations can be loaded for different situations such as low power modes and testing.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Pin configuration data written to PFS register(s) |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

◆ **R_IOPORT_PinCfg()**

```
fsp_err_t R_IOPORT_PinCfg ( ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg )
```

Configures the settings of a pin. Implements `ioport_api_t::pinCfg`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Pin configured |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

Note

This function is re-entrant for different pins. This function will change the configuration of the pin with the new configuration. For example it is not possible with this function to change the drive strength of a pin while leaving all the other pin settings unchanged. To achieve this the original settings with the required change will need to be written using this function.

◆ **R_IOPORT_PinRead()**

```
fsp_err_t R_IOPORT_PinRead ( ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_value )
```

Reads the level on a pin. Implements `ioport_api_t::pinRead`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Pin read |
| FSP_ERR_ASSERTION | NULL pointer |
| FSP_ERR_NOT_OPEN | The module has not been opened |

Note

This function is re-entrant for different pins.

◆ **R_IOPORT_PortRead()**

```
fsp_err_t R_IOPORT_PortRead ( ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *
p_port_value )
```

Reads the value on an IO port. Implements `ioport_api_t::portRead`.

The specified port will be read, and the levels for all the pins will be returned. Each bit in the returned value corresponds to a pin on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Port read |
| FSP_ERR_ASSERTION | NULL pointer |
| FSP_ERR_NOT_OPEN | The module has not been opened |

Note

This function is re-entrant for different ports.

◆ **R_IOPORT_PortWrite()**

```
fsp_err_t R_IOPORT_PortWrite ( ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value,
ioport_size_t mask )
```

Writes to multiple pins on a port. Implements `ioport_api_t::portWrite`.

The input value will be written to the specified port. Each bit in the value parameter corresponds to a bit on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on. Each bit in the mask parameter corresponds to a pin on the port.

Only the bits with the corresponding bit in the mask value set will be updated. For example, value = 0xFFFF, mask = 0x0003 results in only bits 0 and 1 being updated.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Port written to |
| FSP_ERR_INVALID_ARGUMENT | The port and/or mask not valid |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

Note

This function is re-entrant for different ports. This function makes use of the PCNTR3 register to atomically modify the levels on the specified pins on a port.

◆ **R_IOPORT_PinWrite()**

```
fsp_err_t R_IOPORT_PinWrite ( ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level )
```

Sets a pin's output either high or low. Implements `ioport_api_t::pinWrite`.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Pin written to |
| FSP_ERR_INVALID_ARGUMENT | The pin and/or level not valid |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

Note

This function is re-entrant for different pins. This function makes use of the PCNTR3 register to atomically modify the level on the specified pin on a port.

◆ **R_IOPORT_PortDirectionSet()**

```
fsp_err_t R_IOPORT_PortDirectionSet ( ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask )
```

Sets the direction of individual pins on a port. Implements `ioport_api_t::portDirectionSet()`.

Multiple pins on a port can be set to inputs or outputs at once. Each bit in the mask parameter corresponds to a pin on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on. If a bit is set to 1 then the corresponding pin will be changed to an input or an output as specified by the direction values. If a mask bit is set to 0 then the direction of the pin will not be changed.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Port direction updated |
| FSP_ERR_INVALID_ARGUMENT | The port and/or mask not valid |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PortEventInputRead()

```
fsp_err_t R_IOPORT_PortEventInputRead ( ioport_ctrl_t *const p_ctrl, bsp_io_port_t port,
ioport_size_t * p_event_data )
```

Reads the value of the event input data. Implements `ioport_api_t::portEventInputRead()`.

The event input data for the port will be read. Each bit in the returned value corresponds to a pin on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on.

The port event data is captured in response to a trigger from the ELC. This function enables this data to be read. Using the event system allows the captured data to be stored when it occurs and then read back at a later time.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Port read |
| FSP_ERR_INVALID_ARGUMENT | Port not a valid ELC port |
| FSP_ERR_ASSERTION | NULL pointer |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_UNSUPPORTED | Function not supported. |

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PinEventInputRead()

```
fsp_err_t R_IOPORT_PinEventInputRead ( ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin,
bsp_io_level_t * p_pin_event )
```

Reads the value of the event input data of a specific pin. Implements `ioport_api_t::pinEventInputRead`.

The pin event data is captured in response to a trigger from the ELC. This function enables this data to be read. Using the event system allows the captured data to be stored when it occurs and then read back at a later time.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Pin read |
| FSP_ERR_ASSERTION | NULL pointer |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_INVALID_ARGUMENT | Port is not valid ELC PORT. |
| FSP_ERR_UNSUPPORTED | Function not supported. |

Note

This function is re-entrant.

◆ R_IOPORT_PortEventOutputWrite()

```
fsp_err_t R_IOPORT_PortEventOutputWrite ( ioport_ctrl_t *const p_ctrl, bsp_io_port_t port,
ioport_size_t event_data, ioport_size_t mask_value )
```

This function writes the set and reset event output data for a port. Implements [ioport_api_t::portEventOutputWrite](#).

Using the event system enables a port state to be stored by this function in advance of being output on the port. The output to the port will occur when the ELC event occurs.

The input value will be written to the specified port when an ELC event configured for that port occurs. Each bit in the value parameter corresponds to a bit on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on. Each bit in the mask parameter corresponds to a pin on the port.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Port event data written |
| FSP_ERR_INVALID_ARGUMENT | Port or Mask not valid |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PinEventOutputWrite()

```
fsp_err_t R_IOPORT_PinEventOutputWrite ( ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin,
bsp_io_level_t pin_value )
```

This function writes the event output data value to a pin. Implements [ioport_api_t::pinEventOutputWrite](#).

Using the event system enables a pin state to be stored by this function in advance of being output on the pin. The output to the pin will occur when the ELC event occurs.

Return values

| | |
|--------------------------|--------------------------------|
| FSP_SUCCESS | Pin event data written |
| FSP_ERR_INVALID_ARGUMENT | Port or Pin or value not valid |
| FSP_ERR_NOT_OPEN | The module has not been opened |
| FSP_ERR_ASSERTION | NULL pointer |

Note

This function is re-entrant for different ports.

5.2.19 Timers

Modules

Detailed Description

Timers Modules.

Modules

Independent Channel, 16-bit and 8-bit timer (r_tau)

Driver for the TAU peripheral on RA MCUs. This module implements the [Timer Interface](#).

Port Output Enable for GPT (r_poeg)

Driver for the POEG peripheral on RA MCUs. This module implements the [POEG Interface](#).

Realtime Clock (r_rtc)

Driver for the RTC peripheral on RA MCUs. This module implements the [RTC Interface](#).

Realtime Clock (r_rtc_c)

Driver for the RTC peripheral on RA MCUs. This module implements the [RTC Interface](#).

Three-Phase PWM (r_gpt_three_phase)

Driver for 3-phase motor control using the GPT peripheral on RA MCUs. This module implements the [Three-Phase Interface](#).

Timer, General PWM (r_gpt)

Driver for the GPT32 and GPT16 peripherals on RA MCUs. This module implements the [Timer Interface](#).

Timer, Low-Power (r_agt)

Driver for the AGT peripheral on RA MCUs. This module implements the [Timer Interface](#).

Timer, Simultaneous Channel (r_tau_pwm)

Driver for the TAU_PWM peripheral on RA MCUs. This module

implements the [Timer Interface](#).

Timer, Ultra Low-Power (r_ulpt)

Driver for the ULPT peripheral on RA MCUs. This module implements the [Timer Interface](#).

5.2.19.1 Independent Channel, 16-bit and 8-bit timer (r_tau)

Detailed Description

Driver for the TAU peripheral on RA MCUs. This module implements the [Timer Interface](#).

Overview

Features

The TAU module has the following features:

- Supports Function Interval Timer, Square Wave Output, External Event Counter, Divider Function, Input Pulse Interval Measurement, Delay Counter, Input Signal High- or Low-Level Width Measurement.
- Configurable clock source and external sources input to TImn
- Configurable period (counts per timer cycle).
- Supports operation clocks: CK00, CK01, CK02, and CK03.
- Supports noise filter on input source.
- Supports 16-bit and 8-bit timers.
- Supports the runtime reconfiguration of the period.
- Signal can be output to a pin.
- Supports counting based on an external signal to TImn
- Supports measuring pulse width or pulse period.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value. Below table illustrates the channels and their corresponding supported features.

| Channel | Interval Timer | Square Wave Output | External Event Counter | Divider | Input Pulse Interval Measurement | Delay Counter | Measure High-Low Level Pulse Width | 8-bit timer operation | Operation clocks | Input signals | Output signals |

Configuration

Build Time Configurations for r_tau

The following build time configurations are defined in fsp_cfg/r_tau_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Pin Output Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | Enable output for either square wave or divider output |
| Pin Input Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | Enable input for pulse width measurement, level width measurement, event counting or divider functions. |

Configurations for Timers > Timer, Independent Channel, 16-bit and 8-bit Timer Operation (r_tau)

This module can be added to the Stacks tab via New Stack > Timers > Timer, Independent Channel, 16-bit and 8-bit Timer Operation (r_tau).

| Configuration | Options | Default | Description |
|---------------|--|----------------|--|
| General | | | |
| Name | Name must be a valid C symbol | g_timer0 | Module name. |
| Channel | Channel number must be a non-negative integer | 0 | Physical hardware channel. |
| Function | <ul style="list-style-type: none"> Interval Timer Square Wave Output External Event Counter Divider Input Pulse Interval Measurement Measure Low Level Pulse | Interval Timer | Function selection. Note: The calculation of the input pulse function and the high-low level pulse width measurement function is implemented using interrupts. ISR's must be enabled for these functions even if callback is unused. |

| | | | |
|-----------------|---|--------------|---|
| | Width | | |
| | <ul style="list-style-type: none"> • Measure High Level Pulse Width • Delay Counter | | |
| Bit Timer Mode | <ul style="list-style-type: none"> • 16-bit timer • Higher 8-bit timer • Lower 8-bit timer • Higher and Lower 8-bit timer | 16-bit timer | Specify the 16 or 8-bit timer mode |
| Operation Clock | <ul style="list-style-type: none"> • CK00 • CK01 • CK02 • CK03 | CK00 | Specify the selection of operation clock |
| Period | Value must be a non-negative integer | 0x10000 | <p>Specify the timer period based on the selected units.</p> <p>When the unit is set to 'Raw Counts', setting the period to 0x10000 results in the maximum period at the lowest divisor (fastest timer tick). When Pulse width measurement or high-low level pulse width measurement is enabled, this period is always generated as zero.. The period should be set maximally 0x100 when lower 8-bit mode or higher and lower 8-bit mode is enabled. When 'Input->Trigger Edge' is set to 'Trigger Edge Rising' or 'Trigger Edge Falling', this period can be maximally set to 0x20000 when using the divider function.</p> <p>If the requested period cannot be achieved, the settings with the largest possible period, that does not exceed</p> |

the requested period, are used. The theoretical calculated period is printed in a comment in the [timer_cfg_t](#) structure.

Unit of the period specified above

Specify the higher 8-bit timer period based on the selected unit.

When the unit is set to 'Raw Counts', setting the period to 0x100 results in the maximum period at the lowest divisor (fastest timer tick). This setting is only applicable in interval timer function with higher 8bit mode or higher and lower 8bit mode.

If the requested period cannot be achieved, the settings with the largest possible period that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the [tau_extended_cfg_t](#) structure.

Unit of the period specified above

| Callback | Name must be a valid C symbol | NULL | A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the timer period elapses. |

| | | |
|---------------------------------|----------------------|--|
| Interrupt Priority | MCU Specific Options | Timer interrupt priority. |
| Higher 8-bit Interrupt Priority | MCU Specific Options | Timer higher 8-bit interrupt priority. |

Clock Configuration

The TAU clock is based on the peripheral module clock (PCLKB) which is equal to the system clock (ICLK).

Each TAU channel has certain operation clocks selections, these can be set with the **General>Operation Clock** property in the module configuration. When the operation clock of a channel is set to CK00, CK01, or CK03, the TAU module provides divisor values for each of those clocks. These divisors may be set in the **Clocks** tab. As such, setting a divisor in the **Clocks** tab affects all TAU channels that use that CK0x clock as an input. Adjusting these settings determines the frequency range achievable by a TAU channel. If a desired frequency is not achievable, the divider in the **Clocks** tab may be adjusted.

Pin Configuration

This module should use the T0mn pins as output pins for Square Wave Output, Divider Function

For input source, the input signal must be applied to External Event Counter, Divider, Input Pulse Interval Measurement, Delay Counter, and Measure High-Low Level Pulse Width Function

Timer Period

The RA Configuration editor will automatically calculate the period count value based on the selected period time, units, operation clock (set by **General>Operation Clock** property in the module configuration), and clock divisor value (set in **Clocks** tab).

When the selected unit is "Raw counts", the maximum and minimum allowed period setting varies depending on the selected clock source:

| Clock divisor | Minimum period (counts) | Maximum period (counts) |
|--------------------|-------------------------|-------------------------|
| ICLK/1 | 0x00002 | 0x10000 |
| All other divisors | 0x00001 | 0x10000 |

Note

If ICLK (undivided) is selected as the operation clock (CK00, CK01) and TDR0n is set to 0x0000 (n = 0 to 7), interrupt requests output from timer array units cannot be used. For this reason When Clock Source is ICLK, Minimum period (counts) is 0x00002

| Clock divisor | Minimum Higher 8-bit period (counts) | Maximum Higher 8-bit period (counts) |
|---------------|--------------------------------------|--------------------------------------|
| All divisors | 0x001 | 0x100 |

Note

Though the TAU is a 16-bit timer, because the period interrupt occurs when the counter underflow, setting the period register to 0 results in an effective period of 1 count. For this reason all user-provided raw count values reflect the actual number of period counts (not the raw register values).

Usage Notes

Interval Timer Function

This function can be used as a reference timer to generate TAU0_TMI0n (timer interrupt) at fixed intervals. The interrupt generation period can be calculated by the following expression.

- Generation period of TAU0_TMI0n (timer interrupt) = Period of count clock × (Set value of TDR0n + 1)

The Interval Timer Function can operate as the higher/lower 8-bits mode.

When "Interrupts > Setting of starting count and interrupt" is "Timer interrupt is generated when counting is started/Start trigger is valid during counting operation.", an interrupt is generated immediately after [R_TAU_Start\(\)](#) function is called and timer output also changed.

Square Wave Output Function

This function can use TO0n to perform a toggle operation as soon as TAU0_TMI0n has been generated, and outputs a square wave with a duty factor of 50%.

The period and frequency for outputting a square wave from TO0n can be calculated by the following expressions.

- Period of square wave output from TO0n = Period of count clock × (Set value of TDR0n + 1) × 2
- Frequency of square wave output from TO0n = Frequency of count clock / {(Set value of TDR0n + 1) × 2}

The Square Wave Output Function can operate as the lower 8-bits mode.

When "Interrupts > Setting of starting count and interrupt" is "Timer interrupt is generated when counting is started/Start trigger is valid during counting operation.", an interrupt is generated immediately after [R_TAU_Start\(\)](#) function is called and output pin is also changed.

External Event Counter Function

The timer array unit can be used as an external event counter that counts the number of times the valid input edge (external event) is detected in the TI0n pin. When a specified count value is reached, the event counter generates an interrupt. The specified number of counts can be calculated by the following expression.

- Specified number of counts = Set value of TDR0n + 1

Instead of using the TI0n pin input, a channel specified for the External Event Counter Function can also use the signal as "Middle-speed on-chip oscillator (MOCO)", "Low-speed on-chip oscillator (LOCO)", "Subsystem clock (FSUB)", and ELC event which selected in **Input>Input Source** property as its input source to drive counting.

The External Event Counter Function can operate as the lower 8-bits mode.

Delay Counter Function

It is possible to start counting down when the valid edge of the TI0n pin input is detected (an

external event), and then generate TAU0_TMI0n (a timer interrupt) after any specified interval. The interrupt generation period can be calculated by the following expression. Generation period of TAU0_TMI0n (timer interrupt) = Period of count clock × (Set value of TDR0n + 1)

Instead of using the TI0n pin input, a channel specified for the Delay Counter Function can also use the signal as "Middle-speed on-chip oscillator (MOCO)", "Low-speed on-chip oscillator (LOCO)", "Subsystem clock (FSUB)", and ELC event which selected in **Input>Input Source** property as its input source to drive counting.

The Delay Counter Function can operate as the lower 8-bits mode.

When "Interrupts > Setting of starting count and interrupt" is "Timer interrupt is generated when counting is started/Start trigger is valid during counting operation.", a start trigger is valid during counting operation.

Divider Function

The timer array unit can be used as a frequency divider that divides a clock input to the TI00 pin and outputs the result from the TO00 pin. The divided clock frequency output from TO00 can be calculated by the following expression. When rising edge/falling edge is selected:

- Divided clock frequency = Input clock frequency / {(Set value of TDR00 + 1) × 2} When both edges are selected:
- Divided clock frequency ≈ Input clock frequency / (Set value of TDR00 + 1)

When "Interrupts > Setting of starting count and interrupt" is "Timer interrupt is generated when counting is started/Start trigger is valid during counting operation.", an interrupt is generated immediately after first input signal is detected and output pin is also changed.

Input Pulse Interval Measurement Function

The count value can be captured at the TI0n valid edge and the interval of the pulse input to TI0n can be measured. The pulse interval can be calculated by the following expression.

- TI0n input pulse interval = Period of count clock × ((0x10000 × TSR0n.OVF) + (Captured value of TDR0n + 1))

Instead of using the TI0n pin input, a channel specified for the Input Pulse Interval Measurement can also use the signal as "Middle-speed on-chip oscillator (MOCO)", "Low-speed on-chip oscillator (LOCO)", "Subsystem clock (FSUB)", "Input signal of the RXD2 pin", and ELC event which selected in **Input>Input Source** property as its input source to drive counting.

High-Low Level Pulse Width Measurement

By starting counting at one edge of the TI0n pin input and capturing the number of counts at another edge, the signal width (high-level width or low-level width) of TI0n can be measured. The signal width of TI0n can be calculated by the following expression.

- Signal width of TI0n input = Period of count clock × ((0x10000 × TSR0n.OVF) + (Captured value of TDR0n + 1))

Instead of using the TI0n pin input, a channel specified for the High-Low Level Pulse Width Function can also use the signal as "Middle-speed on-chip oscillator (MOCO)", "Low-speed on-chip oscillator (LOCO)", "Subsystem clock (FSUB)", "Input signal of the RXD2 pin", and ELC event which selected in **Input>Input Source** property as its input source to drive counting.

Triggering ELC Events with TAU

The TAU timer can trigger the start of other peripherals. The [Event Link Controller \(r_elc\)](#) guide provides a list of all available peripherals.

Limitations

- When using High-Low Level Pulse Width Measurement function, the counter can not be reset by invoking [R_TAU_Reset\(\)](#).

Examples

TAU Basic Example

This is a basic example of minimal use of the TAU in an application.

```
void tau_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_TAU_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_TAU_Start(&g_timer0_ctrl);
}
```

TAU Callback Example

This is an example of a timer callback.

```
/* Example callback called when timer expires. */
uint32_t g_counter_underflow = 0U;
void timer_callback (timer_callback_args_t * p_args)
{
    if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
        /* Add application code to be called periodically here. */
        g_counter_underflow++;
    }
}
```

```
    }  
    if (TIMER_EVENT_HIGHER_8BIT_CYCLE_END == p_args->event)  
    {  
        /* Add application code to be called periodically here. */  
    }  
}
```

TAU 16-bit or 8-bit mode Example

To use the TAU as 16-bit or 8-bit mode, select Bit Mode Timer.

```
void tau_counter_example (void)  
{  
    fsp_err_t err = FSP_SUCCESS;  
    /* Initializes the module. */  
    err = R_TAU_Open(&g_timer0_ctrl, &g_timer0_cfg);  
    /* Handle any errors. This function should be defined by the user. */  
    assert(FSP_SUCCESS == err);  
    /* Start the timer. */  
    (void) R_TAU_Start(&g_timer0_ctrl);  
    /* (Optional) Stop the timer. */  
    (void) R_TAU_Stop(&g_timer0_ctrl);  
    /* Read the current counter value. Counter value is in status.counter. */  
    timer_status_t status;  
    (void) R_TAU_StatusGet(&g_timer0_ctrl, &status);  
}
```

```
static const tau_extended_cfg_t g_timer0_higher_8bit_extend =  
{  
    .opirq          = TAU_INTERRUPT_OPIRQ_BIT_RESET,  
    .tau_func       = TAU_FUNCTION_INTERVAL,  
    .bit_mode       = TAU_BIT_MODE_HIGHER_8BIT,  
    .initial_output = TAU_PIN_OUTPUT_CFG_DISABLED,  
    .input_source   = TAU_INPUT_SOURCE_NONE,  
    .tau_filter     = TAU_INPUT_NOISE_FILTER_DISABLE,  
}
```

```
.trigger_edge      = TAU_TRIGGER_EDGE_RISING,
.operation_clock   = TAU_OPERATION_CK02,
/* Actual Higher 8-bit Period: 0.0000160000 seconds */
/* Minimum Period ~ Maximum Period: 0.000000006 ~ 0.00001600 seconds. */
.period_higher_8bit_counts = (uint16_t) 0x100,
.higher_8bit_cycle_end_ip1 = 0,
.higher_8bit_cycle_end_irq = TAU_VECTOR_TIMER_HIGHER_8BIT_MODE,
};
static const timer_cfg_t g_timer0_higher_8bit_cfg =
{
    .channel        = 1,
/* Not used for higher 8-bit mode */
    .period_counts = 100,
    .source_div     = TIMER_SOURCE_DIV_2,
    .mode           = TIMER_MODE_PERIODIC,
    .cycle_end_ip1  = BSP_IRQ_DISABLED,
    .cycle_end_irq  = FSP_INVALID_VECTOR,
    .p_callback     = timer_callback,
    .p_context      = NULL,
    .p_extend       = &g_timer0_higher_8bit_extend,
};
void tau_higher_8bit_counter_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
/* Initializes the module. */
    err = R_TAU_Open(&g_timer0_ctrl, &g_timer0_higher_8bit_cfg);
/* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
/* Start the timer. */
    (void) R_TAU_Start(&g_timer0_ctrl);
/* (Optional) Stop the timer. */
    (void) R_TAU_Stop(&g_timer0_ctrl);
/* Read the current counter value. Counter value is in status.counter. */
    timer_status_t status;
```

```
(void) R_TAU_StatusGet(&g_timer0_ctrl, &status);  
}
```

TAU Input Capture Example

This is an example of using the TAU to capture pulse width or pulse period measurements.

```
static tau_instance_ctrl_t g_timer_input_capture_ctrl;  
static const tau_extended_cfg_t g_timer_input_capture_extend =  
{  
    .opirq           = TAU_INTERRUPT_OPIRQ_BIT_RESET,  
    .tau_func        = TAU_FUNCTION_INPUT_PULSE_INTERVAL_MEASUREMENT,  
    .bit_mode        = TAU_BIT_MODE_16BIT,  
    .initial_output  = TAU_PIN_OUTPUT_CFG_START_LEVEL_HIGH,  
    .input_source    = TAU_INPUT_SOURCE_NONE,  
    .tau_filter       = TAU_INPUT_NOISE_FILTER_DISABLE,  
    .trigger_edge    = TAU_TRIGGER_EDGE_RISING,  
    .operation_clock = TAU_OPERATION_CK00,

Enumerations

enum [tau_function_t](#)enum [tau_bit_mode_t](#)enum [tau_operation_ck_t](#)enum [tau_trigger_edge_t](#)enum [tau_interrupt_opirq_bit_t](#)enum [tau_input_source_t](#)enum [tau_pin_output_cfg_t](#)enum [tau_input_noise_filter_t](#)

Data Structure Documentation

◆ [tau_instance_ctrl_t](#)

struct [tau_instance_ctrl_t](#)Channel control block. DO NOT INITIALIZE. Initialization occurs when [timer_api_t::open](#) is called.

◆ [tau_extended_cfg_t](#)

struct [tau_extended_cfg_t](#)

Optional TAU extension data structure.

Data Fields

| Data Fields | | |
|---|----------------|--|
| tau_interrupt_opirq_bit_t | opirq: 1 | Setting of starting count and interrupt. |
| tau_function_t | tau_func | Setting of Function for TAU. |
| tau_bit_mode_t | bit_mode | Setting of 16-bit timer or 8-bit timer. |
| tau_pin_output_cfg_t | initial_output | Setting of Function for TAU. |
| tau_input_source_t | input_source | |
| | | |

| | | |
|--|---------------------------|---|
| tau_input_noise_filter_t | tau_filter | Input filter for TAU. |
| tau_trigger_edge_t | trigger_edge | Trigger edge to start pulse period measurement or count external event. |
| tau_operation_ck_t | operation_clock | |
| uint16_t | period_higher_8bit_counts | Period in raw higher 8 bit timer counts. |
| uint8_t | higher_8bit_cycle_end_ipi | Cycle higher 8-bit end interrupt priority. |
| IRQn_Type | higher_8bit_cycle_end_irq | Cycle higher 8-bit end interrupt. |

Enumeration Type Documentation

◆ tau_function_t

| enum tau_function_t | |
|---|------------------------------------|
| Timer function | |
| Enumerator | |
| TAU_FUNCTION_INTERVAL | Interval Timer Function. |
| TAU_FUNCTION_SQUARE_WAVE | Square Wave Function. |
| TAU_FUNCTION_EXTERNAL_EVENT_COUNT | External Event Count Function. |
| TAU_FUNCTION_DIVIDER | Divider Function. |
| TAU_FUNCTION_INPUT_PULSE_INTERVAL_MEASUREMENT | Input Pulse Interval Function. |
| TAU_FUNCTION_LOW_LEVEL_WIDTH_MEASUREMENT | Low Level Width Measure Function. |
| TAU_FUNCTION_HIGH_LEVEL_WIDTH_MEASUREMENT | High Level Width Measure Function. |
| TAU_FUNCTION_DELAY_COUNT | Delay Count Function. |

◆ **tau_bit_mode_t**

| | |
|--------------------------------|------------------------------------|
| enum tau_bit_mode_t | |
| Timer bit mode | |
| Enumerator | |
| TAU_BIT_MODE_16BIT | 16-Bit Timer Mode |
| TAU_BIT_MODE_HIGHER_8BIT | Higher 8-bit Timer Mode. |
| TAU_BIT_MODE_LOWER_8BIT | Lower 8-bit Timer Mode. |
| TAU_BIT_MODE_HIGHER_LOWER_8BIT | Lower and Higher 8-bit Timer Mode. |

◆ **tau_operation_ck_t**

| |
|-------------------------|
| enum tau_operation_ck_t |
| Timer operation clock. |

◆ **tau_trigger_edge_t**

| | |
|---|---|
| enum tau_trigger_edge_t | |
| Trigger edge for pulse period measurement mode, high-low measurement, divider, delay counter and event counting mode. | |
| Enumerator | |
| TAU_TRIGGER_EDGE_FALLING | Measurement starts or events are counted on falling edge. |
| TAU_TRIGGER_EDGE_RISING | Measurement starts or events are counted on rising edge. |
| TAU_TRIGGER_EDGE_BOTH | Events are counted on both edges (pulse period mode and high-low measurement) |

◆ **tau_interrupt_opirq_bit_t**

| |
|-----------------------------------|
| enum tau_interrupt_opirq_bit_t |
| Interrupt and starting Count Mode |

◆ tau_input_source_t

| enum tau_input_source_t | |
|---------------------------|----------------------------------|
| Input source | |
| Enumerator | |
| TAU_INPUT_SOURCE_TI_PIN | Timer Input Source is input pin. |
| TAU_INPUT_SOURCE_ELC | ELC Timer Input Source. |
| TAU_INPUT_SOURCE_RXD2_PIN | Timer Input Source is RXD2 pin. |
| TAU_INPUT_SOURCE_MOCO | Timer Input Source is MOCO. |
| TAU_INPUT_SOURCE_LOCO | Timer Input Source is LOCO. |
| TAU_INPUT_SOURCE_FSUB | Timer Input Source is FSUB. |
| TAU_INPUT_SOURCE_NONE | No Timer Input Source. |

◆ tau_pin_output_cfg_t

| enum tau_pin_output_cfg_t | |
|-------------------------------------|-------------------------|
| Level of TAU pin | |
| Enumerator | |
| TAU_PIN_OUTPUT_CFG_START_LEVEL_LOW | Pin level low. |
| TAU_PIN_OUTPUT_CFG_START_LEVEL_HIGH | Pin level high. |
| TAU_PIN_OUTPUT_CFG_DISABLED | Not used as output pin. |

◆ tau_input_noise_filter_t

| enum tau_input_noise_filter_t | |
|--|-----------------------|
| Input filter, applies TAU in high-low measurement, pulse width measurement, delay counter, divider, or event counter mode. | |
| Enumerator | |
| TAU_INPUT_NOISE_FILTER_DISABLE | Disable noise filter. |
| TAU_INPUT_NOISE_FILTER_ENABLE | Enable noise filter. |

Function Documentation

◆ R_TAU_Open()

```
fsp_err_t R_TAU_Open ( timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg )
```

Initializes the timer module and applies configurations. Implements `timer_api_t::open`.

The TAU implementation of the general timer can accept a `tau_extended_cfg_t` extension parameter.

Example:

```
/* Initializes the module. */
err = R_TAU_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

| | |
|--------------------------------|--|
| FSP_SUCCESS | Initialization was successful and timer has started. |
| FSP_ERR_ASSERTION | A required input pointer is NULL or the period is not in the valid range |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_INVALID_CHANNEL | The channel does not support this feature. |
| FSP_ERR_IRQ_BSP_DISABLED | Timer_cfg_t::p_callback is not NULL, but ISR is not enabled. ISR must be enabled to use callback |
| FSP_ERR_INVALID_MODE | Invalid configuration for p_extend. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | The channel requested in the p_cfg parameter is not available on this device. |

◆ R_TAU_Stop()

```
fsp_err_t R_TAU_Stop ( timer_ctrl_t *const p_ctrl)
```

Stops timer. Implements `timer_api_t::stop`.

Example:

```
/* (Optional) Stop the timer. */
(void) R_TAU_Stop(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Timer successfully stopped. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_Start()**

```
fsp_err_t R_TAU_Start ( timer_ctrl_t *const p_ctrl)
```

Starts timer. Implements `timer_api_t::start`.

Example:

```
/* Start the timer. */
(void) R_TAU_Start(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Timer successfully started. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_Reset()**

```
fsp_err_t R_TAU_Reset ( timer_ctrl_t *const p_ctrl)
```

Resets the counter value to the period minus one. Input Pulse Function is reset counter value to 0. Implements `timer_api_t::reset`.

Note

This function can not reset the counter when counter is stopped, and function High/Low Measurement Function is used.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | The counter value written successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_Enable()**

```
fsp_err_t R_TAU_Enable ( timer_ctrl_t *const p_ctrl)
```

Enables external event triggers that start, stop, clear, or capture the counter. Implements [timer_api_t::enable](#).

Example:

```
/* Enable captures. Captured values arrive in the interrupt. */
(void) R_TAU_Enable(&g_timer_input_capture_ctrl);
```

Return values

| | |
|-------------------|---------------------------------------|
| FSP_SUCCESS | External events successfully enabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_Disable()**

```
fsp_err_t R_TAU_Disable ( timer_ctrl_t *const p_ctrl)
```

Disables external event triggers that start, stop, clear, or capture the counter. Implements [timer_api_t::disable](#).

Note

The timer could be running after [R_TAU_Disable\(\)](#). To ensure it is stopped, call [R_TAU_Stop\(\)](#).

Example:

```
/* (Optional) Disable captures. */
(void) R_TAU_Disable(&g_timer_input_capture_ctrl);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | External events successfully disabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_PeriodSet()**

```
fsp_err_t R_TAU_PeriodSet ( timer_ctrl_t *const p_ctrl, uint32_t const period_counts )
```

Sets period value provided. If the timer is running, the period will be updated after the next counter underflow. If the timer is stopped, this function resets the counter and updates the period. This Function is not supported for Input pulse Function, High-Low Measurement Function. Implements [timer_api_t::periodSet](#).

Note

if timer mode is Lower and Higher 8-bit Timer Mode, the last 9 bits are the lower 8-bits of the timer, and the subsequent 9 bits are the higher 8-bits of the timer

Example:

```

/* Get operation clock frequency
 * - Use the R_TAU_InfoGet function (it accounts for the clock source and divider of
operation clock ).
 */
timer_info_t info;
(void) R_TAU_InfoGet(&g_timer0_ctrl, &info);
uint32_t timer_freq_hz = info.clock_frequency;
/* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
 * desired period is larger than UINT32_MAX / iclk_freq_hz. A cast to uint32_t is
used to prevent this. */
uint32_t period_counts =
    (uint32_t) ((timer_freq_hz * TAU_EXAMPLE_DESIRED_PERIOD_MSEC) /
TAU_EXAMPLE_MSEC_PER_SEC);
/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
 * period is larger than UINT16_MAX. */
err = R_TAU_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);

```

Return values

| | |
|---------------------|---|
| FSP_SUCCESS | Period value written successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL or period is invalid range. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_UNSUPPORTED | Unsupported for Input pulse Function, High-Low Measurement Function |

◆ **R_TAU_DutyCycleSet()**

```
fsp_err_t R_TAU_DutyCycleSet ( timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts,
uint32_t const pin )
```

`timer_api_t::dutyCycleSet` is not supported on the R_TAU Independent channels.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | Function not supported in this implementation. |
|---------------------|--|

◆ **R_TAU_InfoGet()**

```
fsp_err_t R_TAU_InfoGet ( timer_ctrl_t *const p_ctrl, timer_info_t *const p_info )
```

Get timer information and store it in provided pointer `p_info`. Implements `timer_api_t::infoGet`.

Example:

```
timer_info_t info;

(void) R_TAU_InfoGet(&g_timer0_ctrl, &info);

uint32_t timer_freq_hz = info.clock_frequency;
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Period, count direction, frequency, and ELC event written to caller's structure successfully. |
| FSP_ERR_ASSERTION | <code>p_ctrl</code> or <code>p_info</code> was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_StatusGet()**

```
fsp_err_t R_TAU_StatusGet ( timer_ctrl_t *const p_ctrl, timer_status_t *const p_status )
```

Get current timer status and store it in provided pointer p_status. Implements `timer_api_t::statusGet`.

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;

(void) R_TAU_StatusGet(&g_timer0_ctrl, &status);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Current timer state and counter value set successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_CallbackSet()**

```
fsp_err_t R_TAU_CallbackSet ( timer_ctrl_t *const p_api_ctrl, void(*)(timer_callback_args_t *)
p_callback, void const *const p_context, timer_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `timer_api_t::callbackSet`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |

◆ **R_TAU_Close()**

```
fsp_err_t R_TAU_Close ( timer_ctrl_t *const p_ctrl)
```

Stops counter, disables output pins, and clears internal driver data. Implements `timer_api_t::close`.

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

Detailed Description

Driver for the POEG peripheral on RA MCUs. This module implements the [POEG Interface](#).

Overview

The POEG module can be used to configure events to disable GPT GTIOC output pins.

Features

The POEG module has the following features:

- Supports disabling GPT output pins based on GTETRGR input pin level.
- Supports disabling GPT output pins based on comparator crossing events (configurable in the [Comparator, High-Speed \(r_acmphs\)](#) driver).
- Supports disabling GPT output pins when GTIOC pins are the same level (configurable in the [Timer, General PWM \(r_gpt\)](#) driver).
- Supports disabling GPT output pins when main oscillator stop is detected.
- Supports disabling GPT output pins by software API.
- Supports notifying the application when GPT output pins are disabled by POEG.
- Supports resetting POEG status.

Configuration

Build Time Configurations for r_poeg

The following build time configurations are defined in fsp_cfg/r_poeg_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Timers > Port Output Enable for GPT (r_poeg)

This module can be added to the Stacks tab via New Stack > Timers > Port Output Enable for GPT (r_poeg). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|----------------------|---|-------------|---|
| General | | | |
| Name | Name must be a valid C symbol | g_poeg0 | Module name. |
| Channel | Must be a valid POEG channel | 0 | Specify the hardware channel. |
| Trigger | MCU Specific Options | | Select the trigger sources that will enable POEG. Software disable is always supported. This configuration can only be set once after reset. It cannot be modified after the initial setting. |
| Input | | | |
| GTETRGR Polarity | <ul style="list-style-type: none"> Active High Active Low | Active High | Select the polarity of the GTETRGR pin. Only applicable if GTETRGR pin is selected under Trigger. |
| GTETRGR Noise Filter | <ul style="list-style-type: none"> Disabled PCLKB/1 PCLKB/8 PCLKB/32 PCLKB/128 | Disabled | Configure the noise filter for the GTETRGR pin. Only applicable if GTETRGR pin is selected under Trigger. |
| Interrupts | | | |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be specified here. If this callback function is provided, it will be called from the interrupt service routine (ISR) when GPT |

output pins are disabled by POEG.

Select the POEG interrupt priority.

Interrupt Priority

MCU Specific Options

Clock Configuration

The POEG clock is based on the PCLKB frequency.

Pin Configuration

This module can use GTETRGA, GTETRGB, GTETRGC, or GTETRGD as an input signal to disable GPT output pins.

Usage Notes

POEG GTETRГ Pin and Channel

The POEG channel number corresponds to the GTETRГ input pin that can be used with the channel. GTETRGA must be used with POEG channel 0, GTETRGB must be used with POEG channel 1, etc.

Limitations

The user should be aware of the following limitations when using POEG:

- The POEG trigger source can only be set once per channel. Modifying the POEG trigger source after it is set is not allowed by the hardware.
- The POEG cannot be disabled using this API. The interrupt is disabled in [R_POEG_Close\(\)](#), but the POEG will still disable the GPT output pins if a trigger is detected even if the module is closed.

Examples

POEG Basic Example

This is a basic example of minimal use of the POEG in an application.

```
void poeg_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the POEG. */
    err = R_POEG_Open(&g_poeg0_ctrl, &g_poeg0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

POEG Callback Example

This is an example of a using the POEG callback to restore GPT output operation.

```

/* Example callback called when POEG disables GPT output pins. */
void poeg_callback (poeg_callback_args_t * p_args)
{
    FSP_PARAMETER_NOT_USED(p_args);

    /* (Optional) Determine the cause of the POEG event. */
    poeg_status_t status;

    (void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);

    /* Correct the cause of the POEG event before resetting POEG. */
    /* Reset the POEG before exiting the callback. */
    (void) R_POEG_Reset(&g_poeg0_ctrl);

    /* Wait for the status to clear after reset before exiting the callback to ensure
the interrupt does not fire
    * again. */
    do
    {
        (void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
    } while (POEG_STATE_NO_DISABLE_REQUEST != status.state);

    /* Alternatively, if the POEG cannot be reset, disable the POEG interrupt to prevent
it from firing continuously.

    * Update the 0 in the macro below to match the POEG channel number. */
    NVIC_DisableIRQ(VECTOR_NUMBER_POEG0_EVENT);
}

```

Data Structures

struct [poeg_instance_ctrl_t](#)

Data Structure Documentation

◆ poeg_instance_ctrl_t

struct poeg_instance_ctrl_t

Channel control block. DO NOT INITIALIZE. Initialization occurs when [poeg_api_t::open](#) is called.

Function Documentation

◆ **R_POEG_Open()**

```
fsp_err_t R_POEG_Open ( poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg )
```

Initializes the POEG module and applies configurations. Implements `poeg_api_t::open`.

Note

The `poeg_cfg_t::trigger` setting can only be configured once after reset. Reopening with a different trigger configuration is not possible.

Example:

```
/* Initializes the POEG. */
err = R_POEG_Open(&g_poeg0_ctrl, &g_poeg0_cfg);
```

Return values

| | |
|--------------------------------|---|
| FSP_SUCCESS | Initialization was successful. |
| FSP_ERR_ASSERTION | A required input pointer is NULL or the source divider is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_IRQ_BSP_DISABLED | <code>poeg_cfg_t::p_callback</code> is not NULL, but ISR is not enabled. ISR must be enabled to use callback. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | The channel requested in the <code>p_cfg</code> parameter is not available on this device. |

◆ **R_POEG_OutputDisable()**

```
fsp_err_t R_POEG_OutputDisable ( poeg_ctrl_t *const p_ctrl)
```

Disables GPT output pins. Implements `poeg_api_t::outputDisable`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | GPT output pins successfully disabled. |
| FSP_ERR_ASSERTION | <code>p_ctrl</code> was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_POEG_Reset()**

```
fsp_err_t R_POEG_Reset ( poeg_ctrl_t *const p_ctrl)
```

Resets status flags. Implements `poeg_api_t::reset`.

Note

Status flags are only reset if the original POEG trigger is resolved. Check the status using `R_POEG_StatusGet` after calling this function to verify the status is cleared.

Example:

```
/* Correct the cause of the POEG event before resetting POEG. */
/* Reset the POEG before exiting the callback. */
(void) R_POEG_Reset(&g_poeg0_ctrl);
/* Wait for the status to clear after reset before exiting the callback to ensure
the interrupt does not fire
* again. */
do
{
(void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
} while (POEG_STATE_NO_DISABLE_REQUEST != status.state);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Function attempted to clear status flags. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_POEG_StatusGet()**

```
fsp_err_t R_POEG_StatusGet ( poeg_ctrl_t *const p_ctrl, poeg_status_t *const p_status )
```

Get current POEG status and store it in provided pointer p_status. Implements `poeg_api_t::statusGet`.

Example:

```
/* (Optional) Determine the cause of the POEG event. */
poeg_status_t status;

(void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Current POEG state stored successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_POEG_CallbackSet()**

```
fsp_err_t R_POEG_CallbackSet ( poeg_ctrl_t *const p_ctrl, void (*)(poeg_callback_args_t *)
p_callback, void const *const p_context, poeg_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `poeg_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | p_callback is non-secure and p_callback_memory is either secure or NULL. |

◆ **R_POEG_Close()**

```
fsp_err_t R_POEG_Close ( poeg_ctrl_t *const p_ctrl)
```

Disables POEG interrupt. Implements `poeg_api_t::close`.

Note

This function does not disable the POEG.

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

5.2.19.3 Realtime Clock (r_rtc)

*const p_time_capture)
```

Detailed Description

Driver for the RTC peripheral on RA MCUs. This module implements the [RTC Interface](#).

Overview

The RTC HAL module configures the RTC module and controls clock, calendar and alarm functions. A callback can be used to respond to the alarm and periodic interrupt.

Features

- RTC time and date get and set.
- RTC time and date alarm get and set.
- RTC alarm and periodic event notification.
- RTC time capture.

The RTC HAL module supports three different interrupt types:

- An alarm interrupt generated on a match of any combination of year, month, day, day of the week, hour, minute or second
- A periodic interrupt generated every 2, 1, 1/2, 1/4, 1/8, 1/16, 1/32, 1/64, 1/128, or 1/256 second(s)
- A carry interrupt is used internally when reading time from the RTC calendar to get accurate time readings.

Note

See section "23.3.5 Reading 64-Hz Counter and Time" of the RA6M3 manual R01UH0886EJ0100 for more details.

A user-defined callback function can be registered (in the [rtc_api_t::open](#) API call) and will be called from the interrupt service routine (ISR) for alarm and periodic interrupt. When called, it is passed a pointer to a structure ([rtc_callback_args_t](#)) that holds a user-defined context pointer and an indication of which type of interrupt was fired.

Date and Time validation

"Parameter Checking" needs to be enabled if date and time validation is required for `calendarTimeSet` and `calendarAlarmSet` APIs. If "Parameter Checking" is enabled, the 'day of the week' field is automatically calculated and updated by the driver for the provided date. When using the `calendarAlarmSet` API, only the fields which have their corresponding match flag set are written to the registers. Other register fields are reset to default value.

Sub-Clock error adjustment (Time Error Adjustment Function)

The time error adjustment function is used to correct errors, running fast or slow, in the time caused

by variation in the precision of oscillation by the sub-clock oscillator. Because 32,768 cycles of the sub-clock oscillator constitute 1 second of operation when the sub-clock oscillator is selected, the clock runs fast if the sub-clock frequency is high and slow if the sub-clock frequency is low. The time error adjustment functions include:

- Automatic adjustment
- Adjustment by software

The error adjustment is reset every time RTC is reconfigured or time is set.

Note

RTC driver configurations do not do error adjustment internally while initializing the driver. Application must make calls to the error adjustment api's for desired adjustment. See section 26.3.8 "Time Error Adjustment Function" of the RA6M3 manual R01UH0886EJ0100) for more details on this feature

Configuration

Build Time Configurations for r_rtc

The following build time configurations are defined in fsp_cfg/r_rtc_cfg.h:

| Configuration | Options | Default | Description |
|--------------------------|--|---------------|--|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Set Source Clock in Open | <ul style="list-style-type: none"> • Enabled • Disabled | Enabled | If enabled RTC source clock is initialized in R_RTC_Open. If disabled, R_RTC_ClockSourceSet must be called to set the RTC source clock. Disable if user wants to control the setting of RTC source clock after warm start. |

Configurations for Timers > Realtime Clock (r_rtc)

This module can be added to the Stacks tab via New Stack > Timers > Realtime Clock (r_rtc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|-----------------------------------|---|---------|--|
| Name | Name must be a valid C symbol | g_rtc0 | Module name. |
| Clock Source | <ul style="list-style-type: none"> • Sub-Clock • LOCO | LOCO | Select the RTC clock source. |
| Frequency Comparison Value (LOCO) | Value must be a positive integer between 7 and 511 | 255 | Frequency comparison value when using LOCO |

| | | | |
|------------------------------|---|------------|--|
| Automatic Adjustment Mode | <ul style="list-style-type: none"> Enabled Disabled | Enabled | Enable/ Disable the Error Adjustment mode |
| Automatic Adjustment Period | <ul style="list-style-type: none"> 10 Seconds 1 Minute NONE | 10 Seconds | Select the Error Adjustment Period for Automatic Adjustment |
| Adjustment Type (Plus-Minus) | <ul style="list-style-type: none"> NONE Addition Subtraction | NONE | Select the Error Adjustment type |
| Error Adjustment Value | Value must be a positive integer less than equal to 63 | 0 | Specify the Adjustment Value (the number of sub-clock cycles) from the prescaler |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR). |
| Alarm Interrupt Priority | MCU Specific Options | | Select the alarm interrupt priority. |
| Period Interrupt Priority | MCU Specific Options | | Select the period interrupt priority. |
| Carry Interrupt Priority | MCU Specific Options | | Select the carry interrupt priority. |

Note

See 23.2.20 Frequency Register (RFRH/RFRL) of the RA6M3 manual R01UH0886EJ0100) for more details

Interrupt Configuration

To activate interrupts for the RTC module, the desired interrupts must be enabled, The underlying implementation will be expected to handle any interrupts it can support and notify higher layers via callback.

Clock Configuration

The RTC HAL module can use the following clock sources:

- LOCO (Low Speed On-Chip Oscillator) with less accuracy
- Sub-clock oscillator with increased accuracy

Users have to select the right source for their application. LOCO is the default during configuration when it is available.

Pin Configuration

This module does not use I/O pins.

Usage Notes

System Initialization

- RTC driver does not start the sub-clock. The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take seconds to stabilize. The RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation.

- Carry interrupt priority must be set to avoid incorrect time returned from `calendarTimeGet` API during roll-over.
- Even when only running in Periodic Interrupt mode `R_RTC_CalendarTimeSet` must be called successfully to start the RTC.
- In case of warm start or a hard reset (when VBATT powers RTC in case of power loss), user might not want to reinitialize the clock source after reset. In this case, disable the Set Source Clock in Open property for RTC and call `R_RTC_ClockSourceSet()` only when RTC clock source needs to be set. Application should check for the reset type and should accordingly call the `R_RTC_ClockSourceSet()`.

Limitations

Developers should be aware of the following limitations when using the RTC:

- R_RTC operates in 24-hour mode.
- Binary-count mode is not supported.
- The `R_RTC_CalendarTimeGet()` cannot be used from an interrupt that has higher priority than the carry interrupt. Also, it must not be called with interrupts disabled globally, as this API internally uses carry interrupt for its processing. API may return incorrect time if this is done.
- Time capture input pins should be configured prior to opening RTC.
- When multiple events are detected, the capture time for the first event is retained. Time capture value must be got and reset status bit for the next capture when having event input.

VRTC-Domain

VRTC-domain provides power supply to SOSC and RTC on devices with IRTC:

- In case VRTC-domain is invalid, SOSC and RTC will be in undetermined state. Any operation related to RTC and sub-clock should be avoided.
- When VRTC-domain becomes valid again, application is responsible to reinitialize SOSC and RTC. Sub-clock initialization can be done by calling `R_BSP_SubclockInitialize()`.
- BSP provides `R_BSP_SubclockStatusGet()` to check the status of VRTC domain. But, it is recommended to use LVD to monitor VRTC domain change. Please refer to [LVD](#) module for more details.

Time Capture

The RTC is capable of storing the month, day, hour, minute and second when detecting an edge of a signal on a time capture event input pin. On RA parts up to three capture channels can be configured.

- Use `R_RTC_TimeCaptureSet` to configure the detection source and noise filter for each capture channel.
- Use `R_RTC_TimeCaptureGet` to check the latest capture. If no capture has been triggered the function will return `FSP_ERR_INVALID_STATE`.
- Even when the supply of power from the VCC power supply pin is stopped and VRTC power is being supplied, the time capture function of the time capture event input pins (RTCICn) can be used.

Examples

RTC Basic Example

This is a basic example of minimal use of the RTC in an application.

```
/* rtc_time_t is an alias for the C Standard time.h struct 'tm' */
rtc_time_t set_time =
{
    .tm_sec = 10,
    .tm_min = 11,
    .tm_hour = 12,
    .tm_mday = 6,
    .tm_wday = 3,
    .tm_mon = 11,
    .tm_year = YEARS_SINCE_1900,
};
rtc_time_t get_time;
void rtc_example ()
{
    fsp_err_t err = FSP_SUCCESS;
    /* Open the RTC module */
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Set the RTC clock source. Can be skipped if "Set Source Clock in Open" property
is enabled. */
    R_RTC_ClockSourceSet(&g_rtc0_ctrl);
    /* Set the calendar time */
    R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time);
    /* Get the calendar time */
```

```
R_RTC_CalendarTimeGet(&g_rtc0_ctrl, &get_time);  
}
```

RTC Clock Source Set Example

This is an example of how to handle call to set the RTC clock.

```
void rtc_clock_source_set_example ()  
{  
    fsp_err_t err = FSP_SUCCESS;  
    /* Open the RTC module*/  
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);  
    /* Handle any errors. This function should be defined by the user. */  
    assert(FSP_SUCCESS == err);  
    /* This condition can differ based on use case. */  
    if (R_SYSTEM->RSTSR0 == 1)  
    {  
        /* Set the RTC clock source. Can be skipped if "Set Source Clock in Open" property  
is enabled. */  
        R_RTC_ClockSourceSet(&g_rtc0_ctrl);  
    }  
    /* R_RTC_CalendarTimeSet must be called at least once to start the RTC */  
    R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time);  
    /* Set the periodic interrupt rate to 1 second */  
    R_RTC_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);  
    /* Wait for the periodic interrupt */  
    while (1)  
    {  
        /* Wait for interrupt */  
    }  
}
```

RTC Periodic interrupt example

This is an example of periodic interrupt in RTC.

```
void rtc_periodic_irq_example ()
{
    fsp_err_t err = FSP_SUCCESS;

    /* Open the RTC module*/
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Set the RTC clock source. Can be skipped if "Set Source Clock in Open" property
is enabled. */
    R_RTC_ClockSourceSet(&g_rtc0_ctrl);

    /* R_RTC_CalendarTimeSet must be called at least once to start the RTC */
    R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time);

    /* Set the periodic interrupt rate to 1 second */
    R_RTC_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);

    /* Wait for the periodic interrupt */
    while (1)
    {
        /* Wait for interrupt */
    }
}
```

RTC Alarm interrupt example

This is an example of alarm interrupt in RTC.

```
void rtc_alarm_irq_example ()
{
    fsp_err_t err = FSP_SUCCESS;

    /*Open the RTC module*/
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Set the RTC clock source. Can be skipped if "Set Source Clock in Open" property
is enabled. */
    R_RTC_ClockSourceSet(&g_rtc0_ctrl);
```

```
R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time1.time);
R_RTC_CalendarAlarmSet(&g_rtc0_ctrl, &set_time1);
/* Wait for the Alarm interrupt */
while (1)
{
/* Wait for interrupt */
}
}
```

RTC Error Adjustment example

This is an example of modifying error adjustment in RTC.

```
void rtc_erroradj_example ()
{
fsp_err_t err = FSP_SUCCESS;
/*Open the RTC module*/
R_RTC_Open(&g_rtc0_ctrl, &g_rtc1_cfg);
/* Set the RTC clock source. Can be skipped if "Set Source Clock in Open" property
is enabled. */
R_RTC_ClockSourceSet(&g_rtc0_ctrl);
R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time1.time);
/* Modify Error Adjustment after RTC is running */
err = R_RTC_ErrorAdjustmentSet(&g_rtc0_ctrl, &err_cfg2);
assert(FSP_SUCCESS == err);
}
```

RTC with VRTC-domain example

This is an example of calling RTC API on devices with VRTC-domain.

```
#if BSP_FEATURE_RTC_IS_IRTC
void rtc_vrtc_domain_checking_example ()
{
fsp_err_t err = FSP_SUCCESS;
static uint32_t rtc_opened = 0;
```

```
while (1)
{
    err = R_BSP_SubclockStatusGet();
if (FSP_SUCCESS != err)
{
    /* RTC API should not be called. */
    /* Try to initialize SOSC. */
    err = R_BSP_SubclockInitialize();
if (FSP_SUCCESS == err)
{
    /* Delay for sub-clock oscillation stabilization time */
    R_BSP_SoftwareDelay(BSP_CLOCK_CFG_SUBCLOCK_STABILIZATION_MS,
BSP_DELAY_UNITS_MILLISECONDS);
}
}
else
{
    /* VRTC-domain reset will not initialize RTC registers. */
if (0 == rtc_opened)
{
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
    rtc_opened = (FSP_SUCCESS == err) ? 1 : 0;
}
    /* Other RTC API can be called if needed. */
}
}
}
#endif
```

Data Structures

struct [rtc_extended_cfg_t](#)

struct [rtc_instance_ctrl_t](#)

Data Structure Documentation

◆ **rtc_extended_cfg_t**

| | | |
|---------------------------|------------|-----------------------------|
| struct rtc_extended_cfg_t | | |
| RTC extend configuration | | |
| Data Fields | | |
| uint8_t | alarm1_ipr | Alarm 1 interrupt priority. |
| IRQn_Type | alarm1_irq | Alarm 1 interrupt vector. |

◆ **rtc_instance_ctrl_t**

| | |
|---|------------------------------------|
| struct rtc_instance_ctrl_t | |
| Channel control block. DO NOT INITIALIZE. Initialization occurs when <code>rtc_api_t::open</code> is called | |
| Data Fields | |
| uint32_t | <code>open</code> |
| | Whether or not driver is open. |
| const <code>rtc_cfg_t</code> * | <code>p_cfg</code> |
| | Pointer to initial configurations. |
| volatile bool | <code>carry_isr_triggered</code> |
| | Was the carry isr triggered. |

Function Documentation

◆ **R_RTC_Open()**

```
fsp_err_t R_RTC_Open ( rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg )
```

Opens and configures the RTC driver module. Implements `rtc_api_t::open`. Configuration includes clock source, and interrupt callback function.

Example:

```
/* Open the RTC module */
err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
```

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Initialization was successful and RTC has started. |
| FSP_ERR_ASSERTION | Invalid p_ctrl or p_cfg pointer. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_INVALID_ARGUMENT | Invalid time parameter field. |

◆ **R_RTC_Close()**

```
fsp_err_t R_RTC_Close ( rtc_ctrl_t *const p_ctrl)
```

Close the RTC driver. Implements `rtc_api_t::close`

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | De-Initialization was successful and RTC driver closed. |
| FSP_ERR_ASSERTION | Invalid p_ctrl. |
| FSP_ERR_NOT_OPEN | Driver not open already for close. |

◆ **R_RTC_ClockSourceSet()**

```
fsp_err_t R_RTC_ClockSourceSet ( rtc_ctrl_t *const p_ctrl)
```

Sets the RTC clock source. Implements `rtc_api_t::clockSourceSet`.

Example:

```
/* This condition can differ based on use case. */
if (R_SYSTEM->RSTSR0 == 1)
{
/* Set the RTC clock source. Can be skipped if "Set Source Clock in Open" property
is enabled. */
R_RTC_ClockSourceSet (&g_rtc0_ctrl);
}
```

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Initialization was successful and RTC has started. |
| FSP_ERR_ASSERTION | Invalid p_ctrl or p_cfg pointer. |
| FSP_ERR_NOT_OPEN | Driver is not opened. |
| FSP_ERR_INVALID_ARGUMENT | Invalid clock source. |

◆ **R_RTC_CalendarTimeSet()**

```
fsp_err_t R_RTC_CalendarTimeSet ( rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time )
```

Set the calendar time.

Implements `rtc_api_t::calendarTimeSet`.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Calendar time set operation was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_INVALID_ARGUMENT | Invalid time parameter field. |

◆ **R_RTC_CalendarTimeGet()**

```
fsp_err_t R_RTC_CalendarTimeGet ( rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time )
```

Get the calendar time.

Warning

Do not call this function from a critical section or from an interrupt with higher priority than the carry interrupt, or the time returned may be inaccurate.

Implements `rtc_api_t::calendarTimeGet`

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Calendar time get operation was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_IRQ_BSP_DISABLED | User IRQ parameter not valid |

◆ **R_RTC_CalendarAlarmSet()**

```
fsp_err_t R_RTC_CalendarAlarmSet ( rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm )
```

Set the calendar alarm time.

Implements `rtc_api_t::calendarAlarmSet`.

Precondition

The calendar counter must be running before the alarm can be set.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Calendar alarm time set operation was successful. |
| FSP_ERR_INVALID_ARGUMENT | Invalid time parameter field. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_IRQ_BSP_DISABLED | User IRQ parameter not valid |

◆ **R_RTC_CalendarAlarmGet()**

```
fsp_err_t R_RTC_CalendarAlarmGet ( rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm )
```

Get the calendar alarm time.

Implements `rtc_api_t::calendarAlarmGet`

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Calendar alarm time get operation was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |

◆ **R_RTC_PeriodicIrqRateSet()**

```
fsp_err_t R_RTC_PeriodicIrqRateSet ( rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate )
```

Set the periodic interrupt rate and enable periodic interrupt.

Implements `rtc_api_t::periodicIrqRateSet`

Note

To start the RTC `R_RTC_CalendarTimeSet` must be called at least once.

Example:

```
/* Set the periodic interrupt rate to 1 second */
R_RTC_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | The periodic interrupt rate was successfully set. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_IRQ_BSP_DISABLED | User IRQ parameter not valid |

◆ **R_RTC_InfoGet()**

```
fsp_err_t R_RTC_InfoGet ( rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info )
```

Set RTC clock source and running status information and store it in provided pointer p_rtc_info

Implements [rtc_api_t::infoGet](#)

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Get information Successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |

◆ **R_RTC_ErrorAdjustmentSet()**

```
fsp_err_t R_RTC_ErrorAdjustmentSet ( rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg )
```

This function sets time error adjustment

Implements [rtc_api_t::errorAdjustmentSet](#)

Return values

| | |
|--------------------------|------------------------------------|
| FSP_SUCCESS | Time error adjustment successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open for operation. |
| FSP_ERR_UNSUPPORTED | The clock source is not sub-clock. |
| FSP_ERR_INVALID_ARGUMENT | Invalid error adjustment value. |

◆ **R_RTC_CallbackSet()**

```
fsp_err_t R_RTC_CallbackSet ( rtc_ctrl_t *const p_ctrl, void(*) (rtc_callback_args_t *) p_callback,
void const *const p_context, rtc_callback_args_t *const p_callback_memory )
```

Updates the user callback and has option of providing memory for callback structure. Implements `rtc_api_t::callbackSet`

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Baud rate was successfully changed. |
| FSP_ERR_ASSERTION | Pointer to RTC control block is NULL or the RTC is not configured to use the internal clock. |
| FSP_ERR_NOT_OPEN | The control block has not been opened |
| FSP_ERR_NO_CALLBACK_MEMORY | p_callback is non-secure and p_callback_memory is either secure or NULL. |

◆ **R_RTC_TimeCaptureSet()**

```
fsp_err_t R_RTC_TimeCaptureSet ( rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const
p_time_capture )
```

Set time capture configuration for the provided channel.

Implements `rtc_api_t::timeCaptureSet`

Note

Updating capture settings requires significant software delay. Timing considerations should be carefully considered when calling this function.

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Setting for Time capture was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_INVALID_CHANNEL | Invalid input channel set. |
| FSP_ERR_UNSUPPORTED | Hardware not support this feature. |

◆ R_RTC_TimeCaptureGet()

```
fsp_err_t R_RTC_TimeCaptureGet ( rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const p_time_capture )
```

Get time capture value of the provided channel.

Implements `rtc_api_t::timeCaptureGet`

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | Get time capture successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_INVALID_CHANNEL | Invalid input channel get. |
| FSP_ERR_INVALID_STATE | Invalid operation state. |
| FSP_ERR_UNSUPPORTED | Hardware not support this feature. |

*const p_time_capture)
```

Detailed Description

Driver for the RTC peripheral on RA MCUs. This module implements the [RTC Interface](#).

Overview

The RTC HAL module configures the RTC module and controls clock, calendar and alarm functions. A callback can be used to respond to the alarm and periodic interrupt.

Features

- RTC_C time and date get and set.
- RTC_C time and date alarm get and set.
- RTC_C alarm and periodic event notification.

The RTC HAL module supports two different interrupt types:

- An alarm interrupt generated on a match of any combination of minute, hour and day of the week.
- A periodic interrupt generated every 1 month, 1 day, 1 hour, 1 minute, 1 second and 1/2 second.

A user-defined callback function can be registered (in the [rtc_api_t::open](#) API call) and will be called from the interrupt service routine (ISR) for alarm and periodic interrupt. When called, it is passed a pointer to a structure ([rtc_callback_args_t](#)) that holds a user-defined context pointer and an indication of which type of interrupt was fired.

Date and Time validation

"Parameter Checking" needs to be enabled if date and time validation is required for `calendarTimeSet` and `calendarAlarmSet` APIs. If "Parameter Checking" is enabled, the 'day of the week' field is automatically calculated and updated by the driver for the provided date. When using the `calendarAlarmSet` API, minute, hour and day of the week are written to the related registers.

Sub-Clock error adjustment (Time Error Adjustment Function)

The time error adjustment function is used to correct errors, running fast or slow, in the time caused by variation in the precision of oscillation by the sub-clock oscillator. Because 32,768 cycles of the

sub-clock oscillator constitute 1 second of operation when the sub-clock oscillator is selected, the clock runs fast if the sub-clock frequency is high and slow if the sub-clock frequency is low.

The error adjustment is reset every time RTC is reconfigured or time is set.

Note

RTC driver configurations do not do error adjustment internally while initializing the driver. Application must make calls to the error adjustment api's for desired adjustment.

Configuration

Build Time Configurations for r_rtc_c

The following build time configurations are defined in fsp_cfg/r_rtc_c_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Timers > Realtime Clock (r_rtc_c)

This module can be added to the Stacks tab via New Stack > Timers > Realtime Clock (r_rtc_c).

| Configuration | Options | Default | Description |
|------------------------------|---|------------|---|
| Name | Name must be a valid C symbol | g_rtc0 | Module name. |
| Operation clock | <ul style="list-style-type: none"> FSXP SOSC/256 (128 Hz) | FSXP | Select the RTC operation clock. If using 'SOSC/256' as the source for RTCCLK, the FSXP source cannot be LOCO in Clock tab. |
| Automatic Adjustment Period | <ul style="list-style-type: none"> 20 Seconds 1 Minute | 20 Seconds | Select the Error Adjustment Period for Automatic Adjustment |
| Adjustment Type (Plus-Minus) | <ul style="list-style-type: none"> Addition Subtraction | Addition | Select the Error Adjustment type |
| Error Adjustment Value | Refer to the RA Configuration tool for available options. | 0 | Specify the Adjustment Value (the number of sub-clock cycles) from the prescaler |
| Callback | Name must be a valid C symbol | NULL | A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service |

routine (ISR).

Select the period or alarm interrupt priority.

Interrupt Priority

MCU Specific Options

Interrupt Configuration

To activate interrupts for the RTC module, the desired interrupts must be enabled. The underlying implementation will be expected to handle any interrupts it can support and notify higher layers via callback.

Clock Configuration

The RTC HAL module can use the following clock sources(setting in clock page):

- Sub-Clock: SOSC (32.768 kHz)
- SOSC/256 (128 Hz)
- LOCO (32.768 kHz)

Users have to select the right source for their application. Sub-Clock is the default during configuration when it is available.

Pin Configuration

This module does not use I/O pins.

Usage Notes

System Initialization

- RTC driver does not start the sub-clock. The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take seconds to stabilize. The RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation.

- Even when only running in Periodic Interrupt mode [R_RTC_C_CalendarTimeSet](#) must be called successfully to start the RTC.

Limitations

Developers should be aware of the following limitations when using the RTC_C:

- R_RTC_C operates in 24-hour mode.
- If using 'SOSC/256' as the source for RTC operation clock, the FSXP source cannot be LOCO in Clock tab.
- Time error correction function can only proceed when the setting of the RTCC0.RTC128EN bit is 0.
- Alarm clock interrupt can work under LOCO clock source, but it is unstable. Please use alarm clock interrupt function under other clocks.

Examples

RTC Basic Example

This is a basic example of minimal use of the RTC_C in an application.

```
/* rtc_time_t is an alias for the C Standard time.h struct 'tm' */
rtc_time_t set_time =
{
    .tm_sec = 10,
    .tm_min = 11,
    .tm_hour = 12,
    .tm_mday = 6,
    .tm_wday = 3,
    .tm_mon = 11,
    .tm_year = YEARS_SINCE_1900,
};
rtc_time_t get_time;
void rtc_c_example ()
{
    fsp_err_t err = FSP_SUCCESS;
    /* Open the RTC module */
    err = R_RTC_C_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Set the calendar time */
    R_RTC_C_CalendarTimeSet(&g_rtc0_ctrl, &set_time);
    /* Get the calendar time */
    R_RTC_C_CalendarTimeGet(&g_rtc0_ctrl, &get_time);
}
```

RTC Periodic interrupt example

This is an example of periodic interrupt in RTC.

```
void rtc_c_periodic_irq_example ()
{
```

```
fsp_err_t err = FSP_SUCCESS;

/* Open the RTC module*/
err = R_RTC_C_Open(&g_rtc0_ctrl, &g_rtc0_cfg);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* R_RTC_C_CalendarTimeSet must be called at least once to start the RTC */
R_RTC_C_CalendarTimeSet(&g_rtc0_ctrl, &set_time);

/* Set the periodic interrupt rate to 1 second */
R_RTC_C_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);

/* Wait for the periodic interrupt */
while (1)
{
/* Wait for interrupt */
}
}
```

RTC Alarm interrupt example

This is an example of alarm interrupt in RTC.

```
void rtc_c_alarm_irq_example ()
{
fsp_err_t err = FSP_SUCCESS;

/*Open the RTC module*/
err = R_RTC_C_Open(&g_rtc0_ctrl, &g_rtc0_cfg);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

R_RTC_C_CalendarTimeSet(&g_rtc0_ctrl, &set_time1.time);
R_RTC_C_CalendarAlarmSet(&g_rtc0_ctrl, &set_time1);

/* Wait for the Alarm interrupt */
while (1)
{
/* Wait for interrupt */
}
}
```

RTC Error Adjustment example

This is an example of modifying error adjustment in RTC.

```
void rtc_c_erroradj_example ()
{
    fsp_err_t err = FSP_SUCCESS;
    /*Open the RTC module*/
    R_RTC_C_Open(&g_rtc0_ctrl, &g_rtc1_cfg);
    R_RTC_C_CalendarTimeSet(&g_rtc0_ctrl, &set_time1.time);
    /* Modify Error Adjustment after RTC is running */
    err = R_RTC_C_ErrorAdjustmentSet(&g_rtc0_ctrl, &err_cfg2);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

| struct rtc_c_extended_cfg | | |
| RTC extended configuration | | |
| Data Fields | | |
| rtc_c_subclock_division_t | clock_source_div | The sub clock division value. |

◆ [rtc_c_instance_ctrl_t](#)

| | | |
|--|----------------------|--------------------------------|
| struct rtc_c_instance_ctrl_t | | |
| Channel control block. DO NOT INITIALIZE. Initialization occurs when rtc_api_t::open is called | | |
| Data Fields | | |
| uint32_t | open | Whether or not driver is open. |

| | |
|--------------------------------|------------------------------------|
| | |
| const <code>rtc_cfg_t</code> * | <code>p_cfg</code> |
| | Pointer to initial configurations. |
| | |

Enumeration Type Documentation

◆ `rtc_c_subclock_division_t`

| | |
|---|--|
| enum <code>rtc_c_subclock_division_t</code> | |
| RTC sub_clock division | |
| Enumerator | |
| <code>RTC_CLOCK_SOURCE_SUBCLOCK_DIV_BY_1</code> | Using sub_clock for rct_c clock. |
| <code>RTC_CLOCK_SOURCE_SUBCLOCK_DIV_BY_256</code> | Using (sub_clock / 256) for rct_c clock. |

Function Documentation

◆ `R_RTC_C_Open()`

| | |
|---|--|
| <code>fsp_err_t R_RTC_C_Open (rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg)</code> | |
| Opens and configures the RTC driver module. Implements <code>rtc_api_t::open</code> . Configuration includes clock source, and interrupt callback function. | |
| Example: | |
| <pre>/* Open the RTC module */ err = R_RTC_C_Open(&g_rtc0_ctrl, &g_rtc0_cfg);</pre> | |
| Return values | |
| <code>FSP_SUCCESS</code> | Initialization was successful and RTC has started. |
| <code>FSP_ERR_UNSUPPORTED</code> | Invalid clock source. |
| <code>FSP_ERR_ALREADY_OPEN</code> | Module is already open. |
| <code>FSP_ERR_INVALID_MODE</code> | Subsystem clock should use SOSC before setting realtime clock to SOSC/256. |
| <code>FSP_ERR_ASSERTION</code> | Invalid time parameter field. |

◆ **R_RTC_C_Close()**

`fsp_err_t R_RTC_C_Close (rtc_ctrl_t *const p_ctrl)`

Close the RTC driver. Implements `rtc_api_t::close`

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | De-Initialization was successful and RTC driver closed. |
| FSP_ERR_ASSERTION | Invalid p_ctrl. |
| FSP_ERR_NOT_OPEN | Driver not open already for close. |

◆ **R_RTC_C_ClockSourceSet()**

`fsp_err_t R_RTC_C_ClockSourceSet (rtc_ctrl_t *const p_ctrl)`

Setting clock source is not supported on the RTC_C.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | Please set clock source in clock page. |
|---------------------|--|

◆ **R_RTC_C_CalendarTimeSet()**

`fsp_err_t R_RTC_C_CalendarTimeSet (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)`

Set the calendar time.

Implements `rtc_api_t::calendarTimeSet`.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Calendar time set operation was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_INVALID_ARGUMENT | Invalid parameter field. |

◆ **R_RTC_C_CalendarTimeGet()**

```
fsp_err_t R_RTC_C_CalendarTimeGet ( rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time )
```

Get the calendar time.

Warning

Do not call this function from a critical section or from an interrupt with higher priority than the carry interrupt, or the time returned may be inaccurate.

Implements `rtc_api_t::calendarTimeGet`

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Calendar time get operation was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |

◆ **R_RTC_C_CalendarAlarmSet()**

```
fsp_err_t R_RTC_C_CalendarAlarmSet ( rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm )
```

Set the calendar alarm time. For the `p_alarm`, only minutes, hours and weekdays are valid. Minutes 0 to 59. Hours 0 to 23. Weekdays 0 to 127.

Implements `rtc_api_t::calendarAlarmSet`.

Precondition

The calendar counter must be running before the alarm can be set.

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Calendar alarm time set operation was successful. |
| FSP_ERR_INVALID_ARGUMENT | Invalid time parameter field. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |

◆ **R_RTC_C_CalendarAlarmGet()**

```
fsp_err_t R_RTC_C_CalendarAlarmGet ( rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm )
```

Get the calendar alarm time. For the p_alarm, only minutes, hours and weekdays will be got.

Implements `rtc_api_t::calendarAlarmGet`

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Calendar alarm time get operation was successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |

◆ **R_RTC_C_PeriodicIrqRateSet()**

```
fsp_err_t R_RTC_C_PeriodicIrqRateSet ( rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate )
```

Set the periodic interrupt rate and enable periodic interrupt.

Implements `rtc_api_t::periodicIrqRateSet`

Note

To start the RTC `R_RTC_C_CalendarTimeSet` must be called at least once.

Example:

```
/* Set the periodic interrupt rate to 1 second */
R_RTC_C_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | The periodic interrupt rate was successfully set. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |
| FSP_ERR_IRQ_BSP_DISABLED | User IRQ parameter not valid |

◆ **R_RTC_C_InfoGet()**

```
fsp_err_t R_RTC_C_InfoGet ( rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info )
```

Get RTC_C running status information and store it in provided pointer p_rtc_info

Implements [rtc_api_t::infoGet](#)

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Get information Successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open already for operation. |

◆ **R_RTC_C_ErrorAdjustmentSet()**

```
fsp_err_t R_RTC_C_ErrorAdjustmentSet ( rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg )
```

This function sets time error adjustment

Implements [rtc_api_t::errorAdjustmentSet](#)

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Time error adjustment successful. |
| FSP_ERR_ASSERTION | Invalid input argument. |
| FSP_ERR_NOT_OPEN | Driver not open for operation. |
| FSP_ERR_INVALID_ARGUMENT | Not under sub-clock or invalid error adjustment value. |

◆ R_RTC_C_CallbackSet()

```
fsp_err_t R_RTC_C_CallbackSet ( rtc_ctrl_t *const p_ctrl, void(*) (rtc_callback_args_t *) p_callback,
void const *const p_context, rtc_callback_args_t *const p_callback_memory )
```

Updates the user callback and has option of providing memory for callback structure. Implements [rtc_api_t::callbackSet](#)

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Baud rate was successfully changed. |
| FSP_ERR_ASSERTION | Pointer to RTC control block is NULL or the RTC is not configured to use the internal clock. |
| FSP_ERR_NOT_OPEN | The control block has not been opened |

◆ R_RTC_C_TimeCaptureSet()

```
fsp_err_t R_RTC_C_TimeCaptureSet ( rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const
p_time_capture )
```

Capture is not supported on the RTC_C.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | Function not supported in this implementation. |
|---------------------|--|

◆ R_RTC_C_TimeCaptureGet()

```
fsp_err_t R_RTC_C_TimeCaptureGet ( rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const
p_time_capture )
```

Capture is not supported on the RTC_C.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | Function not supported in this implementation. |
|---------------------|--|

```

Detailed Description

Driver for 3-phase motor control using the GPT peripheral on RA MCUs. This module implements the [Three-Phase Interface](#).

Overview

The General PWM Timer (GPT) Three-Phase driver provides basic functionality for synchronously starting and stopping three PWM channels for use in 3-phase motor control applications. A function is additionally provided to allow setting duty cycle values for all three channels, optionally with double-buffering.

Features

The GPT Three-Phase driver provides the following functions:

- Synchronize configuration of three GPT channels
- Synchronously start, stop and reset all three GPT channels
- Set duty cycle on all three channels with one function

Configuration

Build Time Configurations for r_gpt_three_phase

The following build time configurations are defined in fsp_cfg/r_gpt_three_phase_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Timers > Three-Phase PWM (r_gpt_three_phase)

This module can be added to the Stacks tab via New Stack > Timers > Three-Phase PWM (r_gpt_three_phase). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|--|-----------------------------|--|
| General | | | |
| Name | Name must be a valid C symbol | g_three_phase0 | Module name. |
| Mode | <ul style="list-style-type: none"> Triangle-Wave Symmetric PWM Triangle-Wave Asymmetric PWM Triangle-Wave Asymmetric PWM (Mode 3) | Triangle-Wave Symmetric PWM | <p>Mode selection.</p> <p>Triangle-Wave Symmetric PWM: Generates symmetric PWM waveforms with duty cycle determined by compare match set during a crest interrupt and updated at the next trough.</p> <p>Triangle-Wave Asymmetric PWM: Generates asymmetric PWM waveforms with duty cycle determined by compare match set during a crest/trough interrupt and updated at the next trough/crest.</p> |
| Period | Value must be a non-negative integer less than or equal to 0x4000000000 | 15 | <p>Specify the timer period in units selected below. Setting the period to 0x100000000 raw counts results in the maximum period. Set the period to 0x100000000 raw counts for a free running timer or an input capture configuration. The period can be set up to 0x4000000000, which will use a divider of 1024 with the maximum period.</p> <p>If the requested period cannot be achieved, the settings with the largest possible period</p> |

that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the generated [timer_cfg_t](#) structures for each timer.

| | | | |
|-------------------|--|---------------|---|
| Period Unit | <ul style="list-style-type: none"> • Raw Counts • Nanoseconds • Microseconds • Milliseconds • Seconds • Hertz • Kilohertz | Kilohertz | Unit of the period specified above |
| GPT U-Channel | Value must be an integer greater than or equal to 0 | 0 | Specify the GPT channel for U signal output. |
| GPT V-Channel | Value must be an integer greater than or equal to 0 | 1 | Specify the GPT channel for V signal output. |
| GPT W-Channel | Value must be an integer greater than or equal to 0 | 2 | Specify the GPT channel for W signal output. |
| Callback Channel | <ul style="list-style-type: none"> • U-Channel • V-Channel • W-Channel | U-Channel | Specify the GPT channel to set a callback for when using <code>R_GPT_THREE_PHASE_CallbackSet</code> . |
| Buffer Mode | <ul style="list-style-type: none"> • Single Buffer • Double Buffer | Single Buffer | When Double Buffer is selected the 'duty_buffer' array in three_phase_duty_cycle_t is used as a buffer for the 'duty' array. This allows setting the duty cycle for the next two crest/trough events in asymmetric mode with only one call to <code>R_GPT_THREE_PHASE_DutyCycleSet</code> . |
| GTIOCA Stop Level | <ul style="list-style-type: none"> • Pin Level Low • Pin Level High | Pin Level Low | Select the behavior of the output pin when the timer is stopped. |
| GTIOCB Stop Level | <ul style="list-style-type: none"> • Pin Level Low • Pin Level High | Pin Level Low | Select the behavior of the output pin when the timer is stopped. |

Extra Features

Extra Features > Dead Time

| | | | |
|---|--|---|--|
| Dead Time Count Up (Raw Counts) | Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff). | 0 | Select the dead time to apply during up counting. This value also applies during down counting for the GPT32 and GPT16 variants. |
| Dead Time Count Down (Raw Counts) (GPTE/GPTEH only) | Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff). | 0 | Select the dead time to apply during down counting. This value only applies to the GPT32E and GPT32EH variants. |

Clock Configuration

Please refer to the [Timer, General PWM \(r_gpt\)](#) section for more information.

Pin Configuration

Please refer to the [Timer, General PWM \(r_gpt\)](#) section for more information.

Usage Notes

Warning

Be sure the GTIOCA/B stop level and dead time values are set appropriately for your application before attempting to drive a motor. Failure to do so may result in damage to the motor drive circuitry and/or the motor itself if the timer is stopped by software.

Initial Setup

The following should be configured once the GPT Three-Phase module has been added to a project:

1. Set "Pin Output Support" in one of the GPT submodules to "Enabled with Extra Features"
2. Configure common settings in the GPT Three-Phase module properties
3. Set the crest and trough interrupt priority and callback function in **one** of the three GPT submodules (if desired)
4. Set the "Extra Features -> Output Disable" settings in each GPT submodule as needed for your application

Note

Because all three modules are operated synchronously with the same period interrupts only need to be enabled in one of the three GPT modules.

Buffer Modes

There are two buffering modes available for duty cycle values - single- and double-buffered. In single buffer mode only the values specified in the duty array element of [three_phase_duty_cycle_t](#) are used by [R_GPT_THREE_PHASE_DutyCycleSet](#). At the next trough or crest event the output duty cycle will be internally updated to the set values.

In double buffer mode the `duty_buffer` array values are used as buffer values for the duty elements. Once passed to `R_GPT_THREE_PHASE_DutyCycleSet`, the next trough or crest event will update the output duty cycle to the values specified in `duty` as before. However, at the following crest or trough event the output duty cycle will be updated to the values in `duty_buffer`. This allows the duty cycle for both sides of an asymmetric PWM waveform to be set at only one trough or crest event per period instead of at every event.

Examples

GPT Three-Phase Basic Example

This is a basic example of minimal use of the GPT Three-Phase module in an application. The duty cycle is updated at every timer trough with the previously loaded buffer value, then the duty cycle buffer is reloaded in the trough interrupt callback.

```
void gpt_callback (timer_callback_args_t * p_args)
{
    fsp_err_t          err;
    three_phase_duty_cycle_t duty_cycle;
    if (TIMER_EVENT_TROUGH == p_args->event)
    {
        /* Update duty cycle values (example) */
        duty_cycle.duty[THREE_PHASE_CHANNEL_U] =
get_duty_counts(THREE_PHASE_CHANNEL_U);
        duty_cycle.duty[THREE_PHASE_CHANNEL_V] =
get_duty_counts(THREE_PHASE_CHANNEL_V);
        duty_cycle.duty[THREE_PHASE_CHANNEL_W] =
get_duty_counts(THREE_PHASE_CHANNEL_W);
        /* Update duty cycle values */
        err = R_GPT_THREE_PHASE_DutyCycleSet(&g_gpt_three_phase_ctrl, &duty_cycle);
        assert(FSP_SUCCESS == err);
    }
    else
    {
        /* Handle crest event. */
    }
}

void gpt_three_phase_basic_example (void)
{
```

```

fsp_err_t err = FSP_SUCCESS;

/* Initializes the module. */
err = R_GPT_THREE_PHASE_Open(&g_gpt_three_phase_ctrl, &g_gpt_three_phase_cfg);

/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);

/* Start the timer. */
(void) R_GPT_THREE_PHASE_Start(&g_gpt_three_phase_ctrl);
}

```

Data Structures

struct [gpt_three_phase_instance_ctrl_t](#)

Data Structure Documentation

◆ gpt_three_phase_instance_ctrl_t

struct [gpt_three_phase_instance_ctrl_t](#)

Channel control block. DO NOT INITIALIZE. Initialization occurs when [three_phase_api_t::open](#) is called.

Function Documentation

◆ R_GPT_THREE_PHASE_Open()

[fsp_err_t](#) R_GPT_THREE_PHASE_Open ([three_phase_ctrl_t](#) *const *p_ctrl*, [three_phase_cfg_t](#) const *const *p_cfg*)

Initializes the 3-phase timer module (and associated timers) and applies configurations. Implements [three_phase_api_t::open](#).

Example:

```

/* Initializes the module. */
err = R_GPT_THREE_PHASE_Open(&g_gpt_three_phase_ctrl, &g_gpt_three_phase_cfg);

```

Return values

| | |
|----------------------|-----------------------------------|
| FSP_SUCCESS | Initialization was successful. |
| FSP_ERR_ASSERTION | A required input pointer is NULL. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |

◆ **R_GPT_THREE_PHASE_Stop()**

```
fsp_err_t R_GPT_THREE_PHASE_Stop ( three_phase_ctrl_t *const p_ctrl)
```

Stops all timers synchronously. Implements `three_phase_api_t::stop`.

Return values

| | |
|-------------------|------------------------------|
| FSP_SUCCESS | Timers successfully stopped. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_THREE_PHASE_Start()**

```
fsp_err_t R_GPT_THREE_PHASE_Start ( three_phase_ctrl_t *const p_ctrl)
```

Starts all timers synchronously. Implements `three_phase_api_t::start`.

Example:

```
/* Start the timer. */
(void) R_GPT_THREE_PHASE_Start(&g_gpt_three_phase_ctrl);
```

Return values

| | |
|-------------------|------------------------------|
| FSP_SUCCESS | Timers successfully started. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_THREE_PHASE_Reset()**

```
fsp_err_t R_GPT_THREE_PHASE_Reset ( three_phase_ctrl_t *const p_ctrl)
```

Resets the counter values to 0. Implements `three_phase_api_t::reset`.

Return values

| | |
|-------------------|-----------------------------------|
| FSP_SUCCESS | Counters were reset successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ R_GPT_THREE_PHASE_DutyCycleSet()

```
fsp_err_t R_GPT_THREE_PHASE_DutyCycleSet ( three_phase_ctrl_t *const p_ctrl,
three_phase_duty_cycle_t *const p_duty_cycle )
```

Sets duty cycle for all three timers. Implements `three_phase_api_t::dutyCycleSet`.

In symmetric PWM mode duty cycle values are reflected after the next trough. In asymmetric PWM mode values are reflected at the next trough OR crest, whichever comes first.

When double-buffering is enabled the values in `three_phase_duty_cycle_t::duty_buffer` are set to the double-buffer registers. When values are reflected the first time the single buffer values (`three_phase_duty_cycle_t::duty`) are used. On the second reflection the `duty_buffer` values are used. In asymmetric PWM mode this enables both count-up and count-down PWM values to be set at trough (or crest) exclusively.

Note

It is recommended to call this function in a high-priority callback to ensure that it is not interrupted and that no GPT events occur during setting that would result in a duty cycle buffer load operation.

Example:

```
/* Update duty cycle values */
err = R_GPT_THREE_PHASE_DutyCycleSet(&g_gpt_three_phase_ctrl, &duty_cycle);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Duty cycle updated successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_ARGUMENT | One or more duty cycle count values was outside the range 0..(period - 1). |

◆ R_GPT_THREE_PHASE_CallbackSet()

```
fsp_err_t R_GPT_THREE_PHASE_CallbackSet ( three_phase_ctrl_t *const p_ctrl,
void(*) (timer_callback_args_t *) p_callback, void const *const p_context, timer_callback_args_t
*const p_callback_memory )
```

Updates the user callback for the GPT U-channel with the option to provide memory for the callback argument structure. Implements `three_phase_api_t::callbackSet`.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |

◆ **R_GPT_THREE_PHASE_Close()**

```
fsp_err_t R_GPT_THREE_PHASE_Close ( three_phase_ctrl_t *const p_ctrl)
```

Stops counters, disables output pins, and clears internal driver data. Implements [three_phase_api_t::close](#).

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

Detailed Description

Driver for the GPT32 and GPT16 peripherals on RA MCUs. This module implements the [Timer Interface](#).

Overview

The GPT module can be used to count events, measure external input signals, generate a periodic interrupt, or output a periodic or PWM signal to a GTIOC pin.

This module supports the GPT peripherals GPT32EH, GPT32E, GPT32, and GPT16. GPT16 is a 16-bit timer. The other peripherals (GPT32EH, GPT32E, and GPT32) are 32-bit timers. The 32-bit timers are all treated the same in this module from the API perspective.

Features

The GPT module has the following features:

- Supports periodic mode, one-shot mode, and PWM mode.
- Supports count source of PCLK, GTETRГ pins, GTIOC pins, or ELC events.
- Supports debounce filter on GTIOC pins.
- Signal can be output to a pin.
- Configurable period (counts per timer cycle).
- Configurable duty cycle in PWM mode.
- Supports runtime reconfiguration of period.
- Supports runtime reconfiguration of duty cycle in PWM mode.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value.
- Supports start, stop, clear, count up, count down, and capture by external sources from GTETRГ pins, GTIOC pins, or ELC events.
- Supports symmetric and asymmetric PWM waveform generation.
- Supports One shot synchronous pulse waveform generation.

- Supports automatic addition of dead time.
- Supports generating ELC events to start an ADC scan at a compare match value (see [Event Link Controller \(r_elc\)](#)) and updating the compare match value.
- Supports linking with a POEG channel to automatically disable GPT output when an error condition is detected.
- Supports setting the counter value while the timer is stopped.
- Supports enabling and disabling output pins.
- Supports skipping up to seven overflow/underflow (crest/trough) interrupts at a time
- Supports generating custom PWM waveforms by configuring the pin's output level at each compare match and cycle end.

Selecting a Timer

RA MCUs have two timer peripherals: the General PWM Timer (GPT) and the Asynchronous General Purpose Timer (AGT). When selecting between them, consider these factors:

| | GPT | AGT |
|--------------------|--|---|
| Low Power Modes | The GPT can operate in sleep mode. | The AGT can operate in all low power modes. |
| Available Channels | The number of GPT channels is device specific. All currently supported MCUs have at least 7 GPT channels. | All MCUs have 2 AGT channels. |
| Timer Resolution | All MCUs have at least one 32-bit GPT timer. | The AGT timers are 16-bit timers. |
| Clock Source | The GPT runs off PCLKD with a configurable divider up to 1024. It can also be configured to count ELC events or external pulses. | The AGT runs off PCLKB, LOCO, or subclock. |

Configuration

Build Time Configurations for r_gpt

The following build time configurations are defined in `fsp_cfg/r_gpt_cfg.h`:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Pin Output Support | <ul style="list-style-type: none"> • Disabled • Enabled • Enabled with Extra Features | Disabled | Enables or disables support for outputting PWM waveforms on GTIOCx pins. The "Enabled with Extra Features" option enables support for |

Triangle wave modes and also enables the features located in the "Extra Features" section of each module instance.

Write Protect Enable • Enabled Disabled
 • Disabled

If selected write protection is applied to all GPT channels.

Configurations for Timers > Timer, General PWM (r_gpt)

This module can be added to the Stacks tab via New Stack > Timers > Timer, General PWM (r_gpt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|---|----------|--|
| General | | | |
| Name | Name must be a valid C symbol | g_timer0 | Module name. |
| Channel | Channel number must exist on this MCU | 0 | Specify the hardware channel. |
| Mode | <ul style="list-style-type: none"> • Periodic • One-Shot • One-Shot Pulse • Saw-wave PWM • Triangle-wave PWM (symmetric, Mode 1) • Triangle-wave PWM (asymmetric, Mode 2) • Triangle-wave PWM (asymmetric, Mode 3) | Periodic | <p>Mode selection.</p> <p>Periodic: Generates periodic interrupts or square waves.</p> <p>One-shot: Generate a single interrupt or a pulse wave. Note: One-shot mode is implemented in software. ISRs must be enabled for one-shot even if callback is unused.</p> <p>One-Shot Pulse: Counter performs saw-wave operation with fixed buffer operation.</p> <p>Saw-wave PWM: Generates basic saw-wave PWM waveforms.</p> <p>Triangle-wave PWM (symmetric, Mode 1): Generates symmetric PWM waveforms with duty cycle determined by compare match set with 32-bit transfer during a crest interrupt and updated at the next trough with single</p> |

or double buffer operation.

Triangle-wave PWM (asymmetric, Mode 2): Generates asymmetric PWM waveforms with duty cycle determined by compare match set with 32-bit transfer during a crest/trough interrupt and updated at the next trough/crest.

Triangle-wave PWM (asymmetric, Mode 3): Generates PWM waveforms with duty cycle determined by compare match set with 64-bit transfer during a crest interrupt and updated at the next trough with fixed buffer operation.

| | | | |
|-------------|---|------------|---|
| Period | Value must be a non-negative integer less than or equal to 0x400000000000 | 0x10000 | Specify the timer period in units selected below. Set the period to 0x100000000 (32-bit) or 0x10000 (16-bit) raw counts for a free running timer or an input capture configuration. The period can be set up to 0x400000000000 (32-bit) or 0x4000000 (16-bit) which will use a divider of 1024 with the maximum period. |
| Period Unit | <ul style="list-style-type: none"> • Raw Counts • Nanoseconds | Raw Counts | If the requested period cannot be achieved, the settings with the largest possible period that is less than or equal to the requested period are used. Extra Features

Extra Features > Output Disable

POEG Link

- POEG Channel 0
- POEG Channel 1
- POEG Channel 2
- POEG Channel 3

POEG Channel 0

Select which POEG to link this GPT channel to.

Output Disable POEG Trigger

- Dead Time Error
- GTIOCA and GTIOCB High Level
- GTIOCA and GTIOCB Low Level

Select which errors send an output disable trigger to POEG. Dead time error is only available GPT channels that have GTINTAD.GRPDTE.

GTIOCA Disable Setting

- Disable Prohibited
- Set Hi Z
- Level Low
- Level High

Disable Prohibited

Select the disable setting for GTIOCA.

GTIOCB Disable Setting

- Disable Prohibited
- Set Hi Z
- Level Low
- Level High

Disable Prohibited

Select the disable setting for GTIOCB.

Extra Features > ADC Trigger

Start Event Trigger (Channels with GTINTAD only)

- Trigger Event A/D Converter Start Request A During Up Counting
- Trigger Event A/D Converter Start Request A During Down Counting
- Trigger Event A/D Converter Start Request B During Up Counting
- Trigger Event A/D Converter Start Request B

Select which A/D converter start request interrupts to generate and at which point in the cycle to generate them.

During Down Counting

Extra Features > Dead Time (Value range varies with Channel)

| | | | |
|---------------------------------|--|---|---|
| Dead Time Count Up (Raw Counts) | Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff). | 0 | Select the dead time to apply during up counting. This value also applies during down counting for channels that do not have GTDVD. The dead time count up value can be set up to 0xffffffff (32-bit) or 0xffff (16-bit). |
|---------------------------------|--|---|---|

| | | | |
|--|--|---|---|
| Dead Time Count Down (Raw Counts) (Channels with GTDVD only) | Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff). | 0 | Select the dead time to apply during down counting. The dead time count down value can be set up to 0xffffffff (32-bit) or 0xffff (16-bit). |
|--|--|---|---|

Extra Features > ADC Trigger (Channels with GTADTRA only)

| | | | |
|----------------------------------|--|---|---|
| ADC A Compare Match (Raw Counts) | Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff). | 0 | Select the compare match value that generates a GPTn AD TRIG A event. |
|----------------------------------|--|---|---|

Extra Features > ADC Trigger (Channels with GTADTRB only)

| | | | |
|----------------------------------|--|---|---|
| ADC B Compare Match (Raw Counts) | Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff). | 0 | Select the compare match value that generates a GPTn AD TRIG B event. |
|----------------------------------|--|---|---|

Extra Features > Interrupt Skipping (Channels with GTITC only)

| | | | |
|--------------------|--|------|--|
| Interrupt to Count | <ul style="list-style-type: none"> • None • Overflow and Underflow (sawtooth) • Crest (triangle) • Trough (triangle) | None | Select the count source for interrupt skipping. The interrupt skip counter increments after each source event. All crest/overflow and trough/underflow interrupts are skipped when the interrupt skip counter is non-zero. |
|--------------------|--|------|--|

| | | | |
|----------------------|--|---|--|
| Interrupt Skip Count | <ul style="list-style-type: none"> • 0 • 1 • 2 • 3 | 0 | Select the number of interrupts to skip. |
|----------------------|--|---|--|

| | | | |
|-----------------|---|---|--|
| | <ul style="list-style-type: none"> • 4 • 5 • 6 • 7 | | |
| Skip ADC Events | <ul style="list-style-type: none"> • None • ADC A Compare Match • ADC B Compare Match • ADC A and B Compare Match | module.driver.timer.interrupt_skip.adc.none | Select ADC events to suppress when the interrupt skip count is not zero. |
| Extra Features | <ul style="list-style-type: none"> • Enabled • Disabled | Disabled | Select whether to enable extra features on this channel. |

Clock Configuration

The GPT clock is based on the PCLKD frequency. You can set the PCLKD frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

This module can use GTETRGA, GTETRGB, GTETRGC, GTETRGD, GTIOCA and GTIOCB pins as count sources.

This module can use GTIOCA and GTIOCB pins as output pins for periodic or PWM signals.

This module can use GTIOCA and GTIOCB as input pins to measure input signals.

Usage Notes

Maximum Period

The RA Configuration editor will automatically calculate the period count value and source clock divider based on the selected period time, units and clock speed.

When the selected period unit is "Raw counts", the maximum period setting is 0x4000000000 on a 32-bit timer or 0x0x4000000 on a 16-bit timer. This will configure the timer with the maximum period and a count clock divisor of 1024.

Note

16-bit channels inherently have a reduced maximum period compared to 32-bit channels. When setting period values of hundreds of milliseconds or more on 16-bit channels be sure to check the generated output to confirm the actual configured value as it will clip much earlier than 32-bit channels. In general, it is recommended to use a lower-power timer like AGT or RTC if long hardware delays are required.

Updating Period and Duty Cycle

The period and duty cycle are updated after the next counter overflow after calling [R_GPT_PeriodSet\(\)](#) or [R_GPT_DutyCycleSet\(\)](#). To force them to update before the next counter overflow, call [R_GPT_Reset\(\)](#) while the counter is running.

Note

When manually changing the timer period counts the maximum value for a 32-bit GPT is 0x100000000. This number overflows the 32-bit value for `timer_cfg_t::period_counts`. To configure the timer for the maximum period, set `timer_cfg_t::period_counts` to 0.

One-Shot Mode

The GPT timer does not support one-shot mode natively. One-shot mode is achieved by stopping the timer in the interrupt service routine before the callback is called. If the interrupt is not serviced before the timer period expires again, the timer generates more than one event. The callback is only called once in this case, but multiple events may be generated if the timer is linked to the [Transfer \(r_dtc\)](#).

One-Shot Mode Output

The output waveform in one-shot mode is one PCLKD cycle less than the configured period. The configured period must be at least 2 counts to generate an output pulse.

Examples of one-shot signals that can be generated by this module are shown below:

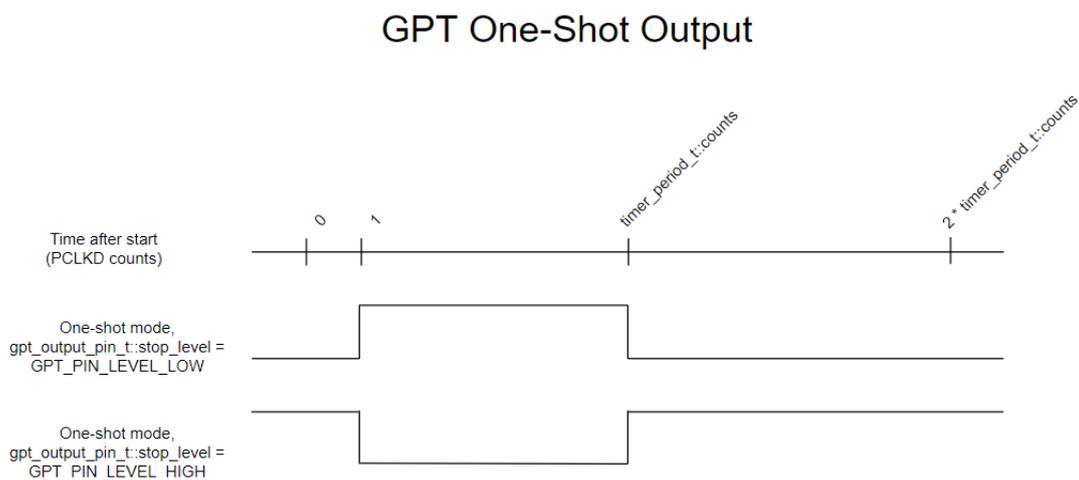

Figure 296: GPT One-Shot Output

One-Shot Pulse Mode

The one-shot pulse mode is an asymmetric PWM mode that provides more control over the rising and falling edges of the output. The user provides a period and initial output level and controls the signal by specifying compare match values for the leading and trailing edges each period.

Note

Despite its name, the One-Shot Pulse Mode operates continuously and does not stop after the first period.

One-Shot Pulse Mode Output

Examples of PWM signals that can be generated by this module are shown below. The leading and trailing edge match values can be modified using [R_GPT_DutyCycleSet\(\)](#) in the overflow interrupt.

GPT One-Shot Pulse Output

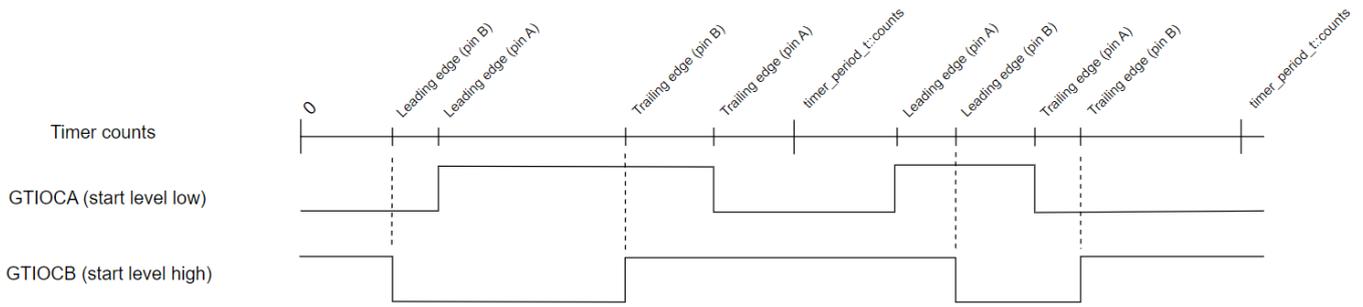

Figure 297: GPT One-Shot Pulse Output (without dead time)

If dead time is enabled only match values for GTIOCnA need to be set; the match values for GTIOCnB will be automatically configured in hardware.

GPT One-Shot Pulse Output (with dead time)

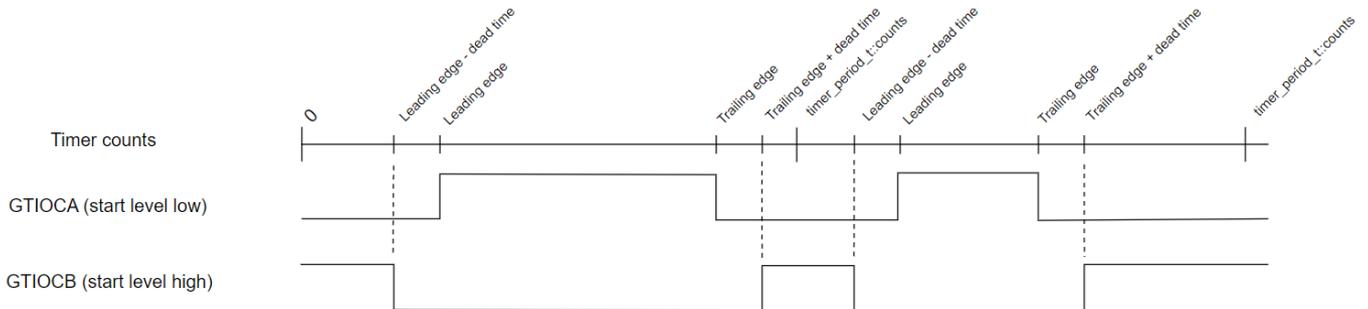

Figure 298: GPT One-Shot Pulse Output (with dead time)

Periodic Output

The GTIOC pin toggles twice each time the timer expires in periodic mode. This is achieved by defining a PWM wave at a 50 percent duty cycle so that the period of the resulting square wave (from rising edge to rising edge) matches the period of the GPT timer. Since the periodic output is actually a PWM output, the time at the stop level is one cycle shorter than the time opposite the stop level for odd period values.

Examples of periodic signals that can be generated by this module are shown below:

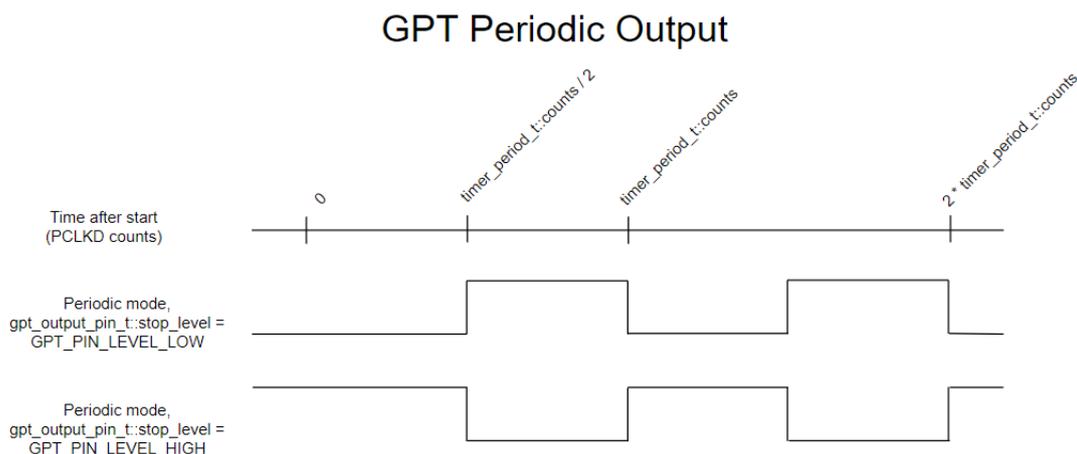

Figure 299: GPT Periodic Output

PWM Output

The PWM output signal is high at the beginning of the cycle and low at the end of the cycle.

Examples of PWM signals that can be generated by this module are shown below:

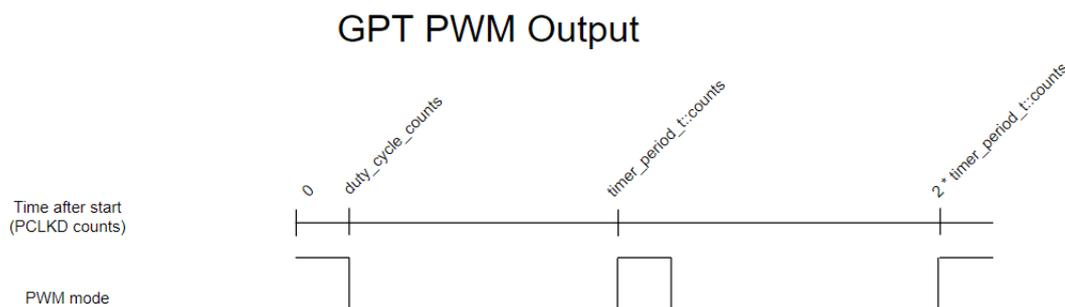

Figure 300: GPT PWM Output

Triangle-Wave PWM Output

Examples of PWM signals that can be generated by this module are shown below. The `duty_cycle_counts` can be modified using `R_GPT_DutyCycleSet()` in the crest interrupt and updated at the following trough for symmetric PWM or modified in both the crest/trough interrupts and updated at the following trough/crest for asymmetric PWM.

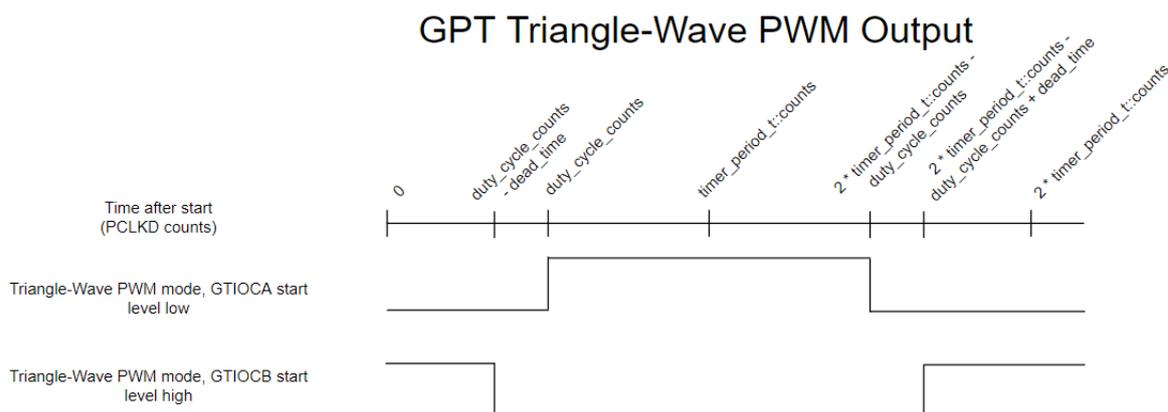

Figure 301: GPT Triangle-Wave PWM Output

PWM Output Delay Circuit

On select MCUs, an additional PWM output delay circuit can be configured in order to fine tune the rising and falling edge delays in increments of 1/32 times the period of the GPT core clock. The PWM output delay function must be configured prior to initializing the GPT channels using [R_GPT_PwmOutputDelayInitialize](#).

Note

1. In Saw-wave PWM mode, the output delay setting cannot be changed while the capture compare setting ($GTCCRn$) is greater than or equal the period setting ($GTPR$) - 2.
2. In Triangle PWM modes, the output delay setting cannot be changed while the counter is counting down, and the capture compare setting ($GTCCRn$) is less than or equal to 2.
3. When the PWM Output Delay Circuit is enabled, the PWM signal is delayed by 3 GPT core clock cycles.
4. When the $GPTCLK$ is used as the GPT core clock, the following delay is required between writes to the rising or falling edge output delay setting for a given pin: $Write_Interval[ns] = Period_of_PCLKA [ns] \times 6 + Period_of_GPTCLK [ns] \times 4$.

Event Counting

Event counting can be done by selecting up or down counting sources from $GTETR$ G pins, ELC events, or $GTIOC$ pins. In event counting mode, the GPT counter is not affected by $PCLKD$.

Note

In event counting mode, the application must call [R_GPT_Start\(\)](#) to enable event counting. The counter will not change after calling [R_GPT_Start\(\)](#) until an event occurs.

Pulse Measurement

If the capture edge occurs before the start edge in pulse measurement, the first capture is invalid (0).

Controlling GPT with $GTETR$ G Edges

The GPT timer can be configured to stop, start, clear, count up, or count down when a $GTETR$ G rising or falling edge occurs.

Note

The $GTETR$ G pins are shared by all GPT channels.
 $GTETR$ G pins require $POEG$ to be on (example code for this is provided in [GPT Free Running Counter Example](#)).

If input filtering is required on the GTETRG pins, that must also be handled outside this module.

Controlling GPT with ELC Events

The GPT timer can be configured to stop, start, clear, count up, or count down when an ELC event occurs.

Note

The configurable ELC GPT sources are shared by all GPT channels.

The event links for the ELC must be configured outside this module.

Triggering ELC Events with GPT

The GPT timer can trigger the start of other peripherals. The [Event Link Controller \(r_elc\)](#) guide provides a list of all available peripherals.

Enabling External Sources for Start, Stop, Clear, or Capture

[R_GPT_Enable\(\)](#) must be called when external sources are used for start, stop, clear, or capture.

Interrupt Skipping

When an interrupt skipping source is selected a hardware counter will increment each time the selected event occurs. Each interrupt past the first (up to the specified skip count) will be suppressed. If ADC events are selected for skipping they will also be suppressed except during the timer period leading to the selected interrupt skipping event (see below diagram).

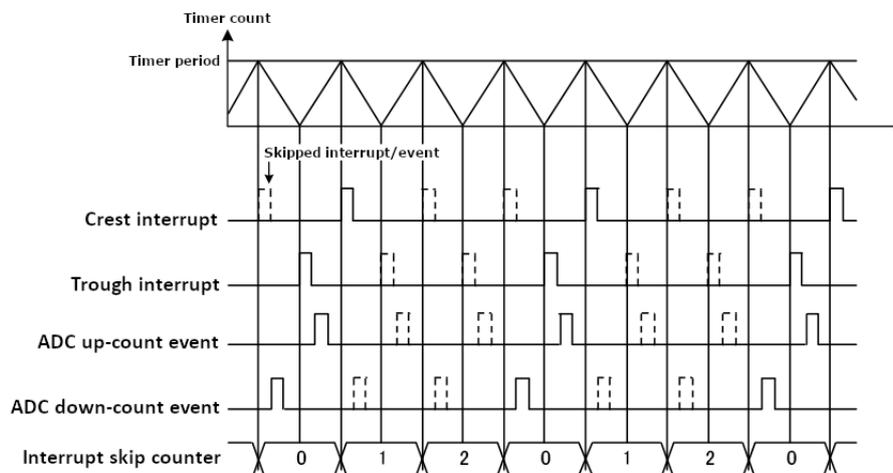

Figure 302: Crest interrupt skipping in triangle-wave PWM modes (skip count 2)

Complementary Output

By using the Custom Waveform option the output pins can be made to output complementary waveforms. To ensure these waveforms stay in sync, the duty cycle for both pins can be set simultaneously by calling [R_GPT_DutyCycleSet](#) once with a pin parameter of [GPT_IO_PIN_GTIOCA_AND_GTIOCB](#).

Note

The pin level for 0% and 100% duty cycle is determined by the Cycle End Output Level in normal PWM mode and

the Initial Output Level in triangle PWM modes. 100% duty will output the configured level and 0% will output the opposite. Do not use Pin Level Toggle or Pin Level Retain for the Cycle End Output Level if normal PWM waveforms are desired.

Examples

GPT Basic Example

This is a basic example of minimal use of the GPT in an application.

```
void gpt_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);
}
```

GPT Callback Example

This is an example of a timer callback.

```
/* Example callback called when timer expires. */
void timer_callback (timer_callback_args_t * p_args)
{
    if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
        /* Add application code to be called periodically here. */
    }
}
```

GPT Free Running Counter Example

To use the GPT as a free running counter, select periodic mode and set the the Period to 0xFFFFFFFF for a 32-bit timer or 0xFFFF for a 16-bit timer.

```
void gpt_counter_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    /* (Optional) If event count mode is used to count edges on a GTETRQ pin, POEG must
    be started to use GTETRQ.

    * Reference Note 1 of Table 23.2 "GPT functions" in the RA6M3 manual
    R01UH0886EJ0100. */

    R_BSP_MODULE_START(FSP_IP_POEG, 0U);

    /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);

    /* (Optional) Stop the timer. */
    (void) R_GPT_Stop(&g_timer0_ctrl);

    /* Read the current counter value. Counter value is in status.counter. */
    timer_status_t status;

    (void) R_GPT_StatusGet(&g_timer0_ctrl, &status);
}
```

GPT Input Capture Example

This is an example of using the GPT to capture pulse width or pulse period measurements.

```
/* Example callback called when a capture occurs. */
uint64_t g_captured_time = 0U;
uint32_t g_capture_overflows = 0U;
void timer_capture_callback (timer_callback_args_t * p_args)
{
    if ((TIMER_EVENT_CAPTURE_A == p_args->event) || (TIMER_EVENT_CAPTURE_B ==
p_args->event))
    {
        /* (Optional) Get the current period if not known. */
        timer_info_t info;
```

```
(void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
uint64_t period = info.period_counts;
/* The maximum period is one more than the maximum 32-bit number, but will be
reflected as 0 in
* timer_info_t::period_counts. */
if (0U == period)
{
    period = UINT32_MAX + 1U;
}
g_captured_time = (period * g_capture_overflows) + p_args->capture;
g_capture_overflows = 0U;
}
if (TIMER_EVENT_CYCLE_END == p_args->event)
{
    /* An overflow occurred during capture. This must be accounted for at the
application layer. */
    g_capture_overflows++;
}
}
void gpt_capture_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Enable captures. Captured values arrive in the interrupt. */
    (void) R_GPT_Enable(&g_timer0_ctrl);
    /* (Optional) Disable captures. */
    (void) R_GPT_Disable(&g_timer0_ctrl);
}
```

GPT Period Update Example

This an example of updating the period.

```
#define GPT_EXAMPLE_MSEC_PER_SEC (1000)
#define GPT_EXAMPLE_DESIRED_PERIOD_MSEC (20)
/* This example shows how to calculate a new period value at runtime. */
void gpt_period_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);
    /* Get the source clock frequency (in Hz). There are 3 ways to do this in FSP:
    * - If the PCLKD frequency has not changed since reset, the source clock frequency
    is
    * BSP_STARTUP_PCLKD_HZ >> timer_cfg_t::source_div
    * - Use the R_GPT_InfoGet function (it accounts for the divider).
    * - Calculate the current PCLKD frequency using
    R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) and right shift
    * by timer_cfg_t::source_div.
    *
    * This example uses the 3rd option (R_FSP_SystemClockHzGet).
    */
    uint32_t pclkd_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) >>
    g_timer0_cfg.source_div;
    /* Calculate the desired period based on the current clock. Note that this
    calculation could overflow if the
    * desired period is larger than UINT32_MAX / pclkd_freq_hz. A cast to uint64_t is
    used to prevent this. */
    uint32_t period_counts =
        (uint32_t) (((uint64_t) pclkd_freq_hz * GPT_EXAMPLE_DESIRED_PERIOD_MSEC) /
    GPT_EXAMPLE_MSEC_PER_SEC);
    /* Set the calculated period. */
    err = R_GPT_PeriodSet(&g_timer0_ctrl, period_counts);
}
```

```
    assert(FSP_SUCCESS == err);
}
```

GPT Duty Cycle Update Example

This an example of updating the duty cycle.

```
#define GPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT (25)
#define GPT_EXAMPLE_MAX_PERCENT (100)

/* This example shows how to calculate a new duty cycle value at runtime. */
void gpt_duty_cycle_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;

    /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);

    /* Get the current period setting. */
    timer_info_t info;
    (void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
    uint32_t current_period_counts = info.period_counts;

    /* Calculate the desired duty cycle based on the current period. Note that if the
    period could be larger than
    * UINT32_MAX / 100, this calculation could overflow. A cast to uint64_t is used to
    prevent this. The cast is
    * not required for 16-bit timers. */
    uint32_t duty_cycle_counts =
        (uint32_t) (((uint64_t) current_period_counts *
GPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                    GPT_EXAMPLE_MAX_PERCENT);

    /* Set the calculated duty cycle. */
    err = R_GPT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, GPT_IO_PIN_GTIOCB);
    assert(FSP_SUCCESS == err);
}
```

```
}
```

GPT A/D Converter Start Request Example

This is an example of using the GPT to start the ADC at a configurable A/D converter compare match value.

```
#if ((1U << GPT_EXAMPLE_CHANNEL) & (BSP_FEATURE_GPTEH_CHANNEL_MASK |  
BSP_FEATURE_GPTE_CHANNEL_MASK))  
  
/* This example shows how to configure the GPT to generate an A/D start request at an  
A/D start request compare  
* match value. This example can only be used with GPTE or GPTEH variants. */  
void gpt_adc_start_request_example (void)  
{  
    fsp_err_t err = FSP_SUCCESS;  
    /* Initialize and configure the ELC. */  
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);  
    /* Handle any errors. This function should be defined by the user. */  
    assert(FSP_SUCCESS == err);  
    /* Configure the ELC to start a scan on ADC unit 0 when GPT channel 0. Note: This is  
typically configured in  
* g_elc_cfg and already set during R_ELC_Open. */  
    err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0, ELC_EVENT_GPT0_AD_TRIG_A);  
    assert(FSP_SUCCESS == err);  
    /* Globally enable ELC events. */  
    err = R_ELC_Enable(&g_elc_ctrl);  
    assert(FSP_SUCCESS == err);  
    /* Initialize the ADC to start a scan based on an ELC event trigger. Set  
adc_cfg_t::trigger to  
* ADC_TRIGGER_SYNC_ELC. */  
    err = R_ADC_Open(&g_adc0_ctrl, &g_adc0_cfg);  
    assert(FSP_SUCCESS == err);  
    err = R_ADC_ScanCfg(&g_adc0_ctrl, &g_adc0_channel_cfg);  
    assert(FSP_SUCCESS == err);  
    /* Enable ELC triggers by calling R_ADC_ScanStart(). */
```

```

    (void) R_ADC_ScanStart(&g_adc0_ctrl);

    /* Initializes the GPT module. Configure gpt_extended_pwm_cfg_t::adc_trigger to set
when the A/D start request
    * is generated. Set gpt_extended_pwm_cfg_t::adc_a_compare_match to set the desired
compare match value. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    assert(FSP_SUCCESS == err);

    /* Start the timer. A/D converter start request events are generated each time the
counter is equal to the
    * A/D start request compare match value. */

#endif

```

GPT One-Shot Pulse Mode Example

This example demonstrates the configuration and use of one-shot pulse mode with GPT timer.

```

/* Example callback called when timer overflows. */
void gpt_overflow_callback (timer_callback_args_t * p_args)
{
    if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
        /* Use R_GPT_DutyCycleSet() API to set new values for each cycle.
        * - Use GPT_IO_PIN_ONE_SHOT_LEADING_EDGE to set the leading edge transition match
value (GTCCRC or GTCCRE register).
        * - Use GPT_IO_PIN_ONE_SHOT_TRAILING_EDGE to set the trailing edge transition match
value (GTCCRD or GTCCRF register).
        */
    }
}

#define GPT_ONE_SHOT_EXAMPLE_DUTY_CYCLE_GTCCRD_GTCCRF (0x1000U)
#define GPT_ONE_SHOT_EXAMPLE_DUTY_CYCLE_GTCCRC (0x800U)
#define GPT_ONE_SHOT_EXAMPLE_DUTY_CYCLE_GTCCRE (0x100U)
void gpt_one_shot_pulse_mode_example (void)

```

```
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

Enumeration Type Documentation

◆ [gpt_io_pin_t](#)

| | |
|--|---|
| enum gpt_io_pin_t | |
| Input/Output pins, used to select which duty cycle to update in R_GPT_DutyCycleSet() . | |
| Enumerator | |
| GPT_IO_PIN_GTIOCA | GTIOCA. |
| GPT_IO_PIN_GTIOCB | GTIOCB. |
| GPT_IO_PIN_GTIOCA_AND_GTIOCB | GTIOCA and GTIOCB. |
| GPT_IO_PIN_TROUGH | Used in R_GPT_DutyCycleSet when Triangle-wave PWM Mode 3 is selected. |
| GPT_IO_PIN_CREST | Used in R_GPT_DutyCycleSet when Triangle-wave PWM Mode 3 is selected. |
| GPT_IO_PIN_ONE_SHOT_LEADING_EDGE | Used in R_GPT_DutyCycleSet to set GTCCRC and GTCCRE registers when One-Shot Pulse mode is selected. |
| GPT_IO_PIN_ONE_SHOT_TRAILING_EDGE | Used in R_GPT_DutyCycleSet to set GTCCRD and GTCCRF registers when One-Shot Pulse mode is selected. |

◆ **gpt_buffer_force_push**

| | |
|--|--|
| enum gpt_buffer_force_push | |
| Forced buffer push operation used in One-Shot Pulse mode with R_GPT_DutyCycleSet() . | |
| Enumerator | |
| GPT_BUFFER_FORCE_PUSH | Used in R_GPT_DutyCycleSet to force push the data from GTCCRn registers to temporary buffer A or B when One-Shot Pulse mode is selected. |

◆ **gpt_pin_level_t**

| | |
|--------------------------------------|-----------------|
| enum gpt_pin_level_t | |
| Level of GPT pin | |
| Enumerator | |
| GPT_PIN_LEVEL_LOW | Pin level low. |
| GPT_PIN_LEVEL_HIGH | Pin level high. |

◆ **gpt_source_t**

| | |
|---|---|
| enum gpt_source_t | |
| Sources can be used to start the timer, stop the timer, count up, or count down. These enumerations represent a bitmask. Multiple sources can be ORed together. | |
| Enumerator | |
| GPT_SOURCE_NONE | No active event sources. |
| GPT_SOURCE_GTETRGA_RISING | Action performed on GTETRGA rising edge. |
| GPT_SOURCE_GTETRGA_FALLING | Action performed on GTETRGA falling edge. |
| GPT_SOURCE_GTETRGB_RISING | Action performed on GTETRGB rising edge. |
| GPT_SOURCE_GTETRGB_FALLING | Action performed on GTETRGB falling edge. |
| GPT_SOURCE_GTETRGC_RISING | Action performed on GTETRGC rising edge. |
| GPT_SOURCE_GTETRGC_FALLING | Action performed on GTETRGC falling edge. |
| GPT_SOURCE_GTETRGD_RISING | Action performed on GTETRGB rising edge. |

| | |
|---|--|
| GPT_SOURCE_GTETRGD_FALLING | Action performed on GTETRGB falling edge. |
| GPT_SOURCE_GTIOCA_RISING_WHILE_GTIOCB_LOW | Action performed when GTIOCA input rises while GTIOCB is low. |
| GPT_SOURCE_GTIOCA_RISING_WHILE_GTIOCB_HIGH | Action performed when GTIOCA input rises while GTIOCB is high. |
| GPT_SOURCE_GTIOCA_FALLING_WHILE_GTIOCB_LOW | Action performed when GTIOCA input falls while GTIOCB is low. |
| GPT_SOURCE_GTIOCA_FALLING_WHILE_GTIOCB_HIGH | Action performed when GTIOCA input falls while GTIOCB is high. |
| GPT_SOURCE_GTIOCB_RISING_WHILE_GTIOCA_LOW | Action performed when GTIOCB input rises while GTIOCA is low. |
| GPT_SOURCE_GTIOCB_RISING_WHILE_GTIOCA_HIGH | Action performed when GTIOCB input rises while GTIOCA is high. |
| GPT_SOURCE_GTIOCB_FALLING_WHILE_GTIOCA_LOW | Action performed when GTIOCB input falls while GTIOCA is low. |
| GPT_SOURCE_GTIOCB_FALLING_WHILE_GTIOCA_HIGH | Action performed when GTIOCB input falls while GTIOCA is high. |
| GPT_SOURCE_GPT_A | Action performed on ELC GPTA event. |
| GPT_SOURCE_GPT_B | Action performed on ELC GPTB event. |
| GPT_SOURCE_GPT_C | Action performed on ELC GPTC event. |
| GPT_SOURCE_GPT_D | Action performed on ELC GPTD event. |
| GPT_SOURCE_GPT_E | Action performed on ELC GPTE event. |
| GPT_SOURCE_GPT_F | Action performed on ELC GPTF event. |
| GPT_SOURCE_GPT_G | Action performed on ELC GPTG event. |
| GPT_SOURCE_GPT_H | Action performed on ELC GPTH event. |

◆ **gpt_capture_filter_t**enum `gpt_capture_filter_t`

Input capture signal noise filter (debounce) setting. Only available for input signals GTIOCxA and GTIOCxB. The noise filter samples the external signal at intervals of the PCLK divided by one of the values. When 3 consecutive samples are at the same level (high or low), then that level is passed on as the observed state of the signal. See "Noise Filter Function" in the hardware manual, GPT section.

Enumerator

| | |
|--|--------------------------|
| <code>GPT_CAPTURE_FILTER_NONE</code> | None - no filtering. |
| <code>GPT_CAPTURE_FILTER_PCLKD_DIV_1</code> | PCLK/1 - fast sampling. |
| <code>GPT_CAPTURE_FILTER_PCLKD_DIV_4</code> | PCLK/4. |
| <code>GPT_CAPTURE_FILTER_PCLKD_DIV_16</code> | PCLK/16. |
| <code>GPT_CAPTURE_FILTER_PCLKD_DIV_64</code> | PCLK/64 - slow sampling. |

◆ **gpt_adc_trigger_t**

| enum <code>gpt_adc_trigger_t</code> | |
|---|---|
| Trigger options to start A/D conversion. | |
| Enumerator | |
| <code>GPT_ADC_TRIGGER_NONE</code> | None - no output disable request. |
| <code>GPT_ADC_TRIGGER_UP_COUNT_START_ADC_A</code> | Request A/D conversion from ADC unit 0 at up counting compare match of <code>gpt_extended_pwm_cfg_t::adc_a_compare_match</code> . |
| <code>GPT_ADC_TRIGGER_DOWN_COUNT_START_ADC_A</code> | Request A/D conversion from ADC unit 0 at down counting compare match of <code>gpt_extended_pwm_cfg_t::adc_a_compare_match</code> . |
| <code>GPT_ADC_TRIGGER_UP_COUNT_START_ADC_B</code> | Request A/D conversion from ADC unit 1 at up counting compare match of <code>gpt_extended_pwm_cfg_t::adc_b_compare_match</code> . |
| <code>GPT_ADC_TRIGGER_DOWN_COUNT_START_ADC_B</code> | Request A/D conversion from ADC unit 1 at down counting compare match of <code>gpt_extended_pwm_cfg_t::adc_b_compare_match</code> . |

◆ **gpt_poeg_link_t**

| enum <code>gpt_poeg_link_t</code> | |
|---------------------------------------|---|
| POEG channel to link to this channel. | |
| Enumerator | |
| <code>GPT_POEG_LINK_POEG0</code> | Link this GPT channel to POEG channel 0 (GTETRGA) |
| <code>GPT_POEG_LINK_POEG1</code> | Link this GPT channel to POEG channel 1 (GTETRGB) |
| <code>GPT_POEG_LINK_POEG2</code> | Link this GPT channel to POEG channel 2 (GTETRGC) |
| <code>GPT_POEG_LINK_POEG3</code> | Link this GPT channel to POEG channel 3 (GTETRGD) |

◆ **gpt_output_disable_t**

| enum <code>gpt_output_disable_t</code> | |
|--|--|
| Select trigger to send output disable request to POEG. | |
| Enumerator | |
| <code>GPT_OUTPUT_DISABLE_NONE</code> | None - no output disable request. |
| <code>GPT_OUTPUT_DISABLE_DEAD_TIME_ERROR</code> | Request output disable if a dead time error occurs. |
| <code>GPT_OUTPUT_DISABLE_GTIOCA_GTIOCB_HIGH</code> | Request output disable if GTIOCA and GTIOCB are high at the same time. |
| <code>GPT_OUTPUT_DISABLE_GTIOCA_GTIOCB_LOW</code> | Request output disable if GTIOCA and GTIOCB are low at the same time. |

◆ **gpt_gtioc_disable_t**

| enum <code>gpt_gtioc_disable_t</code> | |
|---|--|
| Disable level options for GTIOC pins. | |
| Enumerator | |
| <code>GPT_GTIOC_DISABLE_PROHIBITED</code> | Do not allow output disable. |
| <code>GPT_GTIOC_DISABLE_SET_HI_Z</code> | Set GTIOC to high impedance when output is disabled. |
| <code>GPT_GTIOC_DISABLE_LEVEL_LOW</code> | Set GTIOC level low when output is disabled. |
| <code>GPT_GTIOC_DISABLE_LEVEL_HIGH</code> | Set GTIOC level high when output is disabled. |

◆ **gpt_adc_compare_match_t**

| enum <code>gpt_adc_compare_match_t</code> | |
|---|---|
| Trigger options to start A/D conversion. | |
| Enumerator | |
| <code>GPT_ADC_COMPARE_MATCH_ADC_A</code> | Set A/D conversion start request value for GPT A/D converter start request A. |
| <code>GPT_ADC_COMPARE_MATCH_ADC_B</code> | Set A/D conversion start request value for GPT A/D converter start request B. |

◆ **gpt_interrupt_skip_source_t**

| enum gpt_interrupt_skip_source_t | |
|--|--|
| Interrupt skipping modes | |
| Enumerator | |
| GPT_INTERRUPT_SKIP_SOURCE_NONE | Do not skip interrupts. |
| GPT_INTERRUPT_SKIP_SOURCE_OVERFLOW_UNDERFLOW | Count and skip overflow and underflow interrupts. |
| GPT_INTERRUPT_SKIP_SOURCE_CREST | Count crest interrupts for interrupt skipping. Skip the number of crest and trough interrupts configured in gpt_interrupt_skip_count_t . When the interrupt does fire, the trough interrupt fires before the crest interrupt. |
| GPT_INTERRUPT_SKIP_SOURCE_TROUGH | Count trough interrupts for interrupt skipping. Skip the number of crest and trough interrupts configured in gpt_interrupt_skip_count_t . When the interrupt does fire, the crest interrupt fires before the trough interrupt. |

◆ **gpt_interrupt_skip_count_t**

| enum gpt_interrupt_skip_count_t | |
|---|-------------------------|
| Number of interrupts to skip between events | |
| Enumerator | |
| GPT_INTERRUPT_SKIP_COUNT_0 | Do not skip interrupts. |
| GPT_INTERRUPT_SKIP_COUNT_1 | Skip one interrupt. |
| GPT_INTERRUPT_SKIP_COUNT_2 | Skip two interrupts. |
| GPT_INTERRUPT_SKIP_COUNT_3 | Skip three interrupts. |
| GPT_INTERRUPT_SKIP_COUNT_4 | Skip four interrupts. |
| GPT_INTERRUPT_SKIP_COUNT_5 | Skip five interrupts. |
| GPT_INTERRUPT_SKIP_COUNT_6 | Skip six interrupts. |
| GPT_INTERRUPT_SKIP_COUNT_7 | Skip seven interrupts. |

◆ **gpt_interrupt_skip_adc_t**

| enum gpt_interrupt_skip_adc_t | |
|---|--------------------------|
| ADC events to skip during interrupt skipping | |
| Enumerator | |
| GPT_INTERRUPT_SKIP_ADC_NONE | Do not skip ADC events. |
| GPT_INTERRUPT_SKIP_ADC_A | Skip ADC A events. |
| GPT_INTERRUPT_SKIP_ADC_B | Skip ADC B events. |
| GPT_INTERRUPT_SKIP_ADC_A_AND_B | Skip ADC A and B events. |

◆ **gpt_pwm_output_delay_setting_t**

| enum gpt_pwm_output_delay_setting_t | |
|---|--|
| Delay setting for the PWM Delay Generation Circuit (PDG). | |
| Enumerator | |
| GPT_PWM_OUTPUT_DELAY_SETTING_0_32 | Delay is not applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_1_32 | Delay of 1 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_2_32 | Delay of 2 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_3_32 | Delay of 3 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_4_32 | Delay of 4 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_5_32 | Delay of 5 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_6_32 | Delay of 6 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_7_32 | Delay of 7 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_8_32 | Delay of 8 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_9_32 | Delay of 9 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_10_32 | Delay of 10 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_11_32 | Delay of 11 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_12_32 | Delay of 12 / 32 GTCLK period applied. |

| | |
|-------------------------------------|--|
| GPT_PWM_OUTPUT_DELAY_SETTING_13_32 | Delay of 13 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_14_32 | Delay of 14 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_15_32 | Delay of 15 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_16_32 | Delay of 16 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_17_32 | Delay of 17 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_18_32 | Delay of 18 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_19_32 | Delay of 19 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_20_32 | Delay of 20 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_21_32 | Delay of 21 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_22_32 | Delay of 22 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_23_32 | Delay of 23 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_24_32 | Delay of 24 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_25_32 | Delay of 25 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_26_32 | Delay of 26 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_27_32 | Delay of 27 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_28_32 | Delay of 28 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_29_32 | Delay of 29 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_30_32 | Delay of 30 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_31_32 | Delay of 31 / 32 GTCLK period applied. |
| GPT_PWM_OUTPUT_DELAY_SETTING_BYPASS | Bypass the PWM Output Delay Circuit. |

◆ gpt_pwm_output_delay_edge_t

| enum <code>gpt_pwm_output_delay_edge_t</code> | |
|---|--|
| Select which PWM Output Delay setting to apply. | |
| Enumerator | |
| <code>GPT_PWM_OUTPUT_DELAY_EDGE_RISING</code> | Configure the PWM Output Delay setting for rising edge. |
| <code>GPT_PWM_OUTPUT_DELAY_EDGE_FALLING</code> | Configure the PWM Output Delay setting for falling edge. |

Function Documentation

◆ **R_GPT_Open()**

```
fsp_err_t R_GPT_Open ( timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg )
```

Initializes the timer module and applies configurations. Implements `timer_api_t::open`.

GPT hardware does not support one-shot functionality natively. When using one-shot mode, the timer will be stopped in an ISR after the requested period has elapsed.

The GPT implementation of the general timer can accept a `gpt_extended_cfg_t` extension parameter.

Example:

```
/* Initializes the module. */
err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

| | |
|--------------------------------|--|
| FSP_SUCCESS | Initialization was successful and timer has started. |
| FSP_ERR_ASSERTION | A required input pointer is NULL or the source divider is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_IRQ_BSP_DISABLED | <code>timer_cfg_t::mode</code> is <code>TIMER_MODE_ONE_SHOT</code> or <code>timer_cfg_t::p_callback</code> is not NULL, but ISR is not enabled. ISR must be enabled to use one-shot mode or callback. |
| FSP_ERR_INVALID_MODE | Triangle wave PWM is only supported if <code>GPT_CFG_OUTPUT_SUPPORT_ENABLE</code> is 2. Selected channel does not support external count sources. External and event count sources not are available in this mode. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | The channel requested in the <code>p_cfg</code> parameter is not available on this device. |

◆ **R_GPT_Stop()**

```
fsp_err_t R_GPT_Stop ( timer_ctrl_t *const p_ctrl)
```

Stops timer. Implements `timer_api_t::stop`.

Example:

```
/* (Optional) Stop the timer. */
(void) R_GPT_Stop(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Timer successfully stopped. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_Start()**

```
fsp_err_t R_GPT_Start ( timer_ctrl_t *const p_ctrl)
```

Starts timer. Implements `timer_api_t::start`.

Example:

```
/* Start the timer. */
(void) R_GPT_Start(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Timer successfully started. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_Reset()**

```
fsp_err_t R_GPT_Reset ( timer_ctrl_t *const p_ctrl)
```

Resets the counter value to 0. Implements `timer_api_t::reset`.

Note

This function also updates to the new period if no counter overflow has occurred since the last call to `R_GPT_PeriodSet()`.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Counter value written successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_Enable()**

```
fsp_err_t R_GPT_Enable ( timer_ctrl_t *const p_ctrl)
```

Enables external event triggers that start, stop, clear, or capture the counter. Implements `timer_api_t::enable`.

Example:

```
/* Enable captures. Captured values arrive in the interrupt. */
(void) R_GPT_Enable(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---------------------------------------|
| FSP_SUCCESS | External events successfully enabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_Disable()**

```
fsp_err_t R_GPT_Disable ( timer_ctrl_t *const p_ctrl)
```

Disables external event triggers that start, stop, clear, or capture the counter. Implements [timer_api_t::disable](#).

Note

The timer could be running after [R_GPT_Disable\(\)](#). To ensure it is stopped, call [R_GPT_Stop\(\)](#).

Example:

```
/* (Optional) Disable captures. */
(void) R_GPT_Disable(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | External events successfully disabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_PeriodSet()**

```
fsp_err_t R_GPT_PeriodSet ( timer_ctrl_t *const p_ctrl, uint32_t const period_counts )
```

Sets period value provided. If the timer is running, the period will be updated after the next counter overflow. If the timer is stopped, this function resets the counter and updates the period. Implements [timer_api_t::periodSet](#).

Warning

If periodic output is used, the duty cycle buffer registers are updated after the period buffer register. If this function is called while the timer is running and a GPT overflow occurs during processing, the duty cycle will not be the desired 50% duty cycle until the counter overflow after processing completes.

Example:

```
/* Get the source clock frequency (in Hz). There are 3 ways to do this in FSP:
 * - If the PCLKD frequency has not changed since reset, the source clock frequency
is
 * BSP_STARTUP_PCLKD_HZ >> timer_cfg_t::source_div
 * - Use the R_GPT_InfoGet function (it accounts for the divider).
 * - Calculate the current PCLKD frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) and right shift
 * by timer_cfg_t::source_div.
 *
```

```

* This example uses the 3rd option (R_FSP_SystemClockHzGet).
*/
uint32_t pclkd_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) >>
g_timer0_cfg.source_div;
/* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
* desired period is larger than UINT32_MAX / pclkd_freq_hz. A cast to uint64_t is
used to prevent this. */
uint32_t period_counts =
    (uint32_t) (((uint64_t) pclkd_freq_hz * GPT_EXAMPLE_DESIRED_PERIOD_MSEC) /
GPT_EXAMPLE_MSEC_PER_SEC);
/* Set the calculated period. */
err = R_GPT_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);

```

Return values

| | |
|-------------------|------------------------------------|
| FSP_SUCCESS | Period value written successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ R_GPT_DutyCycleSet()

```

fsp_err_t R_GPT_DutyCycleSet ( timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts,
uint32_t const pin )

```

Sets duty cycle on requested pin. Implements [timer_api_t::dutyCycleSet](#).

Duty cycle is updated in the buffer register. The updated duty cycle is reflected after the next cycle end (counter overflow).

Example:

```

/* Get the current period setting. */
timer_info_t info;
(void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
uint32_t current_period_counts = info.period_counts;
/* Calculate the desired duty cycle based on the current period. Note that if the
period could be larger than
* UINT32_MAX / 100, this calculation could overflow. A cast to uint64_t is used to

```

```

prevent this. The cast is
* not required for 16-bit timers. */
uint32_t duty_cycle_counts =
    (uint32_t) (((uint64_t) current_period_counts *
GPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                GPT_EXAMPLE_MAX_PERCENT);
/* Set the calculated duty cycle. */
err = R_GPT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, GPT_IO_PIN_GTIOCB);
assert(FSP_SUCCESS == err);

```

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to instance control block. |
| [in] | duty_cycle_counts | Duty cycle to set in counts. |
| [in] | pin | Use gpt_io_pin_t to select GPT_IO_PIN_GTIOCA or GPT_IO_PIN_GTIOCB |

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Duty cycle updated successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL or the pin is not one of gpt_io_pin_t |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_ARGUMENT | Duty cycle is larger than period. |
| FSP_ERR_INVALID_MODE | GPT_IO_PIN_TROUGH, and GPT_IO_PIN_CREST settings are invalid in the this mode. |
| FSP_ERR_UNSUPPORTED | GPT_CFG_OUTPUT_SUPPORT_ENABLE is 0. |

◆ R_GPT_InfoGet()

```
fsp_err_t R_GPT_InfoGet ( timer_ctrl_t *const p_ctrl, timer_info_t *const p_info )
```

Get timer information and store it in provided pointer p_info. Implements `timer_api_t::infoGet`.

Example:

```
/* (Optional) Get the current period if not known. */
timer_info_t info;
(void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
uint64_t period = info.period_counts;

/* The maximum period is one more than the maximum 32-bit number, but will be
reflected as 0 in
* timer_info_t::period_counts. */
if (0U == period)
{
    period = UINT32_MAX + 1U;
}
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Period, count direction, frequency, and ELC event written to caller's structure successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_info was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_StatusGet()**

```
fsp_err_t R_GPT_StatusGet ( timer_ctrl_t *const p_ctrl, timer_status_t *const p_status )
```

Get current timer status and store it in provided pointer p_status. Implements `timer_api_t::statusGet`.

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;

(void) R_GPT_StatusGet(&g_timer0_ctrl, &status);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Current timer state and counter value set successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_CounterSet()**

```
fsp_err_t R_GPT_CounterSet ( timer_ctrl_t *const p_ctrl, uint32_t counter )
```

Set counter value.

Note

Do not call this API while the counter is counting. The counter value can only be updated while the counter is stopped.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Counter value updated. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_IN_USE | The timer is running. Stop the timer before calling this function. |

◆ **R_GPT_OutputEnable()**

```
fsp_err_t R_GPT_OutputEnable ( timer_ctrl_t *const p_ctrl, gpt_io_pin_t pin )
```

Enable output for GTIOCA and/or GTIOCB.

Return values

| | |
|-------------------|------------------------------|
| FSP_SUCCESS | Output is enabled. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_OutputDisable()**

```
fsp_err_t R_GPT_OutputDisable ( timer_ctrl_t *const p_ctrl, gpt_io_pin_t pin )
```

Disable output for GTIOCA and/or GTIOCB.

Return values

| | |
|-------------------|------------------------------|
| FSP_SUCCESS | Output is disabled. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_AdcTriggerSet()**

```
fsp_err_t R_GPT_AdcTriggerSet ( timer_ctrl_t *const p_ctrl, gpt_adc_compare_match_t  
which_compare_match, uint32_t compare_match_value )
```

Set A/D converter start request compare match value.

Return values

| | |
|-------------------|------------------------------|
| FSP_SUCCESS | Counter value updated. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_PwmOutputDelaySet()**

```
fsp_err_t R_GPT_PwmOutputDelaySet ( timer_ctrl_t *const p_ctrl, gpt_pwm_output_delay_edge_t
edge, gpt_pwm_output_delay_setting_t delay_setting, uint32_t const pin )
```

Set the Output Delay setting for the PWM output pin.

Return values

| | |
|-------------------------|--|
| FSP_SUCCESS | The output delay was set. |
| FSP_ERR_ASSERTION | An input parameter was invalid. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_CHANNEL | The channel does not support this feature. |
| FSP_ERR_NOT_INITIALIZED | The PWM Output Delay Circuit has not been initialized. |
| FSP_ERR_INVALID_STATE | The PWM Output Delay setting cannot be updated in the current state. |
| FSP_ERR_UNSUPPORTED | This feature is not supported on this MCU. |

◆ **R_GPT_CallbackSet()**

```
fsp_err_t R_GPT_CallbackSet ( timer_ctrl_t *const p_api_ctrl, void(*)(timer_callback_args_t *)
p_callback, void const *const p_context, timer_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `timer_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | p_callback is non-secure and p_callback_memory is either secure or NULL. |

◆ **R_GPT_Close()**

fsp_err_t R_GPT_Close (timer_ctrl_t *const p_ctrl)

Stops counter, disables output pins, and clears internal driver data. Implements [timer_api_t::close](#).**Return values**

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_GPT_PwmOutputDelayInitialize()**

fsp_err_t R_GPT_PwmOutputDelayInitialize (void)

Initialize the PWM Delay Generation Circuit (PDG). This function must be called before calling [R_GPT_PwmOutputDelaySet](#).*Note**This function will delay for 20 microseconds.***Return values**

| | |
|-----------------------|--|
| FSP_SUCCESS | Initialization sequence completed successfully. |
| FSP_ERR_INVALID_STATE | The source clock frequency is out of the required range for the PDG. |
| FSP_ERR_UNSUPPORTED | This feature is not supported. |

5.2.19.7 Timer, Low-Power (r_agt)Modules » [Timers](#)**Functions**

fsp_err_t R_AGT_Open (timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg)

fsp_err_t R_AGT_Start (timer_ctrl_t *const p_ctrl)

fsp_err_t R_AGT_Stop (timer_ctrl_t *const p_ctrl)

fsp_err_t R_AGT_Reset (timer_ctrl_t *const p_ctrl)

fsp_err_t R_AGT_Enable (timer_ctrl_t *const p_ctrl)

```
fsp_err_t R_AGT_Disable (timer_ctrl_t *const p_ctrl)
```

```
fsp_err_t R_AGT_PeriodSet (timer_ctrl_t *const p_ctrl, uint32_t const
period_counts)
```

```
fsp_err_t R_AGT_DutyCycleSet (timer_ctrl_t *const p_ctrl, uint32_t const

fsp_err_t R_AGT_CallbackSet (timer_ctrl_t *const p_api_ctrl,
void(*p_callback)(timer_callback_args_t *), void const *const
p_context, timer_callback_args_t *const p_callback_memory)
```

```
fsp_err_t R_AGT_Close (timer_ctrl_t *const p_ctrl)
```

Detailed Description

Driver for the AGT peripheral on RA MCUs. This module implements the [Timer Interface](#).

Overview

Features

The AGT module has the following features:

- Supports periodic mode, one-shot mode, and PWM mode.
- Signal can be output to a pin.
- Configurable period (counts per timer cycle).
- Configurable duty cycle in PWM mode.
- Configurable clock source, including PCLKB, LOCO, SUBCLK, and external sources input to AGTIO.
- Supports runtime reconfiguration of period.
- Supports runtime reconfiguration of duty cycle in PWM mode.
- Supports counting based on an external clock input to AGTIO.
- Supports debounce filter on AGTIO pins.
- Supports measuring pulse width or pulse period.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value.

Selecting a Timer

RA MCUs have two timer peripherals: the General PWM Timer (GPT) and the Asynchronous General Purpose Timer (AGT). When selecting between them, consider these factors:

| | | |
|--|-----|-----|
| | GPT | AGT |
|--|-----|-----|

| | | |
|--------------------|--|--|
| Low Power Modes | The GPT can operate in sleep mode. | The AGT can operate in all low power modes (when count source is LOCO or subclock). |
| Available Channels | The number of GPT channels is device specific. All currently supported MCUs have at least 7 GPT channels. | All MCUs have 2 AGT channels. |
| Timer Resolution | All MCUs have at least one 32-bit GPT timer. | The AGT timers are 16-bit timers. |
| Clock Source | The GPT runs off PCLKD with a configurable divider up to 1024. It can also be configured to count ELC events or external pulses. | The AGT runs off PCLKB, LOCO, or subclock with a configurable divider up to 8 for PCLKB or up to 128 for LOCO or subclock. |

Configuration

Build Time Configurations for r_agt

The following build time configurations are defined in fsp_cfg/r_agt_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|--|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Pin Output Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | If selected code for outputting a waveform to a pin is included in the build. |
| Pin Input Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | Enable input support to use pulse width measurement mode, pulse period measurement mode, or input from P402, P403, P404, or AGTIO. |

Configurations for Timers > Timer, Low-Power (r_agt)

This module can be added to the Stacks tab via New Stack > Timers > Timer, Low-Power (r_agt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|-------------------------------|----------|--------------|
| General | | | |
| Name | Name must be a valid C symbol | g_timer0 | Module name. |

| | | | |
|-------------------|---|----------|--|
| Counter Bit Width | MCU Specific Options | | Counter register bit width (16-bit or 32-bit)) |
| Channel | Channel number must be a non-negative integer | 0 | Physical hardware channel. |
| Mode | <ul style="list-style-type: none"> • Periodic • One-Shot • PWM | Periodic | Mode selection. Note: One-shot mode is implemented in software. ISR's must be enabled for one shot even if callback is unused. |
| Period | Value must be non-negative | 0x10000 | <p>Specify the timer period based on the selected unit.</p> <p>When the unit is set to 'Raw Counts', setting the period to 0x100000000 (32-bit) or 0x10000 (16-bit) results in the maximum period at the lowest divisor (fastest timer tick). Set the period to 0x100000000 (32-bit) or 0x10000 (16-bit) for a free running timer, pulse width measurement or pulse period measurement. Setting the period higher will automatically select a higher divider; the period can be set up to 0x800000000 (32-bit) or 0x80000 (16-bit) when counting from PCLKB or 0x800000000 (32-bit) or 0x800000 (16-bit) when counting from LOCO/subclock, which will use a divider of 8 or 128 respectively with the maximum period.</p> <p>If the requested period cannot be achieved, the settings with the largest possible period</p> |

that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the [timer_cfg_t](#) structure.

| | | | |
|--|--|------------------|--|
| Period Unit | <ul style="list-style-type: none"> • Raw Counts • Nanoseconds • Microseconds • Milliseconds • Seconds • Hertz • Kilohertz | Raw Counts | Unit of the period specified above |
| Count Source | MCU Specific Options | | AGT counter clock source. NOTE: The divisor is calculated automatically based on the selected period. See agt_clock_t documentation for details. |
| Output | | | |
| Duty Cycle Percent (only applicable in PWM mode) | Value must be between 0 and 100 | 50 | Specify the timer duty cycle percent. Only used in PWM mode. |
| AGTOA Output | <ul style="list-style-type: none"> • Disabled • Start Level Low • Start Level High | Disabled | Configure AGTOA output. |
| AGTOB Output | <ul style="list-style-type: none"> • Disabled • Start Level Low • Start Level High | Disabled | Configure AGTOB output. |
| AGTO Output | <ul style="list-style-type: none"> • Disabled • Start Level Low • Start Level High | Disabled | Configure AGTO output. |
| Input | | | |
| Measurement Mode | <ul style="list-style-type: none"> • Measure Disabled • Measure Low Level Pulse Width • Measure High Level Pulse Width • Measure Pulse Period | Measure Disabled | Select if the AGT should be used to measure pulse width or pulse period. In high level pulse width measurement mode, the AGT counts when AGTIO is high and starts counting immediately in the middle of a pulse if AGTIO is high when R_AGT_Start() is called. |

| | | | |
|------------------------------|---|---------------------|---|
| Input Filter | <ul style="list-style-type: none"> No Filter Filter sampled at PCLKB Filter sampled at PCLKB / 8 Filter sampled at PCLKB / 32 | No Filter | In low level pulse width measurement mode, the AGT counts when AGTIO is low and could start counting in the middle of a pulse if AGTIO is low when R_AGT_Start() is called. |
| Enable Pin | <ul style="list-style-type: none"> Enable Pin Not Used Enable Pin Active Low Enable Pin Active High | Enable Pin Not Used | Input filter, applies AGTIO in pulse period measurement, pulse width measurement, or event counter mode. The filter requires the signal to be at the same level for 3 successive reads at the specified filter frequency. |
| Trigger Edge | <ul style="list-style-type: none"> Trigger Edge Rising Trigger Edge Falling Trigger Edge Both | Trigger Edge Rising | Select active edge for the AGTEE pin if used. Only applies if the count source is P402, P403 or AGTIO. |
| Interrupts | | | |
| Callback | Name must be a valid C symbol | NULL | Select the trigger edge. Applies if measurement mode is pulse period, or if the count source is P402, P403, or AGTIO. Do not select Trigger Edge Both with pulse period measurement. |
| Underflow Interrupt Priority | MCU Specific Options | | A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the timer period elapses. |
| | | | Timer interrupt priority. |

Clock Configuration

The AGT clock is based on the PCLKB, LOCO, or Subclock frequency. You can set the clock frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

This module can use the AGTOA and AGTOB pins as output pins for periodic, one-shot, or PWM signals.

For input capture, the input signal must be applied to the AGTIO pin.

For event counting, the AGTEEn enable pin is optional.

Timer Period

The RA Configuration editor will automatically calculate the period count value and source clock divider based on the selected period time, units, and clock speed.

When the selected unit is "Raw counts", the maximum allowed period setting varies depending on the selected clock source:

| Clock source | 16-bit Timer Maximum period (counts) | 32-bit Timer Maximum period (counts) |
|-------------------|--------------------------------------|--------------------------------------|
| LOCO/Subclock | 0x800000 | 0x800000000 |
| PCLKB | 0x80000 | 0x800000000 |
| All other sources | 0x10000 | 0x100000000 |

Note

Though the AGT is a 16-bit timer, because the period interrupt occurs when the counter underflows, setting the period register to 0 results in an effective period of 1 count. For this reason all user-provided raw count values reflect the actual number of period counts (not the raw register values).

Usage Notes

Starting and Stopping the AGT

After starting or stopping the timer, AGT registers cannot be accessed until the AGT state is updated after 3 AGTCLK cycles. If another AGT function is called before the 3 AGTCLK period elapses, the function spins waiting for the AGT state to update. The required wait time after starting or stopping the timer can be determined using the frequency of AGTCLK, which is derived from [timer_cfg_t::source_div](#) and [agt_extended_cfg_t::count_source](#).

The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take seconds to stabilize. The RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation.

Low Power Modes

The AGT1 (channel 1 only) can be used to enter snooze mode or to wake the MCU from snooze, software standby, or deep software standby modes when a counter underflow occurs. The compare match A and B events can also be used to wake from software standby or snooze modes.

One-Shot Mode

The AGT timer does not support one-shot mode natively. One-shot mode is achieved by stopping the timer in the interrupt service routine before the callback is called. If the interrupt is not serviced before the timer period expires again, the timer generates more than one event. The callback is only called once in this case, but multiple events may be generated if the timer is linked to the [Transfer \(r_dtc\)](#).

One-Shot Mode Output

The output waveform in one-shot mode is one AGT clock cycle less than the configured period. The configured period must be at least 2 counts to generate an output pulse.

Examples of one-shot signals that can be generated by this module are shown below:

AGT One-Shot Output

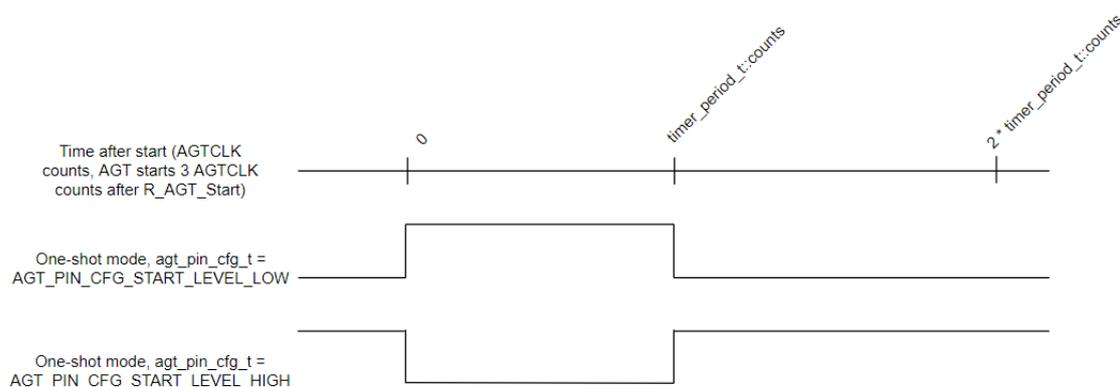

Figure 303: AGT One-Shot Output

Periodic Output

The AGTOA or AGTOB pin toggles twice each time the timer expires in periodic mode. This is achieved by defining a PWM wave at a 50 percent duty cycle so that the period of the resulting square (from rising edge to rising edge) matches the period of the AGT timer. Since the periodic output is actually a PWM output, the time at the stop level is one cycle shorter than the time opposite the stop level for odd period values.

Examples of periodic signals that can be generated by this module are shown below:

AGT Periodic Output

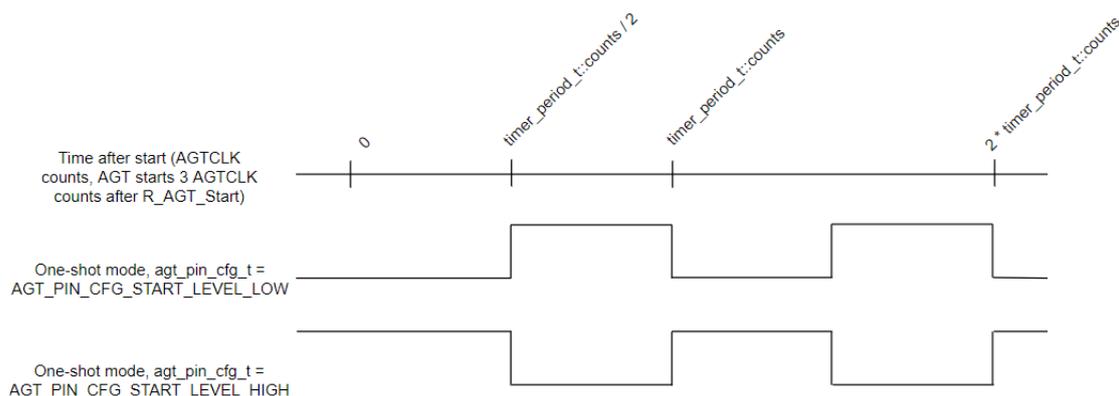

Figure 304: AGT Periodic Output

PWM Output

This module does not support in phase PWM output. The PWM output signal is low at the beginning of the cycle and high at the end of the cycle.

Examples of PWM signals that can be generated by this module are shown below:

AGT PWM Output

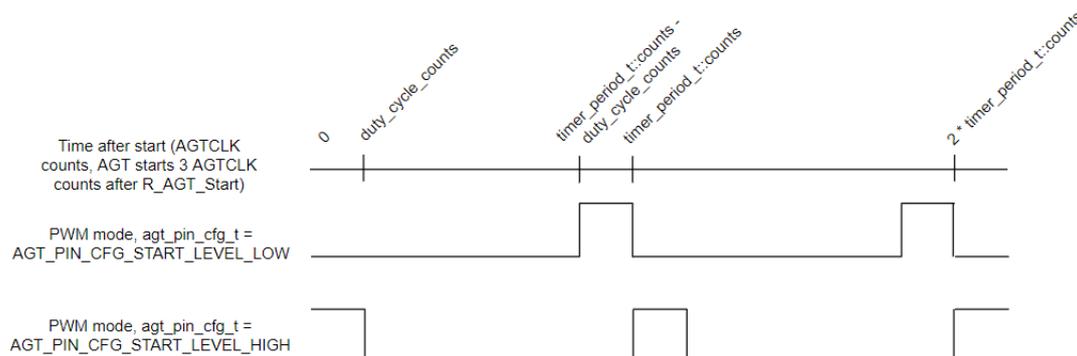

Figure 305: AGT PWM Output

Triggering ELC Events with AGT

The AGT timer can trigger the start of other peripherals. The [Event Link Controller \(r_elc\)](#) guide provides a list of all available peripherals.

Examples

AGT Basic Example

This is a basic example of minimal use of the AGT in an application.

```
void agt_basic_example (void)
```

```
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_AGT_Start(&g_timer0_ctrl);
}
```

AGT Callback Example

This is an example of a timer callback.

```
/* Example callback called when timer expires. */
void timer_callback (timer_callback_args_t * p_args)
{
    if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
        /* Add application code to be called periodically here. */
    }
}
```

AGT Free Running Counter Example

To use the AGT as a free running counter, select periodic mode and set the the Period to 0xFFFFFFFF for a 32-bit timer or 0xFFFF for a 16-bit timer.

```
void agt_counter_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

```
/* Start the timer. */
(void) R_AGT_Start(&g_timer0_ctrl);
/* (Optional) Stop the timer. */
(void) R_AGT_Stop(&g_timer0_ctrl);
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;
(void) R_AGT_StatusGet(&g_timer0_ctrl, &status);
}
```

AGT Input Capture Example

This is an example of using the AGT to capture pulse width or pulse period measurements.

```
/* Example callback called when a capture occurs. */
uint64_t g_captured_time = 0U;
uint32_t g_capture_overflows = 0U;
void timer_capture_callback (timer_callback_args_t * p_args)
{
    if (TIMER_EVENT_CAPTURE_A == p_args->event)
    {
        /* (Optional) Get the current period if not known. */
        timer_info_t info;
        (void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
        uint32_t period = info.period_counts;
        /* Process capture from AGTIO. */
        g_captured_time = ((uint64_t) period * g_capture_overflows) +
p_args->capture;
        g_capture_overflows = 0U;
    }
    if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
        /* An overflow occurred during capture. This must be accounted for at the
application layer. */
        g_capture_overflows++;
    }
}
```

```
}  
  
void agt_capture_example (void)  
{  
    fsp_err_t err = FSP_SUCCESS;

    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);  
    /* Handle any errors. This function should be defined by the user. */  
    assert(FSP_SUCCESS == err);  
    /* Enable captures. Captured values arrive in the interrupt. */  
    (void) R_AGT_Enable(&g_timer0_ctrl);  
    /* (Optional) Disable captures. */  
    (void) R_AGT_Disable(&g_timer0_ctrl);  
}
```

AGT Period Update Example

This an example of updating the period.

```
#define AGT_EXAMPLE_MSEC_PER_SEC (1000)  
#define AGT_EXAMPLE_DESIRED_PERIOD_MSEC (20)  
/* This example shows how to calculate a new period value at runtime. */  
void agt_period_calculation_example (void)  
{  
    fsp_err_t err = FSP_SUCCESS;  
    /* Initializes the module. */  
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);  
    /* Handle any errors. This function should be defined by the user. */  
    assert(FSP_SUCCESS == err);  
    /* Start the timer. */  
    (void) R_AGT_Start(&g_timer0_ctrl);  
    /* Get the source clock frequency (in Hz). There are several ways to do this in FSP:  
    * - If LOCO or subclock is chosen in agt_extended_cfg_t::clock_source  
    * - The source clock frequency is BSP_LOCO_HZ >> timer_cfg_t::source_div  
    * - If PCLKB is chosen in agt_extended_cfg_t::clock_source and the PCLKB frequency  
    has not changed since reset,
```

```

* - The source clock frequency is BSP_STARTUP_PCLKB_HZ >> timer_cfg_t::source_div
* - Use the R_AGT_InfoGet function (it accounts for the clock source and divider).
* - Calculate the current PCLKB frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) and right shift
* by timer_cfg_t::source_div.
*
* This example uses the last option (R_FSP_SystemClockHzGet).
*/
uint32_t timer_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) >>
g_timer0_cfg.source_div;
/* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
* desired period is larger than UINT32_MAX / pclkb_freq_hz. A cast to uint64_t is
used to prevent this. */
uint32_t period_counts =
    (uint32_t) (((uint64_t) timer_freq_hz * AGT_EXAMPLE_DESIRED_PERIOD_MSEC) /
AGT_EXAMPLE_MSEC_PER_SEC);
/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
* period is larger than UINT16_MAX. */
err = R_AGT_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);
}

```

AGT Duty Cycle Update Example

This an example of updating the duty cycle.

```

#define AGT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT (25)
#define AGT_EXAMPLE_MAX_PERCENT (100)
/* This example shows how to calculate a new duty cycle value at runtime. */
void agt_duty_cycle_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
}

```

```
err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);
/* Start the timer. */
(void) R_AGT_Start(&g_timer0_ctrl);
/* Get the current period setting. */
timer_info_t info;
(void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
uint32_t current_period_counts = info.period_counts;
/* Calculate the desired duty cycle based on the current period. */
uint32_t duty_cycle_counts = (current_period_counts *
AGT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
AGT_EXAMPLE_MAX_PERCENT;
/* Set the calculated duty cycle. */
err = R_AGT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, AGT_OUTPUT_PIN_AGTOA
);
assert(FSP_SUCCESS == err);
}
```

AGT Cascaded Timers Example

This an example of using underflow from an even AGT channel as the count source for the next channel (in this case, AGT0 and AGT1).

```
/* This example shows how use cascaded timers. The count source for AGT channel 1 is
set to AGT0 underflow. */
void agt_cascaded_timers_example (void)
{
fsp_err_t err = FSP_SUCCESS;
/* Initialize the timers in any order. */
err = R_AGT_Open(&g_timer_channel0_ctrl, &g_timer_channel0_cfg);
assert(FSP_SUCCESS == err);
err = R_AGT_Open(&g_timer_channel1_ctrl, &g_timer_channel1_cfg);
assert(FSP_SUCCESS == err);
/* Start AGT channel 1 first. */
```

```

(void) R_AGT_Start(&g_timer_channel1_ctrl);
(void) R_AGT_Start(&g_timer_channel0_ctrl);
/* (Optional) Stop AGT channel 0 first. */
(void) R_AGT_Stop(&g_timer_channel0_ctrl);
(void) R_AGT_Stop(&g_timer_channel1_ctrl);
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;
(void) R_AGT_StatusGet(&g_timer_channel1_ctrl, &status);
}

```

Data Structure Documentation

◆ [agt_instance_ctrl_t](#)

struct [agt_instance_ctrl_t](#)

Channel control block. DO NOT INITIALIZE. Initialization occurs when [timer_api_t::open](#) is called.

◆ [agt_extended_cfg_t](#)

struct [agt_extended_cfg_t](#)

Optional AGT extension data structure.

| Data Fields | | |
|--|-------------------|--|
| agt_clock_t | count_source | AGT channel clock source. Valid values are: AGT_CLOCK_PCLKB, AGT_CLOCK_LOCO, AGT_CLOCK_FSUB. |
| union agt_extended_cfg_t | __unnamed__ | |
| agt_pin_cfg_t | agto: 3 | Configure AGTO pin. <i>Note</i> <i>AGTIO polarity is opposite AGTO</i> |
| agt_measure_t | measurement_mode | Measurement mode. |
| agt_agtio_filter_t | agtio_filter | Input filter for AGTIO. |
| agt_enable_pin_t | enable_pin | Enable pin (event counting only) |
| agt_trigger_edge_t | trigger_edge | Trigger edge to start pulse period measurement or count external event. |
| agt_counter_bit_width_t | counter_bit_width | Counter bit width. |

Enumeration Type Documentation

◆ **agt_clock_t**

| enum agt_clock_t | |
|-------------------------|---|
| Count source | |
| Enumerator | |
| AGT_CLOCK_PCLKB | PCLKB count source, division by 1, 2, or 8 allowed. |
| AGT_CLOCK_LOCO | LOCO count source, division by 1, 2, 4, 8, 16, 32, 64, or 128 allowed. |
| AGT_CLOCK_AGT_UNDERFLOW | Underflow event signal from next lowest AGT channel, division must be 1. |
| AGT_CLOCK_SUBCLOCK | Subclock count source, division by 1, 2, 4, 8, 16, 32, 64, or 128 allowed. |
| AGT_CLOCK_P402 | Counts events on P402, events are counted in deep software standby mode. |
| AGT_CLOCK_P403 | Counts events on P403, events are counted in deep software standby mode. |
| AGT_CLOCK_P404 | Counts events on P404, events are counted in deep software standby mode. |
| AGT_CLOCK_AGTIO | Counts events on AGTIO _n , events are not counted in software standby modes. |

◆ **agt_measure_t**

| enum agt_measure_t | |
|-------------------------------------|---|
| Enable pin for event counting mode. | |
| Enumerator | |
| AGT_MEASURE_DISABLED | AGT used as a counter. |
| AGT_MEASURE_PULSE_WIDTH_LOW_LEVEL | AGT used to measure low level pulse width. |
| AGT_MEASURE_PULSE_WIDTH_HIGH_LEVEL | AGT used to measure high level pulse width. |
| AGT_MEASURE_PULSE_PERIOD | AGT used to measure pulse period. |

◆ **agt_agtio_filter_t**

| enum agt_agtio_filter_t | |
|---|-----------------------|
| Input filter, applies AGTIO in pulse period measurement, pulse width measurement, or event counter mode. The filter requires the signal to be at the same level for 3 successive reads at the specified filter frequency. | |
| Enumerator | |
| AGT_AGTIO_FILTER_NONE | No filter. |
| AGT_AGTIO_FILTER_PCLKB | Filter at PCLKB. |
| AGT_AGTIO_FILTER_PCLKB_DIV_8 | Filter at PCLKB / 8. |
| AGT_AGTIO_FILTER_PCLKB_DIV_32 | Filter at PCLKB / 32. |

◆ **agt_enable_pin_t**

| enum agt_enable_pin_t | |
|-------------------------------------|--|
| Enable pin for event counting mode. | |
| Enumerator | |
| AGT_ENABLE_PIN_NOT_USED | AGTEE/AGTWEE is not used. |
| AGT_ENABLE_PIN_ACTIVE_LOW | Events are only counted when AGTEE/AGTWEE is low. |
| AGT_ENABLE_PIN_ACTIVE_HIGH | Events are only counted when AGTEE/AGTWEE is high. |

◆ **agt_trigger_edge_t**

| enum agt_trigger_edge_t | |
|---|--|
| Trigger edge for pulse period measurement mode and event counting mode. | |
| Enumerator | |
| AGT_TRIGGER_EDGE_RISING | Measurement starts or events are counted on rising edge. |
| AGT_TRIGGER_EDGE_FALLING | Measurement starts or events are counted on falling edge. |
| AGT_TRIGGER_EDGE_BOTH | Events are counted on both edges (n/a for pulse period mode) |

◆ **agt_output_pin_t**

| enum agt_output_pin_t | |
|--|--------|
| Output pins, used to select which duty cycle to update in R_AGT_DutyCycleSet() . | |
| Enumerator | |
| AGT_OUTPUT_PIN_AGTOA | AGTOA. |
| AGT_OUTPUT_PIN_AGTOB | AGTOB. |

◆ **agt_pin_cfg_t**

| enum agt_pin_cfg_t | |
|------------------------------|-------------------------|
| Level of AGT pin | |
| Enumerator | |
| AGT_PIN_CFG_DISABLED | Not used as output pin. |
| AGT_PIN_CFG_START_LEVEL_LOW | Pin level low. |
| AGT_PIN_CFG_START_LEVEL_HIGH | Pin level high. |

◆ **agt_counter_bit_width_t**

| enum agt_counter_bit_width_t | |
|---|---------|
| Counter type to determine register size | |
| Enumerator | |
| AGT_COUNTER_BIT_WIDTH_DEFAULT | Legacy. |
| AGT_COUNTER_BIT_WIDTH_16 | AGT. |
| AGT_COUNTER_BIT_WIDTH_32 | AGTW. |

Function Documentation◆ **R_AGT_Open()**

```
fsp_err_t R_AGT_Open ( timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg )
```

Initializes the AGT module instance. Implements `timer_api_t::open`.

The AGT hardware does not support one-shot functionality natively. The one-shot feature is therefore implemented in the AGT HAL layer. For a timer configured as a one-shot timer, the timer is stopped upon the first timer expiration.

The AGT implementation of the general timer can accept an optional `agt_extended_cfg_t` extension parameter. For AGT, the extension specifies the clock to be used as timer source and the output pin configurations. If the extension parameter is not specified (NULL), the default clock PCLKB is used and the output pins are disabled.

Example:

```
/* Initializes the module. */
err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

| | |
|--------------------------------|--|
| FSP_SUCCESS | Initialization was successful and timer has started. |
| FSP_ERR_ASSERTION | A required input pointer is NULL or the period is not in the valid range of 1 to 0xFFFF. |
| FSP_ERR_ALREADY_OPEN | R_AGT_Open has already been called for this p_ctrl. |
| FSP_ERR_IRQ_BSP_DISABLED | A required interrupt has not been enabled in the vector table. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | Requested channel number is not available on AGT. |

◆ **R_AGT_Start()**

```
fsp_err_t R_AGT_Start ( timer_ctrl_t *const p_ctrl)
```

Starts timer. Implements `timer_api_t::start`.

Example:

```
/* Start the timer. */
(void) R_AGT_Start(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Timer started. |
| FSP_ERR_ASSERTION | p_ctrl is null. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_AGT_Stop()**

```
fsp_err_t R_AGT_Stop ( timer_ctrl_t *const p_ctrl)
```

Stops the timer. Implements `timer_api_t::stop`.

Example:

```
/* (Optional) Stop the timer. */
(void) R_AGT_Stop(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Timer stopped. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_AGT_Reset()**

```
fsp_err_t R_AGT_Reset ( timer_ctrl_t *const p_ctrl)
```

Resets the counter value to the period minus one. Implements `timer_api_t::reset`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Counter reset. |
| FSP_ERR_ASSERTION | p_ctrl is NULL |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_AGT_Enable()**

```
fsp_err_t R_AGT_Enable ( timer_ctrl_t *const p_ctrl)
```

Enables external event triggers that start, stop, clear, or capture the counter. Implements `timer_api_t::enable`.

Example:

```
/* Enable captures. Captured values arrive in the interrupt. */
(void) R_AGT_Enable(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---------------------------------------|
| FSP_SUCCESS | External events successfully enabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_AGT_Disable()**

```
fsp_err_t R_AGT_Disable ( timer_ctrl_t *const p_ctrl)
```

Disables external event triggers that start, stop, clear, or capture the counter. Implements `timer_api_t::disable`.

Example:

```
/* (Optional) Disable captures. */
(void) R_AGT_Disable(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | External events successfully disabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_AGT_PeriodSet()**

```
fsp_err_t R_AGT_PeriodSet ( timer_ctrl_t *const p_ctrl, uint32_t const period_counts )
```

Updates period. The new period is updated immediately and the counter is reset to the maximum value. Implements `timer_api_t::periodSet`.

Warning

If periodic output is used, the duty cycle buffer registers are updated after the period buffer register. If this function is called while the timer is running and an AGT underflow occurs during processing, the duty cycle will not be the desired 50% duty cycle until the counter underflow after processing completes.

Stop the timer before calling this function if one-shot output is used.

Example:

```
/* Get the source clock frequency (in Hz). There are several ways to do this in FSP:
 * - If LOCO or subclock is chosen in agt_extended_cfg_t::clock_source
 * - The source clock frequency is BSP_LOCO_HZ >> timer_cfg_t::source_div
 * - If PCLKB is chosen in agt_extended_cfg_t::clock_source and the PCLKB frequency
has not changed since reset,
 * - The source clock frequency is BSP_STARTUP_PCLKB_HZ >> timer_cfg_t::source_div
 * - Use the R_AGT_InfoGet function (it accounts for the clock source and divider).
 * - Calculate the current PCLKB frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) and right shift
 * by timer_cfg_t::source_div.
 *
```

```

* This example uses the last option (R_FSP_SystemClockHzGet).
*/
uint32_t timer_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) >>
g_timer0_cfg.source_div;
/* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
* desired period is larger than UINT32_MAX / pclk_freq_hz. A cast to uint64_t is
used to prevent this. */
uint32_t period_counts =
    (uint32_t) (((uint64_t) timer_freq_hz * AGT_EXAMPLE_DESIRED_PERIOD_MSEC) /
AGT_EXAMPLE_MSEC_PER_SEC);
/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
* period is larger than UINT16_MAX. */
err = R_AGT_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);

```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Period value updated. |
| FSP_ERR_ASSERTION | A required pointer was NULL, or the period was not in the valid range of 1 to 0xFFFF. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ R_AGT_DutyCycleSet()

```
fsp_err_t R_AGT_DutyCycleSet ( timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts,
uint32_t const pin )
```

Updates duty cycle. If the timer is counting, the new duty cycle is reflected after the next counter underflow. Implements [timer_api_t::dutyCycleSet](#).

Example:

```
/* Get the current period setting. */
timer_info_t info;
(void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
uint32_t current_period_counts = info.period_counts;
/* Calculate the desired duty cycle based on the current period. */
uint32_t duty_cycle_counts = (current_period_counts *
AGT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
AGT_EXAMPLE_MAX_PERCENT;
/* Set the calculated duty cycle. */
err = R_AGT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, AGT_OUTPUT_PIN_AGTOA);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Duty cycle updated. |
| FSP_ERR_ASSERTION | A required pointer was NULL, or the pin was not AGT_AGTO_AGTOA or AGT_AGTO_AGTOB. |
| FSP_ERR_INVALID_ARGUMENT | Duty cycle was not in the valid range of 0 to period (counts) - 1 |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |
| FSP_ERR_UNSUPPORTED | AGT_CFG_OUTPUT_SUPPORT_ENABLE is 0. |

◆ **R_AGT_InfoGet()**

```
fsp_err_t R_AGT_InfoGet ( timer_ctrl_t *const p_ctrl, timer_info_t *const p_info )
```

Gets timer information and store it in provided pointer p_info. Implements `timer_api_t::infoGet`.

Example:

```
/* (Optional) Get the current period if not known. */
timer_info_t info;
(void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
uint32_t period = info.period_counts;
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Period, count direction, and frequency stored in p_info. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_AGT_StatusGet()**

```
fsp_err_t R_AGT_StatusGet ( timer_ctrl_t *const p_ctrl, timer_status_t *const p_status )
```

Retrieves the current state and counter value stores them in p_status. Implements `timer_api_t::statusGet`.

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;
(void) R_AGT_StatusGet(&g_timer0_ctrl, &status);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Current status and counter value provided in p_status. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_AGT_CallbackSet()**

```
fsp_err_t R_AGT_CallbackSet ( timer_ctrl_t *const p_api_ctrl, void(*) (timer_callback_args_t *)
p_callback, void const *const p_context, timer_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `timer_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

◆ **R_AGT_Close()**

```
fsp_err_t R_AGT_Close ( timer_ctrl_t *const p_ctrl)
```

Stops counter, disables interrupts, disables output pins, and clears internal driver data. Implements `timer_api_t::close`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Timer closed. |
| FSP_ERR_ASSERTION | <code>p_ctrl</code> is NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

Detailed Description

Driver for the TAU_PWM peripheral on RA MCUs. This module implements the [Timer Interface](#).

Overview

Features

The TAU_PWM module has the following features:

- Supports simultaneous channel operation functions: one-shot pulse output, PWM output and multiple PWM output.
- Configurable clock source (CK00, CK01).
- Configurable period (counts per timer cycle).
- Configurable trigger source (TImn input) for one-shot pulse output
- Supports noise filter on input source in one-shot pulse output mode (always enabled)
- Supports runtime reconfiguration of period/delay, pulse width or duty cycle percent.
- Signal can be output to a pin.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value.

Configuration

Build Time Configurations for r_tau_pwm

The following build time configurations are defined in fsp_cfg/r_tau_pwm_cfg.h:

| Configuration | Options | Default | Description |
|------------------------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| One-shot Pulse Output Mode Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | Controls whether one-shot pulse output mode support is included in the build. This setting applies globally to all r_tau_pwm_instances. If one shot mode is not used by any instance, disable this setting to reduce ROM usage. |
| PWM Output Mode Support | <ul style="list-style-type: none"> Disabled Enabled | Enabled | Controls whether PWM mode support is included in the build. This setting applies globally to all r_tau_pwm_instances. If PWM mode is not used by any instance, disable this setting to reduce ROM usage. |

Configurations for Timers > Timer, Simultaneous Channel Operation (r_tau_pwm)

This module can be added to the Stacks tab via New Stack > Timers > Timer, Simultaneous Channel Operation (r_tau_pwm).

| Configuration | Options | Default | Description |
|-----------------|---|------------|---|
| General | | | |
| Name | Name must be a valid C symbol | g_timer0 | Module name. |
| Operation Clock | <ul style="list-style-type: none"> CK00 CK01 | CK00 | Select the operation clock |
| Mode | <ul style="list-style-type: none"> One-shot pulse output PWM output | PWM output | Mode selection. |
| Master Channel | Channel number must be even. | 0 | Select the TAU master channel. When two or more master channels are to be used, slave channels with a master channel between them may not be set. |
| Period | Value must be a non- | 0x10000 | Specify the timer |

negative integer

period based on the selected unit. In One-shot pulse output mode this value corresponds to the delay time.

When the unit is set to 'Raw Counts', setting the period to 0x10000/0x10001 results in the maximum period for PWM Output function/One-shot pulse output function at the lowest divisor (fastest timer tick). The theoretical calculated period is printed in a comment in the [timer_cfg_t](#) structure.

Period Unit

- Raw Counts
- Nanoseconds
- Microseconds
- Milliseconds
- Seconds
- Hertz
- Kilohertz

Raw Counts

Unit of the period specified above

Input (One-shot pulse)

Trigger Source

MCU Specific Options

Select the trigger source for master channel.

Detect Edge

- Falling Edge
- Rising Edge
- Both Edges

Falling Edge

Select the detect edge.

Interrupts

Callback

Name must be a valid C symbol

NULL

A user callback function can be provided. If provided, the callback function is called from the interrupt service routine (ISR) each time the timer period elapses in PWM mode, and when the timer delay elapses in one-shot mode. If the optional slave channel interrupt is enabled, the callback is also called when the signal

switches state during the PWM cycle in PWM mode, and when the pulse output is complete in one-shot mode.

Interrupt Priority

MCU Specific Options

Timer interrupt priority.

Configurations for Timers > TAU PWM Channel Configuration (r_tau_pwm)

| Configuration | Options | Default | Description |
|---------------------------|--|-----------------|--|
| General | | | |
| Channel | Manual Entry | 1 | Specify the slave channel. |
| Output | | | |
| Output Level | <ul style="list-style-type: none"> Start Level Low Start Level High | Start Level Low | Output level of TAU slave channel. |
| Output Polarity | <ul style="list-style-type: none"> Active-high Active-low | Active-high | Output polarity of TAU slave channel. |
| One-Shot Pulse Width | Value must be a non-negative integer | 0xffff | Specify the pulse width based on the selected unit. |
| | | | When the unit is set to 'Raw Counts', setting the period to 0xffff results in the maximum period at the lowest divisor (fastest timer tick). |
| One-Shot Pulse Width Unit | <ul style="list-style-type: none"> Raw Counts Nanoseconds Microseconds Milliseconds Seconds Hertz Kilohertz | Raw Counts | Unit of the period specified above |
| PWM Duty Cycle Percent | Value must be a non-negative integer between 0 and 100 | 50 | Specify the duty cycle percent for output pulse of slave channel. |
| Interrupts | | | |
| Interrupt Priority | MCU Specific Options | | Timer interrupt priority. |

Clock Configuration

The TAU_PWM clock is based on the clock CK00 and CK01. You can set the clock operation clock on **General>Operation Clock** of property r_tau_pwm Configuration editor. The clock divider can be configured using the **Clocks** tab of the RA Configuration editor.

Pin Configuration

This module can use the T0mn pins as output pins for One-shot and PWM signals.

This module can use the T1mn pin as the input pin for One-shot signals.

Timer Period And Duty Cycle

The RA Configuration editor will automatically calculate the period/pulse width/duty cycle percent based on the selected period time, units, clock source, clock divider and mode.

When the selected unit is "Raw counts", the maximum and minimum allowed period/pulse width/duty cycle setting are presented by the following tables:

In One-shot pulse output mode:

| Clock divider | Minimum period (counts) | Maximum period (counts) | Minimum pulse width (counts) | Maximum pulse width (counts) |
|----------------------|-------------------------|-------------------------|------------------------------|------------------------------|
| PCLK/1 | 0x00003 | 0x10001 | 0x0001 | 0xffff |
| PCLK/2 to PCLK/32768 | 0x00002 | 0x10000 | 0x0000 | 0xffff |

In PWM output mode:

| Clock divider | Minimum period (counts) | Maximum period (counts) | Minimum duty cycle (%) | Maximum duty cycle (%) |
|----------------------|-------------------------|-------------------------|------------------------|------------------------|
| PCLK/1 | 0x00002 | 0x10001 | 0 | 100 |
| PCLK/2 to PCLK/32768 | 0x00001 | 0x10000 | 0 | 100 |

Note

If PCLK (undivided) is selected as the operation clock (CK00, CK01) and TDR0n is set to 0x0000 (n = 0 to 7), interrupt requests output from timer array units cannot be used. So, when PCLK is undivided, the minimum period must be plus one.

Because the period interrupt occurs when the counter underflows, setting the period register to 0 results in an effective period of 1 count. For this reason, all user-provided raw count values reflect the actual number of period counts (not the raw register values).

Usage Notes

Updating Period and Duty Cycle

The period and duty cycle are updated after the next counter underflow after calling [R_TAU_PWM_PeriodSet\(\)](#) or [R_TAU_PWM_DutyCycleSet\(\)](#).

One-Shot Pulse Output Mode

By using two channels as a set, a one-shot pulse having any delay pulse width can be generated from the signal input to the T10n pin.

The delay time is counted by the master channel, and the pulse width is counted by the slave

channel.

PWM Output

Two channels can be used as a set to generate a pulse of any period and duty factor (duty cycle). By extending the PWM function and using multiple slave channels, many PWM waveforms with different duty values can be output.

Note

When two or more master channels are to be used, slave channels with a master channel between them may not be set. For example, if channels 0 and 4 are set as master channels, channels 1 to 3 can be set as the slave channels of master channel 0, channels 5 to 7 cannot be set as the slave channels of master channel 0.

The period is counted by the master channel, and the duty cycle is counted by the slave channel.

Controlling TAU_PWM with ELC Events

The TAU_PWM timer can be configured to trigger the timer counter when an ELC event occurs.

Note

*Triggering the timer using ELC events is supported only when master channel is set to 0 and mode is set to One-shot pulse output.
The event links for the ELC must be configured outside this module.*

Triggering ELC Events with TAU_PWM

The TAU_PWM timer can trigger the start of other peripherals. The [Event Link Controller \(r_elc\)](#) guide provides a list of all available peripherals.

Note

Only event signals from channel 00 to 03 are available.

Limitations

- None

Examples

TAU_PWM Basic Example

This is a basic example of minimal use of the TAU PWM (in PWM Output mode) in an application.

```
void tau_pwm_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_TAU_PWM_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
}
```

```
(void) R_TAU_PWM_Start(&g_timer0_ctrl);  
}
```

TAU_PWM Callback Example

This is an example of a timer callback.

Note

The callback function always called after the period time (in PWM output mode) or delay time (in One-shot pulse output mode) has expired. Additionally, it can be optionally called after the duty cycle (in PWM output mode) or pulse width (in One-shot pulse output mode) has expired by enabling the slave channel's interrupt.

```
/* Example callback called when timer expires. */  
void timer_callback (timer_callback_args_t * p_args)  
{  
    if (TIMER_EVENT_MASTER_CYCLE_END == p_args->event)  
    {  
        /* Add application code to be called here. */  
    }  
    if (TIMER_EVENT_SLAVE_CYCLE_END == p_args->event)  
    {  
        /* Add application code to be called here. */  
    }  
}
```

TAU_PWM One-Shot Pulse Output Mode Example

TAU_PWM One-Shot Pulse Output Mode Example - Software Trigger

This example demonstrates the configuration and use of One-shot pulse output mode with TAU_PWM timer when using the software trigger.

```
static const tau_pwm_channel_cfg_t g_one_shot_software_channel_cfg1 =  
{  
    .channel          = 1,  
    .duty_cycle_counts = (uint16_t) 0xffff,  
    .output_level     = TAU_PWM_OUTPUT_LEVEL_LOW,  
    .output_polarity  = TAU_PWM_OUTPUT_POLARITY_ACTIVE_HIGH,  
}
```

```
.cycle_end_ip1      = (BSP_IRQ_DISABLED),
.cycle_end_irq      = FSP_INVALID_VECTOR,
};

}
```

TAU_PWM Period Update Example

This an example of updating the period.

```
#define TAU_PWM_EXAMPLE_MSEC_PER_SEC (1000)
#define TAU_PWM_EXAMPLE_DESIRED_PERIOD_MSEC (20)
/* This example shows how to calculate a new period value at runtime. */
void tau_pwm_period_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_TAU_PWM_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_TAU_PWM_Start(&g_timer0_ctrl);
    /* Get the source clock frequency (in Hz) */
    timer_info_t info;
    (void) R_TAU_PWM_InfoGet(&g_timer0_ctrl, &info);
    uint32_t timer_freq_hz = info.clock_frequency;
    /* Calculate the desired period based on the current clock. Note that this
    calculation could overflow if the
    * desired period is larger than UINT32_MAX. A cast to uint32_t is used to prevent
```

```
this. */
    uint32_t period_counts =
        (uint32_t) ((timer_freq_hz * TAU_PWM_EXAMPLE_DESIRED_PERIOD_MSEC) /
TAU_PWM_EXAMPLE_MSEC_PER_SEC);
    /* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
    * period is larger than UINT16_MAX. */
    err = R_TAU_PWM_PeriodSet(&g_timer0_ctrl, period_counts);
    assert(FSP_SUCCESS == err);
}
```

TAU_PWM Duty Cycle Update Example

This an example of updating the duty cycle.

```
#define TAU_PWM_EXAMPLE_MSEC_PER_SEC (1000)
#define TAU_PWM_EXAMPLE_DESIRED_PERIOD_MSEC (20)
/* This example shows how to calculate a new period value at runtime. */
void tau_pwm_period_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_TAU_PWM_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_TAU_PWM_Start(&g_timer0_ctrl);
    /* Get the source clock frequency (in Hz) */
    timer_info_t info;
    (void) R_TAU_PWM_InfoGet(&g_timer0_ctrl, &info);
    uint32_t timer_freq_hz = info.clock_frequency;
    /* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
    * desired period is larger than UINT32_MAX. A cast to uint32_t is used to prevent
this. */
```

```
uint32_t period_counts =
    (uint32_t) ((timer_freq_hz * TAU_PWM_EXAMPLE_DESIRED_PERIOD_MSEC) /
TAU_PWM_EXAMPLE_MSEC_PER_SEC);
/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
* period is larger than UINT16_MAX. */
err = R_TAU_PWM_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);
}
```

ELC Example

This is an example of using TAU_PWM with ELC events.

```
static const tau_pwm_channel_cfg_t g_elc_event_channel_cfg1 =
{
    .channel          = 1,

◆ **tau_pwm_output_level_t**

| | |
|-----------------------------|-----------------|
| enum tau_pwm_output_level_t | |
| Level of TAU pin | |
| Enumerator | |
| TAU_PWM_OUTPUT_LEVEL_LOW | Pin level low. |
| TAU_PWM_OUTPUT_LEVEL_HIGH | Pin level high. |

◆ **tau_pwm_output_polarity_t**

| enum tau_pwm_output_polarity_t | |
|-------------------------------------|-------------------------------------|
| Timer output polarity | |
| Enumerator | |
| TAU_PWM_OUTPUT_POLARITY_ACTIVE_HIGH | Positive logic output (active-high) |
| TAU_PWM_OUTPUT_POLARITY_ACTIVE_LOW | Negative logic output (active-low) |

◆ **tau_pwm_io_pin_t**

| enum tau_pwm_io_pin_t | |
|---|-----------------------|
| Input/Output pins, used to select which duty cycle to update in <code>R_TAU_PWM_DutyCycleSet()</code> . | |
| Enumerator | |
| TAU_PWM_IO_PIN_CHANNEL_0 | I/O pin of channel 0. |
| TAU_PWM_IO_PIN_CHANNEL_1 | I/O pin of channel 1. |
| TAU_PWM_IO_PIN_CHANNEL_2 | I/O pin of channel 2. |
| TAU_PWM_IO_PIN_CHANNEL_3 | I/O pin of channel 3. |
| TAU_PWM_IO_PIN_CHANNEL_4 | I/O pin of channel 4. |
| TAU_PWM_IO_PIN_CHANNEL_5 | I/O pin of channel 5. |
| TAU_PWM_IO_PIN_CHANNEL_6 | I/O pin of channel 6. |
| TAU_PWM_IO_PIN_CHANNEL_7 | I/O pin of channel 7. |

Function Documentation

◆ **R_TAU_PWM_Open()**

```
fsp_err_t R_TAU_PWM_Open ( timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg )
```

Initializes the timer module and applies configurations. Implements `timer_api_t::open`.

The TAU_PWM implementation of the timer requires a `tau_pwm_extended_cfg_t` extension parameter.

Example:

```
/* Initializes the module. */
err = R_TAU_PWM_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Initialization was successful |
| FSP_ERR_ASSERTION | A required input pointer is NULL, the source divider/period/duty cycle counts or number of slave channels is invalid. |
| FSP_ERR_ALREADY_OPEN | Module is already open. |
| FSP_ERR_IRQ_BSP_DISABLED | ISR of master channel must be enabled |
| FSP_ERR_INVALID_MODE | Invalid configuration option provided for selected timer mode |
| FSP_ERR_INVALID_CHANNEL | The master/slave channel selected is not available on this device, slave channel number must be greater than master channel number. |

◆ **R_TAU_PWM_Stop()**

```
fsp_err_t R_TAU_PWM_Stop ( timer_ctrl_t *const p_ctrl)
```

Stops timer. Implements `timer_api_t::stop`.

Example:

```
/* (Optional) Stop the timer. */
(void) R_TAU_PWM_Stop(&g_timer0_ctrl);
```

Return values

| | |
|----------------------|--|
| FSP_SUCCESS | Timer successfully stopped. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_MODE | The mode is invalid, only called in TIMER_MODE_PWM mode. |
| FSP_ERR_UNSUPPORTED | Unsupported when pwm mode support is disabled |

◆ **R_TAU_PWM_Start()**

```
fsp_err_t R_TAU_PWM_Start ( timer_ctrl_t *const p_ctrl)
```

Starts timer (pwm mode) or triggers the one-shot pulse output by software (one-shot mode). Implements `timer_api_t::start`.

Note

In one-shot mode, this function is supported only after the timer has been placed into the start trigger detection wait state by calling `R_TAU_PWM_Enable`.

Example:

```
/* Start the timer. */
(void) R_TAU_PWM_Start(&g_timer0_ctrl);
```

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | Timer successfully started. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_NOT_ENABLED | In One-shot mode, timer must be enabled first. |

◆ **R_TAU_PWM_Reset()**

```
fsp_err_t R_TAU_PWM_Reset ( timer_ctrl_t *const p_ctrl)
```

Resets the counter value to the current period and duty cycle. Implements `timer_api_t::reset`.

Note

If the timer is stopped when calling this function, the timer counter is not reset. The counter will be reset one cycle after the timer is next started (or restarted), since it takes one cycle to reload the initial count when starting the timer.

Return values

| | |
|-------------------|-------------------------------------|
| FSP_SUCCESS | Counter value written successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_PWM_Enable()**

```
fsp_err_t R_TAU_PWM_Enable ( timer_ctrl_t *const p_ctrl)
```

Enables external event inputs that can start the counter and enables the software trigger. After a successful call to this function, the timer is placed into the trigger detection wait state. Implements `timer_api_t::enable`.

Example:

```
/* Enable triggering (including by software). */
(void) R_TAU_PWM_Enable(&g_timer0_ctrl);
```

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | External events successfully enabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_MODE | The mode is invalid, only called in TIMER_MODE_ONE_SHOT mode. |
| FSP_ERR_UNSUPPORTED | Unsupported when one shot mode support is disabled |

◆ **R_TAU_PWM_Disable()**

```
fsp_err_t R_TAU_PWM_Disable ( timer_ctrl_t *const p_ctrl)
```

Stops timer and disables external event inputs and software trigger. Implements [timer_api_t::disable](#).

Example:

```
/* Stop timer and disable the software trigger. */
(void) R_TAU_PWM_Disable(&g_timer0_ctrl);
```

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | External events successfully disabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_MODE | The mode is invalid, only called in TIMER_MODE_ONE_SHOT mode. |
| FSP_ERR_UNSUPPORTED | Unsupported when one shot mode support is disabled |

◆ R_TAU_PWM_PeriodSet()

```
fsp_err_t R_TAU_PWM_PeriodSet ( timer_ctrl_t *const p_ctrl, uint32_t const period_counts )
```

Sets period value provided. If the timer is running, the period will be updated after the next counter underflow. If the timer is stopped, this function resets the counter and updates the period. Implements [timer_api_t::periodSet](#).

Example:

```
/* Get the source clock frequency (in Hz) */
timer_info_t info;
(void) R_TAU_PWM_InfoGet(&g_timer0_ctrl, &info);
uint32_t timer_freq_hz = info.clock_frequency;
/* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
* desired period is larger than UINT32_MAX. A cast to uint32_t is used to prevent
this. */
uint32_t period_counts =
    (uint32_t) ((timer_freq_hz * TAU_PWM_EXAMPLE_DESIRED_PERIOD_MSEC) /
TAU_PWM_EXAMPLE_MSEC_PER_SEC);
/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
* period is larger than UINT16_MAX. */
err = R_TAU_PWM_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|--------------------------|------------------------------------|
| FSP_SUCCESS | Period value written successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_ARGUMENT | Period counts is out of range. |

◆ R_TAU_PWM_DutyCycleSet()

```
fsp_err_t R_TAU_PWM_DutyCycleSet ( timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts,
uint32_t const pin )
```

Sets duty cycle on requested pin. Implements `timer_api_t::dutyCycleSet`.

Duty cycle is updated in the timer data register. The updated duty cycle is reflected after the next cycle end (counter underflow).

Example:

```
/* Get the current period setting. */
timer_info_t info;
(void) R_TAU_PWM_InfoGet(&g_timer0_ctrl, &info);
uint32_t current_period_counts = info.period_counts;
/* Calculate the desired duty cycle based on the current period. */
uint16_t duty_cycle_counts = (uint16_t) ((current_period_counts *
TAU_PWM_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
TAU_PWM_EXAMPLE_MAX_PERCENT);
/* Set the calculated duty cycle. */
err = R_TAU_PWM_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, 1);
assert(FSP_SUCCESS == err);
```

Parameters

| | | |
|------|-------------------|--|
| [in] | p_ctrl | Pointer to instance control block. |
| [in] | duty_cycle_counts | Duty cycle to set in counts. |
| [in] | pin | Use <code>tau_pwm_io_pin_t</code> to select the target slave channel |

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Duty cycle updated successfully. |
| FSP_ERR_ASSERTION | p_ctrl was NULL or the pin is not one of <code>tau_pwm_io_pin_t</code> . |
| FSP_ERR_NOT_OPEN | The instance is not opened. |
| FSP_ERR_INVALID_ARGUMENT | Duty cycle is out of range or larger than period. |

◆ **R_TAU_PWM_InfoGet()**

```
fsp_err_t R_TAU_PWM_InfoGet ( timer_ctrl_t *const p_ctrl, timer_info_t *const p_info )
```

Get timer information and store it in provided pointer p_info. Implements `timer_api_t::infoGet`.

Example:

```
/* Get the current period setting. */
timer_info_t info;

(void) R_TAU_PWM_InfoGet(&g_timer0_ctrl, &info);

uint32_t current_period_counts = info.period_counts;
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Period, count direction, frequency written to caller's structure successfully |
| FSP_ERR_ASSERTION | p_ctrl or p_info was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_TAU_PWM_StatusGet()**

```
fsp_err_t R_TAU_PWM_StatusGet ( timer_ctrl_t *const p_ctrl, timer_status_t *const p_status )
```

Retrieves the current timer state and master channel counter value and stores them in provided pointer p_status. Implements `timer_api_t::statusGet`.

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;

(void) R_TAU_PWM_StatusGet(&g_timer0_ctrl, &status);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Current timer state and counter value retrieved successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_status was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ R_TAU_PWM_CallbackSet()

```
fsp_err_t R_TAU_PWM_CallbackSet ( timer_ctrl_t *const p_api_ctrl, void(*) (timer_callback_args_t *)
p_callback, void const *const p_context, timer_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `timer_api_t::callbackSet`.

Return values

| | |
|-------------------|--------------------------------|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | p_ctrl or p_callback was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ R_TAU_PWM_Close()

```
fsp_err_t R_TAU_PWM_Close ( timer_ctrl_t *const p_ctrl)
```

Stops counter, disables output pins, and clears internal driver data. Implements `timer_api_t::close`.

Return values

| | |
|-------------------|-----------------------------|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

```

```
fsp_err_t R_ULPT_Close (timer_ctrl_t *const p_ctrl)
```

Detailed Description

Driver for the ULPT peripheral on RA MCUs. This module implements the [Timer Interface](#).

Overview

Features

The ULPT module has the following features:

- Supports periodic mode, one-shot mode, and PWM mode.
- Signal can be output to a pin.
- Configurable period (counts per timer cycle).
- Configurable duty cycle in PWM mode.
- Configurable clock source, LOCO, SUBCLK, and external sources input to ULPTEVIn.
- Supports runtime reconfiguration of period.
- Supports runtime reconfiguration of duty cycle in PWM mode.
- Supports counting based on an external clock input to ULPTEVIn.
- Supports debounce filter on ULPTEVIn pins.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value.

Selecting a Timer

RA MCUs can have multiple timer peripherals: the General PWM Timer (GPT) and the Asynchronous General Purpose Timer, and the Ultra Low Power Timer (ULPT). When selecting between them, consider these factors:

| | GPT | AGT | ULPT |
|-----------------|------------------------------------|--|--|
| Low Power Modes | The GPT can operate in sleep mode. | The AGT can operate in all low power modes (when count source is | The ULPT can operate in all low power up to DSTBYs (when count |

| | | | |
|--------------------|--|--|---|
| | | LOCO or subclock). | source is LOCO or subclock). |
| Available Channels | The number of GPT channels is device specific. All currently supported MCUs have at least 7 GPT channels. | All MCUs have 2 AGT channels. | The number of ULPT channels is device specific, 2 is common. |
| Timer Resolution | All MCUs have at least one 32-bit GPT timer. | The AGT timers are 16-bit timers. | The ULPT timers are 32-bit timers. |
| Clock Source | The GPT runs off PCLKD with a configurable divider up to 1024. It can also be configured to count ELC events or external pulses. | The AGT runs off PCLKB, LOCO, or subclock with a configurable divider up to 8 for PCLKB or up to 128 for LOCO or subclock. | The ULPT runs off PCLKB. LOCO, or subclock are count sources with a configurable divider up to 128. |

Configuration

Build Time Configurations for r_ulpt

The following build time configurations are defined in fsp_cfg/r_ulpt_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> Default (BSP) Enabled Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Pin Output Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | If selected code for outputting a waveform to a pin is included in the build. |
| Pin Input Support | <ul style="list-style-type: none"> Disabled Enabled | Disabled | Enable input support to use ULPTEVin as count source |

Configurations for Timers > Timer, Ultra-Low-Power (r_ulpt)

This module can be added to the Stacks tab via New Stack > Timers > Timer, Ultra-Low-Power (r_ulpt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

| Configuration | Options | Default | Description |
|---------------|-------------------------------|----------|--------------|
| General | | | |
| Name | Name must be a valid C symbol | g_timer0 | Module name. |

| | | | |
|-------------|---|------------|---|
| Channel | Channel number does not exist | 0 | Physical hardware channel. |
| Mode | <ul style="list-style-type: none"> • Periodic • One-Shot • PWM | Periodic | Mode selection. Note: One-shot mode is implemented in software. ISR's must be enabled for one shot even if callback is unused. |
| Period | Value must be non-negative | 0x10000 | <p>Specify the timer period based on the selected unit.</p> <p>When the unit is set to 'Raw Counts', setting the period to 0x10000 results in the maximum period at the lowest divisor (fastest timer tick). Set the period to 0x10000 for a free running timer, pulse width measurement or pulse period measurement. Setting the period higher will automatically select a higher divider; the period can be set up to 0x80000 when counting from PCLKB or 0x800000 when counting from LOCO/subclock, which will use a divider of 8 or 128 respectively with the maximum period.</p> <p>If the requested period cannot be achieved, the settings with the largest possible period that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the timer_cfg_t structure.</p> |
| Period Unit | <ul style="list-style-type: none"> • Raw Counts • Nanoseconds • Microseconds | Raw Counts | Unit of the period specified above |

| | | | | |
|--|--|---|-------------------------|---|
| | | <ul style="list-style-type: none"> • Milliseconds • Seconds • Hertz • Kilohertz | | |
| Count Source | | <ul style="list-style-type: none"> • LOCO • SUBCLOCK • EVI | LOCO | ULPT count source. NOTE: The divisor is calculated automatically based on the selected period. See <code>ulpt_count_source_t</code> documentation for details. |
| Output | | | | |
| Duty Cycle Percent (only applicable in PWM mode) | Value must be between 0 and 100 | | 50 | Specify the timer duty cycle percent. Only used in PWM mode. |
| ULPTOA Output | <ul style="list-style-type: none"> • Disabled • Start Level Low • Start Level High | | Disabled | Configure Match ULPTOA output. |
| ULPTOB Output | <ul style="list-style-type: none"> • Disabled • Start Level Low • Start Level High | | Disabled | Configure Match ULPTOB output. |
| ULPTO Output | <ul style="list-style-type: none"> • Disabled • Start Level Low • Start Level High | | Disabled | Configure Pulse ULPTO output. |
| Input | | | | |
| Input Filter | <ul style="list-style-type: none"> • No Filter • Filter sampled at PCLKB • Filter sampled at PCLKB / 8 • Filter sampled at PCLKB / 32 | | No Filter | ULPTEVIn filter. Only applies if the count source is ULPTEVIn, event counter mode. The filter requires the signal to be at the same level for 3 successive reads at the specified filter frequency. |
| Enable Pin | <ul style="list-style-type: none"> • Enable Function Ignored • Enable Function Low • Enable Function High • Enable Function Start • Enable Function Restart | | Enable Function Ignored | ULPTEEn enable edge. Only applies if the count source is ULPTEVIn, event counter mode |
| Trigger Edge | <ul style="list-style-type: none"> • Trigger Edge Rising | | Trigger Edge Rising | ULPTEVIn trigger edge. Applies Only applies if |

| | | | |
|------------------------------|--|-------------------|--|
| | <ul style="list-style-type: none"> • Trigger Edge Falling • Trigger Edge Both | | the count source is ULPTEVIn, event counter mode. |
| Event Edge | <ul style="list-style-type: none"> • Event Edge Rising • Event Edge Falling • Event Edge Both | Event Edge Rising | Select the ULPTEVIn edge. Applies if count input is ULPTEVIn. |
| Interrupts | | | |
| Callback | Name must be a valid C symbol | NULL | A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the timer period elapses. |
| Underflow Interrupt Priority | MCU Specific Options | | Timer interrupt priority. |

Clock Configuration

The ULPT subsystem is driven by the PCLKB, but countdown is driven LOCO, Subclock, or event input. You can set the clock frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

This module can use the ULPTO, ULPTOA and ULPTOB pins as output pins for periodic, one-shot, or PWM signals.

For event counting, the input clocking signal must be applied to the ULPTEVIn pin.

Timer Period

The RA Configuration editor will automatically calculate the period count value and source clock divider based on the selected period time, units, and clock speed.

When the selected unit is "Raw counts", the maximum allowed period setting varies depending on the selected clock source:

| Clock source | Maximum period (counts) |
|-------------------|-------------------------|
| LOCO/Subclock | 0xFFFFFFFF |
| All other sources | 0xFFFFFFFF |

Note

Though the ULPT is a 32-bit timer, because the period interrupt occurs when the counter underflows, setting the period register to 0 results in an effective period of 1 count. For this reason all user-provided raw count values reflect the actual number of period counts (not the raw register values).

Usage Notes

Starting and Stopping the ULPT

After starting or stopping the timer, ULPT registers cannot be accessed until the ULPT state is updated after 3 ULPTCLK cycles. If another ULPT function is called before the 3 ULPTCLK period elapses, the function spins waiting for the ULPT state to update. The required wait time after starting or stopping the timer can be determined using the frequency of ULPTCLK, which is derived from `timer_cfg_t::source_div` and `ulpt_extended_cfg_t::count_source`.

The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take seconds to stabilize. The RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. When running ULPT or RTC off the subclock, the application must ensure the subclock is stable before starting operation.

Low Power Modes

The ULPT can be used to enter snooze mode or to wake the MCU from snooze, software standby, or deep software standby modes when a counter underflow occurs. The compare match A and B events can also be used to wake from software standby or snooze modes.

One-Shot Mode

The ULPT timer does support one-shot mode natively. The interrupt will put the module in the stop state. The callback is only called once in this case. If needed the timer needs to be re-started via the driver call.

Periodic Output

The ULPTO toggles each time the counter underflows.

Examples of periodic signals that can be generated by this module are shown below:

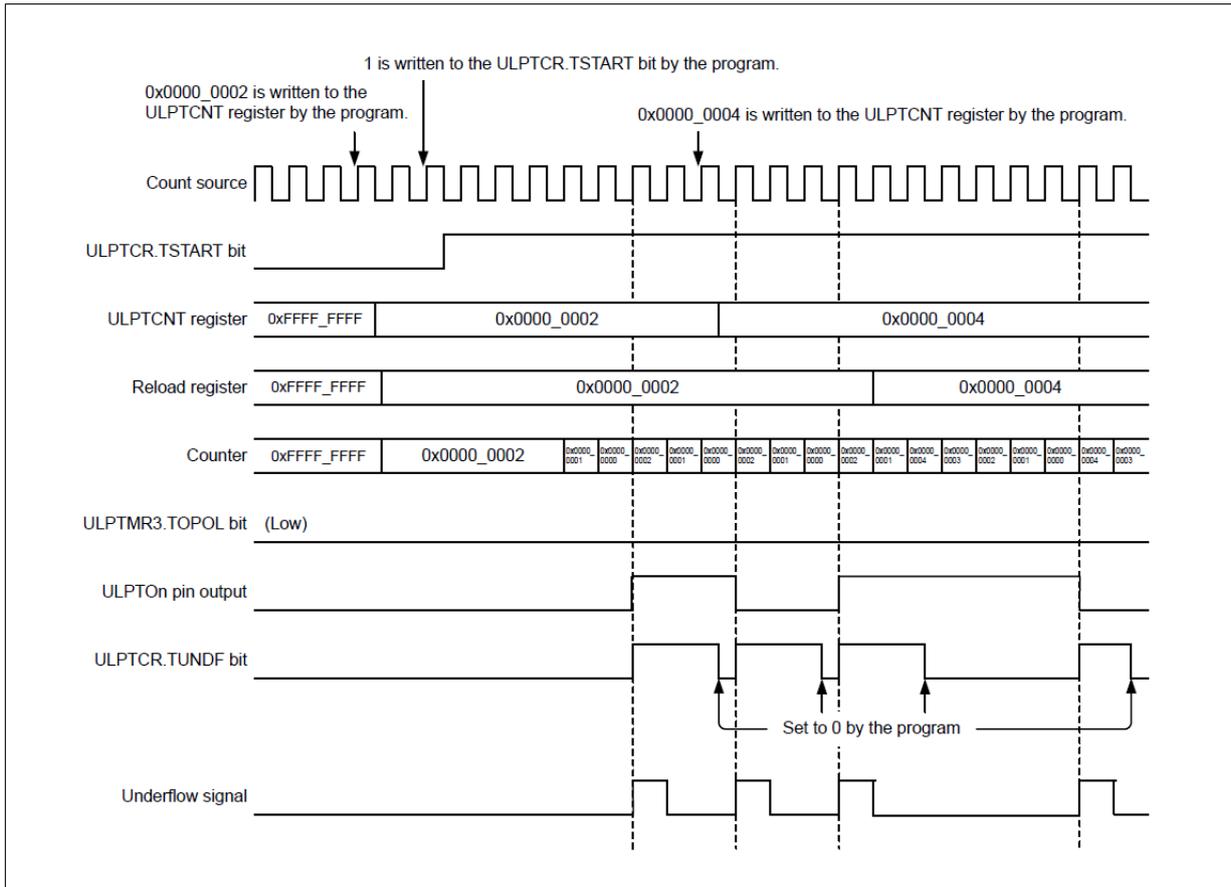

Figure 23.17 Operation example of pulse output

Figure 306: ULPT Periodic Output

PWM Output

The ULPTOA or ULPTOB pin toggles each time the compare match timer matches the down counter. It also toggles once the underflow occurs in periodic mode. For example, setting the ULPT counter to 0x1000, and compare match A to half (0x800) will create a 50% duty cycle output on ULPTOA. Setting ULPTB to a quarter of that (0x400) will create a 25% duty cycle wave. Since the periodic output is actually a PWM output, the time at the stop level is one cycle shorter than the time opposite the stop level for odd period values.

Examples of periodic signals that can be generated by this module are shown below:

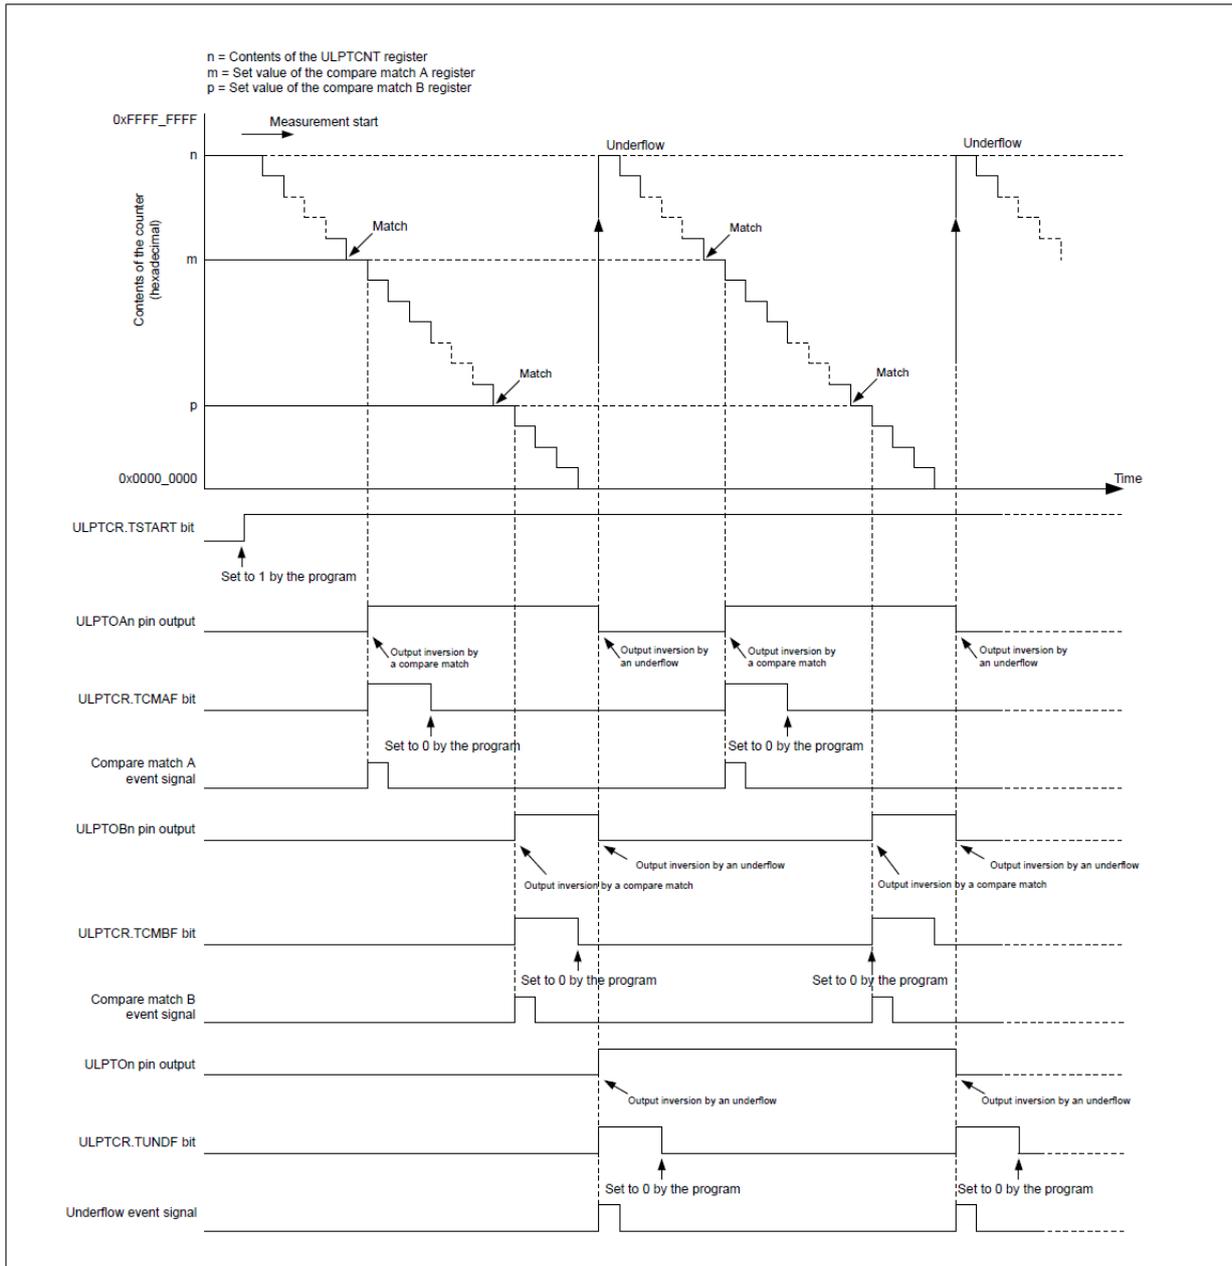

Figure 23.18 Operation example of the compare match function (both the TOPOLA and TOPOLB bits of the ULPTCMSR register are set to 0)

Figure 307: ULPT Periodic Output

Triggering ELC Events with ULPT

The ULPT timer can trigger the start of other peripherals. The [Event Link Controller \(r_elc\)](#) guide provides a list of all available peripherals.

Examples

ULPT Basic Example

This is a basic example of minimal use of the ULPT in an application.

```
void ulpt_basic_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_ULPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_ULPT_Start(&g_timer0_ctrl);
    /* Read the current counter value. Counter value is in status.counter. */
    (void) R_ULPT_StatusGet(&g_timer0_ctrl, &status);
}
```

ULPT Callback Example

This is an example of a timer callback.

```
/* Example callback called when timer expires. */
void timer_callback (timer_callback_args_t * p_args)
{
    if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
        /* Add application code to be called periodically here. */
    }
}
```

ULPT Free Running Counter Example

To use the ULPT as a free running counter, select periodic mode and set the the Period to 0xFFFFFFFF.

```
void ulpt_counter_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    timer_status_t status;
```

```
/* Initializes the module. */
err = R_ULPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
/* Handle any errors. This function should be defined by the user. */
assert(FSP_SUCCESS == err);
/* Start the timer. */
(void) R_ULPT_Start(&g_timer0_ctrl);
/* (Optional) Stop the timer. This will set the counter back to max */
(void) R_ULPT_Stop(&g_timer0_ctrl);
/* Read the current counter value. Counter value is in status.counter. */
(void) R_ULPT_StatusGet(&g_timer0_ctrl, &status);
}
```

ULPT Period Update Example

This an example of updating the period.

```
#define ULPT_EXAMPLE_MSEC_PER_SEC (1000)
#define ULPT_EXAMPLE_DESIRED_PERIOD_MSEC (20)
/* This example shows how to calculate a new period value at runtime. */
void ulpt_period_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    timer_info_t ulptInfo;
    uint32_t timer_freq_hz =0;
    /* Initializes the module. */
    err = R_ULPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_ULPT_Start(&g_timer0_ctrl);
    err = R_ULPT_Enable(&g_timer0_ctrl);

    /* Get the source clock frequency (in Hz).
     * - Use the R_ULPT_InfoGet function (it accounts for the clock source and divider).
     */
}
```

```
if (R_ULPT_InfoGet (&g_timer0_ctrl, &ulptInfo) == FSP_SUCCESS)
{
    timer_freq_hz = ulptInfo.clock_frequency;
}

/* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
* desired period is larger than UINT32_MAX / pclk_freq_hz. A cast to uint64_t is
used to prevent this. */
uint32_t period_counts =
    (uint32_t) (((uint64_t) timer_freq_hz * ULPT_EXAMPLE_DESIRED_PERIOD_MSEC) /
ULPT_EXAMPLE_MSEC_PER_SEC);

/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
* period is larger than UINT16_MAX. */
err = R_ULPT_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);
err = R_ULPT_Disable(&g_timer0_ctrl);
}
```

ULPT Duty Cycle Update Example

This an example of updating the duty cycle.

```
#define ULPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT (25)
#define ULPT_EXAMPLE_MAX_PERCENT (100)
/* This example shows how to calculate a new duty cycle value at runtime. */
void ulpt_duty_cycle_calculation_example (void)
{
    fsp_err_t err = FSP_SUCCESS;
    /* Initializes the module. */
    err = R_ULPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Start the timer. */
    (void) R_ULPT_Start(&g_timer0_ctrl);
}
```

```

/* Get the current period setting. */
timer_info_t info;

(void) R_ULPT_InfoGet(&g_timer0_ctrl, &info);

uint32_t current_period_counts = info.period_counts;

/* Calculate the desired duty cycle based on the current period. */
uint32_t duty_cycle_counts = (current_period_counts *
ULPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                               ULPT_EXAMPLE_MAX_PERCENT;

/* Set the calculated duty cycle. */
err = R_ULPT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts,
ULPT_OUTPUT_PIN_ULPTOA);

assert(FSP_SUCCESS == err);
}

```

Data Structure Documentation

◆ [ulpt_instance_ctrl_t](#)

```
struct ulpt_instance_ctrl_t
```

Channel control block. DO NOT INITIALIZE. Initialization occurs when `timer_api_t::open` is called.

◆ `ulpt_extended_cfg_t`

| struct <code>ulpt_extended_cfg_t</code> | | |
|---|------------------------------|---|
| Optional ULPT extension data structure. | | |
| Data Fields | | |
| <code>ulpt_clock_t</code> | <code>count_source</code> | ULPT channel clock source. |
| <code>ulpt_ulptevi_filter_t</code> | <code>ulptevi_filter</code> | Input filter for ULTPTEVI. |
| <code>ulpt_enable_function_t</code> | <code>enable_function</code> | Counter function when ULPTTEE is valid. |
| <code>ulpt_trigger_edge_t</code> | <code>trigger_edge</code> | Enable trigger edge (start and restart functions only). |
| <code>ulpt_event_pin_t</code> | <code>event_pin</code> | Event pin (event counting only). |
| <code>ulpt_pulse_pin_cfg_t</code> | <code>ulpto</code> | Pulse output pin. |
| union <code>ulpt_extended_cfg_t</code> | <code>__unnamed__</code> | |

Enumeration Type Documentation

◆ `ulpt_clock_t`

| enum <code>ulpt_clock_t</code> | |
|--------------------------------|---|
| Count source. | |
| Enumerator | |
| ULPT_CLOCK_LOCO | LOCO count source, division by 1, 2, 4, 8, 16, 32, 64, 128. |
| ULPT_CLOCK_SUBCLOCK | Subclock count source, division by 1, 2, 4, 8, 16, 32, 64, 128. |
| ULPT_CLOCK_ULPTEVI | Counts external events on ULPTEVI. |

◆ **ulpt_enable_function_t**

| enum <code>ulpt_enable_function_t</code> | |
|---|---|
| Counter mode for event enable. | |
| Enumerator | |
| <code>ULPT_ENABLE_FUNCTION_IGNORED</code> | Always count external events, ignore ULPTEE. |
| <code>ULPT_ENABLE_FUNCTION_ENABLE_LOW</code> | Event counting is enabled while ULPTEE is low (event counting only). |
| <code>ULPT_ENABLE_FUNCTION_ENABLE_HIGH</code> | Event counting is enabled while ULPTEE is high (event counting only). |
| <code>ULPT_ENABLE_FUNCTION_START</code> | Counting is started after ULPTEE. |
| <code>ULPT_ENABLE_FUNCTION_RESTART</code> | Counting is restarted after ULPTEE. |

◆ **ulpt_trigger_edge_t**

| enum <code>ulpt_trigger_edge_t</code> | |
|---|---|
| Enable signal trigger edge for start and restart functions. | |
| Enumerator | |
| <code>ULPT_TRIGGER_EDGE_RISING</code> | Timer enable function occurs on the rising edge of ULPTEE. |
| <code>ULPT_TRIGGER_EDGE_FALLING</code> | Timer enable function occurs on the falling edge of ULPTEE. |
| <code>ULPT_TRIGGER_EDGE_BOTH</code> | Timer enable function occurs on any edge of ULPTEE. |

◆ **ulpt_event_pin_t**

| | |
|---------------------------------------|---|
| enum ulpt_event_pin_t | |
| Event signal pin. | |
| Enumerator | |
| ULPT_EVENT_PIN_RISING | Event count occurs on the rising edge. |
| ULPT_EVENT_PIN_FALLING | Event count occurs on the falling edge. |
| ULPT_EVENT_PIN_BOTH | Event count occurs on both edges. |

◆ **ulpt_output_pin_t**

| | |
|---|-------------------------|
| enum ulpt_output_pin_t | |
| Output pins, used to select which duty cycle to update in R_ULPT_DutyCycleSet() . | |
| Enumerator | |
| ULPT_OUTPUT_PIN_ULPTOA | Compare match A output. |
| ULPT_OUTPUT_PIN_ULPTOB | Compare match B output. |

◆ **ulpt_pulse_pin_cfg_t**

| | |
|---|-------------------------------|
| enum ulpt_pulse_pin_cfg_t | |
| ULPTO pulse output pin. | |
| Enumerator | |
| ULPT_PULSE_PIN_CFG_DISABLED | Output pin disabled. |
| ULPT_PULSE_PIN_CFG_ENABLED_START_LEVEL_LOW | Output pin Enabled Start Low. |
| ULPT_PULSE_PIN_CFG_ENABLED_START_LEVEL_HIGH | Output pin enabled Start Hig. |

◆ **ulpt_match_pin_cfg_t**

| enum <code>ulpt_match_pin_cfg_t</code> | |
|--|------------------------------------|
| ULPT match output pin. | |
| Enumerator | |
| <code>ULPT_MATCH_PIN_CFG_DISABLED</code> | Match output disabled. |
| <code>ULPT_MATCH_PIN_CFG_START_LEVEL_LOW</code> | Match output enabled, starts low. |
| <code>ULPT_MATCH_PIN_CFG_START_LEVEL_HIGH</code> | Match output enabled, starts high. |

◆ **ulpt_ulptevi_filter_t**

| enum <code>ulpt_ulptevi_filter_t</code> | |
|--|-----------------------|
| Input filter, applied to ULPTEVI in event counter mode. The filter requires the signal to be at the same level for 3 successive reads at the specified filter frequency. | |
| Enumerator | |
| <code>ULPT_ULPTEVI_FILTER_NONE</code> | No filter. |
| <code>ULPT_ULPTEVI_FILTER_PCLKB</code> | Filter at PCLKB. |
| <code>ULPT_ULPTEVI_FILTER_PCLKB_DIV_8</code> | Filter at PCLKB / 8. |
| <code>ULPT_ULPTEVI_FILTER_PCLKB_DIV_32</code> | Filter at PCLKB / 32. |

Function Documentation

◆ **R_ULPT_Open()**

```
fsp_err_t R_ULPT_Open ( timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg )
```

Initializes the ULPT module instance. Implements `timer_api_t::open`.

The ULPT implementation of the general timer can accept an optional `ulpt_extended_cfg_t` extension parameter. For ULPT, the extension specifies the clock to be used as timer source and the output pin configurations. If the extension parameter is not specified (NULL), the default clock LOCO is used and the output pins are disabled.

Example:

```
/* Initializes the module. */
err = R_ULPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

| | |
|--------------------------------|--|
| FSP_SUCCESS | Initialization was successful and timer has started. |
| FSP_ERR_ASSERTION | A required input pointer is NULL or the period is not in the valid range of 1 to 0xFFFF. |
| FSP_ERR_ALREADY_OPEN | R_ULPT_Open has already been called for this p_ctrl. |
| FSP_ERR_IRQ_BSP_DISABLED | A required interrupt has not been enabled in the vector table. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | Requested channel number is not available on ULPT. |

◆ **R_ULPT_Start()**

```
fsp_err_t R_ULPT_Start ( timer_ctrl_t *const p_ctrl)
```

Starts timer. Implements `timer_api_t::start`.

Example:

```
/* Start the timer. */
(void) R_ULPT_Start(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Timer started. |
| FSP_ERR_ASSERTION | p_ctrl is null. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_ULPT_Stop()**

```
fsp_err_t R_ULPT_Stop ( timer_ctrl_t *const p_ctrl)
```

Stops the timer. Implements `timer_api_t::stop`.

Example:

```
/* (Optional) Stop the timer. This will set the counter back to max */
(void) R_ULPT_Stop(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Timer stopped. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_ULPT_Reset()**

```
fsp_err_t R_ULPT_Reset ( timer_ctrl_t *const p_ctrl)
```

Resets the counter value to the period minus one. Implements `timer_api_t::reset`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Counter reset. |
| FSP_ERR_ASSERTION | p_ctrl is NULL |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_ULPT_Enable()**

```
fsp_err_t R_ULPT_Enable ( timer_ctrl_t *const p_ctrl)
```

Enables external event triggers that start, stop, clear, or capture the counter. Implements `timer_api_t::enable`.

Example:

```
err = R_ULPT_Enable(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|---------------------------------------|
| FSP_SUCCESS | External events successfully enabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ **R_ULPT_Disable()**

```
fsp_err_t R_ULPT_Disable ( timer_ctrl_t *const p_ctrl)
```

Disables external event triggers that start, stop, clear, or capture the counter. Implements `timer_api_t::disable`.

Example:

```
err = R_ULPT_Disable(&g_timer0_ctrl);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | External events successfully disabled. |
| FSP_ERR_ASSERTION | p_ctrl was NULL. |
| FSP_ERR_NOT_OPEN | The instance is not opened. |

◆ R_ULPT_PeriodSet()

```
fsp_err_t R_ULPT_PeriodSet ( timer_ctrl_t *const p_ctrl, uint32_t const period_counts )
```

Updates period. The new period is updated immediately and the counter is reset to the maximum value. Implements `timer_api_t::periodSet`.

Warning

If periodic output is used, the duty cycle buffer registers are updated after the period buffer register. If this function is called while the timer is running and an AGT underflow occurs during processing, the duty cycle will not be the desired 50% duty cycle until the counter underflow after processing completes.

Stop the timer before calling this function if one-shot output is used.

Example:

```
/* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
* period is larger than UINTE16_MAX. */
err = R_ULPT_PeriodSet(&g_timer0_ctrl, period_counts);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Period value updated. |
| FSP_ERR_ASSERTION | A required pointer was NULL, or the period was not in the valid range of 1 to 0xFFFF. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ R_ULPT_DutyCycleSet()

```
fsp_err_t R_ULPT_DutyCycleSet ( timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts,
uint32_t const pin )
```

Updates duty cycle. If the timer is counting, the new duty cycle is reflected after the next counter underflow. Implements [timer_api_t::dutyCycleSet](#).

Example:

```
/* Set the calculated duty cycle. */
err = R_ULPT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts,
ULPT_OUTPUT_PIN_ULPTOA);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|--------------------------|---|
| FSP_SUCCESS | Duty cycle updated. |
| FSP_ERR_ASSERTION | A required pointer was NULL, or the pin was not ULPT_ULPTO_ULPTOA or ULPT_ULPTO_ULPTOB. |
| FSP_ERR_INVALID_ARGUMENT | Duty cycle was not in the valid range of 0 to period (counts) - 1 |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |
| FSP_ERR_UNSUPPORTED | ULPT_CFG_OUTPUT_SUPPORT_ENABLE is 0. |

◆ **R_ULPT_InfoGet()**

```
fsp_err_t R_ULPT_InfoGet ( timer_ctrl_t *const p_ctrl, timer_info_t *const p_info )
```

Gets timer information and store it in provided pointer p_info. Implements [timer_api_t::infoGet](#).

Example:

```
/* Get the source clock frequency (in Hz).
 * - Use the R_ULPT_InfoGet function (it accounts for the clock source and divider).
 */
if (R_ULPT_InfoGet (&g_timer0_ctrl, &ulptInfo) == FSP_SUCCESS)
{
    timer_freq_hz = ulptInfo.clock_frequency;
}
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Period, count direction, and frequency stored in p_info. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ **R_ULPT_StatusGet()**

```
fsp_err_t R_ULPT_StatusGet ( timer_ctrl_t *const p_ctrl, timer_status_t *const p_status )
```

Retrieves the current state and counter value stores them in p_status. Implements [timer_api_t::statusGet](#).

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
(void) R_ULPT_StatusGet(&g_timer0_ctrl, &status);
```

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Current status and counter value provided in p_status. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

◆ R_ULPT_CallbackSet()

```
fsp_err_t R_ULPT_CallbackSet ( timer_ctrl_t *const p_api_ctrl, void(*) (timer_callback_args_t *)
p_callback, void const *const p_context, timer_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure. Implements `timer_api_t::callbackSet`.

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

◆ R_ULPT_Close()

```
fsp_err_t R_ULPT_Close ( timer_ctrl_t *const p_ctrl)
```

Stops counter, disables interrupts, disables output pins, and clears internal driver data. Implements `timer_api_t::close`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Timer closed. |
| FSP_ERR_ASSERTION | <code>p_ctrl</code> is NULL. |
| FSP_ERR_NOT_OPEN | The instance control structure is not opened. |

5.2.20 Transfer

Modules

Detailed Description

Transfer Modules.

Modules

Detailed Description

Driver for the DMAC peripheral on RA MCUs. This module implements the [Transfer Interface](#).

Overview

The Direct Memory Access Controller (DMAC) transfers data from one memory location to another without using the CPU.

Features

- Supports multiple transfer modes
 - Normal transfer
 - Repeat transfer
 - Block transfer
 - Repeat-Block transfer (Not available on all MCUs)
- Address increment, decrement, fixed, or offset modes
- Triggered by ELC events
 - Some exceptions apply, see the Event table in the Event Numbers section of the Interrupt Controller Unit chapter of the hardware manual
- Supports 1, 2, and 4 byte data units

Configuration

Build Time Configurations for r_dmac

The following build time configurations are defined in fsp_cfg/r_dmac_cfg.h:

| Configuration | Options | Default | Description |
|--------------------|--|---------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |

Configurations for Transfer > Transfer (r_dmac)

This module can be added to the Stacks tab via New Stack > Transfer > Transfer (r_dmac).

| Configuration | Options | Default | Description |
|---------------|--------------------------------------|-------------|---|
| Name | Name must be a valid C symbol | g_transfer0 | Module name. |
| Channel | Value must be a non-negative integer | 0 | Specify the hardware channel. |
| Mode | MCU Specific Options | | Select the transfer mode. Normal: One transfer per activation, transfer ends after Number of Transfers; Repeat: One transfer per activation, Repeat Area address reset after Number of Transfers, transfer ends after Number of |

| | | | |
|--|--|--|--|
| | | | Blocks; Block: Number of Blocks per activation, Repeat Area address reset after Number of Transfers, transfer ends after Number of Blocks. |
| Transfer Size | <ul style="list-style-type: none"> • 1 Byte • 2 Bytes • 4 Bytes | 2 Bytes | Select the transfer size. |
| Destination Address Mode | <ul style="list-style-type: none"> • Fixed • Offset addition • Incremented • Decrementd | Fixed | Select the address mode for the destination. |
| Source Address Mode | <ul style="list-style-type: none"> • Fixed • Offset addition • Incremented • Decrementd | Fixed | Select the address mode for the source. |
| Repeat Area (Unused in Normal Mode) | <ul style="list-style-type: none"> • Destination • Source | Source | Select the repeat area. Either the source or destination address resets to its initial value after completing Number of Transfers in Repeat or Block mode. |
| Number of Transfers | Value must be a non-negative integer | 1 | Specify the number of transfers for repeat and normal mode or block size for repeat-block transfer mode. |
| Number of Blocks (Valid only in Repeat,Block or Repeat-Block Mode) | Value must be a non-negative integer | 0 | Specify the number of blocks to transfer in Repeat,Block or Repeat-Block mode. |
| Activation Source | MCU Specific Options | | Select the DMAC transfer start event. If no ELC event is chosen then software start can be used. |
| Callback | Name must be a valid C symbol | NULL | A user callback that is called at the end of the transfer. |
| Transfer End Interrupt Priority | MCU Specific Options | | Select the transfer end interrupt priority. |
| Interrupt Frequency | <ul style="list-style-type: none"> • Interrupt after all transfers have completed • Interrupt after each block, or | Interrupt after all transfers have completed | Select to have interrupt after each transfer or after last transfer. |

| | repeat size is transferred | | |
|--|--|---|---|
| Offset value (Valid only when address mode is '\Offset') | Value must be a 24 bit signed integer. | 1 | Offset value is added to the address after each transfer. |
| Source Buffer Size | Value must be a non-negative integer with a maximum configurable value of 65535. | 1 | Specify the size of whole source buffer (valid only for Repeat-Block transfer mode with source address update mode other than offset addition). |

Clock Configuration

The DMAC peripheral module uses ICLK as the clock source. The ICLK frequency is set by using the **Clocks** tab of the RA Configuration editor prior to a build, or by using the CGC module at run-time.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Source and Destination Configuration

[R_DMxAC_Reset\(\)](#) API function should be called to set the source and destination before starting transfer operation.

Transfer Modes

The DMAC Module supports three modes of operation.

- **Normal Mode** - In normal mode, a single data unit is transferred every time the configured ELC event is received by the DMAC channel. A data unit can be 1-byte, 2-bytes, or 4-bytes. The source and destination addresses can be fixed, increment, decrement, or add an offset to the next data unit after each transfer. A 16-bit counter decrements after each transfer. When the counter reaches 0, transfers will no longer be triggered by the ELC event and the CPU can be interrupted to signal that all transfers have finished.
- **Repeat Mode** - Repeat mode works the same way as normal mode, however the length is limited to an integer in the range[1,1024]. When the transfer counter reaches 0, the counter is reset to its configured value, the repeat area (source or destination address) resets to its starting address and the block count remaining will decrement by 1. When the block count reaches 0, transfers will no longer be triggered by the ELC event and the CPU may be interrupted to signal that all transfers have finished.
- **Block Mode** - In block mode, the amount of data units transferred by each interrupt can be set to an integer in the range [1,1024]. The number of blocks to transfer can also be configured to a 16-bit number. After each block transfer the repeat area (source or destination address) will reset to the original address and the other address will be incremented or decremented to the next block.
- **Repeat-Block Mode** - In repeat-block mode, the amount of data units transferred by each interrupt can be set to an integer in the range [1,1024]. The number of blocks to transfer can be configured to a 16 bit number. If the destination address mode is offset mode,

maximum configurable number of blocks is 0xFFFF for block size(length) of one with data transfer size as byte,0x7FFF for block size of one with data transfer size as half word and 0x3FFF for block size of one with data size as word. After each block transfer the source address and the destination address will be incremented or decremented to the next block address. In case of offset address mode for source address, the source address size is the total size of source buffer after which the source area is rolled over, block size can be smaller than the source buffer size. For source address mode as offset mode, the maximum configurable source buffer size is 0xFFFF for transfer data size of a byte,0x7FFF for transfer data size of half word and 0x3FFF for transfer data size of word. Repeat-block mode can be used to implement single ring buffer to multiple ring buffer transfer type design.

Selecting the DTC or DMAC

The Transfer API is implemented by both DTC and the DMAC so that applications can switch between the DTC and the DMAC. When selecting between them, consider these factors:

| | DTC | DMAC |
|---------------------|---|---|
| Repeat Mode | <ul style="list-style-type: none"> Repeats forever Max repeat size is 256 x 4 bytes | <ul style="list-style-type: none"> Configurable number of repeats Max repeat size is 1024 x 4 bytes |
| Block Mode | <ul style="list-style-type: none"> Max block size is 256 x 4 bytes | <ul style="list-style-type: none"> Max block size is 1024 x 4 bytes |
| Channels | <ul style="list-style-type: none"> One instance per interrupt | <ul style="list-style-type: none"> MCU specific (8 channels or less) |
| Chained Transfers | <ul style="list-style-type: none"> Supported | <ul style="list-style-type: none"> Not Supported |
| Software Trigger | <ul style="list-style-type: none"> Must use the software ELC event | <ul style="list-style-type: none"> Has support for software trigger without using software ELC event Supports TRANSFER_START_MODE_SINGLE and TRANSFER_START_MODE_REPEAT |
| Offset Address Mode | <ul style="list-style-type: none"> Not supported | <ul style="list-style-type: none"> Supported |

Interrupts

The DTC and DMAC interrupts behave differently. The DTC uses the configured IELSR event IRQ as the interrupt source whereas each DMAC channel has its own IRQ.

The transfer_info_t::irq setting also behaves a little differently depending on which mode is selected.

Normal Mode

| | DTC | DMAC |
|-------------------|-------------------------------|-------------------------------|
| TRANSFER_IRQ_EACH | Interrupt after each transfer | N/A |
| TRANSFER_IRQ_END | Interrupt after last transfer | Interrupt after last transfer |

Repeat Mode

| | DTC | DMAC |
|-------------------|-------------------------------|-------------------------------|
| TRANSFER_IRQ_EACH | Interrupt after each transfer | Interrupt after each repeat |
| TRANSFER_IRQ_END | Interrupt after each repeat | Interrupt after last transfer |

Block Mode

| | DTC | DMAC |
|-------------------|----------------------------|----------------------------|
| TRANSFER_IRQ_EACH | Interrupt after each block | Interrupt after each block |
| TRANSFER_IRQ_END | Interrupt after last block | Interrupt after last block |

Repeat-block Mode

| | DTC | DMAC |
|-------------------|-----|----------------------------|
| TRANSFER_IRQ_EACH | N/A | N/A |
| TRANSFER_IRQ_END | N/A | Interrupt after last block |

Additional Considerations

- The DTC requires a moderate amount of RAM (one `transfer_info_t` struct per open instance + `DTC_VECTOR_TABLE_SIZE`).
- The DTC stores transfer information in RAM and writes back to RAM after each transfer whereas the DMAC stores all transfer information in registers.
- When transfers are configured for more than one activation source, the DTC must fetch the transfer info from RAM on each interrupt. This can cause a higher latency between transfers.

Offset Address Mode

When the source or destination mode is configured to offset mode, a configurable offset is added to the source or destination pointer after each transfer. The offset is a signed 24 bit number.

Examples

Basic Example

This is a basic example of minimal use of the DMAC in an application. In this case, one or more events have been routed to the DMAC for handling so it only needs to be enabled to start accepting transfers.

```
void dmac_minimal_example (void)
{
    /* Open the transfer instance with initial configuration. */
    fsp_err_t err = R_DMAMC_Open(&g_transfer_ctrl, &g_transfer_cfg);

    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);

    /* Enable the DMAC so that it responds to transfer requests. */
}
```

```
err = R_DMACE_Enable(&g_transfer_ctrl);  
assert(FSP_SUCCESS == err);  
}
```

CRC32 Example

In this example the DMAC is used to feed the CRC peripheral to perform a CRC32 operation.

```
volatile bool g_transfer_complete = false;  
void dmac_callback (dmac_callback_args_t * cb_data)  
{  
    FSP_PARAMETER_NOT_USED(cb_data);  
    g_transfer_complete = true;  
}  
void dmac_crc_example (void)  
{  
    uint8_t p_src[TRANSFER_LENGTH];  
    /* Initialize p_src to [ABC..OP] */  
    for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)  
    {  
        p_src[i] = (uint8_t) ('A' + (i % 26));  
    }  
    /* Set transfer source address to p_src */  
    g_transfer_cfg.p_info->p_src = (void *) p_src;  
    /* Set transfer destination address to the CRC data input register */  
    g_transfer_cfg.p_info->p_dest = (void *) &R_CRC->CRCDIR;  
    /* Open the transfer instance with initial configuration. */  
    fsp_err_t err = R_DMACE_Open(&g_transfer_ctrl, &g_transfer_cfg);  
    /* Handle any errors. This function should be defined by the user. */  
    assert(FSP_SUCCESS == err);  
    /* Enable DMAC transfers. */  
    (void) R_DMACE_Enable(&g_transfer_ctrl);  
    /* Open the CRC module. */  
    err = R_CRC_Open(&g_crc_ctrl, &g_crc_cfg);  
    assert(FSP_SUCCESS == err);  
}
```

```
/* Clear the transfer complete flag. */
g_transfer_complete = false;

/* Trigger the transfer using software. */
err = R_DMAC_SoftwareStart(&g_transfer_ctrl, TRANSFER_START_MODE_SINGLE);
assert(FSP_SUCCESS == err);

while (!g_transfer_complete)
{
/* Wait for transfer complete interrupt */
}

/* Get CRC result and perform final XOR. */
uint32_t crc32;
(void) R_CRC_CalculatedValueGet(&g_crc_ctrl, &crc32);
crc32 ^= CRC32_FINAL_XOR_VALUE;

/* Verify that the CRC32 is calculated correctly. */
/* CRC32("ABCD...NOP") = 0xE0E8FF4D. */
const uint32_t expected_crc32 = 0xE0E8FF4D;
if (expected_crc32 != crc32)
{
/* Handle any CRC errors. This function should be defined by the user. */
handle_crc_error();
}
}
```

Field Documentation

◆ src_buffer_size

uint16_t dmac_extended_cfg_t::src_buffer_size

Source ring buffer size for [TRANSFER_MODE_REPEAT_BLOCK](#).

◆ activation_source

elc_event_t dmac_extended_cfg_t::activation_source

Select which event will trigger the transfer.

Note

Select `ELC_EVENT_NONE` for software activation in order to use `softwareStart` and `softwareStart` to trigger transfers.

◆ p_callback

void(* dmac_extended_cfg_t::p_callback) (dmac_callback_args_t *cb_data)

Callback for transfer end interrupt.

◆ p_context

void const* dmac_extended_cfg_t::p_context

Placeholder for user data. Passed to the user `p_callback` in [transfer_callback_args_t](#).

Macro Definition Documentation

◆ DMAC_MAX_NORMAL_TRANSFER_LENGTH

```
#define DMAC_MAX_NORMAL_TRANSFER_LENGTH
```

Max configurable number of transfers in `TRANSFER_MODE_NORMAL`.

◆ DMAC_MAX_REPEAT_TRANSFER_LENGTH

```
#define DMAC_MAX_REPEAT_TRANSFER_LENGTH
```

Max number of transfers per repeat for `TRANSFER_MODE_REPEAT`.

◆ DMAC_MAX_BLOCK_TRANSFER_LENGTH

```
#define DMAC_MAX_BLOCK_TRANSFER_LENGTH
```

Max number of transfers per block in `TRANSFER_MODE_BLOCK`.

◆ **DMAC_MAX_REPEAT_COUNT**

#define DMAC_MAX_REPEAT_COUNT

Max configurable number of repeats to transfer in TRANSFER_MODE_REPEAT

◆ **DMAC_MAX_BLOCK_COUNT**

#define DMAC_MAX_BLOCK_COUNT

Max configurable number of blocks to transfer in TRANSFER_MODE_BLOCK

Function Documentation◆ **R_DMAM_Open()**

fsp_err_t R_DMAM_Open (transfer_ctrl_t*const p_api_ctrl, transfer_cfg_t const*const p_cfg)

Configure a DMAM channel.

Return values

| | |
|--------------------------------|--|
| FSP_SUCCESS | Successful open. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_IP_CHANNEL_NOT_PRESENT | The configured channel is invalid. |
| FSP_ERR_IRQ_BSP_DISABLED | The IRQ associated with the activation source is not enabled in the BSP. |
| FSP_ERR_ALREADY_OPEN | The control structure is already opened. |

◆ **R_DMAM_Reconfigure()**

fsp_err_t R_DMAM_Reconfigure (transfer_ctrl_t*const p_api_ctrl, transfer_info_t* p_info)

Reconfigure the transfer with new transfer info.

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | Transfer is configured and will start when trigger occurs. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_ENABLED | DMAM is not enabled. The current configuration must not be valid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMAM_Open to initialize the control block. |

◆ **R_DMACE_Reset()**

```
fsp_err_t R_DMACE_Reset ( transfer_ctrl_t *const p_api_ctrl, void const *volatile p_src, void *volatile p_dest, uint16_t const num_transfers )
```

Reset transfer source, destination, and number of transfers.

Return values

| | |
|---------------------|---|
| FSP_SUCCESS | Transfer reset successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_ENABLED | DMACE is not enabled. The current configuration must not be valid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMACE_Open to initialize the control block. |

◆ **R_DMACE_SoftwareStart()**

```
fsp_err_t R_DMACE_SoftwareStart ( transfer_ctrl_t *const p_api_ctrl, transfer_start_mode_t mode )
```

If the mode is TRANSFER_START_MODE_SINGLE initiate a single transfer with software. If the mode is TRANSFER_START_MODE_REPEAT continue triggering transfers until all of the transfers are completed.

Return values

| | |
|---------------------|---|
| FSP_SUCCESS | Transfer started written successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMACE_Open to initialize the control block. |
| FSP_ERR_UNSUPPORTED | Handle was not configured for software activation. |

◆ **R_DMAC_SoftwareStop()**

`fsp_err_t R_DMAC_SoftwareStop (transfer_ctrl_t *const p_api_ctrl)`

Stop software transfers if they were started with TRANSFER_START_MODE_REPEAT.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Transfer stopped written successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMAC_Open to initialize the control block. |

◆ **R_DMAC_Enable()**

`fsp_err_t R_DMAC_Enable (transfer_ctrl_t *const p_api_ctrl)`

Enable transfers for the configured activation source.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Counter value written successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMAC_Open to initialize the control block. |

◆ **R_DMAC_Disable()**

`fsp_err_t R_DMAC_Disable (transfer_ctrl_t *const p_api_ctrl)`

Disable transfers so that they are no longer triggered by the activation source.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Counter value written successfully. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMAC_Open to initialize the control block. |

◆ **R_DMAC_InfoGet()**

```
fsp_err_t R_DMAC_InfoGet ( transfer_ctrl_t *const p_api_ctrl, transfer_properties_t *const p_info )
```

Set driver specific information in provided pointer.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Information has been written to p_info. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMAC_Open to initialize the control block. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |

◆ **R_DMAC_Reload()**

```
fsp_err_t R_DMAC_Reload ( transfer_ctrl_t *const p_api_ctrl, void const * p_src, void * p_dest,
uint32_t const num_transfers )
```

To update next transfer information without interruption during transfer.

Return values

| | |
|---------------------|--------------------------------|
| FSP_ERR_UNSUPPORTED | This feature is not supported. |
|---------------------|--------------------------------|

◆ **R_DMAC_CallbackSet()**

```
fsp_err_t R_DMAC_CallbackSet ( transfer_ctrl_t *const p_api_ctrl, void(*) (dmac_callback_args_t *)
p_callback, void const *const p_context, dmac_callback_args_t *const p_callback_memory )
```

Updates the user callback with the option to provide memory for the callback argument structure.

Return values

| | |
|-------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |

◆ **R_DMACE_Close()**

`fsp_err_t R_DMACE_Close (transfer_ctrl_t *const p_api_ctrl)`

Disable transfer and clean up internal data. Implements `transfer_api_t::close`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DMACE_Open to initialize the control block. |

`fsp_err_t R_DTC_CallbackSet (transfer_ctrl_t *const p_api_ctrl, void(*p_callback)(transfer_callback_args_t *), void const *const p_context, transfer_callback_args_t *const p_callback_memory)`

```
fsp_err_t R_DTC_Close (transfer_ctrl_t *const p_api_ctrl)
```

Detailed Description

Driver for the DTC peripheral on RA MCUs. This module implements the [Transfer Interface](#).

Overview

The Data Transfer Controller (DTC) transfers data from one memory location to another without using the CPU.

The DTC uses a RAM based vector table. Each entry in the vector table corresponds to an entry in the ISR vector table. When the DTC is triggered by an interrupt, it reads the DTC vector table, fetches the transfer information, and then executes the transfer. After the transfer is executed, the DTC writes the updated transfer info back to the location pointed to by the DTC vector table.

Features

- Supports multiple transfer modes
 - Normal transfer
 - Repeat transfer
 - Block transfer
- Chain transfers
- Address increment, decrement or fixed modes
- Can be triggered by any event that has reserved a slot in the interrupt vector table.
 - Some exceptions apply, see the Event table in the Event Numbers section of the Interrupt Controller Unit chapter of the hardware manual
- Supports 1, 2, and 4 byte data units

Configuration

Build Time Configurations for r_dtc

The following build time configurations are defined in fsp_cfg/r_dtc_cfg.h:

| Configuration | Options | Default | Description |
|---|--|-----------------------|---|
| Parameter Checking | <ul style="list-style-type: none"> • Default (BSP) • Enabled • Disabled | Default (BSP) | If selected code for parameter checking is included in the build. |
| Linker section to keep DTC vector table | Manual Entry | .fsp_dtc_vector_table | Section to place the DTC vector table. |

Configurations for Transfer > Transfer (r_dtc)

This module can be added to the Stacks tab via New Stack > Transfer > Transfer (r_dtc).

| Configuration | Options | Default | Description |
|---------------|----------------------|-------------|--------------|
| Name | Name must be a valid | g_transfer0 | Module name. |

C symbol

| | | | |
|---|---|------------------------------------|--|
| Mode | <ul style="list-style-type: none"> • Normal • Repeat • Block | Normal | Select the transfer mode. Select the transfer mode. Normal: One transfer per activation, transfer ends after Number of Transfers; Repeat: One transfer per activation, Repeat Area address reset after Number of Transfers, transfer repeats until stopped; Block: Number of Blocks per activation, Repeat Area address reset after Number of Transfers, transfer ends after Number of Blocks. |
| Transfer Size | <ul style="list-style-type: none"> • 1 Byte • 2 Bytes • 4 Bytes | 2 Bytes | Select the transfer size. |
| Destination Address Mode | <ul style="list-style-type: none"> • Fixed • Incremented • Decrementd | Fixed | Select the address mode for the destination. |
| Source Address Mode | <ul style="list-style-type: none"> • Fixed • Incremented • Decrementd | Fixed | Select the address mode for the source. |
| Repeat Area (Unused in Normal Mode) | <ul style="list-style-type: none"> • Destination • Source | Source | Select the repeat area. Either the source or destination address resets to its initial value after completing Number of Transfers in Repeat or Block mode. |
| Interrupt Frequency | <ul style="list-style-type: none"> • After all transfers have completed • After each transfer | After all transfers have completed | Select to have interrupt after each transfer or after last transfer. |
| Number of Transfers | Value must be a non-negative integer | 0 | Specify the number of transfers. |
| Number of Blocks (Valid only in Block Mode) | Must be a valid non-negative integer with a maximum configurable value of 65536. Applicable only in Block Mode. | 0 | Specify the number of blocks to transfer in Block mode. |

| | | | |
|--------------------------------|--------------------------------------|---|--|
| Number of Transfer Descriptors | Value must be a non-negative integer | 1 | Specify the number of transfer descriptors. Users have to initialize descriptors if its value is greater than 1. |
| Activation Source | MCU Specific Options | | Select the DTC transfer start event. |

Clock Configuration

The DTC peripheral module uses ICLK as the clock source. The ICLK frequency is set by using the **Clocks** tab of the RA Configuration editor prior to a build or by using the CGC module at runtime.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Source and Destination Configuration

[R_DTC_Reset\(\)](#) API function should be called to set the Source and Destination address before starting the transfer operation.

Transfer Modes

The DTC Module supports three modes of operation.

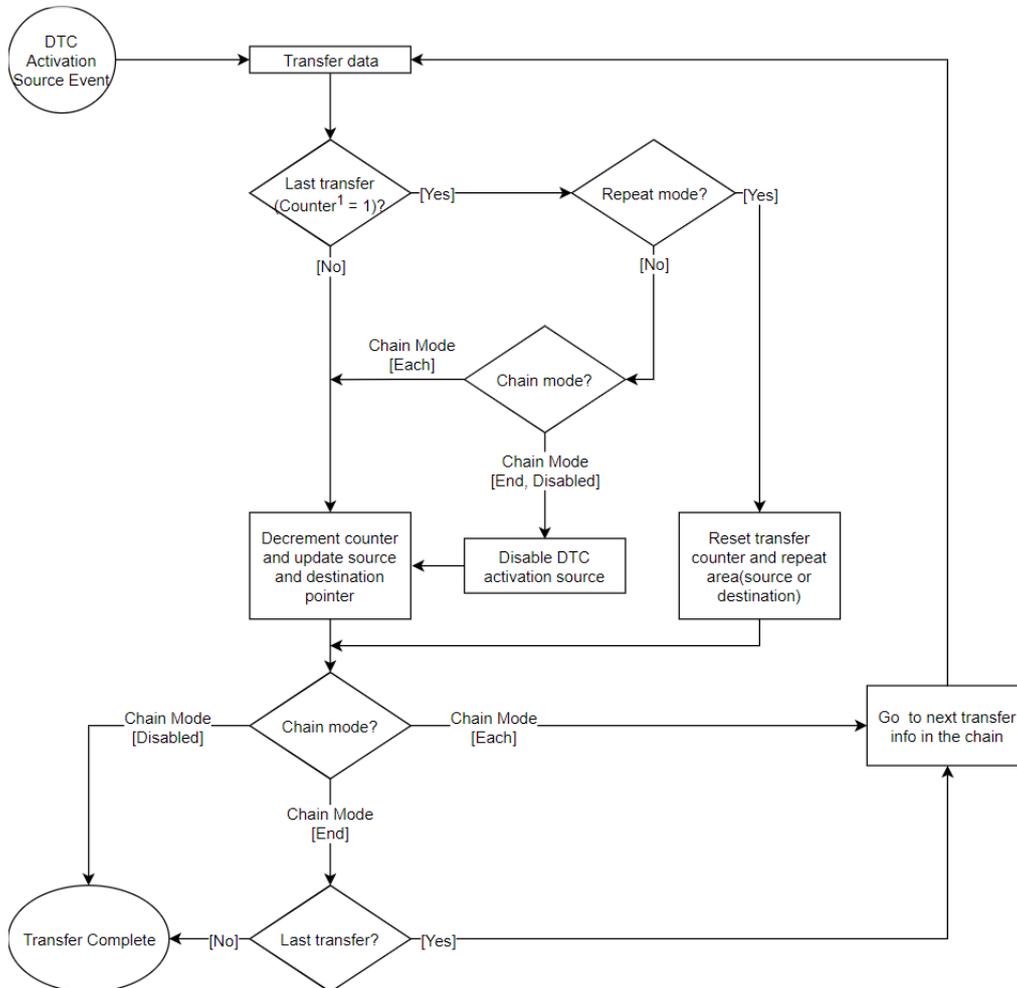

- **Normal Mode** - In normal mode, a single data unit is transferred every time an interrupt is received by the DTC. A data unit can be 1-byte, 2-bytes, or 4-bytes. The source and destination addresses can be fixed, increment or decrement to the next data unit after each transfer. A 16-bit counter (length) decrements after each transfer. When the counter reaches 0, transfers will no longer be triggered by the interrupt source and the CPU can be interrupted to signal that all transfers have finished.
- **Repeat Mode** - Repeat mode works the same way as normal mode, however the length is limited to an integer in the range[1,256]. When the transfer counter reaches 0, the counter is reset to its configured value and the repeat area (source or destination address) resets to its starting address and transfers will still be triggered by the interrupt.
- **Block Mode** - In block mode, the amount of data units transferred by each interrupt can be set to an integer in the range [1,256]. The number of blocks to transfer can also be configured to a 16-bit number. After each block transfer the repeat area (source or destination address) will reset to the original address and the other address will be incremented or decremented to the next block.

Note

1. The source and destination address of the transfer must be aligned to the configured data unit.
2. In normal mode the length can be set to [0,65535]. When the length is set to 0, than the transaction will execute 65536 transfers not 0.
3. In block mode, num_blocks can be set to [0,65535]. When the length is set to 0, than the transaction will execute 65536 transfers not 0.

Chaining Transfers

Multiple transfers can be configured for the same interrupt source by specifying an array of `transfer_info_t` structs instead of just passing a pointer to one. In this configuration, every `transfer_info_t` struct must be configured for a chain mode except for the last one. There are two types of chain mode; `CHAIN_MODE_EACH` and `CHAIN_MODE_END`. If a transfer is configured in `CHAIN_MODE_EACH` then it triggers the next transfer in the chain after it completes each transfer. If a transfer is configured in `CHAIN_MODE_END` then it triggers the next transfer in the chain after it completes its last transfer.

1. Counter refers to `transfer_info_t:length` in normal and repeat mode and `transfer_info_t:num_blocks` in block mode.

Figure 308: DTC Transfer Flowchart

Selecting the DTC or DMAC

The Transfer API is implemented by both DTC and the DMAC so that applications can switch between the DTC and the DMAC. When selecting between them, consider these factors:

| | DTC | DMAC |
|-------------|---|---|
| Repeat Mode | <ul style="list-style-type: none"> Repeats forever Max repeat size is 256 x 4 bytes | <ul style="list-style-type: none"> Configurable number of repeats Max repeat size is 1024 x 4 bytes |
| Block Mode | <ul style="list-style-type: none"> Max block size is 256 x | <ul style="list-style-type: none"> Max block size is 1024 x |

| | | |
|---------------------|---|---|
| | 4 bytes | 4 bytes |
| Channels | <ul style="list-style-type: none"> One instance per interrupt | <ul style="list-style-type: none"> MCU specific (8 channels or less) |
| Chained Transfers | <ul style="list-style-type: none"> Supported | <ul style="list-style-type: none"> Not Supported |
| Software Trigger | <ul style="list-style-type: none"> Must use the software ELC event | <ul style="list-style-type: none"> Has support for software trigger without using software ELC event Supports TRANSFER_START_MODE_SINGLE and TRANSFER_START_MODE_REPEAT |
| Offset Address Mode | <ul style="list-style-type: none"> Not supported | <ul style="list-style-type: none"> Supported |

Additional Considerations

- The DTC requires a moderate amount of RAM (one `transfer_info_t` struct per open instance + `DTC_VECTOR_TABLE_SIZE`).
- The DTC stores transfer information in RAM and writes back to RAM after each transfer whereas the DMAC stores all transfer information in registers.
- When transfers are configured for more than one activation source, the DTC must fetch the transfer info from RAM on each interrupt. This can cause a higher latency between transfers.
- The DTC interrupts the CPU using the activation source's IRQ. Each DMAC channel has its own IRQ.

Interrupts

The DTC and DMAC interrupts behave differently. The DTC uses the configured event IRQ as the interrupt source whereas each DMAC channel has its own IRQ.

The `transfer_info_t::irq` setting also behaves a little differently depending on which mode is selected.

• Normal Mode

| | DTC | DMAC |
|-------------------|-------------------------------|-------------------------------|
| TRANSFER_IRQ_EACH | Interrupt after each transfer | N/A |
| TRANSFER_IRQ_END | Interrupt after last transfer | Interrupt after last transfer |

• Repeat Mode

| | DTC | DMAC |
|-------------------|-------------------------------|-------------------------------|
| TRANSFER_IRQ_EACH | Interrupt after each transfer | Interrupt after each repeat |
| TRANSFER_IRQ_END | Interrupt after each repeat | Interrupt after last transfer |

• Block Mode

| | DTC | DMAC |
|-------------------|----------------------------|----------------------------|
| TRANSFER_IRQ_EACH | Interrupt after each block | Interrupt after each block |

| | | |
|------------------|----------------------------|----------------------------|
| TRANSFER_IRQ_END | Interrupt after last block | Interrupt after last block |
|------------------|----------------------------|----------------------------|

Note

$DTC_VECTOR_TABLE_SIZE = (ICU_NVIC_IRQ_SOURCES \times 4)$ Bytes

Peripheral Interrupts and DTC

When an interrupt is configured to trigger DTC transfers, the peripheral ISR will trigger on the following conditions:

- Each transfer completed (transfer_info_t::irq = TRANSFER_IRQ_EACH)
- Last transfer completed (transfer_info_t::irq = TRANSFER_IRQ_END)

For example, if SCI1_RXI is configured to trigger DTC transfers and a SCI1_RXI event occurs, the interrupt will not fire until the DTC transfer is completed. If the DTC transfer_info_t::irq is configured to only interrupt on the last transfer, then no RXI interrupts will occur until the last transfer is completed.

Note

1. The DTC activation source must be enabled in the NVIC in order to trigger DTC transfers (Modules that are designed to integrate the R_DTC module will automatically handle this).
2. The DTC prioritizes activation sources by granting the smaller interrupt vector numbers higher priority. The priority of interrupts to the CPU is determined by the NVIC priority.

Low Power Modes

DTCST must be set to 0 before transitioning to any of the following:

- Module-stop state
- Software Standby mode without Snooze mode transition
- Deep Software Standby mode

Note

1. R_LPM Module stops the DTC before entering deep software standby mode and software standby without snooze mode transition.
2. For more information see 18.9 and 18.10 in the RA6M3 manual R01UH0886EJ0100.

Limitations

Developers should be aware of the following limitations when using the DTC:

- If the DTC is configured to service many different activation sources, the system could run in to performance issues due to memory contention. To address this issue, it is recommended that the DTC vector table and transfer information be moved to their own dedicated memory area (Ex: SRAM0, SRAM1, SRAMHS). This allows memory accesses from different BUS Masters (CPU, DTC, DMAC, EDMAC and Graphics IPs) to occur in parallel.

Examples**Basic Example**

This is a basic example of minimal use of the DTC in an application.

```

void dtc_minimal_example (void)
{
    /* Open the transfer instance with initial configuration. */
    fsp_err_t err = R_DTC_Open(&g_transfer_ctrl, &g_transfer_cfg);
    /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    /* Enable the DTC to handle incoming transfer requests. */
    err = R_DTC_Enable(&g_transfer_ctrl);
    assert(FSP_SUCCESS == err);
}

```

Macro Definition Documentation

◆ DTC_MAX_NORMAL_TRANSFER_LENGTH

```
#define DTC_MAX_NORMAL_TRANSFER_LENGTH
```

Max configurable number of transfers in NORMAL MODE

◆ DTC_MAX_REPEAT_TRANSFER_LENGTH

```
#define DTC_MAX_REPEAT_TRANSFER_LENGTH
```

Max number of transfers per repeat for REPEAT MODE

◆ DTC_MAX_BLOCK_TRANSFER_LENGTH

```
#define DTC_MAX_BLOCK_TRANSFER_LENGTH
```

Max number of transfers per block in BLOCK MODE

◆ DTC_MAX_BLOCK_COUNT

```
#define DTC_MAX_BLOCK_COUNT
```

Max configurable number of blocks to transfer in BLOCK MODE

Function Documentation

◆ **R_DTC_Open()**

```
fsp_err_t R_DTC_Open ( transfer_ctrl_t *const p_api_ctrl, transfer_cfg_t const *const p_cfg )
```

Configure the vector table if it hasn't been configured, enable the Module and copy the pointer to the transfer info into the DTC vector table. Implements [transfer_api_t::open](#).

Example:

```
/* Open the transfer instance with initial configuration. */
fsp_err_t err = R_DTC_Open(&g_transfer_ctrl, &g_transfer_cfg);
```

Return values

| | |
|--------------------------|--|
| FSP_SUCCESS | Successful open. Transfer transfer info pointer copied to DTC Vector table. Module started. DTC vector table configured. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_UNSUPPORTED | Address Mode Offset is selected. |
| FSP_ERR_ALREADY_OPEN | The control structure is already opened. |
| FSP_ERR_IN_USE | The index for this IRQ in the DTC vector table is already configured. |
| FSP_ERR_IRQ_BSP_DISABLED | The IRQ associated with the activation source is not enabled in the BSP. |

◆ **R_DTC_Reconfigure()**

```
fsp_err_t R_DTC_Reconfigure ( transfer_ctrl_t *const p_api_ctrl, transfer_info_t * p_info )
```

Copy pointer to transfer info into the DTC vector table and enable transfer in ICU. Implements [transfer_api_t::reconfigure](#).

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | Transfer is configured and will start when trigger occurs. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DTC_Open to initialize the control block. |
| FSP_ERR_NOT_ENABLED | Transfer source address is NULL or is not aligned correctly. Transfer destination address is NULL or is not aligned correctly. |

Note

p_info must persist until all transfers are completed.

◆ **R_DTC_Reset()**

```
fsp_err_t R_DTC_Reset ( transfer_ctrl_t *const p_api_ctrl, void const *volatile p_src, void *volatile p_dest, uint16_t const num_transfers )
```

Reset transfer source, destination, and number of transfers. Implements [transfer_api_t::reset](#).

Return values

| | |
|---------------------|--|
| FSP_SUCCESS | Transfer reset successfully (transfers are enabled). |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DTC_Open to initialize the control block. |
| FSP_ERR_NOT_ENABLED | Transfer source address is NULL or is not aligned correctly. Transfer destination address is NULL or is not aligned correctly. |

◆ **R_DTC_SoftwareStart()**

```
fsp_err_t R_DTC_SoftwareStart ( transfer_ctrl_t *const p_api_ctrl, transfer_start_mode_t mode )
```

Placeholder for unsupported softwareStart function. Implements [transfer_api_t::softwareStart](#).

Return values

| | |
|---------------------|--------------------------------------|
| FSP_ERR_UNSUPPORTED | DTC software start is not supported. |
|---------------------|--------------------------------------|

◆ **R_DTC_SoftwareStop()**

```
fsp_err_t R_DTC_SoftwareStop ( transfer_ctrl_t *const p_api_ctrl)
```

Placeholder for unsupported softwareStop function. Implements [transfer_api_t::softwareStop](#).

Return values

| | |
|---------------------|-------------------------------------|
| FSP_ERR_UNSUPPORTED | DTC software stop is not supported. |
|---------------------|-------------------------------------|

◆ **R_DTC_Enable()**

```
fsp_err_t R_DTC_Enable ( transfer_ctrl_t *const p_api_ctrl)
```

Enable transfers on this activation source. Implements [transfer_api_t::enable](#).

Example:

```
/* Enable the DTC to handle incoming transfer requests. */
err = R_DTC_Enable(&g_transfer_ctrl);
assert(FSP_SUCCESS == err);
```

Return values

| | |
|---------------------|---|
| FSP_SUCCESS | Transfers will be triggered by the activation source |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_UNSUPPORTED | Address Mode Offset is selected. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DTC_Open to initialize the control block. |

◆ **R_DTC_Disable()**

```
fsp_err_t R_DTC_Disable ( transfer_ctrl_t *const p_api_ctrl)
```

Disable transfer on this activation source. Implements [transfer_api_t::disable](#).

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Transfers will not occur on activation events. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DTC_Open to initialize the control block. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |

◆ R_DTC_InfoGet()

```
fsp_err_t R_DTC_InfoGet ( transfer_ctrl_t *const p_api_ctrl, transfer_properties_t *const
p_properties )
```

Provides information about this transfer. Implements `transfer_api_t::infoGet`.

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | p_info updated with current instance information. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DTC_Open to initialize the control block. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |

◆ R_DTC_Reload()

```
fsp_err_t R_DTC_Reload ( transfer_ctrl_t *const p_api_ctrl, void const * p_src, void * p_dest,
uint32_t const num_transfers )
```

To update next transfer information without interruption during transfer.

Return values

| | |
|---------------------|--------------------------------|
| FSP_ERR_UNSUPPORTED | This feature is not supported. |
|---------------------|--------------------------------|

◆ R_DTC_CallbackSet()

```
fsp_err_t R_DTC_CallbackSet ( transfer_ctrl_t *const p_api_ctrl, void(*)(transfer_callback_args_t *)
p_callback, void const *const p_context, transfer_callback_args_t *const p_callback_memory )
```

Placeholder for unsupported callbackset function. Implements `transfer_api_t::callbackSet`.

Return values

| | |
|---------------------|--|
| FSP_ERR_UNSUPPORTED | DTC does not support direct callbacks. |
|---------------------|--|

◆ R_DTC_Close()

```
fsp_err_t R_DTC_Close ( transfer_ctrl_t *const p_api_ctrl)
```

Disables DTC activation in the ICU, then clears transfer data from the DTC vector table. Implements [transfer_api_t::close](#).

Return values

| | |
|-------------------|---|
| FSP_SUCCESS | Successful close. |
| FSP_ERR_ASSERTION | An input parameter is invalid. |
| FSP_ERR_NOT_OPEN | Handle is not initialized. Call R_DTC_Open to initialize the control block. |

5.2.21 TrustZone[Modules](#)**Detailed Description**

Arm TrustZone Modules.

Modules

[Arm TrustZone Context RA Port \(rm_tz_context\)](#)
RTOS Context Management for RA MCUs.

5.2.21.1 Arm TrustZone Context RA Port (rm_tz_context)[Modules](#) » [TrustZone](#)

RTOS Context Management for RA MCUs.

Overview

Add this module to a secure TrustZone project to allow the associated non-secure project to use an RTOS. It is used by an RTOS port for RA MCUs (for example, the [FreeRTOS Port \(rm_freertos_port\)](#), which is automatically added to RA projects when FreeRTOS is selected during project creation).

Note

The RTOS Context Management module does not provide any interfaces to the user. To use this module to port an

RTOS, consult the Arm documentation at https://arm-software.github.io/CMSIS_5/Core/html/group__context__trustzone__functions.html for further information.

Configuration

Build Time Configurations for rm_tz_context

The following build time configurations are defined in fsp_cfg/rm_tz_context_cfg.h:

| Configuration | Options | Default | Description |
|---------------------|---|---------|--|
| Process Stack Slots | Value must be a non-negative integer greater than 0 | 8 | The maximum number of threads that can allocate a secure context. For applications using FreeRTOS, the Idle task requires 1 context as well. |
| Process Stack Size | Value must be a non-negative multiple of 8 | 256 | The maximum stack size of all non-secure callable functions. |

Clock Configuration

This module does not use peripheral clocks.

Pin Configuration

This module does not use I/O pins.

Usage Notes

TrustZone Integration

When using an RTOS in a TrustZone project, Arm recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the task has allocated a secure context. To allocate a secure context, reference the documentation for the RTOS port used. For example, reference [TrustZone Integration](#) when FreeRTOS is used.

Sealing the Process Stack

This module seals each process stack by placing the value 0xFE5EDA5 above the stack top. For more information, refer to section 3.5 "Sealing a Stack" in "Secure software guidelines for ARMv8-M": <https://developer.arm.com/documentation/100720/0300>.

5.3 Interfaces

Detailed Description

FSP interfaces provide APIs for common functionality. They can be implemented by one or more modules. Modules can use other modules as dependencies using this interface layer.

5.3.1 Analog Interfaces

Detailed Description

Analog Interfaces.

Modules

ADC Interface

Interface for A/D Converters.

Comparator Interface

Interface for comparators.

DAC Interface

Interface for D/A converters.

OPAMP Interface

Interface for Operational Amplifiers.

5.3.1.1 ADC Interface

[Interfaces](#) » [Analog](#)

Detailed Description

Interface for A/D Converters.

Summary

The ADC interface provides standard ADC functionality including one-shot mode (single scan), continuous scan and group scan. It also allows configuration of hardware and software triggers for starting scans. After each conversion an interrupt can be triggered, and if a callback function is provided, the call back is invoked with the appropriate event information.

Data Structures

struct [adc_status_t](#)

Data Structure Documentation

◆ adc_status_t

| struct adc_status_t | | |
|-----------------------------|-------|----------------|
| ADC status. | | |
| Data Fields | | |
| adc_state_t | state | Current state. |

◆ adc_callback_args_t

| struct adc_callback_args_t | | |
|------------------------------------|--------------|-------------------------------|
| ADC callback arguments definitions | | |
| Data Fields | | |
| uint16_t | unit | ADC device in use. |
| adc_event_t | event | ADC callback event. |
| void const * | p_context | Placeholder for user data. |
| adc_channel_t | channel | Channel of conversion result. |
| uint64_t | channel_mask | Channel mask for conversion |

| | | |
|----------------------------------|------------|---|
| | | result. Only valid for r_adc_b and r_sdadc_b. |
| adc_group_mask_t | group_mask | Group Mask. |

◆ **adc_info_t**

| | | |
|--|---------------------|--|
| struct adc_info_t | | |
| ADC Information Structure for Transfer Interface | | |
| Data Fields | | |
| <code>__l void *</code> | p_address | The address to start reading the data from. |
| uint32_t | length | The total number of transfers to read. |
| transfer_size_t | transfer_size | The size of each transfer. |
| elc_peripheral_t | elc_peripheral | Name of the peripheral in the ELC list. |
| elc_event_t | elc_event | Name of the ELC event for the peripheral. |
| uint32_t | calibration_data | Temperature sensor calibration data (0xFFFFFFFF if unsupported) for reference voltage. |
| int16_t | slope_microvolts | Temperature sensor slope in microvolts/degrees C. |
| bool | calibration_ongoing | Calibration is in progress. |

◆ **adc_cfg_t**

| | | |
|----------------------------------|----------------------------|----------------------|
| struct adc_cfg_t | | |
| ADC general configuration | | |
| Data Fields | | |
| <code>uint16_t</code> | unit | |
| | | ADC unit to be used. |
| adc_mode_t | mode | |
| | | ADC operation mode. |
| adc_resolution_t | resolution | |
| | | ADC resolution. |

| | |
|------------------------------|--|
| | |
| <code>adc_alignment_t</code> | <code>alignment</code> |
| | Specify left or right alignment; ignored if addition used. |
| | |
| <code>adc_trigger_t</code> | <code>trigger</code> |
| | Default and Group A trigger source. |
| | |
| <code>IRQn_Type</code> | <code>scan_end_irq</code> |
| | Scan end IRQ number. |
| | |
| <code>IRQn_Type</code> | <code>scan_end_b_irq</code> |
| | Scan end group B IRQ number. |
| | |
| <code>IRQn_Type</code> | <code>scan_end_c_irq</code> |
| | Scan end group C IRQ number. |
| | |
| <code>uint8_t</code> | <code>scan_end_ipl</code> |
| | Scan end interrupt priority. |
| | |
| <code>uint8_t</code> | <code>scan_end_b_ipl</code> |
| | Scan end group B interrupt priority. |
| | |
| <code>uint8_t</code> | <code>scan_end_c_ipl</code> |
| | Scan end group C interrupt priority. |
| | |
| <code>void(*</code> | <code>p_callback)(adc_callback_args_t *p_args)</code> |
| | Callback function; set to NULL for none. |
| | |

| | |
|--------------|---|
| void const * | p_context |
| | Placeholder for user data. Passed to the user callback in adc_callback_args_t . |
| void const * | p_extend |
| | Extension parameter for hardware specific settings. |

◆ **adc_api_t**

| | |
|--|--|
| struct adc_api_t | |
| ADC functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg) |
| fsp_err_t (* | scanCfg)(adc_ctrl_t *const p_ctrl, void const *const p_extend) |
| fsp_err_t (* | scanStart)(adc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | scanGroupStart)(adc_ctrl_t *p_ctrl, adc_group_mask_t group_mask) |
| fsp_err_t (* | scanStop)(adc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | scanStatusGet)(adc_ctrl_t *const p_ctrl, adc_status_t *p_status) |
| fsp_err_t (* | read)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data) |
| fsp_err_t (* | read32)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data) |
| fsp_err_t (* | calibrate)(adc_ctrl_t *const p_ctrl, void const *p_extend) |
| fsp_err_t (* | offsetSet)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset) |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>callbackSet)(adc_ctrl_t *const p_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)</code> |
| <code>fsp_err_t(*</code> | <code>close)(adc_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>infoGet)(adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)</code> |

Field Documentation

◆ open

`fsp_err_t(* adc_api_t::open) (adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg)`

Initialize ADC Unit; apply power, set the operational mode, trigger sources, interrupt priority, and configurations common to all channels and sensors.

Precondition

Configure peripheral clocks, ADC pins and IRQs prior to calling this function.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control handle structure |
| [in] | <code>p_cfg</code> | Pointer to configuration structure |

◆ scanCfg

`fsp_err_t(* adc_api_t::scanCfg) (adc_ctrl_t *const p_ctrl, void const *const p_extend)`

Configure the scan including the channels, groups, and scan triggers to be used for the unit that was initialized in the open call. Some configurations are not supported for all implementations. See implementation for details.

Parameters

| | | |
|------|-----------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control handle structure |
| [in] | <code>p_extend</code> | See implementation for details |

◆ **scanStart**

```
fsp_err_t(* adc_api_t::scanStart) (adc_ctrl_t *const p_ctrl)
```

Start the scan (in case of a software trigger), or enable the hardware trigger.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **scanGroupStart**

```
fsp_err_t(* adc_api_t::scanGroupStart) (adc_ctrl_t *p_ctrl, adc_group_mask_t group_mask)
```

Start the scan group (in case of a software trigger), or enable the hardware trigger.

Parameters

| | | |
|------|------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | group_mask | Mask of groups to start |

◆ **scanStop**

```
fsp_err_t(* adc_api_t::scanStop) (adc_ctrl_t *const p_ctrl)
```

Stop the ADC scan (in case of a software trigger), or disable the hardware trigger.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **scanStatusGet**

```
fsp_err_t(* adc_api_t::scanStatusGet) (adc_ctrl_t *const p_ctrl, adc_status_t *p_status)
```

Check scan status.

Parameters

| | | |
|-------|----------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [out] | p_status | Pointer to store current status in |

◆ read

```
fsp_err_t(* adc_api_t::read) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data)
```

Read ADC conversion result.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | reg_id | ADC channel to read (see enumeration adc_channel_t) |
| [in] | p_data | Pointer to variable to load value into. |

◆ read32

```
fsp_err_t(* adc_api_t::read32) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data)
```

Read ADC conversion result into a 32-bit word.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | reg_id | ADC channel to read (see enumeration adc_channel_t) |
| [in] | p_data | Pointer to variable to load value into. |

◆ calibrate

```
fsp_err_t(* adc_api_t::calibrate) (adc_ctrl_t *const p_ctrl, void const *p_extend)
```

Calibrate ADC or associated PGA (programmable gain amplifier). The driver may require implementation specific arguments to the p_extend input. Not supported for all implementations. See implementation for details.

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | p_extend | Pointer to implementation specific arguments |

◆ **offsetSet**

```
fsp_err_t(* adc_api_t::offsetSet) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset)
```

Set offset for input PGA configured for differential input. Not supported for all implementations. See implementation for details.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | reg_id | ADC channel to read (see enumeration adc_channel_t) |
| [in] | offset | See implementation for details. |

◆ **callbackSet**

```
fsp_err_t(* adc_api_t::callbackSet) (adc_ctrl_t *const p_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the ADC control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* adc_api_t::close) (adc_ctrl_t *const p_ctrl)
```

Close the specified ADC unit by ending any scan in progress, disabling interrupts, and removing power to the specified A/D unit.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **infoGet**

```
fsp_err_t(* adc_api_t::infoGet) (adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)
```

Return the ADC data register address of the first (lowest number) channel and the total number of bytes to be read in order for the DTC/DMAC to read the conversion results of all configured channels. Return the temperature sensor calibration and slope data.

Parameters

| | | |
|-------|------------|--------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [out] | p_adc_info | Pointer to ADC information structure |

◆ **adc_instance_t**

```
struct adc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|---------------|---|
| adc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| adc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| void const * | p_channel_cfg | Pointer to the channel configuration structure for this instance. |
| adc_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **adc_ctrl_t**

```
typedef void adc_ctrl_t
```

ADC control block. Allocate using driver instance control structure from driver instance header file.

Enumeration Type Documentation

◆ **adc_mode_t**

| enum <code>adc_mode_t</code> | |
|---------------------------------------|--|
| ADC operation mode definitions | |
| Enumerator | |
| <code>ADC_MODE_SINGLE_SCAN</code> | Single scan - one or more channels. |
| <code>ADC_MODE_GROUP_SCAN</code> | Two trigger sources to trigger scan for two groups which contain one or more channels. |
| <code>ADC_MODE_CONTINUOUS_SCAN</code> | Continuous scan - one or more channels. |

◆ **adc_resolution_t**

| enum <code>adc_resolution_t</code> | |
|------------------------------------|-------------------|
| ADC data resolution definitions | |
| Enumerator | |
| <code>ADC_RESOLUTION_12_BIT</code> | 12 bit resolution |
| <code>ADC_RESOLUTION_10_BIT</code> | 10 bit resolution |
| <code>ADC_RESOLUTION_8_BIT</code> | 8 bit resolution |
| <code>ADC_RESOLUTION_14_BIT</code> | 14 bit resolution |
| <code>ADC_RESOLUTION_16_BIT</code> | 16 bit resolution |
| <code>ADC_RESOLUTION_24_BIT</code> | 24 bit resolution |

◆ **adc_alignment_t**

| enum <code>adc_alignment_t</code> | |
|-----------------------------------|-----------------------|
| ADC data alignment definitions | |
| Enumerator | |
| <code>ADC_ALIGNMENT_RIGHT</code> | Data alignment right. |
| <code>ADC_ALIGNMENT_LEFT</code> | Data alignment left. |

◆ **adc_trigger_t**

| enum <code>adc_trigger_t</code> | |
|---|---|
| ADC trigger mode definitions | |
| Enumerator | |
| <code>ADC_TRIGGER_SOFTWARE</code> | Software trigger; not for group modes. |
| <code>ADC_TRIGGER_SYNC_ELC</code> | Synchronous trigger via ELC. |
| <code>ADC_TRIGGER_ASYNC_EXTERNAL</code> | External asynchronous trigger; not for group modes. |

◆ **adc_event_t**

| enum <code>adc_event_t</code> | |
|--|------------------------------------|
| ADC callback event definitions | |
| Enumerator | |
| <code>ADC_EVENT_SCAN_COMPLETE</code> | Normal/Group A scan complete. |
| <code>ADC_EVENT_SCAN_COMPLETE_GROUP_B</code> | Group B scan complete. |
| <code>ADC_EVENT_SCAN_COMPLETE_GROUP_C</code> | Group C scan complete. |
| <code>ADC_EVENT_CALIBRATION_COMPLETE</code> | Calibration complete. |
| <code>ADC_EVENT_CONVERSION_COMPLETE</code> | Conversion complete. |
| <code>ADC_EVENT_CALIBRATION_REQUEST</code> | Calibration requested. |
| <code>ADC_EVENT_CONVERSION_ERROR</code> | Scan error. |
| <code>ADC_EVENT_OVERFLOW</code> | Overflow occurred. |
| <code>ADC_EVENT_LIMIT_CLIP</code> | Limiter clipping occurred. |
| <code>ADC_EVENT_FIFO_READ_REQUEST</code> | FIFO read requested. |
| <code>ADC_EVENT_FIFO_OVERFLOW</code> | FIFO overflow occurred. |
| <code>ADC_EVENT_WINDOW_COMPARE_A</code> | Window A comparison condition met. |
| <code>ADC_EVENT_WINDOW_COMPARE_B</code> | Window B comparison condition met. |
| <code>ADC_EVENT_ZERO_CROSS_DETECTION</code> | Zero-cross detection interrupt. |

◆ **adc_channel_t**

| enum adc_channel_t | |
|--------------------------------|--|
| ADC channels | |
| Enumerator | |
| ADC_CHANNEL_0 | Channel 0 for select mode or channel 0 to 3 for scan mode. |
| ADC_CHANNEL_1 | Channel 1 for select mode or channel 1 to 4 for scan mode. |
| ADC_CHANNEL_2 | Channel 2 for select mode or channel 2 to 5 for scan mode. |
| ADC_CHANNEL_3 | Channel 3 for select mode or channel 3 to 6 for scan mode. |
| ADC_CHANNEL_4 | Channel 4 for select mode or channel 4 to 7 for scan mode. |
| ADC_CHANNEL_5 | Channel 5 for select mode. |
| ADC_CHANNEL_6 | Channel 6 for select mode. |
| ADC_CHANNEL_7 | Channel 7 for select mode. |
| ADC_CHANNEL_21 | Channel 21 for select mode. |
| ADC_CHANNEL_22 | Channel 22 for select mode. |
| ADC_CHANNEL_TEMPERATURE | Temperature sensor output voltage for select mode. |
| ADC_CHANNEL_VOLT | Internal reference voltage for select mode. |
| ADC_CHANNEL_POSITIVE_SIDE_VREF | Select positive reference voltage as target conversion. |
| ADC_CHANNEL_NEGATIVE_SIDE_VREF | Select negative reference voltage as target conversion. |
| ADC_CHANNEL_0 | ADC channel 0. |
| ADC_CHANNEL_1 | ADC channel 1. |
| ADC_CHANNEL_2 | ADC channel 2. |

| | |
|----------------|-----------------|
| ADC_CHANNEL_3 | ADC channel 3. |
| ADC_CHANNEL_4 | ADC channel 4. |
| ADC_CHANNEL_5 | ADC channel 5. |
| ADC_CHANNEL_6 | ADC channel 6. |
| ADC_CHANNEL_7 | ADC channel 7. |
| ADC_CHANNEL_8 | ADC channel 8. |
| ADC_CHANNEL_9 | ADC channel 9. |
| ADC_CHANNEL_10 | ADC channel 10. |
| ADC_CHANNEL_11 | ADC channel 11. |
| ADC_CHANNEL_12 | ADC channel 12. |
| ADC_CHANNEL_13 | ADC channel 13. |
| ADC_CHANNEL_14 | ADC channel 14. |
| ADC_CHANNEL_15 | ADC channel 15. |
| ADC_CHANNEL_16 | ADC channel 16. |
| ADC_CHANNEL_17 | ADC channel 17. |
| ADC_CHANNEL_18 | ADC channel 18. |
| ADC_CHANNEL_19 | ADC channel 19. |
| ADC_CHANNEL_20 | ADC channel 20. |
| ADC_CHANNEL_21 | ADC channel 21. |
| ADC_CHANNEL_22 | ADC channel 22. |
| ADC_CHANNEL_23 | ADC channel 23. |
| ADC_CHANNEL_24 | ADC channel 24. |
| ADC_CHANNEL_25 | ADC channel 25. |

◆ **adc_state_t**

| enum <code>adc_state_t</code> | |
|--|--|
| ADC states. | |
| Enumerator | |
| <code>ADC_STATE_IDLE</code> | ADC is idle. |
| <code>ADC_STATE_SCAN_IN_PROGRESS</code> | ADC scan in progress. |
| <code>ADC_STATE_CALIBRATION_IN_PROGRESS</code> | ADC calibration in progress - Not used by all ADC instances. |

5.3.1.2 Comparator Interface[Interfaces](#) » [Analog](#)

Detailed Description

Interface for comparators.

Summary

The comparator interface provides standard comparator functionality, including generating an event when the comparator result changes.

Data Structures

struct [comparator_info_t](#)

struct [comparator_status_t](#)

struct [comparator_callback_args_t](#)

struct [comparator_cfg_t](#)

struct [comparator_api_t](#)

struct [comparator_instance_t](#)

Typedefs

typedef void [comparator_ctrl_t](#)

Enumerations

enum [comparator_mode_t](#)

enum [comparator_trigger_t](#)

enum [comparator_polarity_invert_t](#)

enum [comparator_pin_output_t](#)

enum [comparator_filter_t](#)

enum [comparator_state_t](#)

Data Structure Documentation

◆ [comparator_info_t](#)

struct [comparator_info_t](#)

Comparator information.

Data Fields

| | | |
|----------|---------------------------|--|
| uint32_t | min_stabilization_wait_us | Minimum stabilization wait time in microseconds. |
|----------|---------------------------|--|

◆ **comparator_status_t**

| | | |
|----------------------------|-------|---------------------------|
| struct comparator_status_t | | |
| Comparator status. | | |
| Data Fields | | |
| comparator_state_t | state | Current comparator state. |

◆ **comparator_callback_args_t**

| | | |
|-----------------------------------|-----------|---|
| struct comparator_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. Set in comparator_api_t::open function in comparator_cfg_t . |
| uint32_t | channel | The physical hardware channel that caused the interrupt. |

◆ **comparator_cfg_t**

| | | |
|---|-------------------------|---------------------------------------|
| struct comparator_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| uint8_t | channel | Hardware channel used. |
| comparator_mode_t | mode | Normal or window mode. |
| comparator_trigger_t | trigger | Trigger setting. |
| comparator_filter_t | filter | Digital filter clock divisor setting. |

| | |
|---|--|
| <code>comparator_polarity_invert_t</code> | <code>invert</code> |
| | Whether to invert output. |
| <code>comparator_pin_output_t</code> | <code>pin_output</code> |
| | Whether to include output on output pin. |
| <code>uint8_t</code> | <code>vref_select</code> |
| | Internal Vref Select. |
| <code>uint8_t</code> | <code>ipl</code> |
| | Interrupt priority. |
| <code>IRQn_Type</code> | <code>irq</code> |
| | NVIC interrupt number. |
| <code>void(*</code> | <code>p_callback</code>)(<code>comparator_callback_args_t *p_args</code>) |
| <code>void const *</code> | <code>p_context</code> |
| <code>void const *</code> | <code>p_extend</code> |
| | Comparator hardware dependent configuration. |

Field Documentation

◆ `p_callback`

`void(* comparator_cfg_t::p_callback) (comparator_callback_args_t *p_args)`

Callback called when comparator event occurs.

◆ **p_context**

```
void const* comparator_cfg_t::p_context
```

Placeholder for user data. Passed to the user callback in [comparator_callback_args_t](#).

◆ **comparator_api_t**

```
struct comparator_api_t
```

Comparator functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>open</code> <code>)(comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)</code> |
|--------------------------|--|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>outputEnable</code> <code>)(comparator_ctrl_t *const p_ctrl)</code> |
|--------------------------|---|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>infoGet</code> <code>)(comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)</code> |
|--------------------------|---|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>statusGet</code> <code>)(comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)</code> |
|--------------------------|---|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>close</code> <code>)(comparator_ctrl_t *const p_ctrl)</code> |
|--------------------------|--|

Field Documentation◆ **open**

```
fsp_err_t(* comparator_api_t::open) (comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)
```

Initialize the comparator.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | p_cfg | Pointer to configuration |

◆ **outputEnable**

```
fsp_err_t(* comparator_api_t::outputEnable) (comparator_ctrl_t *const p_ctrl)
```

Start the comparator.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **infoGet**

```
fsp_err_t(* comparator_api_t::infoGet) (comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)
```

Provide information such as the recommended minimum stabilization wait time.

Parameters

| | | |
|-------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [out] | p_info | Comparator information stored here |

◆ **statusGet**

```
fsp_err_t(* comparator_api_t::statusGet) (comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
```

Provide current comparator status.

Parameters

| | | |
|-------|----------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [out] | p_status | Status stored here |

◆ **close**

```
fsp_err_t(* comparator_api_t::close) (comparator_ctrl_t *const p_ctrl)
```

Stop the comparator.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **comparator_instance_t**

```
struct comparator_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------------------|---------------------|---|
| <code>comparator_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>comparator_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>comparator_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `comparator_ctrl_t`

```
typedef void comparator_ctrl_t
```

Includes board and MCU related header files. Comparator control block. Allocate an instance specific control block to pass into the comparator API calls.

Enumeration Type Documentation

◆ `comparator_mode_t`

```
enum comparator_mode_t
```

Select whether to invert the polarity of the comparator output.

Enumerator

| | |
|-------------------------------------|--|
| <code>COMPARATOR_MODE_NORMAL</code> | Normal mode. |
| <code>COMPARATOR_MODE_WINDOW</code> | Window mode, not supported by all implementations. |

◆ `comparator_trigger_t`

```
enum comparator_trigger_t
```

Trigger type: rising edge, falling edge, both edges, low level.

Enumerator

| | |
|---|-----------------------|
| <code>COMPARATOR_TRIGGER_RISING</code> | Rising edge trigger. |
| <code>COMPARATOR_TRIGGER_FALLING</code> | Falling edge trigger. |
| <code>COMPARATOR_TRIGGER_BOTH_EDGE</code> | Both edges trigger. |

◆ **comparator_polarity_invert_t**

| | |
|---|-------------------------|
| enum <code>comparator_polarity_invert_t</code> | |
| Select whether to invert the polarity of the comparator output. | |
| Enumerator | |
| COMPARATOR_POLARITY_INVERT_OFF | Do not invert polarity. |
| COMPARATOR_POLARITY_INVERT_ON | Invert polarity. |

◆ **comparator_pin_output_t**

| | |
|--|---|
| enum <code>comparator_pin_output_t</code> | |
| Select whether to include the comparator output on the output pin. | |
| Enumerator | |
| COMPARATOR_PIN_OUTPUT_OFF | Do not include comparator output on output pin. |
| COMPARATOR_PIN_OUTPUT_ON | Include comparator output on output pin. |

◆ **comparator_filter_t**

| | |
|---|--|
| enum <code>comparator_filter_t</code> | |
| Comparator digital filtering sample clock divisor settings. | |
| Enumerator | |
| COMPARATOR_FILTER_OFF | Disable debounce filter. |
| COMPARATOR_FILTER_1 | Filter using PCLK divided by 1, not supported by all implementations. |
| COMPARATOR_FILTER_8 | Filter using PCLK divided by 8. |
| COMPARATOR_FILTER_16 | Filter using PCLK divided by 16, not supported by all implementations. |
| COMPARATOR_FILTER_32 | Filter using PCLK divided by 32. |

◆ **comparator_state_t**

| enum <code>comparator_state_t</code> | |
|---|---|
| Current comparator state. | |
| Enumerator | |
| <code>COMPARATOR_STATE_OUTPUT_LOW</code> | VCMP < VREF if polarity is not inverted, VCMP > VREF if inverted. |
| <code>COMPARATOR_STATE_OUTPUT_HIGH</code> | VCMP > VREF if polarity is not inverted, VCMP < VREF if inverted. |
| <code>COMPARATOR_STATE_OUTPUT_DISABLED</code> | <code>comparator_api_t::outputEnable()</code> has not been called |

5.3.1.3 DAC Interface[Interfaces](#) » [Analog](#)**Detailed Description**

Interface for D/A converters.

Summary

The DAC interface provides standard Digital/Analog Converter functionality. A DAC application writes digital sample data to the device and generates analog output on the DAC output pin.

Data Structures

struct `dac_info_t`

struct `dac_cfg_t`

struct `dac_api_t`

struct `dac_instance_t`

Typedefs

typedef void `dac_ctrl_t`

Enumerations

enum `dac_data_format_t`

Data Structure Documentation

◆ dac_info_t

| | | |
|--|-----------|------------------------|
| struct dac_info_t | | |
| DAC information structure to store various information for a DAC | | |
| Data Fields | | |
| uint8_t | bit_width | Resolution of the DAC. |

◆ dac_cfg_t

| | | |
|--------------------------------------|--------------------|--------------------------------------|
| struct dac_cfg_t | | |
| DAC Open API configuration parameter | | |
| Data Fields | | |
| uint8_t | channel | ID associated with this DAC channel. |
| bool | ad_da_synchronized | AD/DA synchronization. |
| void const * | p_extend | |

◆ dac_api_t

| | | |
|---|--------------------|--|
| struct dac_api_t | | |
| DAC driver structure. General DAC functions implemented at the HAL layer follow this API. | | |
| Data Fields | | |
| fsp_err_t(*) | <code>open</code> | <code>((dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)</code> |
| fsp_err_t(*) | <code>close</code> | <code>((dac_ctrl_t *const p_ctrl)</code> |
| fsp_err_t(*) | <code>write</code> | <code>((dac_ctrl_t *const p_ctrl, uint16_t value)</code> |
| fsp_err_t(*) | <code>start</code> | <code>((dac_ctrl_t *const p_ctrl)</code> |
| fsp_err_t(*) | <code>stop</code> | <code>((dac_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ **open**

```
fsp_err_t(* dac_api_t::open) (dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)
```

Initial configuration.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ **close**

```
fsp_err_t(* dac_api_t::close) (dac_ctrl_t *const p_ctrl)
```

Close the D/A Converter.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in dac_api_t::open call for this timer. |
|------|--------|---|

◆ **write**

```
fsp_err_t(* dac_api_t::write) (dac_ctrl_t *const p_ctrl, uint16_t value)
```

Write sample value to the D/A Converter.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in dac_api_t::open call for this timer. |
| [in] | value | Sample value to be written to the D/A Converter. |

◆ **start**

```
fsp_err_t(* dac_api_t::start) (dac_ctrl_t *const p_ctrl)
```

Start the D/A Converter if it has not been started yet.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in dac_api_t::open call for this timer. |
|------|--------|---|

◆ **stop**

```
fsp_err_t(* dac_api_t::stop) (dac_ctrl_t *const p_ctrl)
```

Stop the D/A Converter if the converter is running.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in dac_api_t::open call for this timer. |
|------|--------|---|

◆ **dac_instance_t**

```
struct dac_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| dac_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| dac_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| dac_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **dac_ctrl_t**

```
typedef void dac_ctrl_t
```

DAC control block. Allocate an instance specific control block to pass into the DAC API calls.

Enumeration Type Documentation

◆ **dac_data_format_t**

| | |
|--|--|
| enum <code>dac_data_format_t</code> | |
| DAC Open API data format settings. | |
| Enumerator | |
| <code>DAC_DATA_FORMAT_FLUSH_RIGHT</code> | LSB of data is flush to the right leaving the top 4 bits unused. |
| <code>DAC_DATA_FORMAT_FLUSH_LEFT</code> | MSB of data is flush to the left leaving the bottom 4 bits unused. |

5.3.1.4 OPAMP Interface[Interfaces](#) » [Analog](#)**Detailed Description**

Interface for Operational Amplifiers.

Summary

The OPAMP interface provides standard operational amplifier functionality, including starting and stopping the amplifier.

Data Structures

struct [opamp_trim_args_t](#)

struct [opamp_info_t](#)

struct [opamp_status_t](#)

struct [opamp_cfg_t](#)

struct [opamp_api_t](#)

struct [opamp_instance_t](#)

Typedefs

typedef void [opamp_ctrl_t](#)

Enumerations

enum [opamp_trim_cmd_t](#)

enum [opamp_trim_input_t](#)**Data Structure Documentation**◆ **opamp_trim_args_t**

| | | |
|------------------------------------|---------|-----------------------------------|
| struct opamp_trim_args_t | | |
| OPAMP trim arguments. | | |
| Data Fields | | |
| uint8_t | channel | Channel. |
| opamp_trim_input_t | input | Which input of the channel above. |

◆ **opamp_info_t**

| | | |
|---------------------|---------------------------|--|
| struct opamp_info_t | | |
| OPAMP information. | | |
| Data Fields | | |
| uint32_t | min_stabilization_wait_us | Minimum stabilization wait time in microseconds. |

◆ **opamp_status_t**

| | | |
|-----------------------|------------------------|--|
| struct opamp_status_t | | |
| OPAMP status. | | |
| Data Fields | | |
| uint32_t | operating_channel_mask | Bitmask of channels currently operating. |

◆ **opamp_cfg_t**

| | | |
|------------------------------|----------|---|
| struct opamp_cfg_t | | |
| OPAMP general configuration. | | |
| Data Fields | | |
| void const * | p_extend | Extension parameter for hardware specific settings. |

◆ **opamp_api_t**

| | | |
|--|--|--|
| struct opamp_api_t | | |
| OPAMP functions implemented at the HAL layer will follow this API. | | |
| Data Fields | | |
| | fsp_err_t (* open)(opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg) | |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>start)(opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)</code> |
| <code>fsp_err_t(*</code> | <code>stop)(opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)</code> |
| <code>fsp_err_t(*</code> | <code>trim)(opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)</code> |
| <code>fsp_err_t(*</code> | <code>infoGet)(opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)</code> |
| <code>fsp_err_t(*</code> | <code>statusGet)(opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)</code> |
| <code>fsp_err_t(*</code> | <code>close)(opamp_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* opamp_api_t::open) (opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg)`

Initialize the operational amplifier.

Parameters

| | | |
|------|---------------------|-----------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to instance control block |
| [in] | <code>p_cfg</code> | Pointer to configuration |

◆ start

`fsp_err_t(* opamp_api_t::start) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)`

Start the op-amp(s).

Parameters

| | | |
|------|---------------------------|-----------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to instance control block |
| [in] | <code>channel_mask</code> | Bitmask of channels to start |

◆ **stop**

```
fsp_err_t(* opamp_api_t::stop) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
```

Stop the op-amp(s).

Parameters

| | | |
|------|--------------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | channel_mask | Bitmask of channels to stop |

◆ **trim**

```
fsp_err_t(* opamp_api_t::trim) (opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)
```

Trim the op-amp(s). Not supported on all MCUs. See implementation for procedure details.

Parameters

| | | |
|------|--------|--------------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | cmd | Trim command |
| [in] | p_args | Pointer to arguments for the command |

◆ **infoGet**

```
fsp_err_t(* opamp_api_t::infoGet) (opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)
```

Provide information such as the recommended minimum stabilization wait time.

Parameters

| | | |
|-------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [out] | p_info | OPAMP information stored here |

◆ **statusGet**

```
fsp_err_t(* opamp_api_t::statusGet) (opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)
```

Provide status of each op-amp channel.

Parameters

| | | |
|-------|----------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [out] | p_status | Status stored here |

◆ **close**

```
fsp_err_t(* opamp_api_t::close) (opamp_ctrl_t *const p_ctrl)
```

Close the specified OPAMP unit by ending any scan in progress, disabling interrupts, and removing power to the specified A/D unit.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **opamp_instance_t**

```
struct opamp_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------|--------|---|
| opamp_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| opamp_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| opamp_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **opamp_ctrl_t**

```
typedef void opamp_ctrl_t
```

OPAMP control block. Allocate using driver instance control structure from driver instance header file.

Enumeration Type Documentation

◆ **opamp_trim_cmd_t**

| | |
|--|-------------------------------------|
| enum <code>opamp_trim_cmd_t</code> | |
| Includes board and MCU related header files. Trim command. | |
| Enumerator | |
| OPAMP_TRIM_CMD_START | Initialize trim state machine. |
| OPAMP_TRIM_CMD_NEXT_STEP | Move to next step in state machine. |
| OPAMP_TRIM_CMD_CLEAR_BIT | Clear trim bit. |

◆ **opamp_trim_input_t**

| | |
|--------------------------------------|-------------------------------|
| enum <code>opamp_trim_input_t</code> | |
| Trim input. | |
| Enumerator | |
| OPAMP_TRIM_INPUT_PCH | Trim non-inverting (+) input. |
| OPAMP_TRIM_INPUT_NCH | Trim inverting (-) input. |

5.3.2 AI

Interfaces

Detailed Description

AI Interfaces.

|-------------|---|

| | |
|-------------|--|
| fsp_err_t(* | close)(rai_data_collector_ctrl_t *const p_ctrl) |
|-------------|--|

Field Documentation

◆ open

`fsp_err_t(* rai_data_collector_api_t::open) (rai_data_collector_ctrl_t *const p_ctrl, rai_data_collector_cfg_t const *const p_cfg)`

Initialize Data Collector module instance.

Note

To reopen after calling this function, call `rai_data_collector_api_t::close` first.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | p_cfg | Pointer to configuration structure |

◆ snapshotChannelRegister

`fsp_err_t(* rai_data_collector_api_t::snapshotChannelRegister) (rai_data_collector_ctrl_t *const p_ctrl, uint8_t channel, void const *p_src)`

Config transfer source address for snapshot mode channel

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | p_src | Pointer to transfer source address |

◆ **bufferRelease**

```
fsp_err_t(* rai_data_collector_api_t::bufferRelease) (rai_data_collector_ctrl_t *const p_ctrl)
```

Release frame buffers by upper modules

Parameters

| | | |
|------|---------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | channel | Which snapshot mode channel |
| [in] | p_src | Channel source buffer address |

◆ **bufferReset**

```
fsp_err_t(* rai_data_collector_api_t::bufferReset) (rai_data_collector_ctrl_t *const p_ctrl)
```

Reset internal buffers

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **snapshotStart**

```
fsp_err_t(* rai_data_collector_api_t::snapshotStart) (rai_data_collector_ctrl_t *const p_ctrl)
```

Starts snapshot mode.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **snapshotStop**

```
fsp_err_t(* rai_data_collector_api_t::snapshotStop) (rai_data_collector_ctrl_t *const p_ctrl)
```

Stops snapshot mode.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **channelBufferGet**

```
fsp_err_t(* rai_data_collector_api_t::channelBufferGet) (rai_data_collector_ctrl_t *const p_ctrl,
uint8_t channel, void **pp_buf)
```

Get the PING or PONG buffer address for data transfer. For data feed mode only.

Parameters

| | | |
|-------|---------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | channel | Which data feed mode channel |
| [out] | pp_buf | Returned buffer address |

◆ **channelWrite**

```
fsp_err_t(* rai_data_collector_api_t::channelWrite) (rai_data_collector_ctrl_t *const p_ctrl, uint8_t
channel, const void *p_buf, uint32_t len)
```

Write data to frame buffer using CPU copy. For data feed mode only.

Parameters

| | | |
|------|---------|---------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | channel | Which data feed mode channel |
| [in] | p_buf | Data buffer |
| [in] | len | Length of data buffer in data samples |

◆ **close**

```
fsp_err_t(* rai_data_collector_api_t::close) (rai_data_collector_ctrl_t *const p_ctrl)
```

Close the specified Data Collector module instance.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **rai_data_collector_instance_t**

```
struct rai_data_collector_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------|--------|----------------------------------|
| rai_data_collector_ctrl_t * | p_ctrl | Pointer to the control structure |
|-----------------------------|--------|----------------------------------|

| | | |
|---|--------------------|---|
| | | for this instance. |
| <code>rai_data_collector_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>rai_data_collector_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `rai_data_collector_ctrl_t`

```
typedef void rai_data_collector_ctrl_t
```

Data Collector control block. Allocate an instance specific control block to pass into the Data Collector API calls.

Enumeration Type Documentation

◆ `rai_data_collector_data_type_t`

```
enum rai_data_collector_data_type_t
```

Data types

Enumerator

| | |
|--|------------------|
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_INT8_T</code> | Signed 8-bit. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_UINT8_T</code> | Unsigned 8-bit. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_INT16_T</code> | Signed 16-bit. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_UINT16_T</code> | Unsigned 16-bit. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_INT32_T</code> | Signed 32-bit. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_UINT32_T</code> | Unsigned 32-bit. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_FLOAT</code> | Float. |
| <code>RAI_DATA_COLLECTOR_DATA_TYPE_DOUBLE</code> | Double. |

◆ `rai_data_collector_error_event_t`

```
enum rai_data_collector_error_event_t
```

Data Collector module error events

5.3.2.2 Data Shipper Interface

[Interfaces](#) » [AI](#)

Detailed Description

Interface for RAI Data Shipper.

Summary

The rai data shipper interface provides multiple communication methods.

Data Structures

```
struct rai_data_shipper_callback_args_t
```

```
struct rai_data_shipper_write_params_t
```

```
struct rai_data_shipper_cfg_t
```

```
struct rai_data_shipper_api_t
```

```
struct rai_data_shipper_instance_t
```

Typedefs

```
typedef void rai_data_shipper_ctrl_t
```

Data Structure Documentation

◆ rai_data_shipper_callback_args_t

| struct rai_data_shipper_callback_args_t | | |
|---|-----------|---|
| Callback function parameter structure | | |
| Data Fields | | |
| rm_comms_event_t | result | Whether data is sent successfully or not. |
| void const * | p_context | Pointer to the user-provided context. |
| uint8_t | instance | Data collector instance ID. |

◆ rai_data_shipper_write_params_t

| struct rai_data_shipper_write_params_t | | |
|---|--|--|
| Data Shipper write function parameter structure | | |
| Data Fields | | |

| | | |
|--------------------------------------|---------------------|------------------------------|
| uint16_t | events | Events. |
| uint16_t | diagnostic_data_len | Diagnostic data length. |
| uint8_t * | p_diagnostic_data | Pointer to diagnostic data. |
| rai_data_collector_callback_args_t * | p_sensor_data | Pointer to sensor data info. |

◆ rai_data_shipper_cfg_t

| | |
|--|--|
| struct rai_data_shipper_cfg_t | |
| RAI Data Shipper general configuration | |
| Data Fields | |
| uint8_t | divider |
| | Send data on every (divider + 1) requests in case the interface bandwidth is not sufficient. |
| crc_instance_t const * | p_crc |
| | Pointer to CRC instance. |
| rm_comms_instance_t const * | p_comms |
| | Pointer to COMMS API instance. |
| void const * | p_context |
| | Pointer to the user-provided context. |
| void(* | p_callback)(rai_data_shipper_callback_args_t *p_args) |
| | Pointer to the callback function on data sent or error. |

◆ rai_data_shipper_api_t

| | |
|---------------------------------|--|
| struct rai_data_shipper_api_t | |
| RAI Data Shipper interface API. | |
| Data Fields | |
| fsp_err_t(* | open)(rai_data_shipper_ctrl_t *const p_ctrl, rai_data_shipper_cfg_t const *const p_cfg) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>read)(rai_data_shipper_ctrl_t *const p_ctrl, void *const p_buf, uint32_t *const buf_len)</code> |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>write)(rai_data_shipper_ctrl_t *const p_ctrl, rai_data_shipper_write_params_t const *p_write_params)</code> |
|--------------------------|--|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>close)(rai_data_shipper_ctrl_t *const p_ctrl)</code> |
|--------------------------|---|

Field Documentation

◆ open

`fsp_err_t(* rai_data_shipper_api_t::open) (rai_data_shipper_ctrl_t *const p_ctrl, rai_data_shipper_cfg_t const *const p_cfg)`

Initialize Data Shipper module instance.

Note

To reopen after calling this function, call `rai_data_shipper_api_t::close` first.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | p_cfg | Pointer to configuration structure |

◆ read

`fsp_err_t(* rai_data_shipper_api_t::read) (rai_data_shipper_ctrl_t *const p_ctrl, void *const p_buf, uint32_t *const buf_len)`

Read data.

Parameters

| | | |
|------|---------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buf | Pointer to the location to store read data. |
| [in] | buf_len | Number of bytes to read. |

◆ write

```
fsp_err_t(* rai_data_shipper_api_t::write) (rai_data_shipper_ctrl_t *const p_ctrl,
rai_data_shipper_write_params_t const *p_write_params)
```

Write data.

Parameters

| | | |
|------|--------------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | write_params | Pointer to write parameters structure |

◆ close

```
fsp_err_t(* rai_data_shipper_api_t::close) (rai_data_shipper_ctrl_t *const p_ctrl)
```

Close the specified Data Shipper module instance.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ rai_data_shipper_instance_t

```
struct rai_data_shipper_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------------------|--------|---|
| rai_data_shipper_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rai_data_shipper_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rai_data_shipper_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ rai_data_shipper_ctrl_t

```
typedef void rai_data_shipper_ctrl_t
```

Data Shipper control block. Allocate an instance specific control block to pass into the Data Shipper API calls.

5.3.3 Audio

Interfaces

Detailed Description

Audio Interfaces.

Modules

ADPCM Decoder Interface

Interface for ADPCM decoder.

AUDIO PLAYBACK Interface

Interface for the Audio Playback.

5.3.3.1 ADPCM Decoder Interface

[Interfaces](#) » [Audio](#)

Detailed Description

Interface for ADPCM decoder.

Summary

The ADPCM decoder interface provides functionality to decode the 4bit ADPCM data to 16bit PCM output.

Data Structures

struct `adpcm_decoder_cfg_t`

struct `adpcm_decoder_api_t`

struct `adpcm_decoder_instance_t`

Typedefs

typedef void `adpcm_decoder_ctrl_t`

Data Structure Documentation

◆ `adpcm_decoder_cfg_t`

struct `adpcm_decoder_cfg_t`

Audio Decoder general configuration

◆ **adpcm_decoder_api_t**

struct adpcm_decoder_api_t

Audio Decoder interface API.

Data Fields

| | |
|--------------|---|
| fsp_err_t(*) | <code>open</code>)(adpcm_decoder_ctrl_t *const p_ctrl, adpcm_decoder_cfg_t const *const p_cfg) |
|--------------|---|

| | |
|--------------|--|
| fsp_err_t(*) | <code>decode</code>)(adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | <code>reset</code>)(adpcm_decoder_ctrl_t *const p_ctrl) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | <code>close</code>)(adpcm_decoder_ctrl_t *const p_ctrl) |
|--------------|--|

Field Documentation◆ **open**

| | |
|--------------|--|
| fsp_err_t(*) | <code>adpcm_decoder_api_t::open</code>)(adpcm_decoder_ctrl_t *const p_ctrl, adpcm_decoder_cfg_t const *const p_cfg) |
|--------------|--|

Initialize Audio Decoder device.

*Note**To reconfigure after calling this function, call `adpcm_decoder_api_t::close` first.***Parameters**

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | p_cfg | Pointer to configuration structure |

◆ **decode**

```
fsp_err_t(* adpcm_decoder_api_t::decode) (adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes)
```

Decodes the compressed data and stores it in output buffer.

Parameters

| | | |
|-------|--------|--|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | p_src | Pointer to a source data buffer from which data will be picked up for decode operation. The argument must not be NULL. |
| [out] | p_dest | Pointer to the location to store the decoded data. |
| [in] | p_dest | Number of bytes to be decoded. |

◆ **reset**

```
fsp_err_t(* adpcm_decoder_api_t::reset) (adpcm_decoder_ctrl_t *const p_ctrl)
```

Resets the ADPCM driver.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **close**

```
fsp_err_t(* adpcm_decoder_api_t::close) (adpcm_decoder_ctrl_t *const p_ctrl)
```

Close the specified Audio decoder modules.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
|------|--------|-------------------------------------|

◆ **adpcm_decoder_instance_t**

```
struct adpcm_decoder_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------|--------|---|
| adpcm_decoder_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
|------------------------|--------|---|

| | | |
|--|--------------------|---|
| <code>adpcm_decoder_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>adpcm_decoder_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `adpcm_decoder_ctrl_t`

```
typedef void adpcm_decoder_ctrl_t
```

Audio Decoder control block. Allocate an instance specific control block to pass into the Audio Decoder API calls.

5.3.3.2 AUDIO PLAYBACK Interface

[Interfaces](#) » [Audio](#)

Detailed Description

Interface for the Audio Playback.

Defines the API and data structures for the Audio Playback implementation.

Summary

This module provides common interface for Audio Playback.

Data Structures

```
struct audio_playback_callback_args_t
```

```
struct audio_playback_cfg_t
```

```
struct audio_playback_api_t
```

```
struct audio_playback_instance_t
```

Typedefs

```
typedef void audio_playback_ctrl_t
```

Enumerations

```
enum audio_playback_event_t
```

Data Structure Documentation

◆ **audio_playback_callback_args_t**

| | | |
|---------------------------------------|-----------|------------------------------------|
| struct audio_playback_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| void * | p_context | Placeholder for user data. |
| audio_playback_event_t | event | Event that triggered the callback. |

◆ **audio_playback_cfg_t**

| | |
|--|--|
| struct audio_playback_cfg_t | |
| Audio Playback configuration parameters. | |
| Data Fields | |
| void const * | p_extend |
| | Hardware dependent configuration. |
| | |
| void(* | p_callback)(audio_playback_callback_args_t *p_args) |
| | |
| void * | p_context |
| | |

Field Documentation◆ **p_callback**

void(* audio_playback_cfg_t::p_callback) (audio_playback_callback_args_t *p_args)

Callback called when play is complete.

◆ **p_context**

void* audio_playback_cfg_t::p_context

Placeholder for user data. Passed to the user callback in [audio_playback_callback_args_t](#).◆ **audio_playback_api_t**

| | |
|--|--|
| struct audio_playback_api_t | |
| Audio Playback functions implemented by the Audio Playback drivers will follow this API. | |
| Data Fields | |
| fsp_err_t(* | open)(audio_playback_ctrl_t *const p_ctrl, audio_playback_cfg_t const *const p_cfg) |
| | |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>start)(audio_playback_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>stop)(audio_playback_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>play)(audio_playback_ctrl_t *const p_ctrl, void const *const p_buffer, uint32_t length)</code> |
| <code>fsp_err_t(*</code> | <code>close)(audio_playback_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* audio_playback_api_t::open) (audio_playback_ctrl_t *const p_ctrl, audio_playback_cfg_t const *const p_cfg)`

Open a audio playback module.

Parameters

| | | |
|------|---------------------|--|
| [in] | <code>p_ctrl</code> | Pointer to memory allocated for control block. |
| [in] | <code>p_cfg</code> | Pointer to the hardware configurations. |

◆ start

`fsp_err_t(* audio_playback_api_t::start) (audio_playback_ctrl_t *const p_ctrl)`

Start audio playback hardware.

Parameters

| | | |
|------|---------------------|---------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control block. |
|------|---------------------|---------------------------|

◆ stop

`fsp_err_t(* audio_playback_api_t::stop) (audio_playback_ctrl_t *const p_ctrl)`

Stop audio playback hardware.

Parameters

| | | |
|------|---------------------|---------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control block. |
|------|---------------------|---------------------------|

◆ **play**

```
fsp_err_t(* audio_playback_api_t::play) (audio_playback_ctrl_t *const p_ctrl, void const *const p_buffer, uint32_t length)
```

Play audio buffer.

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Pointer to control block. |
| [in] | p_buffer | Pointer to buffer with PCM samples to play. Data must be scaled for audio playback hardware. |
| [in] | length | Length of data in p_buffer. |

◆ **close**

```
fsp_err_t(* audio_playback_api_t::close) (audio_playback_ctrl_t *const p_ctrl)
```

Close the audio driver.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control block initialized in audio_playback_api_t::open . |
|------|--------|--|

◆ **audio_playback_instance_t**

```
struct audio_playback_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--|--------|---|
| audio_playback_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| audio_playback_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| audio_playback_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **audio_playback_ctrl_t**

```
typedef void audio_playback_ctrl_t
```

Audio Playback control block. Allocate an instance specific control block to pass into the AUDIO_PLAYBACK API calls.

Enumeration Type Documentation

◆ audio_playback_event_t

| | |
|--|--------------------------------|
| enum audio_playback_event_t | |
| Callback event types. | |
| Enumerator | |
| AUDIO_PLAYBACK_EVENT_PLAYBACK_COMPLETE | Audio playback complete event. |

5.3.4 CapTouch

Interfaces

Detailed Description

CapTouch Interfaces.

Modules

CTSU Interface

Interface for Capacitive Touch Sensing Unit (CTSU) functions.

Touch Middleware Interface

Interface for Touch Middleware functions.

Data Structure Documentation

◆ [ctsu_callback_args_t](#)

| struct ctsu_callback_args_t | | |
|---|-----------|---|
| Callback function parameter data | | |
| Data Fields | | |
| ctsu_event_t | event | The event can be used to identify what caused the callback. |
| void const * | p_context | Placeholder for user data. Set in ctsu_api_t::open function in ctsu_cfg_t . |

◆ **ctsu_element_cfg_t**

| | | |
|--|-------------------|--|
| struct <code>ctsu_element_cfg_t</code> | | |
| CTSU Configuration parameters. Element Configuration | | |
| Data Fields | | |
| <code>ctsu_sdiv_t</code> | <code>sdiv</code> | CTSU Spectrum Diffusion Frequency Division Setting (CTSU Only) |
| <code>uint16_t</code> | <code>so</code> | CTSU Sensor Offset Adjustment. |
| <code>uint8_t</code> | <code>snum</code> | CTSU Measurement Count Setting. |
| <code>uint8_t</code> | <code>sdpa</code> | CTSU Base Clock Setting. |

◆ **ctsu_cfg_t**

| | |
|--|--|
| struct <code>ctsu_cfg_t</code> | |
| User configuration structure, used in <code>open</code> function | |
| Data Fields | |
| <code>ctsu_cap_t</code> | <code>cap</code> |
| | CTSU Scan Start Trigger Select. |
| <code>ctsu_txvsel_t</code> | <code>txvsel</code> |
| | CTSU Transmission Power Supply Select. |
| <code>ctsu_txvsel2_t</code> | <code>txvsel2</code> |
| | CTSU Transmission Power Supply Select 2 (CTSU2 Only) |
| <code>ctsu_atune1_t</code> | <code>atune1</code> |
| | CTSU Power Supply Capacity Adjustment (CTSU Only) |
| <code>ctsu_atune12_t</code> | <code>atune12</code> |
| | CTSU Power Supply Capacity Adjustment (CTSU2 Only) |
| <code>ctsu_md_t</code> | <code>md</code> |

| | |
|---------------------------|---|
| | CTSU Measurement Mode Select. |
| | |
| <code>ctsu_posel_t</code> | <code>posel</code> |
| | CTSU Non-Measured Channel Output Select (CTS2 Only) |
| | |
| <code>uint8_t</code> | <code>ctsuchac0</code> |
| | TS00-TS07 enable mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchac1</code> |
| | TS08-TS15 enable mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchac2</code> |
| | TS16-TS23 enable mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchac3</code> |
| | TS24-TS31 enable mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchac4</code> |
| | TS32-TS39 enable mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchtrc0</code> |
| | TS00-TS07 mutual-tx mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchtrc1</code> |
| | TS08-TS15 mutual-tx mask. |
| | |
| <code>uint8_t</code> | <code>ctsuchtrc2</code> |
| | TS16-TS23 mutual-tx mask. |

| | |
|---|--|
| | |
| uint8_t | ctsuchtrc3 |
| | TS24-TS31 mutual-tx mask. |
| | |
| uint8_t | ctsuchtrc4 |
| | TS32-TS39 mutual-tx mask. |
| | |
| ctsu_element_cfg_t const * | p_elements |
| | Pointer to elements configuration array. |
| | |
| uint8_t | num_rx |
| | Number of receive terminals. |
| | |
| uint8_t | num_tx |
| | Number of transmit terminals. |
| | |
| uint16_t | num_moving_average |
| | Number of moving average for measurement data. |
| | |
| bool | tunning_enable |
| | Initial offset tuning flag. |
| | |
| void(*) | p_callback (ctsu_callback_args_t *p_args) |
| | Callback provided when CTSUFN ISR occurs. |
| | |
| transfer_instance_t const * | p_transfer_tx |
| | DTC instance for transmit at CTSUWR. Set to NULL if unused. |
| | |

| | |
|--|---|
| <code>transfer_instance_t const *</code> | <code>p_transfer_rx</code> |
| | DTC instance for receive at CTSURD. Set to NULL if unused. |
| <code>adc_instance_t const *</code> | <code>p_adc_instance</code> |
| | ADC instance for temperature correction. |
| <code>IRQn_Type</code> | <code>write_irq</code> |
| | CTSU_CTSUWR interrupt vector. |
| <code>IRQn_Type</code> | <code>read_irq</code> |
| | CTSU_CTSURD interrupt vector. |
| <code>IRQn_Type</code> | <code>end_irq</code> |
| | CTSU_CTSUFN interrupt vector. |
| <code>void const *</code> | <code>p_context</code> |
| | User defined context passed into callback function. |
| <code>void const *</code> | <code>p_extend</code> |
| | Pointer to extended configuration by instance of interface. |
| <code>uint16_t</code> | <code>tuning_self_target_value</code> |
| | Target self value for initial offset tuning. |
| <code>uint16_t</code> | <code>tuning_mutual_target_value</code> |
| | Target mutual value for initial offset tuning. |

◆ `ctsu_api_t`

struct ctsu_api_t

Functions implemented at the HAL layer will follow this API.

Field Documentation

◆ open

| |
|---|
| fsp_err_t(*) ctsu_api_t::open) (ctsu_ctrl_t *const p_ctrl, ctsu_cfg_t const *const p_cfg) |
|---|

Open driver.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **scanStart**

```
fsp_err_t(* ctsu_api_t::scanStart) (ctsu_ctrl_t *const p_ctrl)
```

Scan start.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **dataGet**

```
fsp_err_t(* ctsu_api_t::dataGet) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_data)
```

Data get.

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_data | Pointer to get data array. |

◆ **scanStop**

```
fsp_err_t(* ctsu_api_t::scanStop) (ctsu_ctrl_t *const p_ctrl)
```

ScanStop.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **diagnosis**

```
fsp_err_t(* ctsu_api_t::diagnosis) (ctsu_ctrl_t *const p_ctrl)
```

Diagnosis.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **callbackSet**

```
fsp_err_t(* ctsu_api_t::callbackSet) (ctsu_ctrl_t *const p_ctrl, void(*p_callback)(ctsu_callback_args_t *), void const *const p_context, csu_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the CTSU control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* ctsu_api_t::close) (ctsu_ctrl_t *const p_ctrl)
```

Close driver.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **specificDataGet**

```
fsp_err_t(* ctsu_api_t::specificDataGet) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_specific_data, csu_specific_data_type_t specific_data_type)
```

Specific Data get.

Parameters

| | | |
|-------|--------------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_specific_data | Pointer to get specific data array. |
| [in] | specific_data_type | Specific data type |

◆ **dataInsert**

```
fsp_err_t(* ctsu_api_t::dataInsert) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_insert_data)
```

Data Insert.

Parameters

| | | |
|------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_insert_data | Pointer to insert data. |

◆ **offsetTuning**

```
fsp_err_t(* ctsu_api_t::offsetTuning) (ctsu_ctrl_t *const p_ctrl)
```

Adjust the offset value to tune the sensor.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **ctsu_instance_t**

```
struct ctsu_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------|--------|---|
| ctsu_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| ctsu_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| ctsu_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **ctsu_ctrl_t**

```
typedef void ctsu_ctrl_t
```

CTSU Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **ctsu_event_t**

| enum <code>ctsu_event_t</code> | |
|---------------------------------------|---|
| CTSU Events for callback function | |
| Enumerator | |
| <code>CTSU_EVENT_SCAN_COMPLETE</code> | Normal end. |
| <code>CTSU_EVENT_OVERFLOW</code> | Sensor counter overflow (CTSUST.CTSUSOVF set) |
| <code>CTSU_EVENT_ICOMP</code> | Abnormal TSCAP voltage (CTSUERRS.CTSUICOMP set) |
| <code>CTSU_EVENT_ICOMP1</code> | Abnormal sensor current (CTSUSR.ICOMP1 set) |

◆ **ctsu_cap_t**

| enum <code>ctsu_cap_t</code> | |
|--------------------------------|---------------------------------|
| CTSU Scan Start Trigger Select | |
| Enumerator | |
| <code>CTSU_CAP_SOFTWARE</code> | Scan start by software trigger. |
| <code>CTSU_CAP_EXTERNAL</code> | Scan start by external trigger. |

◆ **ctsu_txvsel_t**

| enum <code>ctsu_txvsel_t</code> | |
|---|---------------------------------------|
| CTSU Transmission Power Supply Select | |
| Enumerator | |
| <code>CTSU_TXVSEL_VCC</code> | VCC selected. |
| <code>CTSU_TXVSEL_INTERNAL_POWER</code> | Internal logic power supply selected. |

◆ **ctsu_txvsel2_t**

| | |
|---|------------------------|
| enum <code>ctsu_txvsel2_t</code> | |
| CTSU Transmission Power Supply Select 2 (CTSUS2 Only) | |
| Enumerator | |
| <code>CTSUS_TXVSEL_MODE</code> | Follow TXVSEL setting. |
| <code>CTSUS_TXVSEL_VCC_PRIVATE</code> | VCC private selected. |

◆ **ctsu_atune1_t**

| | |
|---|----------------------------|
| enum <code>ctsu_atune1_t</code> | |
| CTSUS Power Supply Capacity Adjustment (CTSUS Only) | |
| Enumerator | |
| <code>CTSUS_ATUNE1_NORMAL</code> | Normal output (40uA) |
| <code>CTSUS_ATUNE1_HIGH</code> | High-current output (80uA) |

◆ **ctsu_atune12_t**

| | |
|--|----------------------------------|
| enum <code>ctsu_atune12_t</code> | |
| CTSUS Power Supply Capacity Adjustment (CTSUS2 Only) | |
| Enumerator | |
| <code>CTSUS_ATUNE12_80UA</code> | High-current output (80uA) |
| <code>CTSUS_ATUNE12_40UA</code> | Normal output (40uA) |
| <code>CTSUS_ATUNE12_20UA</code> | Low-current output (20uA) |
| <code>CTSUS_ATUNE12_160UA</code> | Very high-current output (160uA) |

◆ **ctsu_md_t**

| enum <code>ctsu_md_t</code> | |
|---|---|
| CTSU Measurement Mode Select | |
| Enumerator | |
| <code>CTSU_MODE_SELF_MULTI_SCAN</code> | Self-capacitance multi scan mode. |
| <code>CTSU_MODE_MUTUAL_FULL_SCAN</code> | Mutual capacitance full scan mode. |
| <code>CTSU_MODE_MUTUAL_CFC_SCAN</code> | Mutual capacitance cfc scan mode (CTSU2 Only) |
| <code>CTSU_MODE_CURRENT_SCAN</code> | Current scan mode (CTSU2 Only) |
| <code>CTSU_MODE_CORRECTION_SCAN</code> | Correction scan mode (CTSU2 Only) |
| <code>CTSU_MODE_DIAGNOSIS_SCAN</code> | Diagnosis scan mode. |

◆ **ctsu_posel_t**

| enum <code>ctsu_posel_t</code> | |
|--|--|
| CTSU Non-Measured Channel Output Select (CTSU2 Only) | |
| Enumerator | |
| <code>CTSU_POSEL_LOW_GPIO</code> | Output low through GPIO. |
| <code>CTSU_POSEL_HI_Z</code> | Hi-Z. |
| <code>CTSU_POSEL_LOW</code> | Setting prohibited. |
| <code>CTSU_POSEL_SAME_PULSE</code> | Same phase pulse output as transmission channel through the power setting by the TXVSEL[1:0] bits. |

◆ **ctsu_ssddiv_t**

| enum <code>ctsu_ssddiv_t</code> | |
|--|---|
| CTSUSpectrum Diffusion Frequency Division Setting (CTSUS Only) | |
| Enumerator | |
| <code>CTSUS_SSDIV_4000</code> | 4.00 <= Base clock frequency (MHz) |
| <code>CTSUS_SSDIV_2000</code> | 2.00 <= Base clock frequency (MHz) < 4.00 |
| <code>CTSUS_SSDIV_1330</code> | 1.33 <= Base clock frequency (MHz) < 2.00 |
| <code>CTSUS_SSDIV_1000</code> | 1.00 <= Base clock frequency (MHz) < 1.33 |
| <code>CTSUS_SSDIV_0800</code> | 0.80 <= Base clock frequency (MHz) < 1.00 |
| <code>CTSUS_SSDIV_0670</code> | 0.67 <= Base clock frequency (MHz) < 0.80 |
| <code>CTSUS_SSDIV_0570</code> | 0.57 <= Base clock frequency (MHz) < 0.67 |
| <code>CTSUS_SSDIV_0500</code> | 0.50 <= Base clock frequency (MHz) < 0.57 |
| <code>CTSUS_SSDIV_0440</code> | 0.44 <= Base clock frequency (MHz) < 0.50 |
| <code>CTSUS_SSDIV_0400</code> | 0.40 <= Base clock frequency (MHz) < 0.44 |
| <code>CTSUS_SSDIV_0360</code> | 0.36 <= Base clock frequency (MHz) < 0.40 |
| <code>CTSUS_SSDIV_0330</code> | 0.33 <= Base clock frequency (MHz) < 0.36 |
| <code>CTSUS_SSDIV_0310</code> | 0.31 <= Base clock frequency (MHz) < 0.33 |
| <code>CTSUS_SSDIV_0290</code> | 0.29 <= Base clock frequency (MHz) < 0.31 |
| <code>CTSUS_SSDIV_0270</code> | 0.27 <= Base clock frequency (MHz) < 0.29 |
| <code>CTSUS_SSDIV_0000</code> | 0.00 <= Base clock frequency (MHz) < 0.27 |

◆ **ctsu_specific_data_type_t**

| enum <code>ctsu_specific_data_type_t</code> |
|---|
| CTSUS select data type for select data get |

5.3.4.2 Touch Middleware Interface

[Interfaces](#) » [CapTouch](#)

Detailed Description

Interface for Touch Middleware functions.

Summary

The TOUCH interface provides TOUCH functionality.

Data Structures

struct [touch_button_cfg_t](#)

struct [touch_slider_cfg_t](#)

struct [touch_wheel_cfg_t](#)

struct [touch_pad_cfg_t](#)

struct [touch_cfg_t](#)

struct [touch_sensitivity_info_t](#)

struct [touch_api_t](#)

struct [touch_instance_t](#)

Macros

#define [TOUCH_COUNT_MAX](#)
Value of Maximum count.

#define [TOUCH_OFF_VALUE](#)
Value of Non-touch.

Typedefs

typedef void [touch_ctrl_t](#)

typedef struct [touch_callback_args_t](#)
[st_ctsu_callback_args](#)

Data Structure Documentation

◆ touch_button_cfg_t

| | | |
|------------------------------|------------|---|
| struct touch_button_cfg_t | | |
| Configuration of each button | | |
| Data Fields | | |
| uint8_t | elem_index | Element number used by this button. |
| uint16_t | threshold | Touch/non-touch judgment threshold. |
| uint16_t | hysteresis | Threshold hysteresis for chattering prevention. |

◆ touch_slider_cfg_t

| | | |
|------------------------------|--------------|---|
| struct touch_slider_cfg_t | | |
| Configuration of each slider | | |
| Data Fields | | |
| uint8_t const * | p_elem_index | Element number array used by this slider. |
| uint8_t | num_elements | Number of elements used by this slider. |
| uint16_t | threshold | Position calculation start threshold value. |

◆ touch_wheel_cfg_t

| | | |
|-----------------------------|--------------|---|
| struct touch_wheel_cfg_t | | |
| Configuration of each wheel | | |
| Data Fields | | |
| uint8_t const * | p_elem_index | Element number array used by this wheel. |
| uint8_t | num_elements | Number of elements used by this wheel. |
| uint16_t | threshold | Position calculation start threshold value. |

◆ touch_pad_cfg_t

| | | |
|----------------------------|-----------------|---|
| struct touch_pad_cfg_t | | |
| Configuration of each pads | | |
| Data Fields | | |
| uint8_t const * | p_elem_index_rx | RX of element number arrays used by this pad. |
| | | |

| | | |
|-----------------|-----------------|--|
| uint8_t const * | p_elem_index_tx | TX of element number arrays used by this pad. |
| uint8_t | num_elements | Number of elements used by this pad. |
| uint16_t | threshold | Coordinate calculation threshold value. |
| uint16_t | rx_pixel | rx coordinate resolution |
| uint16_t | tx_pixel | tx coordinate resolution |
| uint8_t | max_touch | Maximum number of touch judgments used by the pad. |
| uint8_t | num_drift | Number of pad drift. |

◆ touch_cfg_t

| | | |
|---|-----------------|---|
| struct touch_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| touch_button_cfg_t const * | p_buttons | Pointer to array of button configuration. |
| touch_slider_cfg_t const * | p_sliders | Pointer to array of slider configuration. |
| touch_wheel_cfg_t const * | p_wheels | Pointer to array of wheel configuration. |
| touch_pad_cfg_t const * | p_pad | Pointer of pad configuration. |
| uint8_t | num_buttons | Number of buttons. |
| uint8_t | num_sliders | Number of sliders. |
| uint8_t | num_wheels | Number of wheels. |
| uint8_t | on_freq | The cumulative number of determinations of ON. |
| uint8_t | off_freq | The cumulative number of determinations of OFF. |
| uint16_t | drift_freq | Base value drift frequency. [0 : no use]. |
| uint16_t | cancel_freq | Maximum continuous ON. [0 : no use]. |
| uint8_t | number | Configuration number for QE monitor. |
| ctsu_instance_t const * | p_ctsu_instance | Pointer to CTSU instance. |
| uart_instance_t const * | p_uart_instance | Pointer to UART instance. |
| void const * | p_context | User defined context passed into callback function. |

| | | |
|--------------|----------|---|
| void const * | p_extend | Pointer to extended configuration by instance of interface. |
|--------------|----------|---|

◆ touch_sensitivity_info_t

| | | |
|---|---------------------------|-------------------------------------|
| struct touch_sensitivity_info_t | | |
| Configuration of each touch sensitivity information | | |
| Data Fields | | |
| uint16_t * | p_touch_sensitivity_ratio | Pointer to sensitivity ratio array. |
| uint16_t | old_threshold_ratio | Old threshold ratio. |
| uint16_t | new_threshold_ratio | New threshold ratio. |
| uint8_t | new_hysteresis_ratio | New hysteresis ratio. |

◆ touch_api_t

| | |
|--|--|
| struct touch_api_t | |
| Functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t(*) | open)(touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg) |
| fsp_err_t(*) | scanStart)(touch_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | dataGet)(touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position) |
| fsp_err_t(*) | scanStop)(cts_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | padDataGet)(touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate, uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch) |
| fsp_err_t(*) | callbackSet)(touch_ctrl_t *const p_ctrl, void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t *const p_callback_memory) |
| fsp_err_t(*) | close)(touch_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | sensitivityRatioGet)(touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info) |

| | |
|-------------|---|
| fsp_err_t(* | thresholdAdjust)(touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info) |
|-------------|---|

| | |
|-------------|---|
| fsp_err_t(* | driftControl)(touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq) |
|-------------|---|

Field Documentation

◆ open

| | |
|--------------------------------|--|
| fsp_err_t(* touch_api_t::open) | (touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg) |
|--------------------------------|--|

Open driver.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ scanStart

| | |
|-------------------------------------|------------------------------|
| fsp_err_t(* touch_api_t::scanStart) | (touch_ctrl_t *const p_ctrl) |
|-------------------------------------|------------------------------|

Scan start.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ dataGet

| | |
|-----------------------------------|--|
| fsp_err_t(* touch_api_t::dataGet) | (touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position) |
|-----------------------------------|--|

Data get.

Parameters

| | | |
|-------|-------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_button_status | Pointer to get data bitmap. |
| [out] | p_slider_position | Pointer to get data array. |
| [out] | p_wheel_position | Pointer to get data array. |

◆ scanStop

```
fsp_err_t(* touch_api_t::scanStop) (ctsu_ctrl_t *const p_ctrl)
```

ScanStop.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ padDataGet

```
fsp_err_t(* touch_api_t::padDataGet) (touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate,
uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch)
```

pad data get.

Parameters

| | | |
|-------|---------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_pad_rx_coordinate | Pointer to get coordinate of receiver side. |
| [out] | p_pad_tx_coordinate | Pointer to get coordinate of transmitter side. |
| [out] | p_pad_num_touch | Pointer to get touch count. |

◆ callbackSet

```
fsp_err_t(* touch_api_t::callbackSet) (touch_ctrl_t *const p_ctrl,
void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the CTSU control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* touch_api_t::close) (touch_ctrl_t *const p_ctrl)
```

Close driver.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **sensitivityRatioGet**

```
fsp_err_t(* touch_api_t::sensitivityRatioGet) (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
```

Sensitivity ratio get.

Parameters

| | | |
|----------|--------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in,out] | p_touch_sensitivity_info | Pointer to touch sensitivity structure. |

◆ **thresholdAdjust**

```
fsp_err_t(* touch_api_t::thresholdAdjust) (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
```

Threshold adjust.

Parameters

| | | |
|------|--------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_touch_sensitivity_info | Pointer to touch sensitivity structure. |

◆ **driftControl**

```
fsp_err_t(* touch_api_t::driftControl) (touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq)
```

Drift control.

Parameters

| | | |
|------|------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | input_drift_freq | Drift frequency value. |

◆ **touch_instance_t**

```
struct touch_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

| Data Fields | | |
|----------------------------------|---------------------|---|
| <code>touch_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>touch_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>touch_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `touch_ctrl_t`

```
typedef void touch_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

◆ `touch_callback_args_t`

```
typedef struct st_ctsu_callback_args touch_callback_args_t
```

Callback function parameter data

5.3.5 Connectivity

Interfaces

Detailed Description

Connectivity Interfaces.

Modules

CAN Interface

Interface for CAN peripheral.

CEC Interface

Interface for CEC peripheral.

Communicatons Middleware Interface

Interface for Communications Middleware functions.

I2C Master Interface

Interface for I2C master communication.

I2C Slave Interface

Interface for I2C slave communication.

I2S Interface

Interface for I2S audio communication.

I3C Interface

Interface for I3C.

LIN Interface

Interface for LIN communications.

SMCI Interface

Interface for SMCI communications.

SPI Interface

Interface for SPI communications.

UART Interface

Interface for UART communications.

USB HCDC Interface

Interface for USB HCDC functions.

USB HHID Interface

Interface for USB HHID functions.

USB HMSC Interface

Interface for USB HMSC functions.

USB Interface

Interface for USB functions.

USB PCDC Interface

Interface for USB PCDC functions.

USB PHID Interface

Interface for USB PHID functions.

USB PMSC Interface

Interface for USB PMSC functions.

USB PPRN Interface

Interface for USB PPRN functions.

5.3.5.1 CAN Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for CAN peripheral.

Summary

The CAN interface provides common APIs for CAN HAL drivers. CAN interface supports following features.

- Full-duplex CAN communication
- Generic CAN parameter setting
- Interrupt driven transmit/receive processing
- Callback function support with returning event code
- Hardware resource locking during a transaction

Data Structures

struct [can_info_t](#)

struct [can_bit_timing_cfg_t](#)

struct [can_frame_t](#)

```
struct can_callback_args_t
```

```
struct can_cfg_t
```

```
struct can_api_t
```

```
struct can_instance_t
```

Typedefs

```
typedef void can_ctrl_t
```

Enumerations

Data Structure Documentation

◆ can_info_t

| struct can_info_t | | |
|-------------------|----------------------|--|
| CAN status info | | |
| Data Fields | | |
| uint32_t | status | Useful information from the CAN status register. |
| uint32_t | rx_mb_status | RX Message Buffer New Data flags. |
| uint32_t | rx_fifo_status | RX FIFO Empty flags. |
| uint8_t | error_count_transmit | Transmit error count. |
| uint8_t | error_count_receive | Receive error count. |
| uint32_t | error_code | Error code, cleared after reading. |

◆ can_bit_timing_cfg_t

| struct can_bit_timing_cfg_t | | |
|-----------------------------|--|--|
| CAN bit rate configuration. | | |
| Data Fields | | |

| | | |
|----------|----------------------------|--|
| uint32_t | baud_rate_prescaler | Baud rate prescaler. Valid values: 1 - 1024. |
| uint32_t | time_segment_1 | Time segment 1 control. |
| uint32_t | time_segment_2 | Time segment 2 control. |
| uint32_t | synchronization_jump_width | Synchronization jump width. |

◆ can_frame_t

| | | |
|--------------------|------------------------------|----------------------------------|
| struct can_frame_t | | |
| CAN data Frame | | |
| Data Fields | | |
| uint32_t | id | CAN ID. |
| can_id_mode_t | id_mode | Standard or Extended ID (IDE). |
| can_frame_type_t | type | Frame type (RTR). |
| uint8_t | data_length_code | CAN Data Length Code (DLC). |
| uint32_t | options | Implementation-specific options. |
| uint8_t | data[CAN_DATA_BUFFER_LENGTH] | CAN data. |

◆ can_callback_args_t

| | | |
|-----------------------------------|-------------|---|
| struct can_callback_args_t | | |
| CAN callback parameter definition | | |
| Data Fields | | |
| uint32_t | channel | Device channel number. |
| can_event_t | event | Event code. |
| uint32_t | error | Error code. |
| union can_callback_args_t | __unnamed__ | |
| void const * | p_context | Context provided to user during callback. |
| can_frame_t | frame | Received frame data. |

◆ can_cfg_t

| | | |
|--------------------|---------|--------------|
| struct can_cfg_t | | |
| CAN Configuration | | |
| Data Fields | | |
| uint32_t | channel | |
| | | CAN channel. |

| | |
|-------------------------------------|--|
| <code>can_bit_timing_cfg_t *</code> | <code>p_bit_timing</code> |
| | CAN bit timing. |
| <code>void(*</code> | <code>p_callback</code>)(can_callback_args_t *p_args) |
| | Pointer to callback function. |
| <code>void const *</code> | <code>p_context</code> |
| | User defined callback context. |
| <code>void const *</code> | <code>p_extend</code> |
| | CAN hardware dependent configuration. |
| <code>uint8_t</code> | <code>ipl</code> |
| | Error/Transmit/Receive interrupt priority. |
| <code>IRQn_Type</code> | <code>error_irq</code> |
| | Error IRQ number. |
| <code>IRQn_Type</code> | <code>rx_irq</code> |
| | Receive IRQ number. |
| <code>IRQn_Type</code> | <code>tx_irq</code> |
| | Transmit IRQ number. |

◆ **can_api_t**

| |
|-------------------------------------|
| <code>struct can_api_t</code> |
| Shared Interface definition for CAN |

| Data Fields | | |
|--|---|---|
| <code>fsp_err_t(*</code> | <code>open)(can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)</code> | |
| <code>fsp_err_t(*</code> | <code>write)(can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)</code> | |
| <code>fsp_err_t(*</code> | <code>read)(can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)</code> | |
| <code>fsp_err_t(*</code> | <code>close)(can_ctrl_t *const p_ctrl)</code> | |
| <code>fsp_err_t(*</code> | <code>modeTransition)(can_ctrl_t *const p_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)</code> | |
| <code>fsp_err_t(*</code> | <code>infoGet)(can_ctrl_t *const p_ctrl, can_info_t *const p_info)</code> | |
| <code>fsp_err_t(*</code> | <code>callbackSet)(can_ctrl_t *const p_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)</code> | |
| Field Documentation | | |
| ◆ open | | |
| <code>fsp_err_t(* can_api_t::open) (can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)</code> | | |
| Open function for CAN device | | |
| Parameters | | |
| [in,out] | <code>p_ctrl</code> | Pointer to the CAN control block. Must be declared by user. Value set here. |
| [in] | <code>p_cfg</code> | Pointer to CAN configuration structure. All elements of this structure must be set by user. |

◆ write

```
fsp_err_t(* can_api_t::write) (can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
```

Write function for CAN device

Parameters

| | | |
|------|---------|---|
| [in] | p_ctrl | Pointer to the CAN control block. |
| [in] | buffer | Buffer number (mailbox or message buffer) to write to. |
| [in] | p_frame | Pointer for frame of CAN ID, DLC, data and frame type to write. |

◆ read

```
fsp_err_t(* can_api_t::read) (can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
```

Read function for CAN device

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Pointer to the CAN control block. |
| [in] | buffer | Message buffer (number) to read from. |
| [in] | p_frame | Pointer to store the CAN ID, DLC, data and frame type. |

◆ close

```
fsp_err_t(* can_api_t::close) (can_ctrl_t *const p_ctrl)
```

Close function for CAN device

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to the CAN control block. |
|------|--------|-----------------------------------|

◆ **modeTransition**

```
fsp_err_t(* can_api_t::modeTransition) (can_ctrl_t *const p_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)
```

Mode Transition function for CAN device

Parameters

| | | |
|------|----------------|-----------------------------------|
| [in] | p_ctrl | Pointer to the CAN control block. |
| [in] | operation_mode | Destination CAN operation state. |
| [in] | test_mode | Destination CAN test state. |

◆ **infoGet**

```
fsp_err_t(* can_api_t::infoGet) (can_ctrl_t *const p_ctrl, can_info_t *const p_info)
```

Get CAN channel info.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Handle for channel (pointer to channel control block) |
| [out] | p_info | Memory address to return channel specific data to. |

◆ **callbackSet**

```
fsp_err_t(* can_api_t::callbackSet) (can_ctrl_t *const p_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in can_api_t::open call. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **can_instance_t**

| struct can_instance_t | | |
|--|--------|---|
| This structure encompasses everything that is needed to use an instance of this interface. | | |
| Data Fields | | |
| can_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| can_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| can_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ can_ctrl_t

| typedef void can_ctrl_t |
|--|
| CAN control block. Allocate an instance specific control block to pass into the CAN API calls. |

Enumeration Type Documentation

◆ **can_event_t**

| enum <code>can_event_t</code> | |
|---|---|
| CAN event codes | |
| Enumerator | |
| <code>CAN_EVENT_ERR_WARNING</code> | Error Warning event. |
| <code>CAN_EVENT_ERR_PASSIVE</code> | Error Passive event. |
| <code>CAN_EVENT_ERR_BUS_OFF</code> | Bus Off event. |
| <code>CAN_EVENT_BUS_RECOVERY</code> | Bus Off Recovery event. |
| <code>CAN_EVENT_MAILBOX_MESSAGE_LOST</code> | Mailbox has been overrun. |
| <code>CAN_EVENT_ERR_BUS_LOCK</code> | Bus lock detected (32 consecutive dominant bits). |
| <code>CAN_EVENT_ERR_CHANNEL</code> | Channel error has occurred. |
| <code>CAN_EVENT_TX_ABORTED</code> | Transmit abort event. |
| <code>CAN_EVENT_RX_COMPLETE</code> | Receive complete event. |
| <code>CAN_EVENT_TX_COMPLETE</code> | Transmit complete event. |
| <code>CAN_EVENT_ERR_GLOBAL</code> | Global error has occurred. |
| <code>CAN_EVENT_TX_FIFO_EMPTY</code> | Transmit FIFO is empty. |
| <code>CAN_EVENT_FIFO_MESSAGE_LOST</code> | Receive FIFO overrun. |

◆ **can_operation_mode_t**

| enum <code>can_operation_mode_t</code> | |
|--|----------------------------|
| CAN Operation modes | |
| Enumerator | |
| <code>CAN_OPERATION_MODE_NORMAL</code> | CAN Normal Operation Mode. |
| <code>CAN_OPERATION_MODE_RESET</code> | CAN Reset Operation Mode. |
| <code>CAN_OPERATION_MODE_HALT</code> | CAN Halt Operation Mode. |
| <code>CAN_OPERATION_MODE_SLEEP</code> | CAN Sleep Operation Mode. |

◆ **can_test_mode_t**

| enum <code>can_test_mode_t</code> | |
|--|---|
| CAN Test modes | |
| Enumerator | |
| <code>CAN_TEST_MODE_DISABLED</code> | CAN Test Mode Disabled. |
| <code>CAN_TEST_MODE_LISTEN</code> | CAN Test Listen Mode. |
| <code>CAN_TEST_MODE_LOOPBACK_EXTERNAL</code> | CAN Test External Loopback Mode. |
| <code>CAN_TEST_MODE_LOOPBACK_INTERNAL</code> | CAN Test Internal Loopback Mode. |
| <code>CAN_TEST_MODE_INTERNAL_BUS</code> | CANFD Internal CAN Bus Communication Test Mode. |

◆ **can_id_mode_t**

| enum <code>can_id_mode_t</code> | |
|-----------------------------------|-------------------------------|
| CAN ID modes | |
| Enumerator | |
| <code>CAN_ID_MODE_STANDARD</code> | Standard IDs of 11 bits used. |
| <code>CAN_ID_MODE_EXTENDED</code> | Extended IDs of 29 bits used. |

◆ **can_frame_type_t**

| | |
|------------------------------------|---------------|
| enum <code>can_frame_type_t</code> | |
| CAN frame types | |
| Enumerator | |
| <code>CAN_FRAME_TYPE_DATA</code> | Data frame. |
| <code>CAN_FRAME_TYPE_REMOTE</code> | Remote frame. |

5.3.5.2 CEC Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for CEC peripheral.

Summary

The CEC interface provides common APIs for CEC HAL drivers and supports the following features:

- Opening and closing the CEC module.
- Allocation for full range of local address settings (TV, Recording Device, Playback Device, etc.)
- Supports a user-callback function (required), invoked when transmit, receive, or error interrupts are received.

Data Structures

union `cec_message_t`

struct `cec_callback_args_t`

struct `cec_cfg_t`

struct `cec_api_t`

struct `cec_instance_t`

Typedefs

typedef void `cec_ctrl_t`

Enumerations

enum [cec_addr_t](#)enum [cec_clock_source_t](#)enum [cec_state_t](#)enum [cec_error_t](#)enum [cec_event_t](#)

Data Structure Documentation

◆ [cec_message_t](#)

| | | |
|--------------------------------------|--|----------------------|
| union cec_message_t | | |
| CEC message | | |
| Data Fields | | |
| struct cec_message_t | <code>__unnamed__</code> | |
| uint8_t | <code>raw_data[CEC_DATA_BUFFER_LENGTH+2 *sizeof(uint8_t)]</code> | Contiguous raw data. |

◆ [cec_callback_args_t](#)

| | | |
|--|------------|--|
| struct cec_callback_args_t | | |
| CEC callback parameter definition | | |
| Data Fields | | |
| cec_event_t | event | Event code. |
| void const * | p_context | Context provided to user during callback. |
| bool | addr_match | Local address matches message destination. |
| uint8_t | data_byte | Received data byte (INTDA) |
| cec_status_t | status | CEC Module status data. |
| cec_error_t | errors | Error code bitfield. |

◆ [cec_cfg_t](#)

| | | |
|--------------------------------------|--------------------------------|-------------------------------|
| struct cec_cfg_t | | |
| CEC Configuration | | |
| Data Fields | | |
| cec_timing_t const * | bit_timing_cfg | |
| | | CEC Bit Timing Configuration. |

| | |
|--------------|---|
| uint16_t | rx_data_sample_time |
| | Receive Data Sample Time Setting. |
| uint16_t | rx_data_bit_reference_width |
| | Receive Data Bit Reference Width. |
| void(* | p_callback)(cec_callback_args_t *p_args) |
| | Pointer to callback function. |
| void const * | p_context |
| | User defined callback context. |
| uint8_t | ipl |
| | Error/Data/Message interrupt priority level. |
| IRQn_Type | error_irq |
| | Error IRQ number. |
| IRQn_Type | data_irq |
| | Data IRQ number. |
| IRQn_Type | msg_irq |
| | Communication Complete IRQ number. |
| void * | p_extend |
| | Pointer to extended configuration structure. |

Open function for CEC device

Parameters

| | | |
|----------|--------|---|
| [in,out] | p_ctrl | Pointer to the CEC control block. Must be declared by user. Value set here. |
| [in] | p_cfg | Pointer to CEC configuration structure. All elements of this structure must be set by user. |

◆ **medialnit**

```
fsp_err_t(* cec_api_t::medialnit) (cec_ctrl_t *const p_ctrl, cec_addr_t local_address)
```

Initializes the CEC device. May be called any time after the CEC module has been opened. This API blocks until the device initialization procedure is complete.

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Pointer to CEC instance control block. |
| [out] | local_address | Desired Logical address for local device. |

◆ **write**

```
fsp_err_t(* cec_api_t::write) (cec_ctrl_t *const p_ctrl, cec_message_t const *const p_message, uint32_t message_size)
```

Write function for CEC device

Parameters

| | | |
|------|--------------|---------------------------------------|
| [in] | p_ctrl | Pointer to CEC instance control block |
| [in] | p_message | Message data |
| [in] | message_size | Total size of entire message |

◆ **close**

```
fsp_err_t(* cec_api_t::close) (cec_ctrl_t *const p_ctrl)
```

Close function for CEC device

Parameters

| | | |
|-------|-----------|---------------------------------------|
| [in] | p_ctrl | Pointer to CEC instance control block |
| [out] | p_message | Message data |

◆ **statusGet**

```
fsp_err_t(* cec_api_t::statusGet) (cec_ctrl_t *const p_ctrl, cec_status_t *const p_status)
```

Get CEC channel info.

Parameters

| | | |
|-------|----------|--|
| [in] | p_ctrl | Pointer to CEC instance control block |
| [out] | p_status | Memory address to return channel specific data to. |

◆ **callbackSet**

```
fsp_err_t(* cec_api_t::callbackSet) (cec_ctrl_t *const p_ctrl, void(*p_callback)(cec_callback_args_t *), void const *const p_context, cec_callback_args_t *const p_callback_memory)
```

Specify callback function, optional context pointer and working memory pointer.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Control block set in cec_api_t::open call. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_callback_memory | Pointer to volatile memory where callback structure cec be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **cec_instance_t**

```
struct cec_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| cec_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| cec_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| cec_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **cec_ctrl_t**

```
typedef void cec_ctrl_t
```

CEC control block. Allocate an instance specific control block to pass into the CEC API calls.

Enumeration Type Documentation◆ **cec_addr_t**

```
enum cec_addr_t
```

CEC Addresses

Enumerator

| | |
|-----------------------------|---------------------------------------|
| CEC_ADDR_TV | CEC Address for TV. |
| CEC_ADDR_RECORDING_DEVICE_1 | CEC Address for Recording Device 1. |
| CEC_ADDR_RECORDING_DEVICE_2 | CEC Address for Recording Device 2. |
| CEC_ADDR_TUNER_1 | CEC Address for Tuner 1. |
| CEC_ADDR_PLAYBACK_DEVICE_1 | CEC Address for Playback Device 1. |
| CEC_ADDR_AUDIO_SYSTEM | CEC Address for Audio System. |
| CEC_ADDR_TUNER_2 | CEC Address for Tuner 2. |
| CEC_ADDR_TUNER_3 | CEC Address for Tuner 3. |
| CEC_ADDR_PLAYBACK_DEVICE_2 | CEC Address for Playback Device 2. |
| CEC_ADDR_RECORDING_DEVICE_3 | CEC Address for Recording Device 3. |
| CEC_ADDR_TUNER_4 | CEC Address for Tuner 4. |
| CEC_ADDR_PLAYBACK_DEVICE_3 | CEC Address for Playback Device 3. |
| CEC_ADDR_SPECIFIC_USE | CEC Address for Specific Use. |
| CEC_ADDR_UNREGISTERED | CEC Address for Unregistered Devices. |
| CEC_ADDR_BROADCAST | CEC Broadcast message. |

◆ **cec_clock_source_t**

| enum <code>cec_clock_source_t</code> | |
|--|--|
| CEC Source Clock | |
| Enumerator | |
| <code>CEC_CLOCK_SOURCE_PCLKB_DIV_32</code> | PCLKB / 32 is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_PCLKB_DIV_64</code> | PCLKB / 64 is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_PCLKB_DIV_128</code> | PCLKB / 128 is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_PCLKB_DIV_256</code> | PCLKB / 256 is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_PCLKB_DIV_512</code> | PCLKB / 512 is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_PCLKB_DIV_1024</code> | PCLKB / 1024 is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_CECCLK</code> | CECCLK is the source of the CEC Clock. |
| <code>CEC_CLOCK_SOURCE_CECCLK_DIV_256</code> | CECCLK / 256 is the source of the CEC Clock. |

◆ **cec_state_t**

| enum <code>cec_state_t</code> | |
|----------------------------------|---|
| CEC State | |
| Enumerator | |
| <code>CEC_STATE_UNINIT</code> | Module requires initialization. |
| <code>CEC_STATE_READY</code> | Module ready for operation. |
| <code>CEC_STATE_TX_ACTIVE</code> | Transmit in progress, either direct or broadcast. |
| <code>CEC_STATE_RX_ACTIVE</code> | Receive in progress, either direct or broadcast. |
| <code>CEC_STATE_BUSY</code> | CEC Signal Free Time has not yet elapsed. |

◆ **cec_error_t**

| enum <code>cec_error_t</code> | |
|-------------------------------|-----------------------------|
| CEC Error Code | |
| Enumerator | |
| <code>CEC_ERROR_NONE</code> | No errors currently active. |
| <code>CEC_ERROR_OERR</code> | Overrun error. |
| <code>CEC_ERROR_UERR</code> | Unterrun Error. |
| <code>CEC_ERROR_ACKERR</code> | ACK Error. |
| <code>CEC_ERROR_TERR</code> | Timing Error. |
| <code>CEC_ERROR_TXERR</code> | Transmission Error. |
| <code>CEC_ERROR_AERR</code> | Bus arbitration Loss. |
| <code>CEC_ERROR_BLERR</code> | Bus lock error. |
| <code>CEC_ERROR_ADDR</code> | Address allocation error. |

◆ **cec_event_t**

| enum <code>cec_event_t</code> | |
|------------------------------------|--|
| CEC event codes | |
| Enumerator | |
| <code>CEC_EVENT_RX_DATA</code> | Receive Data byte event. |
| <code>CEC_EVENT_RX_COMPLETE</code> | Receive complete event. |
| <code>CEC_EVENT_TX_COMPLETE</code> | Transmit complete event. |
| <code>CEC_EVENT_READY</code> | CEC Address allocated and module is now ready. |
| <code>CEC_EVENT_ERR</code> | Error has occurred. |

5.3.5.3 Communicatons Middleware Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for Communications Middleware functions.

Summary

The Communications interface provides multiple communications functionality.

Data Structures

Field Documentation

◆ open

fsp_err_t(* rm_comms_api_t::open) (rm_comms_ctrl_t *const p_ctrl, rm_comms_cfg_t const *const p_cfg)

Open driver.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ close

fsp_err_t(* rm_comms_api_t::close) (rm_comms_ctrl_t *const p_ctrl)

Close driver.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ read

fsp_err_t(* rm_comms_api_t::read) (rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

Read data.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_dest | Pointer to the location to store read data. |
| [in] | bytes | Number of bytes to read. |

◆ **write**

```
fsp_err_t(* rm_comms_api_t::write) (rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)
```

Write data.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_src | Pointer to the location to get write data from. |
| [in] | bytes | Number of bytes to write. |

◆ **writeRead**

```
fsp_err_t(* rm_comms_api_t::writeRead) (rm_comms_ctrl_t *const p_ctrl, rm_comms_write_read_params_t write_read_params)
```

Write bytes over comms followed by a read, will have a struct for params.

Parameters

| | | |
|------|-------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | write_read_params | Parameters structure. |

◆ **callbackSet**

```
fsp_err_t(* rm_comms_api_t::callbackSet) (rm_comms_ctrl_t *const p_ctrl, void(*p_callback)(rm_comms_callback_args_t *), void const *const p_context)
```

Specify callback function and optional context pointer.

Parameters

| | | |
|------|------------|--------------------------------------|
| [in] | p_ctrl | Pointer to the control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |

◆ **rm_comms_instance_t**

```
struct rm_comms_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Typedef Documentation

◆ `rm_comms_ctrl_t`

```
typedef void rm_comms_ctrl_t
```

Communications control block. Allocate an instance specific control block to pass into the Communications API calls.

Enumeration Type Documentation

◆ `rm_comms_event_t`

```
enum rm_comms_event_t
```

Event in the callback function

5.3.5.4 I2C Master Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for I2C master communication.

Summary

The I2C master interface provides a common API for I2C HAL drivers. The I2C master interface supports:

- Interrupt driven transmit/receive processing
- Callback function support which can return an event code

Data Structures

```
struct i2c_master_callback_args_t
```

```
struct i2c_master_status_t
```

```
struct i2c_master_cfg_t
```

```
struct i2c_master_api_t
```

```
struct i2c_master_instance_t
```

Typedefs

```
typedef void i2c_master_ctrl_t
```

Enumerations

enum [i2c_master_rate_t](#)enum [i2c_master_addr_mode_t](#)enum [i2c_master_event_t](#)

Data Structure Documentation

◆ [i2c_master_callback_args_t](#)

| | | |
|---|---------------------------|-----------------------------------|
| struct i2c_master_callback_args_t | | |
| I2C callback parameter definition | | |
| Data Fields | | |
| void const * | p_context | Pointer to user-provided context. |
| i2c_master_event_t | event | Event code. |

◆ [i2c_master_status_t](#)

| | | |
|--|----------------------|-------------------------|
| struct i2c_master_status_t | | |
| I2C status indicators | | |
| Data Fields | | |
| bool | open | True if driver is open. |

◆ [i2c_master_cfg_t](#)

| | | |
|---|---------------------------|--|
| struct i2c_master_cfg_t | | |
| I2C configuration block | | |
| Data Fields | | |
| uint8_t | channel | Identifier recognizable by implementation. More... |
| i2c_master_rate_t | rate | Device's maximum clock rate from enum i2c_rate_t . |
| uint32_t | slave | The address of the slave device. |
| i2c_master_addr_mode_t | addr_mode | |

| | |
|---|--|
| | Indicates how slave fields should be interpreted. |
| | |
| uint8_t | ipl |
| | Interrupt priority level. Same for RXI, TXI, TEI and ERI. |
| | |
| IRQn_Type | rx_irq |
| | Receive IRQ number. |
| | |
| IRQn_Type | tx_irq |
| | Transmit IRQ number. |
| | |
| IRQn_Type | tei_irq |
| | Transmit end IRQ number. |
| | |
| IRQn_Type | eri_irq |
| | Error IRQ number. |
| | |
| transfer_instance_t const * | p_transfer_tx |
| | Transfer instance for I2C transmit. Set to NULL if unused. More... |
| | |
| transfer_instance_t const * | p_transfer_rx |
| | Transfer instance for I2C receive. Set to NULL if unused. |
| | |
| void(*) | p_callback (i2c_master_callback_args_t *p_args) |
| | Pointer to callback function. More... |
| | |
| void const * | p_context |
| | Pointer to the user-provided context. |

| | |
|---|--|
| | |
| void const * | p_extend |
| | Any configuration data needed by the hardware. More... |
| Field Documentation | |
| ◆ channel | |
| uint8_t i2c_master_cfg_t::channel | |
| Identifier recognizable by implementation. Generic configuration | |
| ◆ p_transfer_tx | |

| <code>fsp_err_t(*</code> | <code>callbackSet)(i2c_master_ctrl_t *const p_ctrl, void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context, i2c_master_callback_args_t *const p_callback_memory)</code> |
| <code>fsp_err_t(*</code> | <code>statusGet)(i2c_master_ctrl_t *const p_ctrl, i2c_master_status_t *p_status)</code> |
| <code>fsp_err_t(*</code> | <code>close)(i2c_master_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* i2c_master_api_t::open) (i2c_master_ctrl_t *const p_ctrl, i2c_master_cfg_t const *const p_cfg)`

Opens the I2C Master driver and initializes the hardware.

Parameters

| | | |
|------|---------------------|--|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements are set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ read

```
fsp_err_t(* i2c_master_api_t::read) (i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart)
```

Performs a read operation on an I2C Master device.

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Pointer to control block set in i2c_master_api_t::open call. |
| [in] | p_dest | Pointer to the location to store read data. |
| [in] | bytes | Number of bytes to read. |
| [in] | restart | Specify if the restart condition should be issued after reading. |

◆ write

```
fsp_err_t(* i2c_master_api_t::write) (i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart)
```

Performs a write operation on an I2C Master device.

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Pointer to control block set in i2c_master_api_t::open call. |
| [in] | p_src | Pointer to the location to get write data from. |
| [in] | bytes | Number of bytes to write. |
| [in] | restart | Specify if the restart condition should be issued after writing. |

◆ abort

```
fsp_err_t(* i2c_master_api_t::abort) (i2c_master_ctrl_t *const p_ctrl)
```

Performs a reset of the peripheral.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control block set in i2c_master_api_t::open call. |
|------|--------|--|

◆ **slaveAddressSet**

```
fsp_err_t(* i2c_master_api_t::slaveAddressSet) (i2c_master_ctrl_t *const p_ctrl, uint32_t const slave,
i2c_master_addr_mode_t const addr_mode)
```

Sets address of the slave device without reconfiguring the bus.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control block set in <code>i2c_master_api_t::open</code> call. |
| [in] | slave_address | Address of the slave device. |
| [in] | address_mode | Addressing mode. |

◆ **callbackSet**

```
fsp_err_t(* i2c_master_api_t::callbackSet) (i2c_master_ctrl_t *const p_ctrl,
void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context,
i2c_master_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the IIC Master control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **statusGet**

```
fsp_err_t(* i2c_master_api_t::statusGet) (i2c_master_ctrl_t *const p_ctrl, i2c_master_status_t
*p_status)
```

Gets the status of the configured I2C device.

Parameters

| | | |
|-------|----------|--|
| [in] | p_ctrl | Pointer to the IIC Master control block. |
| [out] | p_status | Pointer to store current status. |

◆ **close**

```
fsp_err_t(* i2c_master_api_t::close) (i2c_master_ctrl_t *const p_ctrl)
```

Closes the driver and releases the I2C Master device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block set in <code>i2c_master_api_t::open</code> call. |
|------|--------|---|

◆ **i2c_master_instance_t**

```
struct i2c_master_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------------------|--------|---|
| <code>i2c_master_ctrl_t *</code> | p_ctrl | Pointer to the control structure for this instance. |
| <code>i2c_master_cfg_t const *</code> | p_cfg | Pointer to the configuration structure for this instance. |
| <code>i2c_master_api_t const *</code> | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **i2c_master_ctrl_t**

```
typedef void i2c_master_ctrl_t
```

I2C control block. Allocate an instance specific control block to pass into the I2C API calls.

Enumeration Type Documentation◆ **i2c_master_rate_t**

```
enum i2c_master_rate_t
```

Communication speed options

Enumerator

| | |
|--------------------------|---------|
| I2C_MASTER_RATE_STANDARD | 100 kHz |
| I2C_MASTER_RATE_FAST | 400 kHz |
| I2C_MASTER_RATE_FASTPLUS | 1 MHz |

◆ **i2c_master_addr_mode_t**

| enum <code>i2c_master_addr_mode_t</code> | |
|--|-----------------------------|
| Addressing mode options | |
| Enumerator | |
| <code>I2C_MASTER_ADDR_MODE_7BIT</code> | Use 7-bit addressing mode. |
| <code>I2C_MASTER_ADDR_MODE_10BIT</code> | Use 10-bit addressing mode. |

◆ **i2c_master_event_t**

| enum <code>i2c_master_event_t</code> | |
|---|--|
| Callback events | |
| Enumerator | |
| <code>I2C_MASTER_EVENT_ABORTED</code> | A transfer was aborted. |
| <code>I2C_MASTER_EVENT_RX_COMPLETE</code> | A receive operation was completed successfully. |
| <code>I2C_MASTER_EVENT_TX_COMPLETE</code> | A transmit operation was completed successfully. |

5.3.5.5 I2C Slave Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for I2C slave communication.

Summary

The I2C slave interface provides a common API for I2C HAL drivers. The I2C slave interface supports:

- Interrupt driven transmit/receive processing
- Callback function support which returns a event codes

Data Structures

|--------------------------|--|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>close)(i2c_slave_ctrl_t *const p_ctrl)</code> |
|--------------------------|---|

Field Documentation

◆ **open**

```
fsp_err_t(* i2c_slave_api_t::open) (i2c_slave_ctrl_t *const p_ctrl, i2c_slave_cfg_t const *const p_cfg)
```

Opens the I2C Slave driver and initializes the hardware.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control block. Must be declared by user. Elements are set here. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **read**

```
fsp_err_t(* i2c_slave_api_t::read) (i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
```

Performs a read operation on an I2C Slave device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block set in i2c_slave_api_t::open call. |
| [in] | p_dest | Pointer to the location to store read data. |
| [in] | bytes | Number of bytes to read. |

◆ **write**

```
fsp_err_t(* i2c_slave_api_t::write) (i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)
```

Performs a write operation on an I2C Slave device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block set in i2c_slave_api_t::open call. |
| [in] | p_src | Pointer to the location to get write data from. |
| [in] | bytes | Number of bytes to write. |

◆ **callbackSet**

```
fsp_err_t(* i2c_slave_api_t::callbackSet) (i2c_slave_ctrl_t *const p_ctrl,
void(*p_callback)(i2c_slave_callback_args_t *), void const *const p_context,
i2c_slave_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the IIC Slave control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* i2c_slave_api_t::close) (i2c_slave_ctrl_t *const p_ctrl)
```

Closes the driver and releases the I2C Slave device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block set in i2c_slave_api_t::open call. |
|------|--------|---|

◆ **i2c_slave_instance_t**

```
struct i2c_slave_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---|--------|---|
| i2c_slave_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| i2c_slave_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| i2c_slave_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **i2c_slave_ctrl_t**

```
typedef void i2c_slave_ctrl_t
```

I2C control block. Allocate an instance specific control block to pass into the I2C API calls.

Enumeration Type Documentation◆ **i2c_slave_rate_t**

```
enum i2c_slave_rate_t
```

Communication speed options

Enumerator

| | |
|-------------------------|---------|
| I2C_SLAVE_RATE_STANDARD | 100 kHz |
| I2C_SLAVE_RATE_FAST | 400 kHz |
| I2C_SLAVE_RATE_FASTPLUS | 1 MHz |

◆ **i2c_slave_addr_mode_t**

```
enum i2c_slave_addr_mode_t
```

Addressing mode options

Enumerator

| | |
|---------------------------|-----------------------------|
| I2C_SLAVE_ADDR_MODE_7BIT | Use 7-bit addressing mode. |
| I2C_SLAVE_ADDR_MODE_10BIT | Use 10-bit addressing mode. |

◆ **i2c_slave_event_t**

| enum i2c_slave_event_t | |
|---------------------------------|--|
| Callback events | |
| Enumerator | |
| I2C_SLAVE_EVENT_ABORTED | A transfer was aborted. |
| I2C_SLAVE_EVENT_RX_COMPLETE | A receive operation was completed successfully. |
| I2C_SLAVE_EVENT_TX_COMPLETE | A transmit operation was completed successfully. |
| I2C_SLAVE_EVENT_RX_REQUEST | A read operation expected from slave. Detected a write from master. |
| I2C_SLAVE_EVENT_TX_REQUEST | A write operation expected from slave. Detected a read from master. |
| I2C_SLAVE_EVENT_RX_MORE_REQUEST | A read operation expected from slave. Master sends out more data than configured to be read in slave. |
| I2C_SLAVE_EVENT_TX_MORE_REQUEST | A write operation expected from slave. Master requests more data than configured to be written by slave. |
| I2C_SLAVE_EVENT_GENERAL_CALL | General Call address received from Master. Detected a write from master. |

5.3.5.6 I2S Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for I2S audio communication.

Summary

The I2S (Inter-IC Sound) interface provides APIs and definitions for I2S audio communication.

Data Structures

```
struct i2s_callback_args_t
```

```
struct i2s_status_t
```

```
struct i2s_cfg_t
```

```
struct i2s_api_t
```

```
struct i2s_instance_t
```

Typedefs

```
typedef void i2s_ctrl_t
```

Enumerations

```
enum i2s_pcm_width_t
```

```
enum i2s_word_length_t
```

```
enum i2s_event_t
```

```
enum i2s_mode_t
```

```
enum i2s_mute_t
```

```
enum i2s_ws_continue_t
```

```
enum i2s_state_t
```

Data Structure Documentation

◆ i2s_callback_args_t

| struct i2s_callback_args_t | | |
|----------------------------------|-----------|---|
| Callback function parameter data | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. Set in i2s_api_t::open function in i2s_cfg_t . |
| i2s_event_t | event | The event can be used to identify what caused the callback (overflow or error). |

◆ i2s_status_t

| struct i2s_status_t |
|---------------------|
| I2S status. |

| Data Fields | | |
|-----------------------------|-------|--------------------|
| i2s_state_t | state | Current I2S state. |

◆ **i2s_cfg_t**

| | | |
|---|--|---|
| struct i2s_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| uint32_t | channel | |
| i2s_pcm_width_t | pcm_width | Audio PCM data width. |
| i2s_word_length_t | word_length | Audio word length, bits must be \geq i2s_cfg_t::pcm_width bits. |
| i2s_ws_continue_t | ws_continue | Whether to continue WS transmission during idle state. |
| i2s_mode_t | operating_mode | Master or slave mode. |
| transfer_instance_t const * | p_transfer_tx | |
| transfer_instance_t const * | p_transfer_rx | |
| void(* | p_callback)(i2s_callback_args_t *p_args) | |
| void const * | p_context | |
| void const * | p_extend | Extension parameter for hardware specific settings. |

| | |
|-----------|--------------------------------|
| uint8_t | rx_ipl |
| | Receive interrupt priority. |
| uint8_t | tx_ipl |
| | Transmit interrupt priority. |
| uint8_t | idle_err_ipl |
| | Idle/Error interrupt priority. |
| IRQn_Type | tx_irq |
| | Transmit IRQ number. |
| IRQn_Type | rx_irq |
| | Receive IRQ number. |
| IRQn_Type | int_irq |
| | Idle/Error IRQ number. |

Field Documentation

◆ channel

uint32_t i2s_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

◆ p_transfer_tx

[transfer_instance_t](#) const* i2s_cfg_t::p_transfer_tx

To use DMA for transmitting link a Transfer instance here. Set to NULL if unused.

◆ **p_transfer_rx**

| |
|---|
| <code>transfer_instance_t</code> const* <code>i2s_cfg_t::p_transfer_rx</code> |
|---|

To use DMA for receiving link a Transfer instance here. Set to NULL if unused.

◆ **p_callback**

| |
|--|
| <code>void(* i2s_cfg_t::p_callback) (i2s_callback_args_t *p_args)</code> |
|--|

Callback provided when an I2S ISR occurs. Set to NULL for no CPU interrupt.

◆ **p_context**

| |
|--|
| <code>void</code> const* <code>i2s_cfg_t::p_context</code> |
|--|

Placeholder for user data. Passed to the user callback in `i2s_callback_args_t`.

◆ **i2s_api_t**

| |
|-------------------------------|
| <code>struct i2s_api_t</code> |
|-------------------------------|

I2S functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>open)(i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)</code> |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>stop)(i2s_ctrl_t *const p_ctrl)</code> |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>mute)(i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)</code> |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>write)(i2s_ctrl_t *const p_ctrl, void const *const p_src, uint32_t const bytes)</code> |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>read)(i2s_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const bytes)</code> |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>writeRead)(i2s_ctrl_t *const p_ctrl, void const *const p_src, void *const p_dest, uint32_t const bytes)</code> |
|--------------------------|--|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>statusGet)(i2s_ctrl_t *const p_ctrl, i2s_status_t *const p_status)</code> |
|--------------------------|---|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>close)(i2s_ctrl_t *const p_ctrl)</code> |
|--------------------------|---|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>callbackSet)(i2s_ctrl_t *const p_ctrl, void(*p_callback)(i2s_callback_args_t *), void const *const p_context,</code> |
|--------------------------|--|

i2s_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* i2s_api_t::open) (i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)

Initial configuration.

Precondition

Peripheral clocks and any required output pins should be configured prior to calling this function.

Note

To reconfigure after calling this function, call [i2s_api_t::close](#) first.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ stop

fsp_err_t(* i2s_api_t::stop) (i2s_ctrl_t *const p_ctrl)

Stop communication. Communication is stopped when callback is called with I2S_EVENT_IDLE.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
|------|--------|--|

◆ mute

fsp_err_t(* i2s_api_t::mute) (i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)

Enable or disable mute.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
| [in] | mute_enable | Whether to enable or disable mute. |

◆ write

```
fsp_err_t(* i2s_api_t::write) (i2s_ctrl_t *const p_ctrl, void const *const p_src, uint32_t const bytes)
```

Write I2S data. All transmit data is queued when callback is called with I2S_EVENT_TX_EMPTY. Transmission is complete when callback is called with I2S_EVENT_IDLE.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
| [in] | p_src | Buffer of PCM samples. Must be 4 byte aligned. |
| [in] | bytes | Number of bytes in the buffer. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, padding 0s will be added to transmission to make it a multiple of 8. |

◆ read

```
fsp_err_t(* i2s_api_t::read) (i2s_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const bytes)
```

Read I2S data. Reception is complete when callback is called with I2S_EVENT_RX_EMPTY.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
| [in] | p_dest | Buffer to store PCM samples. Must be 4 byte aligned. |
| [in] | bytes | Number of bytes in the buffer. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, receive will stop at the multiple of 8 below requested bytes. |

◆ **writeRead**

```
fsp_err_t(* i2s_api_t::writeRead) (i2s_ctrl_t *const p_ctrl, void const *const p_src, void *const p_dest, uint32_t const bytes)
```

Simultaneously write and read I2S data. Transmission and reception are complete when callback is called with I2S_EVENT_IDLE.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
| [in] | p_src | Buffer of PCM samples. Must be 4 byte aligned. |
| [in] | p_dest | Buffer to store PCM samples. Must be 4 byte aligned. |
| [in] | bytes | Number of bytes in the buffers. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, padding 0s will be added to transmission to make it a multiple of 8, and receive will stop at the multiple of 8 below requested bytes. |

◆ **statusGet**

```
fsp_err_t(* i2s_api_t::statusGet) (i2s_ctrl_t *const p_ctrl, i2s_status_t *const p_status)
```

Get current status and store it in provided pointer p_status.

Parameters

| | | |
|-------|----------|--|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
| [out] | p_status | Current status of the driver. |

◆ **close**

```
fsp_err_t(* i2s_api_t::close) (i2s_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i2s_api_t::open call for this instance. |
|------|--------|--|

◆ **callbackSet**

```
fsp_err_t(* i2s_api_t::callbackSet) (i2s_ctrl_t *const p_ctrl, void(*p_callback)(i2s_callback_args_t *),
void const *const p_context, i2s_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the I2S control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **i2s_instance_t**

```
struct i2s_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| i2s_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| i2s_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| i2s_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **i2s_ctrl_t**

```
typedef void i2s_ctrl_t
```

I2S control block. Allocate an instance specific control block to pass into the I2S API calls.

Enumeration Type Documentation

◆ **i2s_pcm_width_t**

| enum i2s_pcm_width_t | |
|-----------------------|-------------------|
| Audio PCM width | |
| Enumerator | |
| I2S_PCM_WIDTH_8_BITS | Using 8-bit PCM. |
| I2S_PCM_WIDTH_16_BITS | Using 16-bit PCM. |
| I2S_PCM_WIDTH_18_BITS | Using 18-bit PCM. |
| I2S_PCM_WIDTH_20_BITS | Using 20-bit PCM. |
| I2S_PCM_WIDTH_22_BITS | Using 22-bit PCM. |
| I2S_PCM_WIDTH_24_BITS | Using 24-bit PCM. |
| I2S_PCM_WIDTH_32_BITS | Using 32-bit PCM. |

◆ **i2s_word_length_t**

| enum i2s_word_length_t | |
|---------------------------|-----------------------------------|
| Audio system word length. | |
| Enumerator | |
| I2S_WORD_LENGTH_8_BITS | Using 8-bit system word length. |
| I2S_WORD_LENGTH_16_BITS | Using 16-bit system word length. |
| I2S_WORD_LENGTH_24_BITS | Using 24-bit system word length. |
| I2S_WORD_LENGTH_32_BITS | Using 32-bit system word length. |
| I2S_WORD_LENGTH_48_BITS | Using 48-bit system word length. |
| I2S_WORD_LENGTH_64_BITS | Using 64-bit system word length. |
| I2S_WORD_LENGTH_128_BITS | Using 128-bit system word length. |
| I2S_WORD_LENGTH_256_BITS | Using 256-bit system word length. |

◆ **i2s_event_t**

| enum i2s_event_t | |
|---|--|
| Events that can trigger a callback function | |
| Enumerator | |
| I2S_EVENT_IDLE | Communication is idle. |
| I2S_EVENT_TX_EMPTY | Transmit buffer is below FIFO trigger level. |
| I2S_EVENT_RX_FULL | Receive buffer is above FIFO trigger level. |

◆ **i2s_mode_t**

| enum i2s_mode_t | |
|------------------------|--------------|
| I2S communication mode | |
| Enumerator | |
| I2S_MODE_SLAVE | Slave mode. |
| I2S_MODE_MASTER | Master mode. |

◆ **i2s_mute_t**

| enum i2s_mute_t | |
|---------------------|---------------|
| Mute audio samples. | |
| Enumerator | |
| I2S_MUTE_OFF | Disable mute. |
| I2S_MUTE_ON | Enable mute. |

◆ **i2s_ws_continue_t**

| enum i2s_ws_continue_t | |
|---|---------------------------|
| Whether to continue WS (word select line) transmission during idle state. | |
| Enumerator | |
| I2S_WS_CONTINUE_ON | Enable WS continue mode. |
| I2S_WS_CONTINUE_OFF | Disable WS continue mode. |

◆ **i2s_state_t**

| enum <code>i2s_state_t</code> | |
|--|-----------------|
| Possible status values returned by <code>i2s_api_t::statusGet</code> . | |
| Enumerator | |
| <code>I2S_STATE_IN_USE</code> | I2S is in use. |
| <code>I2S_STATE_STOPPED</code> | I2S is stopped. |

5.3.5.7 I3C Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for I3C.

Summary

The I3C interface provides APIs and definitions for I3C communication.

Data Structures

```
struct i3c\_device\_status\_t
```

```
struct i3c\_slave\_info\_t
```

```
struct i3c\_device\_table\_cfg\_t
```

```
struct i3c\_device\_cfg\_t
```

```
struct i3c\_command\_descriptor\_t
```

```
struct i3c\_callback\_args\_t
```

```
struct i3c\_cfg\_t
```

```
struct i3c\_api\_t
```

```
struct i3c\_instance\_t
```

Typedefs

```
typedef void i3c\_ctrl\_t
```

Enumerations

enum [i3c_common_command_code_t](#)

enum [i3c_event_t](#)

enum [i3c_device_type_t](#)

enum [i3c_device_protocol_t](#)

enum [i3c_address_assignment_mode_t](#)

enum [i3c_ibi_type_t](#)

Data Structure Documentation

◆ [i3c_device_status_t](#)

| | | |
|--|-------------------|--|
| struct i3c_device_status_t | | |
| The current status of the slave device (See GETSTATUS in the MIPI I3C Specification v1.0). | | |
| Data Fields | | |
| uint8_t | pending_interrupt | Contains the interrupt number of any pending interrupt, or 0 if no interrupts are pending. |
| uint8_t | vendor_status | Reserved for vendor-specific meaning. |

◆ [i3c_slave_info_t](#)

| | | |
|---|-------------|----------------------------------|
| struct i3c_slave_info_t | | |
| Device characteristics that define the I3C capabilities of a slave. | | |
| Data Fields | | |
| uint8_t | pid[6] | Provisional ID. |
| union i3c_slave_info_t | __unnamed__ | |
| uint8_t | dcr | Device Characteristics Register. |

◆ [i3c_device_table_cfg_t](#)

| | | |
|--|-----------------|---|
| struct i3c_device_table_cfg_t | | |
| Structure for configuring an entry in the device table when the driver is in master mode (See i3c_api_t::masterDeviceTableSet). | | |
| Data Fields | | |
| uint8_t | static_address | I3C Static address / I2C address for this device. |
| uint8_t | dynamic_address | Dynamic address for the |

| | | |
|---------------------------------------|-----------------------|--|
| | | device. This address will be assigned during Dynamic Address Assignment. |
| i3c_device_protocol_t | device_protocol | The protocol used to communicate with this device (I3C / I2C Legacy). |
| bool | ibi_accept | Accept or reject IBI requests from this device. |
| bool | master_request_accept | Accept mastership requests from this device. |
| bool | ibi_payload | IBI requests from this device have a data payload. Note: When the device is configured using ENTDAAs, the <code>ibi_payload</code> will automatically be updated based on the value of BCR. |

◆ [i3c_device_cfg_t](#)

| | | |
|--|-----------------|---|
| struct i3c_device_cfg_t | | |
| Structure for configuring a slave address when the driver is in slave mode (See i3c_api_t::deviceCfgSet). | | |
| Data Fields | | |
| uint8_t | static_address | I3C Static address / I2C address for this device. |
| uint8_t | dynamic_address | Dynamic address for this device. Note that the dynamic address will automatically be updated when ENTDAAs is completed. |
| i3c_slave_info_t | slave_info | PID, BCR, and DCR registers for the device (Slave mode only). |

◆ [i3c_command_descriptor_t](#)

| | | |
|---|--------------|--|
| struct i3c_command_descriptor_t | | |
| Descriptor for completing CCC transfers. | | |
| Data Fields | | |
| uint8_t | command_code | Common Command Code for the transfer. |
| uint8_t * | p_buffer | Buffer for reading or writing data. |
| uint32_t | length | Length of the data portion of the command. |

| | | |
|------|---------|--|
| bool | restart | If true, issue a repeated-start after the transfer is completed. |
| bool | rnw | Set to true if the command type is Direct Get. |

◆ **i3c_callback_args_t**

| | | |
|--|-----------------|--|
| struct i3c_callback_args_t | | |
| Arguments that are passed to the user callback when an event occurs. | | |
| Data Fields | | |
| i3c_event_t | event | The type of event that has occurred. |
| uint32_t | event_status | Status flags associated with the event. |
| uint32_t | transfer_size | Number of bytes transferred. |
| i3c_slave_info_t const * | p_slave_info | A pointer to the Characteristics Registers read during ENTDAAs. |
| uint8_t | dynamic_address | The dynamic address that was assigned to the slave during ENTDAAs. |
| i3c_ibi_type_t | ibi_type | The type of IBI that has been received. |
| uint8_t | ibi_address | The address of the device that sent the IBI. |
| uint8_t | command_code | The command code of the received command. |
| void const * | p_context | User defined context. |

◆ **i3c_cfg_t**

| | | |
|---|---|---------------------------------------|
| struct i3c_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| uint32_t | channel | |
| i3c_device_type_t | device_type | |
| void(* | p_callback)(i3c_callback_args_t const *const p_args) | |
| void const * | p_context | |
| | | Pointer to the user-provided context. |

| | | |
|--|------------------------------|--|
| | void const * | p_extend |
| Field Documentation | | |
| ◆ channel | | |
| uint32_t i3c_cfg_t::channel | | |
| Select a channel corresponding to the channel number of the hardware. | | |
| ◆ device_type | | |
| i3c_device_type_t i3c_cfg_t::device_type | | |
| The type of device. | | |
| ◆ p_callback | | |
| void(* i3c_cfg_t::p_callback) (i3c_callback_args_t const *const p_args) | | |
| Pointer to the user callback. | | |
| ◆ p_extend | | |
| void const* i3c_cfg_t::p_extend | | |
| Pointer to extended configuration. | | |
| ◆ i3c_api_t | | |
| struct i3c_api_t | | |
| I3C functions implemented at the HAL layer will follow this API. | | |
| Data Fields | | |
| | fsp_err_t (* | open)(i3c_ctrl_t *const p_ctrl, i3c_cfg_t const *const p_cfg) |
| | fsp_err_t (* | enable)(i3c_ctrl_t *const p_ctrl) |
| | fsp_err_t (* | deviceCfgSet)(i3c_ctrl_t *const p_ctrl, i3c_device_cfg_t const *const p_device_cfg) |
| | fsp_err_t (* | masterDeviceTableSet)(i3c_ctrl_t *const p_ctrl, uint32_t device_index, i3c_device_table_cfg_t const *const p_device_table_cfg) |
| | fsp_err_t (* | deviceSelect)(i3c_ctrl_t *const p_ctrl, uint32_t device_index, uint32_t bitrate_mode) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>dynamicAddressAssignmentStart)(i3c_ctrl_t *const p_ctrl, i3c_address_assignment_mode_t address_assignment_mode, uint32_t starting_device_index, uint32_t device_count)</code> |
| <code>fsp_err_t(*</code> | <code>slaveStatusSet)(i3c_ctrl_t *const p_ctrl, i3c_device_status_t device_status)</code> |
| <code>fsp_err_t(*</code> | <code>commandSend)(i3c_ctrl_t *const p_ctrl, i3c_command_descriptor_t *p_command_descriptor)</code> |
| <code>fsp_err_t(*</code> | <code>write)(i3c_ctrl_t *const p_ctrl, uint8_t const *const p_data, uint32_t length, bool restart)</code> |
| <code>fsp_err_t(*</code> | <code>read)(i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length, bool restart)</code> |
| <code>fsp_err_t(*</code> | <code>ibiWrite)(i3c_ctrl_t *const p_ctrl, i3c_ibi_type_t ibi_type, uint8_t const *const p_data, uint32_t length)</code> |
| <code>fsp_err_t(*</code> | <code>ibiRead)(i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length)</code> |
| <code>fsp_err_t(*</code> | <code>close)(i3c_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* i3c_api_t::open) (i3c_ctrl_t *const p_ctrl, i3c_cfg_t const *const p_cfg)`

Initial configuration.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ **enable**

```
fsp_err_t(* i3c_api_t::enable) (i3c_ctrl_t *const p_ctrl)
```

Enable the I3C device.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
|------|--------|--|

◆ **deviceCfgSet**

```
fsp_err_t(* i3c_api_t::deviceCfgSet) (i3c_ctrl_t *const p_ctrl, i3c_device_cfg_t const *const p_device_cfg)
```

Set the configuration of this device.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | p_device_cfg | Pointer to device configuration. |

◆ **masterDeviceTableSet**

```
fsp_err_t(* i3c_api_t::masterDeviceTableSet) (i3c_ctrl_t *const p_ctrl, uint32_t device_index, i3c_device_table_cfg_t const *const p_device_table_cfg)
```

Set the configuration for the device at the given index in the device table. The configuration will be used by transfers when it is selected by [deviceSelect](#).

Note: This function is not used in slave mode.

Parameters

| | | |
|------|--------------------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | device_index | Index into the device table. |
| [in] | p_device_table_cfg | Pointer to the table settings for the entry in the master device table. |

◆ **deviceSelect**

```
fsp_err_t(* i3c_api_t::deviceSelect) (i3c_ctrl_t *const p_ctrl, uint32_t device_index, uint32_t
bitrate_mode)
```

In master mode, select the device for the next transfer.

Note: This function is not used in slave mode.

Parameters

| | | |
|------|-----------------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | device_index | Index into the device table. |
| [in] | bitrate_setting | The bitrate settings for the selected device. |

◆ **dynamicAddressAssignmentStart**

```
fsp_err_t(* i3c_api_t::dynamicAddressAssignmentStart) (i3c_ctrl_t *const p_ctrl,
i3c_address_assignment_mode_t address_assignment_mode, uint32_t starting_device_index,
uint32_t device_count)
```

Start Dynamic Address Assignment by sending either the ENTDA or SETDASA command See [i3c_address_assignment_mode_t](#) for more information.

Note: This function is not used in slave mode.

Parameters

| | | |
|------|-------------------------|---|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | address_assignment_mode | The command to use for Dynamic Address Assignment. |
| [in] | starting_device_index | The device index that will be used to assign the first device during Dynamic Address Assignment. |
| [in] | device_count | The number of devices to assign (Only used with I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA). |

◆ **slaveStatusSet**

```
fsp_err_t(* i3c_api_t::slaveStatusSet) (i3c_ctrl_t *const p_ctrl, i3c_device_status_t device_status)
```

Set the status returned to the master in response to a GETSTATUS command.

Note: This function is not used in master mode.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | device_status | New status settings for responding to the GETSTATUS command code. |

◆ **commandSend**

```
fsp_err_t(* i3c_api_t::commandSend) (i3c_ctrl_t *const p_ctrl, i3c_command_descriptor_t *p_command_descriptor)
```

Send a broadcast or directed command to slave devices on the bus.

Note: This function is not used in slave mode.

Parameters

| | | |
|------|----------------------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | p_command_descriptor | A descriptor for executing the command. |

◆ write

```
fsp_err_t(* i3c_api_t::write) (i3c_ctrl_t *const p_ctrl, uint8_t const *const p_data, uint32_t length, bool restart)
```

In master mode: Start a write transfer. When the transfer is completed send a stop condition or a repeated-start. In slave mode: Set the write buffer and configure the number of bytes that will be transferred before the the transfer is ended by the slave via the 'T' bit or by the master issuing a stop condition.

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | p_data | Pointer to a buffer to write. |
| [in] | length | Number of bytes to transfer. |
| [in] | restart | If true, issue a repeated-start after the transfer is completed (Master only). |

◆ read

```
fsp_err_t(* i3c_api_t::read) (i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length, bool restart)
```

In master mode: Start a read transfer. When the transfer is completed, send a stop condition or a repeated-start. In slave mode: Set the read buffer for storing data read during the transfer. When the buffer is full, the application will receive a callback requesting a new read buffer. If no buffer is provided by the application, the driver will discard any remaining bytes read during the transfer.

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | p_data | Pointer to a buffer to store the bytes read during the transfer. |
| [in] | length | Number of bytes to transfer. |
| [in] | restart | If true, issue a repeated-start after the transfer is completed (Master only). |

◆ **ibiWrite**

```
fsp_err_t(* i3c_api_t::ibiWrite) (i3c_ctrl_t *const p_ctrl, i3c_ibi_type_t ibi_type, uint8_t const *const p_data, uint32_t length)
```

Initiate an IBI write operation.

Note: This function is not used in master mode.

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | ibi_type | The type of In-Band Interrupt. |
| [in] | p_data | Pointer to a buffer to start the bytes read during the transfer. |
| [in] | length | Number of bytes to transfer. |

◆ **ibiRead**

```
fsp_err_t(* i3c_api_t::ibiRead) (i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length)
```

Set the read buffer for storing received IBI data (This function is not used in slave mode).

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
| [in] | p_data | Pointer to a buffer to store the bytes read during the transfer. |
| [in] | length | Number of bytes to transfer. |

◆ **close**

```
fsp_err_t(* i3c_api_t::close) (i3c_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in i3c_api_t::open call for this instance. |
|------|--------|--|

◆ **i3c_instance_t**

struct i3c_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------------------|---------------------|---|
| <code>i3c_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>i3c_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>i3c_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation◆ **i3c_ctrl_t**

```
typedef void i3c_ctrl_t
```

I3C control block. Allocate an instance specific control block to pass into the I3C API calls.

Enumeration Type Documentation

◆ **i3c_common_command_code_t**

| enum i3c_common_command_code_t | |
|--|--|
| Common Command Codes defined by MIPI I3C Specification v1.1. | |
| Enumerator | |
| I3C_CCC_BROADCAST_ENEC | Enable Slave initiated events. |
| I3C_CCC_BROADCAST_DISEC | Disable Slave initiated events. |
| I3C_CCC_BROADCAST_ENTAS0 | Enter Activity State 0. |
| I3C_CCC_BROADCAST_ENTAS1 | Enter Activity State 1. |
| I3C_CCC_BROADCAST_ENTAS2 | Enter Activity State 2. |
| I3C_CCC_BROADCAST_ENTAS3 | Enter Activity State 3. |
| I3C_CCC_BROADCAST_RSTDAA | Reset Dynamic Address Assignment. |
| I3C_CCC_BROADCAST_ENTDAA | Enter Dynamic Address Assignment. |
| I3C_CCC_BROADCAST_DEFSVLS | Define List of Slaves. |
| I3C_CCC_BROADCAST_SETMWL | Set Max Write Length. |
| I3C_CCC_BROADCAST_SETMRL | Set Max Read Length. |
| I3C_CCC_BROADCAST_ENTTM | Enter Test Mode. |
| I3C_CCC_BROADCAST_ENTHDR0 | Enter HDR Mode 0. |
| I3C_CCC_BROADCAST_ENTHDR1 | Enter HDR Mode 1. |

| I3C_CCC_DIRECT_RSTDAA | Reset Dynamic Address Assignment. |
| I3C_CCC_DIRECT_SETDASA | Set Dynamic Address from Static Address. |
| I3C_CCC_DIRECT_SETNEWDA | Set New Dynamic Address. |
| I3C_CCC_DIRECT_SETMWL | Set Max Write Length. |
| I3C_CCC_DIRECT_SETMRL | Set Max Read Length. |
| I3C_CCC_DIRECT_GETMWL | Get Max Write Length. |
| I3C_CCC_DIRECT_GETMRL | Get Max Read Length. |
| I3C_CCC_DIRECT_GETPID | Get Provisional ID. |
| I3C_CCC_DIRECT_GETBCR | Get Bus Characteristic Register. |
| I3C_CCC_DIRECT_GETDCR | Get Device Characteristic Register. |
| I3C_CCC_DIRECT_GETSTATUS | Get Device Status. |
| I3C_CCC_DIRECT_GETACCMST | Get Accept Mastership. |
| I3C_CCC_DIRECT_GETMXDS | Get Max Data Speed. |
| I3C_CCC_DIRECT_SETXTIME | Set Exchange Timing Information. |
| I3C_CCC_DIRECT_GETXTIME | Get Exchange Timing Information. |

◆ **i3c_event_t**

| enum <code>i3c_event_t</code> | |
|--|--|
| I3C Events that result in a callback. | |
| Enumerator | |
| <code>I3C_EVENT_ENTDAA_ADDRESS_PHASE</code> | Events that only occur in Master mode. A Slave device has finished writing its PID, BCR, and DCR. This information is provided in <code>i3c_callback_args_t::p_slave_info</code> . |
| <code>I3C_EVENT_IBI_READ_COMPLETE</code> | An IBI has successfully been read. |
| <code>I3C_EVENT_IBI_READ_BUFFER_FULL</code> | There is no more space in the IBI read buffer. The application may provide another buffer by calling <code>i3c_api_t::ibiRead</code> . |
| <code>I3C_EVENT_READ_BUFFER_FULL</code> | Events that only occur in Slave mode. There is no more space in the read buffer. The application may provide another buffer by calling <code>i3c_api_t::read</code> . |
| <code>I3C_EVENT_IBI_WRITE_COMPLETE</code> | A IBI was written successfully. |
| <code>I3C_EVENT_HDR_EXIT_PATTERN_DETECTED</code> | The HDR exit pattern was detected on the bus. |
| <code>I3C_EVENT_ADDRESS_ASSIGNMENT_COMPLETE</code> | Dynamic Address Assignment has completed. Events that are common to Master and Slave mode. |
| <code>I3C_EVENT_COMMAND_COMPLETE</code> | A command was completed. |
| <code>I3C_EVENT_WRITE_COMPLETE</code> | A write transfer has completed. |
| <code>I3C_EVENT_READ_COMPLETE</code> | A read transfer has completed. |
| <code>I3C_EVENT_TIMEOUT_DETECTED</code> | SCL is stuck at the logic high or logic low level during a transfer. |
| <code>I3C_EVENT_INTERNAL_ERROR</code> | An internal error occurred. |

◆ **i3c_device_type_t**

| | |
|-----------------------------|--|
| enum i3c_device_type_t | |
| The type of device. | |
| Enumerator | |
| I3C_DEVICE_TYPE_MAIN_MASTER | The main master starts in master mode and is responsible for configuring the bus. |
| I3C_DEVICE_TYPE_SLAVE | A slave device listens to the bus for relevant I3C Commands (CCCs) sent by the current master, and responds accordingly. Slave devices may also initiate In-band interrupts and Hot-Join requests. |

◆ **i3c_device_protocol_t**

| | |
|---|--|
| enum i3c_device_protocol_t | |
| Identifies the protocol for transferring data with the device on the bus. | |
| Enumerator | |
| I3C_DEVICE_PROTOCOL_I2C | Transfers will use legacy I2C protocol with open-drain output at a reduced baudrate. |
| I3C_DEVICE_PROTOCOL_I3C | Transfers will use I3C SDR mode. |

◆ **i3c_address_assignment_mode_t**

| | |
|------------------------------------|---|
| enum i3c_address_assignment_mode_t | |
| Address Assignment Mode. | |
| Enumerator | |
| I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA | Send the ENTDAA command to enter Dynamic Address Assignment mode and assign dynamic addresses in order, starting with the starting device index. The procedure is completed after the specified number of devices have been configured. The callback will be called after the PID, DCR, and BCR registers have been read for each device. |

◆ **i3c_ibi_type_t**

| enum i3c_ibi_type_t | |
|---------------------------------|---|
| The type of In-Band Interrupt. | |
| Enumerator | |
| I3C_IBI_TYPE_INTERRUPT | Application specific In-Band Interrupt for notifying the master when an event occurs. |
| I3C_IBI_TYPE_HOT_JOIN | Request the master to perform the Dynamic Address Assignment process. |
| I3C_IBI_TYPE_MASTERSHIP_REQUEST | Request the master to give up control of the bus. |

5.3.5.8 LIN Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for LIN communications.

Summary

The LIN interface provides common APIs for LIN HAL drivers. The LIN interface supports the following features:

- Half-duplex master or slave LIN communication
- Interrupt driven transmit/receive processing
- Callback function with returned event code and data
- Checksum generation and validation (standard or enhanced)

Data Structures

struct [lin_transfer_params_t](#)

struct [lin_callback_args_t](#)

struct [lin_cfg_t](#)

struct [lin_api_t](#)

struct [lin_instance_t](#)

Typedefs

```
typedef void lin_ctrl_t
```

Enumerations

```
enum lin_mode_t
```

```
enum lin_checksum_type_t
```

```
enum lin_event_t
```

Data Structure Documentation

◆ lin_transfer_params_t

| struct lin_transfer_params_t | | |
|------------------------------|---------------|---|
| LIN Transfer Parameters | | |
| Data Fields | | |
| uint8_t | id | The unprotected frame ID associated with the information frame transfer. |
| uint8_t * | p_information | Pointer to rx or tx buffer associated with the information frame transfer. |
| uint8_t | num_bytes | Length of buffer pointed to by p_information, in bytes. |
| lin_checksum_type_t | checksum_type | Checksum type to use for checksum generation (when writing frame) or validation (when reading frame). See lin_checksum_type_t . |

◆ lin_callback_args_t

| struct lin_callback_args_t | | |
|----------------------------|----------------|---|
| LIN Callback Arguments | | |
| Data Fields | | |
| uint32_t | channel | Channel number. |
| lin_event_t | event | Event code. |
| uint8_t | bytes_received | Valid for the following events: <ul style="list-style-type: none"> • LIN_EVENT_RX_INFORMATION_FRAME_COMPLETE • LIN_EVENT_ERR_FRAMING • LIN_EVENT_ERR_INVALID |

| | | |
|--------------|-----------|---|
| | | D_CHECKSUM Contains the number of information bytes received for an information frame reception. |
| uint8_t | pid | For LIN slave: Contains the most recently received protected identifier For LIN master: Contains the most recently transmitted protected identifier. |
| uint8_t | checksum | Received checksum. Valid for the following events: <ul style="list-style-type: none"> LIN_EVENT_RX_INFORMATION_FRAME_COMPLETE LIN_EVENT_ERR_INVALID_CHECKSUM. |
| void const * | p_context | Context provided to user during callback. |

◆ lin_cfg_t

| | |
|-------------------------|---|
| struct lin_cfg_t | |
| LIN configuration block | |
| Data Fields | |
| uint8_t | channel |
| | Select a channel corresponding to the channel number of the hardware. |
| lin_mode_t | mode |
| | Driver mode (master or slave) |
| uint8_t | rx_ipl |
| | Receive interrupt priority. |
| IRQn_Type | rx_irq |
| | Receive interrupt IRQ number. |

| | |
|--------------|---|
| uint8_t | txi_ipl |
| | Transmit interrupt priority. |
| IRQn_Type | txi_irq |
| | Transmit interrupt IRQ number. |
| uint8_t | tei_ipl |
| | Transmit end interrupt priority. |
| IRQn_Type | tei_irq |
| | Transmit end interrupt IRQ number. |
| uint8_t | eri_ipl |
| | Error interrupt priority. |
| IRQn_Type | eri_irq |
| | Error interrupt IRQ number. |
| void(* | p_callback)(lin_callback_args_t *p_args) |
| | Pointer to callback function. |
| void const * | p_context |
| | User defined context passed into callback function. |
| void const * | p_extend |
| | LIN hardware dependent configuration. |

◆ **lin_api_t**

| | | |
|---|-----------------------|---|
| struct lin_api_t | | |
| Interface definition for LIN | | |
| Data Fields | | |
| fsp_err_t(*) | open | (lin_ctrl_t *const p_ctrl, lin_cfg_t const *const p_cfg) |
| fsp_err_t(*) | startFrameWrite | (lin_ctrl_t *const p_ctrl, uint8_t const id) |
| fsp_err_t(*) | informationFrameWrite | (lin_ctrl_t *const p_ctrl, const lin_transfer_params_t *const p_transfer_params) |
| fsp_err_t(*) | informationFrameRead | (lin_ctrl_t *const p_ctrl, lin_transfer_params_t *const p_transfer_params) |
| fsp_err_t(*) | communicationAbort | (lin_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | callbackSet | (lin_ctrl_t *const p_ctrl, void(*p_callback)(lin_callback_args_t *), void const *const p_context, lin_callback_args_t *const p_callback_memory) |
| fsp_err_t(*) | close | (lin_ctrl_t *const p_ctrl) |
| Field Documentation | | |
| ◆ open | | |
| fsp_err_t(* lin_api_t::open) (lin_ctrl_t *const p_ctrl, lin_cfg_t const *const p_cfg) | | |
| Open LIN device. Transmission and reception of LIN frames is enabled upon successful return from this function. | | |
| Parameters | | |
| [in,out] | p_ctrl | Pointer to the LIN control block. Must be declared by user. Value set here. |
| [in] | p_cfg | Pointer to LIN configuration structure. All elements of this structure must be set by user. |

◆ **startFrameWrite**

```
fsp_err_t(* lin_api_t::startFrameWrite) (lin_ctrl_t *const p_ctrl, uint8_t const id)
```

Begin non-blocking transmission of the LIN start frame. The start frame consists of the break pattern, sync word, and protected frame identifier (PID). The unprotected identifier should be supplied. The driver will compute the PID.

When the start frame has been transmitted, the callback is called with event LIN_EVENT_TX_START_FRAME_COMPLETE.

Parameters

| | | |
|----------|--------|-----------------------------------|
| [in,out] | p_ctrl | Pointer to the LIN control block. |
| [in] | id | Unprotected frame identifier |

◆ **informationFrameWrite**

```
fsp_err_t(* lin_api_t::informationFrameWrite) (lin_ctrl_t *const p_ctrl, const lin_transfer_params_t *const p_transfer_params)
```

Begin non-blocking transmission of the LIN information frame.

The write buffer is used until the write is complete. When the write completes successfully (all bytes are fully transmitted on the wire) the callback is called with event LIN_EVENT_TX_INFORMATION_FRAME_COMPLETE.

Parameters

| | | |
|----------|-------------------|---|
| [in,out] | p_ctrl | Pointer to the LIN control block. |
| [in] | p_transfer_params | Pointer to parameters required for the write transaction. |

◆ **informationFrameRead**

```
fsp_err_t(* lin_api_t::informationFrameRead) (lin_ctrl_t *const p_ctrl, lin_transfer_params_t *const p_transfer_params)
```

Begin non-blocking read of information frame bytes.

When a read completes successfully, the callback is called with event LIN_EVENT_RX_INFORMATION_FRAME_COMPLETE.

Parameters

| | | |
|------|-------------------|--|
| [in] | p_ctrl | Pointer to the LIN control block for the channel. |
| [in] | p_transfer_params | Pointer to parameters required for the read transaction. |

◆ **communicationAbort**

```
fsp_err_t(* lin_api_t::communicationAbort) (lin_ctrl_t *const p_ctrl)
```

Abort ongoing transfer.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to the LIN control block. |
|------|--------|-----------------------------------|

◆ **callbackSet**

```
fsp_err_t(* lin_api_t::callbackSet) (lin_ctrl_t *const p_ctrl, void(*p_callback)(lin_callback_args_t *), void const *const p_context, lin_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the LIN control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* lin_api_t::close) (lin_ctrl_t *const p_ctrl)
```

Close LIN device.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to the LIN control block. |
|------|--------|-----------------------------------|

◆ **lin_instance_t**

```
struct lin_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------|--------|---|
| lin_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
|--------------|--------|---|

| | | |
|--------------------------------|--------------------|---|
| <code>lin_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>lin_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `lin_ctrl_t`

| |
|--|
| typedef void <code>lin_ctrl_t</code> |
| LIN control block. Allocate an instance specific control block to pass into the LIN API calls. |

Enumeration Type Documentation

◆ `lin_mode_t`

| | |
|------------------------------|--------------|
| enum <code>lin_mode_t</code> | |
| LIN driver mode | |
| Enumerator | |
| <code>LIN_MODE_SLAVE</code> | Slave mode. |
| <code>LIN_MODE_MASTER</code> | Master mode. |

◆ `lin_checksum_type_t`

| | |
|---|--|
| enum <code>lin_checksum_type_t</code> | |
| LIN checksum type | |
| Enumerator | |
| <code>LIN_CHECKSUM_TYPE_CLASSIC</code> | 8 bit LIN classic checksum over information bytes only |
| <code>LIN_CHECKSUM_TYPE_ENHANCED</code> | 8 bit LIN enhanced checksum over information bytes and PID |
| <code>LIN_CHECKSUM_TYPE_NONE</code> | Skip driver checksum generation/validation. |

◆ **lin_event_t**

| enum <code>lin_event_t</code> | |
|--|---|
| LIN Event codes | |
| Enumerator | |
| <code>LIN_EVENT_NONE</code> | No event present. |
| <code>LIN_EVENT_RX_START_FRAME_COMPLETE</code> | Start frame received event. |
| <code>LIN_EVENT_RX_INFORMATION_FRAME_COMPLETE</code> | Information frame received event. |
| <code>LIN_EVENT_TX_START_FRAME_COMPLETE</code> | Start frame transmission complete event. |
| <code>LIN_EVENT_TX_INFORMATION_FRAME_COMPLETE</code> | Information transmission complete event. |
| <code>LIN_EVENT_ERR_INVALID_CHECKSUM</code> | Information frame received successfully, but checksum was invalid. |
| <code>LIN_EVENT_ERR_BUS_COLLISION_DETECTED</code> | Bus collision detection event. |
| <code>LIN_EVENT_ERR_FRAMING</code> | Framing error event. |
| <code>LIN_EVENT_ERR_COUNTER_OVERFLOW</code> | Counter overflow event. |
| <code>LIN_EVENT_ERR_OVERRUN</code> | Overrun error event. |
| <code>LIN_EVENT_ERR_PARITY</code> | Parity error event (start frame only, LIN information is sent without parity) |

5.3.5.9 SMCI Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for SMCI communications.

Summary

The SMCI interface provides common APIs for SMCI HAL drivers. The SMCI interface supports the following features:

- Interrupt driven transmit/receive processing

- Callback function with returned event code
- Runtime baud-rate change (baud = 1/ETU)
- Hardware resource locking during a transaction

Data Structures

struct [smci_status_t](#)

struct [smci_transfer_mode_t](#)

struct [smci_speed_params_t](#)

struct [smci_callback_args_t](#)

struct [smci_cfg_t](#)

struct [smci_api_t](#)

struct [smci_instance_t](#)

Typedefs

typedef void [smci_ctrl_t](#)

Enumerations

enum [smci_state_t](#)

enum [smci_event_t](#)

enum [smci_convention_type_t](#)

enum [smci_clock_conversion_integer_t](#)

enum [smci_baudrate_adjustment_integer_t](#)

enum [smci_protocol_type_t](#)

Data Structure Documentation

◆ [smci_status_t](#)

| struct smci_status_t | | |
|--------------------------------------|-------------|---|
| SMCI driver specific information | | |
| Data Fields | | |
| smci_state_t | smci_state | State of the smci state machine. |
| uint32_t | bytes_recvd | Bytes read into receive buffer since read was called. |

◆ **smci_transfer_mode_t**

| | | |
|-----------------------------|------------|-------------------------------------|
| struct smci_transfer_mode_t | | |
| SMCI Transfer Mode settings | | |
| Data Fields | | |
| smci_protocol_type_t | protocol | Protocol (Normal t=0, or Block t=1) |
| smci_convention_type_t | convention | Convention Direct or Inverse. |
| bool | gsm_mode | True=GMS Mode, false=Normal. |

◆ **smci_speed_params_t**

| | | |
|--|----------|--|
| struct smci_speed_params_t | | |
| SMCI settings that are used as inputs to register setting calculations | | |
| Data Fields | | |
| uint32_t | baudrate | Bits per second requested, 1/ETU. |
| smci_baudrate_adjustment_integer_t | di | Referred to as D in ISO spec (from Table 8 in ISO7816-3 3rd Edition) |
| smci_clock_conversion_integer_t | fi | Index of in ISO spec (from Table 8 in ISO7816-3 3rd Edition) |

◆ **smci_callback_args_t**

| | | |
|------------------------------------|-----------|---|
| struct smci_callback_args_t | | |
| SMCI Callback parameter definition | | |
| Data Fields | | |
| uint32_t | channel | Device channel number. |
| smci_event_t | event | Event code. |
| uint8_t | data | Data Byte to process. Contains the next character received for the events SMCI_EVENT_RX_CHAR, SMCI_EVENT_ERR_PARITY, SMCI_EVENT_ERR_LOW_SIGNAL, or SMCI_EVENT_ERR_OVERRUN. Otherwise unused. |
| void const * | p_context | Context provided to user during callback. |

◆ **smci_cfg_t**

| |
|-------------------|
| struct smci_cfg_t |
|-------------------|

Configuration Structure for SMCI

Data Fields

| | |
|--------------|--|
| uint8_t | channel |
| | Channel number of the hardware. |
| uint8_t | rx_ipl |
| | Receive interrupt priority. |
| uint8_t | txi_ipl |
| | Transmit interrupt priority. |
| uint8_t | eri_ipl |
| | Error interrupt priority. |
| IRQn_Type | rx_irq |
| | Receive interrupt IRQ number. |
| IRQn_Type | txi_irq |
| | Transmit interrupt IRQ number. |
| IRQn_Type | eri_irq |
| | Error interrupt IRQ number. |
| void(* | p_callback)(smci_callback_args_t *p_args) |
| | Pointer to callback function. |
| void const * | p_context |
| | User defined context passed into callback function. |

| | |
|--------------|--|
| | |
| void const * | p_extend |
| | SMCI hardware dependent configuration. |
| | |

◆ [smci_api_t](#)

| | |
|--------------------------------------|--|
| struct smci_api_t | |
| Shared Interface definition for SMCI | |
| Data Fields | |
| fsp_err_t (* | open)(smci_ctrl_t *const p_ctrl, smci_cfg_t const *const p_cfg) |
| fsp_err_t (* | read)(smci_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes) |
| fsp_err_t (* | write)(smci_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes) |
| fsp_err_t (* | transferModeSet)(smci_ctrl_t *const p_ctrl, smci_transfer_mode_t const *const p_transfer_mode_params) |
| fsp_err_t (* | baudSet)(smci_ctrl_t *const p_ctrl, void const *const p_baud_setting) |
| fsp_err_t (* | statusGet)(smci_ctrl_t *const p_ctrl, smci_status_t *const p_status) |
| fsp_err_t (* | clockControl)(smci_ctrl_t *const p_ctrl, bool clock_enable) |
| fsp_err_t (* | callbackSet)(smci_ctrl_t *const p_ctrl, void(*p_callback)(smci_callback_args_t *), void const *const p_context, smci_callback_args_t *const p_callback_memory) |
| fsp_err_t (* | close)(smci_ctrl_t *const p_ctrl) |
| Field Documentation | |
| | |

◆ **open**

```
fsp_err_t(* smci_api_t::open) (smci_ctrl_t *const p_ctrl, smci_cfg_t const *const p_cfg)
```

Open Smart Card Interface Mode (SMCI)

Parameters

| | | |
|----------|------------|--|
| [in,out] | p_ctrl | Pointer to the SMCI control block. Must be declared by user. Value set here. |
| [in] | smci_cfg_t | Pointer to SMCI configuration structure. All elements of this structure must be set by user. |

◆ **read**

```
fsp_err_t(* smci_api_t::read) (smci_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
```

Read from Smart Card device. The read buffer is used until the read is complete. When a transfer is complete, the callback is called with event SMCI_EVENT_RX_COMPLETE. Bytes received outside an active transfer are received in the callback function with event SMCI_EVENT_RX_CHAR.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to the SMCI control block for the channel. |
| [in] | p_dest | Destination address to read data from. |
| [in] | bytes | Read data length. |

◆ **write**

```
fsp_err_t(* smci_api_t::write) (smci_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes)
```

Write to Smart Card device. The write buffer is used until write is complete. Do not overwrite write buffer contents until the write is finished. When the write is complete (all bytes are fully transmitted on the wire), the callback called with event SMCI_EVENT_TX_COMPLETE.

Parameters

| | | |
|------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to the SMCI control block. |
| [in] | p_src | Source address to write data to. |
| [in] | bytes | Write data length. |

◆ **transferModeSet**

```
fsp_err_t(* smci_api_t::transferModeSet) (smci_ctrl_t *const p_ctrl, smci_transfer_mode_t const *const p_transfer_mode_params)
```

Change the peripheral settings based on provided transfer mode and data convention type

Parameters

| | | |
|------|------------------------|---|
| [in] | p_ctrl | Pointer to the SMCI control block. |
| [in] | p_transfer_mode_params | Pointer to SMCI setting like protocol, convention, and gsm_mode |

◆ **baudSet**

```
fsp_err_t(* smci_api_t::baudSet) (smci_ctrl_t *const p_ctrl, void const *const p_baud_setting)
```

Change baud rate.

Warning

Calling this API aborts any in-progress transmission and disables reception until the new baud settings have been applied.

Parameters

| | | |
|------|----------------|---|
| [in] | p_ctrl | Pointer to the SMCI control block. |
| [in] | p_baud_setting | Pointer to module specific setting for configuring baud rate. |

◆ **statusGet**

```
fsp_err_t(* smci_api_t::statusGet) (smci_ctrl_t *const p_ctrl, smci_status_t *const p_status)
```

Get the driver specific information.

Parameters

| | | |
|-------|----------|------------------------------------|
| [in] | p_ctrl | Pointer to the SMCI control block. |
| [out] | p_status | State info for the driver. |

◆ **clockControl**

```
fsp_err_t(* smci_api_t::clockControl) (smci_ctrl_t *const p_ctrl, bool clock_enable)
```

Enable or disable the SMCI clock to control the start of the activation or de-activation

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to the SMCI control block. |
| [in] | clock_enable | True: enables clock output, False disables it |

◆ **callbackSet**

```
fsp_err_t(* smci_api_t::callbackSet) (smci_ctrl_t *const p_ctrl, void(*p_callback)(smci_callback_args_t *), void const *const p_context, smci_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and callback memory pointer.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to the SMCI control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_callback_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* smci_api_t::close) (smci_ctrl_t *const p_ctrl)
```

Close SMCI device.

Parameters

| | | |
|------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to the SMCI control block. |
|------|--------|------------------------------------|

◆ **smci_instance_t**

```
struct smci_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

| Data Fields | | |
|---------------------------------|---------------------|---|
| <code>smci_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>smci_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>smci_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `smci_ctrl_t`

```
typedef void smci_ctrl_t
```

Smart Card Interface control block. Allocate an instance specific control block to pass into the SMCI API calls.

Enumeration Type Documentation

◆ `smci_state_t`

```
enum smci_state_t
```

Enumerator

| | |
|--|---|
| <code>SMCI_STATE_IDLE_CLOCK_OFF</code> | SMCI idle state with no clock output. |
| <code>SMCI_STATE_TX_RX_IDLE</code> | SMCI is in idle state, clock is active. |
| <code>SMCI_STATE_TX_PROGRESSING</code> | Transmission is in progress. |
| <code>SMCI_STATE_RX_PROGRESSING</code> | Reception is in progress. |

◆ **smci_event_t**

| enum smci_event_t | |
|-----------------------------------|---|
| SMCI Event codes | |
| Enumerator | |
| SMCI_EVENT_RX_COMPLETE | Receive complete event. |
| SMCI_EVENT_TX_COMPLETE | Transmit complete event. |
| SMCI_EVENT_RX_CHAR | Character transfer is completed. |
| SMCI_EVENT_ERR_PARITY | Parity error event. |
| SMCI_EVENT_ERR_LOW_SIGNAL | Low error signal response occurred event. |
| SMCI_EVENT_ERR_OVERRUN | Overrun error event. |

◆ **smci_convention_type_t**

| enum smci_convention_type_t | |
|---|--|
| Enumerator | |
| SMCI_CONVENTION_TYPE_DIRECT | Direct convention type (LSB First, High=1) |
| SMCI_CONVENTION_TYPE_INVERSE | Inverse convention type (MSB First, Low=1) |

◆ **smci_clock_conversion_integer_t**

| enum smci_clock_conversion_integer_t | |
|--|---|
| Enumerator | |
| SMCI_CLOCK_CONVERSION_INTEGER_372_4 | 372 base cycles for 1-bit period, max freq = 4Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_372_5 | 372 base cycles for 1-bit period, max freq = 5Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_558_6 | 558 base cycles for 1-bit period, max freq = 6Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_744_8 | 744 base cycles for 1-bit period, max freq = 8Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_1116_12 | |

| | |
|---|---|
| | 1116 base cycles for 1-bit period, max freq = 12Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_1488_16 | 1488 base cycles for 1-bit period, max freq = 16Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_1860_20 | 1860 base cycles for 1-bit period, max freq = 20Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_UNSUPPORTED7 | Unsupported Clock Cycles. |
| SMCI_CLOCK_CONVERSION_INTEGER_UNSUPPORTED8 | Unsupported Clock Cycles. |
| SMCI_CLOCK_CONVERSION_INTEGER_512_5 | 512 base cycles for 1-bit period, max freq = 5Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_768_75 | 768 base cycles for 1-bit period, max freq = 7.5Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_1024_10 | 1024 base cycles for 1-bit period, max freq = 10Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_1536_15 | 1536 base cycles for 1-bit period, max freq = 15Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_2048_20 | 2048 base cycles for 1-bit period, max freq = 20Mhz |
| SMCI_CLOCK_CONVERSION_INTEGER_UNSUPPORTED14 | Unsupported Clock Cycles. |
| SMCI_CLOCK_CONVERSION_INTEGER_UNSUPPORTED15 | Unsupported Clock Cycles. |

◆ **smci_baudrate_adjustment_integer_t**

| enum <code>smci_baudrate_adjustment_integer_t</code> | |
|--|-----------|
| Enumerator | |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU0</code> | RESERVED. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_1</code> | Di=1. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_2</code> | Di=2. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_4</code> | Di=4. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_8</code> | Di=8. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_16</code> | Di=16. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_32</code> | Di=32. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_64</code> | Di=64. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_12</code> | Di=12. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_20</code> | Di=20. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU10</code> | RESERVED. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU11</code> | RESERVED. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU12</code> | RESERVED. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU13</code> | RESERVED. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU14</code> | RESERVED. |
| <code>SMCI_BAUDRATE_ADJUSTMENT_INTEGER_RFU15</code> | RESERVED. |

◆ **smci_protocol_type_t**

| | |
|---|--|
| enum <code>smci_protocol_type_t</code> | |
| SMCI Protocol Type according to ISO7816-3 | |
| Enumerator | |
| <code>SMCI_PROTOCOL_TYPE_T0</code> | Normal mode operation (Protocol T = 0) |
| <code>SMCI_PROTOCOL_TYPE_T1</code> | Block transfer mode operation (Protocol T = 1) |

5.3.5.10 SPI Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for SPI communications.

Summary

Provides a common interface for communication using the SPI Protocol.

Data Structures

struct `spi_callback_args_t`

struct `spi_write_read_guard_args_t`

struct `spi_cfg_t`

struct `spi_api_t`

struct `spi_instance_t`

Typedefs

typedef void `spi_ctrl_t`

Enumerations

enum `spi_bit_width_t`

enum `spi_mode_t`

enum `spi_clk_phase_t`

enum [spi_clk_polarity_t](#)enum [spi_mode_fault_t](#)enum [spi_bit_order_t](#)enum [spi_event_t](#)

Data Structure Documentation

◆ [spi_callback_args_t](#)

| | | |
|--|-----------|---|
| struct spi_callback_args_t | | |
| Common callback parameter definition | | |
| Data Fields | | |
| uint32_t | channel | Device channel number. |
| spi_event_t | event | Event code. |
| void const * | p_context | Context provided to user during callback. |

◆ [spi_write_read_guard_args_t](#)

| |
|--|
| struct spi_write_read_guard_args_t |
| Non-secure arguments for write-read guard function |

◆ [spi_cfg_t](#)

| | |
|----------------------------------|-----------------------------------|
| struct spi_cfg_t | |
| SPI interface configuration | |
| Data Fields | |
| uint8_t | channel |
| | Channel number to be used. |
| IRQn_Type | rx_irq |
| | Receive Buffer Full IRQ number. |
| IRQn_Type | tx_irq |
| | Transmit Buffer Empty IRQ number. |

| | |
|------------------------------------|--|
| IRQn_Type | tei_irq |
| | Transfer Complete IRQ number. |
| IRQn_Type | eri_irq |
| | Error IRQ number. |
| uint8_t | rx_ipl |
| | Receive Interrupt priority. |
| uint8_t | tx_ipl |
| | Transmit Interrupt priority. |
| uint8_t | tei_ipl |
| | Transfer Complete Interrupt priority. |
| uint8_t | eri_ipl |
| | Error Interrupt priority. |
| spi_mode_t | operating_mode |
| | Select master or slave operating mode. |
| spi_clk_phase_t | clk_phase |
| | Data sampling on odd or even clock edge. |
| spi_clk_polarity_t | clk_polarity |
| | Clock level when idle. |
| spi_mode_fault_t | mode_fault |

| | |
|--|---|
| | Mode fault error (master/slave conflict) flag. |
| | |
| <code>spi_bit_order_t</code> | <code>bit_order</code> |
| | Select to transmit MSB/LSB first. |
| | |
| <code>transfer_instance_t const *</code> | <code>p_transfer_tx</code> |
| | To use SPI DTC/DMAC write transfer, link a transfer instance here. Set to NULL if unused. |
| | |
| <code>transfer_instance_t const *</code> | <code>p_transfer_rx</code> |
| | To use SPI DTC/DMAC read transfer, link a transfer instance here. Set to NULL if unused. |
| | |
| <code>void(*</code> | <code>p_callback</code> <code>)(spi_callback_args_t *p_args)</code> |
| | Pointer to user callback function. |
| | |
| <code>void const *</code> | <code>p_context</code> |
| | User defined context passed to callback function. |
| | |
| <code>void const *</code> | <code>p_extend</code> |
| | Extended SPI hardware dependent configuration. |
| | |

◆ `spi_api_t`

| | |
|-------------------------------------|--|
| <code>struct spi_api_t</code> | |
| Shared Interface definition for SPI | |
| Data Fields | |
| <code>fsp_err_t(*</code> | <code>open</code> <code>)(spi_ctrl_t *p_ctrl, spi_cfg_t const *const p_cfg)</code> |
| | |
| <code>fsp_err_t(*</code> | <code>read</code> <code>)(spi_ctrl_t *const p_ctrl, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)</code> |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>write</code>)(<code>spi_ctrl_t *const p_ctrl, void const *p_src, uint32_t const length, spi_bit_width_t const bit_width</code>) |
| <code>fsp_err_t(*</code> | <code>writeRead</code>)(<code>spi_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width</code>) |
| <code>fsp_err_t(*</code> | <code>callbackSet</code>)(<code>spi_ctrl_t *const p_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory</code>) |
| <code>fsp_err_t(*</code> | <code>close</code>)(<code>spi_ctrl_t *const p_ctrl</code>) |

Field Documentation

◆ open

`fsp_err_t(* spi_api_t::open)` (`spi_ctrl_t *p_ctrl, spi_cfg_t const *const p_cfg`)

Initialize a channel for SPI communication mode.

Parameters

| | | |
|----------|---------------------|---|
| [in,out] | <code>p_ctrl</code> | Pointer to user-provided storage for the control block. |
| [in] | <code>p_cfg</code> | Pointer to SPI configuration structure. |

◆ read

```
fsp_err_t(* spi_api_t::read) (spi_ctrl_t *const p_ctrl, void *p_dest, uint32_t const length,
spi_bit_width_t const bit_width)
```

Receive data from a SPI device.

Parameters

| | | |
|-------|-----------|--|
| [in] | p_ctrl | Pointer to the control block for the channel. |
| [out] | p_dest | Pointer to destination buffer into which data will be copied that is received from a SPI device. It is the responsibility of the caller to ensure that adequate space is available to hold the requested data count. |
| [in] | length | Number of units of data to be transferred (unit size specified by the bit_width). |
| [in] | bit_width | Data bit width to be transferred. |

◆ write

```
fsp_err_t(* spi_api_t::write) (spi_ctrl_t *const p_ctrl, void const *p_src, uint32_t const length,
spi_bit_width_t const bit_width)
```

Transmit data to a SPI device.

Parameters

| | | |
|------|-----------|---|
| [in] | p_ctrl | Pointer to the control block for the channel. |
| [in] | p_src | Pointer to a source data buffer from which data will be transmitted to a SPI device. The argument must not be NULL. |
| [in] | length | Number of units of data to be transferred (unit size specified by the bit_width). |
| [in] | bit_width | Data bit width to be transferred. |

◆ writeRead

```
fsp_err_t(* spi_api_t::writeRead) (spi_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t
const length, spi_bit_width_t const bit_width)
```

Simultaneously transmit data to a SPI device while receiving data from a SPI device (full duplex).

Parameters

| | | |
|-------|-----------|---|
| [in] | p_ctrl | Pointer to the control block for the channel. |
| [in] | p_src | Pointer to a source data buffer from which data will be transmitted to a SPI device. The argument must not be NULL. |
| [out] | p_dest | Pointer to destination buffer into which data will be copied that is received from a SPI device. It is the responsibility of the caller to ensure that adequate space is available to hold the requested data count. The argument must not be NULL. |
| [in] | length | Number of units of data to be transferred (unit size specified by the bit_width). |
| [in] | bit_width | Data bit width to be transferred. |

◆ **callbackSet**

```
fsp_err_t(* spi_api_t::callbackSet) (spi_ctrl_t *const p_ctrl, void(*p_callback)(spi_callback_args_t *),
void const *const p_context, spi_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the SPI control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* spi_api_t::close) (spi_ctrl_t *const p_ctrl)
```

Remove power to the SPI channel designated by the handle and disable the associated interrupts.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to the control block for the channel. |
|------|--------|---|

◆ **spi_instance_t**

```
struct spi_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| spi_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| spi_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| spi_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **spi_ctrl_t**typedef void [spi_ctrl_t](#)

SPI control block. Allocate an instance specific control block to pass into the SPI API calls.

Enumeration Type Documentation◆ **spi_bit_width_t**enum [spi_bit_width_t](#)

Data bit width

Enumerator

| | |
|-----------------------|----------------------------|
| SPI_BIT_WIDTH_4_BITS | Data bit width is 4 bits. |
| SPI_BIT_WIDTH_5_BITS | Data bit width is 5 bits. |
| SPI_BIT_WIDTH_6_BITS | Data bit width is 6 bits. |
| SPI_BIT_WIDTH_7_BITS | Data bit width is 7 bits. |
| SPI_BIT_WIDTH_8_BITS | Data bit width is 8 bits. |
| SPI_BIT_WIDTH_9_BITS | Data bit width is 9 bits. |
| SPI_BIT_WIDTH_10_BITS | Data bit width is 10 bits. |
| SPI_BIT_WIDTH_11_BITS | Data bit width is 11 bits. |
| SPI_BIT_WIDTH_12_BITS | Data bit width is 12 bits. |
| SPI_BIT_WIDTH_13_BITS | Data bit width is 13 bits. |
| SPI_BIT_WIDTH_14_BITS | Data bit width is 14 bits. |
| SPI_BIT_WIDTH_15_BITS | Data bit width is 15 bits. |
| SPI_BIT_WIDTH_16_BITS | Data bit width is 16 bits. |
| SPI_BIT_WIDTH_17_BITS | Data bit width is 17 bits. |
| SPI_BIT_WIDTH_18_BITS | Data bit width is 18 bits. |
| SPI_BIT_WIDTH_19_BITS | Data bit width is 19 bits. |
| SPI_BIT_WIDTH_20_BITS | Data bit width is 20 bits. |

| | |
|-----------------------|----------------------------|
| SPI_BIT_WIDTH_21_BITS | Data bit width is 21 bits. |
| SPI_BIT_WIDTH_22_BITS | Data bit width is 22 bits. |
| SPI_BIT_WIDTH_23_BITS | Data bit width is 23 bits. |
| SPI_BIT_WIDTH_24_BITS | Data bit width is 24 bits. |
| SPI_BIT_WIDTH_25_BITS | Data bit width is 25 bits. |
| SPI_BIT_WIDTH_26_BITS | Data bit width is 26 bits. |
| SPI_BIT_WIDTH_27_BITS | Data bit width is 27 bits. |
| SPI_BIT_WIDTH_28_BITS | Data bit width is 28 bits. |
| SPI_BIT_WIDTH_29_BITS | Data bit width is 29 bits. |
| SPI_BIT_WIDTH_30_BITS | Data bit width is 30 bits. |
| SPI_BIT_WIDTH_31_BITS | Data bit width is 31 bits. |
| SPI_BIT_WIDTH_32_BITS | Data bit width is 32 bits. |

◆ spi_mode_t

| | |
|---------------------------------|---------------------------------|
| enum spi_mode_t | |
| Master or slave operating mode | |
| Enumerator | |
| SPI_MODE_MASTER | Channel operates as SPI master. |
| SPI_MODE_SLAVE | Channel operates as SPI slave. |

◆ **spi_clk_phase_t**

| | |
|--------------------------------------|---|
| enum <code>spi_clk_phase_t</code> | |
| Clock phase | |
| Enumerator | |
| <code>SPI_CLK_PHASE_EDGE_ODD</code> | 0: Data sampling on odd edge, data variation on even edge |
| <code>SPI_CLK_PHASE_EDGE_EVEN</code> | 1: Data variation on odd edge, data sampling on even edge |

◆ **spi_clk_polarity_t**

| | |
|--------------------------------------|-------------------------------------|
| enum <code>spi_clk_polarity_t</code> | |
| Clock polarity | |
| Enumerator | |
| <code>SPI_CLK_POLARITY_LOW</code> | 0: Clock polarity is low when idle |
| <code>SPI_CLK_POLARITY_HIGH</code> | 1: Clock polarity is high when idle |

◆ **spi_mode_fault_t**

| | |
|--|----------------------------|
| enum <code>spi_mode_fault_t</code> | |
| Mode fault error flag. This error occurs when the device is setup as a master, but the SS/SLA line does not seem to be controlled by the master. This usually happens when the connecting device is also acting as master. A similar situation can also happen when configured as a slave. | |
| Enumerator | |
| <code>SPI_MODE_FAULT_ERROR_ENABLE</code> | Mode fault error flag on. |
| <code>SPI_MODE_FAULT_ERROR_DISABLE</code> | Mode fault error flag off. |

◆ **spi_bit_order_t**

| enum spi_bit_order_t | |
|--------------------------------------|---------------------------------|
| Bit order | |
| Enumerator | |
| SPI_BIT_ORDER_MSB_FIRST | Send MSB first in transmission. |
| SPI_BIT_ORDER_LSB_FIRST | Send LSB first in transmission. |

◆ **spi_event_t**

| enum spi_event_t | |
|----------------------------------|----------------------------------|
| SPI events | |
| Enumerator | |
| SPI_EVENT_TRANSFER_COMPLETE | The data transfer was completed. |
| SPI_EVENT_TRANSFER_ABORTED | The data transfer was aborted. |
| SPI_EVENT_ERR_MODE_FAULT | Mode fault error. |
| SPI_EVENT_ERR_READ_OVERFLOW | Read overflow error. |
| SPI_EVENT_ERR_PARITY | Parity error. |
| SPI_EVENT_ERR_OVERRUN | Overrun error. |
| SPI_EVENT_ERR_FRAMING | Framing error. |
| SPI_EVENT_ERR_MODE_UNDERRUN | Underrun error. |

5.3.5.11 UART Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for UART communications.

Summary

The UART interface provides common APIs for UART HAL drivers. The UART interface supports the following features:

- Full-duplex UART communication
- Interrupt driven transmit/receive processing
- Callback function with returned event code
- Runtime baud-rate change
- Hardware resource locking during a transaction
- CTS/RTS hardware flow control support (with an associated IOPORT pin)

Data Structures

struct [uart_info_t](#)

struct [uart_callback_args_t](#)

struct [uart_cfg_t](#)

struct [uart_api_t](#)

struct [uart_instance_t](#)

Typedefs

typedef void [uart_ctrl_t](#)

Enumerations

enum [uart_event_t](#)

enum [uart_data_bits_t](#)

enum [uart_parity_t](#)

enum [uart_stop_bits_t](#)

enum [uart_dir_t](#)

Data Structure Documentation

◆ [uart_info_t](#)

| struct uart_info_t | | |
|------------------------------------|---------------------------------|--|
| UART driver specific information | | |
| Data Fields | | |
| uint32_t | write_bytes_max | Maximum bytes that can be written at this time. Only applies if uart_cfg_t::p_transfer_tx is not NULL. |

| | | |
|----------|----------------|--|
| uint32_t | read_bytes_max | Maximum bytes that are available to read at one time. Only applies if uart_cfg_t::p_transfer_rx is not NULL. |
|----------|----------------|--|

◆ **uart_callback_args_t**

| | | |
|------------------------------------|-----------|--|
| struct uart_callback_args_t | | |
| UART Callback parameter definition | | |
| Data Fields | | |
| uint32_t | channel | Device channel number. |
| uart_event_t | event | Event code. |
| uint32_t | data | Contains the next character received for the events UART_EVENT_RX_CHAR, UART_EVENT_ERR_PARITY, UART_EVENT_ERR_FRAMING, or UART_EVENT_ERR_OVERFLOW. Otherwise unused. |
| void const * | p_context | Context provided to user during callback. |

◆ **uart_cfg_t**

| | | |
|----------------------------------|---------------------------|---|
| struct uart_cfg_t | | |
| UART Configuration | | |
| Data Fields | | |
| uint8_t | channel | |
| | | Select a channel corresponding to the channel number of the hardware. |
| uart_data_bits_t | data_bits | |
| | | Data bit length (8 or 7 or 9) |
| uart_parity_t | parity | |
| | | Parity type (none or odd or even) |
| uart_stop_bits_t | stop_bits | |
| | | Stop bit length (1 or 2) |

| | |
|---|------------------------------------|
| | |
| uint8_t | rx_ipl |
| | Receive interrupt priority. |
| | |
| IRQn_Type | rx_irq |
| | Receive interrupt IRQ number. |
| | |
| uint8_t | tx_ipl |
| | Transmit interrupt priority. |
| | |
| IRQn_Type | tx_irq |
| | Transmit interrupt IRQ number. |
| | |
| uint8_t | tei_ipl |
| | Transmit end interrupt priority. |
| | |
| IRQn_Type | tei_irq |
| | Transmit end interrupt IRQ number. |
| | |
| uint8_t | eri_ipl |
| | Error interrupt priority. |
| | |
| IRQn_Type | eri_irq |
| | Error interrupt IRQ number. |
| | |
| transfer_instance_t const * | p_transfer_rx |
| | |
| transfer_instance_t const * | p_transfer_tx |
| | |

| | |
|--------------|--|
| void(* | p_callback)(uart_callback_args_t *p_args) |
| | Pointer to callback function. |
| void const * | p_context |
| | User defined context passed into callback function. |
| void const * | p_extend |
| | UART hardware dependent configuration. |

Field Documentation

◆ p_transfer_rx

[transfer_instance_t](#) const* uart_cfg_t::p_transfer_rx

Optional transfer instance used to receive multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the read API is limited to one byte at a time.

◆ p_transfer_tx

[transfer_instance_t](#) const* uart_cfg_t::p_transfer_tx

Optional transfer instance used to send multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the write APIs is limited to one byte at a time.

◆ uart_api_t

struct uart_api_t

Shared Interface definition for UART

Data Fields

| | |
|------------------------------|--|
| fsp_err_t (* | open)(uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg) |
| fsp_err_t (* | read)(uart_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes) |
| fsp_err_t (* | write)(uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes) |
| fsp_err_t (* | baudSet)(uart_ctrl_t *const p_ctrl, void const *const p_baudrate_info) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>infoGet)(uart_ctrl_t *const p_ctrl, uart_info_t *const p_info)</code> |
| <code>fsp_err_t(*</code> | <code>communicationAbort)(uart_ctrl_t *const p_ctrl, uart_dir_t communication_to_abort)</code> |
| <code>fsp_err_t(*</code> | <code>callbackSet)(uart_ctrl_t *const p_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory)</code> |
| <code>fsp_err_t(*</code> | <code>close)(uart_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>readStop)(uart_ctrl_t *const p_ctrl, uint32_t *remaining_bytes)</code> |

Field Documentation

◆ open

`fsp_err_t(* uart_api_t::open) (uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg)`

Open UART device.

Parameters

| | | |
|----------|-------------------------|--|
| [in,out] | <code>p_ctrl</code> | Pointer to the UART control block. Must be declared by user. Value set here. |
| [in] | <code>uart_cfg_t</code> | Pointer to UART configuration structure. All elements of this structure must be set by user. |

◆ read

`fsp_err_t(* uart_api_t::read) (uart_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)`

Read from UART device. The read buffer is used until the read is complete. When a transfer is complete, the callback is called with event `UART_EVENT_RX_COMPLETE`. Bytes received outside an active transfer are received in the callback function with event `UART_EVENT_RX_CHAR`. The maximum transfer size is reported by [infoGet\(\)](#).

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to the UART control block for the channel. |
| [in] | p_dest | Destination address to read data from. |
| [in] | bytes | Read data length. |

◆ write

`fsp_err_t(* uart_api_t::write) (uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes)`

Write to UART device. The write buffer is used until write is complete. Do not overwrite write buffer contents until the write is finished. When the write is complete (all bytes are fully transmitted on the wire), the callback called with event `UART_EVENT_TX_COMPLETE`. The maximum transfer size is reported by [infoGet\(\)](#).

Parameters

| | | |
|------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to the UART control block. |
| [in] | p_src | Source address to write data to. |
| [in] | bytes | Write data length. |

◆ **baudSet**

```
fsp_err_t(* uart_api_t::baudSet) (uart_ctrl_t *const p_ctrl, void const *const p_baudrate_info)
```

Change baud rate.

Warning

Calling this API aborts any in-progress transmission and disables reception until the new baud settings have been applied.

Parameters

| | | |
|------|-----------------|---|
| [in] | p_ctrl | Pointer to the UART control block. |
| [in] | p_baudrate_info | Pointer to module specific information for configuring baud rate. |

◆ **infoGet**

```
fsp_err_t(* uart_api_t::infoGet) (uart_ctrl_t *const p_ctrl, uart_info_t *const p_info)
```

Get the driver specific information.

Parameters

| | | |
|------|----------|------------------------------------|
| [in] | p_ctrl | Pointer to the UART control block. |
| [in] | baudrate | Baud rate in bps. |

◆ **communicationAbort**

```
fsp_err_t(* uart_api_t::communicationAbort) (uart_ctrl_t *const p_ctrl, uart_dir_t communication_to_abort)
```

Abort ongoing transfer.

Parameters

| | | |
|------|------------------------|------------------------------------|
| [in] | p_ctrl | Pointer to the UART control block. |
| [in] | communication_to_abort | Type of abort request. |

◆ **callbackSet**

```
fsp_err_t(* uart_api_t::callbackSet) (uart_ctrl_t *const p_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the UART control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* uart_api_t::close) (uart_ctrl_t *const p_ctrl)
```

Close UART device.

Parameters

| | | |
|------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to the UART control block. |
|------|--------|------------------------------------|

◆ **readStop**

```
fsp_err_t(* uart_api_t::readStop) (uart_ctrl_t *const p_ctrl, uint32_t *remaining_bytes)
```

Stop ongoing read and return the number of bytes remaining in the read.

Parameters

| | | |
|----------|-----------------|--|
| [in] | p_ctrl | Pointer to the UART control block. |
| [in,out] | remaining_bytes | Pointer to location to store remaining bytes for read. |

◆ **uart_instance_t**

```
struct uart_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------------|---------------------|---|
| <code>uart_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>uart_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>uart_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `uart_ctrl_t`

| |
|--|
| <code>typedef void uart_ctrl_t</code> |
| UART control block. Allocate an instance specific control block to pass into the UART API calls. |

Enumeration Type Documentation

◆ `uart_event_t`

| | |
|---------------------------------------|---|
| <code>enum uart_event_t</code> | |
| UART Event codes | |
| Enumerator | |
| <code>UART_EVENT_RX_COMPLETE</code> | Receive complete event. |
| <code>UART_EVENT_TX_COMPLETE</code> | Transmit complete event. |
| <code>UART_EVENT_RX_CHAR</code> | Character received. |
| <code>UART_EVENT_ERR_PARITY</code> | Parity error event. |
| <code>UART_EVENT_ERR_FRAMING</code> | Mode fault error event. |
| <code>UART_EVENT_ERR_OVERFLOW</code> | FIFO Overflow error event. |
| <code>UART_EVENT_BREAK_DETECT</code> | Break detect error event. |
| <code>UART_EVENT_TX_DATA_EMPTY</code> | Last byte is transmitting, ready for more data. |

◆ **uart_data_bits_t**

| enum <code>uart_data_bits_t</code> | |
|------------------------------------|------------------|
| UART Data bit length definition | |
| Enumerator | |
| <code>UART_DATA_BITS_5</code> | Data bits 5-bit. |
| <code>UART_DATA_BITS_9</code> | Data bits 9-bit. |
| <code>UART_DATA_BITS_7</code> | Data bits 7-bit. |
| <code>UART_DATA_BITS_8</code> | Data bits 8-bit. |
| <code>UART_DATA_BITS_9</code> | Data bits 9-bit. |
| <code>UART_DATA_BITS_8</code> | Data bits 8-bit. |
| <code>UART_DATA_BITS_7</code> | Data bits 7-bit. |

◆ **uart_parity_t**

| enum <code>uart_parity_t</code> | |
|---------------------------------|--------------|
| UART Parity definition | |
| Enumerator | |
| <code>UART_PARITY_OFF</code> | No parity. |
| <code>UART_PARITY_ZERO</code> | Zero parity. |
| <code>UART_PARITY_EVEN</code> | Even parity. |
| <code>UART_PARITY_ODD</code> | Odd parity. |

◆ **uart_stop_bits_t**

| | |
|------------------------------------|------------------|
| enum <code>uart_stop_bits_t</code> | |
| UART Stop bits definition | |
| Enumerator | |
| <code>UART_STOP_BITS_1</code> | Stop bit 1-bit. |
| <code>UART_STOP_BITS_2</code> | Stop bits 2-bit. |

◆ **uart_dir_t**

| | |
|------------------------------|-----------------|
| enum <code>uart_dir_t</code> | |
| UART transaction definition | |
| Enumerator | |
| <code>UART_DIR_RX_TX</code> | Both RX and TX. |
| <code>UART_DIR_RX</code> | Only RX. |
| <code>UART_DIR_TX</code> | Only TX. |

5.3.5.12 USB HCDC Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for USB HCDC functions.

Summary

The USB HCDC interface provides USB HCDC functionality.

Data Structures

struct `usb_hcdc_encapsulated_t`

| uint16_t | bover_run: 1 | Over Run error. |
| uint16_t | rsv: 9 | Reserved. |

◆ usb_hcdc_breakduration_t

| | | |
|---------------------------------|----------|--------------------|
| struct usb_hcdc_breakduration_t | | |
| Break duration data | | |
| Data Fields | | |
| uint16_t | wtime_ms | Duration of Break. |

◆ usb_hcdc_device_info_t

| | | |
|-------------------------------|------------|----------------|
| struct usb_hcdc_device_info_t | | |
| Break duration data | | |
| Data Fields | | |
| uint16_t | vendor_id | Vendor ID. |
| uint16_t | product_id | Product ID. |
| uint8_t | subclass | Subclass code. |

◆ usb_hcdc_api_t

| | | |
|---|--|--|
| struct usb_hcdc_api_t | | |
| USB HCDC functions implemented at the HAL layer will follow this API. | | |
| Data Fields | | |
| fsp_err_t(*) | controlDataRead)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t device_address) | |
| fsp_err_t(*) | deviceRegister)(usb_ctrl_t *const p_api_ctrl, uint16_t vendor_id, uint16_t product_id) | |
| fsp_err_t(*) | infoGet)(usb_ctrl_t *const p_api_ctrl, usb_hcdc_device_info_t *p_info, uint8_t device_address) | |
| Field Documentation | | |

◆ **controlDataRead**

```
fsp_err_t(* usb_hcdc_api_t::controlDataRead) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t device_address)
```

Read Control Data (CDC Interrupt IN data)

Parameters

| | | |
|------|----------------|--|
| [in] | p_api_ctrl | Pointer to control structure. |
| [in] | p_buf | Pointer to area that stores read data. |
| [in] | size | Read request size. |
| [in] | device_address | Device address. |

◆ **deviceRegister**

```
fsp_err_t(* usb_hcdc_api_t::deviceRegister) (usb_ctrl_t *const p_api_ctrl, uint16_t vendor_id, uint16_t product_id)
```

Register the specified vendor class device in the device table.

Parameters

| | | |
|------|------------|-------------------------------|
| [in] | p_api_ctrl | Pointer to control structure. |
| [in] | vendor_id | Vendor ID. |
| [in] | product_id | Product ID. |

◆ **infoGet**

```
fsp_err_t(* usb_hcdc_api_t::infoGet) (usb_ctrl_t *const p_api_ctrl, usb_hcdc_device_info_t *p_info, uint8_t device_address)
```

Get connected device information.

Parameters

| | | |
|------|----------------|--|
| [in] | p_api_ctrl | Pointer to control structure. |
| [in] | p_info | Pointer to store CDC device information. |
| [in] | device_address | Device address. |

◆ **usb_hcdc_instance_t**

```
struct usb_hcdc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------|--------|----------------------------------|
| usb_ctrl_t * | p_ctrl | Pointer to the control structure |
|--------------|--------|----------------------------------|

| | | |
|-------------------------------------|--------------------|---|
| | | for this instance. |
| <code>usb_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>usb_hcdc_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Enumeration Type Documentation

◆ `usb_hcdc_data_bit_t`

| | |
|---------------------------------------|--------|
| enum <code>usb_hcdc_data_bit_t</code> | |
| Virtual UART data length | |
| Enumerator | |
| <code>USB_HCDC_DATA_BIT_7</code> | 7 bits |
| <code>USB_HCDC_DATA_BIT_8</code> | 8 bits |

◆ `usb_hcdc_stop_bit_t`

| | |
|---------------------------------------|----------|
| enum <code>usb_hcdc_stop_bit_t</code> | |
| Virtual UART stop bit length | |
| Enumerator | |
| <code>USB_HCDC_STOP_BIT_1</code> | 1 bit |
| <code>USB_HCDC_STOP_BIT_15</code> | 1.5 bits |
| <code>USB_HCDC_STOP_BIT_2</code> | 2 bits |

◆ `usb_hcdc_parity_bit_t`

| | |
|---|----------------|
| enum <code>usb_hcdc_parity_bit_t</code> | |
| Virtual UART parity bit setting | |
| Enumerator | |
| <code>USB_HCDC_PARITY_BIT_NONE</code> | No parity bit. |
| <code>USB_HCDC_PARITY_BIT_ODD</code> | Odd parity. |
| <code>USB_HCDC_PARITY_BIT_EVEN</code> | Even parity. |

◆ usb_hcdc_line_speed_t

| |
|----------------------------|
| enum usb_hcdc_line_speed_t |
| Virtual UART bitrate |

◆ usb_hcdc_feature_selector_t

| |
|----------------------------------|
| enum usb_hcdc_feature_selector_t |
| Feature Selector |

5.3.5.13 USB HHID Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for USB HHID functions.

Summary

The USB HHID interface provides USB HHID functionality.

Data Structures

| | |
|--------|----------------|
| struct | usb_hhid_api_t |
|--------|----------------|

| | |
|--------|---------------------|
| struct | usb_hhid_instance_t |
|--------|---------------------|

Macros

| | | |
|---------|---------------|--------|
| #define | USB_HID_OTHER | Other. |
|---------|---------------|--------|

| | | |
|---------|------------------|-----------|
| #define | USB_HID_KEYBOARD | Keyboard. |
|---------|------------------|-----------|

| | | |
|---------|---------------|--------|
| #define | USB_HID_MOUSE | Mouse. |
|---------|---------------|--------|

| | | |
|---------|------------|--|
| #define | USB_HID_IN | |
|---------|------------|--|

In Transfer.

```
#define USB_HID_OUT
```

Out Transfer.

Data Structure Documentation

◆ usb_hhid_api_t

struct usb_hhid_api_t

USB HHID functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------|--|
| fsp_err_t(*) | <code>typeGet</code> (usb_ctrl_t *const p_ctrl, uint8_t *p_type, uint8_t device_address) |
|--------------|--|

| | |
|--------------|---|
| fsp_err_t(*) | <code>maxPacketSizeGet</code> (usb_ctrl_t *const p_ctrl, uint16_t *p_size, uint8_t direction, uint8_t device_address) |
|--------------|---|

Field Documentation

◆ typeGet

`fsp_err_t(*) usb_hhid_api_t::typeGet` (usb_ctrl_t *const p_ctrl, uint8_t *p_type, uint8_t device_address)

Get HID protocol.(USB Mouse/USB Keyboard/Other Type.)

Parameters

| | | |
|------|----------------|--------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_type | Pointer to store HID protocol value. |
| [in] | device_address | Device Address. |

◆ **maxPacketSizeGet**

```
fsp_err_t(* usb_hhid_api_t::maxPacketSizeGet) (usb_ctrl_t *const p_ctrl, uint16_t *p_size, uint8_t direction, uint8_t device_address)
```

Obtains max packet size for the connected HID device. The max packet size is set to the area. Set the direction (USB_HID_IN/USB_HID_OUT).

Parameters

| | | |
|------|----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_size | Pointer to the area to store the max package size. |
| [in] | direction | Transfer direction. |
| [in] | device_address | Device Address. |

◆ **usb_hhid_instance_t**

```
struct usb_hhid_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------|--------|---|
| usb_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| usb_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| usb_hhid_api_t const * | p_api | Pointer to the API structure for this instance. |

5.3.5.14 USB HMSC Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for USB HMSC functions.

Summary

The USB HMSC interface provides USB HMSC functionality.

Data Structures

```
struct usb_hmsc_api_t
```

Enumerations

enum [usb_atapi_t](#)enum [usb_csw_result_t](#)

Data Structure Documentation

◆ [usb_hmsc_api_t](#)

struct [usb_hmsc_api_t](#)

USB HMSC functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|------------------------------|--|
| fsp_err_t (* | storageCommand)(usb_ctrl_t *const p_ctrl, uint8_t *buf, uint8_t command, uint8_t destination) |

Field Documentation

◆ **storageCommand**

`fsp_err_t(* usb_hmsc_api_t::storageCommand) (usb_ctrl_t *const p_ctrl, uint8_t *buf, uint8_t command, uint8_t destination)`

Processing for MassStorage(ATAPI) command.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | *buf | Pointer to the buffer area to store the transfer data. |
| [in] | command | ATAPI command. |
| [in] | destination | Represents a device address. |

◆ **driveNumberGet**

`fsp_err_t(* usb_hmsc_api_t::driveNumberGet) (usb_ctrl_t *const p_ctrl, uint8_t *p_drive, uint8_t destination)`

Get number of Storage drive.

Parameters

| | | |
|-------|-------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_drive | Store address for Drive No. |
| [in] | destination | Represents a device address. |

◆ **storageReadSector**

`fsp_err_t(* usb_hmsc_api_t::storageReadSector) (uint16_t drive_number, uint8_t *const buff, uint32_t sector_number, uint16_t sector_count)`

Read sector information.

Parameters

| | | |
|-------|---------------|--|
| [in] | drive_number | Drive number. |
| [out] | *buff | Pointer to the buffer area to store the transfer data. |
| [in] | sector_number | The sector number to start with. |
| [in] | sector_count | Transmit with the sector size of the number of times. |

◆ **storageWriteSector**

```
fsp_err_t(* usb_hmsc_api_t::storageWriteSector) (uint16_t drive_number, uint8_t const *const buff,
uint32_t sector_number, uint16_t sector_count)
```

Write sector information.

Parameters

| | | |
|------|---------------|--|
| [in] | drive_number | Drive number. |
| [in] | *buff | Pointer to the buffer area to store the transfer data. |
| [in] | sector_number | The sector number to start with. |
| [in] | sector_count | Transmit with the sector size of the number of times. |

◆ **semaphoreGet**

```
fsp_err_t(* usb_hmsc_api_t::semaphoreGet) (void)
```

Get Semaphore.

◆ **semaphoreRelease**

```
fsp_err_t(* usb_hmsc_api_t::semaphoreRelease) (void)
```

Release Semaphore.

Enumeration Type Documentation

◆ **usb_atapi_t**

| enum usb_atapi_t | |
|--------------------------------|-----------------------|
| ATAPI commands | |
| Enumerator | |
| USB_ATAPI_TEST_UNIT_READY | Test Unit Ready. |
| USB_ATAPI_REQUEST_SENSE | Request Sense. |
| USB_ATAPI_FORMAT_UNIT | Format Unit. |
| USB_ATAPI_INQUIRY | Inquiry. |
| USB_ATAPI_MODE_SELECT6 | Mode Select6. |
| USB_ATAPI_MODE_SENSE6 | Mode Sense6. |
| USB_ATAPI_START_STOP_UNIT | Start Stop Unit. |
| USB_ATAPI_PREVENT_ALLOW | Prevent Allow. |
| USB_ATAPI_READ_FORMAT_CAPACITY | Read Format Capacity. |
| USB_ATAPI_READ_CAPACITY | Read Capacity. |
| USB_ATAPI_READ10 | Read10. |
| USB_ATAPI_WRITE10 | Write10. |
| USB_ATAPI_SEEK | Seek. |
| USB_ATAPI_WRITE_AND_VERIFY | Write and Verify. |
| USB_ATAPI_VERIFY10 | Verify10. |
| USB_ATAPI_MODE_SELECT10 | Mode Select10. |
| USB_ATAPI_MODE_SENSE10 | Mode Sense10. |

◆ **usb_csw_result_t**

| enum <code>usb_csw_result_t</code> | |
|-------------------------------------|----------------------|
| Command Status Wrapper (CSW) | |
| Enumerator | |
| <code>USB_CSW_RESULT_SUCCESS</code> | CSW was successful. |
| <code>USB_CSW_RESULT_FAIL</code> | CSW failed. |
| <code>USB_CSW_RESULT_PHASE</code> | CSW has phase error. |

5.3.5.15 USB Interface[Interfaces](#) » [Connectivity](#)**Detailed Description**

Interface for USB functions.

Summary

The USB interface provides USB functionality.

Data Structures

```
struct usb\_cfg\_t
```

```
struct usb\_api\_t
```

```
struct usb\_instance\_t
```

Macros

```
#define USB\_BREQUEST  
b15-8
```

```
#define USB\_GET\_STATUS  
USB Standard request Get Status.
```

```
#define USB\_CLEAR\_FEATURE  
USB Standard request Clear Feature.
```

```
#define USB_REQRESERVED
        USB Standard request Reqreserved.
```

```
#define USB_SET_FEATURE
        USB Standard request Set Feature.
```

```
#define USB_REQRESERVED1
        USB Standard request Reqreserved1.
```

```
#define USB_SET_ADDRESS
        USB Standard request Set Address.
```

```
#define USB_GET_DESCRIPTOR
        USB Standard request Get Descriptor.
```

```
#define USB_SET_DESCRIPTOR
        USB Standard request Set Descriptor.
```

```
#define USB_GET_CONFIGURATION
        USB Standard request Get Configuration.
```

```
#define USB_SET_CONFIGURATION
        USB Standard request Set Configuration.
```

```
#define USB_GET_INTERFACE
        USB Standard request Get Interface.
```

```
#define USB_SET_INTERFACE
        USB Standard request Set Interface.
```

```
#define USB_SYNCH_FRAME
        USB Standard request Synch Frame.
```

```
#define USB_HOST_TO_DEV
    From host to device.
```

```
#define USB_DEV_TO_HOST
    From device to host.
```

```
#define USB_STANDARD
    Standard Request.
```

```
#define USB_CLASS
    Class Request.
```

```
#define USB_VENDOR
    Vendor Request.
```

```
#define USB_DEVICE
    Device.
```

```
#define USB_INTERFACE
    Interface.
```

```
#define USB_ENDPOINT
    End Point.
```

```
#define USB_OTHER
    Other.
```

```
#define USB_NULL
    NULL pointer.
```

```
#define USB_IP0
    USB0 module.
```

```
#define USB_IP1
```

USB1 module.

```
#define USB_PIPE0  
Pipe Number0.
```

```
#define USB_PIPE1  
Pipe Number1.
```

```
#define USB_PIPE2  
Pipe Number2.
```

```
#define USB_PIPE3  
Pipe Number3.
```

```
#define USB_PIPE4  
Pipe Number4.
```

```
#define USB_PIPE5  
Pipe Number5.
```

```
#define USB_PIPE6  
Pipe Number6.
```

```
#define USB_PIPE7  
Pipe Number7.
```

```
#define USB_PIPE8  
Pipe Number8.
```

```
#define USB_PIPE9  
Pipe Number9.
```

```
#define USB_EP0  
End Point Number0.
```

```
#define USB_EP1  
    End Point Number1.
```

```
#define USB_EP2  
    End Point Number2.
```

```
#define USB_EP3  
    End Point Number3.
```

```
#define USB_EP4  
    End Point Number4.
```

```
#define USB_EP5  
    End Point Number5.
```

```
#define USB_EP6  
    End Point Number6.
```

```
#define USB_EP7  
    End Point Number7.
```

```
#define USB_EP8  
    End Point Number8.
```

```
#define USB_EP9  
    End Point Number9.
```

```
#define USB_EP10  
    End Point Number10.
```

```
#define USB_EP11  
    End Point Number11.
```

```
#define USB_EP12
    End Point Number12.
```

```
#define USB_EP13
    End Point Number13.
```

```
#define USB_EP14
    End Point Number14.
```

```
#define USB_EP15
    End Point Number15.
```

```
#define USB_EP_DIR
    b7: Endpoint Direction
```

```
#define USB_EP_DIR_IN
    b7: Endpoint Direction In
```

```
#define USB_EP_DIR_OUT
    b7: Endpoint Direction Out
```

```
#define USB_DT_DEVICE
    Device Descriptor.
```

```
#define USB_DT_CONFIGURATION
    Configuration Descriptor.
```

```
#define USB_DT_STRING
    String Descriptor.
```

```
#define USB_DT_INTERFACE
    Interface Descriptor.
```

```
#define USB_DT_ENDPOINT
```

Endpoint Descriptor.

```
#define USB_DT_DEVICE_QUALIFIER  
Device Qualifier Descriptor.
```

```
#define USB_DT_OTHER_SPEED_CONF  
Other Speed Configuration Descriptor.
```

```
#define USB_DT_INTERFACE_POWER  
Interface Power Descriptor.
```

```
#define USB_DT_OTGDESCRIPTOR  
OTG Descriptor.
```

```
#define USB_DT_HUBDESCRIPTOR  
HUB descriptor.
```

```
#define USB_IFCLS_NOT  
Un corresponding Class.
```

```
#define USB_IFCLS_AUD  
Audio Class.
```

```
#define USB_IFCLS_CDC  
CDC Class.
```

```
#define USB_IFCLS_CDCC  
CDC-Control Class.
```

```
#define USB_IFCLS_HID  
HID Class.
```

```
#define USB_IFCLS_PHY  
Physical Class.
```

```
#define USB_IFCLS_IMG  
Image Class.
```

```
#define USB_IFCLS_PRN  
Printer Class.
```

```
#define USB_IFCLS_MAS  
Mass Storage Class.
```

```
#define USB_IFCLS_HUB  
HUB Class.
```

```
#define USB_IFCLS_CDCD  
CDC-Data Class.
```

```
#define USB_IFCLS_CHIP  
Chip/Smart Card Class.
```

```
#define USB_IFCLS_CNT  
Content-Security Class.
```

```
#define USB_IFCLS_VID  
Video Class.
```

```
#define USB_IFCLS_DIAG  
Diagnostic Device.
```

```
#define USB_IFCLS_WIRE  
Wireless Controller.
```

```
#define USB_IFCLS_APL  
Application-Specific.
```

```
#define USB_IFCLS_VEN
Vendor-Specific Class.
```

```
#define USB_EP_IN
In Endpoint.
```

```
#define USB_EP_OUT
Out Endpoint.
```

```
#define USB_EP_ISO
Isochronous Transfer.
```

```
#define USB_EP_BULK
Bulk Transfer.
```

```
#define USB_EP_INT
Interrupt Transfer.
```

```
#define USB_CF_RESERVED
Reserved(set to 1)
```

```
#define USB_CF_SELFP
Self Powered.
```

```
#define USB_CF_BUSP
Bus Powered.
```

```
#define USB_CF_RWUPON
Remote Wake up ON.
```

```
#define USB_CF_RWUPOFF
Remote Wake up OFF.
```

```
#define USB_DD_BLENGTH
```

Device Descriptor Length.

```
#define USB_CD_BLENGTH
Configuration Descriptor Length.
```

```
#define USB_ID_BLENGTH
Interface Descriptor Length.
```

```
#define USB_ED_BLENGTH
Endpoint Descriptor Length.
```

Typedefs

```
typedef void usb_ctrl_t
```

Enumerations

```
enum usb_speed_t
```

```
enum usb_setup_status_t
```

```
enum usb_status_t
```

```
enum usb_class_t
```

```
enum usb_bcport_t
```

```
enum usb_onoff_t
```

```
enum usb_transfer_t
```

```
enum usb_transfer_type_t
```

```
enum usb_mode_t
```

```
enum usb_compliancetest_status_t
```

Data Structure Documentation

◆ usb_cfg_t

```
struct usb_cfg_t
```

USB configuration.

Data Fields

| | | |
|--|---------------------------------|---|
| <code>usb_mode_t</code> | <code>usb_mode</code> | USB_MODE_HOST/USB_MODE_P ERI. |
| <code>usb_speed_t</code> | <code>usb_speed</code> | USB speed (USB_HS/USB_FS/USB_LS) |
| <code>uint8_t</code> | <code>module_number</code> | USB module number (USB_IP0/USB_IP1) |
| <code>usb_class_t</code> | <code>type</code> | USB device class etc. |
| <code>usb_descriptor_t *</code> | <code>p_usb_reg</code> | Pointer to the <code>usb_descriptor_t</code> structure area. |
| <code>usb_compliance_cb_t *</code> | <code>usb_compliance_cb</code> | |
| <code>IRQn_Type</code> | <code>irq</code> | USBI dedicated interrupt number storage variable. |
| <code>IRQn_Type</code> | <code>irq_r</code> | USBR dedicated interrupt number storage variable. |
| <code>IRQn_Type</code> | <code>irq_d0</code> | FS D0FIFO dedicated interrupt number storage variable. |
| <code>IRQn_Type</code> | <code>irq_d1</code> | FS D1FIFO dedicated interrupt number storage variable. |
| <code>IRQn_Type</code> | <code>hsirq</code> | USBIR dedicated interrupt number storage variable. |
| <code>IRQn_Type</code> | <code>hsirq_d0</code> | HS D0FIFO dedicated interrupt number storage variable. |
| <code>IRQn_Type</code> | <code>hsirq_d1</code> | HS D1FIFO dedicated interrupt number storage variable. |
| <code>uint8_t</code> | <code>ipl</code> | Variable to store the interrupt priority of USBI. |
| <code>uint8_t</code> | <code>ipl_r</code> | Variable to store the interrupt priority of USBR. |
| <code>uint8_t</code> | <code>ipl_d0</code> | Variable to store the interrupt priority of FS D0FIFO. |
| <code>uint8_t</code> | <code>ipl_d1</code> | Variable to store the interrupt priority of FS D1FIFO. |
| <code>uint8_t</code> | <code>hsipl</code> | Variable to store the interrupt priority of USBIR. |
| <code>uint8_t</code> | <code>hsipl_d0</code> | Variable to store the interrupt priority of HS D0FIFO. |
| <code>uint8_t</code> | <code>hsipl_d1</code> | Variable to store the interrupt priority of HS D1FIFO. |
| <code>usb_callback_t *</code> | <code>p_usb_apl_callback</code> | Application Callback. |
| <code>void const *</code> | <code>p_context</code> | Other Context. |
| <code>const transfer_instance_t *</code> | <code>p_transfer_tx</code> | Send context. |

| | | |
|---|---------------|---|
| const transfer_instance_t * | p_transfer_rx | Receive context. |
| void const * | p_extend | Pointer to extended configuration by instance of interface. |

◆ [usb_api_t](#)

| | | |
|--|--|--|
| struct usb_api_t | | |
| Functions implemented at the HAL layer will follow this API. | | |

Field Documentation

◆ open

`fsp_err_t(* usb_api_t::open) (usb_ctrl_t *const p_ctrl, usb_cfg_t const *const p_cfg)`

Start the USB module

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ close

`fsp_err_t(* usb_api_t::close) (usb_ctrl_t *const p_ctrl)`

Stop the USB module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ read

```
fsp_err_t(* usb_api_t::read) (usb_ctrl_t *const p_ctrl, uint8_t *p_buf, uint32_t size, uint8_t destination)
```

Request USB data read

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buf | Pointer to area that stores read data. |
| [in] | size | Read request size. |
| [in] | destination | In Host mode, it represents the device address, and in Peripheral mode, it represents the device class. |

◆ write

```
fsp_err_t(* usb_api_t::write) (usb_ctrl_t *const p_ctrl, uint8_t const *const p_buf, uint32_t size, uint8_t destination)
```

Request USB data write

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buf | Pointer to area that stores write data. |
| [in] | size | Read request size. |
| [in] | destination | In Host mode, it represents the device address, and in Peripheral mode, it represents the device class. |

◆ stop

```
fsp_err_t(* usb_api_t::stop) (usb_ctrl_t *const p_ctrl, usb_transfer_t direction, uint8_t destination)
```

Stop USB data read/write processing

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | direction | Receive (USB_TRANSFER_READ) or send (USB_TRANSFER_WRITE). |
| [in] | destination | In Host mode, it represents the device address, and in Peripheral mode, it represents the device class. |

◆ suspend

```
fsp_err_t(* usb_api_t::suspend) (usb_ctrl_t *const p_ctrl)
```

Request suspend

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ resume

```
fsp_err_t(* usb_api_t::resume) (usb_ctrl_t *const p_ctrl)
```

Request resume

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ vbusSet

```
fsp_err_t(* usb_api_t::vbusSet) (usb_ctrl_t *const p_ctrl, uint16_t state)
```

Sets VBUS supply start/stop.

Parameters

| | | |
|------|--------|--------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | state | VBUS supply start/stop specification |

◆ infoGet

```
fsp_err_t(* usb_api_t::infoGet) (usb_ctrl_t *const p_ctrl, usb_info_t *p_info, uint8_t destination)
```

Get information on USB device.

Parameters

| | | |
|------|-------------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_info | Pointer to usb_info_t structure area. |
| [in] | destination | Device address for Host. |

◆ pipeRead

```
fsp_err_t(* usb_api_t::pipeRead) (usb_ctrl_t *const p_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)
```

Request data read from specified pipe

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buf | Pointer to area that stores read data. |
| [in] | size | Read request size. |
| [in] | pipe_number | Pipe Number. |

◆ pipeWrite

```
fsp_err_t(* usb_api_t::pipeWrite) (usb_ctrl_t *const p_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)
```

Request data write to specified pipe

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buf | Pointer to area that stores write data. |
| [in] | size | Read request size. |
| [in] | pipe_number | Pipe Number. |

◆ **pipeStop**

```
fsp_err_t(* usb_api_t::pipeStop) (usb_ctrl_t *const p_ctrl, uint8_t pipe_number)
```

Stop USB data read/write processing to specified pipe

Parameters

| | | |
|------|-------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pipe_number | Pipe Number. |

◆ **usedPipesGet**

```
fsp_err_t(* usb_api_t::usedPipesGet) (usb_ctrl_t *const p_ctrl, uint16_t *p_pipe, uint8_t destination)
```

Get pipe number

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_pipe | Pointer to area that stores the selected pipe number (bit map information). |
| [in] | destination | Device address for Host. |

◆ **pipeInfoGet**

```
fsp_err_t(* usb_api_t::pipeInfoGet) (usb_ctrl_t *const p_ctrl, usb_pipe_t *p_info, uint8_t pipe_number)
```

Get pipe information

Parameters

| | | |
|------|-------------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_info | Pointer to usb_pipe_t structure area. |
| [in] | pipe_number | Pipe Number. |

◆ **eventGet**

```
fsp_err_t(* usb_api_t::eventGet) (usb_ctrl_t *const p_ctrl, usb_status_t *event)
```

Return USB-related completed events (OS less only)

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | event | Pointer to event. |

◆ **callback**

`fsp_err_t(* usb_api_t::callback) (usb_callback_t *p_callback)`

Register a callback function to be called upon completion of a USB related event. (RTOS only)

Parameters

| | | |
|------|------------|-------------------------------|
| [in] | p_callback | Pointer to Callback function. |
|------|------------|-------------------------------|

◆ **pullUp**

`fsp_err_t(* usb_api_t::pullUp) (usb_ctrl_t *const p_ctrl, uint8_t state)`

Pull-up enable/disable setting of D+/D- line.

Parameters

| | | |
|------|--------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | state | Pull-up enable/disable setting. |

◆ **hostControlTransfer**

`fsp_err_t(* usb_api_t::hostControlTransfer) (usb_ctrl_t *const p_ctrl, usb_setup_t *p_setup, uint8_t *p_buf, uint8_t device_address)`

Performs settings and transmission processing when transmitting a setup packet.

Parameters

| | | |
|------|----------------|-----------------------------|
| [in] | p_ctrl | USB control structure. |
| [in] | p_setup | Setup packet information. |
| [in] | p_buf | Transfer area information. |
| [in] | device_address | Device address information. |

◆ **periControlDataGet**

`fsp_err_t(* usb_api_t::periControlDataGet) (usb_ctrl_t *const p_ctrl, uint8_t *p_buf, uint32_t size)`

Receives data sent by control transfer.

Parameters

| | | |
|------|--------|----------------------------------|
| [in] | p_ctrl | USB control structure. |
| [in] | p_buf | Data reception area information. |
| [in] | size | Data reception size information. |

◆ **periControlDataSet**

`fsp_err_t(* usb_api_t::periControlDataSet) (usb_ctrl_t *const p_ctrl, uint8_t *p_buf, uint32_t size)`

Performs transfer processing for control transfer.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | USB control structure. |
| [in] | p_buf | Area information for data transfer. |
| [in] | size | Transfer size information. |

◆ **periControlStatusSet**

`fsp_err_t(* usb_api_t::periControlStatusSet) (usb_ctrl_t *const p_ctrl, usb_setup_status_t status)`

Set the response to the setup packet.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | USB control structure. |
| [in] | status | USB port startup information. |

◆ **remoteWakeup**

`fsp_err_t(* usb_api_t::remoteWakeup) (usb_ctrl_t *const p_ctrl)`

Sends a remote wake-up signal to the connected Host.

Parameters

| | | |
|------|--------|------------------------|
| [in] | p_ctrl | USB control structure. |
|------|--------|------------------------|

◆ **driverActivate**

`fsp_err_t(* usb_api_t::driverActivate) (usb_ctrl_t *const p_api_ctrl)`

Activate USB Driver

Parameters

| | | |
|------|------------|------------------------|
| [in] | p_api_ctrl | USB control structure. |
|------|------------|------------------------|

◆ **callbackMemorySet**

```
fsp_err_t(* usb_api_t::callbackMemorySet) (usb_ctrl_t *const p_api_ctrl, usb_callback_args_t *p_callback_memory)
```

Set callback memory to USB driver.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_api_ctrl | USB control structure. |
| [in] | p_callback_memory | Pointer to store USB event information. |

◆ **moduleNumberGet**

```
fsp_err_t(* usb_api_t::moduleNumberGet) (usb_ctrl_t *const p_ctrl, uint8_t *module_number)
```

This API gets the module number.

Parameters

| | | |
|-------|---------------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | module_number | Module number to get. |

◆ **classTypeGet**

```
fsp_err_t(* usb_api_t::classTypeGet) (usb_ctrl_t *const p_ctrl, usb_class_t *class_type)
```

This API gets the module number.

Parameters

| | | |
|-------|------------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | class_type | Class type to get. |

◆ **deviceAddressGet**

```
fsp_err_t(* usb_api_t::deviceAddressGet) (usb_ctrl_t *const p_ctrl, uint8_t *device_address)
```

This API gets the device address.

Parameters

| | | |
|-------|----------------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | device_address | Device address to get. |

◆ **pipeNumberGet**

```
fsp_err_t(* usb_api_t::pipeNumberGet) (usb_ctrl_t *const p_ctrl, uint8_t *pipe_number)
```

This API gets the pipe number.

Parameters

| | | |
|-------|-------------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | pipe_number | Pipe number to get. |

◆ **deviceStateGet**

```
fsp_err_t(* usb_api_t::deviceStateGet) (usb_ctrl_t *const p_ctrl, uint16_t *state)
```

This API gets the state of the device.

Parameters

| | | |
|-------|--------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | state | Device state to get. |

◆ **dataSizeGet**

```
fsp_err_t(* usb_api_t::dataSizeGet) (usb_ctrl_t *const p_ctrl, uint32_t *data_size)
```

This API gets the data size.

Parameters

| | | |
|-------|-----------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | data_size | Data size to get. |

◆ **setupGet**

```
fsp_err_t(* usb_api_t::setupGet) (usb_ctrl_t *const p_ctrl, usb_setup_t *setup)
```

This API gets the setup type.

Parameters

| | | |
|-------|--------|------------------------|
| [in] | p_ctrl | USB control structure. |
| [out] | setup | Setup type to get. |

◆ **otgCallbackSet**

```
fsp_err_t(* usb_api_t::otgCallbackSet) (usb_ctrl_t *const p_ctrl, usb_otg_callback_t *p_callback)
```

This API sets the callback function for OTG.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | USB control structure. |
| [in] | p_callback | Pointer to the callback function for OTG. |

◆ **otgSRP**

```
fsp_err_t(* usb_api_t::otgSRP) (usb_ctrl_t *const p_ctrl)
```

This API starts SRP processing for OTG.

Parameters

| | | |
|------|--------|------------------------|
| [in] | p_ctrl | USB control structure. |
|------|--------|------------------------|

◆ **usb_instance_t**

```
struct usb_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| usb_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| usb_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| usb_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **usb_ctrl_t**

```
typedef void usb_ctrl_t
```

USB control block. Allocate an instance specific control block to pass into the USB API calls.

Enumeration Type Documentation

◆ **usb_speed_t**

| | |
|-------------------------------|-----------------------|
| enum <code>usb_speed_t</code> | |
| USB speed type | |
| Enumerator | |
| <code>USB_SPEED_LS</code> | Low speed operation. |
| <code>USB_SPEED_FS</code> | Full speed operation. |
| <code>USB_SPEED_HS</code> | Hi speed operation. |

◆ **usb_setup_status_t**

| | |
|--------------------------------------|-----------------|
| enum <code>usb_setup_status_t</code> | |
| USB request result | |
| Enumerator | |
| <code>USB_SETUP_STATUS_ACK</code> | ACK response. |
| <code>USB_SETUP_STATUS_STALL</code> | STALL response. |

◆ **usb_status_t**

| enum <code>usb_status_t</code> | |
|--|-------------------------|
| USB driver status | |
| Enumerator | |
| <code>USB_STATUS_POWERED</code> | Powered State. |
| <code>USB_STATUS_DEFAULT</code> | Default State. |
| <code>USB_STATUS_ADDRESS</code> | Address State. |
| <code>USB_STATUS_CONFIGURED</code> | Configured State. |
| <code>USB_STATUS_SUSPEND</code> | Suspend State. |
| <code>USB_STATUS_RESUME</code> | Resume State. |
| <code>USB_STATUS_DETACH</code> | Detach State. |
| <code>USB_STATUS_REQUEST</code> | Request State. |
| <code>USB_STATUS_REQUEST_COMPLETE</code> | Request Complete State. |
| <code>USB_STATUS_READ_COMPLETE</code> | Read Complete State. |
| <code>USB_STATUS_WRITE_COMPLETE</code> | Write Complete State. |
| <code>USB_STATUS_BC</code> | battery Charge State |
| <code>USB_STATUS_OVERCURRENT</code> | Over Current state. |
| <code>USB_STATUS_NOT_SUPPORT</code> | Device Not Support. |
| <code>USB_STATUS_NONE</code> | None Status. |
| <code>USB_STATUS_MSC_CMD_COMPLETE</code> | MSC_CMD Complete. |

◆ **usb_class_t**

| enum <code>usb_class_t</code> | |
|-------------------------------|-------------|
| USB class type | |
| Enumerator | |
| <code>USB_CLASS_PCDC</code> | PCDC Class. |

| | |
|-------------------|---------------------|
| USB_CLASS_PCDCC | PCDCC Class. |
| USB_CLASS_PCDC2 | PCDC2 Class. |
| USB_CLASS_PCDCC2 | PCDCC2 Class. |
| USB_CLASS_PHID | PHID Class. |
| USB_CLASS_PHID2 | PHID2 Class. |
| USB_CLASS_PAUD | PAUD Class. |
| USB_CLASS_PPRN | PPRN Class. |
| USB_CLASS_DFU | DFU Class. |
| USB_CLASS_PVND | PVND Class. |
| USB_CLASS_HCDC | HCDC Class. |
| USB_CLASS_HCDCC | HCDCC Class. |
| USB_CLASS_HHID | HHID Class. |
| USB_CLASS_HVND | HVND Class. |
| USB_CLASS_HMSC | HMSC Class. |
| USB_CLASS_PMSC | PMSC Class. |
| USB_CLASS_HPRN | HPRN Class. |
| USB_CLASS_HUVC | HUVC Class. |
| USB_CLASS_REQUEST | USB Class Request. |
| USB_CLASS_HUB | HUB Class. |
| USB_CLASS_END | USB Class End Code. |

◆ **usb_bcport_t**

| | |
|-----------------------------------|--------------------|
| enum usb_bcport_t | |
| USB battery charging type | |
| Enumerator | |
| USB_BCPORT_SDP | SDP port settings. |
| USB_BCPORT_CDP | CDP port settings. |
| USB_BCPORT_DCP | DCP port settings. |

◆ **usb_onoff_t**

| | |
|----------------------------------|----------------|
| enum usb_onoff_t | |
| USB status | |
| Enumerator | |
| USB_OFF | USB Off State. |
| USB_ON | USB On State. |

◆ **usb_transfer_t**

| | |
|-------------------------------------|----------------------------------|
| enum usb_transfer_t | |
| USB read/write type | |
| Enumerator | |
| USB_TRANSFER_READ | Data Receive communication. |
| USB_TRANSFER_WRITE | Data transmission communication. |

◆ **usb_transfer_type_t**

| enum <code>usb_transfer_type_t</code> | |
|---------------------------------------|----------------------------|
| USB transfer type | |
| Enumerator | |
| <code>USB_TRANSFER_TYPE_BULK</code> | Bulk communication. |
| <code>USB_TRANSFER_TYPE_INT</code> | Interrupt communication. |
| <code>USB_TRANSFER_TYPE_ISO</code> | Isochronous communication. |

◆ **usb_mode_t**

| enum <code>usb_mode_t</code> | |
|------------------------------|------------------|
| Enumerator | |
| <code>USB_MODE_HOST</code> | Host mode. |
| <code>USB_MODE_PERI</code> | Peripheral mode. |

◆ **usb_compliancetest_status_t**

| enum <code>usb_compliancetest_status_t</code> | |
|---|--|
| Enumerator | |
| <code>USB_COMPLIANCETEST_ATTACH</code> | Device Attach Detection. |
| <code>USB_COMPLIANCETEST_DETACH</code> | Device Detach Detection. |
| <code>USB_COMPLIANCETEST_TPL</code> | TPL device connect. |
| <code>USB_COMPLIANCETEST_NOTTPL</code> | Not TPL device connect. |
| <code>USB_COMPLIANCETEST_HUB</code> | USB Hub connect. |
| <code>USB_COMPLIANCETEST_OVRC</code> | Over current. |
| <code>USB_COMPLIANCETEST_NORES</code> | Response Time out for Control Read Transfer. |
| <code>USB_COMPLIANCETEST_SETUP_ERR</code> | Setup Transaction Error. |

5.3.5.16 USB PCDC Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for USB PCDC functions.

Summary

The USB PCDC interface provides USB PCDC functionality.

Data Structures

struct [usb_serial_state_bitmap_t](#)

union [usb_sci_serialstate_t](#)

struct [usb_pcdc_linecoding_t](#)

struct [usb_pcdc_ctrllinestate_t](#)

Macros

```
#define USB\_PCDC\_SET\_LINE\_CODING  
Set Line Coding.
```

```
#define USB\_PCDC\_GET\_LINE\_CODING  
Get Line Coding.
```

```
#define USB\_PCDC\_SET\_CONTROL\_LINE\_STATE  
Control Line State.
```

```
#define USB\_PCDC\_SERIAL\_STATE  
Serial State Code.
```

```
#define USB\_PCDC\_SETUP\_TBL\_BSIZE  
Setup packet table size (uint16_t * 5)
```

Data Structure Documentation

◆ **usb_serial_state_bitmap_t**

| | | |
|----------------------------------|------------------|----------------|
| struct usb_serial_state_bitmap_t | | |
| Virtual UART signal state | | |
| Data Fields | | |
| uint16_t | b_rx_carrier: 1 | DCD signal. |
| uint16_t | b_tx_carrier: 1 | DSR signal. |
| uint16_t | b_break: 1 | Break signal. |
| uint16_t | b_ring_signal: 1 | Ring signal. |
| uint16_t | b_framing: 1 | Framing error. |
| uint16_t | b_parity: 1 | Parity error. |
| uint16_t | b_over_run: 1 | Overrun error. |
| uint16_t | rsv: 9 | Reserved. |

◆ **usb_sci_serialstate_t**

| | | |
|---|------|--------------|
| union usb_sci_serialstate_t | | |
| Class Notification Serial State | | |
| Data Fields | | |
| uint32_t | word | Word Access. |
| usb_serial_state_bitmap_t | bit | Bit Access. |

◆ **usb_pcdc_linecoding_t**

| | | |
|-------------------------------------|---------------|------------|
| struct usb_pcdc_linecoding_t | | |
| Virtual UART communication settings | | |
| Data Fields | | |
| uint32_t | dw_dte_rate | Bitrate. |
| uint8_t | b_char_format | Stop bits. |
| uint8_t | b_parity_type | Parity. |
| uint8_t | b_data_bits | Data bits. |
| uint8_t | rsv | Reserved. |

◆ **usb_pcdc_ctrllinestate_t**

| | | |
|---------------------------------|---------|------|
| struct usb_pcdc_ctrllinestate_t | | |
| Virtual UART control line state | | |
| Data Fields | | |
| uint16_t | bdtr: 1 | DTR. |
| uint16_t | brts: 1 | RTS. |

| | | |
|----------|---------|-----------|
| uint16_t | rsv: 14 | Reserved. |
|----------|---------|-----------|

5.3.5.17 USB PHID Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for USB PHID functions.

Summary

The USB interface provides USB functionality.

5.3.5.18 USB PMSC Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for USB PMSC functions.

Summary

The USB PMSC interface provides USB PMSC functionality.

Macros

```
#define USB_MASS_STORAGE_RESET  
Mass storage reset request code.
```

```
#define USB_GET_MAX_LUN  
Get max logical unit number request code.
```

5.3.5.19 USB PPRN Interface

[Interfaces](#) » [Connectivity](#)

Detailed Description

Interface for USB PPRN functions.

Summary

The USB PPRN interface provides USB PPRN functionality.

Macros

```
#define USB_PPRN_GET_DEVICE_ID  
Get Device ID.
```

```
#define USB_PPRN_GET_PORT_STATUS  
Get Port Status.
```

```
#define USB_PPRN_SOFT_RESET  
Soft Reset.
```

```
#define USB_PPRN_PORT_STATUS_PAPER_EMPTY  
1: Paper Empty, 0: Paper Not Empty
```

```
#define USB_PPRN_PORT_STATUS_SELECT  
1: Selected, 0: Not Selected
```

```
#define USB_PPRN_PORT_STATUS_NOT_ERROR  
1: No Error, 0; Error
```

5.3.6 DSP

Interfaces

Detailed Description

DSP Interfaces.

Modules

IIR Interface

Interface for IIR filter functionality.

5.3.6.1 IIR Interface

[Interfaces](#) » [DSP](#)

Detailed Description

Interface for IIR filter functionality.

Summary

The IIR interface allows access to the IIRFA peripheral for hardware acceleration of direct form 2 transposed biquad IIR filters.

Data Structures

struct [iir_filter_coeffs_t](#)

struct [iir_filter_state_t](#)

struct [iir_filter_cfg_t](#)

struct [iir_status_t](#)

struct [iir_cfg_t](#)

struct [iir_api_t](#)

struct [iirfa_instance_t](#)

Typedefs

typedef void [iir_ctrl_t](#)

Data Structure Documentation

◆ [iir_filter_coeffs_t](#)

| struct iir_filter_coeffs_t | | |
|--|----|-----------------|
| Filter stage coefficient data | | |
| Data Fields | | |
| float | b0 | Coefficient B0. |
| float | b1 | Coefficient B1. |
| float | b2 | Coefficient B2. |
| float | a1 | Coefficient A0. |

| | | |
|-------|----|-----------------|
| float | a2 | Coefficient A1. |
|-------|----|-----------------|

◆ **iir_filter_state_t**

| | | |
|---------------------------|----|--------------------|
| struct iir_filter_state_t | | |
| Filter stage state data | | |
| Data Fields | | |
| float | d0 | State variable D0. |
| float | d1 | State variable D1. |

◆ **iir_filter_cfg_t**

| | | |
|--------------------------------------|----------------|---------------------------------|
| struct iir_filter_cfg_t | | |
| Filter configuration | | |
| Data Fields | | |
| iir_filter_coefs_t * | p_filter_coefs | Filter coefficients. |
| iir_filter_state_t * | p_filter_state | Filter state data. |
| uint8_t | stage_base | Hardware stage to start from. |
| uint8_t | stage_num | Number of filter stages to use. |

◆ **iir_status_t**

| | | |
|------------------------------|--|--|
| struct iir_status_t | | |
| Filter state register status | | |

◆ **iir_cfg_t**

| | | |
|-----------------------------------|----------|-----------------------|
| struct iir_cfg_t | | |
| IIRFA API configuration parameter | | |
| Data Fields | | |
| void const * | p_extend | |
| uint8_t | channel | IIRFA channel to use. |

◆ **iir_api_t**

| | | |
|---|---|--|
| struct iir_api_t | | |
| IIR driver structure. IIR functions implemented at the HAL layer follow this API. | | |
| Data Fields | | |
| fsp_err_t (* | open)(iir_ctrl_t *const p_ctrl, iir_cfg_t const *const p_cfg) | |
| fsp_err_t (* | close)(iir_ctrl_t *const p_ctrl) | |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>configure)(iir_ctrl_t *const p_ctrl, iir_filter_cfg_t const *const p_filter_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>filter)(iir_ctrl_t *const p_ctrl, float const *p_data_in, float *p_data_out, uint16_t const num_samples)</code> |
| <code>fsp_err_t(*</code> | <code>statusGet)(iir_ctrl_t *const p_ctrl, iir_status_t *const p_status)</code> |

Field Documentation

◆ open

`fsp_err_t(* iir_api_t::open)(iir_ctrl_t *const p_ctrl, iir_cfg_t const *const p_cfg)`

Initial configuration.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ close

`fsp_err_t(* iir_api_t::close)(iir_ctrl_t *const p_ctrl)`

Close the IIRFA channel.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Control block set in <code>iir_api_t::open</code> . |
|------|---------------------|---|

◆ **configure**

```
fsp_err_t(* iir_api_t::configure) (iir_ctrl_t *const p_ctrl, iir_filter_cfg_t const *const p_filter_cfg)
```

Configure filter coefficients and state variables.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Control block set in iir_api_t::open . |
| [in] | p_filter_cfg | Pointer to filter configuration to write. |

◆ **filter**

```
fsp_err_t(* iir_api_t::filter) (iir_ctrl_t *const p_ctrl, float const *p_data_in, float *p_data_out, uint16_t const num_samples)
```

Filter the specified data.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Control block set in iir_api_t::open . |
| [in] | p_data_in | Pointer to float input data. |
| [in] | p_data_out | Pointer to float output buffer. |
| [in] | num_samples | Number of samples to process. |

◆ **statusGet**

```
fsp_err_t(* iir_api_t::statusGet) (iir_ctrl_t *const p_ctrl, iir_status_t *const p_status)
```

Retrieve current status (including state registers).

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Control block set in iir_api_t::open . |
| [in] | p_status | Pointer to status struct. |

◆ **iirfa_instance_t**

```
struct iirfa_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------------|--------|---|
| iir_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
|------------------------------|--------|---|

| | | |
|--------------------------------|--------------------|---|
| <code>iir_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>iir_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `iir_ctrl_t`

```
typedef void iir_ctrl_t
```

IIR control block. Allocate an instance specific control block to pass into the DAC API calls.

5.3.7 Graphics

Interfaces

Detailed Description

Graphics Interfaces.

Modules

[CAPTURE Interface](#)

Interface for CAPTURE functions.

[Display Interface](#)

Interface for LCD panel displays.

[JPEG Codec Interface](#)

Interface for JPEG functions.

[MIPI DSI Interface](#)

Interface for MIPI DSI communications.

[SLCDC Interface](#)

Interface for Segment LCD controllers.

5.3.7.1 CAPTURE Interface

[Interfaces](#) » [Graphics](#)

Detailed Description

Interface for CAPTURE functions.

Summary

The CAPTURE interface provides the functionality for capturing an image from an image sensor/camera. When a capture is complete a capture complete interrupt is triggered.

Data Structures

struct [capture_status_t](#)

struct [capture_callback_args_t](#)

struct [capture_cfg_t](#)

struct [capture_api_t](#)

struct [capture_instance_t](#)

Typedefs

typedef uint32_t [capture_event_t](#)

typedef void [capture_ctrl_t](#)

Enumerations

enum [capture_state_t](#)

Data Structure Documentation

◆ [capture_status_t](#)

| | | |
|---|-----------|--|
| struct capture_status_t | | |
| CAPTURE status | | |
| Data Fields | | |
| capture_state_t | state | Current state. |
| uint32_t* | p_buffer | Pointer to active buffer. |
| uint32_t | data_size | Size of data written to provided buffer. |

◆ **capture_callback_args_t**

| | | |
|--|-----------|---|
| struct capture_callback_args_t | | |
| CAPTURE callback function parameter data | | |
| Data Fields | | |
| capture_event_t | event | Event causing the callback. |
| uint8_t * | p_buffer | Pointer to buffer that contains captured data. |
| void const * | p_context | Placeholder for user data. Set in capture_api_t::open function in capture_cfg_t . |

◆ **capture_cfg_t**

| | |
|-----------------------------------|---|
| struct capture_cfg_t | |
| CAPTURE configuration parameters. | |
| Data Fields | |
| uint16_t | x_capture_start_pixel |
| | Horizontal position to start capture. |
| uint16_t | x_capture_pixels |
| | Number of horizontal pixels to capture. |
| uint16_t | y_capture_start_pixel |
| | Vertical position to start capture. |
| uint16_t | y_capture_pixels |
| | Number of vertical lines/pixels to capture. |
| uint8_t | bytes_per_pixel |
| | Number of bytes per pixel. |
| void(*) | p_callback (capture_callback_args_t *p_args) |
| | Callback provided when a CAPTURE transfer ISR occurs. |

| | |
|--------------|---|
| | |
| void const * | p_context |
| | User defined context passed to callback function. |
| | |
| void const * | p_extend |
| | Extension parameter for hardware specific settings. |
| | |

◆ capture_api_t

| | |
|--|---|
| struct capture_api_t | |
| CAPTURE functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(capture_ctrl_t *const p_ctrl, capture_cfg_t const *const p_cfg) |
| fsp_err_t (* | close)(capture_ctrl_t *const p_ctrl) |
| fsp_err_t (* | captureStart)(capture_ctrl_t *const p_ctrl, uint8_t *const p_buffer) |

| fsp_err_t (* | statusGet)(capture_ctrl_t *const p_ctrl, capture_status_t *p_status) |
| Field Documentation | |
| | |

◆ **open**

`fsp_err_t(* capture_api_t::open) (capture_ctrl_t *const p_ctrl, capture_cfg_t const *const p_cfg)`

Initial configuration.

Note

To reconfigure after calling this function, call `capture_api_t::close` first.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **close**

`fsp_err_t(* capture_api_t::close) (capture_ctrl_t *const p_ctrl)`

Closes the driver and allows reconfiguration. May reduce power consumption.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **captureStart**

`fsp_err_t(* capture_api_t::captureStart) (capture_ctrl_t *const p_ctrl, uint8_t *const p_buffer)`

Start a capture.

Parameters

| | | |
|------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buffer | New pointer to store captured image data. |

◆ **callbackSet**

```
fsp_err_t(* capture_api_t::callbackSet) (capture_ctrl_t *const p_ctrl,
void(*p_callback)(capture_callback_args_t *), void const *const p_context, capture_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the CAPTURE control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **statusGet**

```
fsp_err_t(* capture_api_t::statusGet) (capture_ctrl_t *const p_ctrl, capture_status_t *p_status)
```

Check scan status.

Parameters

| | | |
|-------|----------|-------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [out] | p_status | Pointer to store current status in |

◆ **capture_instance_t**

```
struct capture_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------|--------|---|
| capture_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| capture_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| capture_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **capture_event_t**typedef uint32_t [capture_event_t](#)

CAPTURE callback event ID - see implementation for details

◆ **capture_ctrl_t**typedef void [capture_ctrl_t](#)

CAPTURE control block. Allocate an instance specific control block to pass into the CAPTURE API calls.

Enumeration Type Documentation◆ **capture_state_t**enum [capture_state_t](#)

CAPTURE states.

Enumerator

| | |
|---------------------------|------------------------------|
| CAPTURE_STATE_IDLE | CAPTURE is idle. |
| CAPTURE_STATE_IN_PROGRESS | CAPTURE capture in progress. |
| CAPTURE_STATE_BUSY | CAPTURE reset in progress. |

5.3.7.2 Display Interface[Interfaces](#) » [Graphics](#)**Detailed Description**

Interface for LCD panel displays.

Summary

The display interface provides standard display functionality:

- Signal timing configuration for LCD panels with RGB interface.
- Dot clock source selection (internal or external) and frequency divider.
- Blending of multiple graphics layers on the background screen.
- Color correction (brightness/configuration/gamma correction).
- Interrupts and callback function.

Data Structures

struct [display_timing_t](#)

struct [display_color_t](#)

Data Structure Documentation

◆ [display_timing_t](#)

| struct display_timing_t | | |
|---|-------------------------------|---|
| Display signal timing setting | | |
| Data Fields | | |
| uint16_t | total_cyc | Total cycles in one line or total lines in one frame. |
| uint16_t | display_cyc | Active video cycles or lines. |
| uint16_t | back_porch | Back porch cycles or lines. |
| uint16_t | sync_width | Sync signal asserting width. |
| display_signal_polarity_t | sync_polarity | Sync signal polarity. |

◆ [display_color_t](#)

| struct display_color_t |
|--|
| RGB Color setting |

◆ [display_coordinate_t](#)

| | | |
|------------------------------------|---|--|
| struct display_coordinate_t | | |
| Contrast (gain) correction setting | | |
| Data Fields | | |
| int16_t | x | Coordinate X, this allows to set signed value. |
| int16_t | y | Coordinate Y, this allows to set signed value. |

◆ display_brightness_t

| | | |
|------------------------------------|--------|---|
| struct display_brightness_t | | |
| Brightness (DC) correction setting | | |
| Data Fields | | |
| bool | enable | Brightness Correction On/Off. |
| uint16_t | r | Brightness (DC) adjustment for R channel. |
| uint16_t | g | Brightness (DC) adjustment for G channel. |
| uint16_t | b | Brightness (DC) adjustment for B channel. |

◆ display_contrast_t

| | | |
|------------------------------------|--------|---|
| struct display_contrast_t | | |
| Contrast (gain) correction setting | | |
| Data Fields | | |
| bool | enable | Contrast Correction On/Off. |
| uint8_t | r | Contrast (gain) adjustment for R channel. |
| uint8_t | g | Contrast (gain) adjustment for G channel. |
| uint8_t | b | Contrast (gain) adjustment for B channel. |

◆ display_correction_t

| | | |
|-----------------------------|------------|-------------|
| struct display_correction_t | | |
| Color correction setting | | |
| Data Fields | | |
| display_brightness_t | brightness | Brightness. |
| display_contrast_t | contrast | Contrast. |

◆ gamma_correction_t

| | | |
|---|-----------|--------------------------|
| struct gamma_correction_t | | |
| Gamma correction setting for each color | | |
| Data Fields | | |
| bool | enable | Gamma Correction On/Off. |
| uint16_t * | gain | Gain adjustment. |
| uint16_t * | threshold | Start threshold. |

◆ display_gamma_correction_t

| | | |
|-----------------------------------|---|---------------------------------|
| struct display_gamma_correction_t | | |
| Gamma correction setting | | |
| Data Fields | | |
| gamma_correction_t | r | Gamma correction for R channel. |
| gamma_correction_t | g | Gamma correction for G channel. |
| gamma_correction_t | b | Gamma correction for B channel. |

◆ display_clut_t

| | | |
|-----------------------|-----------|--|
| struct display_clut_t | | |
| CLUT setting | | |
| Data Fields | | |
| uint32_t | color_num | The number of colors in CLUT. |
| const uint32_t * | p_clut | Address of the area storing the CLUT data (in ARGB8888 format) |

◆ display_colorkeying_cfg_t

| | | |
|----------------------------------|-------------|---------------------------|
| struct display_colorkeying_cfg_t | | |
| Color Keying setting | | |
| Data Fields | | |
| display_color_t | src_color | Source color. |
| display_color_t | dst_color | Destination color. |
| display_color_keying_t | enable_ckey | Select enable or disable. |

◆ display_colorkeying_layer_t

| | | |
|------------------------------------|--|--|
| struct display_colorkeying_layer_t | | |
| Color Keying layer setting | | |

◆ **display_input_cfg_t**

| | | |
|--|------------------------|------------------------------------|
| struct display_input_cfg_t | | |
| Graphics plane input configuration structure | | |
| Data Fields | | |
| uint32_t * | p_base | Base address to the frame buffer. |
| uint16_t | hsize | Horizontal pixel size in a line. |
| uint16_t | vsize | Vertical pixel size in a frame. |
| uint32_t | hstride | Memory stride (bytes) in a line. |
| display_in_format_t | format | Input format setting. |
| bool | line_descending_enable | Line descending enable. |
| bool | lines_repeat_enable | Line repeat enable. |
| uint16_t | lines_repeat_times | Expected number of line repeating. |

◆ **display_output_cfg_t**

| | | |
|--|----------------------|--------------------------------------|
| struct display_output_cfg_t | | |
| Display output configuration structure | | |
| Data Fields | | |
| display_timing_t | htiming | Horizontal display cycle setting. |
| display_timing_t | vtiming | Vertical display cycle setting. |
| display_out_format_t | format | Output format setting. |
| display_endian_t | endian | Bit order of output data. |
| display_color_order_t | color_order | Color order in pixel. |
| display_signal_polarity_t | data_enable_polarity | Data Enable signal polarity. |
| display_sync_edge_t | sync_edge | Signal sync edge selection. |
| display_color_t | bg_color | Background color. |
| display_brightness_t | brightness | Brightness setting. |
| display_contrast_t | contrast | Contrast setting. |
| display_gamma_correction_t * | p_gamma_correction | Pointer to gamma correction setting. |
| bool | dithering_on | Dithering on/off. |

◆ **display_layer_t**

| | | |
|--|--|--|
| struct display_layer_t | | |
| Graphics layer blend setup parameter structure | | |

| Data Fields | | |
|--|--------------|---|
| display_coordinate_t | coordinate | Blending location (starting point of image) |
| display_color_t | bg_color | Color outside region. |
| display_fade_control_t | fade_control | Layer fade-in/out control on/off. |
| uint8_t | fade_speed | Layer fade-in/out frame rate. |

◆ [display_callback_args_t](#)

| Data Fields | | |
|---------------------------------|-----------|---|
| display_event_t | event | Event code. |
| void const * | p_context | Context provided to user during callback. |

◆ [display_cfg_t](#)

| Data Fields | | |
|--------------------------------------|---------------------------------|---|
| display_input_cfg_t | input [2] | Graphics input frame setting. More... |
| display_output_cfg_t | output | Graphics output frame setting. |
| display_layer_t | layer [2] | Graphics layer blend setting. |
| uint8_t | line_detect_ip1 | Line detect interrupt priority. |
| uint8_t | underflow_1_ip1 | Underflow 1 interrupt priority. |

| | |
|--------------|---|
| uint8_t | underflow_2_ipi |
| | Underflow 2 interrupt priority. |
| IRQn_Type | line_detect_irq |
| | Line detect interrupt vector. |
| IRQn_Type | underflow_1_irq |
| | Underflow 1 interrupt vector. |
| IRQn_Type | underflow_2_irq |
| | Underflow 2 interrupt vector. |
| void(* | p_callback)(display_callback_args_t *p_args) |
| | Pointer to callback function. More... |
| void const * | p_context |
| | User defined context passed into callback function. |
| void const * | p_extend |
| | Display hardware dependent configuration. More... |

Field Documentation

◆ input

[display_input_cfg_t](#) display_cfg_t::input[2]

Graphics input frame setting.

Generic configuration for display devices

◆ **p_callback**

```
void(* display_cfg_t::p_callback) (display_callback_args_t *p_args)
```

Pointer to callback function.

Configuration for display event processing

◆ **p_extend**

```
void const* display_cfg_t::p_extend
```

Display hardware dependent configuration.

Pointer to display peripheral specific configuration

◆ **display_runtime_cfg_t**

```
struct display_runtime_cfg_t
```

Display main configuration structure

Data Fields

| | | |
|-------------------------------------|-------|--|
| display_input_cfg_t | input | Graphics input frame setting. Generic configuration for display devices |
| display_layer_t | layer | Graphics layer alpha blending setting. |

◆ **display_clut_cfg_t**

```
struct display_clut_cfg_t
```

Display CLUT configuration structure

Data Fields

| | | |
|------------|--------|--|
| uint32_t * | p_base | Pointer to CLUT source data. |
| uint16_t | start | Beginning of CLUT entry to be updated. |
| uint16_t | size | Size of CLUT entry to be updated. |

◆ **display_status_t**

```
struct display_status_t
```

Display Status

Data Fields

| | | |
|---------------------------------------|--|------------------------------------|
| display_state_t | state | Status of display module. |
| display_fade_status_t | fade_status[DISPLAY_FRAME_LAYER_2+1] | Status of fade-in/fade-out status. |

◆ **display_api_t**

| struct display_api_t | |

| fsp_err_t(*) | clut)(display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer) |
| fsp_err_t(*) | clutEdit)(display_ctrl_t const *const p_ctrl, display_frame_layer_t layer, uint8_t index, uint32_t color) |
| fsp_err_t(*) | colorKeySet)(display_ctrl_t const *const p_ctrl, display_colorkeying_layer_t key_cfg, display_frame_layer_t layer) |
| fsp_err_t(*) | statusGet)(display_ctrl_t const *const p_ctrl, display_status_t *const p_status) |
| Field Documentation | |
| | |

◆ **open**

```
fsp_err_t(* display_api_t::open) (display_ctrl_t *const p_ctrl, display_cfg_t const *const p_cfg)
```

Open display device.

Parameters

| | | |
|----------|--------|---|
| [in,out] | p_ctrl | Pointer to display interface control block. Must be declared by user. Value set here. |
| [in] | p_cfg | Pointer to display configuration structure. All elements of this structure must be set by user. |

◆ **close**

```
fsp_err_t(* display_api_t::close) (display_ctrl_t *const p_ctrl)
```

Close display device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **start**

```
fsp_err_t(* display_api_t::start) (display_ctrl_t *const p_ctrl)
```

Display start.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **stop**

```
fsp_err_t(* display_api_t::stop) (display_ctrl_t *const p_ctrl)
```

Display stop.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **layerChange**

```
fsp_err_t(* display_api_t::layerChange) (display_ctrl_t const *const p_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t frame)
```

Change layer parameters at runtime.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | p_cfg | Pointer to run-time layer configuration structure. |
| [in] | frame | Number of graphic frames. |

◆ **bufferChange**

```
fsp_err_t(* display_api_t::bufferChange) (display_ctrl_t const *const p_ctrl, uint8_t *const framebuffer, display_frame_layer_t frame)
```

Change layer framebuffer pointer.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | framebuffer | Pointer to desired framebuffer. |
| [in] | frame | Number of graphic frames. |

◆ **correction**

```
fsp_err_t(* display_api_t::correction) (display_ctrl_t const *const p_ctrl, display_correction_t const *const p_param)
```

Color correction.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | param | Pointer to color correction configuration structure. |

◆ **clut**

```
fsp_err_t(* display_api_t::clut) (display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer)
```

Set CLUT for display device.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | p_clut_cfg | Pointer to CLUT configuration structure. |
| [in] | layer | Layer number corresponding to the CLUT. |

◆ **clutEdit**

```
fsp_err_t(* display_api_t::clutEdit) (display_ctrl_t const *const p_ctrl, display_frame_layer_t layer, uint8_t index, uint32_t color)
```

Set CLUT element for display device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | layer | Layer number corresponding to the CLUT. |
| [in] | index | CLUT element index. |
| [in] | color | Desired CLUT index color. |

◆ **colorKeySet**

```
fsp_err_t(* display_api_t::colorKeySet) (display_ctrl_t const *const p_ctrl, display_colorkeying_layer_t key_cfg, display_frame_layer_t layer)
```

Configure color keying.

Parameters

| | | |
|------|---------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | key_cfg | Pointer to color keying configuration. |
| [in] | layer | Layer to apply color keying. |

◆ **statusGet**

```
fsp_err_t(* display_api_t::statusGet) (display_ctrl_t const *const p_ctrl, display_status_t *const p_status)
```

Get status for display device.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | status | Pointer to display interface status structure. |

◆ **display_instance_t**

```
struct display_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------|--------|---|
| display_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| display_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| display_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **display_ctrl_t**

```
typedef void display_ctrl_t
```

Display control block. Allocate an instance specific control block to pass into the display API calls. Display control block

Enumeration Type Documentation◆ **display_frame_layer_t**

```
enum display_frame_layer_t
```

Display frame number

Enumerator

| | |
|-----------------------|----------------|
| DISPLAY_FRAME_LAYER_1 | Frame layer 1. |
| DISPLAY_FRAME_LAYER_2 | Frame layer 2. |

◆ **display_state_t**

| enum <code>display_state_t</code> | |
|---------------------------------------|-----------------|
| Display interface operation state | |
| Enumerator | |
| <code>DISPLAY_STATE_CLOSED</code> | Display closed. |
| <code>DISPLAY_STATE_OPENED</code> | Display opened. |
| <code>DISPLAY_STATE_DISPLAYING</code> | Displaying. |

◆ **display_event_t**

| enum <code>display_event_t</code> | |
|---|-----------------------------------|
| Display event codes | |
| Enumerator | |
| <code>DISPLAY_EVENT_GR1_UNDERFLOW</code> | Graphics frame1 underflow occurs. |
| <code>DISPLAY_EVENT_GR2_UNDERFLOW</code> | Graphics frame2 underflow occurs. |
| <code>DISPLAY_EVENT_LINE_DETECTION</code> | Designated line is processed. |
| <code>DISPLAY_EVENT_FRAME_END</code> | Frame end is processed. |

◆ **display_in_format_t**

| enum <code>display_in_format_t</code> | |
|--|--------------------|
| Input format setting | |
| Enumerator | |
| <code>DISPLAY_IN_FORMAT_32BITS_ARGB8888</code> | ARGB8888, 32 bits. |
| <code>DISPLAY_IN_FORMAT_32BITS_RGB888</code> | RGB888, 32 bits. |
| <code>DISPLAY_IN_FORMAT_16BITS_RGB565</code> | RGB565, 16 bits. |
| <code>DISPLAY_IN_FORMAT_16BITS_ARGB1555</code> | ARGB1555, 16 bits. |
| <code>DISPLAY_IN_FORMAT_16BITS_ARGB4444</code> | ARGB4444, 16 bits. |
| <code>DISPLAY_IN_FORMAT_CLUT8</code> | CLUT8. |
| <code>DISPLAY_IN_FORMAT_CLUT4</code> | CLUT4. |
| <code>DISPLAY_IN_FORMAT_CLUT1</code> | CLUT1. |

◆ **display_out_format_t**

| enum <code>display_out_format_t</code> | |
|---|------------------|
| Output format setting | |
| Enumerator | |
| <code>DISPLAY_OUT_FORMAT_24BITS_RGB888</code> | RGB888, 24 bits. |
| <code>DISPLAY_OUT_FORMAT_18BITS_RGB666</code> | RGB666, 18 bits. |
| <code>DISPLAY_OUT_FORMAT_16BITS_RGB565</code> | RGB565, 16 bits. |
| <code>DISPLAY_OUT_FORMAT_8BITS_SERIAL</code> | SERIAL, 8 bits. |

◆ **display_endian_t**

| | |
|------------------------------------|----------------|
| enum <code>display_endian_t</code> | |
| Data endian select | |
| Enumerator | |
| <code>DISPLAY_ENDIAN_LITTLE</code> | Little-endian. |
| <code>DISPLAY_ENDIAN_BIG</code> | Big-endian. |

◆ **display_color_order_t**

| | |
|---|------------------|
| enum <code>display_color_order_t</code> | |
| RGB color order select | |
| Enumerator | |
| <code>DISPLAY_COLOR_ORDER_RGB</code> | Color order RGB. |
| <code>DISPLAY_COLOR_ORDER_BGR</code> | Color order BGR. |

◆ **display_signal_polarity_t**

| | |
|---|---------------------|
| enum <code>display_signal_polarity_t</code> | |
| Polarity of a signal select | |
| Enumerator | |
| <code>DISPLAY_SIGNAL_POLARITY_LOACTIVE</code> | Low active signal. |
| <code>DISPLAY_SIGNAL_POLARITY_HIACTIVE</code> | High active signal. |

◆ **display_sync_edge_t**

| | |
|---|---|
| enum <code>display_sync_edge_t</code> | |
| Signal synchronization edge select | |
| Enumerator | |
| <code>DISPLAY_SIGNAL_SYNC_EDGE_RISING</code> | Signal is synchronized to rising edge. |
| <code>DISPLAY_SIGNAL_SYNC_EDGE_FALLING</code> | Signal is synchronized to falling edge. |

◆ **display_fade_control_t**

| | |
|---|-----------------------------|
| enum display_fade_control_t | |
| Fading control | |
| Enumerator | |
| DISPLAY_FADE_CONTROL_NONE | Applying no fading control. |
| DISPLAY_FADE_CONTROL_FADEIN | Applying fade-in control. |
| DISPLAY_FADE_CONTROL_FADEOUT | Applying fade-out control. |

◆ **display_fade_status_t**

| | |
|--|---|
| enum display_fade_status_t | |
| Fading status | |
| Enumerator | |
| DISPLAY_FADE_STATUS_NOT_UNDERWAY | Fade-in/fade-out is not in progress. |
| DISPLAY_FADE_STATUS_FADING_UNDERWAY | Fade-in or fade-out is in progress. |
| DISPLAY_FADE_STATUS_PENDING | Fade-in/fade-out is configured but not yet started. |

◆ **display_color_keying_t**

| | |
|---|-----------------------|
| enum display_color_keying_t | |
| Color Keying enable or disable | |
| Enumerator | |
| DISPLAY_COLOR_KEYING_DISABLE | Color keying disable. |
| DISPLAY_COLOR_KEYING_ENABLE | Color keying enable. |

◆ **display_data_swap_t**

| | |
|--|--|
| enum display_data_swap_t | |
| Data swap settings | |

enum [jpeg_decode_subsampling_t](#)

Data Structure Documentation

◆ jpeg_encode_image_size_t

| | | |
|---------------------------------|--------------------------|----------------------------------|
| struct jpeg_encode_image_size_t | | |
| Image parameter structure | | |
| Data Fields | | |
| uint16_t | horizontal_stride_pixels | Horizontal stride. |
| uint16_t | horizontal_resolution | Horizontal Resolution in pixels. |
| uint16_t | vertical_resolution | Vertical Resolution in pixels. |

◆ jpeg_callback_args_t

| | | |
|-----------------------------|------------|-----------------------------------|
| struct jpeg_callback_args_t | | |
| Callback status structure | | |
| Data Fields | | |
| jpeg_status_t | status | JPEG status. |
| uint32_t | image_size | JPEG image size. |
| void const * | p_context | Pointer to user-provided context. |

◆ jpeg_cfg_t

| | | |
|--|-------------------------|-------------------------------------|
| struct jpeg_cfg_t | | |
| User configuration structure, used in open function. | | |
| Data Fields | | |
| IRQn_Type | jedi_irq | |
| | | Data transfer interrupt IRQ number. |
| IRQn_Type | jdti_irq | |
| | | Decompression interrupt IRQ number. |
| uint8_t | jdti_ipl | |
| | | Data transfer interrupt priority. |
| uint8_t | jedi_ipl | |
| | | Decompression interrupt priority. |
| jpeg_mode_t | default_mode | |
| | | Mode to use at startup. |
| jpeg_data_order_t | decode_input_data_order | |
| | | Input data stream byte order. |
| | | |
| | | |

| | |
|--|--|
| jpeg_data_order_t | decode_output_data_order |
| | Output data stream byte order. |
| jpeg_decode_pixel_format_t | pixel_format |
| | Pixel format. |
| uint8_t | alpha_value |
| | Alpha value to be applied to decoded pixel data. Only valid for ARGB8888 format. |
| void(*) | p_decode_callback (jpeg_callback_args_t *p_args) |
| | User-supplied callback functions. |
| void const * | p_decode_context |
| | Placeholder for user data. Passed to user callback in jpeg_callback_args_t . |
| jpeg_data_order_t | encode_input_data_order |
| | Input data stream byte order. |
| jpeg_data_order_t | encode_output_data_order |
| | Output data stream byte order. |
| uint16_t | dri_marker |
| | DRI Marker setting (0 = No DRI or RST marker) |
| uint16_t | horizontal_resolution |
| | Horizontal resolution of input image. |

| | |
|-----------------|--|
| uint16_t | vertical_resolution |
| | Vertical resolution of input image. |
| uint16_t | horizontal_stride_pixels |
| | Horizontal stride of input image. |
| uint8_t const * | p_quant_luma_table |
| | Luma quantization table. |
| uint8_t const * | p_quant_chroma_table |
| | Chroma quantization table. |
| uint8_t const * | p_huffman_luma_ac_table |
| | Huffman AC table for luma. |
| uint8_t const * | p_huffman_luma_dc_table |
| | Huffman DC table for luma. |
| uint8_t const * | p_huffman_chroma_ac_table |
| | Huffman AC table for chroma. |
| uint8_t const * | p_huffman_chroma_dc_table |
| | Huffman DC table for chroma. |
| void(*) | p_encode_callback (jpeg_callback_args_t *p_args) |
| | User-supplied callback functions. |
| void const * | p_encode_context |

| | |
|--|--|
| | Placeholder for user data. Passed to user callback in jpeg_callback_args_t . |
| | |

◆ jpeg_api_t

| | |
|---|--|
| struct jpeg_api_t | |
| JPEG functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(jpeg_ctrl_t *const p_ctrl, jpeg_cfg_t const *const p_cfg) |
| fsp_err_t (* | inputBufferSet)(jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size) |
| fsp_err_t (* | outputBufferSet)(jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size) |
| fsp_err_t (* | statusGet)(jpeg_ctrl_t *const p_ctrl, jpeg_status_t *const p_status) |
| fsp_err_t (* | close)(jpeg_ctrl_t *const p_ctrl) |
| fsp_err_t (* | horizontalStrideSet)(jpeg_ctrl_t *const p_ctrl, uint32_t horizontal_stride) |
| fsp_err_t (* | pixelFormatGet)(jpeg_ctrl_t *const p_ctrl, jpeg_color_space_t *const p_color_space) |
| fsp_err_t (* | imageSubsampleSet)(jpeg_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample, jpeg_decode_subsample_t vertical_subsample) |
| fsp_err_t (* | linesDecodedGet)(jpeg_ctrl_t *const p_ctrl, uint32_t *const p_lines) |
| fsp_err_t (* | imageSizeGet)(jpeg_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size) |
| fsp_err_t (* | imageSizeSet)(jpeg_ctrl_t *const p_ctrl, jpeg_encode_image_size_t *p_image_size) |

`fsp_err_t(* modeSet)(jpeg_ctrl_t *const p_ctrl, jpeg_mode_t mode)`

Field Documentation

◆ open

`fsp_err_t(* jpeg_api_t::open) (jpeg_ctrl_t *const p_ctrl, jpeg_cfg_t const *const p_cfg)`

Initial configuration

Precondition

none

Parameters

| | | |
|----------|--------|---|
| [in,out] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ inputBufferSet

`fsp_err_t(* jpeg_api_t::inputBufferSet) (jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)`

Assign input data buffer to JPEG codec.

Precondition

the JPEG codec module must have been opened properly.

Note

The buffer starting address must be 8-byte aligned.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Control block set in <code>jpeg_api_t::open</code> call. |
| [in] | p_buffer | Pointer to the input buffer space |
| [in] | buffer_size | Size of the input buffer |

◆ **outputBufferSet**

```
fsp_err_t(* jpeg_api_t::outputBufferSet) (jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t
buffer_size)
```

Assign output buffer to JPEG codec for storing output data.

Precondition

The JPEG codec module must have been opened properly.

Note

The buffer starting address must be 8-byte aligned. For the decoding process, the HLD driver automatically computes the number of lines of the image to decoded so the output data fits into the given space. If the supplied output buffer is not able to hold the entire frame, the application should call the Output Full Callback function so it can be notified when additional buffer space is needed.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [in] | p_buffer | Pointer to the output buffer space |
| [in] | buffer_size | Size of the output buffer |

◆ **statusGet**

```
fsp_err_t(* jpeg_api_t::statusGet) (jpeg_ctrl_t *const p_ctrl, jpeg_status_t *const p_status)
```

Retrieve current status of the JPEG codec module.

Precondition

the JPEG codec module must have been opened properly.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [out] | p_status | JPEG module status |

◆ **close**

```
fsp_err_t(* jpeg_api_t::close) (jpeg_ctrl_t *const p_ctrl)
```

Cancel an outstanding operation.

Precondition

the JPEG codec module must have been opened properly.

Note

If the encoding or the decoding operation is finished without errors, the HLD driver automatically closes the device. In this case, application does not need to explicitly close the JPEG device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
|------|--------|---|

◆ **horizontalStrideSet**

```
fsp_err_t(* jpeg_api_t::horizontalStrideSet) (jpeg_ctrl_t *const p_ctrl, uint32_t horizontal_stride)
```

Configure the horizontal stride value.

Precondition

The JPEG codec module must have been opened properly.

Parameters

| | | |
|------|-------------------|--|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [in] | horizontal_stride | Horizontal stride value to be used for the decoded image data. |
| [in] | buffer_size | Size of the output buffer |

◆ **pixelFormatGet**

```
fsp_err_t(* jpeg_api_t::pixelFormatGet) (jpeg_ctrl_t *const p_ctrl, jpeg_color_space_t *const p_color_space)
```

Get the input pixel format.

Precondition

the JPEG codec module must have been opened properly.

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [out] | p_color_space | JPEG input format. |

◆ **imageSubsampleSet**

```
fsp_err_t(* jpeg_api_t::imageSubsampleSet) (jpeg_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample, jpeg_decode_subsample_t vertical_subsample)
```

Configure the horizontal and vertical subsample settings.

Precondition

The JPEG codec module must have been opened properly.

Parameters

| | | |
|------|----------------------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [in] | horizontal_subsample | Horizontal subsample value |
| [in] | vertical_subsample | Vertical subsample value |

◆ **linesDecodedGet**

```
fsp_err_t(* jpeg_api_t::linesDecodedGet) (jpeg_ctrl_t *const p_ctrl, uint32_t *const p_lines)
```

Return the number of lines decoded into the output buffer.

Precondition

the JPEG codec module must have been opened properly.

Parameters

| | | |
|-------|---------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [out] | p_lines | Number of lines decoded |

◆ **imageSizeGet**

```
fsp_err_t(* jpeg_api_t::imageSizeGet) (jpeg_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)
```

Retrieve image size during decoding operation.

Precondition

the JPEG codec module must have been opened properly.

Note

If the encoding or the decoding operation is finished without errors, the HLD driver automatically closes the device. In this case, application does not need to explicitly close the JPEG device.

Parameters

| | | |
|-------|-------------------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [out] | p_horizontal_size | Image horizontal size, in number of pixels. |
| [out] | p_vertical_size | Image vertical size, in number of pixels. |

◆ **imageSizeSet**

```
fsp_err_t(* jpeg_api_t::imageSizeSet) (jpeg_ctrl_t *const p_ctrl, jpeg_encode_image_size_t *p_image_size)
```

Set image parameters to JPEG Codec

Precondition

The JPEG codec module must have been opened properly.

Parameters

| | | |
|----------|--------------|--|
| [in,out] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_image_size | Pointer to the RAW image parameters |

◆ **modeSet**

```
fsp_err_t(* jpeg_api_t::modeSet) (jpeg_ctrl_t *const p_ctrl, jpeg_mode_t mode)
```

Switch between encode and decode mode or vice-versa.

Precondition

The JPEG codec module must have been opened properly. The JPEG Codec can only perform one operation at a time and requires different configuration for encode and decode. This function facilitates easy switching between the two modes in case both are needed in an application.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in jpeg_api_t::open call. |
| [in] | mode | Mode to switch to |

◆ **jpeg_instance_t**

```
struct jpeg_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------------------|--------|---|
| jpeg_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| jpeg_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| jpeg_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **jpeg_ctrl_t**

```
typedef void jpeg_ctrl_t
```

JPEG decode control block. Allocate an instance specific control block to pass into the JPEG decode API calls.

Enumeration Type Documentation

◆ jpeg_color_space_t

| enum jpeg_color_space_t | |
|---|------------------------|
| Configuration for this module Image color space definitions | |
| Enumerator | |
| JPEG_COLOR_SPACE_YCBCR444 | Color Space YCbCr 444. |
| JPEG_COLOR_SPACE_YCBCR422 | Color Space YCbCr 422. |
| JPEG_COLOR_SPACE_YCBCR420 | Color Space YCbCr 420. |
| JPEG_COLOR_SPACE_YCBCR411 | Color Space YCbCr 411. |

◆ jpeg_data_order_t

| enum jpeg_data_order_t | |
|---|--|
| Multi-byte Data Format | |
| Enumerator | |
| JPEG_DATA_ORDER_NORMAL | (1)(2)(3)(4)(5)(6)(7)(8) Normal byte order |
| JPEG_DATA_ORDER_BYTE_SWAP | (2)(1)(4)(3)(6)(5)(8)(7) Byte Swap |
| JPEG_DATA_ORDER_WORD_SWAP | (3)(4)(1)(2)(7)(8)(5)(6) Word Swap |
| JPEG_DATA_ORDER_WORD_BYTE_SWAP | (4)(3)(2)(1)(8)(7)(6)(5) Word-Byte Swap |
| JPEG_DATA_ORDER_LONGWORD_SWAP | (5)(6)(7)(8)(1)(2)(3)(4) Longword Swap |
| JPEG_DATA_ORDER_LONGWORD_BYTE_SWAP | (6)(5)(8)(7)(2)(1)(4)(3) Longword Byte Swap |
| JPEG_DATA_ORDER_LONGWORD_WORD_SWAP | (7)(8)(5)(6)(3)(4)(1)(2) Longword Word Swap |
| JPEG_DATA_ORDER_LONGWORD_WORD_BYTE_SWAP | (8)(7)(6)(5)(4)(3)(2)(1) Longword Word Byte Swap |

◆ **jpeg_status_t**

| enum jpeg_status_t | |
|---|---|
| JPEG HLD driver internal status information. The driver can simultaneously be in more than any one status at the same time. Parse the status bit-fields using the definitions in this enum to determine driver status | |
| Enumerator | |
| JPEG_STATUS_NONE | JPEG codec module is not initialized. |
| JPEG_STATUS_IDLE | JPEG Codec module is open but not running. |
| JPEG_STATUS_RUNNING | JPEG Codec is running. |
| JPEG_STATUS_HEADER_PROCESSING | JPEG Codec module is reading the JPEG header information. |
| JPEG_STATUS_INPUT_PAUSE | JPEG Codec paused waiting for more input data. |
| JPEG_STATUS_OUTPUT_PAUSE | JPEG Codec paused after it decoded the number of lines specified by user. |
| JPEG_STATUS_IMAGE_SIZE_READY | JPEG decoding operation obtained image size, and paused. |
| JPEG_STATUS_ERROR | JPEG Codec module encountered an error. |
| JPEG_STATUS_OPERATION_COMPLETE | JPEG Codec has completed the operation. |

◆ **jpeg_decode_pixel_format_t**

| enum jpeg_decode_pixel_format_t | |
|-----------------------------------|-----------------------------|
| Pixel Data Format | |
| Enumerator | |
| JPEG_DECODE_PIXEL_FORMAT_ARGB8888 | Pixel Data ARGB8888 format. |
| JPEG_DECODE_PIXEL_FORMAT_RGB565 | Pixel Data RGB565 format. |

◆ **jpeg_decode_subsample_t**

| enum jpeg_decode_subsample_t | |
|--|---|
| Data type for horizontal and vertical subsample settings. This setting applies only to the decoding operation. | |
| Enumerator | |
| JPEG_DECODE_OUTPUT_NO_SUBSAMPLE | No subsample. The image is decoded with no reduction in size. |
| JPEG_DECODE_OUTPUT_SUBSAMPLE_HALF | The output image size is reduced by half. |
| JPEG_DECODE_OUTPUT_SUBSAMPLE_ONE_QUARTER | The output image size is reduced to one-quarter. |
| JPEG_DECODE_OUTPUT_SUBSAMPLE_ONE_EIGHTH | The output image size is reduced to one-eighth. |

5.3.7.4 MIPI DSI Interface[Interfaces](#) » [Graphics](#)**Detailed Description**

Interface for MIPI DSI communications.

Summary

The MIPI DSI interface provides functionality involved with driving display panels over MIPI.

Data Structures

struct [mipi_dsi_cmd_t](#)

union [mipi_dsi_ack_err_status_t](#)

struct [mipi_dsi_status_t](#)

struct [mipi_dsi_callback_args_t](#)

struct [mipi_dsi_timing_t](#)

struct [mipi_dsi_cfg_t](#)

struct [mipi_dsi_api_t](#)

struct [mipi_dsi_instance_t](#)

Typedefs

typedef `__PACKED_STRUCT` [st_mipi_dsi_result](#)
Data of received packet header. [More...](#)

typedef void [mipi_dsi_ctrl_t](#)

Enumerations

enum [mipi_dsi_cmd_id_t](#)

enum [mipi_dsi_dcs_id_t](#)

enum [mipi_dsi_lane_t](#)

Variables

[mipi_dsi_cmd_id_t](#) [cmd_id](#)
Data type.

`uint8_t` [virtual_channel_id](#)
Virtual channel ID.

uint8_t [long_packet](#)
Sort packet (0) or Long packet (1)

uint8_t [rx_success](#)
Response packet or ack trigger received.

uint8_t [timeout](#)
Fatal timeout error.

uint8_t [rx_fail](#)
Expected receive not done.

uint8_t [rx_data_fail](#)
Receive packet data fail.

uint8_t [rx_correctable_error](#)
Correctable error detected.

uint8_t [rx_ack_err](#)
Rx acknowledge and error report packet received.

uint8_t [info_overwrite](#)
This information was overwritten.

Data Structure Documentation

◆ [mipi_dsi_cmd_t](#)

| struct mipi_dsi_cmd_t | | |
|---------------------------------------|---------|--|
| MIPI DSI Command | | |
| Data Fields | | |
| uint8_t | channel | Virtual Channel ID. |
| mipi_dsi_cmd_id_t | cmd_id | Message ID. |
| mipi_dsi_cmd_flag_t | flags | Flags controlling this message transition. |

| | | |
|-----------------|-------------|--------------------------|
| uint16_t | tx_len | Transmit buffer size. |
| const uint8_t * | p_tx_buffer | Transmit buffer pointer. |
| const uint8_t * | p_rx_buffer | Receive buffer pointer. |

◆ mipi_dsi_ack_err_status_t

| | | |
|--|--------------------|---------------------|
| union mipi_dsi_ack_err_status_t | | |
| MIPI DSI Acknowledge and Error status type | | |
| Data Fields | | |
| | __PACKED_STRUCT | Error report bits. |
| mipi_dsi_vc_t | virtual_channel: 4 | Virtual Channel ID. |
| uint32_t | __pad0__: 12 | |
| uint32_t | bits | |

◆ mipi_dsi_status_t

| | | |
|---------------------------|---------------------|--|
| struct mipi_dsi_status_t | | |
| MIPI DSI status type | | |
| Data Fields | | |
| mipi_dsi_link_status_t | link_status | Link status. |
| mipi_dsi_ack_err_status_t | ack_err_latest | Latest Acknowledge and Error Report Packet Latest Info. |
| mipi_dsi_ack_err_status_t | ack_err_accumulated | Accumulated Acknowledge and Error Report Packet Latest Info. |

◆ mipi_dsi_callback_args_t

| | | |
|--|-------------|---|
| struct mipi_dsi_callback_args_t | | |
| MIPI DSI callback parameter definition | | |
| Data Fields | | |
| mipi_dsi_event_t | event | Event code. |
| union mipi_dsi_callback_args_t | __unnamed__ | |
| mipi_dsi_receive_result_t * | p_result | Receive result pointer. |
| void const * | p_context | Context provided to user during callback. |

◆ mipi_dsi_timing_t

| | | |
|----------------------------|-----------------|------------------|
| struct mipi_dsi_timing_t | | |
| MIPI DSI transition timing | | |
| Data Fields | | |
| uint32_t | clock_stop_time | Clock stop time. |

| | | |
|----------|-----------------------|------------------------|
| uint32_t | clock_beforehand_time | Clock beforehand time. |
| uint32_t | clock_keep_time | Clock Keep time. |
| uint32_t | go_lp_and_back | Go LP and Back time. |

◆ mipi_dsi_cfg_t

| | | |
|---|-------------------------------------|--|
| struct mipi_dsi_cfg_t | | |
| MIPI DSI main configuration structure | | |
| Data Fields | | |
| mipi_phy_instance_t const * | p_mipi_phy_instance | |
| | | Pointer to mipi physical layer instance. |
| | | |
| mipi_dsi_timing_t const * | p_timing | |
| | | Pointer to MIPI DSI timing configuration. |
| | | |
| | bool | hsa_no_lp |
| | | Suppress the transition to LP during HSA period and keep HS. |
| | | |
| | bool | hbp_no_lp |
| | | Suppress the transition to LP during HBP period and keep HS. |
| | | |
| | bool | hfp_no_lp |
| | | Suppress the transition to LP during HFP period and keep HS. |
| | | |
| | uint8_t | num_lanes |
| | | Number of MIPI lanes to use. |
| | | |
| | uint8_t | ulps_wakeup_period |
| | | ULPS wakeup period. |
| | | |
| | uint8_t | continuous_clock |

| | |
|---------------|--|
| | Always run HS clock on/off. |
| uint32_t | hs_tx_timeout |
| | HS-Tx Timeout value. |
| uint32_t | lp_rx_timeout |
| | LP-Rx host processor timeout. |
| uint32_t | turnaround_timeout |
| | Turnaround Acknowledge Timeout. |
| uint32_t | bta_timeout |
| | Peripheral Response Timeout. |
| uint32_t | lprw_timeout |
| | LP Read and Write Timeouts. |
| uint32_t | hsrw_timeout |
| | HS Read and Write Timeouts. |
| uint32_t | max_return_packet_size |
| | Maximum return packet size. |
| bool | ecc_enable |
| | ECC Check enable. |
| mipi_dsi_vc_t | crc_check_mask |
| | Virtual channel CRC check enable. |

| | |
|---------------------------------------|---|
| | |
| bool | scramble_enable |
| | Scramble on/off. |
| | |
| bool | tearing_detect |
| | External tearing effect detection mode (0:rising, 1:falling edge) |
| | |
| bool | eotp_enable |
| | End of Transmit Packet (EoTP) on/off. |
| | |
| bool | sync_pulse |
| | Enable for Non-Burst Mode with Sync Pulse sequence. |
| | |
| mipi_dsi_video_data_t | data_type |
| | Video mode data type: 16-bit RGB, 18-bit RGB, 24-bit RGB. |
| | |
| uint8_t | virtual_channel_id |
| | Video mode virtual channel to use (from 0x0 to 0x3) |
| | |
| uint32_t | vertical_sync_lines |
| | Number of vertical sync active lines. |
| | |
| bool | vertical_sync_polarity |
| | V-Sync Polarity. |
| | |
| uint32_t | vertical_active_lines |
| | Number of vertical active lines. |
| | |

| | |
|--------------|--|
| uint32_t | vertical_back_porch |
| | Vertical back porch. |
| uint32_t | vertical_front_porch |
| | Vertical front porch. |
| uint32_t | horizontal_sync_lines |
| | Number of horizontal sync active lines. |
| bool | horizontal_sync_polarity |
| | H-Sync Polarity. |
| uint32_t | horizontal_active_lines |
| | Number of horizontal active lines. |
| uint32_t | horizontal_back_porch |
| | Horizontal back porch. |
| uint32_t | horizontal_front_porch |
| | Horizontal front porch. |
| void(* | p_callback)(mipi_dsi_callback_args_t *p_args) |
| | Pointer to callback function. More... |
| void const * | p_context |
| | User defined context passed into callback function. |
| void const * | p_extend |

| | |
|--|--|
| | MIPI hardware dependent configuration. More... |
| Field Documentation | |
| ◆ p_callback | |
| void(* mipi_dsi_cfg_t::p_callback) (mipi_dsi_callback_args_t *p_args) | |
| Pointer to callback function. Callback configuration | |
| ◆ p_extend | |
| void const* mipi_dsi_cfg_t::p_extend | |
| MIPI hardware dependent configuration. Pointer to display peripheral specific configuration | |

Field Documentation

◆ open

`fsp_err_t(* mipi_dsi_api_t::open) (mipi_dsi_ctrl_t *const p_ctrl, mipi_dsi_cfg_t const *const p_cfg)`

Open MIPI DSI device.

Parameters

| | | |
|----------|--------|--|
| [in,out] | p_ctrl | Pointer to MIPI DSI interface control block. Must be declared by user. Value set here. |
| [in] | p_cfg | Pointer to MIPI DSI configuration structure. All elements of this structure must be set by user. |

◆ close

`fsp_err_t(* mipi_dsi_api_t::close) (mipi_dsi_ctrl_t *const p_ctrl)`

Close MIPI DSI device.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
|------|--------|--|

◆ start

`fsp_err_t(* mipi_dsi_api_t::start) (mipi_dsi_ctrl_t *const p_ctrl)`

Start pixel data output.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
|------|--------|--|

◆ stop

`fsp_err_t(* mipi_dsi_api_t::stop) (mipi_dsi_ctrl_t *const p_ctrl)`

Stop pixel data output.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
|------|--------|--|

◆ **ulpsEnter**

```
fsp_err_t(* mipi_dsi_api_t::ulpsEnter) (mipi_dsi_ctrl_t *const p_ctrl, mipi_dsi_lane_t lane)
```

Enter Ultra-low Power State (ULPS).

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
| [in] | lane | Physical lane(s) to transition into ULPS |

◆ **ulpsExit**

```
fsp_err_t(* mipi_dsi_api_t::ulpsExit) (mipi_dsi_ctrl_t *const p_ctrl, mipi_dsi_lane_t lane)
```

Exit Ultra-low Power State (ULPS).

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
| [in] | lane | Physical lane(s) to transition from ULPS |

◆ **command**

```
fsp_err_t(* mipi_dsi_api_t::command) (mipi_dsi_ctrl_t *const p_api_ctrl, mipi_dsi_cmd_t *p_cmd)
```

Send a command to the display.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
| [in] | p_cmd | Pointer to a command structure |

◆ **statusGet**

```
fsp_err_t(* mipi_dsi_api_t::statusGet) (mipi_dsi_ctrl_t *const p_ctrl, mipi_dsi_status_t *p_status)
```

Get status of MIPI link.

Parameters

| | | |
|------|----------|---|
| [in] | p_ctrl | Pointer to MIPI DSI interface control block. |
| [in] | p_status | Pointer to MIPI DSI interface status structure. |

◆ **mipi_dsi_instance_t**

| | | |
|--|--------|---|
| struct mipi_dsi_instance_t | | |
| This structure encompasses everything that is needed to use an instance of this interface. | | |
| Data Fields | | |
| mipi_dsi_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| mipi_dsi_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| mipi_dsi_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **st_mipi_dsi_result**

| |
|--|
| typedef __PACKED_STRUCT st_mipi_dsi_result |
| Data of received packet header. MIPI DSI Result |

◆ **mipi_dsi_ctrl_t**

| |
|--|
| typedef void mipi_dsi_ctrl_t |
| MIPI DSI control block. Allocate an instance specific control block to pass into the MIPI DSI API calls. |

Enumeration Type Documentation

◆ **mipi_dsi_cmd_id_t**

| enum <code>mipi_dsi_cmd_id_t</code> | |
|--|--|
| MIPI DSI packet Data Type (commands) - See MIPI specification for additional information | |
| Enumerator | |
| <code>MIPI_DSI_CMD_ID_V_SYNC_START</code> | (Short) Sync Event, V Sync Start |
| <code>MIPI_DSI_CMD_ID_V_SYNC_END</code> | (Short) Sync Event, V Sync End |
| <code>MIPI_DSI_CMD_ID_H_SYNC_START</code> | (Short) Sync Event, H Sync Start |
| <code>MIPI_DSI_CMD_ID_H_SYNC_END</code> | (Short) Sync Event, H Sync End |
| <code>MIPI_DSI_CMD_ID_COMPRESSION_MODE</code> | (Short) Compression Mode Command |
| <code>MIPI_DSI_CMD_ID_END_OF_TRANSMISSION</code> | (Short) End of Transmission packet (EoTp) |
| <code>MIPI_DSI_CMD_ID_COLOR_MODE_OFF</code> | (Short) Color Mode (CM) Off Command |
| <code>MIPI_DSI_CMD_ID_COLOR_MODE_ON</code> | (Short) Color Mode (CM) On Command |
| <code>MIPI_DSI_CMD_ID_SHUTDOWN_PERIPHERAL</code> | (Short) Shut Down Peripheral Command |
| <code>MIPI_DSI_CMD_ID_TURN_ON_PERIPHERAL</code> | (Short) Turn On Peripheral Command |
| <code>MIPI_DSI_CMD_ID_GENERIC_SHORT_WRITE_0_PARAM</code> | (Short) Generic Short WRITE, no parameters |
| <code>MIPI_DSI_CMD_ID_GENERIC_SHORT_WRITE_1_PARAM</code> | (Short) Generic Short WRITE, 1 parameter |
| <code>MIPI_DSI_CMD_ID_GENERIC_SHORT_WRITE_2_PARAM</code> | (Short) Generic Short WRITE, 2 parameters |
| <code>MIPI_DSI_CMD_ID_GENERIC_READ_REQUEST_0_PARAM</code> | (Short) Generic READ, no parameters |
| <code>MIPI_DSI_CMD_ID_GENERIC_READ_REQUEST_1_PARAM</code> | (Short) Generic READ, 1 parameter |
| <code>MIPI_DSI_CMD_ID_GENERIC_READ_REQUEST_2_PARAM</code> | (Short) Generic READ, 2 parameters |
| <code>MIPI_DSI_CMD_ID_DCS_SHORT_WRITE_0_PARAM</code> | (Short) DCS Short WRITE, no parameters |
| <code>MIPI_DSI_CMD_ID_DCS_SHORT_WRITE_1_PARAM</code> | (Short) DCS Short WRITE, 1 parameter |
| <code>MIPI_DSI_CMD_ID_DCS_READ</code> | (Short) DCS READ, no parameters |
| <code>MIPI_DSI_CMD_ID_EXECUTE_QUEUE</code> | (Short) Execute Queue |

| | |
|---|--|
| MIPI_DSI_CMD_ID_SET_MAXIMUM_RETURN_PACKET_SIZE | (Short) Set Maximum Return Packet Size |
| MIPI_DSI_CMD_ID_NULL_PACKET | (Long) Null Packet, no data |
| MIPI_DSI_CMD_ID_BLANKING_PACKET | (Long) Blanking Packet, no data |
| MIPI_DSI_CMD_ID_GENERIC_LONG_WRITE | (Long) Generic Long Write |
| MIPI_DSI_CMD_ID_DCS_LONG_WRITE | (Long) DCS Long Write/write_LUT Command Packet |
| MIPI_DSI_CMD_ID_PICTURE_PARAMETER_SET | (Long) Picture Parameter Set |
| MIPI_DSI_CMD_ID_COMPRESSED_PIXEL_STREAM | (Long) Compressed Pixel Stream |
| MIPI_DSI_CMD_ID_LOOSELY_PACKED_PIXEL_STREAM_YCBCR20 | (Long) Loosely Packed Pixel Stream, 20-bit YCbCr, 4:2:2 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_YCBCR24 | (Long) Packed Pixel Stream, 24-bit YCbCr, 4:2:2 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_YCBCR16 | (Long) Packed Pixel Stream, 16-bit YCbCr, 4:2:2 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_30 | (Long) Packed Pixel Stream, 30-bit RGB, 10-10-10 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_36 | (Long) Packed Pixel Stream, 36-bit RGB, 12-12-12 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_YCBCR12 | (Long) Packed Pixel Stream, 12-bit YCbCr, 4:2:0 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_16 | (Long) Packed Pixel Stream, 16-bit RGB, 5-6-5 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_18 | (Long) Packed Pixel Stream, 18-bit RGB, 6-6-6 Format |
| MIPI_DSI_CMD_ID_LOOSELY_PACKED_PIXEL_STREAM_18 | (Long) Loosely Packed Pixel Stream, 18-bit RGB, 6-6-6 Format |
| MIPI_DSI_CMD_ID_PACKED_PIXEL_STREAM_24 | (Long) Packed Pixel Stream, 24-bit RGB, 8-8-8 Format |

◆ **mipi_dsi_dcs_id_t**

| enum mipi_dsi_dcs_id_t | |
|---|---|
| MIPI DCS ID types - See MIPI DCS specification for additional information | |
| Enumerator | |
| MIPI_DSI_DCS_ID_ENTER_IDLE_MODE | Enter idle mode. |
| MIPI_DSI_DCS_ID_ENTER_INVERT_MODE | Displayed image colors inverted. |
| MIPI_DSI_DCS_ID_ENTER_NORMAL_MODE | Whole display area used for image. |
| MIPI_DSI_DCS_ID_ENTER_PARTIAL_MODE | Part of display area used for image. |
| MIPI_DSI_DCS_ID_ENTER_SLEEP_MODE | Power off the display panel. |
| MIPI_DSI_DCS_ID_EXIT_IDLE_MODE | Full color depth used. |
| MIPI_DSI_DCS_ID_EXIT_INVERT_MODE | Displayed image colors not inverted. |
| MIPI_DSI_DCS_ID_EXIT_SLEEP_MODE | Power on the display panel. |
| MIPI_DSI_DCS_ID_GET_3D_CONTROL | Get display module 3D mode. |
| MIPI_DSI_DCS_ID_GET_ADDRESS_MODE | Get data order for transfers from host to the display device. |
| MIPI_DSI_DCS_ID_GET_BLUE_CHANNEL | Get blue component of pixel at 0,0. |
| MIPI_DSI_DCS_ID_GET_CABC_MIN_BRIGHTNESS | Get current minimum brightness level of the active CABC mode. |
| MIPI_DSI_DCS_ID_GET_COMPRESSION_MODE | Get current compression mode. |
| MIPI_DSI_DCS_ID_GET_CONTROL_DISPLAY | Get control display mode. |
| MIPI_DSI_DCS_ID_GET_DIAGNOSTIC_RESULT | Get peripheral self-diagnostic result. |
| MIPI_DSI_DCS_ID_GET_DISPLAY_BRIGHTNESS | Get current display brightness level. |
| MIPI_DSI_DCS_ID_GET_DISPLAY_MODE | Get current display mode from the peripheral. |
| MIPI_DSI_DCS_ID_GET_DSI_MODE | Get DSI operation mode. |
| MIPI_DSI_DCS_ID_GET_ERROR_COUNT_ON_DSI | Get number of corrupted packets on DSI. |
| MIPI_DSI_DCS_ID_GET_GREEN_CHANNEL | Get green component of pixel at 0,0. |

| | |
|--|--|
| MIPI_DSI_DCS_ID_GET_IMAGE_CHECKSUM_CT | Returns checksum of frame of color-transformed pixel data. |
| MIPI_DSI_DCS_ID_GET_IMAGE_CHECKSUM_RGB | Returns checksum of frame of RGB pixel data. |
| MIPI_DSI_DCS_ID_GET_PIXEL_FORMAT | Get current pixel format. |
| MIPI_DSI_DCS_ID_GET_POWER_MODE | Get current power mode. |
| MIPI_DSI_DCS_ID_GET_POWER_SAVE | Get current power-save mode. |
| MIPI_DSI_DCS_ID_GET_RED_CHANNEL | Get red component of pixel at 0,0. |
| MIPI_DSI_DCS_ID_GET_SCANLINE | Get current scanline. |
| MIPI_DSI_DCS_ID_GET_SIGNAL_MODE | Get display module signaling mode. |
| MIPI_DSI_DCS_ID_NOP | No operation. |
| MIPI_DSI_DCS_ID_READ_ACMD | Perform read access to the ACMD registers. |
| MIPI_DSI_DCS_ID_READ_DDB_CONTINUE | Continue reading the DDB from the last read location. |
| MIPI_DSI_DCS_ID_READ_DDB_START | Read the DDB from the provided location. |
| MIPI_DSI_DCS_ID_READ_DSE_MAILBOX | Read access to the registers of the DSE read or write control mailbox. |
| MIPI_DSI_DCS_ID_READ_MEMORY_CONTINUE | Read image data from peripheral, continuing after last read. |
| MIPI_DSI_DCS_ID_READ_MEMORY_START | Read image data from the peripheral to the host. |
| MIPI_DSI_DCS_ID_READ_PPS_CONTINUE | Continue reading the specified length of PPS data. |
| MIPI_DSI_DCS_ID_READ_PPS_START | Read PPS data. |
| MIPI_DSI_DCS_ID_SET_3D_CONTROL | 3D is used on the display panel |
| MIPI_DSI_DCS_ID_SET_ADDRESS_MODE | Set data order for transfers from host to peripheral. |
| MIPI_DSI_DCS_ID_SET_ARP_OFF | Disable ARP. |
| MIPI_DSI_DCS_ID_SET_ARP_ON | Enable ARP and set T2 timer. |

| | |
|---|--|
| MIPI_DSI_DCS_ID_SET_CABC_MIN_BRIGHTNESS | Set minimum brightness level for CABC mode. |
| MIPI_DSI_DCS_ID_SET_COLUMN_ADDRESS | Set column extent. |
| MIPI_DSI_DCS_ID_SET_DISPLAY_BRIGHTNESS | Set display brightness level. |
| MIPI_DSI_DCS_ID_SET_DISPLAY_OFF | Blank the display device. |
| MIPI_DSI_DCS_ID_SET_DISPLAY_ON | Show image on display device. |
| MIPI_DSI_DCS_ID_SET_DSI_MODE | Set DSI operation mode. |
| MIPI_DSI_DCS_ID_SET_GAMMA_CURVE | Select gamma curve used by display. |
| MIPI_DSI_DCS_ID_SET_PAGE_ADDRESS | Set page extent. |
| MIPI_DSI_DCS_ID_SET_PARTIAL_COLUMNS | Define the number of columns in the partial display area. |
| MIPI_DSI_DCS_ID_SET_PARTIAL_ROWS | Define the number of rows in the partial display area. |
| MIPI_DSI_DCS_ID_SET_PIXEL_FORMAT | Define how many bits per pixel are used. |
| MIPI_DSI_DCS_ID_SET_SCROLL_AREA | Define vertical scrolling and fixed area. |
| MIPI_DSI_DCS_ID_SET_SCROLL_START | Define vertical scrolling starting point. |
| MIPI_DSI_DCS_ID_SET_TEAR_OFF | Sync information not sent from the display module to the host. |
| MIPI_DSI_DCS_ID_SET_TEAR_ON | Sync information is sent from the display module to the host. |
| MIPI_DSI_DCS_ID_SET_TEAR_SCANLINE | Sync information is sent from display to the host when display refresh reaches provided scan line. |
| MIPI_DSI_DCS_ID_SET_VSYNC_TIMING | Set VSYNC timing to the specified length of PPS data. |
| MIPI_DSI_DCS_ID_SOFT_RESET | Software reset. |
| MIPI_DSI_DCS_ID_WRITE_ACMD | Write access to ACMD registers. |
| MIPI_DSI_DCS_ID_WRITE_CONTROL_DISPLAY | Write control mode of display brightness. |
| MIPI_DSI_DCS_ID_WRITE_DSE_MAILBOX | Write registers of DSE read or write control mailbox. |

| | |
|---------------------------------------|--|
| MIPI_DSI_DCS_ID_WRITE_LUT | Fill peripheral look-up table with provided data. |
| MIPI_DSI_DCS_ID_WRITE_MEMORY_CONTINUE | Continue image information transfer from last address. |
| MIPI_DSI_DCS_ID_WRITE_MEMORY_START | Transfer image information from host to peripheral. |
| MIPI_DSI_DCS_ID_WRITE_POWER_SAVE | Writes power save mode. |

◆ mipi_dsi_video_data_t

| | |
|--|--------------------------------|
| enum mipi_dsi_video_data_t | |
| MIPI DSI Video Data type | |
| Enumerator | |
| MIPI_DSI_VIDEO_DATA_16RGB_PIXEL_STREAM | 16-bit RGB Packed Pixel Stream |
| MIPI_DSI_VIDEO_DATA_18RGB_PIXEL_STREAM | 18-bit RGB Packed Pixel Stream |
| MIPI_DSI_VIDEO_DATA_24RGB_PIXEL_STREAM | 24-bit RGB Packed Pixel Stream |

◆ **mipi_dsi_ack_err_t**

| enum <code>mipi_dsi_ack_err_t</code> | |
|--|-----------------------------------|
| MIPI DSI Acknowledge and Error type | |
| Enumerator | |
| <code>MIPI_DSI_ACK_ERR_NONE</code> | No Errors. |
| <code>MIPI_DSI_ACK_ERR_SOT_ERROR</code> | SoT Error. |
| <code>MIPI_DSI_ACK_ERR_SOT_SYNC_ERROR</code> | SoT Sync Error. |
| <code>MIPI_DSI_ACK_ERR_EOT_SYNC_ERROR</code> | EoT Sync Error. |
| <code>MIPI_DSI_ACK_ERR_ESCAPE_ENTRY_ERROR</code> | Escape Mode Entry Error. |
| <code>MIPI_DSI_ACK_ERR_LOW_POWER_SYNC_ERROR</code> | Low-Power Transmit Sync Error. |
| <code>MIPI_DSI_ACK_ERR_PERIPHERAL_TIMEOUT_ERROR</code> | Peripheral Timeout Error. |
| <code>MIPI_DSI_ACK_ERR_FALSE_CONTROL_ERROR</code> | False Control Error. |
| <code>MIPI_DSI_ACK_ERR_CONTENTION_DETECTED</code> | Contention Detected Error. |
| <code>MIPI_DSI_ACK_ERR_ECC_SINGLE</code> | ECC Error, single-bit. |
| <code>MIPI_DSI_ACK_ERR_ECC_MULTI</code> | ECC Error, multi-bit. |
| <code>MIPI_DSI_ACK_ERR_CKSM_ERROR</code> | Checksum Error (Long packet only) |
| <code>MIPI_DSI_ACK_ERR_DSI_DATA_ERROR</code> | DSI Data Type Not Recognized. |
| <code>MIPI_DSI_ACK_ERR_DSI_VC_ID_ERROR</code> | DSI VC ID Invalid. |
| <code>MIPI_DSI_ACK_ERR_INVALID_TX_LEN</code> | Invalid Transmission Length. |
| <code>MIPI_DSI_ACK_ERR_DSI_PROTOCOL_VIOLATION</code> | DSI Protocol Violation. |

◆ **mipi_dsi_vc_t**

| enum mipi_dsi_vc_t | |
|------------------------------------|-----------------------|
| Enumerator | |
| MIPI_DSI_VC_NONE | No channels selected. |
| MIPI_DSI_VC_0 | Virtual channel 0. |
| MIPI_DSI_VC_1 | Virtual channel 1. |
| MIPI_DSI_VC_2 | Virtual channel 2. |
| MIPI_DSI_VC_3 | Virtual channel 3. |

◆ **mipi_dsi_cmd_flag_t**

| enum mipi_dsi_cmd_flag_t | |
|--|--|
| MIPI DSI Message Flags | |
| Enumerator | |
| MIPI_DSI_CMD_FLAG_NONE | No flags. |
| MIPI_DSI_CMD_FLAG_BTA | Assert bus turnaround at end of transfer. |
| MIPI_DSI_CMD_FLAG_BTA_READ | Assert bus turnaround followed by read request (No WRITE request before BTA) |
| MIPI_DSI_CMD_FLAG_BTA_NO_WRITE | Immediately assert bus turnaround (No WRITE request before BTA) |
| MIPI_DSI_CMD_FLAG_AUX_OPERATION | Execute auxiliary operation command. |
| MIPI_DSI_CMD_FLAG_ACT_CODE_RESET_TRIGGER | Send action code reset trigger message. |
| MIPI_DSI_CMD_FLAG_ACT_CODE_INITIAL_SKEW_CAL | Send action code initial skew calibration message. |
| MIPI_DSI_CMD_FLAG_ACT_CODE_PERIODIC_SKEW_CAL | Send action code periodic skew message. |
| MIPI_DSI_CMD_FLAG_ACT_CODE_NO_OPERATION | Send action code NOOP message. |
| MIPI_DSI_CMD_FLAG_LOW_POWER | Transmit in low-power mode. |

◆ **mipi_dsi_event_t**

| enum <code>mipi_dsi_event_t</code> | |
|--|--|
| MIPI DSI event codes | |
| Enumerator | |
| <code>MIPI_DSI_EVENT_SEQUENCE_0</code> | Sequence 0 event (Low-Power) |
| <code>MIPI_DSI_EVENT_SEQUENCE_1</code> | Sequence 1 event (High-Speed) |
| <code>MIPI_DSI_EVENT_VIDEO</code> | Video event. |
| <code>MIPI_DSI_EVENT_RECEIVE</code> | Receive event. |
| <code>MIPI_DSI_EVENT_FATAL</code> | Fatal event. |
| <code>MIPI_DSI_EVENT_PHY</code> | Physical layer event. |
| <code>MIPI_DSI_EVENT_POST_OPEN</code> | Interface has been opened. Perform post-open application processing. |
| <code>MIPI_DSI_EVENT_PRE_START</code> | Video is about to start. Perform pre-video application processing. |

◆ **mipi_dsi_sequence_status_t**

| enum <code>mipi_dsi_sequence_status_t</code> | |
|---|---------------------------------------|
| MIPI DSI Sequence status | |
| Enumerator | |
| <code>MIPI_DSI_SEQUENCE_STATUS_NONE</code> | Sequence status not set. |
| <code>MIPI_DSI_SEQUENCE_STATUS_RUNNING</code> | Sequence operation in progress. |
| <code>MIPI_DSI_SEQUENCE_STATUS_ACTIONS_FINISHED</code> | All descriptor actions finished. |
| <code>MIPI_DSI_SEQUENCE_STATUS_DESCRIPTOR_FINISHED</code> | All descriptors finished. |
| <code>MIPI_DSI_SEQUENCE_STATUS_DESCRIPTOR_ABORT</code> | Descriptor abort interrupt. |
| <code>MIPI_DSI_SEQUENCE_STATUS_SIZE_ERROR</code> | Packet size error. |
| <code>MIPI_DSI_SEQUENCE_STATUS_TX_INTERNAL_BUS_ERROR</code> | Tx internal bus error. |
| <code>MIPI_DSI_SEQUENCE_STATUS_RX_FATAL_ERROR</code> | Receive fatal error. |
| <code>MIPI_DSI_SEQUENCE_STATUS_RX_FAIL</code> | Receive fail. |
| <code>MIPI_DSI_SEQUENCE_STATUS_RX_PACKET_DATA_FAIL</code> | Receive packet data fail. |
| <code>MIPI_DSI_SEQUENCE_STATUS_RX_CORRECTABLE_ERROR</code> | Receive correctable error. |
| <code>MIPI_DSI_SEQUENCE_STATUS_RX_ACK_AND_ERROR</code> | Receive acknowledge and error report. |

◆ **mipi_dsi_video_status_t**

| enum mipi_dsi_video_status_t | |
|--|-------------------------------|
| MIPI DSI video status errors | |
| Enumerator | |
| MIPI_DSI_VIDEO_STATUS_NONE | Video status not set. |
| MIPI_DSI_VIDEO_STATUS_START | Video started event. |
| MIPI_DSI_VIDEO_STATUS_STOP | Video stopped event. |
| MIPI_DSI_VIDEO_STATUS_RUNNING | Video running status. |
| MIPI_DSI_VIDEO_STATUS_READY | Video ready event. |
| MIPI_DSI_VIDEO_STATUS_TIMING_ERROR | Video timing error event. |
| MIPI_DSI_VIDEO_STATUS_UNDERFLOW | Video buffer underflow event. |
| MIPI_DSI_VIDEO_STATUS_OVERFLOW | Video buffer overflow event. |

◆ **mipi_dsi_receive_status_t**

| enum mipi_dsi_receive_status_t | |
|--|-------------------------------------|
| MIPI DSI receive status errors | |
| Enumerator | |
| MIPI_DSI_RECEIVE_STATUS_NONE | Receive status not set. |
| MIPI_DSI_RECEIVE_STATUS_BTA_REQUEST_END | Receive BTA request end. |
| MIPI_DSI_RECEIVE_STATUS_LP_RX_HOST_TIMEOUT | Receive low power receive timeout. |
| MIPI_DSI_RECEIVE_STATUS_BTA_ACK_TIMEOUT | Receive BTA ack timeout. |
| MIPI_DSI_RECEIVE_STATUS_RESPONSE_PACKET | Receive response. |
| MIPI_DSI_RECEIVE_STATUS_EOTP | Receive end of transmission packet. |
| MIPI_DSI_RECEIVE_STATUS_TEARING_TRIGGER | Receive tearing trigger. |
| MIPI_DSI_RECEIVE_STATUS_ACK_TRIGGER | Receive ack trigger. |
| MIPI_DSI_RECEIVE_STATUS_TEARING_DETECT | Receive tearing detect. |

| | |
|---|-------------------------------|
| MIPI_DSI_RECEIVE_STATUS_MALFORM_ERROR | Receive malform error. |
| MIPI_DSI_RECEIVE_STATUS_ECC_MULTI | Receive ecc multi-bit error. |
| MIPI_DSI_RECEIVE_STATUS_UNEXPECTED_PACKET | Receive unexpected packet. |
| MIPI_DSI_RECEIVE_STATUS_WORD_COUNT | Receive word count. |
| MIPI_DSI_RECEIVE_STATUS_CRC | Receive crc error. |
| MIPI_DSI_RECEIVE_STATUS_INTERNAL_BUS | Receive internal bus error. |
| MIPI_DSI_RECEIVE_STATUS_BUFFER_OVERFLOW | Receive buffer overflow. |
| MIPI_DSI_RECEIVE_STATUS_TIMEOUT | Receive timeout. |
| MIPI_DSI_RECEIVE_STATUS_NO_RESPONSE | Receive no response. |
| MIPI_DSI_RECEIVE_STATUS_PACKET_SIZE | Receive packet size error. |
| MIPI_DSI_RECEIVE_STATUS_ECC_SINGLE | Receive ecc single bit error. |
| MIPI_DSI_RECEIVE_STATUS_ACK_AND_ERROR | Receive ack and error. |

◆ **mipi_dsi_fatal_status_t**

| enum <code>mipi_dsi_fatal_status_t</code> | |
|--|--|
| MIPI DSI fatal status errors | |
| Enumerator | |
| <code>MIPI_DSI_FATAL_STATUS_NONE</code> | Fatal status not set. |
| <code>MIPI_DSI_FATAL_STATUS_HS_TX_TIMEOUT</code> | Fatal high speed transmit timeout. |
| <code>MIPI_DSI_FATAL_STATUS_LP_RX_TIMEOUT</code> | Fatal low power receive timeout. |
| <code>MIPI_DSI_FATAL_STATUS_BTA_ACK_TIMEOUT</code> | Fatal BTA ack timeout. |
| <code>MIPI_DSI_FATAL_STATUS_ESCAPE_ENTRY_ERROR</code> | Fatal escape mode entry error. |
| <code>MIPI_DSI_FATAL_STATUS_LPDT_SYNC_ERROR</code> | Fatal low power data transmission synchronization error. |
| <code>MIPI_DSI_FATAL_STATUS_CTRL_ERROR</code> | Fatal control error. |
| <code>MIPI_DSI_FATAL_STATUS_LP0_CONTENTION_DETECT</code> | Fatal lane 0 low power contention detect. |
| <code>MIPI_DSI_FATAL_STATUS_LP1_CONTENTION_DETECT</code> | Fatal lane 1 low power contention detect. |
| <code>MIPI_DSI_FATAL_STATUS_LP0_CONTENTION</code> | Fatal lane 0 low power contention status. |
| <code>MIPI_DSI_FATAL_STATUS_LP1_CONTENTION</code> | Fatal lane 1 low power contention status. |

◆ **mipi_dsi_phy_status_t**

| enum <code>mipi_dsi_phy_status_t</code> | |
|---|---|
| MIPI DSI physical lane status | |
| Enumerator | |
| <code>MIPI_DSI_PHY_STATUS_NONE</code> | Physical lane status not set. |
| <code>MIPI_DSI_PHY_STATUS_ULP_NOT_ACTIVE</code> | Physical lane ULP not active. |
| <code>MIPI_DSI_PHY_STATUS_CLOCK_LANE_STOP</code> | Clock lane in stopped state. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_LP_RX</code> | Data lane low power receive mode. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_ULP_RX</code> | Data lane ultra low power receive mode. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_NOT_ULP</code> | Data lane 0 not in ULP mode. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE1_NOT_ULP</code> | Data lane 1 not in ULP mode. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_STOP</code> | Data lane 0 stop state. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE1_STOP</code> | Data lane 1 stop state. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_RX_TO_TX</code> | Data lane Rx to Tx transition event. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_TX_TO_RX</code> | Data lane Tx to Rx transition event. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE0_RX_STATE</code> | Data lane Rx active state. |
| <code>MIPI_DSI_PHY_STATUS_CLOCK_ULPS_ENTER</code> | Clock lane ULPS enter event. |
| <code>MIPI_DSI_PHY_STATUS_CLOCK_ULPS_EXIT</code> | Clock lane ULPS exit event. |
| <code>MIPI_DSI_PHY_STATUS_CLOCK_LP_TO_HS</code> | Clock lane LP to HS transition event. |
| <code>MIPI_DSI_PHY_STATUS_CLOCK_HS_TO_LP</code> | Clock lane HS to LP transition event. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE_ULPS_ENTER</code> | Data lane ULPS enter event. |
| <code>MIPI_DSI_PHY_STATUS_DATA_LANE_ULPS_EXIT</code> | Data lane ULPS exit event. |

◆ **mipi_dsi_link_status_t**

| enum <code>mipi_dsi_link_status_t</code> | |
|---|-----------------------------|
| MIPI DSI link status bits | |
| Enumerator | |
| <code>MIPI_DSI_LINK_STATUS_IDLE</code> | Link idle or uninitialized. |
| <code>MIPI_DSI_LINK_STATUS_CH0_RUNNING</code> | Channel 0 running. |
| <code>MIPI_DSI_LINK_STATUS_CH1_RUNNING</code> | Channel 1 running. |
| <code>MIPI_DSI_LINK_STATUS_VIDEO_RUNNING</code> | Video output running. |
| <code>MIPI_DSI_LINK_STATUS_HP_MODE_BUSY</code> | HP operation busy. |
| <code>MIPI_DSI_LINK_STATUS_LP_MODE_BUSY</code> | LP operation busy. |

◆ **mipi_dsi_lane_t**

| enum <code>mipi_dsi_lane_t</code> | |
|-------------------------------------|-----------------|
| MIPI DSI Lane Type | |
| Enumerator | |
| <code>MIPI_DSI_LANE_CLOCK</code> | Clock Lanes. |
| <code>MIPI_DSI_LANE_DATA_ALL</code> | All Data Lanes. |

5.3.7.5 SLCDC Interface[Interfaces](#) » [Graphics](#)**Detailed Description**

Interface for Segment LCD controllers.

Data Structures

struct `slcdc_cfg_t`

struct `slcdc_api_t`

```
struct slcdc_instance_t
```

Typedefs

```
typedef void slcdc_ctrl_t
```

Enumerations

```

Data Structure Documentation

◆ slcdc_cfg_t

| struct slcdc_cfg_t | | |
|---------------------------------------|---------------------|---|
| SLCDC configuration block | | |
| Data Fields | | |
| slcdc_display_clock_t | slcdc_clock | LCD clock source (LCDSCKSEL) |
| slcdc_clk_div_t | slcdc_clock_setting | LCD clock setting (LCDC0) |
| slcdc_bias_method_t | bias_method | LCD display bias method select (LBAS bit) |
| slcdc_time_slice_t | time_slice | Time slice of LCD display select (LDTY bit) |
| slcdc_waveform_t | waveform | LCD display waveform select (LWAVE bit) |

| | | |
|--|----------------|--|
| slcdc_drive_volt_gen_t | drive_volt_gen | LCD Drive Voltage Generator Select (MDSET bit) |
| slcdc_contrast_t | contrast | LCD Boost Level (contrast setting) |
| slcdc_ref_volt_sel_t | ref_volt_sel | LCD reference voltage selection (MDSET2 bit) |

◆ slcdc_api_t

| | |
|--|--|
| struct slcdc_api_t | |
| SLCDC functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg) |
| fsp_err_t (* | write)(slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count) |
| fsp_err_t (* | modify)(slcdc_ctrl_t *const p_ctrl, uint8_t const segment, uint8_t const data_mask, uint8_t const data) |
| fsp_err_t (* | start)(slcdc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | stop)(slcdc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | setContrast)(slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast) |
| fsp_err_t (* | setDisplayArea)(slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area) |
| fsp_err_t (* | close)(slcdc_ctrl_t *const p_ctrl) |
| Field Documentation | |
| | |

◆ **open**

```
fsp_err_t(* slcdc_api_t::open) (slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)
```

Open SLCDC.

Parameters

| | | |
|----------|--------|---|
| [in,out] | p_ctrl | Pointer to display interface control block. Must be declared by user. |
| [in] | p_cfg | Pointer to display configuration structure. All elements of this structure must be set by the user. |

◆ **write**

```
fsp_err_t(* slcdc_api_t::write) (slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count)
```

Write data to the SLCDC segment data array. Specifies the initial display data. Except when using 8-time slice mode, store values in the lower 4 bits when writing to the A-pattern area and in the upper 4 bits when writing to the B-pattern area.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | start_segment | Specify the start segment number to be written. |
| [in] | p_data | Pointer to the display data to be written to the specified segments. |
| [in] | segment_count | Number of segments to be written. |

◆ **modify**

```
fsp_err_t(* slcdc_api_t::modify) (slcdc_ctrl_t *const p_ctrl, uint8_t const segment, uint8_t const data_mask, uint8_t const data)
```

Rewrite data in the SLCDC segment data array. Rewrites the LCD display data in 1-bit units. If a bit is not specified for rewriting, the value stored in the bit is held as it is.

Parameters

| | | |
|------|-----------|--|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | segment | The segment to be written. |
| [in] | data_mask | Mask the data being displayed. Set 0 to the bit to be rewritten and set 1 to the other bits. Multiple bits can be rewritten. |
| [in] | data | Specify display data to rewrite to the specified segment. |

◆ **start**

```
fsp_err_t(* slcdc_api_t::start) (slcdc_ctrl_t *const p_ctrl)
```

Enable display signal output. Displays the segment data on the LCD.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **stop**

```
fsp_err_t(* slcdc_api_t::stop) (slcdc_ctrl_t *const p_ctrl)
```

Disable display signal output. Stops displaying data on the LCD.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **setContrast**

```
fsp_err_t(* slcdc_api_t::setContrast) (slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast)
```

Set the display contrast. This function can be used only when the internal voltage boosting method is used for drive voltage generation.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **setDisplayArea**

```
fsp_err_t(* slcdc_api_t::setDisplayArea) (slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)
```

Set LCD display area. This function sets a specified display area, A-pattern or B-pattern. This function can be used to 'blink' the display between A-pattern and B-pattern area data.

When using blinking, the RTC is required to operate before this function is executed. To configure the RTC, follow the steps below. 1) Open RTC 2) Set Periodic IRQ 3) Start RTC counter 4) Enable IRQ, RTC_EVENT_PERIODIC_IRQ Refer to the User's Manual for the detailed procedure.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
| [in] | display_area | Display area to be used, A-pattern or B-pattern area. |

◆ **close**

```
fsp_err_t(* slcdc_api_t::close) (slcdc_ctrl_t *const p_ctrl)
```

Close SLCDC.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to display interface control block. |
|------|--------|---|

◆ **slcdc_instance_t**

```
struct slcdc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------|--------|---|
| slcdc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| slcdc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |

| | | |
|----------------------------------|--------------------|---|
| <code>slcdc_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |
|----------------------------------|--------------------|---|

Typedef Documentation

◆ `slcdc_ctrl_t`

| |
|---|
| typedef void <code>slcdc_ctrl_t</code> |
| SLCDC control block. Allocate an instance specific control block to pass into the SLCDC API calls.SLCDC control block |

Enumeration Type Documentation

◆ `slcdc_bias_method_t`

| | |
|---------------------------------------|-----------------|
| enum <code>slcdc_bias_method_t</code> | |
| LCD display bias method. | |
| Enumerator | |
| <code>SLCDC_BIAS_2</code> | 1/2 bias method |
| <code>SLCDC_BIAS_3</code> | 1/3 bias method |
| <code>SLCDC_BIAS_4</code> | 1/4 bias method |

◆ `slcdc_time_slice_t`

| | |
|--------------------------------------|--------------|
| enum <code>slcdc_time_slice_t</code> | |
| Time slice of LCD display. | |
| Enumerator | |
| <code>SLCDC_STATIC</code> | Static. |
| <code>SLCDC_SLICE_2</code> | 2-time slice |
| <code>SLCDC_SLICE_3</code> | 3-time slice |
| <code>SLCDC_SLICE_4</code> | 4-time slice |
| <code>SLCDC_SLICE_6</code> | 6-time slice |
| <code>SLCDC_SLICE_8</code> | 8-time slice |

◆ **slcdc_waveform_t**

| | |
|------------------------------------|-------------|
| enum <code>slcdc_waveform_t</code> | |
| LCD display waveform select. | |
| Enumerator | |
| <code>SLCDC_WAVE_A</code> | Waveform A. |
| <code>SLCDC_WAVE_B</code> | Waveform B. |

◆ **slcdc_drive_volt_gen_t**

| | |
|--|--------------------------------------|
| enum <code>slcdc_drive_volt_gen_t</code> | |
| LCD Drive Voltage Generator Select. | |
| Enumerator | |
| <code>SLCDC_VOLT_EXTERNAL</code> | External resistance division method. |
| <code>SLCDC_VOLT_INTERNAL</code> | Internal voltage boosting method. |
| <code>SLCDC_VOLT_CAPACITOR</code> | Capacitor split method. |

◆ **slcdc_ref_volt_sel_t**

| | |
|--|--|
| enum <code>slcdc_ref_volt_sel_t</code> | |
| LCD Reference Voltage Selection. | |
| Enumerator | |
| <code>SLCDC_REF_INTERNAL_VL1_CAPACITOR_VCC_EXTERNAL</code> | Select VL1 reference for internal voltage or VCC reference for capacitor split or external division. Select VL2 reference for internal voltage or VL4 reference for capacitor split |

◆ **slcdc_display_area_control_blink_t**

| enum <code>slcdc_display_area_control_blink_t</code> | |
|--|---|
| Display Data Area Control | |
| Enumerator | |
| SLCDC_NOT_BLINKING | Display either A-pattern or B-pattern data. |
| SLCDC_BLINKING | Alternately display A-pattern and B-pattern data. |

◆ **slcdc_display_area_t**

| enum <code>slcdc_display_area_t</code> | |
|--|---------------------------------|
| Display Area data | |
| Enumerator | |
| SLCDC_DISP_A | Display A-pattern data. |
| SLCDC_DISP_B | Display B-pattern data. |
| SLCDC_DISP_BLINK | Blink between A- and B-pattern. |

◆ **slcdc_contrast_t**

| enum <code>slcdc_contrast_t</code> | |
|-------------------------------------|-------------------|
| LCD Boost Level (contrast) settings | |
| Enumerator | |
| SLCDC_CONTRAST_0 | Contrast level 0. |
| SLCDC_CONTRAST_1 | Contrast level 1. |
| SLCDC_CONTRAST_2 | Contrast level 2. |
| SLCDC_CONTRAST_3 | Contrast level 3. |
| SLCDC_CONTRAST_4 | Contrast level 4. |
| SLCDC_CONTRAST_5 | Contrast level 5. |
| SLCDC_CONTRAST_6 | Contrast level 6. |

| | |
|-------------------|--------------------|
| SLCDC_CONTRAST_7 | Contrast level 7. |
| SLCDC_CONTRAST_8 | Contrast level 8. |
| SLCDC_CONTRAST_9 | Contrast level 9. |
| SLCDC_CONTRAST_10 | Contrast level 10. |
| SLCDC_CONTRAST_11 | Contrast level 11. |
| SLCDC_CONTRAST_12 | Contrast level 12. |
| SLCDC_CONTRAST_13 | Contrast level 13. |
| SLCDC_CONTRAST_14 | Contrast level 14. |
| SLCDC_CONTRAST_15 | Contrast level 15. |
| SLCDC_CONTRAST_16 | Contrast level 16. |
| SLCDC_CONTRAST_17 | Contrast level 17. |
| SLCDC_CONTRAST_18 | Contrast level 18. |
| SLCDC_CONTRAST_19 | Contrast level 19. |
| SLCDC_CONTRAST_20 | Contrast level 20. |
| SLCDC_CONTRAST_21 | Contrast level 21. |
| SLCDC_CONTRAST_22 | Contrast level 22. |

◆ slcdc_display_on_off_t

| | |
|-----------------------------|--------------|
| enum slcdc_display_on_off_t | |
| LCD Display Enable/Disable | |
| Enumerator | |
| SLCDC_DISP_OFF | Display off. |
| SLCDC_DISP_ON | Display on. |

◆ **slcdc_display_enable_disable_t**

| enum <code>slcdc_display_enable_disable_t</code> | |
|--|---|
| LCD Display output enable | |
| Enumerator | |
| <code>SLCDC_DISP_DISABLE</code> | Output ground level to segment/common pins. |
| <code>SLCDC_DISP_ENABLE</code> | Output enable. |

◆ **slcdc_display_clock_t**

| enum <code>slcdc_display_clock_t</code> | |
|---|----------------------------|
| LCD Display clock selection | |
| Enumerator | |
| <code>SLCDC_CLOCK_LOCO</code> | Display clock source LOCO. |
| <code>SLCDC_CLOCK_SOSC</code> | Display clock source SOSC. |
| <code>SLCDC_CLOCK_MOSC</code> | Display clock source MOSC. |
| <code>SLCDC_CLOCK_MOCO</code> | Display clock source MOCO. |
| <code>SLCDC_CLOCK_HOCO</code> | Display clock source HOCO. |

◆ **slcdc_clk_div_t**

| enum <code>slcdc_clk_div_t</code> | |
|---|-----------------|
| LCD clock settings | |
| Enumerator | |
| <code>SLCDC_CLK_DIVISOR_LOCO_4</code> | LOCO Clock/4. |
| <code>SLCDC_CLK_DIVISOR_LOCO_8</code> | LOCO Clock/8. |
| <code>SLCDC_CLK_DIVISOR_LOCO_16</code> | LOCO Clock/16. |
| <code>SLCDC_CLK_DIVISOR_LOCO_32</code> | LOCO Clock/32. |
| <code>SLCDC_CLK_DIVISOR_LOCO_64</code> | LOCO Clock/64. |
| <code>SLCDC_CLK_DIVISOR_LOCO_128</code> | LOCO Clock/128. |

| | |
|--------------------------------|---------------------|
| SLCDC_CLK_DIVISOR_LOCO_256 | LOCO Clock/256. |
| SLCDC_CLK_DIVISOR_LOCO_512 | LOCO Clock/512. |
| SLCDC_CLK_DIVISOR_LOCO_1024 | LOCO Clock/1024. |
| SLCDC_CLK_DIVISOR_HOCO_256 | HOCO Clock/256. |
| SLCDC_CLK_DIVISOR_HOCO_512 | HOCO Clock/512. |
| SLCDC_CLK_DIVISOR_HOCO_1024 | HOCO Clock/1024. |
| SLCDC_CLK_DIVISOR_HOCO_2048 | HOCO Clock/2048. |
| SLCDC_CLK_DIVISOR_HOCO_4096 | HOCO Clock/4096. |
| SLCDC_CLK_DIVISOR_HOCO_8192 | HOCO Clock/8192. |
| SLCDC_CLK_DIVISOR_HOCO_16384 | HOCO Clock/16384. |
| SLCDC_CLK_DIVISOR_HOCO_32768 | HOCO Clock/32768. |
| SLCDC_CLK_DIVISOR_HOCO_65536 | HOCO Clock/65536. |
| SLCDC_CLK_DIVISOR_HOCO_131072 | HOCO Clock/131072. |
| SLCDC_CLK_DIVISOR_HOCO_262144 | HOCO Clock/262144. |
| SLCDC_CLK_DIVISOR_HOCO_524288 | HOCO Clock/524288. |
| SLCDC_CLK_DIVISOR_HOCO_1048576 | HOCO Clock/1048576. |

5.3.8 Input

Interfaces

Detailed Description

Input Interfaces.

Modules

External IRQ Interface

Interface for detecting external interrupts.

Key Matrix Interface

Interface for key matrix functions.

5.3.8.1 External IRQ Interface

[Interfaces](#) » [Input](#)

Detailed Description

Interface for detecting external interrupts.

Summary

The External IRQ Interface is for configuring interrupts to fire when a trigger condition is detected on an external IRQ pin.

Data Structures

struct [external_irq_callback_args_t](#)

struct [external_irq_cfg_t](#)

struct [external_irq_api_t](#)

struct [external_irq_instance_t](#)

Typedefs

typedef void [external_irq_ctrl_t](#)

Enumerations

enum [external_irq_trigger_t](#)

enum [external_irq_clock_source_div_t](#)

Data Structure Documentation

◆ [external_irq_callback_args_t](#)

| struct external_irq_callback_args_t | | |
|---|---------------------------|--|
| Callback function parameter data | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. Set in external_irq_api_t::open |

| | | |
|----------|---------|--|
| | | function in external_irq_cfg_t . |
| uint32_t | channel | The physical hardware channel that caused the interrupt. |

◆ external_irq_cfg_t

| | | |
|---|--|---|
| struct external_irq_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| uint8_t | channel | |
| | | Hardware channel used. |
| uint8_t | ipl | |
| | | Interrupt priority. |
| IRQn_Type | irq | |
| | | Interrupt number assigned to this instance. |
| external_irq_trigger_t | trigger | |
| | | Trigger setting. |
| external_irq_clock_source_div_t | clock_source_div | |
| | | Digital filter clock divisor setting. |
| bool | filter_enable | |
| | | Digital filter enable/disable setting. |
| void(* | p_callback)(external_irq_callback_args_t *p_args) | |
| void const * | p_context | |
| void const * | p_extend | |

| | |
|--|--|
| | External IRQ hardware dependent configuration. |
|--|--|

Field Documentation

◆ p_callback

void(* external_irq_cfg_t::p_callback) (external_irq_callback_args_t *p_args)

Callback provided external input trigger occurs.

◆ p_context

void const* external_irq_cfg_t::p_context

Placeholder for user data. Passed to the user callback in external_irq_callback_args_t.

◆ external_irq_api_t

struct external_irq_api_t

External interrupt driver structure. External interrupt functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|-------------|---|
| fsp_err_t(* | open)(external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg) |
| fsp_err_t(* | enable)(external_irq_ctrl_t *const p_ctrl) |
| fsp_err_t(* | disable)(external_irq_ctrl_t *const p_ctrl) |
| fsp_err_t(* | callbackSet)(external_irq_ctrl_t *const p_ctrl, void(*p_callback)(external_irq_callback_args_t *), void const *const p_context, external_irq_callback_args_t *const p_callback_memory) |
| fsp_err_t(* | close)(external_irq_ctrl_t *const p_ctrl) |

Field Documentation

◆ **open**

```
fsp_err_t(* external_irq_api_t::open) (external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg)
```

Initial configuration.

Parameters

| | | |
|-------|--------|--|
| [out] | p_ctrl | Pointer to control block. Must be declared by user. Value set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of the structure must be set by user. |

◆ **enable**

```
fsp_err_t(* external_irq_api_t::enable) (external_irq_ctrl_t *const p_ctrl)
```

Enable callback when an external trigger condition occurs.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in Open call for this external interrupt. |
|------|--------|---|

◆ **disable**

```
fsp_err_t(* external_irq_api_t::disable) (external_irq_ctrl_t *const p_ctrl)
```

Disable callback when external trigger condition occurs.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in Open call for this external interrupt. |
|------|--------|---|

◆ **callbackSet**

```
fsp_err_t(* external_irq_api_t::callbackSet) (external_irq_ctrl_t *const p_ctrl,
void(*p_callback)(external_irq_callback_args_t *), void const *const p_context,
external_irq_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the External IRQ control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* external_irq_api_t::close) (external_irq_ctrl_t *const p_ctrl)
```

Allow driver to be reconfigured. May reduce power consumption.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in Open call for this external interrupt. |
|------|--------|---|

◆ **external_irq_instance_t**

```
struct external_irq_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|----------------------------|--------|---|
| external_irq_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| external_irq_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| external_irq_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **external_irq_ctrl_t**

```
typedef void external_irq_ctrl_t
```

External IRQ control block. Allocate an instance specific control block to pass into the external IRQ API calls.

Enumeration Type Documentation◆ **external_irq_trigger_t**

```
enum external_irq_trigger_t
```

Condition that will trigger an interrupt when detected.

Enumerator

| | |
|------------------------------|-----------------------|
| EXTERNAL_IRQ_TRIG_FALLING | Falling edge trigger. |
| EXTERNAL_IRQ_TRIG_RISING | Rising edge trigger. |
| EXTERNAL_IRQ_TRIG_BOTH_EDGE | Both edges trigger. |
| EXTERNAL_IRQ_TRIG_LEVEL_LOW | Low level trigger. |
| EXTERNAL_IRQ_TRIG_LEVEL_HIGH | High level trigger. |

◆ **external_irq_clock_source_div_t**

```
enum external_irq_clock_source_div_t
```

External IRQ input pin digital filtering sample clock divisor settings. The digital filter rejects trigger conditions that are shorter than 3 periods of the filter clock.

Enumerator

| | |
|----------------------------------|--|
| EXTERNAL_IRQ_CLOCK_SOURCE_DIV_1 | Filter using clock source divided by 1. |
| EXTERNAL_IRQ_CLOCK_SOURCE_DIV_8 | Filter using clock source divided by 8. |
| EXTERNAL_IRQ_CLOCK_SOURCE_DIV_32 | Filter using clock source divided by 32. |
| EXTERNAL_IRQ_CLOCK_SOURCE_DIV_64 | Filter using clock source divided by 64. |

5.3.8.2 Key Matrix Interface

[Interfaces](#) » [Input](#)

Detailed Description

Interface for key matrix functions.

Summary

The KEYMATRIX interface provides standard Key Matrix functionality including event generation on a rising or falling edge for one or more channels at the same time. The generated event indicates all channels that are active in that instant via a bit mask. This allows the interface to be used with a matrix configuration or a one-to-one hardware implementation that is triggered on either a rising or a falling edge.

Data Structures

struct [keymatrix_callback_args_t](#)

struct [keymatrix_cfg_t](#)

struct [keymatrix_api_t](#)

struct [keymatrix_instance_t](#)

Typedefs

|-------------|---|

Field Documentation

◆ open

`fsp_err_t(* keymatrix_api_t::open) (keymatrix_ctrl_t *const p_ctrl, keymatrix_cfg_t const *const p_cfg)`

Initial configuration.

Parameters

| | | |
|-------|--------|--|
| [out] | p_ctrl | Pointer to control block. Must be declared by user. Value set in this function. |
| [in] | p_cfg | Pointer to configuration structure. All elements of the structure must be set by user. |

◆ enable

`fsp_err_t(* keymatrix_api_t::enable) (keymatrix_ctrl_t *const p_ctrl)`

Enable Key interrupt

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block pointer set in Open call for this Key interrupt. |
|------|--------|--|

◆ disable

`fsp_err_t(* keymatrix_api_t::disable) (keymatrix_ctrl_t *const p_ctrl)`

Disable Key interrupt.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block pointer set in Open call for this Key interrupt. |
|------|--------|--|

◆ **close**

```
fsp_err_t(* keymatrix_api_t::close) (keymatrix_ctrl_t *const p_ctrl)
```

Allow driver to be reconfigured. May reduce power consumption.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block pointer set in Open call for this Key interrupt. |
|------|--------|--|

◆ **keymatrix_instance_t**

```
struct keymatrix_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------------|--------|---|
| keymatrix_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| keymatrix_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| keymatrix_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **keymatrix_ctrl_t**

```
typedef void keymatrix_ctrl_t
```

Key matrix control block. Allocate an instance specific control block to pass into the key matrix API calls.

Enumeration Type Documentation◆ **keymatrix_trigger_t**

```
enum keymatrix_trigger_t
```

Trigger type: rising edge, falling edge

Enumerator

| | |
|------------------------|-----------------------|
| KEYMATRIX_TRIG_FALLING | Falling edge trigger. |
| KEYMATRIX_TRIG_RISING | Rising edge trigger. |

5.3.9 Monitoring Interfaces

Detailed Description

Monitoring Interfaces.

Modules

CAC Interface

Interface for clock frequency accuracy measurements.

CRC Interface

Interface for cyclic redundancy checking.

DOC Interface

Interface for the Data Operation Circuit.

Low Voltage Detection Interface

Interface for Low Voltage Detection.

WDT Interface

Interface for watch dog timer functions.

5.3.9.1 CAC Interface

[Interfaces](#) » [Monitoring](#)

Detailed Description

Interface for clock frequency accuracy measurements.

Summary

The interface for the clock frequency accuracy measurement circuit (CAC) peripheral is used to check a system clock frequency with a reference clock signal by counting the number of pulses of the clock to be measured.

Data Structures

struct [cac_ref_clock_config_t](#)

struct [cac_meas_clock_config_t](#)

| | |
| void const * | p_extend |
| | CAC hardware dependent configuration */. |
| | |

◆ **cac_api_t**

struct cac_api_t

CAC functions implemented at the HAL layer API

Data Fields

fsp_err_t(* open)(cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)

fsp_err_t(* startMeasurement)(cac_ctrl_t *const p_ctrl)

fsp_err_t(* stopMeasurement)(cac_ctrl_t *const p_ctrl)

fsp_err_t(* read)(cac_ctrl_t *const p_ctrl, uint32_t *const p_counter)

fsp_err_t(* callbackSet)(cac_ctrl_t *const p_ctrl,
void(*p_callback)(cac_callback_args_t *), void const *const
p_context, cac_callback_args_t *const p_callback_memory)

fsp_err_t(* close)(cac_ctrl_t *const p_ctrl)

Field Documentation◆ **open**

fsp_err_t(* cac_api_t::open)(cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)

Open function for CAC device.

Parameters

| | | |
|-------|-----------|--|
| [out] | p_ctrl | Pointer to CAC device control. Must be declared by user. |
| [in] | cac_cfg_t | Pointer to CAC configuration structure. |

◆ **startMeasurement**

```
fsp_err_t(* cac_api_t::startMeasurement) (cac_ctrl_t *const p_ctrl)
```

Begin a measurement for the CAC peripheral.

Parameters

| | | |
|------|--------|--------------------------------|
| [in] | p_ctrl | Pointer to CAC device control. |
|------|--------|--------------------------------|

◆ **stopMeasurement**

```
fsp_err_t(* cac_api_t::stopMeasurement) (cac_ctrl_t *const p_ctrl)
```

End a measurement for the CAC peripheral.

Parameters

| | | |
|------|--------|--------------------------------|
| [in] | p_ctrl | Pointer to CAC device control. |
|------|--------|--------------------------------|

◆ **read**

```
fsp_err_t(* cac_api_t::read) (cac_ctrl_t *const p_ctrl, uint32_t *const p_counter)
```

Read function for CAC peripheral.

Parameters

| | | |
|------|-----------|--|
| [in] | p_ctrl | Control for the CAC device context. |
| [in] | p_counter | Pointer to variable in which to store the current CACNTBR register contents. |

◆ **callbackSet**

```
fsp_err_t(* cac_api_t::callbackSet) (cac_ctrl_t *const p_ctrl, void(*p_callback)(cac_callback_args_t *),
void const *const p_context, cac_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in cac_api_t::open call |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* cac_api_t::close) (cac_ctrl_t *const p_ctrl)
```

Close function for CAC device.

Parameters

| | | |
|------|--------|--------------------------------|
| [in] | p_ctrl | Pointer to CAC device control. |
|------|--------|--------------------------------|

◆ **cac_instance_t**

```
struct cac_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| cac_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| cac_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| cac_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **cac_ctrl_t**

```
typedef void cac_ctrl_t
```

CAC control block. Allocate an instance specific control block to pass into the CAC API calls.

Enumeration Type Documentation◆ **cac_event_t**

```
enum cac_event_t
```

Event types returned by the ISR callback when used in CAC interrupt mode

Enumerator

| | |
|--------------------------------|-----------------------|
| CAC_EVENT_FREQUENCY_ERROR | Frequency error. |
| CAC_EVENT_MEASUREMENT_COMPLETE | Measurement complete. |
| CAC_EVENT_COUNTER_OVERFLOW | Counter overflow. |

◆ **cac_clock_type_t**

```
enum cac_clock_type_t
```

Enumeration of the two possible clocks.

Enumerator

| | |
|---------------------|--------------------|
| CAC_CLOCK_MEASURED | Measurement clock. |
| CAC_CLOCK_REFERENCE | Reference clock. |

◆ **cac_clock_source_t**

| enum <code>cac_clock_source_t</code> | |
|--|--|
| Enumeration of the possible clock sources for both the reference and measurement clocks. | |
| Enumerator | |
| <code>CAC_CLOCK_SOURCE_MAIN_OSC</code> | Main clock oscillator. |
| <code>CAC_CLOCK_SOURCE_SUBCLOCK</code> | Sub-clock. |
| <code>CAC_CLOCK_SOURCE_HOCO</code> | HOCO (High speed on chip oscillator) |
| <code>CAC_CLOCK_SOURCE_MOCO</code> | MOCO (Middle speed on chip oscillator) |
| <code>CAC_CLOCK_SOURCE_LOCO</code> | LOCO (Low speed on chip oscillator) |
| <code>CAC_CLOCK_SOURCE_PCLKB</code> | PCLKB (Peripheral Clock B) |
| <code>CAC_CLOCK_SOURCE_IWDT</code> | IWDT-dedicated on-chip oscillator. |
| <code>CAC_CLOCK_SOURCE_EXTERNAL</code> | Externally supplied measurement clock on CACREF pin. |

◆ **cac_ref_divider_t**

| enum <code>cac_ref_divider_t</code> | |
|--|----------------------------------|
| Enumeration of available dividers for the reference clock. | |
| Enumerator | |
| <code>CAC_REF_DIV_32</code> | Reference clock divided by 32. |
| <code>CAC_REF_DIV_128</code> | Reference clock divided by 128. |
| <code>CAC_REF_DIV_1024</code> | Reference clock divided by 1024. |
| <code>CAC_REF_DIV_8192</code> | Reference clock divided by 8192. |

◆ **cac_ref_digfilter_t**

| enum <code>cac_ref_digfilter_t</code> | |
|---|---|
| Enumeration of available digital filter settings for an external reference clock. | |
| Enumerator | |
| <code>CAC_REF_DIGITAL_FILTER_OFF</code> | No digital filter on the CACREF pin for reference clock. |
| <code>CAC_REF_DIGITAL_FILTER_1</code> | Sampling clock for digital filter = measuring frequency. |
| <code>CAC_REF_DIGITAL_FILTER_4</code> | Sampling clock for digital filter = measuring frequency/4. |
| <code>CAC_REF_DIGITAL_FILTER_16</code> | Sampling clock for digital filter = measuring frequency/16. |

◆ **cac_ref_edge_t**

| enum <code>cac_ref_edge_t</code> | |
|--|---|
| Enumeration of available edge detect settings for the reference clock. | |
| Enumerator | |
| <code>CAC_REF_EDGE_RISE</code> | Rising edge detect for the Reference clock. |
| <code>CAC_REF_EDGE_FALL</code> | Falling edge detect for the Reference clock. |
| <code>CAC_REF_EDGE_BOTH</code> | Both Rising and Falling edges detect for the Reference clock. |

◆ **cac_meas_divider_t**

| enum <code>cac_meas_divider_t</code> | |
|---|----------------------------------|
| Enumeration of available dividers for the measurement clock | |
| Enumerator | |
| <code>CAC_MEAS_DIV_1</code> | Measurement clock divided by 1. |
| <code>CAC_MEAS_DIV_4</code> | Measurement clock divided by 4. |
| <code>CAC_MEAS_DIV_8</code> | Measurement clock divided by 8. |
| <code>CAC_MEAS_DIV_32</code> | Measurement clock divided by 32. |

5.3.9.2 CRC Interface[Interfaces](#) » [Monitoring](#)**Detailed Description**

Interface for cyclic redundancy checking.

Summary

The CRC (Cyclic Redundancy Check) calculator generates CRC codes using five different polynomials including 8 bit, 16 bit, and 32 bit variations. Calculation can be performed by sending data to the block using the CPU or by snooping on read or write activity on one of SCI channels.

Data Structures

```
struct crc_input_t
```

```
struct crc_cfg_t
```

```
struct crc_api_t
```

```
struct crc_instance_t
```

Typedefs

```
typedef void crc_ctrl_t
```

Enumerations

```
enum crc_polynomial_t
```

enum [crc_bit_order_t](#)enum [crc_snoop_direction_t](#)

Data Structure Documentation

◆ [crc_input_t](#)

struct [crc_input_t](#)

Structure for CRC inputs

◆ [crc_cfg_t](#)

struct [crc_cfg_t](#)

User configuration structure, used in open function

Data Fields

| | | |
|----------------------------------|---------------|---|
| uint8_t | channel | Channel number. |
| crc_polynomial_t | polynomial | CRC Generating Polynomial Switching (GPS) |
| crc_bit_order_t | bit_order | CRC Calculation Switching (LMS) |
| uint32_t | snoop_address | Register Snoop Address (CRCSA) |
| void const * | p_extend | CRC Hardware Dependent Configuration. |

◆ [crc_api_t](#)

struct [crc_api_t](#)

CRC driver structure. General CRC functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|------------------------------|---|
| fsp_err_t (* | open)(crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg) |
| fsp_err_t (* | close)(crc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | crcResultGet)(crc_ctrl_t *const p_ctrl, uint32_t *crc_result) |
| fsp_err_t (* | snoopEnable)(crc_ctrl_t *const p_ctrl, uint32_t crc_seed) |
| fsp_err_t (* | snoopDisable)(crc_ctrl_t *const p_ctrl) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>calculate)(crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *p_crc_result)</code> |
|--------------------------|--|

Field Documentation

◆ open

| |
|--|
| <code>fsp_err_t(* crc_api_t::open) (crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)</code> |
|--|

Open the CRC driver module.

Parameters

| | | |
|------|--------|---------------------------------------|
| [in] | p_ctrl | Pointer to CRC device handle. |
| [in] | p_cfg | Pointer to a configuration structure. |

◆ close

| |
|---|
| <code>fsp_err_t(* crc_api_t::close) (crc_ctrl_t *const p_ctrl)</code> |
|---|

Close the CRC module driver

Parameters

| | | |
|------|--------|------------------------------|
| [in] | p_ctrl | Pointer to CRC device handle |
|------|--------|------------------------------|

Return values

| | |
|-------------|-------------------------------|
| FSP_SUCCESS | Configuration was successful. |
|-------------|-------------------------------|

◆ crcResultGet

| |
|--|
| <code>fsp_err_t(* crc_api_t::crcResultGet) (crc_ctrl_t *const p_ctrl, uint32_t *crc_result)</code> |
|--|

Return the current calculated value.

Parameters

| | | |
|-------|------------|---|
| [in] | p_ctrl | Pointer to CRC device handle. |
| [out] | crc_result | The calculated value from the last CRC calculation. |

◆ **snoopEnable**

```
fsp_err_t(* crc_api_t::snoopEnable) (crc_ctrl_t *const p_ctrl, uint32_t crc_seed)
```

Configure and Enable snooping.

Parameters

| | | |
|------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to CRC device handle. |
| [in] | crc_seed | CRC seed. |

◆ **snoopDisable**

```
fsp_err_t(* crc_api_t::snoopDisable) (crc_ctrl_t *const p_ctrl)
```

Disable snooping.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to CRC device handle. |
|------|--------|-------------------------------|

◆ **calculate**

```
fsp_err_t(* crc_api_t::calculate) (crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *p_crc_result)
```

Perform a CRC calculation on a block of data.

Parameters

| | | |
|-------|-------------|--|
| [in] | p_ctrl | Pointer to CRC device handle. |
| [in] | p_crc_input | A pointer to structure for CRC inputs |
| [out] | crc_result | The calculated value of the CRC calculation. |

◆ **crc_instance_t**

```
struct crc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| crc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| crc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| crc_api_t const * | p_api | Pointer to the API structure for |

| | |
|--|----------------|
| | this instance. |
|--|----------------|

Typedef Documentation

◆ `crc_ctrl_t`

```
typedef void crc_ctrl_t
```

CRC control block. Allocate an instance specific control block to pass into the CRC API calls.

Enumeration Type Documentation

◆ `crc_polynomial_t`

```
enum crc_polynomial_t
```

CRC Generating Polynomial Switching (GPS).

Enumerator

| | |
|---------------------------------------|--|
| <code>CRC_POLYNOMIAL_CRC_8</code> | 8-bit CRC-8 ($X^8 + X^2 + X + 1$) |
| <code>CRC_POLYNOMIAL_CRC_16</code> | 16-bit CRC-16 ($X^{16} + X^{15} + X^2 + 1$) |
| <code>CRC_POLYNOMIAL_CRC_CCITT</code> | 16-bit CRC-CCITT ($X^{16} + X^{12} + X^5 + 1$) |
| <code>CRC_POLYNOMIAL_CRC_32</code> | 32-bit CRC-32 ($X^{32} + X^{26} + X^{23} + X^{22} + X^{16} + X^{12} + X^{11} + X^{10} + X^8 + X^7 + X^5 + X^4 + X^2 + X + 1$) |
| <code>CRC_POLYNOMIAL_CRC_32C</code> | 32-bit CRC-32C ($X^{32} + X^{28} + X^{27} + X^{26} + X^{25} + X^{23} + X^{22} + X^{20} + X^{19} + X^{18} + X^{14} + X^{13} + X^{11} + X^{10} + X^9 + X^8 + X^6 + 1$) |

◆ `crc_bit_order_t`

```
enum crc_bit_order_t
```

CRC Calculation Switching (LMS)

Enumerator

| | |
|------------------------------------|--|
| <code>CRC_BIT_ORDER_LMS_LSB</code> | Generates CRC for LSB first communication. |
| <code>CRC_BIT_ORDER_LMS_MSB</code> | Generates CRC for MSB first communication. |

◆ **crc_snoop_direction_t**

| | |
|---|-----------------|
| enum <code>crc_snoop_direction_t</code> | |
| Snoop-On-Write/Read Switch (CRCSWR) | |
| Enumerator | |
| <code>CRC_SNOOP_DIRECTION_RECEIVE</code> | Snoop-on-read. |
| <code>CRC_SNOOP_DIRECTION_TRANSMIT</code> | Snoop-on-write. |

5.3.9.3 DOC Interface[Interfaces](#) » [Monitoring](#)**Detailed Description**

Interface for the Data Operation Circuit.

Defines the API and data structures for the DOC implementation of the Data Operation Circuit (DOC) interface.

Summary

This module implements the `DOC_API` using the Data Operation Circuit (DOC).

Data Structures

struct [doc_callback_args_t](#)

struct [doc_cfg_t](#)

struct [doc_api_t](#)

struct [doc_instance_t](#)

Typedefs

typedef void [doc_ctrl_t](#)

Enumerations

enum [doc_event_t](#)

enum [doc_bit_width_t](#)

Data Structure Documentation

◆ doc_callback_args_t

| | | |
|-----------------------------------|-----------|--|
| struct doc_callback_args_t | | |
| Callback function parameter data. | | |
| Data Fields | | |
| void const * | p_context | Set in doc_api_t::open function in doc_cfg_t . Placeholder for user data. |

◆ doc_cfg_t

| | | |
|--|---|--|
| struct doc_cfg_t | | |
| User configuration structure, used in the open function. | | |
| Data Fields | | |
| doc_event_t | event | |
| | | Select enumerated value from doc_event_t . |
| doc_bit_width_t | bit_width | |
| | | The bit width of operations. |
| uint32_t | doc_data | |
| uint32_t | doc_data_extra | |
| uint8_t | ipl | |
| | | DOC interrupt priority. |
| IRQn_Type | irq | |
| | | Interrupt number assigned to this instance. |
| void(* | p_callback)(doc_callback_args_t *p_args) | |

| | |
|--|--|
| void const * | p_context |
| Field Documentation | |
| ◆ doc_data | |
| uint32_t doc_cfg_t::doc_data | |
| Initial/Reference data for addition, subtraction, and comparison operations. | |
| <ul style="list-style-type: none"> • In Addition and Subtraction mode, this value sets the initial value of the operations. • In Comparison match, mismatch, lower, and upper modes, this value is compared with data that is written. • In Comparison inside window and outside window modes, this value is used as the lower bound for comparisons. | |
| ◆ doc_data_extra | |
| uint32_t doc_cfg_t::doc_data_extra | |
| Additional reference data for use in Window Comparison operations. | |
| <ul style="list-style-type: none"> • In Comparison inside window and outside window modes, this value is used as the upper bound for comparisons. | |
| ◆ p_callback | |
| void(* doc_cfg_t::p_callback) (doc_callback_args_t *p_args) | |
| Callback provided when a DOC ISR occurs. | |
| ◆ p_context | |
| void const* doc_cfg_t::p_context | |
| Placeholder for user data. Passed to the user callback in doc_callback_args_t . | |
| ◆ doc_api_t | |
| struct doc_api_t | |
| Data Operation Circuit (DOC) API structure. DOC functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t(* | open)(doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg) |
| fsp_err_t(* | close)(doc_ctrl_t *const p_ctrl) |
| fsp_err_t(* | read)(doc_ctrl_t *const p_ctrl, uint32_t *p_result) |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>write)(doc_ctrl_t *const p_ctrl, uint32_t data)</code> |
|--------------------------|---|

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>callbackSet)(doc_ctrl_t *const p_ctrl, void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const p_callback_memory)</code> |
|--------------------------|---|

Field Documentation

◆ open

| | |
|---|---|
| <code>fsp_err_t(* doc_api_t::open)</code> | <code>(doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)</code> |
|---|---|

Initial configuration.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ close

| | |
|--|---|
| <code>fsp_err_t(* doc_api_t::close)</code> | <code>(doc_ctrl_t *const p_ctrl)</code> |
|--|---|

Allow the driver to be reconfigured. Will reduce power consumption.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in <code>doc_api_t::open</code> call. |
|------|--------|---|

◆ read

| | |
|---|---|
| <code>fsp_err_t(* doc_api_t::read)</code> | <code>(doc_ctrl_t *const p_ctrl, uint32_t *p_result)</code> |
|---|---|

Gets the result of addition/subtraction operations and stores it in the provided pointer p_result.

Parameters

| | | |
|------|----------|---|
| [in] | p_ctrl | Control block set in <code>doc_api_t::open</code> call. |
| [in] | p_result | The result of the DOC operation. |

◆ **write**

```
fsp_err_t(* doc_api_t::write) (doc_ctrl_t *const p_ctrl, uint32_t data)
```

Write to the DODIR register.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in doc_api_t::open call. |
| [in] | data | data to be written to DOC DODIR register. |

◆ **callbackSet**

```
fsp_err_t(* doc_api_t::callbackSet) (doc_ctrl_t *const p_ctrl, void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the DOC control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **doc_instance_t**

```
struct doc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| doc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| doc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| doc_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **doc_ctrl_t**

```
typedef void doc_ctrl_t
```

DOC control block. Allocate an instance specific control block to pass into the DOC API calls.

Enumeration Type Documentation◆ **doc_event_t**

```
enum doc_event_t
```

Event that can trigger a callback function.

Enumerator

| | |
|-------------------------------------|---|
| DOC_EVENT_COMPARISON_MISMATCH | The data is not equal to the reference data setting. |
| DOC_EVENT_ADDITION | Addition resulted in a value greater than the max for the configured bit width. |
| DOC_EVENT_SUBTRACTION | Subtraction resulted in a value less than 0. |
| DOC_EVENT_COMPARISON_MATCH | The data is equal to the reference data setting. |
| DOC_EVENT_COMPARISON_LOWER | The data is less than the reference data setting. |
| DOC_EVENT_COMPARISON_UPPER | The data is greater than the reference data setting. |
| DOC_EVENT_COMPARISON_INSIDE_WINDOW | The data is between the two reference data settings. |
| DOC_EVENT_COMPARISON_OUTSIDE_WINDOW | The data is outside the two reference data settings. |

◆ **doc_bit_width_t**

```
enum doc_bit_width_t
```

The bit width used during operations.

Enumerator

| | |
|------------------|------------------------|
| DOC_BIT_WIDTH_16 | Operations are 16-bit. |
| DOC_BIT_WIDTH_32 | Operations are 32-bit. |

5.3.9.4 Low Voltage Detection Interface

[Interfaces](#) » [Monitoring](#)

Detailed Description

Interface for Low Voltage Detection.

Summary

The LVD driver provides functions for configuring the LVD voltage monitors and detectors.

Data Structures

struct [lvd_status_t](#)

struct [lvd_callback_args_t](#)

struct [lvd_cfg_t](#)

struct [lvd_api_t](#)

struct [lvd_instance_t](#)

Typedefs

typedef void [lvd_ctrl_t](#)

Enumerations

enum [lvd_threshold_t](#)

enum [lvd_response_t](#)

enum [lvd_voltage_slope_t](#)

enum [lvd_sample_clock_t](#)

enum [lvd_negation_delay_t](#)

enum [lvd_threshold_crossing_t](#)

enum [lvd_current_state_t](#)

Data Structure Documentation

◆ [lvd_status_t](#)

| struct lvd_status_t | | |
|--|-------------------|--|
| Current state of a voltage monitor. | | |
| Data Fields | | |
| lvd_threshold_crossing_t | crossing_detected | Threshold crossing detection (latched) |
| lvd_current_state_t | current_state | Instantaneous status of monitored voltage (above or below threshold) |

◆ **lvd_callback_args_t**

| struct lvd_callback_args_t | | |
|-------------------------------------|----------------|---------------------------------------|
| LVD callback parameter definition | | |
| Data Fields | | |
| uint32_t | monitor_number | Monitor number. |
| lvd_current_state_t | current_state | Current state of the voltage monitor. |
| void const * | p_context | Placeholder for user data. |

◆ **lvd_cfg_t**

| struct lvd_cfg_t | | |
|--------------------------------------|--------------------------------------|--|
| LVD configuration structure | | |
| Data Fields | | |
| uint32_t | monitor_number | |
| lvd_threshold_t | voltage_threshold | |
| lvd_response_t | detection_response | |
| lvd_voltage_slope_t | voltage_slope | |
| lvd_negation_delay_t | negation_delay | |
| lvd_sample_clock_t | sample_clock_divisor | |
| IRQn_Type | irq | |
| uint8_t | monitor_ipl | |

| | |
|--|---|
| | |
| void(* | p_callback)(lvd_callback_args_t *p_args) |
| | |
| void const * | p_context |
| | |
| void const * | p_extend |
| | |
| Field Documentation | |
| ◆ monitor_number | |
| uint32_t lvd_cfg_t::monitor_number | |
| Monitor number, 1, 2, ... | |
| ◆ voltage_threshold | |
| lvd_threshold_t lvd_cfg_t::voltage_threshold | |
| Threshold for out of range voltage detection | |
| ◆ detection_response | |
| lvd_response_t lvd_cfg_t::detection_response | |
| Response on detecting a threshold crossing | |
| ◆ voltage_slope | |
| lvd_voltage_slope_t lvd_cfg_t::voltage_slope | |
| Direction of voltage crossing that will trigger a detection (Rising Edge, Falling Edge, Both). | |
| ◆ negation_delay | |
| lvd_negation_delay_t lvd_cfg_t::negation_delay | |
| Negation of LVD signal follows reset or voltage in range | |
| ◆ sample_clock_divisor | |
| lvd_sample_clock_t lvd_cfg_t::sample_clock_divisor | |
| Sample clock divider, use LVD_SAMPLE_CLOCK_DISABLED to disable digital filtering | |
| ◆ irq | |
| IRQn_Type lvd_cfg_t::irq | |
| Interrupt number. | |

◆ **monitor_ipl**

uint8_t lvd_cfg_t::monitor_ipl

Interrupt priority level.

◆ **p_callback**

void(* lvd_cfg_t::p_callback) (lvd_callback_args_t *p_args)

User function to be called from interrupt

◆ **p_context**

void const* lvd_cfg_t::p_context

Placeholder for user data. Passed to the user callback in

◆ **p_extend**

void const* lvd_cfg_t::p_extend

Extension parameter for hardware specific settings

◆ **lvd_api_t**

struct lvd_api_t

LVD driver API structure. LVD driver functions implemented at the HAL layer will adhere to this API.

Data Fieldsfsp_err_t(* [open](#))(lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)fsp_err_t(* [statusGet](#))(lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)fsp_err_t(* [statusClear](#))(lvd_ctrl_t *const p_ctrl)fsp_err_t(* [callbackSet](#))(lvd_ctrl_t *const p_ctrl, void(*p_callback)(lvd_callback_args_t *), void const *const p_context, lvd_callback_args_t *const p_callback_memory)fsp_err_t(* [close](#))(lvd_ctrl_t *const p_ctrl)**Field Documentation**

◆ **open**

```
fsp_err_t(* lvd_api_t::open) (lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)
```

Initializes a low voltage detection driver according to the passed-in configuration structure.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure for the driver instance |
| [in] | p_cfg | Pointer to the configuration structure for the driver instance |

◆ **statusGet**

```
fsp_err_t(* lvd_api_t::statusGet) (lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)
```

Get the current state of the monitor, (threshold crossing detected, voltage currently above or below threshold). Must be used if the peripheral was initialized with lvd_response_t set to LVD_RESPONSE_NONE.

Parameters

| | | |
|----------|--------------|--|
| [in] | p_ctrl | Pointer to the control structure for the driver instance |
| [in,out] | p_lvd_status | Pointer to a lvd_status_t structure |

◆ **statusClear**

```
fsp_err_t(* lvd_api_t::statusClear) (lvd_ctrl_t *const p_ctrl)
```

Clears the latched status of the monitor. Must be used if the peripheral was initialized with lvd_response_t set to LVD_RESPONSE_NONE.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to the control structure for the driver instance |
|------|--------|--|

◆ **callbackSet**

```
fsp_err_t(* lvd_api_t::callbackSet) (lvd_ctrl_t *const p_ctrl, void(*p_callback)(lvd_callback_args_t *),
void const *const p_context, lvd_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the LVD control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* lvd_api_t::close) (lvd_ctrl_t *const p_ctrl)
```

Disables the LVD peripheral. Closes the driver instance.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to the control structure for the driver instance |
|------|--------|--|

◆ **lvd_instance_t**

```
struct lvd_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| lvd_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| lvd_cfg_t const * | p_cfg | Pointer to the configuration structure for this interface instance. |
| lvd_api_t const * | p_api | Pointer to the API structure for this interface instance. |

Typedef Documentation

◆ **lvd_ctrl_t**

```
typedef void lvd_ctrl_t
```

LVD control block. Allocate an instance specific control block to pass into the LVD API calls.

Enumeration Type Documentation◆ **lvd_threshold_t**

```
enum lvd_threshold_t
```

Register definitions, common services, and error codes. Voltage detection level The thresholds supported by each MCU are in the MCU User's Manual as well as in the r_lvd module description on the stack tab of the RA project.

Enumerator

| Enumerator | |
|-------------------------------------|-------|
| LVD_THRESHOLD_MONITOR_1_LEVEL_4_08V | 4.08V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_88V | 3.88V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_67V | 3.67V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_47V | 3.47V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_27V | 3.27V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_06V | 3.06V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_91V | 2.91V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_76V | 2.76V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_60V | 2.60V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_45V | 2.45V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_35V | 2.35V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_25V | 2.25V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_15V | 2.15V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_04V | 2.04V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_94V | 1.94V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_84V | 1.84V |

| | |
|-------------------------------------|-------|
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_74V | 1.74V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_63V | 1.63V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_4_29V | 4.29V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_4_16V | 4.16V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_4_14V | 4.14V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_4_03V | 4.03V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_4_02V | 4.02V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_86V | 3.86V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_84V | 3.84V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_10V | 3.10V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_3_00V | 3.00V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_90V | 2.90V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_79V | 2.79V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_68V | 2.68V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_58V | 2.58V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_48V | 2.48V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_20V | 2.20V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_96V | 1.96V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_86V | 1.86V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_75V | 1.75V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_1_65V | 1.65V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_99V | 2.99V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_92V | 2.92V |
| LVD_THRESHOLD_MONITOR_1_LEVEL_2_85V | 2.85V |

| | |
|-------------------------------------|-------|
| LVD_THRESHOLD_MONITOR_2_LEVEL_4_31V | 4.31V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_4_29V | 4.29V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_4_17V | 4.17V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_4_14V | 4.14V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_4_03V | 4.03V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_4_02V | 4.02V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_3_84V | 3.84V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_2_99V | 2.99V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_2_92V | 2.92V |
| LVD_THRESHOLD_MONITOR_2_LEVEL_2_85V | 2.85V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_3_1V | 3.1V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_2_9V | 2.9V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_2_8V | 2.8V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_2_7V | 2.7V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_2_6V | 2.6V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_2_4V | 2.4V |
| LVD_THRESHOLD_EXLVDVBAT_LEVEL_2_2V | 2.2V |
| LVD_THRESHOLD_LVDVRTC_LEVEL_2_8V | 2.8V |
| LVD_THRESHOLD_LVDVRTC_LEVEL_2_6V | 2.6V |
| LVD_THRESHOLD_LVDVRTC_LEVEL_2_4V | 2.4V |
| LVD_THRESHOLD_LVDVRTC_LEVEL_2_2V | 2.2V |

◆ **lvd_response_t**

| enum <code>lvd_response_t</code> | |
|---|--|
| Response types for handling threshold crossing event. | |
| Enumerator | |
| <code>LVD_RESPONSE_NMI</code> | Non-maskable interrupt. |
| <code>LVD_RESPONSE_INTERRUPT</code> | Maskable interrupt. |
| <code>LVD_RESPONSE_RESET</code> | Reset on VCC-fall. |
| <code>LVD_RESPONSE_RESET_ON_RISING</code> | Reset on VCC-rise. |
| <code>LVD_RESPONSE_NONE</code> | No response, status must be requested via <code>statusGet</code> function. |

◆ **lvd_voltage_slope_t**

| enum <code>lvd_voltage_slope_t</code> | |
|--|--|
| The direction from which VCC must cross the threshold to trigger a detection (rising, falling, or both). | |
| Enumerator | |
| <code>LVD_VOLTAGE_SLOPE_RISING</code> | When $VCC \geq V_{det2}$ (rise) is detected. |
| <code>LVD_VOLTAGE_SLOPE_FALLING</code> | When $VCC < V_{det2}$ (drop) is detected. |
| <code>LVD_VOLTAGE_SLOPE_BOTH</code> | When drop and rise are detected. |

◆ **lvd_sample_clock_t**

| enum <code>lvd_sample_clock_t</code> | |
|---|--|
| Sample clock divider, use <code>LVD_SAMPLE_CLOCK_DISABLED</code> to disable digital filtering | |
| Enumerator | |
| <code>LVD_SAMPLE_CLOCK_LOCO_DIV_2</code> | Digital filter sample clock is LOCO divided by 2. |
| <code>LVD_SAMPLE_CLOCK_LOCO_DIV_4</code> | Digital filter sample clock is LOCO divided by 4. |
| <code>LVD_SAMPLE_CLOCK_LOCO_DIV_8</code> | Digital filter sample clock is LOCO divided by 8. |
| <code>LVD_SAMPLE_CLOCK_LOCO_DIV_16</code> | Digital filter sample clock is LOCO divided by 16. |
| <code>LVD_SAMPLE_CLOCK_DISABLED</code> | Digital filter is disabled. |

◆ **lvd_negation_delay_t**

| enum <code>lvd_negation_delay_t</code> | |
|--|---|
| Negation delay of LVD reset signal follows reset or voltage in range | |
| Enumerator | |
| <code>LVD_NEGATION_DELAY_FROM_VOLTAGE</code> | Negation follows a stabilization time (t_{LVDn}) after $VCC > V_{det1}$ is detected. If a transition to software standby or deep software standby is to be made, the only possible value for the RN bit is <code>LVD_NEGATION_DELAY_FROM_VOLTAGE</code> |
| <code>LVD_NEGATION_DELAY_FROM_RESET</code> | Negation follows a stabilization time (t_{LVDn}) after assertion of the LVDn reset. If a transition to software standby or deep software standby is to be made, the only possible value for the RN bit is <code>LVD_NEGATION_DELAY_FROM_VOLTAGE</code> |

◆ **lvd_threshold_crossing_t**

| enum <code>lvd_threshold_crossing_t</code> | |
|--|---|
| Threshold crossing detection (latched) | |
| Enumerator | |
| <code>LVD_THRESHOLD_CROSSING_NOT_DETECTED</code> | Threshold crossing has not been detected. |
| <code>LVD_THRESHOLD_CROSSING_DETECTED</code> | Threshold crossing has been detected. |

◆ **lvd_current_state_t**

| enum <code>lvd_current_state_t</code> | |
|--|---|
| Instantaneous status of VCC (above or below threshold) | |
| Enumerator | |
| <code>LVD_CURRENT_STATE_BELOW_THRESHOLD</code> | $VCC < \text{threshold}$. |
| <code>LVD_CURRENT_STATE_ABOVE_THRESHOLD</code> | $VCC \geq \text{threshold}$ or monitor is disabled. |

5.3.9.5 WDT Interface[Interfaces](#) » [Monitoring](#)

Detailed Description

Interface for watch dog timer functions.

Summary

The WDT interface for the Watchdog Timer (WDT) peripheral provides watchdog functionality including resetting the device or generating an interrupt.

Data Structures

struct [wdt_callback_args_t](#)

struct [wdt_timeout_values_t](#)

struct [wdt_cfg_t](#)

struct [wdt_api_t](#)

struct [wdt_instance_t](#)

Typedefs

typedef void [wdt_ctrl_t](#)

Enumerations

enum [wdt_timeout_t](#)

enum [wdt_clock_division_t](#)

enum [wdt_window_start_t](#)

enum [wdt_window_end_t](#)

enum [wdt_reset_control_t](#)

enum [wdt_stop_control_t](#)

enum [wdt_status_t](#)

Data Structure Documentation

◆ [wdt_callback_args_t](#)

struct [wdt_callback_args_t](#)

Callback function parameter data

Data Fields

| | | |
|--------------|-----------|---|
| void const * | p_context | Placeholder for user data. Set in wdt_api_t::open function in wdt_cfg_t . |
|--------------|-----------|---|

◆ **wdt_timeout_values_t**

| | | |
|--|--------------------|--|
| struct wdt_timeout_values_t | | |
| WDT timeout data. Used to return frequency of WDT clock and timeout period | | |
| Data Fields | | |
| uint32_t | clock_frequency_hz | Frequency of watchdog clock after divider. |
| uint32_t | timeout_clocks | Timeout period in units of watchdog clock ticks. |

◆ **wdt_cfg_t**

| | | |
|--------------------------------------|--------------------------------|---|
| struct wdt_cfg_t | | |
| WDT configuration parameters. | | |
| Data Fields | | |
| wdt_timeout_t | timeout | |
| | | Timeout period. |
| wdt_clock_division_t | clock_division | |
| | | Clock divider. |
| wdt_window_start_t | window_start | |
| | | Refresh permitted window start position. |
| wdt_window_end_t | window_end | |
| | | Refresh permitted window end position. |
| wdt_reset_control_t | reset_control | |
| | | Select NMI/IRQ or reset generated on underflow. |
| wdt_stop_control_t | stop_control | |
| | | Select whether counter operates in sleep mode. |

| | |
|--------------|---|
| | |
| void(* | p_callback)(wdt_callback_args_t *p_args) |
| | Callback provided when a WDT ISR occurs. |
| | |
| void const * | p_context |
| | |
| void const * | p_extend |
| | Placeholder for user extension. |
| | |

Field Documentation

◆ [p_context](#)

void const* wdt_cfg_t::p_context

Placeholder for user data. Passed to the user callback in [wdt_callback_args_t](#).

◆ [wdt_api_t](#)

struct wdt_api_t

WDT functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|------------------------------|--|
| fsp_err_t (* | open)(wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg) |
| | |
| fsp_err_t (* | refresh)(wdt_ctrl_t *const p_ctrl) |
| | |
| fsp_err_t (* | statusGet)(wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status) |
| | |

| | |
| fsp_err_t (* | callbackSet)(wdt_ctrl_t *const p_ctrl, void(*p_callback)(wdt_callback_args_t *), void const *const p_context, wdt_callback_args_t *const p_callback_memory) |

Field Documentation

◆ open

`fsp_err_t(* wdt_api_t::open) (wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)`

Initialize the WDT in register start mode. In auto-start mode (Supported devices only) with NMI output it registers the NMI callback.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ refresh

`fsp_err_t(* wdt_api_t::refresh) (wdt_ctrl_t *const p_ctrl)`

Refresh the watchdog timer.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ statusGet

`fsp_err_t(* wdt_api_t::statusGet) (wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status)`

Read the status of the WDT.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_status | Pointer to variable to return status information through. |

◆ statusClear

`fsp_err_t(* wdt_api_t::statusClear) (wdt_ctrl_t *const p_ctrl, const wdt_status_t status)`

Clear the status flags of the WDT.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | status | Status condition(s) to clear. |

◆ counterGet

```
fsp_err_t(* wdt_api_t::counterGet) (wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)
```

Read the current WDT counter value.

Parameters

| | | |
|-------|---------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_count | Pointer to variable to return current WDT counter value. |

◆ timeoutGet

```
fsp_err_t(* wdt_api_t::timeoutGet) (wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout)
```

Read the watchdog timeout values.

Parameters

| | | |
|-------|-----------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_timeout | Pointer to structure to return timeout values. |

◆ callbackSet

```
fsp_err_t(* wdt_api_t::callbackSet) (wdt_ctrl_t *const p_ctrl, void(*p_callback)(wdt_callback_args_t *), void const *const p_context, wdt_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to the WDT control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_callback_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ wdt_instance_t

```
struct wdt_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------------------|---------------------|---|
| <code>wdt_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>wdt_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>wdt_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `wdt_ctrl_t`

```
typedef void wdt_ctrl_t
```

WDT control block. Allocate an instance specific control block to pass into the WDT API calls.

Enumeration Type Documentation

◆ `wdt_timeout_t`

```
enum wdt_timeout_t
```

WDT time-out periods.

Enumerator

| | |
|--------------------------------|--------------------|
| <code>WDT_TIMEOUT_128</code> | 128 clock cycles |
| <code>WDT_TIMEOUT_512</code> | 512 clock cycles |
| <code>WDT_TIMEOUT_1024</code> | 1024 clock cycles |
| <code>WDT_TIMEOUT_2048</code> | 2048 clock cycles |
| <code>WDT_TIMEOUT_4096</code> | 4096 clock cycles |
| <code>WDT_TIMEOUT_8192</code> | 8192 clock cycles |
| <code>WDT_TIMEOUT_16384</code> | 16384 clock cycles |

◆ **wdt_clock_division_t**

| enum <code>wdt_clock_division_t</code> | |
|--|-----------|
| WDT clock division ratio. | |
| Enumerator | |
| <code>WDT_CLOCK_DIVISION_1</code> | CLK/1. |
| <code>WDT_CLOCK_DIVISION_4</code> | CLK/4. |
| <code>WDT_CLOCK_DIVISION_16</code> | CLK/16. |
| <code>WDT_CLOCK_DIVISION_32</code> | CLK/32. |
| <code>WDT_CLOCK_DIVISION_64</code> | CLK/64. |
| <code>WDT_CLOCK_DIVISION_128</code> | CLK/128. |
| <code>WDT_CLOCK_DIVISION_256</code> | CLK/256. |
| <code>WDT_CLOCK_DIVISION_512</code> | CLK/512. |
| <code>WDT_CLOCK_DIVISION_2048</code> | CLK/2048. |
| <code>WDT_CLOCK_DIVISION_8192</code> | CLK/8192. |

◆ **wdt_window_start_t**

| enum <code>wdt_window_start_t</code> | |
|---|------------------------|
| WDT refresh permitted period window start position. | |
| Enumerator | |
| <code>WDT_WINDOW_START_25</code> | Start position = 25%. |
| <code>WDT_WINDOW_START_50</code> | Start position = 50%. |
| <code>WDT_WINDOW_START_75</code> | Start position = 75%. |
| <code>WDT_WINDOW_START_100</code> | Start position = 100%. |

◆ **wdt_window_end_t**

| | |
|---|---------------------|
| enum wdt_window_end_t | |
| WDT refresh permitted period window end position. | |
| Enumerator | |
| WDT_WINDOW_END_75 | End position = 75%. |
| WDT_WINDOW_END_50 | End position = 50%. |
| WDT_WINDOW_END_25 | End position = 25%. |
| WDT_WINDOW_END_0 | End position = 0%. |

◆ **wdt_reset_control_t**

| | |
|--|--|
| enum wdt_reset_control_t | |
| WDT Counter underflow and refresh error control. | |
| Enumerator | |
| WDT_RESET_CONTROL_NMI | NMI/IRQ request when counter underflows. |
| WDT_RESET_CONTROL_RESET | Reset request when counter underflows. |

◆ **wdt_stop_control_t**

| | |
|---|--|
| enum wdt_stop_control_t | |
| WDT Counter operation in sleep mode. | |
| Enumerator | |
| WDT_STOP_CONTROL_DISABLE | Count will not stop when device enters sleep mode. |
| WDT_STOP_CONTROL_ENABLE | Count will automatically stop when device enters sleep mode. |

◆ **wdt_status_t**

| enum <code>wdt_status_t</code> | |
|---|--|
| WDT status | |
| Enumerator | |
| <code>WDT_STATUS_NO_ERROR</code> | No status flags set. |
| <code>WDT_STATUS_UNDERFLOW</code> | Underflow flag set. |
| <code>WDT_STATUS_REFRESH_ERROR</code> | Refresh error flag set. Refresh outside of permitted window. |
| <code>WDT_STATUS_UNDERFLOW_AND_REFRESH_ERROR</code> | Underflow and refresh error flags set. |
| <code>WDT_STATUS_OVERFLOW</code> | Overflow flag set. |

5.3.10 Motor[Interfaces](#)**Detailed Description**

Motor Interfaces.

Modules[Motor 120-Degree Control Interface](#)

Interface for motor 120 control functions.

[Motor 120-Degree Driver Interface](#)

Interface for motor driver functions.

[Motor Inertia Estimate Interface](#)

Interface for Motor inertia estimate functions.

[Motor Interface](#)

Interface for Motor functions.

Motor Return Origin Function Interface

Interface for Motor return origin functions.

Motor angle Interface

Interface for motor angle and speed calculation functions.

Motor current Interface

Interface for motor current functions.

Motor driver Interface

Interface for motor driver functions.

Motor position Interface

Interface for motor position functions.

Motor speed Interface

Interface for motor speed functions.

5.3.10.1 Motor 120-Degree Control Interface

[Interfaces](#) » [Motor](#)

Detailed Description

Interface for motor 120 control functions.

Summary

The motor 120 control interface for speed calculation and setting, fixed cycle processing

Data Structures

Data Structure Documentation

◆ motor_120_control_callback_args_t

| | | |
|--|-----------|----------------------------|
| struct motor_120_control_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| motor_120_control_event_t | event | Event trigger. |
| void const * | p_context | Placeholder for user data. |

◆ motor_120_control_motor_parameter_t

| | | |
|--|-------------|------------------|
| struct motor_120_control_motor_parameter_t | | |
| Motor parameter for motor 120 control | | |
| Data Fields | | |
| uint32_t | u4_motor_pp | Pole pairs. |
| float | f4_motor_r | Resistance (ohm) |

| | | |
|-------|-------------|-----------------------------------|
| float | f4_motor_ld | Inductance for d-axis (H) |
| float | f4_motor_lq | Inductance for q-axis (H) |
| float | f4_motor_m | Magnet flux (Wb) |
| float | f4_motor_j | Rotor inertia (kgm ²) |

◆ motor_120_control_cfg_t

| | | |
|--------------------------------|------------------------|--|
| struct motor_120_control_cfg_t | | |
| Configuration parameters. | | |
| Data Fields | | |
| motor_120_conduction_type_t | conduction_type | |
| | | 0:First 60 degree PWM, 1:Complementary first 60 degree PWM |
| | | |
| uint32_t | u4_timeout_cnt | |
| | | Undetected time. |
| | | |
| float | f4_max_drive_v | |
| | | Max output voltage (V) |
| | | |
| float | f4_min_drive_v | |
| | | Min output voltage (V) |
| | | |
| uint32_t | u4_speed_pi_decimation | |
| | | Speed PI control decimation counter. |
| | | |
| uint32_t | u4_free_run_timer_freq | |
| | | Speed calc free run timer frequency (MHz) |
| | | |
| float | f4_speed_lpf_k | |
| | | Speed LPF parameter. |
| | | |

| | |
|---|--|
| float | f4_limit_speed_change |
| | Speed ref change limit. |
| float | f4_pi_ctrl_kp |
| | PI control error. |
| float | f4_pi_ctrl_ki |
| | PI control buffer of integral term. |
| float | f4_pi_ctrl_ilimit |
| | PI control limit of integral term. |
| motor_120_control_motor_parameter_t | motor_param |
| | Motor parameter. |
| void(* | p_callback)(motor_120_control_callback_args_t *p_args) |
| | Callback function. |
| void const * | p_context |
| | Placeholder for user data. |
| void const * | p_extend |
| | Extended configurations. |

◆ [motor_120_control_api_t](#)

```
struct motor\_120\_control\_api\_t
```

Functions implemented at the HAL layer will follow these APIs.

| Data Fields | |

| Field Documentation | |

◆ **open**

```
fsp_err_t(* motor_120_control_api_t::open) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_cfg_t const *const p_cfg)
```

Initialize the motor 120 control module.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* motor_120_control_api_t::close) (motor_120_control_ctrl_t *const p_ctrl)
```

Close the motor 120 control module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **run**

```
fsp_err_t(* motor_120_control_api_t::run) (motor_120_control_ctrl_t *const p_ctrl)
```

Run the motor 120 control module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stop**

```
fsp_err_t(* motor_120_control_api_t::stop) (motor_120_control_ctrl_t *const p_ctrl)
```

Stop the motor 120 control module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_120_control_api_t::reset) (motor_120_control_ctrl_t *const p_ctrl)
```

Reset variables of the motor 120 control module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ speedSet

```
fsp_err_t(* motor_120_control_api_t::speedSet) (motor_120_control_ctrl_t *const p_ctrl, float const speed_rpm)
```

Set speed[rpm]

Parameters

| | | |
|-------|-----------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | speed_rpm | Pointer to get speed data[rpm] |

◆ speedGet

```
fsp_err_t(* motor_120_control_api_t::speedGet) (motor_120_control_ctrl_t *const p_ctrl, float *const p_speed_rpm)
```

Get speed.

Parameters

| | | |
|-------|-------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_speed_rpm | Pointer to get speed data[rpm] |

◆ currentGet

```
fsp_err_t(* motor_120_control_api_t::currentGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)
```

Get phase current, Vdc and Va_max data.

Parameters

| | | |
|-------|------------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_current_status | Pointer to get data structure. |

◆ waitStopFlagGet

```
fsp_err_t(* motor_120_control_api_t::waitStopFlagGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag)
```

Get wait stop flag.

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_flag | Pointer to wait stop flag |

◆ **timeoutErrorFlagGet**

```
fsp_err_t(* motor_120_control_api_t::timeoutErrorFlagGet) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_timeout_error_flag_t *const p_timeout_error_flag)
```

Get timerout error flag.

Parameters

| | | |
|-------|----------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_timeout_error_flag | Pointer to timeout error flag |

◆ **patternErrorFlagGet**

```
fsp_err_t(* motor_120_control_api_t::patternErrorFlagGet) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_pattern_error_flag_t *const p_pattern_error_flag)
```

Get pattern error flag.

Parameters

| | | |
|-------|----------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_pattern_error_flag | Pointer to pattern error flag |

◆ **voltageRefGet**

```
fsp_err_t(* motor_120_control_api_t::voltageRefGet) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_voltage_ref_t *const p_voltage_ref)
```

Get voltage ref.

Parameters

| | | |
|-------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_voltage_ref | Pointer to flag voltage ref |

◆ **parameterUpdate**

```
fsp_err_t(* motor_120_control_api_t::parameterUpdate) (motor_120_control_ctrl_t *const p_ctrl,
motor_120_control_cfg_t const *const p_cfg)
```

Update configuration parameters for the calculation in the motor 120 control module

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_120_control_instance_t**

| struct motor_120_control_instance_t | | |
|--|--------|---|
| This structure encompasses everything that is needed to use an instance of this interface. | | |
| Data Fields | | |
| motor_120_control_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_120_control_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_120_control_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ motor_120_control_ctrl_t

| typedef void motor_120_control_ctrl_t |
|--|
| Control block. Allocate an instance specific control block to pass into the API calls. |

Enumeration Type Documentation

◆ motor_120_control_event_t

| enum motor_120_control_event_t | |
|---|---|
| Events that can trigger a callback function | |
| Enumerator | |
| MOTOR_120_CONTROL_EVENT_ADC_FORWARD | Event before motor 120 driver process. |
| MOTOR_120_CONTROL_EVENT_ADC_BACKWARD | Event after motor 120 driver process. |
| MOTOR_120_CONTROL_EVENT_CYCLE_FORWARD | Before cyclic process of speed control. |
| MOTOR_120_CONTROL_EVENT_CYCLE_BACKWARD | After cyclic process of speed control. |

◆ motor_120_conduction_type_t

| enum motor_120_conduction_type_t | |
|---|------------------------------------|
| Enumerator | |
| MOTOR_120_CONDUCTION_TYPE_FIRST60 | First 60 degree PWM. |
| MOTOR_120_CONDUCTION_TYPE_COMPLEMENTARY | Complementary first 60 degree PWM. |

◆ **motor_120_control_status_t**

| | |
|---|-----------------------------|
| enum motor_120_control_status_t | |
| 120 control status | |
| Enumerator | |
| MOTOR_120_CONTROL_STATUS_INACTIVE | 120 control status inactive |
| MOTOR_120_CONTROL_STATUS_ACTIVE | 120 control status active |

◆ **motor_120_control_run_mode_t**

| | |
|---|-----------------|
| enum motor_120_control_run_mode_t | |
| Run mode | |
| Enumerator | |
| MOTOR_120_CONTROL_RUN_MODE_INIT | Run mode init. |
| MOTOR_120_CONTROL_RUN_MODE_BOOT | Run mode boot. |
| MOTOR_120_CONTROL_RUN_MODE_DRIVE | Run mode drive. |

◆ **motor_120_control_rotation_direction_t**

| | |
|---|--------------------|
| enum motor_120_control_rotation_direction_t | |
| Rotation direction | |
| Enumerator | |
| MOTOR_120_CONTROL_ROTATION_DIRECTION_CW | Clockwise. |
| MOTOR_120_CONTROL_ROTATION_DIRECTION_CCW | Counter clockwise. |
| MOTOR_120_CONTROL_ROTATION_DIRECTION_MAX | Max value. |

◆ **motor_120_control_wait_stop_flag_t**

| | |
|---|-----------------------|
| enum motor_120_control_wait_stop_flag_t | |
| Flag for waiting for motor stop | |
| Enumerator | |
| MOTOR_120_CONTROL_WAIT_STOP_FLAG_CLEAR | Wait stop flag clear. |
| MOTOR_120_CONTROL_WAIT_STOP_FLAG_SET | Wait stop flag set. |

◆ **motor_120_control_timeout_error_flag_t**

| | |
|---|---------------------------|
| enum motor_120_control_timeout_error_flag_t | |
| Flag for timeout error status | |
| Enumerator | |
| MOTOR_120_CONTROL_TIMEOUT_ERROR_FLAG_CLEAR | Timeout error flag clear. |
| MOTOR_120_CONTROL_TIMEOUT_ERROR_FLAG_SET | Timeout error flag set. |

◆ **motor_120_control_pattern_error_flag_t**

| | |
|---|---------------------------|
| enum motor_120_control_pattern_error_flag_t | |
| Flag for pattern error status | |
| Enumerator | |
| MOTOR_120_CONTROL_PATTERN_ERROR_FLAG_CLEAR | Pattern error flag clear. |
| MOTOR_120_CONTROL_PATTERN_ERROR_FLAG_SET | Pattern error flag set. |

◆ **motor_120_control_speed_ref_t**

| enum <code>motor_120_control_speed_ref_t</code> | |
|---|-----------------------------|
| Speed reference status | |
| Enumerator | |
| <code>MOTOR_120_CONTROL_SPEED_REF_ZERO_CONST</code> | Speed reference zero const. |
| <code>MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_1</code> | Speed reference openloop 1. |
| <code>MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_2</code> | Speed reference openloop 2. |
| <code>MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_3</code> | Speed reference openloop 3. |
| <code>MOTOR_120_CONTROL_SPEED_REF_CHANGE</code> | Speed reference change. |

◆ **motor_120_control_voltage_ref_t**

| enum <code>motor_120_control_voltage_ref_t</code> | |
|---|-------------------------------|
| Voltage reference status | |
| Enumerator | |
| <code>MOTOR_120_CONTROL_VOLTAGE_REF_ZERO_CONST</code> | Voltage reference zero const. |
| <code>MOTOR_120_CONTROL_VOLTAGE_REF_UP</code> | Voltage reference up. |
| <code>MOTOR_120_CONTROL_VOLTAGE_REF_CONST</code> | Voltage reference const. |
| <code>MOTOR_120_CONTROL_VOLTAGE_REF_OPENLOOP</code> | Voltage reference openloop. |
| <code>MOTOR_120_CONTROL_VOLTAGE_REF_PI_OUTPUT</code> | Voltage reference pi output. |

5.3.10.2 Motor 120-Degree Driver Interface[Interfaces](#) » [Motor](#)**Detailed Description**

Interface for motor driver functions.

Summary

The MOTOR_120_DRIVER interface for setting the PWM modulation duty

Data Structures

```
struct motor_120_driver_callback_args_t
```

```
struct motor_120_driver_current_status_t
```

```
struct motor_120_driver_cfg_t
```

```
struct motor_120_driver_api_t
```

```
struct motor_120_driver_instance_t
```

Typedefs

```
typedef void motor_120_driver_ctrl_t
```

Enumerations

```
enum motor_120_driver_event_t
```

```
enum motor_120_driver_flag_offset_calc_t
```

```
enum motor_120_driver_phase_pattern_t
```

Data Structure Documentation

◆ motor_120_driver_callback_args_t

| | | |
|---|-----------|----------------------------|
| struct motor_120_driver_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| motor_120_driver_event_t | event | Event trigger. |
| void const * | p_context | Placeholder for user data. |

◆ motor_120_driver_current_status_t

| | | |
|--|----|---------------------|
| struct motor_120_driver_current_status_t | | |
| Current data get structure | | |
| Data Fields | | |
| float | iu | U phase current (A) |
| float | iv | V phase current (A) |
| float | iw | W phase current (A) |
| | | |

| | | |
|-------|-----|-----------------------|
| float | vdc | Main line voltage (V) |
| float | vu | U phase voltage (V) |
| float | vv | V phase voltage (V) |
| float | vw | W phase voltage (V) |

Field Documentation

◆ open

`fsp_err_t(* motor_120_driver_api_t::open) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_cfg_t const *const p_cfg)`

Initialize the motor 120 driver module.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ close

`fsp_err_t(* motor_120_driver_api_t::close) (motor_120_driver_ctrl_t *const p_ctrl)`

Close the motor 120 driver module

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
|------|---------------------|-------------------------------|

◆ **run**

```
fsp_err_t(* motor_120_driver_api_t::run) (motor_120_driver_ctrl_t *const p_ctrl)
```

Run the motor 120 driver module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stop**

```
fsp_err_t(* motor_120_driver_api_t::stop) (motor_120_driver_ctrl_t *const p_ctrl)
```

Stop the motor 120 driver module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_120_driver_api_t::reset) (motor_120_driver_ctrl_t *const p_ctrl)
```

Reset variables of the motor 120 driver module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **phaseVoltageSet**

```
fsp_err_t(* motor_120_driver_api_t::phaseVoltageSet) (motor_120_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
```

Set (Input) phase voltage data into the motor 120 driver module

Parameters

| | | |
|------|-----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | u_voltage | U phase voltage [V] |
| [in] | v_voltage | V phase voltage [V] |
| [in] | w_voltage | W phase voltage [V] |

◆ phasePatternSet

`fsp_err_t(* motor_120_driver_api_t::phasePatternSet) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_phase_pattern_t const pattern)`

Set phase voltage pattern the motor 120 driver module

Parameters

| | | |
|------|---------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pattern | Voltage pattern |

◆ currentGet

`fsp_err_t(* motor_120_driver_api_t::currentGet) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)`

Get phase current, Vdc and Va_max data from the motor 120 driver module

Parameters

| | | |
|-------|------------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_current_status | Pointer to get data structure. |

◆ currentOffsetCalc

`fsp_err_t(* motor_120_driver_api_t::currentOffsetCalc) (motor_120_driver_ctrl_t *const p_ctrl)`

current offset detection from the motor 120 driver module

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ flagCurrentOffsetGet

`fsp_err_t(* motor_120_driver_api_t::flagCurrentOffsetGet) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_flag_offset_calc_t *const p_flag_offset)`

Get the flag of finish current offset detection from the motor 120 driver module

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_flag_offset | Flag of finish current offset detection |

◆ **parameterUpdate**

```
fsp_err_t(* motor_120_driver_api_t::parameterUpdate) (motor_120_driver_ctrl_t *const p_ctrl,
motor_120_driver_cfg_t const *const p_cfg)
```

Update configuration parameters for the calculation in the motor 120 driver module

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_120_driver_instance_t**

```
struct motor_120_driver_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------------------|--------|---|
| motor_120_driver_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_120_driver_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_120_driver_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **motor_120_driver_ctrl_t**

```
typedef void motor_120_driver_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **motor_120_driver_event_t**

| enum motor_120_driver_event_t | |
|---|---|
| Events that can trigger a callback function | |
| Enumerator | |
| MOTOR_120_DRIVER_EVENT_FORWARD | Event before motor 120 driver process (before current control timing) |
| MOTOR_120_DRIVER_EVENT_120_CONTROL | Event 120 detection. |
| MOTOR_120_DRIVER_EVENT_BACKWARD | Event after motor 120 driver process (after PWM duty setting) |

◆ **motor_120_driver_flag_offset_calc_t**

| enum motor_120_driver_flag_offset_calc_t | |
|---|--|
| The flag represents that the offset measurement is finished | |
| Enumerator | |
| MOTOR_120_DRIVER_FLAG_OFFSET_CALC_CLEAR | Offset calculation not finished. |
| MOTOR_120_DRIVER_FLAG_OFFSET_CALC_OFF_FINISH | Off voltage offset calculation finished. |
| MOTOR_120_DRIVER_FLAG_OFFSET_CALC_ALL_FINISH | All offset calculation finished. |

◆ **motor_120_driver_phase_pattern_t**

| enum motor_120_driver_phase_pattern_t | |
|---|------------------------------|
| Phase voltage pattern | |
| Enumerator | |
| MOTOR_120_DRIVER_PHASE_PATTERN_ERROR | Phase voltage pattern error. |
| MOTOR_120_DRIVER_PHASE_PATTERN_UP_PWM_VN_ON | Up(PWM) to Vn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_UP_PWM_WN_ON | Up(PWM) to Wn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_VP_PWM_UN_ON | Vp(PWM) to Un(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_VP_PWM_WN_ON | Vp(PWM) to Wn(on) |

| | |
|---|-------------------|
| MOTOR_120_DRIVER_PHASE_PATTERN_WP_PWM_UN_ON | Wp(PWM) to Un(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_WP_PWM_VN_ON | Wp(PWM) to Vn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_VN_PWM | Up(on) to Vn(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_WN_PWM | Up(on) to Wn(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_UN_PWM | Vp(on) to Un(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_WN_PWM | Vp(on) to Wn(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_UN_PWM | Wp(on) to Un(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_VN_PWM | Wp(on) to Vn(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_U_PWM_VN_ON | U(PWM) to Vn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_U_PWM_WN_ON | U(PWM) to Wn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_V_PWM_UN_ON | V(PWM) to Un(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_V_PWM_WN_ON | V(PWM) to Wn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_W_PWM_UN_ON | W(PWM) to Un(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_W_PWM_VN_ON | W(PWM) to Vn(on) |
| MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_VN_PWM | Up(on) to V(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_WN_PWM | Up(on) to W(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_UN_PWM | Vp(on) to U(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_WN_PWM | Vp(on) to W(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_UN_PWM | Wp(on) to U(PWM) |
| MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_VN_PWM | Wp(on) to V(PWM) |

5.3.10.3 Motor Inertia Estimate Interface

[Interfaces](#) » [Motor](#)

Detailed Description

Interface for Motor inertia estimate functions.

Summary

The Motor interface provides Motor inertia estimate functionality.

Data Structures

struct [motor_inertia_estimate_info_t](#)

struct [motor_inertia_estimate_cfg_t](#)

struct [motor_inertia_estimate_api_t](#)

struct [motor_inertia_estimate_instance_t](#)

Typedefs

typedef void [motor_inertia_estimate_ctrl_t](#)

Data Structure Documentation

◆ [motor_inertia_estimate_info_t](#)

| struct motor_inertia_estimate_info_t | | |
|--|------------------------------|--------------------------------------|
| Interface data structure | | |
| Data Fields | | |
| int16_t | s2_position_reference_degree | Position reference [degree]. |
| motor_inertia_estimate_mode_t | mode | Internal mode of inertia estimation. |
| float | f_estimated_inertia | Estimated inertia data. |

◆ [motor_inertia_estimate_cfg_t](#)

| struct motor_inertia_estimate_cfg_t | | |
|---|-----------|---------------------------------|
| Configuration parameters. | | |
| Data Fields | | |
| void const * | p_context | |
| void const * | p_extend | Placeholder for user extension. |

◆ motor_inertia_estimate_api_t

```
struct motor_inertia_estimate_api_t
```

Functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------|---|
| fsp_err_t(*) | open)(motor_inertia_estimate_ctrl_t *const p_ctrl, motor_inertia_estimate_cfg_t const *const p_cfg) |
|--------------|---|

| | |
|--------------|--|
| fsp_err_t(*) | close)(motor_inertia_estimate_ctrl_t *const p_ctrl) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | start)(motor_inertia_estimate_ctrl_t *const p_ctrl) |
|--------------|--|

| | |
|--------------|---|
| fsp_err_t(*) | stop)(motor_inertia_estimate_ctrl_t *const p_ctrl) |
|--------------|---|

| | |
|--------------|--|
| fsp_err_t(*) | reset)(motor_inertia_estimate_ctrl_t *const p_ctrl) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | infoGet)(motor_inertia_estimate_ctrl_t *const p_ctrl, motor_inertia_estimate_info_t *const p_info) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | dataSet)(motor_inertia_estimate_ctrl_t *const p_ctrl, motor_inertia_estimate_set_data_t *const p_set_data) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | speedCyclic)(motor_inertia_estimate_ctrl_t *const p_ctrl) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | currentCyclic)(motor_inertia_estimate_ctrl_t *const p_ctrl) |
|--------------|--|

| | |
|--------------|--|
| fsp_err_t(*) | parameterUpdate)(motor_inertia_estimate_ctrl_t *const p_ctrl, motor_inertia_estimate_cfg_t const *p_cfg) |
|--------------|--|

Field Documentation

◆ **open**

```
fsp_err_t(* motor_inertia_estimate_api_t::open) (motor_inertia_estimate_ctrl_t *const p_ctrl,
motor_inertia_estimate_cfg_t const *const p_cfg)
```

Open driver.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* motor_inertia_estimate_api_t::close) (motor_inertia_estimate_ctrl_t *const p_ctrl)
```

Close driver.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **start**

```
fsp_err_t(* motor_inertia_estimate_api_t::start) (motor_inertia_estimate_ctrl_t *const p_ctrl)
```

Start the function.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stop**

```
fsp_err_t(* motor_inertia_estimate_api_t::stop) (motor_inertia_estimate_ctrl_t *const p_ctrl)
```

Stop(same as cancel) the function.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_inertia_estimate_api_t::reset) (motor_inertia_estimate_ctrl_t *const p_ctrl)
```

Reset the function. (recover from error state)

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ infoGet

```
fsp_err_t(* motor_inertia_estimate_api_t::infoGet) (motor_inertia_estimate_ctrl_t *const p_ctrl,
motor_inertia_estimate_info_t *const p_info)
```

Get information from the function (to set speed & position control)

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Pointer to information |

◆ dataSet

```
fsp_err_t(* motor_inertia_estimate_api_t::dataSet) (motor_inertia_estimate_ctrl_t *const p_ctrl,
motor_inertia_estimate_set_data_t *const p_set_data)
```

Set the data to the function (from speed, position and current control)

Parameters

| | | |
|-------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_set_data | Pointer to set the data |

◆ speedCyclic

```
fsp_err_t(* motor_inertia_estimate_api_t::speedCyclic) (motor_inertia_estimate_ctrl_t *const p_ctrl)
```

Speed cyclic process of the function

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ currentCyclic

```
fsp_err_t(* motor_inertia_estimate_api_t::currentCyclic) (motor_inertia_estimate_ctrl_t *const p_ctrl)
```

Current cyclic process of the function

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ parameterUpdate

```
fsp_err_t(* motor_inertia_estimate_api_t::parameterUpdate) (motor_inertia_estimate_ctrl_t *const p_ctrl, motor_inertia_estimate_cfg_t const *p_cfg)
```

Update parameters for the function.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ motor_inertia_estimate_instance_t

```
struct motor_inertia_estimate_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------------------------|--------|---|
| motor_inertia_estimate_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_inertia_estimate_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_inertia_estimate_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ motor_inertia_estimate_ctrl_t

```
typedef void motor_inertia_estimate_ctrl_t
```

Motor inertia estimate block. Allocate an instance specific control block to pass into the API calls.

5.3.10.4 Motor Interface

[Interfaces](#) » [Motor](#)

Detailed Description

Interface for Motor functions.

Summary

The Motor interface provides Motor functionality.

Data Structures

struct [motor_callback_args_t](#)

struct [motor_cfg_t](#)

struct [motor_api_t](#)

struct [motor_instance_t](#)

Typedefs

typedef void [motor_ctrl_t](#)

Enumerations

enum [motor_error_t](#)

enum [motor_callback_event_t](#)

enum [motor_wait_stop_flag_t](#)

enum [motor_function_select_t](#)

Data Structure Documentation

◆ [motor_callback_args_t](#)

| | | |
|--|---------------------------|----------------------------|
| struct motor_callback_args_t | | |
| callback function parameter data | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. |
| motor_callback_event_t | event | |

◆ [motor_cfg_t](#)

| | | |
|---|--|-----------------|
| struct motor_cfg_t | | |
| Configuration parameters. | | |
| Data Fields | | |
| motor_speed_instance_t const * | p_motor_speed_instance | |
| | | Speed Instance. |
| motor_current_instance_t const * | p_motor_current_instance | |
| | | |

| | |
|--------------|---|
| | Current Instance. |
| | |
| void(* | p_callback)(motor_callback_args_t *p_args) |
| | |
| void const * | p_extend |
| | Placeholder for user extension. |
| | |

Field Documentation

◆ [p_callback](#)

| | |
|----------------------|---|
| void(* motor_cfg_t:: | p_callback)(motor_callback_args_t *p_args) |
| | Placeholder for user data. Passed to the user callback in motor_callback_args_t . |

◆ [motor_api_t](#)

| | |
|--|--|
| struct motor_api_t | |
| Functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg) |
| | |
| fsp_err_t (* | close)(motor_ctrl_t *const p_ctrl) |
| | |
| fsp_err_t (* | run)(motor_ctrl_t *const p_ctrl) |
| | |
| fsp_err_t (* | stop)(motor_ctrl_t *const p_ctrl) |
| | |
| fsp_err_t (* | reset)(motor_ctrl_t *const p_ctrl) |
| | |
| fsp_err_t (* | errorSet)(motor_ctrl_t *const p_ctrl, motor_error_t const error) |
| | |
| fsp_err_t (* | speedSet)(motor_ctrl_t *const p_ctrl, float const speed_rpm) |
| | |
| fsp_err_t (* | positionSet)(motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position) |
| | |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>statusGet)(motor_ctrl_t *const p_ctrl, uint8_t *const p_status)</code> |
| <code>fsp_err_t(*</code> | <code>angleGet)(motor_ctrl_t *const p_ctrl, float *const p_angle_rad)</code> |
| <code>fsp_err_t(*</code> | <code>speedGet)(motor_ctrl_t *const p_ctrl, float *const p_speed_rpm)</code> |
| <code>fsp_err_t(*</code> | <code>waitStopFlagGet)(motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag)</code> |
| <code>fsp_err_t(*</code> | <code>errorCheck)(motor_ctrl_t *const p_ctrl, uint16_t *const p_error)</code> |
| <code>fsp_err_t(*</code> | <code>functionSelect)(motor_ctrl_t *const p_ctrl, motor_function_select_t const function)</code> |

Field Documentation

◆ open

`fsp_err_t(* motor_api_t::open) (motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg)`

Open driver.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ close

`fsp_err_t(* motor_api_t::close) (motor_ctrl_t *const p_ctrl)`

Close driver.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
|------|---------------------|-------------------------------|

◆ **run**

```
fsp_err_t(* motor_api_t::run) (motor_ctrl_t *const p_ctrl)
```

Run the motor. (Start the motor rotation.)

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stop**

```
fsp_err_t(* motor_api_t::stop) (motor_ctrl_t *const p_ctrl)
```

Stop the motor. (Stop the motor rotation.)

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_api_t::reset) (motor_ctrl_t *const p_ctrl)
```

Reset the motor control. (Recover from the error status.)

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **errorSet**

```
fsp_err_t(* motor_api_t::errorSet) (motor_ctrl_t *const p_ctrl, motor_error_t const error)
```

Set Error Information.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | error | Happend error code |

◆ **speedSet**

```
fsp_err_t(* motor_api_t::speedSet) (motor_ctrl_t *const p_ctrl, float const speed_rpm)
```

Set rotation speed.

Parameters

| | | |
|------|-----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | speed_rpm | Required rotation speed [rpm] |

◆ **positionSet**

```
fsp_err_t(* motor_api_t::positionSet) (motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position)
```

Set reference position.

Parameters

| | | |
|------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_position | Pointer to set required data |

◆ **statusGet**

```
fsp_err_t(* motor_api_t::statusGet) (motor_ctrl_t *const p_ctrl, uint8_t *const p_status)
```

Get the motor control status.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_status | Pointer to get the motor control status |

◆ **angleGet**

```
fsp_err_t(* motor_api_t::angleGet) (motor_ctrl_t *const p_ctrl, float *const p_angle_rad)
```

Get the rotor angle.

Parameters

| | | |
|-------|-------------|--------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_angle_rad | Pointer to get the rotor angle [rad] |

◆ **speedGet**

```
fsp_err_t(* motor_api_t::speedGet) (motor_ctrl_t *const p_ctrl, float *const p_speed_rpm)
```

Get the rotation speed.

Parameters

| | | |
|-------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_speed_rpm | Pointer to get the rotation speed [rpm] |

◆ **waitStopFlagGet**

```
fsp_err_t(* motor_api_t::waitStopFlagGet) (motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag)
```

Get wait stop flag.

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_flag | Pointer to wait stop flag |

◆ **errorCheck**

```
fsp_err_t(* motor_api_t::errorCheck) (motor_ctrl_t *const p_ctrl, uint16_t *const p_error)
```

Check the error occurrence

Parameters

| | | |
|-------|---------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_error | Pointer to get occurred error |

◆ **functionSelect**

```
fsp_err_t(* motor_api_t::functionSelect) (motor_ctrl_t *const p_ctrl, motor_function_select_t const function)
```

FunctionSelect.

Parameters

| | | |
|------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | function | Selected function |

◆ **motor_instance_t**

```
struct motor_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------|--------|---|
| motor_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **motor_ctrl_t**

```
typedef void motor_ctrl_t
```

Motor Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation◆ **motor_error_t**

```
enum motor_error_t
```

Error information

◆ **motor_callback_event_t**

```
enum motor_callback_event_t
```

Events that can trigger a callback function

| Enumerator | |
|---------------------------------------|---|
| MOTOR_CALLBACK_EVENT_SPEED_FORWARD | Event forward speed control. |
| MOTOR_CALLBACK_EVENT_SPEED_BACKWARD | Event backward speed control. |
| MOTOR_CALLBACK_EVENT_CURRENT_FORWARD | Event forward current control. |
| MOTOR_CALLBACK_EVENT_CURRENT_BACKWARD | Event backward current control. |
| MOTOR_CALLBACK_EVENT_ADC_FORWARD | Event before motor 120 driver process. |
| MOTOR_CALLBACK_EVENT_ADC_BACKWARD | Event after motor 120 driver process. |
| MOTOR_CALLBACK_EVENT_CYCLE_FORWARD | Before cyclic process of speed control. |
| MOTOR_CALLBACK_EVENT_CYCLE_BACKWARD | After cyclic process of speed control. |

◆ **motor_wait_stop_flag_t**

| | |
|--|-----------------------|
| enum <code>motor_wait_stop_flag_t</code> | |
| Flag for waiting for motor stop | |
| Enumerator | |
| <code>MOTOR_WAIT_STOP_FLAG_CLEAR</code> | Wait stop flag clear. |
| <code>MOTOR_WAIT_STOP_FLAG_SET</code> | Wait stop flag set. |

◆ **motor_function_select_t**

| | |
|---|-------------------------|
| enum <code>motor_function_select_t</code> | |
| Function select | |
| Enumerator | |
| <code>MOTOR_FUNCTION_SELECT_NONE</code> | No function selected. |
| <code>MOTOR_FUNCTION_SELECT_INERTIA_ESTIMATE</code> | Inertia estimation. |
| <code>MOTOR_FUNCTION_SELECT_RETURN_ORIGIN</code> | Return origin position. |

5.3.10.5 Motor Return Origin Function Interface[Interfaces](#) » [Motor](#)**Detailed Description**

Interface for Motor return origin functions.

Summary

The Motor interface provides Motor return origin functionality.

Data Structures

struct `motor_return_origin_info_t`

struct `motor_return_origin_cfg_t`

struct `motor_return_origin_api_t`

```
struct motor_return_origin_instance_t
```

Typedefs

```
typedef void motor_return_origin_ctrl_t
```

Enumerations

```
enum motor_return_origin_mode_t
```

Data Structure Documentation

◆ motor_return_origin_info_t

| | | |
|-----------------------------------|-----------------------------|------------------------------|
| struct motor_return_origin_info_t | | |
| Interface data structure | | |
| Data Fields | | |
| float | f_position_reference_degree | Position reference [degree]. |
| motor_return_origin_state_t | state | |
| float | f_result_angle | Result angle position. |

◆ motor_return_origin_cfg_t

| | | |
|----------------------------------|-----------|---------------------------------|
| struct motor_return_origin_cfg_t | | |
| Configuration parameters. | | |
| Data Fields | | |
| motor_return_origin_mode_t | mode | |
| void const * | p_context | |
| void const * | p_extend | Placeholder for user extension. |

◆ motor_return_origin_api_t

| | | |
|--|-------|--|
| struct motor_return_origin_api_t | | |
| Functions implemented at the HAL layer will follow this API. | | |
| Data Fields | | |
| fsp_err_t(*) | open | (motor_return_origin_ctrl_t *const p_ctrl, motor_return_origin_cfg_t const *const p_cfg) |
| fsp_err_t(*) | close | (motor_return_origin_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | start | (motor_return_origin_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | stop | (motor_return_origin_ctrl_t *const p_ctrl) |

| | |
|--|--|
| | |
| <code>fsp_err_t(*</code> | <code>reset)(motor_return_origin_ctrl_t *const p_ctrl)</code> |
| | |
| <code>fsp_err_t(*</code> | <code>infoGet)(motor_return_origin_ctrl_t *const p_ctrl, motor_return_origin_info_t *const p_info)</code> |
| | |
| <code>fsp_err_t(*</code> | <code>dataSet)(motor_return_origin_ctrl_t *const p_ctrl, motor_return_origin_set_data_t *const p_set_data)</code> |
| | |
| <code>fsp_err_t(*</code> | <code>speedCyclic)(motor_return_origin_ctrl_t *const p_ctrl)</code> |
| | |
| <code>fsp_err_t(*</code> | <code>parameterUpdate)(motor_return_origin_ctrl_t *const p_ctrl, motor_return_origin_cfg_t const *p_cfg)</code> |
| | |
| Field Documentation | |
| ◆ open | |
| <code>fsp_err_t(* motor_return_origin_api_t::open) (motor_return_origin_ctrl_t *const p_ctrl, motor_return_origin_cfg_t const *const p_cfg)</code> | |
| Open driver. | |
| Parameters | |
| [in] | p_ctrl Pointer to control structure. |
| [in] | p_cfg Pointer to configuration structure. |
| ◆ close | |
| <code>fsp_err_t(* motor_return_origin_api_t::close) (motor_return_origin_ctrl_t *const p_ctrl)</code> | |
| Close driver. | |
| Parameters | |
| [in] | p_ctrl Pointer to control structure. |

◆ **start**

```
fsp_err_t(* motor_return_origin_api_t::start) (motor_return_origin_ctrl_t *const p_ctrl)
```

Start the function.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stop**

```
fsp_err_t(* motor_return_origin_api_t::stop) (motor_return_origin_ctrl_t *const p_ctrl)
```

Stop the function. (Cancel the function works.)

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_return_origin_api_t::reset) (motor_return_origin_ctrl_t *const p_ctrl)
```

Reset the function. (Initialize the function.)

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **infoGet**

```
fsp_err_t(* motor_return_origin_api_t::infoGet) (motor_return_origin_ctrl_t *const p_ctrl,  
motor_return_origin_info_t *const p_info)
```

Get the function information.

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Pointer to info |

◆ **dataSet**

```
fsp_err_t(* motor_return_origin_api_t::dataSet) (motor_return_origin_ctrl_t *const p_ctrl,
motor_return_origin_set_data_t *const p_set_data)
```

Set the data to the function

Parameters

| | | |
|-------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_set_data | Pointer to set the data |

◆ **speedCyclic**

```
fsp_err_t(* motor_return_origin_api_t::speedCyclic) (motor_return_origin_ctrl_t *const p_ctrl)
```

Speed cyclic process of the function

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **parameterUpdate**

```
fsp_err_t(* motor_return_origin_api_t::parameterUpdate) (motor_return_origin_ctrl_t *const p_ctrl,
motor_return_origin_cfg_t const *p_cfg)
```

Update parameters for the function.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_return_origin_instance_t**

```
struct motor_return_origin_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| motor_return_origin_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_return_origin_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_return_origin_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **motor_return_origin_ctrl_t**

```
typedef void motor_return_origin_ctrl_t
```

Motor return origin function block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation◆ **motor_return_origin_mode_t**

```
enum motor_return_origin_mode_t
```

Selection type of return origin function

Enumerator

| | |
|-----------------------------------|--|
| MOTOR_RETURN_ORIGIN_MODE_PUSH | Return origin position with pushing. |
| MOTOR_RETURN_ORIGIN_MODE_SENSOR | Return origin position with origin sensor. |
| MOTOR_RETURN_ORIGIN_MODE_2_SENSOR | Return origin position with 2 sensors. |
| MOTOR_RETURN_ORIGIN_MODE_3_SENSOR | Return origin position with 3 sensors. |

5.3.10.6 Motor angle Interface

[Interfaces](#) » [Motor](#)

Detailed Description

Interface for motor angle and speed calculation functions.

Summary

The Motor angle interface calculates the rotor angle and rotational speed from other data.

Data Structures

```
struct motor_angle_cfg_t
```

```
struct motor_angle_current_t
```

```
struct motor_angle_voltage_reference_t
```

```
struct motor_angle_ad_data_t
```

```
struct motor_angle_encoder_info_t
```

```
struct motor_angle_api_t
```

```
struct motor_angle_instance_t
```

Typedefs

```
typedef void motor_angle_ctrl_t
```

Enumerations

```
enum motor_sense_encoder_angle_adjust_t
```

```
enum motor_angle_open_loop_t
```

```
enum motor_angle_error_t
```

Data Structure Documentation

◆ motor_angle_cfg_t

```
struct motor_angle_cfg_t
```

Configuration parameters.

◆ motor_angle_current_t

```
struct motor_angle_current_t
```

Interface structure

Data Fields

| | | |
|-------|----|----------------|
| float | id | d-axis current |
| float | iq | q-axis current |

◆ motor_angle_voltage_reference_t

```
struct motor_angle_voltage_reference_t
```

Motor angle voltage reference

Data Fields

| | | |
|-------|----|--------------------------|
| float | vd | d-axis voltage reference |
| float | vq | q-axis voltage reference |

◆ motor_angle_ad_data_t

```
struct motor_angle_ad_data_t
```

A/D conversion data

Data Fields

| | | |
|-------|-------------|----------------------------------|
| float | sin_ad_data | sin A/D data of induction sensor |
| float | cos_ad_data | cos A/D data of induction sensor |

◆ motor_angle_encoder_info_t

| | | |
|--|----------------------|-------------------------------|
| struct motor_angle_encoder_info_t | | |
| Motor angle encoder adjustment info | | |
| Data Fields | | |
| motor_sense_encoder_angle_adjust_t | e_adjust_status | Encoder Adjustment Status. |
| uint8_t | u1_adjust_count_full | Adjustment count became full. |
| motor_angle_open_loop_t | e_open_loop_status | Openloop status. |
| float | f_openloop_speed | Openloop speed. |
| float | f_openloop_id_ref | Openloop d-axis current. |

◆ motor_angle_api_t

| | |
|--|--|
| struct motor_angle_api_t | |
| Functions implemented as application interface will follow these APIs. | |
| Data Fields | |
| fsp_err_t(*) | open)(motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg) |
| fsp_err_t(*) | close)(motor_angle_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | reset)(motor_angle_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | currentSet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage) |
| fsp_err_t(*) | speedSet)(motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed) |
| fsp_err_t(*) | flagPiCtrlSet)(motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi) |
| fsp_err_t(*) | internalCalculate)(motor_angle_ctrl_t *const p_ctrl) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>angleSpeedGet)(motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)</code> |
| <code>fsp_err_t(*</code> | <code>angleAdjust)(motor_angle_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>encoderCyclic)(motor_angle_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>cyclicProcess)(motor_angle_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>sensorDataSet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_ad_data_t *const p_ad_data)</code> |
| <code>fsp_err_t(*</code> | <code>estimatedComponentGet)(motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq)</code> |
| <code>fsp_err_t(*</code> | <code>infoGet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_encoder_info_t *const p_info)</code> |
| <code>fsp_err_t(*</code> | <code>parameterUpdate)(motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *p_cfg)</code> |

Field Documentation

◆ open

`fsp_err_t(* motor_angle_api_t::open) (motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg)`

Initialize the Motor_Angle.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ close

```
fsp_err_t(* motor_angle_api_t::close) (motor_angle_ctrl_t *const p_ctrl)
```

Close (Finish) the Motor_Angle.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ reset

```
fsp_err_t(* motor_angle_api_t::reset) (motor_angle_ctrl_t *const p_ctrl)
```

Reset the Motor_Angle.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ currentSet

```
fsp_err_t(* motor_angle_api_t::currentSet) (motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage)
```

Set (Input) Current & Voltage Reference data into the Motor_Angle.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_st_current | Pointer to current structure |
| [in] | p_st_voltage | Pointer to voltage Reference structure |

◆ speedSet

```
fsp_err_t(* motor_angle_api_t::speedSet) (motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed)
```

Set (Input) Speed Information into the Motor_Angle.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | speed_ctrl | Control reference of rotational speed [rad/s] |
| [in] | damp_speed | Damping rotational speed [rad/s] |

◆ **flagPiCtrlSet**

```
fsp_err_t(* motor_angle_api_t::flagPiCtrlSet) (motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi)
```

Set the flag of PI Control runs.

Parameters

| | | |
|------|---------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | flag_pi | The flag of PI control runs |

◆ **internalCalculate**

```
fsp_err_t(* motor_angle_api_t::internalCalculate) (motor_angle_ctrl_t *const p_ctrl)
```

Calculate internal parameters of encoder process.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **angleSpeedGet**

```
fsp_err_t(* motor_angle_api_t::angleSpeedGet) (motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)
```

Get rotor angle and rotational speed from the Motor_Angle.

Parameters

| | | |
|-------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_angl | Memory address to get rotor angle data |
| [out] | p_speed | Memory address to get rotational speed data |
| [out] | p_phase_err | Memory address to get phase(angle) error data |

◆ **angleAdjust**

```
fsp_err_t(* motor_angle_api_t::angleAdjust) (motor_angle_ctrl_t *const p_ctrl)
```

Angle Adjustment Process.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **encoderCyclic**

```
fsp_err_t(* motor_angle_api_t::encoderCyclic) (motor_angle_ctrl_t *const p_ctrl)
```

DEPRECATED Encoder Cyclic Process.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **cyclicProcess**

```
fsp_err_t(* motor_angle_api_t::cyclicProcess) (motor_angle_ctrl_t *const p_ctrl)
```

Cyclic Process. please

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **sensorDataSet**

```
fsp_err_t(* motor_angle_api_t::sensorDataSet) (motor_angle_ctrl_t *const p_ctrl,  
motor_angle_ad_data_t *const p_ad_data)
```

Set sensor A/D data into the Motor_Angle.

Parameters

| | | |
|------|-----------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_ad_data | Pointer to A/D conversion data |

◆ **estimatedComponentGet**

```
fsp_err_t(* motor_angle_api_t::estimatedComponentGet) (motor_angle_ctrl_t *const p_ctrl, float  
*const p_ed, float *const p_eq)
```

Get estimated d/q-axis component from the Motor_Angle.

Parameters

| | | |
|-------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_ed | Memory address to get estimated d-axis component |
| [out] | p_eq | Memory address to get estimated q-axis component |

◆ **infoGet**

```
fsp_err_t(* motor_angle_api_t::infoGet) (motor_angle_ctrl_t *const p_ctrl,
motor_angle_encoder_info_t *const p_info)
```

Get Encoder Calculate Information.

Parameters

| | | |
|-------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Memory address to get angle internal information |

◆ **parameterUpdate**

```
fsp_err_t(* motor_angle_api_t::parameterUpdate) (motor_angle_ctrl_t *const p_ctrl,
motor_angle_cfg_t const *p_cfg)
```

Update Parameters for the calculation in the Motor_Angle.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_angle_instance_t**

```
struct motor_angle_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------|--------|---|
| motor_angle_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_angle_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_angle_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **motor_angle_ctrl_t**

```
typedef void motor_angle_ctrl_t
```

Motor Angle Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **motor_sense_encoder_angle_adjust_t**

| enum motor_sense_encoder_angle_adjust_t | |
|---|---|
| Enumerator | |
| MOTOR_SENSE_ENCODER_ANGLE_ADJUST_90_DEGREE | Roter Angle Adjustment to pull in 90degree. |
| MOTOR_SENSE_ENCODER_ANGLE_ADJUST_0_DEGREE | Roter Angle Adjustment to pull in 0degree. |
| MOTOR_SENSE_ENCODER_ANGLE_ADJUST_FINISH | Roter Angle Adjustment Finish. |
| MOTOR_SENSE_ENCODER_ANGLE_ADJUST_OPEN_LOOP | Roter Angle Adjustment Finish. |

◆ **motor_angle_open_loop_t**

| enum motor_angle_open_loop_t | |
|--|--------------------|
| Enumerator | |
| MOTOR_ANGLE_OPEN_LOOP_INACTIVE | Openloop inactive. |
| MOTOR_ANGLE_OPEN_LOOP_ACTIVE | Openloop active. |

◆ **motor_angle_error_t**

| enum motor_angle_error_t | |
|--|---|
| Flag for induction correction error status | |
| Enumerator | |
| MOTOR_ANGLE_ERROR_NONE | No error happen. |
| MOTOR_ANGLE_ERROR_INDUCATION | Error happens in induction sensor correction process. |

5.3.10.7 Motor current Interface[Interfaces](#) » [Motor](#)**Detailed Description**

Interface for motor current functions.

Summary

The Motor current interface for getting the PWM modulation duty from electric current and speed

Data Structures

struct `motor_current_output_t`

struct `motor_current_input_current_t`

struct `motor_current_input_voltage_t`

struct `motor_current_get_voltage_t`

struct `motor_current_cfg_t`

struct `motor_current_api_t`

struct `motor_current_instance_t`

Typedefs

typedef void `motor_current_ctrl_t`

Enumerations

enum `motor_current_event_t`

Data Structure Documentation

◆ `motor_current_output_t`

| struct <code>motor_current_output_t</code> | | |
|---|-----------------------------|--|
| Structure of interface to speed control Output parameters | | |
| Data Fields | | |
| float | <code>f_id</code> | D-axis current [A]. |
| float | <code>f_iq</code> | Q-axis current [A]. |
| float | <code>f_vamax</code> | |
| float | <code>f_speed_rad</code> | Speed value [rad/s]. |
| float | <code>f_speed_rpm</code> | Speed value [rpm]. |
| float | <code>f_rotor_angle</code> | Motor rotor angle [rad]. |
| float | <code>f_position_rad</code> | Motor rotor position [rad]. |
| float | <code>f_ed</code> | Estimated d-axis component[V] of flux due to the permanent magnet. |
| float | <code>f_eq</code> | Estimated q-axis component[V] |

| | | |
|---------|----------------------|---|
| | | of flux due to the permanent magnet. |
| float | f_phase_err_rad | Phase error [rad]. |
| uint8_t | u1_flag_get_iref | Flag to set d/q-axis current reference. |
| uint8_t | u1_adjust_status | Angle adjustment status. |
| uint8_t | u1_adjust_count_full | Angle adjustment count full. |
| uint8_t | u1_openloop_status | Openloop status. |
| float | f_openloop_speed | Openloop speed. |
| float | f_openloop_id_ref | Openloop d-axis current. |

◆ motor_current_input_current_t

| | | |
|--------------------------------------|----|---------------------|
| struct motor_current_input_current_t | | |
| Three-phase input current | | |
| Data Fields | | |
| float | iu | U phase current[A]. |
| float | iv | V phase current[A]. |
| float | iw | W phase current[A]. |

◆ motor_current_input_voltage_t

| | | |
|--------------------------------------|--------|---|
| struct motor_current_input_voltage_t | | |
| Input voltage | | |
| Data Fields | | |
| float | vdc | Main line voltage[V]. |
| float | va_max | Maximum magnitude of voltage vector[V]. |

◆ motor_current_get_voltage_t

| | | |
|------------------------------------|--------------|--------------------------|
| struct motor_current_get_voltage_t | | |
| Struct to get motor current | | |
| Data Fields | | |
| float | u_voltage | U phase voltage[V]. |
| float | v_voltage | V phase voltage[V]. |
| float | w_voltage | W phase voltage[V]. |
| float | vd_reference | d-axis voltage reference |
| float | vq_reference | q-axis voltage reference |

◆ motor_current_cfg_t

| |
|----------------------------|
| struct motor_current_cfg_t |
|----------------------------|

| |
|---------------------------|
| Configuration parameters. |
|---------------------------|

◆ motor_current_api_t

| |
|----------------------------|
| struct motor_current_api_t |
|----------------------------|

| |
|---|
| Functions implemented at the Motor Current Module will follow these APIs. |
|---|

Data Fields

|--|
| <code>fsp_err_t(* motor_current_api_t::open) (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)</code> |
|--|

Initialize the motor current module.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ close

| |
|---|
| <code>fsp_err_t(* motor_current_api_t::close) (motor_current_ctrl_t *const p_ctrl)</code> |
|---|

Close (Finish) the motor current module.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ reset

| |
|---|
| <code>fsp_err_t(* motor_current_api_t::reset) (motor_current_ctrl_t *const p_ctrl)</code> |
|---|

Reset variables for the motor current module.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ run

| |
|---|
| <code>fsp_err_t(* motor_current_api_t::run) (motor_current_ctrl_t *const p_ctrl)</code> |
|---|

Activate the motor current control.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **parameterSet**

```
fsp_err_t(* motor_current_api_t::parameterSet) (motor_current_ctrl_t *const p_ctrl,
motor_current_input_t const *const p_st_input)
```

Set (Input) parameters into the motor current module.

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_st_input | Pointer to input data structure(speed control output data) |

◆ **currentReferenceSet**

```
fsp_err_t(* motor_current_api_t::currentReferenceSet) (motor_current_ctrl_t *const p_ctrl, float
const id_reference, float const iq_reference)
```

Set (Input) Current reference into the motor current module.

Parameters

| | | |
|------|--------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | id_reference | D-axis current reference [A] |
| [in] | iq_reference | Q-axis current reference [A] |

◆ **speedPhaseSet**

```
fsp_err_t(* motor_current_api_t::speedPhaseSet) (motor_current_ctrl_t *const p_ctrl, float const
speed_rad, float const phase_rad)
```

Set (Input) Speed & Phase data into the motor current module.

Parameters

| | | |
|------|-----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | speed_rad | Rotational speed [rad/s] |
| [in] | phase_rad | Rotor phase [rad] |

◆ **currentSet**

```
fsp_err_t(* motor_current_api_t::currentSet) (motor_current_ctrl_t *const p_ctrl,
motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const
*const p_st_voltage)
```

Set (Input) Current data into the motor current module.

Parameters

| | | |
|------|--------------|------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_st_current | Pointer to input current structure |
| [in] | p_st_voltage | Pointer to input voltage structure |

◆ **parameterGet**

```
fsp_err_t(* motor_current_api_t::parameterGet) (motor_current_ctrl_t *const p_ctrl,
motor_current_output_t *const p_st_output)
```

Get (output) parameters from the motor current module

Parameters

| | | |
|-------|-------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_st_output | Pointer to output data structure(speed control input data) |

◆ **currentGet**

```
fsp_err_t(* motor_current_api_t::currentGet) (motor_current_ctrl_t *const p_ctrl, float *const p_id,
float *const p_iq)
```

Get d/q-axis current

Parameters

| | | |
|-------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_id | Pointer to get d-axis current [A] |
| [out] | p_iq | Pointer to get q-axis current [A] |

◆ **phaseVoltageGet**

```
fsp_err_t(* motor_current_api_t::phaseVoltageGet) (motor_current_ctrl_t *const p_ctrl,
motor_current_get_voltage_t *const p_voltage)
```

Get phase output voltage

Parameters

| | | |
|-------|-----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_voltage | Pointer to get voltages |

◆ **parameterUpdate**

```
fsp_err_t(* motor_current_api_t::parameterUpdate) (motor_current_ctrl_t *const p_ctrl,
motor_current_cfg_t const *const p_cfg)
```

Update parameters for the calculation in the motor current control.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_current_instance_t**

```
struct motor_current_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------|--------|---|
| motor_current_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_current_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_current_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **motor_current_ctrl_t**

```
typedef void motor_current_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **motor_current_event_t**

| enum <code>motor_current_event_t</code> | |
|---|--------------------------------------|
| Events that can trigger a callback function | |
| Enumerator | |
| <code>MOTOR_CURRENT_EVENT_FORWARD</code> | Event forward current control. |
| <code>MOTOR_CURRENT_EVENT_DATA_SET</code> | Event set speed control output data. |
| <code>MOTOR_CURRENT_EVENT_BACKWARD</code> | Event backward current control. |

5.3.10.8 Motor driver Interface[Interfaces](#) » [Motor](#)**Detailed Description**

Interface for motor driver functions.

Summary

The Motor driver interface for setting the PWM modulation duty

Data Structures

struct [motor_driver_callback_args_t](#)

struct [motor_driver_current_get_t](#)

struct [motor_driver_cfg_t](#)

struct [motor_driver_api_t](#)

struct [motor_driver_instance_t](#)

Typedefs

typedef void [motor_driver_ctrl_t](#)

Enumerations

enum [motor_driver_event_t](#)

enum [motor_driver_shunt_type_t](#)

Data Structure Documentation

◆ motor_driver_callback_args_t

| | | |
|-------------------------------------|-----------|----------------------------|
| struct motor_driver_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| motor_driver_event_t | event | Event trigger. |
| void const * | p_context | Placeholder for user data. |

◆ motor_driver_current_get_t

| | | |
|-----------------------------------|--------|-------------------------------------|
| struct motor_driver_current_get_t | | |
| Current Data Get Structure | | |
| Data Fields | | |
| float | iu | U phase current [A]. |
| float | iv | V phase current [A]. |
| float | iw | W phase current [A]. |
| float | vdc | Main Line Voltage [V]. |
| float | va_max | maximum magnitude of voltage vector |
| float | sin_ad | Induction sensor sin signal. |
| float | cos_ad | Induction sensor cos signal. |

◆ motor_driver_cfg_t

| | | |
|---------------------------|----------|----------------------------------|
| struct motor_driver_cfg_t | | |
| Configuration parameters. | | |
| Data Fields | | |
| adc_channel_t | iu_ad_ch | |
| | | A/D Channel for U Phase Current. |
| adc_channel_t | iv_ad_ch | |
| | | A/D Channel for V Phase Current. |
| adc_channel_t | iw_ad_ch | |
| | | A/D Channel for W Phase Current. |

| | |
|--|--|
| <code>adc_channel_t</code> | <code>vdc_ad_ch</code> |
| | A/D Channel for Main Line Voltage. |
| <code>adc_channel_t</code> | <code>sin_ad_ch</code> |
| | A/D Channel for induction sensor sin signal. |
| <code>adc_channel_t</code> | <code>cos_ad_ch</code> |
| | A/D Channel for induction sensor cos signal. |
| <code>motor_driver_shunt_type_t</code> | <code>shunt</code> |
| | Selection of shunt type. |
| <code>void const *</code> | <code>p_context</code> |
| | Placeholder for user data. |

◆ `motor_driver_api_t`

| | |
|--|--|
| struct <code>motor_driver_api_t</code> | |
| Functions implemented at the HAL layer will follow these APIs. | |
| Data Fields | |
| <code>fsp_err_t(*)</code> | <code>open</code>)(motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg) |
| <code>fsp_err_t(*)</code> | <code>close</code>)(motor_driver_ctrl_t *const p_ctrl) |
| <code>fsp_err_t(*)</code> | <code>reset</code>)(motor_driver_ctrl_t *const p_ctrl) |
| <code>fsp_err_t(*)</code> | <code>phaseVoltageSet</code>)(motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage) |
| <code>fsp_err_t(*)</code> | <code>currentGet</code>)(motor_driver_ctrl_t *const p_ctrl, |

| | |
|---|--|
| | <code>motor_driver_current_get_t *const p_current_get)</code> |
| <code>fsp_err_t(*</code> | <code>flagCurrentOffsetGet)(motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset)</code> |
| <code>fsp_err_t(*</code> | <code>currentOffsetRestart)(motor_driver_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>parameterUpdate)(motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)</code> |
| Field Documentation | |
| ◆ open | |
| <code>fsp_err_t(* motor_driver_api_t::open) (motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)</code> | |
| Initialize the Motor Driver Module. | |
| Parameters | |
| [in] | <code>p_ctrl</code> Pointer to control structure. |
| [in] | <code>p_cfg</code> Pointer to configuration structure. |
| ◆ close | |
| <code>fsp_err_t(* motor_driver_api_t::close) (motor_driver_ctrl_t *const p_ctrl)</code> | |
| Close the Motor Driver Module | |
| Parameters | |
| [in] | <code>p_ctrl</code> Pointer to control structure. |
| ◆ reset | |
| <code>fsp_err_t(* motor_driver_api_t::reset) (motor_driver_ctrl_t *const p_ctrl)</code> | |
| Reset variables of the Motor Driver Module | |
| Parameters | |
| [in] | <code>p_ctrl</code> Pointer to control structure. |

◆ **phaseVoltageSet**

```
fsp_err_t(* motor_driver_api_t::phaseVoltageSet) (motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
```

Set (Input) Phase Voltage data into the Motor Driver Module

Parameters

| | | |
|------|-----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | u_voltage | U phase voltage [V] |
| [in] | v_voltage | V phase voltage [V] |
| [in] | w_voltage | W phase voltage [V] |

◆ **currentGet**

```
fsp_err_t(* motor_driver_api_t::currentGet) (motor_driver_ctrl_t *const p_ctrl, motor_driver_current_get_t *const p_current_get)
```

Get Phase current, Vdc and Va_max data from the Motor Driver Module

Parameters

| | | |
|-------|---------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_current_get | Pointer to get data structure. |

◆ **flagCurrentOffsetGet**

```
fsp_err_t(* motor_driver_api_t::flagCurrentOffsetGet) (motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset)
```

Get the flag of finish current offset detection from the Motor Driver Module

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_flag_offset | Flag of finish current offset detection |

◆ **currentOffsetRestart**

```
fsp_err_t(* motor_driver_api_t::currentOffsetRestart) (motor_driver_ctrl_t *const p_ctrl)
```

Restart current offset detection

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **parameterUpdate**

```
fsp_err_t(* motor_driver_api_t::parameterUpdate) (motor_driver_ctrl_t *const p_ctrl,
motor_driver_cfg_t const *const p_cfg)
```

Update Configuration Parameters for the calculation in the Motor Driver Module

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_driver_instance_t**

```
struct motor_driver_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|----------------------------|--------|---|
| motor_driver_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_driver_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_driver_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **motor_driver_ctrl_t**

```
typedef void motor_driver_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **motor_driver_event_t**

| enum motor_driver_event_t | |
|---|---|
| Events that can trigger a callback function | |
| Enumerator | |
| MOTOR_DRIVER_EVENT_FORWARD | Event before Motor Driver Process (before Current Control timing) |
| MOTOR_DRIVER_EVENT_CURRENT | Event Current Control timing. |
| MOTOR_DRIVER_EVENT_BACKWARD | Event after Motor Driver Process (after PWM duty setting) |

◆ **motor_driver_shunt_type_t**

| enum motor_driver_shunt_type_t | |
|--|----------------------------|
| Selection of shunt type | |
| Enumerator | |
| MOTOR_DRIVER_SHUNT_TYPE_1_SHUNT | Only use U phase current. |
| MOTOR_DRIVER_SHUNT_TYPE_2_SHUNT | Use U and W phase current. |
| MOTOR_DRIVER_SHUNT_TYPE_3_SHUNT | Use all phase current. |

5.3.10.9 Motor position Interface[Interfaces](#) » [Motor](#)**Detailed Description**

Interface for motor position functions.

Summary

The Motor position interface for getting the speed references from Encoder Sensor

Data Structures

```
struct motor\_position\_info\_t
```

```
struct motor\_position\_cfg\_t
```

```
struct motor_position_api_t
```

```
struct motor_position_instance_t
```

Typedefs

```
typedef void motor_position_ctrl_t
```

Enumerations

```
enum motor_position_ctrl_mode_t
```

Data Structure Documentation

◆ motor_position_info_t

| | | |
|------------------------------|---------------------------|---------------------------------|
| struct motor_position_info_t | | |
| Position information | | |
| Data Fields | | |
| uint8_t | u1_state_position_profile | Position control profile state. |
| int16_t | s2_position_degree | Position data [degree]. |

◆ motor_position_cfg_t

| | | |
|-----------------------------|-----------|----------------------------|
| struct motor_position_cfg_t | | |
| Configuration parameters. | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. |
| void const * | p_extend | |

◆ motor_position_api_t

| | | |
|--|-------------|--|
| struct motor_position_api_t | | |
| Functions implemented at the HAL layer will follow these APIs. | | |
| Data Fields | | |
| fsp_err_t(*) | open | (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg) |
| fsp_err_t(*) | close | (motor_position_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | reset | (motor_position_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | positionGet | (motor_position_ctrl_t *const p_ctrl, int16_t *const p_position) |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>positionSet)(motor_position_ctrl_t *const p_ctrl, float const position_rad)</code> |
| <code>fsp_err_t(*</code> | <code>positionReferenceSet)(motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg)</code> |
| <code>fsp_err_t(*</code> | <code>controlModeSet)(motor_position_ctrl_t *const p_ctrl, motor_position_ctrl_mode_t const mode)</code> |
| <code>fsp_err_t(*</code> | <code>positionControl)(motor_position_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>ipdSpeedPControl)(motor_position_ctrl_t *const p_ctrl, float const ref_speed_rad, float const speed_rad, float *const p_iq_ref)</code> |
| <code>fsp_err_t(*</code> | <code>speedReferencePControlGet)(motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)</code> |
| <code>fsp_err_t(*</code> | <code>speedReferenceIpdcControlGet)(motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)</code> |
| <code>fsp_err_t(*</code> | <code>speedReferenceFeedforwardGet)(motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)</code> |
| <code>fsp_err_t(*</code> | <code>infoGet)(motor_position_ctrl_t *const p_ctrl, motor_position_info_t *const p_info)</code> |
| <code>fsp_err_t(*</code> | <code>parameterUpdate)(motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)</code> |

Field Documentation

◆ **open**

```
fsp_err_t(* motor_position_api_t::open) (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t
const *const p_cfg)
```

Initialize the Motor Position Module.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* motor_position_api_t::close) (motor_position_ctrl_t *const p_ctrl)
```

Close (Finish) the Motor Position Module.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_position_api_t::reset) (motor_position_ctrl_t *const p_ctrl)
```

Reset(Stop) the Motor Position Module.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **positionGet**

```
fsp_err_t(* motor_position_api_t::positionGet) (motor_position_ctrl_t *const p_ctrl, int16_t *const
p_position)
```

Get Position data.

Parameters

| | | |
|-------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_position | Pointer to get position data |

◆ **positionSet**

```
fsp_err_t(* motor_position_api_t::positionSet) (motor_position_ctrl_t *const p_ctrl, float const position_rad)
```

Set Position data from Encoder.

Parameters

| | | |
|------|--------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | position_rad | Position data [radian] |

◆ **positionReferenceSet**

```
fsp_err_t(* motor_position_api_t::positionReferenceSet) (motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg)
```

Set (Input) Position reference into the Motor Position Module.

Parameters

| | | |
|------|-----------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | position_refernce_deg | Position reference [degree] |

◆ **controlModeSet**

```
fsp_err_t(* motor_position_api_t::controlModeSet) (motor_position_ctrl_t *const p_ctrl, motor_position_ctrl_mode_t const mode)
```

Set (Input) Position Control Mode.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | mode | Position Control Mode |

◆ **positionControl**

```
fsp_err_t(* motor_position_api_t::positionControl) (motor_position_ctrl_t *const p_ctrl)
```

Calculate internal position reference

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **ipdSpeedPControl**

`fsp_err_t(* motor_position_api_t::ipdSpeedPControl) (motor_position_ctrl_t *const p_ctrl, float const ref_speed_rad, float const speed_rad, float *const p_iq_ref)`

Calculate iq reference

Parameters

| | | |
|-------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | ref_speed_rad | Speed Reference [rad/sec] |
| [in] | speed_rad | Current Speed [rad/sec] |
| [out] | p_iq_ref | Pointer to get iq reference |

◆ **speedReferencePControlGet**

`fsp_err_t(* motor_position_api_t::speedReferencePControlGet) (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)`

Get Speed Reference by P Control

Parameters

| | | |
|-------|-------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_speed_ref | Pointer to get speed reference |

◆ **speedReferenceIpDControlGet**

`fsp_err_t(* motor_position_api_t::speedReferenceIpDControlGet) (motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)`

Get Speed Reference by IPD Control

Parameters

| | | |
|-------|-------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_speed_ref | Pointer to get speed reference |

◆ speedReferenceFeedforwardGet

```
fsp_err_t(* motor_position_api_t::speedReferenceFeedforwardGet) (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)
```

Get Speed Reference by Speed Feedforward

Parameters

| | | |
|-------|-------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_speed_ref | Pointer to get speed reference |

◆ infoGet

```
fsp_err_t(* motor_position_api_t::infoGet) (motor_position_ctrl_t *const p_ctrl, motor_position_info_t *const p_info)
```

Get Position information.

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Pointer to get information |

◆ parameterUpdate

```
fsp_err_t(* motor_position_api_t::parameterUpdate) (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)
```

Update Parameters for the calculation in the Motor Position Module.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ motor_position_instance_t

```
struct motor_position_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------------|--------|---|
| motor_position_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_position_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_position_api_t const * | p_api | Pointer to the API structure for |

| | |
|--|----------------|
| | this instance. |
|--|----------------|

Typedef Documentation

◆ motor_position_ctrl_t

```
typedef void motor_position_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ motor_position_ctrl_mode_t

```
enum motor_position_ctrl_mode_t
```

Position Control Mode

5.3.10.10 Motor speed Interface

[Interfaces](#) » [Motor](#)

Detailed Description

Interface for motor speed functions.

Summary

The Motor speed interface for getting the current references from electric current and rotational speed

Data Structures

```
struct motor_speed_callback_args_t
```

```
struct motor_speed_position_data_t
```

```
struct motor_speed_cfg_t
```

```
struct motor_speed_api_t
```

```
struct motor_speed_instance_t
```

Typedefs

```
typedef void motor_speed_ctrl_t
```

Enumerations

enum [motor_speed_event_t](#)

enum [motor_speed_loop_mode_t](#)

enum [motor_speed_step_t](#)

Data Structure Documentation

◆ [motor_speed_callback_args_t](#)

| | | |
|--|---------------------------|----------------------------|
| struct motor_speed_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. |
| motor_speed_event_t | event | |

◆ [motor_speed_position_data_t](#)

| | | |
|--|---|------------------------------|
| struct motor_speed_position_data_t | | |
| Motor speed and position structure | | |
| Data Fields | | |
| motor_speed_step_t | e_step_mode | Select step mode. |
| motor_speed_loop_mode_t | e_loop_mode | Select control mode. |
| int16_t | position_reference_degree | Position reference [degree]. |

◆ [motor_speed_cfg_t](#)

| | | |
|--|-------------------------------------|--|
| struct motor_speed_cfg_t | | |
| Configuration parameters. | | |
| Data Fields | | |
| motor_speed_input_t * | st_input | |
| | | Input data structure for automatic set. |
| motor_speed_output_t * | st_output | |
| | | Output data structure for automatic receive. |
| motor_position_instance_t const * | p_position_instance | |
| | | Position module instance. |

| | |
|--------------|----------------------------|
| | |
| void const * | p_context |
| | Placeholder for user data. |
| | |

◆ motor_speed_api_t

| | |
|--|--|
| struct motor_speed_api_t | |
| Functions implemented at the HAL layer will follow these APIs. | |
| Data Fields | |
| fsp_err_t(*) | open)(motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg) |

◆ **open**

```
fsp_err_t(* motor_speed_api_t::open) (motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)
```

Initialize the motor speed module.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* motor_speed_api_t::close) (motor_speed_ctrl_t *const p_ctrl)
```

Close (Finish) the motor speed module.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reset**

```
fsp_err_t(* motor_speed_api_t::reset) (motor_speed_ctrl_t *const p_ctrl)
```

Reset(Stop) the motor speed module.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **run**

```
fsp_err_t(* motor_speed_api_t::run) (motor_speed_ctrl_t *const p_ctrl)
```

Activate the motor speed control.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **speedReferenceSet**

```
fsp_err_t(* motor_speed_api_t::speedReferenceSet) (motor_speed_ctrl_t *const p_ctrl, float const speed_reference_rpm)
```

Set (Input) speed reference into the motor speed module.

Parameters

| | | |
|------|--------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | speed_refernce_rpm | Speed reference [rpm] |

◆ **positionReferenceSet**

```
fsp_err_t(* motor_speed_api_t::positionReferenceSet) (motor_speed_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position_data)
```

Set (Input) position reference and control mode

Parameters

| | | |
|------|-----------------|------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_position_data | Pointer to structure position data |

◆ **parameterSet**

```
fsp_err_t(* motor_speed_api_t::parameterSet) (motor_speed_ctrl_t *const p_ctrl, motor_speed_input_t const *const p_st_input)
```

Set (Input) speed parameters into the motor speed module.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_st_input | Pointer to structure to input parameters. |

◆ **speedControl**

```
fsp_err_t(* motor_speed_api_t::speedControl) (motor_speed_ctrl_t *const p_ctrl)
```

Calculate current reference

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **parameterGet**

```
fsp_err_t(* motor_speed_api_t::parameterGet) (motor_speed_ctrl_t *const p_ctrl,
motor_speed_output_t *const p_st_output)
```

Get speed control output parameters

Parameters

| | | |
|-------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_st_output | Pointer to get speed control parameters |

◆ **parameterUpdate**

```
fsp_err_t(* motor_speed_api_t::parameterUpdate) (motor_speed_ctrl_t *const p_ctrl,
motor_speed_cfg_t const *const p_cfg)
```

Update Parameters for the calculation in the motor speed module.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure include update parameters. |

◆ **motor_speed_instance_t**

```
struct motor_speed_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------|--------|---|
| motor_speed_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| motor_speed_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| motor_speed_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **motor_speed_ctrl_t**

```
typedef void motor_speed_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **motor_speed_event_t**

| enum <code>motor_speed_event_t</code> | |
|---|-------------------------------|
| Events that can trigger a callback function | |
| Enumerator | |
| <code>MOTOR_SPEED_EVENT_FORWARD</code> | Event forward speed control. |
| <code>MOTOR_SPEED_EVENT_BACKWARD</code> | Event backward speed control. |
| <code>MOTOR_SPEED_EVENT_ENCODER_CYCLIC</code> | Event encoder cyclic. |
| <code>MOTOR_SPEED_EVENT_ENCODER_ADJUST</code> | Event encoder adjust. |

◆ **motor_speed_loop_mode_t**

| enum <code>motor_speed_loop_mode_t</code> | |
|---|------------------------|
| Enumerator | |
| <code>MOTOR_SPEED_LOOP_MODE_SPEED</code> | Speed control mode. |
| <code>MOTOR_SPEED_LOOP_MODE_POSITION</code> | Position control mode. |

◆ **motor_speed_step_t**

| enum <code>motor_speed_step_t</code> | |
|---------------------------------------|---|
| Enumerator | |
| <code>MOTOR_SPEED_STEP_DISABLE</code> | Position control works without step mode. |
| <code>MOTOR_SPEED_STEP_ENABLE</code> | Position control works with step mode. |

5.3.11 Networking

Interfaces

Detailed Description

Networking Interfaces.

Modules

[BLE ABS Interface](#)

Interface for BLE Abstraction functions.

[BLE Interface](#)

Interface for Bluetooth Low Energy (BLE) functions.

[BLE Mesh Network Interfaces](#)

BLE Mesh Network Interfaces.

[DA16XXX AT Command Transport Layer](#)

Abstraction interface for DA16XXX AT Command functions.

[Ethernet Interface](#)

Interface for Ethernet functions.

[Ethernet PHY Interface](#)

Interface for Ethernet PHY functions.

[PTP Interface](#)

Interface for PTP functions.

[WiFi Interface](#)

Interface for common WiFi APIs.

5.3.11.1 BLE ABS Interface

[Interfaces](#) » [Networking](#)

Detailed Description

Interface for BLE Abstraction functions.

Summary

The BLE Abstraction (BLE ABS) interface provides an abstraction layer for various Renesas BLE hardware.

enum ble_abs_delete_non_volatile_area_t
```

Data Structure Documentation

◆ ble_device_address_t

struct ble_device_address_t

st_ble_device_address is the type of bluetooth device address(BD_ADDR).

Data Fields

| | | |
|---------|-----------------------|---------------------------------------|
| uint8_t | addr[BLE_BD_ADDR_LEN] | bluetooth device address. |
| uint8_t | type | the type of bluetooth device address. |

◆ ble_gap_connection_parameter_t

struct ble_gap_connection_parameter_t

ble_gap_connection_parameter_t is Connection parameters included in connection interval, slave latency, supervision timeout, ce length.

Data Fields

| | | |
|----------|---------------|------------------------------|
| uint16_t | conn_intv_min | Minimum connection interval. |
| uint16_t | conn_intv_max | Maximum connection interval. |
| uint16_t | conn_latency | Slave latency. |

| | | |
|----------|---------------|----------------------|
| uint16_t | sup_to | Supervision timeout. |
| uint16_t | min_ce_length | Minimum CE Length. |
| uint16_t | max_ce_length | Maximum CE Length. |

◆ ble_gap_connection_phy_parameter_t

| | | |
|--|--------------|---|
| struct ble_gap_connection_phy_parameter_t | | |
| ble_gap_connection_phy_parameter_t is Connection parameters per PHY. | | |
| Data Fields | | |
| uint16_t | scan_intv | Scan interval. |
| uint16_t | scan_window | Scan window. |
| ble_gap_connection_parameter_t * | p_conn_param | Connection interval, slave latency, supervision timeout, and CE length. |

◆ ble_gap_scan_phy_parameter_t

| | | |
|-------------------------------------|-------------|----------------|
| struct ble_gap_scan_phy_parameter_t | | |
| Scan parameters per scan PHY. | | |
| Data Fields | | |
| uint8_t | scan_type | Scan type. |
| uint16_t | scan_intv | Scan interval. |
| uint16_t | scan_window | Scan window. |

◆ ble_gap_scan_on_t

| | | |
|---|-------------|--------------------|
| struct ble_gap_scan_on_t | | |
| Parameters configured when scanning starts. | | |
| Data Fields | | |
| uint8_t | proc_type | Procedure type. |
| uint8_t | filter_dups | Filter duplicates. |
| uint16_t | duration | Scan duration. |
| uint16_t | period | Scan period. |

◆ ble_abs_callback_args_t

| | | |
|----------------------------------|---------|---|
| struct ble_abs_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| uint32_t | channel | Select a channel corresponding to the channel number of the hardware. |

| | | |
|--------------------------------|---------------|---|
| ble_event_cb_t | ble_abs_event | The event can be used to identify what caused the callback. |
| void const * | p_context | Placeholder for user data. Set in ble_abs_api_t::open function in ble_abs_cfg_t . |

◆ ble_abs_pairing_parameter_t

| | | |
|---|----------------------------|---|
| struct ble_abs_pairing_parameter_t | | |
| st_ble_abs_pairing_parameter_t includes the pairing parameters. | | |
| Data Fields | | |
| uint8_t | io_capability_local_device | IO capabilities of local device. |
| uint8_t | mitm_protection_policy | MITM protection policy. |
| uint8_t | secure_connection_only | Determine whether to accept only Secure Connections or not. |
| uint8_t | local_key_distribute | Type of keys to be distributed from local device. |
| uint8_t | remote_key_distribute | Type of keys which local device requests a remote device to distribute. |
| uint8_t | maximum_key_size | Maximum LTK size. |
| uint8_t | padding[2] | Reserved. |

◆ ble_abs_gatt_server_callback_set_t

| | | |
|--|-------------------------------|---|
| struct ble_abs_gatt_server_callback_set_t | | |
| GATT Server callback function and the priority. | | |
| Data Fields | | |
| ble_gatt_server_application_callback_t | gatt_server_callback_function | GATT Server callback function. |
| uint8_t | gatt_server_callback_priority | The priority number of GATT Server callback function. |

◆ ble_abs_gatt_client_callback_set_t

| | | |
|--|-------------------------------|---|
| struct ble_abs_gatt_client_callback_set_t | | |
| GATT Client callback function and the priority. | | |
| Data Fields | | |
| ble_gatt_client_application_callback_t | gatt_client_callback_function | GATT Client callback function. |
| uint8_t | gatt_client_callback_priority | The priority number of GATT Client callback function. |

◆ ble_abs_legacy_advertising_parameter_t

| struct ble_abs_legacy_advertising_parameter_t | | |
|---|---------------------------|--|
| st_ble_abs_legacy_advertising_parameter_t is the parameters for legacy advertising. | | |
| Data Fields | | |
| ble_device_address_t * | p_peer_address | The remote device address. If the p_peer_address parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_peer_address parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter. |
| uint8_t * | p_advertising_data | Advertising Data. If the p_advertising_data is specified as NULL, Advertising Data is not included in the advertising PDU. |
| uint8_t * | p_scan_response_data | Scan Response Data. If the p_scan_response_data is specified as NULL, Scan Response Data is not included in the advertising PDU. |
| uint32_t | fast_advertising_interval | Advertising with the fast_advertising_interval parameter continues for the period specified by the fast_advertising_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_advertising_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF. |
| uint32_t | slow_advertising_interval | After the elapse of the fast_advertising_period , advertising with the slow_advertising_interval parameter continues for the period specified by the slow_advertising_period parameter. Time(ms) = |

| | | |
|----------|---------------------------|---|
| | | <p><code>slow_advertising_interval</code> * 0.625. Valid range is 0x00000020 - 0x00FFFFFF.</p> |
| uint16_t | fast_advertising_period | <p>The period which advertising with the <code>fast_advertising_interval</code> parameter continues for. Time = duration * 10ms. After the elapse of the <code>fast_advertising_period</code>, <code>BLE_GAP_EVENT_ADV_OFF</code> event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the <code>fast_advertising_period</code> parameter is 0x0000, advertising with the <code>fast_advertising_interval</code> parameter is not performed.</p> |
| uint16_t | slow_advertising_period | <p>The period which advertising with the <code>slow_advertising_interval</code> parameter continues for. Time = duration * 10ms. After the elapse of the <code>slow_advertising_period</code>, <code>BLE_GAP_EVENT_ADV_OFF</code> event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the <code>slow_advertising_period</code> parameter is 0x0000, the advertising continues.</p> |
| uint16_t | advertising_data_length | <p>Advertising data length(byte). Valid range is 0-31. If the <code>advertising_data_length</code> is 0, Advertising Data is not included in the advertising PDU.</p> |
| uint16_t | scan_response_data_length | <p>Scan response data length (in bytes). Scan Response Data(byte). Valid range is 0-31. If the <code>scan_response_data_length</code> is 0, Scan Response Data is not included in the advertising PDU.</p> |
| uint8_t | advertising_channel_map | <p>The channel map used for the advertising packet transmission. It is a bitwise OR of the following values.</p> |

| | | <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADV_CH_37(0x01)</td> <td>Use 37 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_38(0x02)</td> <td>Use 38 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_39(0x04)</td> <td>Use 39 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_ALL(0x07)</td> <td>Use 37 - 39 CH.</td> </tr> </tbody> </table> | macro | description | BLE_GAP_ADV_CH_37(0x01) | Use 37 CH. | BLE_GAP_ADV_CH_38(0x02) | Use 38 CH. | BLE_GAP_ADV_CH_39(0x04) | Use 39 CH. | BLE_GAP_ADV_CH_ALL(0x07) | Use 37 - 39 CH. |
|--|--|--|-------|-------------|---|--|--|--|---|------------|--|-----------------|
| macro | description | | | | | | | | | | | |
| BLE_GAP_ADV_CH_37(0x01) | Use 37 CH. | | | | | | | | | | | |
| BLE_GAP_ADV_CH_38(0x02) | Use 38 CH. | | | | | | | | | | | |
| BLE_GAP_ADV_CH_39(0x04) | Use 39 CH. | | | | | | | | | | | |
| BLE_GAP_ADV_CH_ALL(0x07) | Use 37 - 39 CH. | | | | | | | | | | | |
| uint8_t | advertising_filter_policy | <p>Advertising filter policy. If the p_peer_address parameter is NULL, the advertising is performed according to the advertising filter policy. If the p_peer_address parameter is not NULL, this parameter is ignored.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_ABS_ADV_ERTISING_FILTER_ALLOW_ANY(0x00)</td> <td>Process scan and connection requests from all devices.</td> </tr> <tr> <td>BLE_ABS_ADV_ERTISING_FILTER_ALLOW_WHITE_LIST(0x01)</td> <td>Process scan and connection requests from only devices in the White List.</td> </tr> </tbody> </table> | macro | description | BLE_ABS_ADV_ERTISING_FILTER_ALLOW_ANY(0x00) | Process scan and connection requests from all devices. | BLE_ABS_ADV_ERTISING_FILTER_ALLOW_WHITE_LIST(0x01) | Process scan and connection requests from only devices in the White List. | | | | |
| macro | description | | | | | | | | | | | |
| BLE_ABS_ADV_ERTISING_FILTER_ALLOW_ANY(0x00) | Process scan and connection requests from all devices. | | | | | | | | | | | |
| BLE_ABS_ADV_ERTISING_FILTER_ALLOW_WHITE_LIST(0x01) | Process scan and connection requests from only devices in the White List. | | | | | | | | | | | |
| uint8_t | own_bluetooth_address_type | <p>Own Bluetooth address type. Select one of the following.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADD_R_PUBLIC(0x00)</td> <td>Public Address</td> </tr> <tr> <td>BLE_GAP_ADD_R_RPA_ID_PUBLIC(0x02)</td> <td>Resolvable Private Address. If the IRK (Identity Resolving Key) of local device has not been</td> </tr> </tbody> </table> | macro | description | BLE_GAP_ADD_R_PUBLIC(0x00) | Public Address | BLE_GAP_ADD_R_RPA_ID_PUBLIC(0x02) | Resolvable Private Address. If the IRK (Identity Resolving Key) of local device has not been | | | | |
| macro | description | | | | | | | | | | | |
| BLE_GAP_ADD_R_PUBLIC(0x00) | Public Address | | | | | | | | | | | |
| BLE_GAP_ADD_R_RPA_ID_PUBLIC(0x02) | Resolvable Private Address. If the IRK (Identity Resolving Key) of local device has not been | | | | | | | | | | | |

| | | |
|---------|--------------------------|---|
| | | registered in Resolving List, public address is used. |
| uint8_t | own_bluetooth_address[6] | Own Bluetooth address. |
| uint8_t | padding[3] | Reserved. |

◆ ble_abs_extend_advertising_parameter_t

| | | |
|---|---------------------------|--|
| struct ble_abs_extend_advertising_parameter_t | | |
| st_ble_abs_extend_advertising_parameter_t is the parameters for extended advertising. | | |
| Data Fields | | |
| ble_device_address_t * | p_peer_address | The remote device address. If the p_addr parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_addr parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter. |
| uint8_t * | p_advertising_data | Advertising data. If p_adv_data is specified as NULL, advertising data is not set. |
| uint32_t | fast_advertising_interval | Advertising with the fast_advertising_interval parameter continues for the period specified by the fast_advertising_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_advertising_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF. |
| uint32_t | slow_advertising_interval | After the elapse of the fast_advertising_period , advertising with the slow_advertising_interval parameter continues for the period specified by the slow_advertising_period parameter. Time(ms) = |

| | | <p><code>slow_advertising_interval</code> * 0.625. Valid range is 0x00000020 - 0x00FFFFFF.</p> | | | | | | | | |
|--------------------------------------|--------------------------------------|--|-------|-------------|--------------------------------------|------------|--------------------------------------|------------|--------------------------------------|------------|
| <code>uint16_t</code> | <code>fast_advertising_period</code> | <p>The period which advertising with the <code>fast_advertising_interval</code> parameter continues for. Time = duration * 10ms. After the elapse of the <code>fast_advertising_period</code>, <code>BLE_GAP_EVENT_ADV_OFF</code> event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the <code>fast_advertising_period</code> parameter is 0x0000, the <code>fast_advertising_interval</code> parameter is ignored.</p> | | | | | | | | |
| <code>uint16_t</code> | <code>slow_advertising_period</code> | <p>The period which advertising with the <code>slow_advertising_interval</code> parameter continues for. Time = duration * 10ms. ◆ ble_abs_non_connectable_advertising_parameter_t

| struct ble_abs_non_connectable_advertising_parameter_t | | |
|---|----------------------|---|
| st_ble_abs_non_connectable_advertising_parameter_t is the parameters for non-connectable advertising. | | |
| Data Fields | | |
| ble_device_address_t * | p_peer_address | The remote device address. If the p_peer_address parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_peer_address parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter. |
| uint8_t * | p_advertising_data | Advertising data. If p_adv_data is specified as NULL, advertising data is not set. |
| uint32_t | advertising_interval | Advertising with the advertising_interval parameter continues for the period specified by the duration parameter. Time(ms) = advertising_interval * 0.625. If the duration parameter is 0x0000, the advertising with the advertising_interval parameter continue. Valid range is 0x00000020 - 0x00FFFFFF. |
| uint16_t | advertising_duration | The period which advertising with the advertising_interval parameter continues for. Time = advertising_duration * 10ms. After the elapse of the advertising_duration, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the advertising_duration parameter is 0x0000, the |

| | | advertising continues. | | | | | | | | | | |
|---|---|--|-------|-------------|--|----------------|---|---|---|------------|--|-----------------|
| uint16_t | advertising_data_length | <p>Advertising data length (in bytes).</p> <p>If the primary_advertising_phy parameter is BLE_ABS_ADVERTISING_PHY_LEGACY(0x00), the valid range is 0-31.</p> <p>If the primary_advertising_phy parameter is the other values, the valid range is 0-1650.</p> <p>If the advertising_data_length parameter is 0, Advertising Data is not included in the advertising PDU.</p> | | | | | | | | | | |
| uint8_t | advertising_channel_map | <p>The channel map used for the advertising packet transmission.</p> <p>It is a bitwise OR of the following values.</p> <table border="1"> <thead> <tr> <th>macro</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>BLE_GAP_ADV_CH_37(0x01)</td> <td>Use 37 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_38(0x02)</td> <td>Use 38 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_39(0x04)</td> <td>Use 39 CH.</td> </tr> <tr> <td>BLE_GAP_ADV_CH_ALL(0x07)</td> <td>Use 37 - 39 CH.</td> </tr> </tbody> </table> | macro | description | BLE_GAP_ADV_CH_37(0x01) | Use 37 CH. | BLE_GAP_ADV_CH_38(0x02) | Use 38 CH. | BLE_GAP_ADV_CH_39(0x04) | Use 39 CH. | BLE_GAP_ADV_CH_ALL(0x07) | Use 37 - 39 CH. |

◆ ble_abs_scan_parameter_t

| struct ble_abs_scan_parameter_t | | |
|---|-----------------------|--|
| st_ble_abs_scan_parameter_t is the parameters for scan. | | |
| Data Fields | | |
| ble_abs_scan_phy_parameter_t * | p_phy_parameter_1M | Scan parameters for receiving the advertising packets in 1M PHY. In case of not receiving the advertising packets in 1M PHY, this field is specified as NULL. p_phy_parameter_1M or p_phy_parameter_coded field shall be set to scan parameters. |
| ble_abs_scan_phy_parameter_t * | p_phy_parameter_coded | Scan parameters for receiving the advertising packets in Coded PHY. |

| | | |
|-----------|--------------------|---|
| | | In case of not receiving the advertising packets in Coded PHY, this field is specified as NULL. p_phy_parameter_1M or p_phy_parameter_coded field shall be set to scan parameters. |
| uint8_t * | p_filter_data | Data for Advertising Data filtering. The p_filter_data parameter is used for the advertising data in single advertising report. The advertising data composed of multiple advertising reports is not filtered by this parameter. If the p_filter_data parameter is specified as NULL, the filtering is not done. |
| uint16_t | fast_scan_period | The period which scan with the fast scan interval/fast scan window continues for. Time(ms) = fast_scan_period * 10. Valid range is 0x0000 - 0xFFFF. If the fast_scan_period parameter is 0x0000, scan with the fast scan interval/fast scan window is not performed. After the elapse of the fast_scan_period, BLE_GAP_EVENT_SCAN_TO event notifies that the scan has stopped. |
| uint16_t | slow_scan_period | The period which scan with the slow scan interval/slow scan window continues for. Time = slow_scan_period * 10ms. Valid range is 0x0000 - 0xFFFF. If the slow_scan_period parameter is 0x0000, the scan continues. After the elapse of the slow_scan_period, BLE_GAP_EVENT_SCAN_TO event notifies that the scan has stopped. |
| uint16_t | filter_data_length | The length of the data specified by the p_filter_data parameter. Valid range is 0x0000-0x0010. If the filter_data_length |

parameter is 0, the filtering is not done.

uint8_t

device_scan_filter_policy

Scan Filter Policy. Select one of the following.

- Address type setting (Field [7:4])

| macro | description |
|-------|-------------|
|-------|-------------|

| | |
|---------------------------|---------------------|
| BLE_GAP_ADDR_PUBLIC(0x00) | Use Public Address. |
|---------------------------|---------------------|

| | |
|---------------------------|---------------------|
| BLE_GAP_ADDR_RANDOM(0x01) | Use Random Address. |
|---------------------------|---------------------|

| | |
|--|---|
| BLE_GAP_ADDR_RESOLVING_KEY_LOCAL(0x02) | If the IRK (Identity Resolving Key) of local device has been registered in Resolving list, use RPA. If not, use Public Address. |
|--|---|

| | |
|--|---|
| BLE_GAP_ADDR_RESOLVING_KEY_LOCAL(0x03) | If the IRK (Identity Resolving Key) of local device has been registered in Resolving list, use RPA. If not, use Random Address. |
|--|---|

- White list setting (Field [3:0])

| macro | description |
|-------|-------------|
|-------|-------------|

| | n |
|--|---|
| BLE_GAP_SCAN_ALL OW_ADV_ALL(0x00) | Accept all advertising and scan response PDUs except directed advertising PDUs not addressed to local device. |
| BLE_GAP_SCAN_ALL OW_ADV_WLST(0x01) | Accept only advertising and scan response PDUs from remote devices whose address is registered in the White List. Directed advertising PDUs which are not addressed to local device is ignored. |
| BLE_GAP_SCAN_ALL OW_ADV_EXCEPT_DIRECTED(0x02) | Accept all advertising and scan response PDUs except directed advertising PDUs whose the target address is identity address |

but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.

BLE_GAP_SCAN_ALL
 OW_ADV_EXCEPT_DIRECTED_WLST(0x03)

Accept all advertising and scan response PDUs. The following are excluded.

- Advertising and scan response PDUs where the advertiser's ide

ntity address is not in the White List.

- Directed advertising PDU whose target address is identity address but doesn't address local

Field Documentation

◆ open

`fsp_err_t`(* ble_abs_api_t::open) (ble_abs_ctrl_t *const p_ctrl, ble_abs_cfg_t const *const p_cfg)

Initialize the BLE ABS in register start mode.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to pin configuration structure. |

◆ close

`fsp_err_t`(* ble_abs_api_t::close) (ble_abs_ctrl_t *const p_ctrl)

Close the BLE ABS.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
|------|---------------------|-------------------------------|

◆ **reset**

```
fsp_err_t(* ble_abs_api_t::reset) (ble_abs_ctrl_t *const p_ctrl, ble_event_cb_t init_callback)
```

Close the BLE ABS.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | init_callback | callback function to initialize Host Stack. |

◆ **startLegacyAdvertising**

```
fsp_err_t(* ble_abs_api_t::startLegacyAdvertising) (ble_abs_ctrl_t *const p_ctrl, ble_abs_legacy_advertising_parameter_t const *const p_advertising_parameter)
```

Start Legacy Connectable Advertising.

Parameters

| | | |
|------|-------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_advertising_parameter | Pointer to Advertising parameters for Legacy Advertising. |

◆ **startExtendedAdvertising**

```
fsp_err_t(* ble_abs_api_t::startExtendedAdvertising) (ble_abs_ctrl_t *const p_ctrl, ble_abs_extend_advertising_parameter_t const *const p_advertising_parameter)
```

Start Extended Connectable Advertising.

Parameters

| | | |
|------|-------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_advertising_parameter | Pointer to Advertising parameters for extend Advertising. |

◆ **startNonConnectableAdvertising**

```
fsp_err_t(* ble_abs_api_t::startNonConnectableAdvertising) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_non_connectable_advertising_parameter_t const *const p_advertising_parameter)
```

Start Non-Connectable Advertising.

Parameters

| | | |
|------|-------------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_advertising_parameter | Pointer to Advertising parameters for non-connectable Advertising. |

◆ **startPeriodicAdvertising**

```
fsp_err_t(* ble_abs_api_t::startPeriodicAdvertising) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_periodic_advertising_parameter_t const *const p_advertising_parameter)
```

Start Periodic Advertising.

Parameters

| | | |
|------|-------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_advertising_parameter | Pointer to Advertising parameters for periodic Advertising. |

◆ **startScanning**

```
fsp_err_t(* ble_abs_api_t::startScanning) (ble_abs_ctrl_t *const p_ctrl, ble_abs_scan_parameter_t
const *const p_scan_parameter)
```

Start scanning.

Parameters

| | | |
|------|------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_scan_parameter | Pointer to scan parameter. |

◆ **createConnection**

```
fsp_err_t(* ble_abs_api_t::createConnection) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_connection_parameter_t const *const p_connection_parameter)
```

Request create connection.

Parameters

| | | |
|------|------------------------|----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_connection_parameter | Pointer to connection parameter. |

◆ **setLocalPrivacy**

```
fsp_err_t(* ble_abs_api_t::setLocalPrivacy) (ble_abs_ctrl_t *const p_ctrl, uint8_t const *const
p_lc_irk, uint8_t privacy_mode)
```

Configure local device privacy.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_lc_irk | Pointer to IRK (Identity Resolving Key) to be registered in the resolving list. |
| [in] | privacy_mode | privacy_mode privacy mode. |

◆ **startAuthentication**

```
fsp_err_t(* ble_abs_api_t::startAuthentication) (ble_abs_ctrl_t *const p_ctrl, uint16_t
connection_handle)
```

Start pairing or encryption.

Parameters

| | | |
|------|-------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | connection_handle | Connection handle identifying the remote device. |

◆ **deleteBondInformation**

```
fsp_err_t(* ble_abs_api_t::deleteBondInformation) (ble_abs_ctrl_t *const p_ctrl,
ble_abs_bond_information_parameter_t const *const p_bond_information_parameter)
```

Delete bond information.

Parameters

| | | |
|------|------------------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_bond_information_parameter | Pointer to bond information parameter. |

◆ **importKeyInformation**

```
fsp_err_t(* ble_abs_api_t::importKeyInformation) (ble_abs_ctrl_t *const p_ctrl, ble_device_address_t
*p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)
```

Import local identity address, keys information to local storage.

Parameters

| | | |
|------|--------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_local_identity_address | Pointer to local identity address. |
| [in] | uint8_t | p_local_irk Pointer to local IRK (Identity Resolving Key) |
| [in] | uint8_t | p_local_csrk Pointer to local CSRK |

◆ **exportKeyInformation**

```
fsp_err_t(* ble_abs_api_t::exportKeyInformation) (ble_abs_ctrl_t *const p_ctrl, ble_device_address_t
*p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)
```

Export local identity address, keys information from local storage.

Parameters

| | | |
|-------|--------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_local_identity_address | Pointer to local identity address. |
| [out] | uint8_t | p_local_irk Pointer to local IRK (Identity Resolving Key) |
| [out] | uint8_t | p_local_csrk Pointer to local CSRK |

◆ **ble_abs_instance_t**

```
struct ble_abs_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------------------|---------------------|---|
| <code>ble_abs_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>ble_abs_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>ble_abs_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `ble_gap_application_callback_t`

```
typedef void(* ble_gap_application_callback_t) (uint16_t event_type, ble_status_t event_result,
st_ble_evt_data_t *p_event_data)
```

`ble_gap_application_callback_t` is the GAP Event callback function type.

◆ `ble_vendor_specific_application_callback_t`

```
typedef void(* ble_vendor_specific_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_vs_evt_data_t *p_event_data)
```

`ble_vendor_specific_application_callback_t` is the Vendor Specific Event callback function type.

◆ `ble_gatt_server_application_callback_t`

```
typedef void(* ble_gatt_server_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_gatts_evt_data_t *p_event_data)
```

`ble_gatt_server_application_callback_t` is the GATT Server Event callback function type.

◆ `ble_gatt_client_application_callback_t`

```
typedef void(* ble_gatt_client_application_callback_t) (uint16_t event_type, ble_status_t
event_result, st_ble_gattc_evt_data_t *p_event_data)
```

`ble_gatt_client_application_callback_t` is the GATT Server Event callback function type.

◆ `ble_abs_delete_bond_application_callback_t`

```
typedef void(* ble_abs_delete_bond_application_callback_t) (st_ble_dev_addr_t *p_addr)
```

`ble_abs_delete_bond_application_callback_t` is the delete bond information Event callback function type.

◆ **ble_abs_ctrl_t**typedef void [ble_abs_ctrl_t](#)

BLE ABS control block. Allocate an instance specific control block to pass into the BLE ABS API calls.

Enumeration Type Documentation◆ **ble_abs_advertising_filter_t**enum [ble_abs_advertising_filter_t](#)

Advertising Filter Policy

Enumerator

| | |
|---|---|
| BLE_ABS_ADVERTISING_FILTER_ALLOW_ANY | Receive a connect request from all devices. |
| BLE_ABS_ADVERTISING_FILTER_ALLOW_WHITE_LIST | Receive a connect request from only the devices registered in White List. |

◆ **ble_abs_local_bond_information_t**enum [ble_abs_local_bond_information_t](#)

Local keys delete policy

Enumerator

| | |
|-------------------------------------|------------------------|
| BLE_ABS_LOCAL_BOND_INFORMATION_NONE | Delete no local keys. |
| BLE_ABS_LOCAL_BOND_INFORMATION_ALL | Delete all local keys. |

◆ **ble_abs_remote_bond_information_t**enum [ble_abs_remote_bond_information_t](#)

Remote keys delete policy

Enumerator

| | |
|---|--|
| BLE_ABS_REMOTE_BOND_INFORMATION_NONE | Delete no remote device keys. |
| BLE_ABS_REMOTE_BOND_INFORMATION_SPECIFIED | Delete the keys specified by the device address. |
| BLE_ABS_REMOTE_BOND_INFORMATION_ALL | Delete all remote device keys. |

◆ **ble_abs_delete_non_volatile_area_t**

| | |
|---|------------------------------------|
| enum <code>ble_abs_delete_non_volatile_area_t</code> | |
| Deletion policy for non-volatile memory | |
| Enumerator | |
| <code>BLE_ABS_DELETE_NON_VOLATILE_AREA_DISABLE</code> | Delete no keys stored in storage. |
| <code>BLE_ABS_DELETE_NON_VOLATILE_AREA_ENABLE</code> | Delete the keys stored in storage. |

5.3.11.2 BLE Interface

Interfaces » Networking

Functions

`ble_status_t` [R_BLE_Open](#) (void)
Open the BLE protocol stack. [More...](#)

`ble_status_t` [R_BLE_Close](#) (void)
Close the BLE protocol stack. [More...](#)

`ble_status_t` [R_BLE_Execute](#) (void)
Execute the BLE task. [More...](#)

`uint32_t` [R_BLE_IsTaskFree](#) (void)
Check the BLE task queue is free or not. [More...](#)

`ble_status_t` [R_BLE_SetEvent](#) (`ble_event_cb_t` cb)
Set event. [More...](#)

`uint32_t` [R_BLE_GetVersion](#) (void)
Get the BLE FIT module version. [More...](#)

`uint32_t` [R_BLE_GetLibType](#) (void)
Get the type of BLE protocol stack library. [More...](#)

Detailed Description

Interface for Bluetooth Low Energy (BLE) functions.

Summary

The BLE interface for the Bluetooth Low Energy (BLE) peripheral provides BLE functionality.

◆ BLE_LIB_COMPACT

```
#define BLE_LIB_COMPACT
```

BLE Protocol Stack Library Compacity type.

Typedef Documentation**◆ ble_event_cb_t**

```
ble_event_cb_t
```

ble_event_cb_t is the callback function type for [R_BLE_SetEvent\(\)](#).

Returns

none

Function Documentation

◆ R_BLE_Open()

ble_status_t R_BLE_Open (void)

Open the BLE protocol stack.

This function should be called once before using the BLE protocol stack.

Return values

| | |
|---------------------|---------|
| BLE_SUCCESS(0x0000) | Success |
|---------------------|---------|

◆ R_BLE_Close()

ble_status_t R_BLE_Close (void)

Close the BLE protocol stack.

This function should be called once to close the BLE protocol stack.

Return values

| | |
|---------------------|---------|
| BLE_SUCCESS(0x0000) | Success |
|---------------------|---------|

◆ R_BLE_Execute()

ble_status_t R_BLE_Execute (void)

Execute the BLE task.

This handles all the task queued in the BLE protocol stack internal task queue and return. This function should be called repeatedly in the main loop.

Return values

| | |
|---------------------|---------|
| BLE_SUCCESS(0x0000) | Success |
|---------------------|---------|

◆ **R_BLE_IsTaskFree()**

```
uint32_t R_BLE_IsTaskFree ( void )
```

Check the BLE task queue is free or not.

This function returns the BLE task queue free status. When this function returns 0x0, call [R_BLE_Execute\(\)](#) to execute the BLE task.

Return values

| | |
|-----|----------------------------|
| 0x0 | BLE task queue is not free |
| 0x1 | BLE task queue is free |

◆ **R_BLE_SetEvent()**

```
ble_status_t R_BLE_SetEvent ( ble_event_cb_t cb)
```

Set event.

This function add an event in the BLE protocol stack internal queue. The event is handled in [R_BLE_Execute](#) just like Bluetooth event. This function is intended to be called in hardware interrupt context. Even if calling this function with the same cb before the cb is invoked, only one event is registered. The maximum number of the events can be registered at a time is eight.

Parameters

| | |
|----|-----------------------------|
| cb | The callback for the event. |
|----|-----------------------------|

Return values

| | |
|-------------------------------------|---|
| BLE_SUCCESS(0x0000) | Success |
| BLE_ERR_ALREADY_IN_PROGRESS(0x000A) | The event already registered with the callback. |
| BLE_ERR_CONTEXT_FULL(0x000B) | No free slot for the event. |

◆ **R_BLE_GetVersion()**

```
uint32_t R_BLE_GetVersion ( void )
```

Get the BLE FIT module version.

This function returns the BLE FIT module version.

The major version(BLE_VERSION_MAJOR) is contained in the two most significant bytes, and the minor version(BLE_VERSION_MINOR) occupies the remaining two bytes.

Return values

| | |
|---------------------------------------|--|
| BLE_VERSION_MAJOR BLE_VERSION_MINOR | |
|---------------------------------------|--|

◆ R_BLE_GetLibType()

uint32_t R_BLE_GetLibType (void)

Get the type of BLE protocol stack library.

This function returns the type of BLE protocol stack library.

Return values

| | |
|------------------------|----------|
| BLE_LIB_EXTENDED(0x00) | Extended |
| BLE_LIB_BALANCE(0x01) | Balance |
| BLE_LIB_COMPACT(0x02) | Compact |

GATT_COMMON

Interfaces » Networking » BLE Interface

Functions

ble_status_t R_BLE_GATT_GetMtu (uint16_t conn_hdl, uint16_t *p_mtu)

This function gets the current MTU used in GATT communication.
[More...](#)

Detailed Description

Function Documentation

◆ **R_BLE_GATT_GetMtu()**

```
ble_status_t R_BLE_GATT_GetMtu ( uint16_t conn_hdl, uint16_t* p_mtu )
```

This function gets the current MTU used in GATT communication.

Both GATT server and GATT Client can use this function.

The result of this API call is returned by a return value.

Parameters

| | | |
|------|----------|---|
| [in] | conn_hdl | Connection handle identifying the GATT Server or the GATT Client. |
| [in] | p_mtu | The Current MTU. Before MTU exchange, this parameter is 23 bytes. After MTU exchange, this parameter is the negotiated MTU. |

Return values

| | |
|-----------------------------|---|
| BLE_SUCCESS(0x0000) | Success |
| BLE_ERR_INVALID_PTR(0x0001) | The mtu parameter is NULL. |
| BLE_ERR_INVALID_HDL(0x000E) | The GATT Server or the GATT Client specified by conn_hdl was not found. |

GATT_CLIENT

[Interfaces](#) » [Networking](#) » [BLE Interface](#)

Functions

```
ble_status_t R_BLE_GATTC_Init (uint8_t cb_num)
```

This function initializes the GATT Client and registers the number of the callbacks for GATT Client event. [More...](#)

```
ble_status_t R_BLE_GATTC_RegisterCb (ble_gattc_app_cb_t cb, uint8_t priority)
```

This function registers a callback function for GATT Client event. [More...](#)

```
ble_status_t R_BLE_GATTC_DeregisterCb (ble_gattc_app_cb_t cb)
```

This function deregisters the callback function for GATT Client event. [More...](#)

| | |
|--------------|--|

ble_status_t [R_BLE_GATTC_WriteLongChar](#) (uint16_t conn_hdl, [st_ble_gatt_hdl_value_pair_t](#) *p_write_data, uint16_t offset)

This function writes a Long Characteristic in a GATT Server. [More...](#)

ble_status_t [R_BLE_GATTC_ReliableWrites](#) (uint16_t conn_hdl, [st_ble_gattc_reliable_writes_char_pair_t](#) *p_char_pair, uint8_t pair_num, uint8_t auto_flag)

This function performs the Reliable Writes procedure described in GATT Specification. [More...](#)

`ble_status_t` [R_BLE_GATTC_ExecWrite](#) (uint16_t conn_hdl, uint8_t exe_flag)
If the auto execute of Reliable Writes is not specified by [R_BLE_GATTC_ReliableWrites\(\)](#), this function is used to execute a write to Characteristic. [More...](#)

Detailed Description

Data Structures

struct [st_ble_gatt_hdl_range_t](#)
Attribute handle range. [More...](#)

struct [st_ble_gattc_reliable_writes_char_pair_t](#)
This is used in [R_BLE_GATTC_ReliableWrites\(\)](#) to specify the pair of Characteristic Value and Characteristic Value Handle. [More...](#)

struct [st_ble_gattc_conn_evt_t](#)
This structure notifies that the link with the GATT Server has been established. [More...](#)

struct [st_ble_gattc_disconn_evt_t](#)
This structure notifies that the link with the GATT Server has been disconnected. [More...](#)

struct [st_ble_gattc_ex_mtu_rsp_evt_t](#)
This structure notifies that a MTU Exchange Response PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_serv_16_evt_t](#)
This structure notifies that a 16-bit UUID Service has been discovered. [More...](#)

struct [st_ble_gattc_serv_128_evt_t](#)
This structure notifies that a 128-bit UUID Service has been discovered. [More...](#)

struct [st_ble_gattc_inc_serv_16_evt_t](#)
This structure notifies that a 16-bit UUID Included Service has been

discovered. [More...](#)

struct [st_ble_gattc_inc_serv_128_evt_t](#)

This structure notifies that a 128-bit UUID Included Service has been discovered. [More...](#)

struct [st_ble_gattc_char_16_evt_t](#)

This structure notifies that a 16-bit UUID Characteristic has been discovered. [More...](#)

struct [st_ble_gattc_char_128_evt_t](#)

This structure notifies that a 128-bit UUID Characteristic has been discovered. [More...](#)

struct [st_ble_gattc_char_desc_16_evt_t](#)

This structure notifies that a 16-bit UUID Characteristic Descriptor has been discovered. [More...](#)

struct [st_ble_gattc_char_desc_128_evt_t](#)

This structure notifies that a 128-bit UUID Characteristic Descriptor has been discovered. [More...](#)

struct [st_ble_gattc_err_rsp_evt_t](#)

This structure notifies that a Error Response PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_ntf_evt_t](#)

This structure notifies that a Notification PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_ind_evt_t](#)

This structure notifies that a Indication PDU has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_rd_char_evt_t](#)

This structure notifies that read response to [R_BLE_GATTC_ReadChar\(\)](#) or [R_BLE_GATTC_ReadCharUsingUuid\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_wr_char_evt_t](#)

This structure notifies that write response to [R_BLE_GATTC_WriteChar\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_rd_multi_char_evt_t](#)

This structure notifies that read response to [R_BLE_GATTC_ReadMultiChar\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_char_part_wr_evt_t](#)

This structure notifies that write response to [R_BLE_GATTC_WriteLongChar\(\)](#) or [R_BLE_GATTC_ReliableWrites\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_reliable_writes_comp_evt_t](#)

This structure notifies that a response to [R_BLE_GATTC_ExecWrite\(\)](#) has been received from a GATT Server. [More...](#)

struct [st_ble_gattc_rd_multi_req_param_t](#)

This is used in [R_BLE_GATTC_ReadMultiChar\(\)](#) to specify multiple Characteristics to be read. [More...](#)

struct [st_ble_gattc_evt_data_t](#)

[st_ble_gattc_evt_data_t](#) is the type of the data notified in a GATT Client Event. [More...](#)

struct [st_ble_gatt_value_t](#)

Attribute Value. [More...](#)

struct [st_ble_gatt_hdl_value_pair_t](#)

Attribute handle and attribute Value. [More...](#)

Macros

#define [BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG](#)

#define [BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG](#)

```
#define BLE_GATTC_MAX_CB
        GATT Client Callback Number.
```

```
#define BLE_GATTC_EXEC_AUTO
        Auto execution.
```

```
#define BLE_GATTC_EXEC_NOT_AUTO
        Not auto execution.
```

```
#define BLE_GATTC_RELIABLE_WRITES_MAX_CHAR_PAIR
        Length of the Queue used with Prepare Write procedure to write a
        characteristic whose size is larger than MTU.
```

Typedefs

```
typedef void(* ble_gattc_app_cb_t) (uint16_t event_type, ble_status_t event_result,
st_ble_gattc_evt_data_t *p_event_data)

ble_gattc_app_cb_t is the GATT Client Event callback function type.
More...
```

Enumerations

```
enum e_r_ble_gattc_evt_t
        GATT Client Event Identifier. More...
```

Data Structure Documentation

◆ st_ble_gatt_hdl_range_t

| | | |
|--------------------------------|-----------|-------------------------|
| struct st_ble_gatt_hdl_range_t | | |
| Attribute handle range. | | |
| Data Fields | | |
| uint16_t | start_hdl | Start Attribute Handle. |
| uint16_t | end_hdl | End Attribute Handle. |

◆ st_ble_gattc_reliable_writes_char_pair_t

| |
|---|
| struct st_ble_gattc_reliable_writes_char_pair_t |
| This is used in R_BLE_GATTC_ReliableWrites() to specify the pair of Characteristic Value and Characteristic Value Handle. |

| Data Fields | | |
|--|------------|--|
| st_ble_gatt_hdl_value_pair_t | write_data | Pair of Characteristic Value and Characteristic Value Handle. |
| uint16_t | offset | Offset that indicates the location to be written. Normally, set 0 to this parameter. If this parameter sets to a value other than 0, Adjust the offset parameter and the length of the value to be written not to exceed the length of the Characteristic. |

◆ **st_ble_gattc_conn_evt_t**

| struct st_ble_gattc_conn_evt_t | | |
|--|--------|-----------------------------|
| This structure notifies that the link with the GATT Server has been established. | | |
| Data Fields | | |
| st_ble_dev_addr_t * | p_addr | Address of the GATT Server. |

◆ **st_ble_gattc_disconn_evt_t**

| struct st_ble_gattc_disconn_evt_t | | |
|---|--------|-----------------------------|
| This structure notifies that the link with the GATT Server has been disconnected. | | |
| Data Fields | | |
| st_ble_dev_addr_t * | p_addr | Address of the GATT Server. |

◆ **st_ble_gattc_ex_mtu_rsp_evt_t**

| struct st_ble_gattc_ex_mtu_rsp_evt_t | | |
|--|-----|--|
| This structure notifies that a MTU Exchange Response PDU has been received from a GATT Server. | | |
| Data Fields | | |
| uint16_t | mtu | MTU size(in bytes) that GATT Server can receive. |

◆ **st_ble_gattc_serv_16_evt_t**

| struct st_ble_gattc_serv_16_evt_t | | |
|---|---------|--|
| This structure notifies that a 16-bit UUID Service has been discovered. | | |
| Data Fields | | |
| st_ble_gatt_hdl_range_t | range | Attribute handle range of the 16-bit UUID service. |
| uint16_t | uuid_16 | Service UUID. |

◆ **st_ble_gattc_serv_128_evt_t**

| | | |
|--|--|---|
| struct st_ble_gattc_serv_128_evt_t | | |
| This structure notifies that a 128-bit UUID Service has been discovered. | | |
| Data Fields | | |
| st_ble_gatt_hdl_range_t | range | Attribute handle range of the 128-bit UUID service. |
| uint8_t | uuid_128[BLE_GATT_128_BIT_UUID_SIZE] | Service UUID. |

◆ st_ble_gattc_inc_serv_16_evt_t

| | | |
|--|----------|---|
| struct st_ble_gattc_inc_serv_16_evt_t | | |
| This structure notifies that a 16-bit UUID Included Service has been discovered. | | |
| Data Fields | | |
| uint16_t | decl_hdl | Service Declaration handle of the 16-bit UUID Included Service. |
| st_ble_gattc_serv_16_evt_t | service | The contents of the Included Service. |

◆ st_ble_gattc_inc_serv_128_evt_t

| | | |
|---|----------|--|
| struct st_ble_gattc_inc_serv_128_evt_t | | |
| This structure notifies that a 128-bit UUID Included Service has been discovered. | | |
| Data Fields | | |
| uint16_t | decl_hdl | Service Declaration handle of the 128-bit UUID Included Service. |
| st_ble_gattc_serv_128_evt_t | service | The contents of the Included Service. |

◆ st_ble_gattc_char_16_evt_t

| | | |
|--|-----------|---|
| struct st_ble_gattc_char_16_evt_t | | |
| This structure notifies that a 16-bit UUID Characteristic has been discovered. | | |
| Data Fields | | |
| uint16_t | decl_hdl | Attribute handle of Characteristic Declaration. |
| uint8_t | cproperty | Characteristic Properties. It is a bitwise OR of the following values. Refer to Core Spec [Vol.3] Generic Attribute Profile(GATT) "3.3.1.1 Characteristic Properties" regarding the |

| | | <p>details of the Characteristic Properties.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>Broadcast property</td> </tr> <tr> <td>0x02</td> <td>Read property</td> </tr> <tr> <td>0x04</td> <td>Write Without Response property</td> </tr> <tr> <td>0x08</td> <td>Write property</td> </tr> <tr> <td>0x10</td> <td>Notify property</td> </tr> <tr> <td>0x20</td> <td>Indicate property</td> </tr> <tr> <td>0x40</td> <td>Authenticated Signed Writes property</td> </tr> <tr> <td>0x80</td> <td>Extended Properties property</td> </tr> </tbody> </table> | value | description | 0x01 | Broadcast property | 0x02 | Read property | 0x04 | Write Without Response property | 0x08 | Write property | 0x10 | Notify property | 0x20 | Indicate property | 0x40 | Authenticated Signed Writes property | 0x80 | Extended Properties property |
|----------|--------------------------------------|---|-------|-------------|------|--------------------|------|---------------|------|---------------------------------|------|----------------|------|-----------------|------|-------------------|------|--------------------------------------|------|------------------------------|
| value | description | | | | | | | | | | | | | | | | | | | |
| 0x01 | Broadcast property | | | | | | | | | | | | | | | | | | | |
| 0x02 | Read property | | | | | | | | | | | | | | | | | | | |
| 0x04 | Write Without Response property | | | | | | | | | | | | | | | | | | | |
| 0x08 | Write property | | | | | | | | | | | | | | | | | | | |
| 0x10 | Notify property | | | | | | | | | | | | | | | | | | | |
| 0x20 | Indicate property | | | | | | | | | | | | | | | | | | | |
| 0x40 | Authenticated Signed Writes property | | | | | | | | | | | | | | | | | | | |
| 0x80 | Extended Properties property | | | | | | | | | | | | | | | | | | | |
| uint16_t | value_hdl | Value Handle of the Characteristic. | | | | | | | | | | | | | | | | | | |
| uint16_t | uuid_16 | Characteristic UUID. | | | | | | | | | | | | | | | | | | |

◆ **st_ble_gattc_char_128_evt_t**

| struct st_ble_gattc_char_128_evt_t | | | | |
|---|-------------|--|-------|-------------|
| This structure notifies that a 128-bit UUID Characteristic has been discovered. | | | | |
| Data Fields | | | | |
| uint16_t | decl_hdl | Attribute Handle of Characteristic Declaration. | | |
| uint8_t | cproperty | <p>Characteristic Properties.</p> <p>It is a bitwise OR of the following values. Refer to Core Spec [Vol.3] Generic Attribute Profile(GATT) "3.3.1.1 Characteristic Properties" regarding the details of the Characteristic Properties.</p> <table border="1"> <thead> <tr> <th>value</th> <th>description</th> </tr> </thead> <tbody> </tbody> </table> | value | description |
| value | description | | | |

| | | | |
|----------|--|-------------------------------------|--------------------------------------|
| | | 0x01 | Broadcast property |
| | | 0x02 | Read property |
| | | 0x04 | Write Without Response property |
| | | 0x08 | Write property |
| | | 0x10 | Notify property |
| | | 0x20 | Indicate property |
| | | 0x40 | Authenticated Signed Writes property |
| | | 0x80 | Extended Properties property |
| uint16_t | value_hdl | Value Handle of the Characteristic. | |
| uint8_t | uuid_128[BLE_GATT_128_BIT_UUID_SIZE] | Characteristic UUID. | |

◆ st_ble_gattc_char_desc_16_evt_t

| | | |
|---|----------|--|
| struct st_ble_gattc_char_desc_16_evt_t | | |
| This structure notifies that a 16-bit UUID Characteristic Descriptor has been discovered. | | |
| Data Fields | | |
| uint16_t | desc_hdl | Attribute Handle of Characteristic Descriptor. |
| uint16_t | uuid_16 | Characteristic Descriptor UUID. |

◆ st_ble_gattc_char_desc_128_evt_t

| | | |
|--|--|--|
| struct st_ble_gattc_char_desc_128_evt_t | | |
| This structure notifies that a 128-bit UUID Characteristic Descriptor has been discovered. | | |
| Data Fields | | |
| uint16_t | desc_hdl | Attribute Handle of Characteristic Descriptor. |
| uint8_t | uuid_128[BLE_GATT_128_BIT_UUID_SIZE] | Characteristic Descriptor UUID. |

◆ st_ble_gattc_err_rsp_evt_t

| | | |
|-----------------------------------|--|--|
| struct st_ble_gattc_err_rsp_evt_t | | |
|-----------------------------------|--|--|

| | | |
|---|---------|--|
| This structure notifies that a Error Response PDU has been received from a GATT Server. | | |
| Data Fields | | |
| uint8_t | op_code | The op code of the ATT Request that causes the Error Response. |

VS

Interfaces » Networking » BLE Interface

Functionsble_status_t [R_BLE_VS_Init](#) (ble_vs_app_cb_t vs_cb)

This function initializes Vendor Specific API and registers a callback function for Vendor Specific Event. [More...](#)

ble_status_t [R_BLE_VS_StartTxTest](#) (st_ble_vs_tx_test_param_t *p_tx_test_param)

This function starts extended Transmitter Test. [More...](#)

ble_status_t [R_BLE_VS_StartRxTest](#) (st_ble_vs_rx_test_param_t *p_rx_test_param)

This function starts extended Receiver Test. [More...](#)

ble_status_t [R_BLE_VS_EndTest](#) (void)

This function terminates the extended transmitter or receiver test. [More...](#)

ble_status_t [R_BLE_VS_SetTxPower](#) (uint16_t conn_hdl, uint8_t tx_power)

This function configures transmit power. [More...](#)

ble_status_t [R_BLE_VS_GetTxPower](#) (uint16_t conn_hdl)

This function gets transmit power. [More...](#)

ble_status_t [R_BLE_VS_SetCodingScheme](#) (uint8_t coding_scheme)

This function configure default Coding scheme(S=8 or S=2) that is used in the case of selecting Coded PHY in Primary advertising PHY or Secondary advertising PHY advertising or request for link establishment. [More...](#)

ble_status_t [R_BLE_VS_SetRfControl](#) (st_ble_vs_set_rf_ctrl_param_t *p_rf_ctrl)

This function performs power control on RF. [More...](#)

ble_status_t [R_BLE_VS_SetBdAddr](#) (uint8_t area, st_ble_dev_addr_t *p_addr)

This function sets public/random address of local device to the area specified by the parameter. [More...](#)

ble_status_t [R_BLE_VS_GetBdAddr](#) (uint8_t area, uint8_t addr_type)

This function gets currently configured public/random address. [More...](#)

ble_status_t [R_BLE_VS_GetRand](#) (uint8_t rand_size)

This function generates 4-16 bytes of random number used in creating keys. [More...](#)

ble_status_t [R_BLE_VS_StartTxFlowEvtNtf](#) (void)

This function starts the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow. [More...](#)

ble_status_t [R_BLE_VS_StopTxFlowEvtNtf](#) (void)

This function stops the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow. [More...](#)

ble_status_t [R_BLE_VS_GetTxBufferNum](#) (uint32_t *p_buffer_num)

This function retrieves the number of the available transmission packet buffers. [More...](#)

ble_status_t [R_BLE_VS_SetTxLimit](#) (uint32_t tx_queue_lwm, uint32_t tx_queue_hwm)

This function sets the threshold for notifying the application layer of the TxFlow state. [More...](#)

ble_status_t [R_BLE_VS_SetScanChMap](#) (uint16_t ch_map)

This function sets the scan channel map. [More...](#)

ble_status_t [R_BLE_VS_GetScanChMap](#) (void)

This function gets currently scan channel map. [More...](#)

ble_status_t [R_BLE_VS_StartFirmwareUpdate](#) (void)

This function starts the firmware update procedure. [More...](#)

ble_status_t [R_BLE_VS_SendFirmwareData](#) (uint16_t index, uint16_t length, uint8_t const *const p_data)

This function sends a firmware update data frame. [More...](#)

ble_status_t [R_BLE_VS_EndFirmwareUpdate](#) (uint16_t end_index)

This function ends the firmware update procedure. [More...](#)

ble_status_t [R_BLE_VS_GetFirmwareVersion](#) (void)

This function requests the BLE module firmware version. [More...](#)

ble_status_t [R_BLE_VS_RestartModule](#) (void)

This function restarts the module. [More...](#)

Detailed Description

Data Structures

struct [st_ble_vs_tx_test_param_t](#)

This is the extended transmitter test parameters used in [R_BLE_VS_StartTxTest\(\)](#). [More...](#)

struct [st_ble_vs_rx_test_param_t](#)

This is the extended receiver test parameters used in [R_BLE_VS_StartRxTest\(\)](#). [More...](#)

struct [st_ble_vs_set_rf_ctrl_param_t](#)

This is the RF parameters used in [R_BLE_VS_SetRfControl\(\)](#). [More...](#)

struct [st_ble_vs_test_end_evt_t](#)

This structure notifies that the extended test has been terminated. [More...](#)

struct [st_ble_vs_set_tx_pwr_comp_evt_t](#)

This structure notifies that tx power has been set. [More...](#)

struct [st_ble_vs_get_tx_pwr_comp_evt_t](#)

This structure notifies that tx power has been retrieved. [More...](#)

struct [st_ble_vs_set_rf_ctrl_comp_evt_t](#)

This structure notifies that RF has been configured. [More...](#)

struct [st_ble_vs_get_bd_addr_comp_evt_t](#)

This structure notifies that BD_ADDR has been retrieved. [More...](#)

struct [st_ble_vs_get_rand_comp_evt_t](#)

This structure notifies that random number has been generated. [More...](#)

struct [st_ble_vs_tx_flow_chg_evt_t](#)

This structure notifies that the state transition of TxFlow has been changed. [More...](#)

struct [st_ble_vs_evt_data_t](#)

[st_ble_vs_evt_data_t](#) is the type of the data notified in a Vendor Specific Event. [More...](#)

struct [st_ble_vs_get_scan_ch_map_comp_evt_t](#)

This structure notifies that current scan channel map. [More...](#)

struct [st_ble_vs_get_fw_version_comp_evt_t](#)

This structure notifies the current firmware version. [More...](#)

Macros

#define [BLE_VS_TX_POWER_HIGH](#)

High power level.

```
#define BLE_VS_TX_POWER_MID
```

Middle power level.

```
#define BLE_VS_TX_POWER_LOW
```

Low power level.

```
#define BLE_VS_ADDR_AREA_REG
```

Address in register is written or read.

```
#define BLE_VS_ADDR_AREA_DATA_FLASH
```

Address in DataFlash is written or read.

```
#define BLE_VS_EH_TX_PL_PRBS9
```

PRBS9 sequence '11111111100000111101..'.
'11111111100000111101..'

```
#define BLE_VS_EH_TX_PL_11110000
```

Repeated '11110000'.

```
#define BLE_VS_EH_TX_PL_10101010
```

Repeated '10101010'.

```
#define BLE_VS_EH_TX_PL_PRBS15
```

PRBS15 sequence.

```
#define BLE_VS_EH_TX_PL_11111111
```

Repeated '11111111'.

```
#define BLE_VS_EH_TX_PL_00000000
```

Repeated '00000000'.

```
#define BLE_VS_EH_TX_PL_00001111
```

Repeated '00001111'.

```
#define BLE_VS_EH_TX_PL_01010101
```

Repeated '01010101'.

```
#define BLE_VS_EH_TEST_PHY_1M
1M PHY used in Transmitter/Receiver test.
```

```
#define BLE_VS_EH_TEST_PHY_2M
2M PHY used in Transmitter/Receiver test.
```

```
#define BLE_VS_EH_TEST_PHY_CODED
Coded PHY used in Receiver test.
```

```
#define BLE_VS_EH_TEST_PHY_CODED_S_8
Coded PHY(S=8) used in Transmitter test.
```

```
#define BLE_VS_EH_TEST_PHY_CODED_S_2
Coded PHY(S=2) used in Transmitter test.
```

```
#define BLE_VS_RF_OFF
RF power off.
```

```
#define BLE_VS_RF_ON
RF power on.
```

```
#define BLE_VS_RF_INIT_PARAM_NOT_CHG
The parameters are not changed in RF power on.
```

```
#define BLE_VS_RF_INIT_PARAM_CHG
The parameters are changed in RF power on.
```

```
#define BLE_VS_CS_PRIM_ADV_S_8
Coding scheme for Primary Advertising PHY(S=8).
```

```
#define BLE_VS_CS_PRIM_ADV_S_2
Coding scheme for Primary Advertising PHY(S=2).
```

```
#define BLE_VS_CS_SECOND_ADV_S_8
Coding scheme for Secondary Advertising PHY(S=8).
```

```
#define BLE_VS_CS_SECOND_ADV_S_2
Coding scheme for Secondary Advertising PHY(S=2).
```

```
#define BLE_VS_CS_CONN_S_8
Coding scheme for request for link establishment(S=8).
```

```
#define BLE_VS_CS_CONN_S_2
Coding scheme for request for link establishment(S=2).
```

```
#define BLE_VS_TX_FLOW_CTL_ON
It means that the number of buffer has reached the High Water Mark
from flow off state.
```

```
#define BLE_VS_TX_FLOW_CTL_OFF
It means that the number of buffer has reached the Low Water Mark
from flow on state.
```

Typedefs

```
typedef void(* ble_vs_app_cb_t) (uint16_t event_type, ble_status_t event_result,
st_ble_vs_evt_data_t *p_event_data)
ble_vs_app_cb_t is the Vendor Specific Event callback function type.
More...
```

Enumerations

```
enum e_r_ble_vs_evt_t
Vendor Specific Event Identifier. More...

5.3.11.3 BLE Mesh Network Interfaces

[Interfaces](#) » [Networking](#)

Detailed Description

BLE Mesh Network Interfaces.

Modules

BLE Mesh Access Interface

Interface for BLE Mesh Access functions.

BLE Mesh Bearer Interface

Interface for BLE Mesh Bearer functions.

BLE Mesh Bearer Platform Interface

Interface for BLE Mesh Bearer Platform functions.

BLE Mesh Health Server Interface

Interface for BLE Mesh Model Health Server functions.

BLE Mesh Interface

Interface for BLE Mesh functions.

BLE Mesh Lower Trans Interface

Interface for BLE Mesh Lower Trans functions.

BLE Mesh Model Client Interface

Interface for BLE Mesh Model Client functions.

BLE Mesh Model Configuration Client Interface

Interface for BLE Mesh Model Configuration Client functions.

BLE Mesh Model Server Interface

Interface for BLE Mesh Model Server functions.

BLE Mesh Network Interface

Interface for BLE Mesh Network functions.

BLE Mesh Provision Interface

Interface for BLE Mesh Provision functions.

BLE Mesh Scene Server Interface

Interface for BLE Mesh Model Scene Server functions.

BLE Mesh Upper Trans Interface

Interface for BLE Mesh Upper Trans functions.

BLE Mesh Access Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Access functions.

Summary

The BLE Mesh Access interface for the BLE Mesh Network Access (BLE MESH ACCESS) peripheral provides BLE Mesh Network Access functionality.

| uint8_t | period | PublishPeriod |
| uint8_t | rtx_count | PublishRetransmitCount |
| uint8_t | rtx_interval_steps | PublishRetransmitIntervalSteps |
| uint8_t | remote | Flag - if called from local or remote |

◆ [rm_ble_mesh_access_model_req_msg_context_t](#)

| | | |
|---|---------------|--|
| struct rm_ble_mesh_access_model_req_msg_context_t | | |
| Context of message received for a specific model instance. This is required to send response appropriately. | | |
| Data Fields | | |
| rm_ble_mesh_access_model_handle_t | handle | Model Handle - for which request is received |
| rm_ble_mesh_network_address_t | saddr | Source Address - originator of request |
| rm_ble_mesh_network_address_t | daddr | Destination Address - of the request |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Associated Subnet Identifier |
| rm_ble_mesh_network_appkey_handle_t | appkey_handle | Associated AppKey Identifier |

◆ [rm_ble_mesh_access_req_msg_raw_t](#)

| | | |
|--|--|--|
| | | |
|--|--|--|

| struct rm_ble_mesh_access_req_msg_raw_t | | |
|---|------------|-----------------------------|
| Uninterpreted/raw received message for a specific model instance. | | |
| Data Fields | | |
| uint32_t | opcode | Request Opcode |
| uint8_t * | data_param | Raw received message |
| uint16_t | data_len | Raw received message length |

◆ rm_ble_mesh_access_model_req_msg_t

| struct rm_ble_mesh_access_model_req_msg_t | | |
|---|-------------|--------------------------|
| Requested message type for a specific model instance. | | |
| Data Fields | | |
| rm_ble_mesh_access_model_req_msg_type_t | type | Flag: GET, SET or Others |
| uint8_t | to_be_acked | Flag: True or False |

◆ rm_ble_mesh_access_publish_setting_t

| struct rm_ble_mesh_access_publish_setting_t | | |
|---|------------|--|
| Publish setting | | |
| Data Fields | | |
| uint8_t | ttl | Time to Live |
| uint8_t | to_publish | Flag to indicate if the message also to be published |

◆ rm_ble_mesh_access_pdu_t

| struct rm_ble_mesh_access_pdu_t | | |
|---|---------------|----------------------------|
| PDU setting | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | src_addr | 16 bit Source Address |
| rm_ble_mesh_network_address_t | dst_addr | 16 bit Destination Address |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Subnet Handle |
| rm_ble_mesh_network_appkey_handle_t | appkey_handle | AppKey Handle |
| uint8_t | ttl | Time to Live |
| uint32_t | opcode | Request Opcode |
| uint8_t * | data_param | Raw received message |
| | | |

| | | |
|----------|----------|-----------------------------|
| uint16_t | data_len | Raw received message length |
|----------|----------|-----------------------------|

◆ **rm_ble_mesh_access_model_state_parameter_t**

| | | |
|--|------------|---------------|
| struct rm_ble_mesh_access_model_state_parameter_t | | |
| Model specific state parameters in a request or response message | | |
| Data Fields | | |
| uint8_t | state_type | State Type |
| void * | state | State pointer |

◆ **rm_ble_mesh_access_extended_parameter_t**

| | | |
|---|----------|---------------------------------------|
| struct rm_ble_mesh_access_extended_parameter_t | | |
| Additional parameters in a Model specific request or response message | | |
| Data Fields | | |
| uint8_t | ext_type | State/Extended Type |
| void * | ext | State/Extended data structure pointer |

◆ **rm_ble_mesh_access_device_entry_t**

| | | |
|--|--------------|--------------------------------------|
| struct rm_ble_mesh_access_device_entry_t | | |
| Provisioned Device List Data Structure, containing Primary Element Address and number of elements. | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | uaddr | Unicast address of the first element |
| uint8_t | num_elements | Number of Elements |

◆ **rm_ble_mesh_access_model_t**

| | | |
|--|------------------|--|
| struct rm_ble_mesh_access_model_t | | |
| Data structure for model. | | |
| Models could be bluetooth SIG defined or vendor defined. | | |
| Data Fields | | |
| rm_ble_mesh_access_model_id_t | model_id | Model ID |
| rm_ble_mesh_access_model_callback_t | model_callback | Callback function pointer to receive packets from the underlying protocol layers |
| rm_ble_mesh_access_timeout_callback_t | timeout_callback | Callback function called when Publication Timer expires. Set to NULL if model does not support periodic publication. |

| | | |
|-----------------|-------------|-------------------|
| uint16_t | num_opcodes | Number of Opcodes |
| const uint32_t* | opcodes | List of Opcodes |

◆ rm_ble_mesh_access_server_state_t

| | | |
|---|---------------------------|---|
| struct rm_ble_mesh_access_server_state_t | | |
| API to send reply or to update state change | | |
| Data Fields | | |
| rm_ble_mesh_access_model_req_msg_context_t* | p_context | Context of the message. |
| rm_ble_mesh_access_model_state_parameter_t* | p_current_state_parameter | Model specific current state parameters. |
| rm_ble_mesh_access_model_state_parameter_t* | p_target_state_parameter | Model specific target state parameters (NULL: to be ignored). |
| uint16_t | remaining_time | Time from current state to target state (0: to be ignored). |
| rm_ble_mesh_access_extended_parameter_t* | p_extended_parameter | Additional parameters (NULL: to be ignored). |
| uint8_t | reply | If unicast response to be sent. |
| uint8_t | publish | If state to be published. |

◆ rm_ble_mesh_access_provisioned_device_entry_t

| | | |
|--|--------------|--------------------------------------|
| struct rm_ble_mesh_access_provisioned_device_entry_t | | |
| Provisioned Device List Data Structure, containing Primary Element Address and number of elements. | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | uaddr | Unicast address of the first element |
| uint8_t | num_elements | Number of Elements |

◆ rm_ble_mesh_access_associated_keys_t

| | | |
|---|--|----------------|
| struct rm_ble_mesh_access_associated_keys_t | | |
| Associated key | | |
| Data Fields | | |
| uint8_t | privacy_key[RM_BLE_MESH_ACCESS_KEY_SIZE] | Privacy key |
| uint8_t | encrypt_key[RM_BLE_MESH_ACCESS_KEY_SIZE] | Encryption key |
| | | |

| | | |
|---------|---|------------------------|
| uint8_t | beacon_key[RM_BLE_MESH_ACCESS_KEY_SIZE] | Beacon key |
| uint8_t | is_new_key | Whether new key or not |

◆ rm_ble_mesh_access_friend_security_credential_info_t

| | | |
|---|----------------|--|
| struct rm_ble_mesh_access_friend_security_credential_info_t | | |
| To add Security Credential of a LPN or the Friend. | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | lpn_addr | Address of the LPN. |
| rm_ble_mesh_network_address_t | friend_addr | Address of the Friend. |
| uint16_t | lpn_counter | Number of Friend Request messages the LPN has sent. |
| uint16_t | friend_counter | Number of Friend Offer messages the Friend has sent. |

◆ rm_ble_mesh_access_cfg_t

| | | |
|--|-----------------------------|---|
| struct rm_ble_mesh_access_cfg_t | | |
| BLE MESH ACCESS configuration parameters. | | |
| Data Fields | | |
| uint32_t | channel | Select a channel corresponding to the channel number of the hardware. the parameters for initialization. |
| rm_ble_mesh_access_element_descriptor_t * | p_element_descriptor | Element description format. |
| rm_ble_mesh_upper_trans_instance_t const * | p_mesh_upper_trans_instance | Instance structure of upper trans. |
| rm_ble_mesh_access_element_handle_t | element_number | Element number. |
| void const * | p_context | Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t . |
| void const * | p_extend | Placeholder for user extension. |

◆ rm_ble_mesh_access_api_t

| | | |
|--|--|--|
| struct rm_ble_mesh_access_api_t | | |
| BLE MESH ACCESS functions implemented at the HAL layer will follow this API. | | |

| Data Fields | |
|-------------|---|
| fsp_err_t(* | open)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_cfg_t const *const p_cfg) |
| fsp_err_t(* | close)(rm_ble_mesh_access_ctrl_t *const p_ctrl) |

| Field Documentation | |
| | |

◆ **open**

```
fsp_err_t(* rm_ble_mesh_access_api_t::open) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_cfg_t const *const p_cfg)
```

Open access middleware.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_access_api_t::close) (rm_ble_mesh_access_ctrl_t *const p_ctrl)
```

Close access middleware.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **registerModel**

```
fsp_err_t(* rm_ble_mesh_access_api_t::registerModel) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_model_t const *const p_model, rm_ble_mesh_access_model_handle_t *const
p_model_handle)
```

Register a model with the access layer.

Parameters

| | | |
|-------|----------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_model | Pointer to model structure. |
| [out] | p_model_handle | Pointer to model handle. |

◆ **getElementHandle**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getElementHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t elem_addr, rm_ble_mesh_access_element_handle_t *const p_handle)
```

Get element handle.

Parameters

| | | |
|-------|-----------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | elem_addr | Address of the corresponding element. |
| [out] | p_handle | Pointer to model handle. |

◆ **getElementHandleForModelHandle**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getElementHandleForModelHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_element_handle_t *const p_elem_handle)
```

Get element handle for a given model handle

Parameters

| | | |
|-------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Model handle. |
| [out] | p_elem_handle | Pointer to element handle. |

◆ **getModelHandle**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getModelHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_element_handle_t elem_handle, rm_ble_mesh_access_model_id_t model_id, rm_ble_mesh_access_model_handle_t *const p_handle)
```

Get model handle.

Parameters

| | | |
|-------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | elem_handle | Element identifier associated with the Model. |
| [in] | model_id | Model identifier for which the model handle to be searched. |
| [out] | p_handle | Pointer to model handle. |

◆ **publish**

```
fsp_err_t(* rm_ble_mesh_access_api_t::publish) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t
const *const p_publish_message, uint8_t reliable)
```

API to publish access layer message.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_handl | Pointer to model handle. |
| [in] | p_publish_message | Pointer to received message structure. |
| [in] | reliable | MS_TRUE for reliable message. MS_FALSE otherwise. |

◆ **reliablePublish**

```
fsp_err_t(* rm_ble_mesh_access_api_t::reliablePublish) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t
const *const p_publish_message, uint32_t rsp_opcode)
```

API to reliably publish access layer message.

Parameters

| | | |
|------|-------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_handl | Pointer to model handle. |
| [in] | p_publish_message | Pointer to raw received message structure. |
| [in] | rsp_opcode | Response opcode. |

◆ reply

```
fsp_err_t(* rm_ble_mesh_access_api_t::reply) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, uint8_t ttl,
rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw)
```

API to reply to access layer message.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_req_msg_context | Pointer to context of received message structure. |
| [in] | ttl | Time to live. |
| [in] | p_req_msg_raw | Pointer to received message structure. |

◆ replyAndPublish

```
fsp_err_t(* rm_ble_mesh_access_api_t::replyAndPublish) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context,
rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw,
rm_ble_mesh_access_publish_setting_t const *const p_publish_setting)
```

API to reply to access layer message and optionally also to publish.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_req_msg_context | Pointer to context of received message structure. |
| [in] | p_req_msg_raw | Pointer to received message structure. |
| [in] | p_publish_setting | Pointer to publish setting structure. |

◆ **sendPdu**

```
fsp_err_t(* rm_ble_mesh_access_api_t::sendPdu) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_access_pdu_t const *const p_pdu, uint8_t reliable)
```

API to send access PDUs.

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_pdu | Pointer to PDU structure. |
| [in] | reliable | If requires lower transport ACK, set reliable as TRUE. |

◆ **getCompositionData**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getCompositionData) (rm_ble_mesh_access_ctrl_t *const
p_ctrl, rm_ble_mesh_buffer_t *const p_buffer)
```

Get composition data.

Parameters

| | | |
|-------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_buffer | Pointer to buffer structure. |

◆ **reset**

```
fsp_err_t(* rm_ble_mesh_access_api_t::reset) (rm_ble_mesh_access_ctrl_t *const p_ctrl)
```

To reset a node.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **getElementCount**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getElementCount) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t *const p_count)
```

To get the number of elements in local node.

Parameters

| | | |
|-------|---------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_count | Pointer to number of elements. |

◆ **setPrimaryUnicastAddress**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setPrimaryUnicastAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
```

To set primary unicast address.

Parameters

| | | |
|------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | Primary Unicast address to be set. |

◆ **getPrimaryUnicastAddress**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getPrimaryUnicastAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t *const p_addr)
```

To get primary unicast address.

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_addr | Pointer to address. |

◆ **setDefaultTtl**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setDefaultTtl) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t ttl)
```

To set default TTL.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | ttl | Default TTL to be set. |

◆ **getDefaultTtl**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getDefaultTtl) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_ttl)
```

To get default TTL.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_ttl | Pointer to TTL. |

◆ **setIvIndex**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setIvIndex) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint32_t iv_index, uint8_t iv_update_flag)
```

To set IV Index.

Parameters

| | | |
|------|----------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | iv_index | IV index to be set. |
| [in] | iv_update_flag | IV update flag. |

◆ **getIvIndex**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getIvIndex) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint32_t *const p_iv_index, uint8_t *const p_iv_update_flag)
```

To get IV Index.

Parameters

| | | |
|-------|------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_iv_index | Pointer to index. |
| [out] | p_iv_update_flag | Pointer to update flag. |

◆ **getIvIndexByIvi**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getIvIndexByIvi) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t ivi, uint32_t *const p_iv_index)
```

To get IV Index by Ivi.

Parameters

| | | |
|-------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | ivi | Least significant bit of the IV index used in the once to authenticate and encrypt the network PDU. |
| [out] | p_iv_index | Pointer to index. |

◆ **setFeaturesField**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setFeaturesField) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t enable, uint8_t feature)
```

To enable/disable a feature.

Parameters

| | | |
|------|---------|------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | enable | Enable or Disable. |
| [in] | feature | Relay, proxy, friend or low power. |

◆ **getFeaturesField**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getFeaturesField) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t *const p_enable, uint8_t feature)
```

To get state of a feature.

Parameters

| | | |
|------|----------|------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_enable | Pointer to enable. |
| [in] | feature | Relay, proxy, friend or low power. |

◆ **getFeatures**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getFeatures) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t *const p_features)
```

To get state of all features.

Parameters

| | | |
|-------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_features | Pointer to features. |

◆ **getFriendshipRole**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getFriendshipRole) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_friend_role)
```

To get friendship role of the node.

Parameters

| | | |
|-------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_friend_role | Pointer to friend role. |

◆ **setFriendshipRole**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setFriendshipRole) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t friend_role)
```

To set friendship role of the node.

Parameters

| | | |
|-------|-------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | friend_role | Friend role. |

◆ **addDeviceKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::addDeviceKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_dev_key, rm_ble_mesh_network_address_t uaddr, uint8_t num_elements)
```

To add Device Key.

Parameters

| | | |
|------|--------------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_dev_key | Pointer to device Key. |
| [in] | uaddr | Unicast address of the first element. |
| [in] | num_elements | Number of elements. |

◆ **getDeviceKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getDeviceKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t dev_key_index, uint8_t **const p_dev_key)
```

To get Device Key.

Parameters

| | | |
|-------|---------------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | dev_key_index | Device key index. |
| [out] | p_dev_key | Pointer to device key to be returned. |

◆ **removeAllDeviceKeys**

```
fsp_err_t(* rm_ble_mesh_access_api_t::removeAllDeviceKeys) (rm_ble_mesh_access_ctrl_t *const
p_ctrl)
```

To remove all Device Keys.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **getProvisionedDeviceList**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getProvisionedDeviceList) (rm_ble_mesh_access_ctrl_t
*const p_ctrl, rm_ble_mesh_access_provisioned_device_entry_t const *const p_prov_dev_list,
uint16_t *const p_num_entries)
```

To get list of Provisioned Device List.

Parameters

| | | |
|------|-----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_prov_dev_list | Pointer to provisioned device list structure. |
| [in] | p_num_entries | Pointer to number of entries. |

◆ getDeviceKeyHandle

```
fsp_err_t(* rm_ble_mesh_access_api_t::getDeviceKeyHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t prim_elem_uaddr, rm_ble_mesh_access_device_key_handle_t *const p_handle)
```

To get Device Key Handle.

Parameters

| | | |
|------|-----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | prim_elem_uaddr | Primary element address to be searched. |
| [in] | p_handle | Pointer to handle. |

◆ getAppKey

```
fsp_err_t(* rm_ble_mesh_access_api_t::getAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_appkey_handle_t appkey_handle, uint8_t **const p_app_key, uint8_t *const p_aid)
```

To get AppKey.

Parameters

| | | |
|-------|---------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | appkey_handle | AppKey Handle. |
| [out] | p_app_key | Pointer to AppKey to be returned. |
| [out] | p_aid | Pointer to AID to be returned. |

◆ addUpdateNetkey

```
fsp_err_t(* rm_ble_mesh_access_api_t::addUpdateNetkey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t netkey_index, uint32_t opcode, uint8_t const *const p_net_key)
```

To add/update NetKey.

Parameters

| | | |
|-------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | netkey_index | Identifies global index of NetKey. A 12bits value. |
| [in] | opcode | To identify Add or Update NetKey. |
| [out] | p_net_key | Pointer to NetKey. |

◆ addFriendSecurityCredential

```
fsp_err_t(* rm_ble_mesh_access_api_t::addFriendSecurityCredential) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t friend_index, rm_ble_mesh_access_friend_security_credential_info_t info)
```

To add Security Credential of a LPN or the Friend.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Identifies associated subnet. |
| [in] | friend_index | Friend Index. |
| [in] | info | Security credential of a LPN or the friend. |

◆ deleteFriendSecurityCredential

```
fsp_err_t(* rm_ble_mesh_access_api_t::deleteFriendSecurityCredential) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t friend_index)
```

To delete the Security Credential of a LPN or the Friend.

Parameters

| | | |
|------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Identifies associated subnet. |
| [in] | friend_index | Friend index. |

◆ findSubnet

```
fsp_err_t(* rm_ble_mesh_access_api_t::findSubnet) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t netkey_index, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle)
```

To find a Subnet associated with the NetKey.

Parameters

| | | |
|-------|-----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | netkey_index | Identifies global Index of NetKey, corresponding Subnet to be returned. |
| [out] | p_subnet_handle | Pointer to subnet handle. |

◆ findMasterSubnet

```
fsp_err_t(* rm_ble_mesh_access_api_t::findMasterSubnet) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t friend_subnet_handle,
rm_ble_mesh_network_subnet_handle_t *const p_master_subnet_handle)
```

To find the Master Subnet associated with the friend security credential, identified by Friend Subnet Handle.

Parameters

| | | |
|-------|------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | friend_subnet_handle | Identifies the friend subnet handle, corresponding to friend subnet handle. |
| [out] | p_master_subnet_handle | Pointer to master subnet handle. |

◆ deleteNetKey

```
fsp_err_t(* rm_ble_mesh_access_api_t::deleteNetKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t subnet_handle)
```

To delete NetKey.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle of the subnet for which NetKey to be deleted. |

◆ getNetKey

```
fsp_err_t(* rm_ble_mesh_access_api_t::getNetKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_net_key)
```

To get NetKey.

Parameters

| | | |
|------|---------------|--------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Target subnet handle to get net key. |
| [in] | p_net_key | Pointer to NetKey. |

◆ getNetKeyIndexList

```
fsp_err_t(* rm_ble_mesh_access_api_t::getNetKeyIndexList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t *const p_netkey_count, uint16_t *const p_netkey_index_list)
```

To get list of all known NetKeys.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_netkey_count | Pointer to NetKey count. |
| [in] | p_netkey_index_list | Pointer to NetKey index list. |

◆ lookUpNid

```
fsp_err_t(* rm_ble_mesh_access_api_t::lookUpNid) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t nid, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle, rm_ble_mesh_access_associated_keys_t *const p_key_set)
```

To search for NID.

Parameters

| | | |
|-------|-----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | nid | NID to be searched in all known subnets for match. |
| [out] | p_subnet_handle | Pointer to subnet handle. |
| [out] | p_key_set | Pointer to key set. |

◆ lookUpNetworkId

```
fsp_err_t(* rm_ble_mesh_access_api_t::lookUpNetworkId) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_network_id, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle, rm_ble_mesh_access_associated_keys_t *const p_key_set)
```

To search for Network ID.

Parameters

| | | |
|-------|-----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_network_id | Pointer to network ID to be searched in all known subnets for match. |
| [out] | p_subnet_handle | Pointer to subnet handle. |
| [out] | p_key_set | Pointer to key settings. |

◆ **lookUpAid**

```
fsp_err_t(* rm_ble_mesh_access_api_t::lookUpAid) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t aid, rm_ble_mesh_network_appkey_handle_t *const p_appkey_handle, uint8_t *const p_app_key)
```

To search for AID.

Parameters

| | | |
|-------|-----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | aid | AID to be searched in all known AppKeys for match. |
| [out] | p_appkey_handle | Pointer to AppKey handle. |
| [out] | p_app_key | Pointer to AppKey. |

◆ **setProvisioningData**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setProvisioningData) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_provision_data_t const *const p_prov_data)
```

Set Provisioning Data.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_prov_data | Pointer to provisioning data structure. |

◆ **getSubnetNid**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetNid) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_nid)
```

To get NID associated with a subnet.

Parameters

| | | |
|-------|--------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Handle identifying the subnet. |
| [out] | p_nid | Pointer to NID. |

◆ **getSubnetPrivacyKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetPrivacyKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_privacy_key)
```

To get privacy Key associated with a subnet.

Parameters

| | | |
|-------|---------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Handle identifying the subnet. |
| [out] | p_privacy_key | Pointer to Privacy Key. |

◆ **getSubnetNetworkId**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetNetworkId) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_network_id)
```

To get Network ID associated with a subnet.

Parameters

| | | |
|-------|--------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Handle identifying the subnet. |
| [out] | p_network_id | Pointer to Network ID. |

◆ **getSubnetBeaconKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetBeaconKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_beacon_key)
```

To get Beacon Key associated with a subnet.

Parameters

| | | |
|-------|--------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Handle identifying the subnet. |
| [out] | p_beacon_key | Pointer to Beacon Key. |

◆ **getSubnetIdentityKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetIdentityKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_identity_key)
```

To get Identity Key associated with a subnet.

Parameters

| | | |
|-------|----------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Handle identifying the subnet. |
| [out] | p_identity_key | Pointer to Identity Key. |

◆ **getSubnetEncryptionKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetEncryptionKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_encrypt_key)
```

To get Encryption Key associated with a subnet.

Parameters

| | | |
|-------|---------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Handle identifying the subnet. |
| [out] | p_encrypt_key | Pointer to Encryption Key. |

◆ **getNodeIdentity**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getNodeIdentity) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_id_state)
```

To get Node Identity.

Parameters

| | | |
|-------|---------------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle identifying the subnet. |
| [out] | p_id_state | Pointer to node identity state. |

◆ **setNodeIdentity**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setNodeIdentity) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_id_state)
```

To set Node Identity.

Parameters

| | | |
|-------|---------------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle identifying the subnet. |
| [out] | p_id_state | Pointer to node identity state. |

◆ **getKeyRefreshPhase**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getKeyRefreshPhase) (rm_ble_mesh_access_ctrl_t *const
p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_key_refresh_state)
```

To get Key refresh phase.

Parameters

| | | |
|-------|---------------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle identifying the subnet. |
| [out] | p_key_refresh_state | Pointer to key refresh phase state. |

◆ **setKeyRefreshPhase**

```
fsp_err_t(* rm_ble_mesh_access_api_t::setKeyRefreshPhase) (rm_ble_mesh_access_ctrl_t *const
p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t const *const
p_key_refresh_state)
```

To set Key refresh phase.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle identifying the subnet. |
| [in] | p_key_refresh_state | Pointer to key refresh phase state. |

◆ setTransmitState

```
fsp_err_t(* rm_ble_mesh_access_api_t::setTransmitState) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t tx_state_type, uint8_t tx_state)
```

To set Network/Relay Transmit state.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | tx_state_type | Transmit state type (Network or Relay). |
| [in] | tx_state | Composite state (3bits of TX count and 5bits of TX interval steps). |

◆ getTransmitState

```
fsp_err_t(* rm_ble_mesh_access_api_t::getTransmitState) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
uint8_t tx_state_type, uint8_t *const p_tx_state)
```

To get Network/Relay Transmit state.

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | tx_state_type | Transmit State Type (Network or Relay). |
| [out] | p_tx_state | Pointer to TX state. |

◆ addAppKey

```
fsp_err_t(* rm_ble_mesh_access_api_t::addAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const
*const p_app_key)
```

To add AppKey.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle of the subnet for which AppKey to be added. |
| [in] | appkey_index | Identifies global Index of AppKey. A 12bits value. |
| [in] | p_app_key | Pointer to AppKey. |

◆ **updateAppKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::updateAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const
*const p_app_key)
```

To update/delete AppKey.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle of the Subnet for which AppKey to be updated/deleted. |
| [in] | appkey_index | Identifies global Index of AppKey. A 12bits value. |
| [in] | p_app_key | Pointer to AppKey. |

◆ **deleteAppKey**

```
fsp_err_t(* rm_ble_mesh_access_api_t::deleteAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl,
rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const
*const p_app_key)
```

To update/delete AppKey.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle of the Subnet for which AppKey to be updated/deleted. |
| [in] | appkey_index | Identifies global index of AppKey. A 12bits value. |
| [in] | p_app_key | Pointer to AppKey. |

◆ getAppKeyHandle

```
fsp_err_t(* rm_ble_mesh_access_api_t::getAppKeyHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key, rm_ble_mesh_network_appkey_handle_t *const p_appkey_handle)
```

To get AppKey Handle for a given AppKey Index.

Parameters

| | | |
|-------|-----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle of the Subnet for which AppKey to be gotten. |
| [in] | appkey_index | Identifies global Index of AppKey. A 12bits value. |
| [in] | p_app_key | Pointer to AppKey. |
| [out] | p_appkey_handle | Pointer to AppKey handle. |

◆ getAppKeyIndexList

```
fsp_err_t(* rm_ble_mesh_access_api_t::getAppKeyIndexList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t *const p_appkey_count, uint16_t *const p_appkey_index_list)
```

To get list of all known AppKeys.

Parameters

| | | |
|-------|---------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle of the Subnet for which AppKey to be returned. |
| [out] | p_appkey_count | Pointer to AppKey count. |
| [out] | p_appkey_index_list | Pointer to AppKey index list. |

◆ bindModelWithAppKey

```
fsp_err_t(* rm_ble_mesh_access_api_t::bindModelWithAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t appkey_index)
```

To bind a model with an AppKey.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Model handle identifying the model. |
| [in] | appkey_index | Identifies global index of AppKey. A 12bits value. |

◆ unbindModelWithAppKey

```
fsp_err_t(* rm_ble_mesh_access_api_t::unbindModelWithAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t appkey_index)
```

To unbind a model with an AppKey.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Model handle identifying the model. |
| [in] | appkey_index | Identifies global index of AppKey. A 12bits value. |

◆ getModelAppKeyList

```
fsp_err_t(* rm_ble_mesh_access_api_t::getModelAppKeyList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t *const p_appkey_count, uint16_t *const p_appkey_index_list)
```

To get list of all AppKeys associated with a model.

Parameters

| | | |
|-------|---------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which AppKey to be returned. |
| [out] | p_appkey_count | pointer to AppKey count. |
| [out] | p_appkey_index_list | Pointer to AppKey index list. |

◆ setModelPublication

```
fsp_err_t(* rm_ble_mesh_access_api_t::setModelPublication) (rm_ble_mesh_access_ctrl_t *const
p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_publish_info_t
*const p_publish_info)
```

To set Publication information associated with a model.

Parameters

| | | |
|------|----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which Publication info to be set. |
| [in] | p_publish_info | Pointer to publication information structure. |

◆ setModelPublicationPeriodDivisor

```
fsp_err_t(* rm_ble_mesh_access_api_t::setModelPublicationPeriodDivisor)
(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle,
uint8_t period_divisor)
```

To set Publication Fast Period Divisor information associated with a model.

Parameters

| | | |
|------|----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which Publication info to be set. |
| [in] | period_divisor | The value range for the Health Fast Period Divisor state is 0 through 15, all other values are prohibited. |

◆ getModelPublication

```
fsp_err_t(* rm_ble_mesh_access_api_t::getModelPublication) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_publish_info_t *const p_publish_info)
```

To get Publication information associated with a model.

Parameters

| | | |
|-------|----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which Publication info to be returned. |
| [out] | p_publish_info | Pointer to publication information structure. |

◆ addModelSubscription

```
fsp_err_t(* rm_ble_mesh_access_api_t::addModelSubscription) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_address_t const *const p_sub_addr)
```

To add an address to a model subscription list.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which address to be added in the subscription list. |
| [in] | p_sub_addr | Pointer to address structure. |

◆ deleteModelSubscription

```
fsp_err_t(* rm_ble_mesh_access_api_t::deleteModelSubscription) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_address_t const *const p_sub_addr)
```

To delete an address to a model subscription list.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which address to be deleted in the subscription list. |
| [in] | p_sub_addr | Pointer to address structure. |

◆ **deleteAllModelSubscription**

```
fsp_err_t(* rm_ble_mesh_access_api_t::deleteAllModelSubscription) (rm_ble_mesh_access_ctrl_t
*const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)
```

To discard a model subscription list.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which the subscription list to be discarded. |

◆ **getModelSubscriptionList**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getModelSubscriptionList) (rm_ble_mesh_access_ctrl_t
*const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t *const
p_sub_addr_count, uint16_t *const p_sub_addr_list)
```

To get list of subscription addresses of a model.

Parameters

| | | |
|-------|------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | model_handle | Handle of the Model for which the subscription addresses to be returned. |
| [in] | p_sub_addr_count | Pointer to maximum number of subscription address. |
| [out] | p_sub_addr_list | Pointer to subscription addresses. |

◆ **getAllModelSubscriptionList**

```
fsp_err_t(* rm_ble_mesh_access_api_t::getAllModelSubscriptionList) (rm_ble_mesh_access_ctrl_t
*const p_ctrl, uint16_t *const p_sub_addr_count, uint16_t *const p_sub_addr_list)
```

To get list of subscription addresses of all the models.

Parameters

| | | |
|-------|------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_sub_addr_count | Pointer to maximum number of subscription address. |
| [out] | p_sub_addr_list | Pointer to subscription addresses. |

◆ **isValidElementAddress**

```
fsp_err_t(* rm_ble_mesh_access_api_t::isValidElementAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
```

To check if valid element address to receive a packet.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | A valid element address, to be checked. |

◆ **isFixedGroupAddressToBeProcessed**

```
fsp_err_t(* rm_ble_mesh_access_api_t::isFixedGroupAddressToBeProcessed) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
```

To check if Fixed Group Address in receive packet to be processed.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | A valid fixed group address, to be checked. |

◆ **isValidSubscriptionAddress**

```
fsp_err_t(* rm_ble_mesh_access_api_t::isValidSubscriptionAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
```

To check if valid subscription address to receive a packet.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | A valid subscription address, to be checked. |

◆ **enableIvUpdateTestMode**

```
fsp_err_t(* rm_ble_mesh_access_api_t::enableIvUpdateTestMode) (rm_ble_mesh_access_ctrl_t
*const p_ctrl, rm_ble_mesh_access_iv_update_test_mode_t mode)
```

To set the IV Update Test Mode feature.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | mode | This flag is used to either enable or disable the IV update test mode feature. |

◆ **rm_ble_mesh_access_instance_t**

```
struct rm_ble_mesh_access_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|----------------------------------|--------|---|
| rm_ble_mesh_access_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_access_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_access_api_t const * | p_api | Pointer to the API structure for this instance. |

Macro Definition Documentation◆ **RM_BLE_MESH_ACCESS_VADDR_LABEL_UUID_SIZE**

```
#define RM_BLE_MESH_ACCESS_VADDR_LABEL_UUID_SIZE
```

Array sizes for use in the Access layer Size of Virtual Address (Label UUID)

◆ **RM_BLE_MESH_ACCESS_NETKEY_SIZE**

```
#define RM_BLE_MESH_ACCESS_NETKEY_SIZE
```

Size of NetKey

◆ **RM_BLE_MESH_ACCESS_APPKEY_SIZE**

```
#define RM_BLE_MESH_ACCESS_APPKEY_SIZE
```

Size of AppKey

Application Callback

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#) » [BLE Mesh Access Interface](#)

Detailed Description

This Section Describes the module Notification Callback interface offered to the application

Data Structures

```
struct rm_ble_mesh_access_model_callback_args_t
```

```
struct rm_ble_mesh_access_timeout_callback_args_t
```

Typedefs

```
typedef void(* rm_ble_mesh_access_model_callback_t)
              (rm_ble_mesh_access_model_callback_args_t *p_args)
```

```
typedef void(* rm_ble_mesh_access_timeout_callback_t)
              (rm_ble_mesh_access_timeout_callback_args_t *p_args)
```

Data Structure Documentation

◆ rm_ble_mesh_access_model_callback_args_t

| struct rm_ble_mesh_access_model_callback_args_t | | |
|--|---------------|---|
| Access Layer Application Asynchronous Notification Callback Arguments. | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. |
| rm_ble_mesh_access_model_req_msg_context_t * | p_msg_context | Context of message received for a specific model instance. |
| rm_ble_mesh_access_req_msg_raw_t * | p_msg_raw | Uninterpreted/raw received message for a specific model instance. |

◆ rm_ble_mesh_access_timeout_callback_args_t

| struct rm_ble_mesh_access_timeout_callback_args_t | | |
|--|-----------|----------------------------|
| Access Layer Model Publication Timeout Callback Arguments. | | |
| Access Layer calls the registered callback to indicate Publication Timeout for the associated model. | | |
| Parameters | | |
| | p_context | Placeholder for user data. |
| | handle | Model Handle. |
| | blob | Blob if any or NULL. |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. |
| rm_ble_mesh_access_model_handle_t | handle | Model handle. |

| | | |
|---------------------|---------------------|----------------------|
| <code>ndle_t</code> | | |
| <code>void *</code> | <code>p_blob</code> | Blob if any or NULL. |

Typedef Documentation

◆ `rm_ble_mesh_access_model_callback_t`

```
typedef void(* rm_ble_mesh_access_model_callback_t)
(rm_ble_mesh_access_model_callback_args_t *p_args)
```

Access Layer Application Asynchronous Notification Callback.

Access Layer calls the registered callback to indicate events occurred to the application.

Parameters

| | |
|---------------------|--|
| <code>p_args</code> | Access Layer application asynchronous notification callback arguments. |
|---------------------|--|

◆ `rm_ble_mesh_access_timeout_callback_t`

```
typedef void(* rm_ble_mesh_access_timeout_callback_t)
(rm_ble_mesh_access_timeout_callback_args_t *p_args)
```

Access Layer Model Publication Timeout Callback.

Access Layer calls the registered callback to indicate Publication Timeout for the associated model.

Parameters

| | |
|---------------------|--|
| <code>p_args</code> | Access Layer Model publication timeout callback arguments. |
|---------------------|--|

BLE Mesh Bearer Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Bearer functions.

Summary

The BLE Mesh Bearer interface for the BLE Mesh Bearer (BLE MESH BEARER) peripheral provides BLE Mesh Bearer functionality.

Data Structures

```
struct  rm_ble_mesh_bearer_info_t
```

```
struct  rm_ble_mesh_bearer_beacon_info_t
```

```
struct  rm_ble_mesh_bearer_ch_info_t
```

```
struct  rm_ble_mesh_bearer_ntf_callback_args_t
```

```
struct  rm_ble_mesh_bearer_beacon_callback_args_t
```

```
struct  rm_ble_mesh_bearer_cfg_t
```

```
struct  rm_ble_mesh_bearer_api_t
```

```
struct  rm_ble_mesh_bearer_instance_t
```

Macros

```
#define  RM_BLE_MESH_BEARER_HANDLE_INVALID
```

```
#define  RM_BLE_MESH_BEARER_MAX_PDU_SIZE
```

```
#define  RM_BLE_MESH_BEARER_SUBTYPE_GATT_T_MASK_BIT_OFFSET
```

Typedefs

```
typedef uint8_t  rm_ble_mesh_bearer_handle_t
```

```
typedef void  rm_ble_mesh_bearer_ctrl_t
```

Enumerations

```
enum  rm_ble_mesh_bearer_interface_event_t
```

```
enum  rm_ble_mesh_bearer_beacon_operation_t
```

```
enum  rm_ble_mesh_bearer_beacon_action_t
```

```
enum  rm_ble_mesh_bearer_role_t
```

```
enum  rm_ble_mesh_bearer_operation_mode_t
```

```
enum  rm_ble_mesh_bearer_ntf_callback_result_t
```

```
enum  rm_ble_mesh_bearer_type_t
```

```
enum  rm_ble_mesh_bearer_beacon_type_t
```

Data Structure Documentation

◆ **rm_ble_mesh_bearer_info_t**

| | |
|---|--|
| struct rm_ble_mesh_bearer_info_t | |
| Bearer information to register | |
| Data Fields | |
| rm_ble_mesh_buffer_t * | binfo |

| void(* | bearer_rcv)(rm_ble_mesh_bearer_handle_t *, uint8_t *, uint16_t, rm_ble_mesh_buffer_t *info) |
| void(* | bearer_sleep)(rm_ble_mesh_bearer_handle_t *) |
| void(* | bearer_wakeup)(rm_ble_mesh_bearer_handle_t *, uint8_t mode) |
| Field Documentation | |
| ◆ binfo | |
| rm_ble_mesh_buffer_t* rm_ble_mesh_bearer_info_t::binfo | |
| Bearer Information | |
| ◆ bearer_send | |
| fsp_err_t(* rm_ble_mesh_bearer_info_t::bearer_send) (rm_ble_mesh_bearer_handle_t *, uint8_t, void *, uint16_t) | |
| Data Send routine | |
| ◆ bearer_rcv | |
| void(* rm_ble_mesh_bearer_info_t::bearer_rcv) (rm_ble_mesh_bearer_handle_t *, uint8_t *, uint16_t, rm_ble_mesh_buffer_t * info) | |
| Data Receive routine | |
| ◆ bearer_sleep | |
| void(* rm_ble_mesh_bearer_info_t::bearer_sleep) (rm_ble_mesh_bearer_handle_t *) | |
| Bearer Sleep Interface | |

◆ **bearer_wakeup**

```
void(* rm_ble_mesh_bearer_info_t::bearer_wakeup) (rm_ble_mesh_bearer_handle_t *, uint8_t mode)
```

Bearer Wakeup Interface

◆ **rm_ble_mesh_bearer_beacon_info_t**

```
struct rm_ble_mesh_bearer_beacon_info_t
```

Bearer Beacon type data structure

Data Fields

| | | |
|-----------|-----------|---|
| uint8_t | action | <p>Beacon Action</p> <ul style="list-style-type: none"> Lower Nibble: <ul style="list-style-type: none"> BRR_OBSERVE_B BRR_BROADCAST Higher Nibble: <ul style="list-style-type: none"> BRR_ENABLE BRR_DISABLE |
| uint8_t | type | <p>Beacon type</p> <ul style="list-style-type: none"> Lower Nibble: <ul style="list-style-type: none"> BRR_BCON_PASSIVE - Non Connectable beacon BRR_BCON_ACTIVE - Connectable beacon Higher Nibble (Valid only when Passive) <ul style="list-style-type: none"> BRR_BCON_TYPE_UNPROV_DEVICE BRR_BCON_TYPE_SECURE_NET |
| uint8_t * | bcon_data | Beacon Broadcast Data |

| | | |
|------------------------|---------------|--|
| uint16_t | bcon_dataalen | Beacon Broadcast Data length |
| rm_ble_mesh_buffer_t * | uri | URI information in case of Unprovisioned Beacons |

◆ rm_ble_mesh_bearer_ch_info_t

| | | |
|--|------|--|
| struct rm_ble_mesh_bearer_ch_info_t | | |
| Bearer GATT Channel information related data structure | | |
| Data Fields | | |
| uint16_t | mtu | Identifies the MTU for the Bearer Channel |
| uint8_t | role | Identifies the role for the Bearer channel |

◆ rm_ble_mesh_bearer_ntf_callback_args_t

| | | |
|--|-------------|--|
| struct rm_ble_mesh_bearer_ntf_callback_args_t | | |
| BEARER Application Asynchronous Notification Callback. | | |
| BEARER calls the registered callback to indicate events occurred to the application. | | |
| Data Fields | | |
| rm_ble_mesh_bearer_handle_t * | p_handle | Bearer handle identifier. |
| rm_ble_mesh_bearer_interface_event_t | event | Bearer interface event. |
| uint8_t * | p_data | Data associated with the event if any or NULL. |
| uint16_t | data_length | Size of the event data. 0 if event data is NULL. |

◆ rm_ble_mesh_bearer_beacon_callback_args_t

| | | |
|---|-------------|--|
| struct rm_ble_mesh_bearer_beacon_callback_args_t | | |
| BEARER Application Asynchronous Notification Callback for Beacons. | | |
| Application registers callback for beacon notification with bearer. | | |
| Data Fields | | |
| uint8_t * | p_data | Data associated with the event if any or NULL. |
| uint16_t | data_length | Size of the event data. 0 if event data is NULL. |

◆ rm_ble_mesh_bearer_cfg_t

| | | |
|---|--|--|
| struct rm_ble_mesh_bearer_cfg_t | | |
| BLE MESH BEARER configuration parameters. | | |
| Data Fields | | |

| | | |
|--------------------------------|-----------------|---|
| uint32_t | channel | Select a channel corresponding to the channel number of the hardware. the parameters for initialization. |
| rm_ble_mesh_instance_t const * | p_mesh_instance | Instance structure of BLE Mesh. |
| void const * | p_context | Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t . |
| void const * | p_extend | Placeholder for user extension. |

◆ rm_ble_mesh_bearer_api_t

| | |
|--|--|
| struct rm_ble_mesh_bearer_api_t | |
| BLE MESH BEARER functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t(*) | open)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_cfg_t const *const p_cfg) |
| fsp_err_t(*) | close)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl) |

| <code>fsp_err_t(*</code> | <code>sendPdu)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_handle_t const *const p_brr_handle, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_buffer_t const *const p_buffer)</code> |
| <code>fsp_err_t(*</code> | <code>getPacketRssi)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t *p_rssi_value)</code> |
| <code>fsp_err_t(*</code> | <code>sleep)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>wakeup)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t mode)</code> |

Field Documentation

◆ open

`fsp_err_t(* rm_ble_mesh_bearer_api_t::open) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_cfg_t const *const p_cfg)`

Open bearer middleware.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to pin configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::close) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl)
```

Close bearer middleware.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **registerInterface**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::registerInterface) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_ntf_callback_result_t(*p_callback)(
rm_ble_mesh_bearer_ntf_callback_args_t *p_args))
```

Register Interface with Bearer Layer

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | brr_type | Bearer Type. |
| [in] | p_callback | Pointer to details describing application notification callback. |

◆ **registerBeaconHandler**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::registerBeaconHandler) (rm_ble_mesh_bearer_ctrl_t *const
p_ctrl, rm_ble_mesh_bearer_beacon_type_t bcon_type, void( *p_handler)(
rm_ble_mesh_bearer_beacon_callback_args_t *p_args))
```

Register Beacon Interface with Bearer Layer

Parameters

| | | |
|------|-----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | bcon_type | Beacon type - Unprovisioned Device or Secure Network. |
| [in] | p_handler | Pointer to callback handler to be registered for the given beacon type. |

◆ **addBearer**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::addBearer) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_info_t const *const p_brr_info,
rm_ble_mesh_bearer_handle_t *const p_brr_handle)
```

Add a bearer to Bearer Layer

Parameters

| | | |
|-------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | brr_type | Bearer Type. |
| [in] | p_brr_info | Pointer to details describing the Bearer being added. |
| [out] | p_brr_handle | Pointer to handle to the bearer that is added. Used in data APIs. |

◆ **removeBearer**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::removeBearer) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_handle_t const *const p_brr_handle)
```

Remove a bearer from Bearer Layer

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | brr_type | Bearer Type. |
| [in] | p_brr_handle | Pointer to handle to the bearer is removed. Used in data APIs. |

◆ **observeBeacon**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::observeBeacon) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
uint8_t bcon_type, uint8_t enable)
```

Observe ON/OFF for the beacon type

Parameters

| | | |
|------|-----------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | bcon_type | Type of beacon to observe - Active/Passive. |
| [in] | enable | Enable or Disable the observation procedure. |

◆ bcastUnprovisionedBeacon

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::bcastUnprovisionedBeacon) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_dev_uuid, uint16_t oob_info, rm_ble_mesh_buffer_t const *const p_uri)
```

API to send Unprovisioned Device Beacon

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | type | Active or Passive Broadcast type. |
| [in] | p_dev_uuid | Pointer to device UUID uniquely identifying this device. |
| [in] | oob_info | OOB Information. |
| [in] | p_uri | Pointer to optional Parameter. NULL if not present. Points to the length and payload pointer of the URI string to be advertised interleaving with the unprovisioned beacon. |

◆ broadcastBeacon

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::broadcastBeacon) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_packet, uint16_t length)
```

API to broadcast a beacon

Parameters

| | | |
|------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | type | The type of beacon. |
| [in] | p_packet | Pointer to beacon data. |
| [in] | length | Beacon data length. |

◆ **startProxyAdv**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::startProxyAdv) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
uint8_t type, uint8_t const *const p_data, uint16_t datalen)
```

API to send Proxy Device ADV

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | type | Proxy ADV Type: 0x00 - Network ID 0x01 - Node Identity |
| [in] | p_data | Pointer to data to be advertised by Proxy. If the "type" is: 0x00 - Network ID - 8 Bytes of Network ID 0x01 - Node Identity - 8 Bytes Hash, 8 Bytes Random number |
| [in] | datalen | Length of the data to be advertised by Proxy. If the "type" is: 0x00 - Network ID - 8 Bytes of Network ID 0x01 - Node Identity - 8 Bytes Hash, 8 Bytes Random number |

◆ **sendPdu**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::sendPdu) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
rm_ble_mesh_bearer_handle_t const *const p_brr_handle, rm_ble_mesh_bearer_type_t brr_type,
rm_ble_mesh_buffer_t const *const p_buffer)
```

Send a bearer PDU

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_brr_handle | Pointer to bearer handle on which PDU is to be sent. |
| [in] | brr_type | Bearer Type. |
| [in] | p_buffer | Pointer to PDU data to be sent. |

◆ **getPacketRssi**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::getPacketRssi) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl,
uint8_t *p_rssi_value)
```

Get the RSSI of current received packet being processed.

Parameters

| | | |
|-------|--------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_rssi_value | Pointer to RSSI value. |

Note

This applies only when the packet is received over ADV bearer.

◆ **sleep**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::sleep) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl)
```

Put the bearer to sleep.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **wakeup**

```
fsp_err_t(* rm_ble_mesh_bearer_api_t::wakeup) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t
mode)
```

Wakeup the bearer.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | mode | Identifies the mode (BRR_TX/BRR_RX) for which bearer is requested for wakeup. |

◆ **rm_ble_mesh_bearer_instance_t**

```
struct rm_ble_mesh_bearer_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|----------------------------------|--------|---|
| rm_ble_mesh_bearer_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_bearer_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_bearer_api_t const * | p_api | Pointer to the API structure for this instance. |

Macro Definition Documentation

◆ RM_BLE_MESH_BEARER_HANDLE_INVALID

```
#define RM_BLE_MESH_BEARER_HANDLE_INVALID
```

Invalid Bearer handle identifier

◆ RM_BLE_MESH_BEARER_MAX_PDU_SIZE

```
#define RM_BLE_MESH_BEARER_MAX_PDU_SIZE
```

Maximum PDU size for data received over bearer

◆ RM_BLE_MESH_BEARER_SUBTYPE_GATT_T_MASK_BIT_OFFSET

```
#define RM_BLE_MESH_BEARER_SUBTYPE_GATT_T_MASK_BIT_OFFSET
```

GATT Bearer Message Type Masks

Typedef Documentation

◆ rm_ble_mesh_bearer_handle_t

```
typedef uint8_t rm_ble_mesh_bearer_handle_t
```

Bearer handle identifier

◆ rm_ble_mesh_bearer_ctrl_t

```
typedef void rm_ble_mesh_bearer_ctrl_t
```

BLE MESH BEARER control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Enumeration Type Documentation

◆ **rm_ble_mesh_bearer_interface_event_t**

| enum <code>rm_ble_mesh_bearer_interface_event_t</code> | |
|--|-------------------------------------|
| Bearer Interface Event | |
| Enumerator | |
| <code>RM_BLE_MESH_BEARER_INTERFACE_EVENT_DOWN</code> | Bearer Interface Event - Down |
| <code>RM_BLE_MESH_BEARER_INTERFACE_EVENT_UP</code> | Bearer Interface Event - Up |
| <code>RM_BLE_MESH_BEARER_INTERFACE_EVENT_DATA</code> | Bearer Interface Event - Data |
| <code>RM_BLE_MESH_BEARER_INTERFACE_EVENT_PROXY_DATA</code> | Bearer Interface Event - Proxy Data |

◆ **rm_ble_mesh_bearer_beacon_operation_t**

| enum <code>rm_ble_mesh_bearer_beacon_operation_t</code> | |
|--|--------------------------------------|

| fsp_err_t(*) | disconnect)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle) |
| Field Documentation | |
| | |

◆ **open**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::open) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl,
rm_mesh_bearer_platform_cfg_t const *const p_cfg)
```

Open Bearer Platform middleware.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::close) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl)
```

Close Bearer Platform middleware.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **setScanResponseData**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::setScanResponseData)
(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint8_t *p_data, uint8_t len)
```

Set scan response data in connectable and scannable undirected advertising event.

Parameters

| | | |
|-------|--------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_data | Pointer to scan response data. |
| [in] | len | Data length. |

◆ **connect**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::connect) (rm_mesh_bearer_platform_ctrl_t *const
p_ctrl, uint8_t *p_remote_address, uint8_t address_type, rm_mesh_bearer_platform_gatt_mode_t
mode)
```

Request to create connection.

Parameters

| | | |
|------|------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_remote_address | Pointer to remote device address. |
| [in] | address_type | Address type. |
| [in] | mode | GATT interface mode, either <code>RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION</code> or <code>RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY</code> . |

◆ **discoverService**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::discoverService) (rm_mesh_bearer_platform_ctrl_t
*const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_gatt_mode_t mode)
```

Start service discovery for Mesh GATT service.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Connection handle to identify device. |
| [in] | mode | GATT interface mode, either <code>RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION</code> or <code>RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY</code> . |

◆ **configureNotification**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::configureNotification) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_state_t state, rm_mesh_bearer_platform_gatt_mode_t mode)
```

Configure GATT notification of Mesh GATT service.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Connection handle to identify device. |
| [in] | state | Notification configuration flag; enable if RM_MESH_BEARER_PLATFORM_STATE_ENABLE, or disable if RM_MESH_BEARER_PLATFORM_STATE_DISABLE. |
| [in] | mode | GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY. |

◆ **disconnect**

```
fsp_err_t(* rm_mesh_bearer_platform_api_t::disconnect) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle)
```

Terminate Connection.

Parameters

| | | |
|------|--------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | handle | Connection handle to identify device. |

◆ **rm_mesh_bearer_platform_instance_t**

```
struct rm_mesh_bearer_platform_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------------------|--------|---|
| rm_mesh_bearer_platform_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_mesh_bearer_platform_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_mesh_bearer_platform_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `rm_mesh_bearer_platform_ctrl_t`

| fsp_err_t (* | close)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl) |
| fsp_err_t (* | reportFault)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl, const rm_ble_mesh_access_model_handle_t *const p_model_handle, uint8_t test_id, uint16_t company_id, uint8_t fault_code) |
| fsp_err_t (* | publishCurrentStatus)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl, uint8_t *p_status, uint16_t length) |

Field Documentation

◆ **open**

```
fsp_err_t(* rm_ble_mesh_health_server_api_t::open) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, rm_ble_mesh_health_server_cfg_t const *const p_cfg)
```

API to open health server model.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_health_server_api_t::close) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl)
```

API to close health server model.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **reportFault**

```
fsp_err_t(* rm_ble_mesh_health_server_api_t::reportFault) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, const rm_ble_mesh_access_model_handle_t *const p_model_handle, uint8_t test_id, uint16_t company_id, uint8_t fault_code)
```

API to report self-test fault.

Parameters

| | | |
|------|----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_model_handle | Pointer to model handle identifying the health server model instance. |
| [in] | test_id | Identifier of the self-test. |
| [in] | company_id | Company identifier. |
| [in] | fault_code | Fault value indicating the error. |

◆ **publishCurrentStatus**

```
fsp_err_t(* rm_ble_mesh_health_server_api_t::publishCurrentStatus)
(rm_ble_mesh_health_server_ctrl_t*const p_ctrl, uint8_t *p_status, uint16_t length)
```

API to publish current status.

Parameters

| | | |
|------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_status | Pointer to current status. |
| [in] | length | Status data length. |

◆ **rm_ble_mesh_health_server_instance_t**

```
struct rm_ble_mesh_health_server_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---|--------|---|
| rm_ble_mesh_health_server_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_health_server_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_health_server_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **rm_ble_mesh_health_server_self_test_function**

```
typedef void(* rm_ble_mesh_health_server_self_test_function) (uint8_t test_id, uint16_t
company_id)
```

Health Server Self Test Function.

◆ **rm_ble_mesh_health_server_ctrl_t**

```
typedef void rm_ble_mesh_health_server_ctrl_t
```

BLE MESH HEALTH SERVER control block. Allocate an instance specific control block to pass into the BLE mesh model health server API calls.

Data Fields

| | | |
|----------|---------------------------------|---|
| uint32_t | channel | Select a channel corresponding to the channel number of the hardware. the parameters for initialization. |
| uint32_t | network_interfaces_num | Number of Network Interfaces |
| uint32_t | provisioning_interfaces_num | Number of Provisioning Interfaces |
| uint32_t | network_cache_size | Network Cache Size |
| uint32_t | network_sequence_num_cache_size | Network Sequence Number Cache Size |
| uint32_t | maximum_subnets | Maximum number of subnets the device can store information about. |
| uint32_t | maximum_device_keys | Maximum number of device keys the device can store information about. |
| uint32_t | proxy_filter_list_size | Maximum number of addresses present in each proxy filter list. |
| uint32_t | maximum_lpn | Maximum number of LPNs. |
| uint32_t | reassembled_cache_size | The size of Reassembled Cache. |
| uint32_t | maximum_ltrn_sar_context | Number of Segmentation and Reassembly contexts. |
| uint32_t | maximum_friend_message_queue | Maximum number of messages that the friend is capable to queue for a single Low Power Node. |

| | | |
|----------|----------------------------------|---|
| uint32_t | maximum_friend_subscription_list | Maximum number of subscription addresses that the friend is capable to store for a single Low Power Node. |
| uint32_t | maximum_access_element_num | Maximum number of elements. |
| uint32_t | maximum_access_model_num | Maximum number of models. |
| uint32_t | maximum_application | Maximum number of Applications (keys) the device can store information about. |
| uint32_t | maximum_virtual_address | Maximum number of Virtual Addresses the device can store information about. |
| uint32_t | maximum_non_virtual_address | Maximum number of Non-Virtual Addresses the device can store information about. |
| uint32_t | net_sequence_number_block_size | The distance between the network sequence numbers, for every persistent storage write. If the device is powered cycled, it will resume transmission using the sequence number from start of next block. |
| uint32_t | net_tx_count | Network Transmit Count for network packets |
| uint32_t | net_tx_interval_steps | Network Interval Steps for network packets |
| uint32_t | net_relay_tx_count | Network Transmit Count for relayed packets |
| uint32_t | net_relay_tx_interval_steps | Network Interval Steps for relayed packets |
| uint32_t | config_server_snb_timeout | Secure Network Beacon Interval |
| uint32_t | proxy_subnet_netid_adv_timeout | Poxy ADV Network ID timeout for each Subnet in milliseconds. |
| uint32_t | proxy_subnet_nodeid_adv_timeout | Poxy ADV Node Identity timeout for each Subnet in milliseconds. |
| uint32_t | proxy_nodeid_adv_timeout | Poxy ADV Node Identity overall time period in milliseconds. |
| uint32_t | frnd_poll_retry_count | Friend Poll Retry Count - default value |
| uint32_t | ltrn_rtx_timeout | Lower Transport Segment |

| | | |
|--------------|---------------------------------|--|
| | | Transmission Timeout in milliseconds |
| uint32_t | ltrn_rtx_count | Lower Transport Segment Transmission Count - default value |
| uint32_t | ltrn_ack_timeout | Lower Transport Acknowledgment Timeout in milliseconds |
| uint32_t | ltrn_incomplete_timeout | Lower Transport Incomplete Timeout in milliseconds |
| uint32_t | frnd_receive_window | Friendship Receive Window - default value |
| uint32_t | lfn_clear_retry_timeout_initial | Friend Clear Confirmation Timeout in milliseconds |
| uint32_t | lfn_clear_retry_count | LPN Friend Clear Retry Count |
| uint32_t | trn_frndreq_retry_timeout | Friendship Retry Timeout in milliseconds |
| uint32_t | unprov_device_beacon_timeout | Unprovisioned Device Beacon Interleaved Beacon Timeout |
| uint32_t | net_tx_queue_size | Maximum number of messages that can be queued in Network layer for Transmission. |
| uint32_t | max_num_transition_timers | Maximum number of Transition Timers |
| uint32_t | max_num_periodic_step_timers | Maximum number of Periodic Step Timers |
| uint32_t | maximum_health_server_num | Maximum number of Health Server Instances. |
| uint32_t | maximum_light_lc_server_num | Maximum number of Light Lightness Controller Server Instances. |
| uint32_t | replay_cache_size | The size of the Replay Protection cache. |
| uint32_t | default_company_id | Company ID |
| uint32_t | default_product_id | Product ID |
| uint32_t | default_vendor_id | Vendor ID |
| void const * | p_context | Placeholder for user data. |
| void const * | p_extend | Placeholder for user extension. |

| Field Documentation | | |
| ◆ open | | |
| fsp_err_t(* rm_ble_mesh_api_t::open) (rm_ble_mesh_ctrl_t *const p_ctrl, rm_ble_mesh_cfg_t const *const p_cfg) | | |
| Open BLE mesh middleware. | | |
| Parameters | | |
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_api_t::close) (rm_ble_mesh_ctrl_t *const p_ctrl)
```

Close BLE mesh middleware.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **startTransitionTimer**

```
fsp_err_t(* rm_ble_mesh_api_t::startTransitionTimer) (rm_ble_mesh_ctrl_t *const p_ctrl,
rm_ble_mesh_access_state_transition_t const *const p_transition, uint16_t *const
p_transition_time_handle)
```

To start transition timer.

Parameters

| | | |
|-------|--------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_transition | Pointer to state transition data structure, which includes the timeout, transition start and complete callback etc. |
| [out] | p_transition_time_handle | Pointer to transition time handle, which can be used to stop the transition timer if required. |

◆ **stopTransitionTimer**

```
fsp_err_t(* rm_ble_mesh_api_t::stopTransitionTimer) (rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t
transition_time_handle)
```

To stop transition timer.

Parameters

| | | |
|------|------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | transition_time_handle | Transition time handle, returned by the Start Transition Timer interface. |

◆ getRemainingTransitionTime

`fsp_err_t(* rm_ble_mesh_api_t::getRemainingTransitionTime) (rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle, uint8_t *const p_remaining_transition_time)`

To get remaining Transition Time.

Parameters

| | | |
|-------|-----------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | transition_time_handle | Transition time handle, returned by the Start Transition Timer interface. |
| [out] | p_remaining_transition_time | Pointer to remaining transition time. |

◆ getRemainingTransitionTimeWithOffset

`fsp_err_t(* rm_ble_mesh_api_t::getRemainingTransitionTimeWithOffset) (rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle, uint32_t offset_in_ms, uint8_t *const p_remaining_transition_time)`

To get remaining Transition Time, with offset.

Parameters

| | | |
|-------|-----------------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | transition_time_handle | Transition time handle, returned by the Start Transition Timer interface. |
| [in] | offset_in_ms | Offset in millisecond. |
| [out] | p_remaining_transition_time | Pointer to remaining transition time. |

◆ convertTransitionTimeFromMs

`fsp_err_t(* rm_ble_mesh_api_t::convertTransitionTimeFromMs) (rm_ble_mesh_ctrl_t *const p_ctrl, uint32_t transition_time_in_ms, uint8_t *const p_transition_time)`

To convert transition time from millisecond.

Parameters

| | | |
|-------|-----------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | transition_time_in_ms | Transition time in millisecond. |
| [out] | p_transition_time | Pointer to converted value in Generic Default Transition Time state format. |

◆ **convertTransitionTimeToMs**

```
fsp_err_t(* rm_ble_mesh_api_t::convertTransitionTimeToMs) (rm_ble_mesh_ctrl_t *const p_ctrl,
uint8_t transition_time, uint32_t *const p_transition_time_in_ms)
```

To convert transition time to millisecond.

Parameters

| | | |
|-------|-------------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | transition_time | Transition time in Generic Default Transition Time state format. |
| [out] | p_transition_time_in_ms | Pointer to converted value of transition time in millisecond. |

◆ **rm_ble_mesh_instance_t**

```
struct rm_ble_mesh_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------|--------|---|
| rm_ble_mesh_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_api_t const * | p_api | Pointer to the API structure for this instance. |

Macro Definition Documentation◆ **RM_BLE_MESH_DEVICE_UUID_SIZE**

```
#define RM_BLE_MESH_DEVICE_UUID_SIZE
```

Device UUID Size

◆ **RM_BLE_MESH_ERROR_GROUP_MASK**

```
#define RM_BLE_MESH_ERROR_GROUP_MASK
```

Error group mask for BLE MESH Module

◆ RM_BLE_MESH_ERROR_GROUP_MASK_COMMON

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_COMMON
```

Error group mask for Common

◆ RM_BLE_MESH_ERROR_GROUP_MASK_BEARER

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_BEARER
```

Error group mask for Bearer

◆ RM_BLE_MESH_ERROR_GROUP_MASK_NETWORK

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_NETWORK
```

Error group mask for Network

◆ RM_BLE_MESH_ERROR_GROUP_MASK_LOWER_TRANS

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_LOWER_TRANS

Error group mask for Upper Transport

◆ RM_BLE_MESH_ERROR_GROUP_MASK_ACCESS

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_ACCESS
```

Error group mask for Access

◆ RM_BLE_MESH_ERROR_GROUP_MASK_PROVISION

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_PROVISION
```

Error group mask for Provisioning

◆ RM_BLE_MESH_ERROR_GROUP_MASK_GENERIC_MODEL

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_GENERIC_MODEL
```

Error group mask for Generic Models

◆ RM_BLE_MESH_ERROR_GROUP_MASK_CONFIG_MODEL

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_CONFIG_MODEL
```

Error group mask for Config Model

◆ RM_BLE_MESH_ERROR_GROUP_MASK_HEALTH_MODEL

```
#define RM_BLE_MESH_ERROR_GROUP_MASK_HEALTH_MODEL
```

Error group mask for Health Model

Typedef Documentation**◆ rm_ble_mesh_timer_handle_t**

```
typedef void* rm_ble_mesh_timer_handle_t
```

Timer handle

◆ rm_ble_mesh_ctrl_t

```
typedef void rm_ble_mesh_ctrl_t
```

BLE MESH control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Enumeration Type Documentation

◆ **rm_ble_mesh_error_code_t**

| enum <code>rm_ble_mesh_error_code_t</code> | |
|---|--|
| BLE MESH error code. | |
| Enumerator | |
| <code>RM_BLE_MESH_ERROR_CODE_SUCCESS</code> | Success |
| <code>RM_BLE_MESH_ERROR_CODE_INVALID_ADDRESS</code> | Invalid Address |
| <code>RM_BLE_MESH_ERROR_CODE_INVALID_MODEL</code> | Invalid Model |
| <code>RM_BLE_MESH_ERROR_CODE_INVALID_APPKEY_INDEX</code> | Invalid AppKey Index |
| <code>RM_BLE_MESH_ERROR_CODE_INVALID_NETKEY_INDEX</code> | Invalid NetKey Index |
| <code>RM_BLE_MESH_ERROR_CODE_INSUFFICIENT_RESOURCES</code> | Insufficient Resources |
| <code>RM_BLE_MESH_ERROR_CODE_KEY_INDEX_ALREADY_STORED</code> | Key Index Already Stored |
| <code>RM_BLE_MESH_ERROR_CODE_INVALID_PUBLISH_PARAMETER</code> | Invalid Publish Parameters |
| <code>RM_BLE_MESH_ERROR_CODE_NOT_A_SUBSCRIBE_MODEL</code> | Not a Subscribe Model |
| <code>RM_BLE_MESH_ERROR_CODE_STORAGE_FAILURE</code> | Storage Failure |
| <code>RM_BLE_MESH_ERROR_CODE_FEATURE_NOT_SUPPORTED</code> | Feature Not Supported |
| <code>RM_BLE_MESH_ERROR_CODE_CANNOT_UPDATE</code> | Cannot Update |
| <code>RM_BLE_MESH_ERROR_CODE_CANNOT_REMOVE</code> | Cannot Remove |
| <code>RM_BLE_MESH_ERROR_CODE_CANNOT_BIND</code> | Cannot Bind |
| <code>RM_BLE_MESH_ERROR_CODE_TEMP_UNABLE_TO_CHANGE_STATE</code> | Temporarily Unable to Change State |
| <code>RM_BLE_MESH_ERROR_CODE_CANNOT_SET</code> | Cannot Set |
| <code>RM_BLE_MESH_ERROR_CODE_UNSPECIFIED_ERROR</code> | Unspecified Error |
| <code>RM_BLE_MESH_ERROR_CODE_INVALID_BINDING</code> | Invalid Binding |
| <code>RM_BLE_MESH_ERROR_CODE_BEARER_MUTEX_INIT_FAILED</code> | Bearer Error Code for MUTEX Initialization Failure |

| | |
|---|--|
| RM_BLE_MESH_ERROR_CODE_BEARER_COND_INIT_FAILED | Bearer Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_BEARER_MUTEX_LOCK_FAILED | Bearer Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_BEARER_MUTEX_UNLOCK_FAILED | Bearer Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_BEARER_MEMORY_ALLOCATION_FAILED | Bearer Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_BEARER_INVALID_PARAMETER_VALUE | Bearer Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_BEARER_PARAMETER_OUTSIDE_RANGE | Bearer Error Code for Parameter Outside Range |
| RM_BLE_MESH_ERROR_CODE_BEARER_NULL_PARAMETER_NOT_ALLOWED | Bearer Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_BEARER_INTERFACE_NOT_READY | Bearer Error Code for Interface Not Read |
| RM_BLE_MESH_ERROR_CODE_BEARER_API_NOT_SUPPORTED | Bearer Error Code for API Not Supported |
| RM_BLE_MESH_ERROR_CODE_NETWORK_MUTEX_INIT_FAILED | Network Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_NETWORK_COND_INIT_FAILED | Network Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_NETWORK_MUTEX_LOCK_FAILED | Network Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_NETWORK_MUTEX_UNLOCK_FAILED | Network Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_NETWORK_MEMORY_ALLOCATION_FAILED | Network Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_NETWORK_INVALID_PARAMETER_VALUE | Network Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_NETWORK_PARAMETER_OUTSIDE_RANGE | Network Error Code for Parameter Outside Range |
| RM_BLE_MESH_ERROR_CODE_NETWORK_NULL_PARAMETER_NOT_ALLOWED | Network Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_NETWORK_TX_QUEUE_FULL | Network Error Code for Transmit Queue Full |
| RM_BLE_MESH_ERROR_CODE_NETWORK_TX_QUEUE | |

| | |
|---|---|
| EUE_EMPTY | Network Error Code for Transmit Queue Empty |
| RM_BLE_MESH_ERROR_CODE_NETWORK_INVALID_RX_PACKET_FORMAT | Network Error Code returned by Network Callback, indicating if it detected an invalid packet format or if the packet to be further processed, by the network layer like to be relayed or proxied etc. |
| RM_BLE_MESH_ERROR_CODE_NETWORK_RX_LOCAL_SRC_ADDR_PACKET | Network Error Code for reception of locally sourced packet |
| RM_BLE_MESH_ERROR_CODE_NETWORK_POST_PROCESS_RX_PACKET | Network Error Code returned by Network Callback, indicating if the received packet needs further processing by the network layer like to be relayed or proxied etc. after the control being returned by the callback. |
| RM_BLE_MESH_ERROR_CODE_NETWORK_RX_ALREADY_RELAYED_PACKET | Network Error Code for Already Relayed Packet |
| RM_BLE_MESH_ERROR_CODE_NETWORK_RX_LP_N_SRC_ADDR_TO_RELAY_PACKET | Network Error Code returned by Network Callback, indicating if the received packet is for a known LPN with an ongoing Friendship which needs further processing by the network layer like to be relayed or proxied etc. after the control being returned by the callback. |
| RM_BLE_MESH_ERROR_CODE_NETWORK_CRYPTO_UNLIKELY_ERR | Network Error code to tag all errors returned by the Crypto Interface to the Network layer. |
| RM_BLE_MESH_ERROR_CODE_NETWORK_API_NOT_SUPPORTED | Network Error Code for API Not Supported |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_MUTEX_INIT_FAILED | Lower Transport Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_CONDITION_INIT_FAILED | Lower Transport Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_MUTEX_LOCK_FAILED | Lower Transport Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_MUTEX_UNLOCK_FAILED | Lower Transport Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_MEMORY_ALLOCATION_FAILED | Lower Transport Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_INVALID_PARAMETER_VALUE | Lower Transport Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANSPORT_PARAMETER | Lower Transport Error Code for Parameter |

| | |
|--|---|
| RAMETER_OUTSIDE_RANGE | Outside Range |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANS_NULL_PARAMETER_NOT_ALLOWED | Lower Transport Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_LOWER_TRANS_SAR_CTX_ALLOCATION_FAILED | Lower Transport Error Code for SAR Context Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_MUTEX_INIT_FAILED | Upper Transport Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_COND_INIT_FAILED | Upper Transport Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_MUTEX_LOCK_FAILED | Upper Transport Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_MUTEX_UNLOCK_FAILED | Upper Transport Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_MEMORY_ALLOCATION_FAILED | Upper Transport Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_INVALID_PARAMETER_VALUE | Upper Transport Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_PARAMETER_OUTSIDE_RANGE | Upper Transport Error Code for Parameter Outside Range |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_NULL_PARAMETER_NOT_ALLOWED | Upper Transport Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_QUEUE_FULL | Upper Transport Error Code for Queue Full |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_QUEUE_EMPTY | Upper Transport Error Code for Queue Empty |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_INCOMPLETE_PACKET_RECEIVED | Upper Transport Error Code for Incomplete Packet Reception |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_INVALID_FRIENDSHIP_STATE | Upper Transport Error Code for Invalid Friendship State |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_FRIENDSHIP_CLEARED_ON_TIMEOUT | Upper Transport Error Code for Friendship Cleared on Timeout |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_CRYPTO_UNLIKELY_ERR | Upper Transport Error code to tag all errors returned by the Crypto Interface to the Transport layer. |
| RM_BLE_MESH_ERROR_CODE_UPPER_TRANS_API | Upper Transport Error Code for API Not |

| _NOT_SUPPORTED | Supported |
|--|---|
| RM_BLE_MESH_ERROR_CODE_ACCESS_MUTEX_INIT_FAILED | Access Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_ACCESS_COND_INIT_FAILED | Access Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_ACCESS_MUTEX_LOCK_FAILED | Access Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_ACCESS_MUTEX_UNLOCK_FAILED | Access Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_ACCESS_MEMORY_ALLOCATION_FAILED | Access Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_ACCESS_INVALID_PARAMETER_VALUE | Access Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_ACCESS_PARAMETER_OUTSIDE_RANGE | Access Error Code for Parameter Outside Range |
| RM_BLE_MESH_ERROR_CODE_ACCESS_NULL_PARAMETER_NOT_ALLOWED | Access Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_ACCESS_NO_RESOURCE | Access Error Code for No Resources |
| RM_BLE_MESH_ERROR_CODE_ACCESS_NO_MATCH | Access Error Code for No Match |
| RM_BLE_MESH_ERROR_CODE_ACCESS_INVALID_HANDLE | Access Error Code for Invalid Handle |
| RM_BLE_MESH_ERROR_CODE_ACCESS_MODEL_ALREADY_REGISTERED | Access Error Code for Model Already Registered |
| RM_BLE_MESH_ERROR_CODE_ACCESS_INVALID_SRC_ADDR | Access Error Code for Invalid Source Address |
| RM_BLE_MESH_ERROR_CODE_ACCESS_DEV_KEY_TABLE_FULL | Access Error Code for Device Key Table Full |
| RM_BLE_MESH_ERROR_CODE_ACCESS_MASTER_NID_ON_LPN | Access Error Code when detecting Packets with Master Network Credentials from a known address with ongoing Friendship |
| RM_BLE_MESH_ERROR_CODE_ACCESS_INVALID_PUBLICATION_STATE | Access Error Code for Invalid Publication State |
| RM_BLE_MESH_ERROR_CODE_ACCESS_INVALID_PUBLICATION_TTL | Access Error Code for Invalid Publication TTL |
| RM_BLE_MESH_ERROR_CODE_ACCESS_IV_VALUE_NOT_PERMITTED | Access Error Code for not permitted IV Index Value |

| | |
|---|---|
| RM_BLE_MESH_ERROR_CODE_ACCESS_IV_UPDATE_TOO_SOON | Access Error Code for IV Update occurring too soon within the stipulated/specified Time Limit |
| RM_BLE_MESH_ERROR_CODE_ACCESS_IV_INCORRECT_STATE | Access Error Code for IV Update in Incorrect State |
| RM_BLE_MESH_ERROR_CODE_ACCESS_IV_UPDATE_DEFERRED_IN_BUSY | Access Error Code for IV Update deferred due to currently Busy State |
| RM_BLE_MESH_ERROR_CODE_ACCESS_API_NOT_SUPPORTED | Access Error Code for API Not Supported |
| RM_BLE_MESH_ERROR_CODE_PROVISION_MUTEX_INIT_FAILED | Provisioning Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_CONDITIONAL_VARIABLE_INIT_FAILED | Provisioning Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_MUTEX_LOCK_FAILED | Provisioning Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_MUTEX_UNLOCK_FAILED | Provisioning Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_MEMORY_ALLOCATION_FAILED | Provisioning Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_INVALID_STATE | Provisioning Error Code for Invalid State |
| RM_BLE_MESH_ERROR_CODE_PROVISION_INVALID_PARAMETER | Bearer Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_PROVISION_CONTEXT_ALLOC_FAILED | Provisioning Error Code for Context Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_CONTEXT_ASSERT_FAILED | Provisioning Error Code for Context Assertion Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_CONTEXT_LINK_OPEN | Provisioning Error Code for Context Link Open |
| RM_BLE_MESH_ERROR_CODE_PROVISION_BEARER_ASSERT_FAILED | Provisioning Error Code for Bearer Assertion Failure |
| RM_BLE_MESH_ERROR_CODE_PROVISION_PROCEDURE_TIMEOUT | Provisioning Error Code for Procedure Timeout |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_MUTEX_INIT_FAILED | Generic Model Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_CONDITIONAL_VARIABLE_INIT_FAILED | Generic Model Error Code for Conditional Variable Initialization Failure |

| | |
|---|--|
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_MUTEX_LOCK_FAILED | Generic Model Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_MUTEX_UNLOCK_FAILED | Generic Model Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_MEMORY_ALLOCATION_FAILED | Generic Model Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_INVALID_STATE | Generic Model Error Code for Invalid State |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_INVALID_PARAMETER | Generic Model Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_PARAMETER_OUTSIDE_RANGE | Generic Model Error Code for Parameter Outside Range |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_NULL_PARAMETER_NOT_ALLOWED | Generic Model Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_INVALID_MODEL_HANDLE | Generic Model Error Code for Invalid Model Handle |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_INVALID_ELEMENT_HANDLE | Generic Model Error Code for Invalid Element Handle |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_NOT_PRIMARY_ELEMENT | Generic Model Error Code when Operation is detected on a Node element which is not Primary Element |
| RM_BLE_MESH_ERROR_CODE_GENERIC_MODEL_API_NOT_SUPPORTED | Generic Model Error Code for API Not Supported |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_MUTEX_INIT_FAILED | Config Model Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_CONDITION_INIT_FAILED | Config Model Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_MUTEX_LOCK_FAILED | Config Model Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_MUTEX_UNLOCK_FAILED | Config Model Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_MEMORY_ALLOCATION_FAILED | Config Model Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_INVALID_STATE | Config Model Error Code for Invalid State |

| | |
|--|---|
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_INVALID_PARAMETER | Config Model Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_PARAMETER_OUTSIDE_RANGE | Config Model Error Code for Parameter Outside Range |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_NULL_PARAMETER_NOT_ALLOWED | Config Model Error Code for NULL Parameter Not Allowed |
| RM_BLE_MESH_ERROR_CODE_CONFIG_MODEL_API_NOT_SUPPORTED | Config Model Error Code for API Not Supported |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_MUTEX_INIT_FAILED | Health Model Error Code for MUTEX Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_CONDITION_INIT_FAILED | Health Model Error Code for Conditional Variable Initialization Failure |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_MUTEX_LOCK_FAILED | Health Model Error Code for MUTEX Lock Failure |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_MUTEX_UNLOCK_FAILED | Health Model Error Code for MUTEX Unlock Failure |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_MEMORY_ALLOCATION_FAILED | Health Model Error Code for Memory Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_INVALID_STATE | Health Model Error Code for Invalid State |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_INVALID_PARAMETER | Health Model Error Code for Invalid Parameter Value |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_CONTEXT_ALLOC_FAILED | Health Model Error Code for Context Allocation Failure |
| RM_BLE_MESH_ERROR_CODE_HEALTH_MODEL_CONTEXT_ASSERT_FAILED | Health Model Error Code for Context Assertion Failure |
| RM_BLE_MESH_ERROR_CODE_FAILURE | A failure that does not match any other error code |

BLE Mesh Lower Trans Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Lower Trans functions.

Summary

The BLE Mesh Lower Trans middleware provides a lower-level transfer interface for BLE Mesh services.

Data Structures

struct [rm_ble_mesh_lower_trans_transmit_setting_t](#)

struct [rm_ble_mesh_lower_trans_callback_args_t](#)

struct [rm_ble_mesh_lower_trans_cfg_t](#)

```
struct rm_ble_mesh_lower_trans_api_t
```

```
struct rm_ble_mesh_lower_trans_instance_t
```

Typedefs

```
typedef uint8_t rm_ble_mesh_lower_trans_lpn_handle_t
```

```
typedef void rm_ble_mesh_lower_trans_ctrl_t
```

Enumerations

```
enum rm_ble_mesh_lower_trans_message_type_t
```

```
enum rm_ble_mesh_lower_trans_reliable_t
```

```
enum rm_ble_mesh_lower_trans_event_t
```

```
enum rm_ble_mesh_lower_trans_notification_t
```

Data Structure Documentation

◆ rm_ble_mesh_lower_trans_transmit_setting_t

| struct rm_ble_mesh_lower_trans_transmit_setting_t | | |
|--|---------------|--------------------------------|
| transport PDUs setting to peer device. | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | src_addr | Source address. |
| rm_ble_mesh_network_address_t | dst_addr | Destination address. |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Handle identifying the subnet. |
| rm_ble_mesh_lower_trans_message_type_t | msg_type | Transport message type. |
| uint8_t | ttl | Time to Live. |
| uint8_t | akf | Application key flag. |
| uint8_t | aid | Application key identifier. |
| uint8_t | seq_num | Sequence number. |

◆ rm_ble_mesh_lower_trans_callback_args_t

| struct rm_ble_mesh_lower_trans_callback_args_t | |
|--|--|
| BLE Mesh lower trans callback parameter definition | |
| Data Fields | |

| | | |
|---|----------------|---|
| <code>rm_ble_mesh_lower_trans_event_t</code> | event | Event code. |
| <code>rm_ble_mesh_network_header_t *</code> | p_header | Network header. |
| <code>rm_ble_mesh_network_subnet_handle_t</code> | subnet_handle | Subnet handle. |
| uint8_t | trans_mic_size | TransMIC size. |
| <code>rm_ble_mesh_lower_trans_lpn_handle_t</code> | lpn_handle | LPM Size. |
| uint8_t | packet_type | packet type |
| <code>rm_ble_mesh_buffer_t</code> | event_data | Event data. |
| void const * | p_context | Context provided to user during callback. |

◆ `rm_ble_mesh_lower_trans_cfg_t`

| | |
|---|---|
| struct <code>rm_ble_mesh_lower_trans_cfg_t</code> | |
| BLE MESH configuration parameters. | |
| Data Fields | |
| uint32_t | <code>channel</code> |
| | Select a channel corresponding to the channel number of the hardware. More... |
| <code>rm_ble_mesh_network_instance_t</code> const * | <code>p_mesh_network_instance</code> |
| | Instance structure of BLE Mesh network. |
| void(* | <code>p_callback</code>)(<code>rm_ble_mesh_lower_trans_callback_args_t</code> *p_args) |
| | Callback function. |
| void const * | <code>p_context</code> |
| | Placeholder for user data. |
| void const * | <code>p_extend</code> |
| | Placeholder for extension data. |

Field Documentation

◆ channel

uint32_t rm_ble_mesh_lower_trans_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

the parameters for initialization.

◆ rm_ble_mesh_lower_trans_api_t

struct rm_ble_mesh_lower_trans_api_t

BLE MESH functions implemented at the HAL layer will follow this API.

Field Documentation

◆ open

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::open) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_lower_trans_cfg_t const *const p_cfg)
```

Register Interface with Lower Transport Layer.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ close

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::close) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)
```

Unregister Interface with Lower Transport Layer.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ sendPdu

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::sendPdu) (rm_ble_mesh_lower_trans_ctrl_t *const
p_ctrl, rm_ble_mesh_lower_trans_transmit_setting_t const *const p_transmit_setting,
rm_ble_mesh_buffer_t const *const p_buffer, rm_ble_mesh_lower_trans_reliable_t reliable)
```

API to send transport PDUs.

Parameters

| | | |
|------|--------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_transmit_setting | Pointer to transmit setting structure. |
| [in] | p_buffer | Pointer to payload and payload length structure. |
| [in] | reliable | If requires lower transport ACK, set reliable as RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE. |

◆ **clearSarContexts**

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::clearSarContexts) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)
```

To clear all segmentation and reassembly contexts.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **clearSubnetSarContexts**

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::clearSubnetSarContexts) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)
```

To clear all segmentation and reassembly contexts for a given subnet.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Subnet Handle whose respective SAR Contexts are to be cleared. |

◆ **reinitReplayCache**

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::reinitReplayCache) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)
```

To reinitialize all Lower Transport replay cache entries.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **triggerPendingTransmits**

```
fsp_err_t(* rm_ble_mesh_lower_trans_api_t::triggerPendingTransmits) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)
```

To trigger any Lower Transport pending transmissions.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_ble_mesh_lower_trans_instance_t**

```
struct rm_ble_mesh_lower_trans_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

| Data Fields | | |
|--|---------------------|---|
| <code>rm_ble_mesh_lower_trans_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>rm_ble_mesh_lower_trans_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>rm_ble_mesh_lower_trans_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `rm_ble_mesh_lower_trans_lpn_handle_t`

| |
|---|
| <code>typedef uint8_t rm_ble_mesh_lower_trans_lpn_handle_t</code> |
| LPN handle |

◆ `rm_ble_mesh_lower_trans_ctrl_t`

| |
|--|
| <code>typedef void rm_ble_mesh_lower_trans_ctrl_t</code> |
| BLE MESH control block. Allocate an instance specific control block to pass into the BLE MESH API calls. |

Enumeration Type Documentation

◆ `rm_ble_mesh_lower_trans_message_type_t`

| | |
|--|--------------------------------|
| <code>enum rm_ble_mesh_lower_trans_message_type_t</code> | |
| Transport Message Type | |
| Enumerator | |
| <code>RM_BLE_MESH_LOWER_TRANS_MESSAGE_TYPE_ACCESS</code> | Access Layer Packet |
| <code>RM_BLE_MESH_LOWER_TRANS_MESSAGE_TYPE_CTRL</code> | Transport Layer Control Packet |

| | |

Field Documentation

◆ open

```
fsp_err_t(* rm_ble_mesh_model_client_api_t::open) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl,
rm_ble_mesh_model_client_cfg_t const *const p_cfg)
```

API to open client model.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ close

```
fsp_err_t(* rm_ble_mesh_model_client_api_t::close) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
```

API to close client model.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ getModelHandle

```
fsp_err_t(* rm_ble_mesh_model_client_api_t::getModelHandle) (rm_ble_mesh_model_client_ctrl_t
*const p_ctrl, rm_ble_mesh_access_model_handle_t *const p_model_handle)
```

API to get Model client model handle.

Parameters

| | | |
|-------|----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_model_handle | Pointer to model handle to be filled/returned. |

◆ **sendReliablePdu**

```
fsp_err_t(* rm_ble_mesh_model_client_api_t::sendReliablePdu) (rm_ble_mesh_model_client_ctrl_t
*const p_ctrl, uint32_t req_opcode, void const *const p_parameter, uint32_t rsp_opcode)
```

API to send acknowledged commands.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | req_opcode | Request Opcode. |
| [in] | p_parameter | Pointer to Parameter associated with Request Opcode. |
| [in] | rsp_opcode | Response Opcode. |

◆ **rm_ble_mesh_model_client_instance_t**

```
struct rm_ble_mesh_model_client_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--|--------|---|
| rm_ble_mesh_model_client_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_model_client_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_model_client_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **rm_ble_mesh_model_client_ctrl_t**

```
typedef void rm_ble_mesh_model_client_ctrl_t
```

BLE MESH MODEL CLIENT control block. Allocate an instance specific control block to pass into the BLE mesh model health client API calls.

BLE Mesh Model Configuration Client Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Model Configuration Client functions.

API to open server model.

Parameters

| | | |
|------|------------------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_model_server_api_t::close) (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
```

API to close server model.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stateUpdate**

```
fsp_err_t(* rm_ble_mesh_model_server_api_t::stateUpdate) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)
```

API to send reply or to update state change.

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_state | Pointer to model specific current/target state parameters. |

◆ **rm_ble_mesh_model_server_instance_t**

```
struct rm_ble_mesh_model_server_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

| | | |
|--|--------|---|
| rm_ble_mesh_model_server_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_model_server_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_model_server_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **rm_ble_mesh_model_server_ctrl_t**

```
typedef void rm_ble_mesh_model_server_ctrl_t
```

BLE MESH MODEL SERVER control block. Allocate an instance specific control block to pass into the BLE mesh model server API calls.

Enumeration Type Documentation

◆ `rm_ble_mesh_model_server_generic_server_property_t`

| enum <code>rm_ble_mesh_model_server_generic_server_property_t</code> | |
|--|---------------------------------|
| Enumerator | |
| <code>RM_BLE_MESH_MODEL_SERVER_GENERIC_SERVER_PROPERTY_MANUFACTURER</code> | Generic Manufacturer Properties |
| <code>RM_BLE_MESH_MODEL_SERVER_GENERIC_SERVER_PROPERTY_ADMIN</code> | Generic Admin Properties |
| <code>RM_BLE_MESH_MODEL_SERVER_GENERIC_SERVER_PROPERTY_USER</code> | Generic User Properties |

◆ `rm_ble_mesh_model_server_user_access_t`

| enum <code>rm_ble_mesh_model_server_user_access_t</code> | |
|---|---|
| User Access field values | |
| Enumerator | |
| <code>RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_PROHIBITED</code> | User Access - Prohibited |
| <code>RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_READ</code> | User Access - the device property can be read |
| <code>RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_WRITE</code> | User Access - the device property can be written |
| <code>RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_READ_WRITE</code> | User Access - the device property can be read and written |
| <code>RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_INVALID_PROPERTY_ID</code> | User Access - the invalid device property id |

◆ **rm_ble_mesh_model_server_device_property_t**

| enum <code>rm_ble_mesh_model_server_device_property_t</code> | |
|--|--|
| Enumerator | |
| <code>RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_OCCUPANCY_DELAY</code> | Device Property - Light Control Time Occupancy Delay |

| RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_REGULATOR_ACCURACY | Device Property - Light Control Regulator Accuracy |
| RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_MOTION_SENSED | Device Property - Motion Sensed |
| RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_TIME_SINCE_MOTION_SENSED | Device Property - Time Since Motion Sensed |
| RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_PEOPLE_COUNT | Device Property - People Count |
| RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_PRESENCE_DETECTED | Device Property - Presence Detected |
| RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_PRESENT_AMBIENT_LIGHT_LEVEL | Device Property - Present Ambient Light Level |

BLE Mesh Network Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Network functions.

Summary

The BLE Mesh Network interface for the BLE Mesh Network (BLE MESH NETWORK) peripheral provides BLE Mesh Network functionality.

Data Structures

```
struct rm\_ble\_mesh\_network\_header\_t
```

```
struct rm\_ble\_mesh\_network\_seq\_number\_state\_t
```

```
struct rm\_ble\_mesh\_network\_route\_info\_t
```

```
struct rm\_ble\_mesh\_network\_proxy\_address\_list\_t
```

```
struct rm\_ble\_mesh\_network\_callback\_args\_t
```

```
struct rm\_ble\_mesh\_network\_cfg\_t
```

```
struct rm\_ble\_mesh\_network\_api\_t
```

```
struct rm_ble_mesh_network_instance_t
```

Macros

```
#define RM_BLE_MESH_NETWORK_UNASSIGNED_ADDRESS
```

```
#define RM_BLE_MESH_NETWORK_PRIMARY_SUBNET
```

```
#define RM_BLE_MESH_NETWORK_INVALID_SUBNET_HANDLE
```

```
#define RM_BLE_MESH_NETWORK_INVALID_APPKEY_HANDLE
```

```
#define RM_BLE_MESH_NETWORK_INVALID_NID
```

Typedefs

```
typedef uint16_t rm_ble_mesh_network_address_t
```

```
typedef uint16_t rm_ble_mesh_network_subnet_handle_t
```

```
typedef uint16_t rm_ble_mesh_network_appkey_handle_t
```

```
typedef uint16_t rm_ble_mesh_network_proxy_address_t
```

```
typedef uint8_t rm_ble_mesh_network_interface_handle_t
```

```
typedef void rm_ble_mesh_network_ctrl_t
```

Enumerations

```
enum rm_ble_mesh_network_old_packet_treatment_t
```

```
enum rm_ble_mesh_network_rx_state_event_t
```

```
enum rm_ble_mesh_network_tx_state_event_t
```

```
enum rm_ble_mesh_network_address_type_t
```

```
enum rm_ble_mesh_proxy_filter_type_t
```

```
enum rm_ble_mesh_proxy_config_opcode_t
```

```
enum rm_ble_mesh_network_gatt_proxy_state_t
```

```
enum rm_ble_mesh_network_gatt_proxy_adv_mode_t
```

```
enum rm_ble_mesh_network_event_t
```

Data Structure Documentation

◆ **rm_ble_mesh_network_header_t**

| struct rm_ble_mesh_network_header_t | | |
|---|----------|--|
| Network Header Type | | |
| Data Fields | | |
| uint8_t | ivi | Least significant bit of IV Index - 1 bit |
| uint8_t | nid | Value derived from the NetKey used to identify the Encryption Key and Privacy Key used to secure this PDU - 7 bits |
| uint8_t | new_key | Indicates use of a new NetKey to which the network is being updated to. |
| uint8_t | ctl | Network Control - 1 bit |
| uint8_t | ttl | Time To Live - 7 bits |
| rm_ble_mesh_network_address_t | src_addr | 16 Bit Source Address |
| rm_ble_mesh_network_address_t | dst_addr | 16 Bit Destination Address |
| uint32_t | seq_num | 24 bit sequence number - currently filled only in reception path |

◆ **rm_ble_mesh_network_seq_number_state_t**

| struct rm_ble_mesh_network_seq_number_state_t | | |
|---|-------------------|---|
| Current Sequence Number and Block State | | |
| Data Fields | | |
| uint32_t | seq_num | Current Sequence Number |
| uint32_t | block_seq_num_max | Block Sequence number - maximum available |

◆ **rm_ble_mesh_network_route_info_t**

| struct rm_ble_mesh_network_route_info_t | | |
|--|------------------|---|
| Network configuration information | | |
| Data Fields | | |
| rm_ble_mesh_network_interface_handle_t * | interface_handle | Pointer to list of address to be added/deleted |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Count of addresses present in the provided list |

◆ **rm_ble_mesh_network_proxy_address_list_t**

| | | |
|---|---------|---|
| struct rm_ble_mesh_network_proxy_address_list_t | | |
| Proxy Server's filter List | | |
| Data Fields | | |
| rm_ble_mesh_network_proxy_address_t * | address | Pointer to list of address to be added/deleted |
| uint16_t | count | Count of addresses present in the provided list |

◆ rm_ble_mesh_network_callback_args_t

| | | |
|--|---------------------|---|
| struct rm_ble_mesh_network_callback_args_t | | |
| BLE Mesh Network callback parameter definition | | |
| Data Fields | | |
| rm_ble_mesh_network_event_t | event | Event code. |
| rm_ble_mesh_network_header_t * | p_header | Network header type. |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Subnet handle. |
| rm_ble_mesh_network_interface_handle_t * | p_network_interface | Network interface handle. |
| rm_ble_mesh_buffer_t | event_data | Event data. |
| void const * | p_context | Context provided to user during callback. |

◆ rm_ble_mesh_network_cfg_t

| | | |
|--|---------------------------|---|
| struct rm_ble_mesh_network_cfg_t | | |
| BLE MESH NETWORK configuration parameters. | | |
| Data Fields | | |
| uint32_t | channel | |
| | | Select a channel corresponding to the channel number of the hardware. More... |
| rm_ble_mesh_bearer_instance_t const * | p_mesh_bearer_instance | |
| | | Instance structure of BLE Mesh Bearer. |
| rm_ble_mesh_provision_instance_t const * | p_mesh_provision_instance | |
| | | |

| | |
|--------------|---|
| | Instance structure of BLE Mesh Provision. |
| | |
| void(* | p_callback)(rm_ble_mesh_network_callback_args_t *p_args) |
| | Callback function. |
| | |
| void const * | p_context |
| | Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t . |
| | |
| void const * | p_extend |
| | Placeholder for user extension. |
| | |

Field Documentation

◆ channel

uint32_t rm_ble_mesh_network_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.
the parameters for initialization.

◆ rm_ble_mesh_network_api_t

struct rm_ble_mesh_network_api_t

BLE MESH NETWORK functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|-------------|---|
| fsp_err_t(* | open)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_cfg_t const *const p_cfg) |

| Field Documentation | |

◆ **open**

```
fsp_err_t(* rm_ble_mesh_network_api_t::open) (rm_ble_mesh_network_ctrl_t *const p_ctrl,
rm_ble_mesh_network_cfg_t const *const p_cfg)
```

Register Interface with Network Layer.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_network_api_t::close) (rm_ble_mesh_network_ctrl_t *const p_ctrl)
```

Unregister Interface with Network Layer.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **broadcastSecureBeacon**

```
fsp_err_t(* rm_ble_mesh_network_api_t::broadcastSecureBeacon) (rm_ble_mesh_network_ctrl_t
*const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)
```

API to send Secure Network Beacon.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Subnet handle of the network to be broadcasted. |

◆ sendPduOnInterface

```
fsp_err_t(* rm_ble_mesh_network_api_t::sendPduOnInterface) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_network_header_t const *const p_header, rm_ble_mesh_buffer_t const *const p_buffer)
```

Extension API to send network PDUs on selected network interfaces.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_route_info | Pointer to network configuration information. |
| [in] | p_header | Pointer to network Header. |
| [in] | p_buffer | Pointer to Lower Transport Payload. |

◆ getAddressType

```
fsp_err_t(* rm_ble_mesh_network_api_t::getAddressType) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr, rm_ble_mesh_network_address_type_t *const p_type)
```

To get address type.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | Input network address. |
| [in] | p_type | One of the following address type RM_BLE_MESH_NETWORK_ADDRESS_TYPE_INVALID RM_BLE_MESH_NETWORK_ADDRESS_TYPE_UNICAST RM_BLE_MESH_NETWORK_ADDRESS_TYPE_GROUP |

◆ fetchProxyState

```
fsp_err_t(* rm_ble_mesh_network_api_t::fetchProxyState) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_gatt_proxy_state_t *const p_proxy_state)
```

Check if the proxy module is ready to handle proxy messages/events.

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_proxy_state | Returns the current state of the proxy. |

◆ **setProxyFilter**

```
fsp_err_t(* rm_ble_mesh_network_api_t::setProxyFilter) (rm_ble_mesh_network_ctrl_t *const p_ctrl,
rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_proxy_filter_type_t
type)
```

Set proxy server's filter type.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_route_info | Pointer to network configuration information. |
| [in] | type | Type of the proxy filter to be set. Either RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_WHITELIST or RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_BLACKLIST |

◆ **configProxyFilter**

```
fsp_err_t(* rm_ble_mesh_network_api_t::configProxyFilter) (rm_ble_mesh_network_ctrl_t *const
p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info,
rm_ble_mesh_proxy_config_opcode_t opcode, rm_ble_mesh_network_proxy_address_list_t *const
p_addr_list)
```

Add or Delete/Remove addresses to/from proxy filter list.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_route_info | Pointer to network configuration information. |
| [in] | opcode | Operation to be performed. Either RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPCODE_ADD_TO_FILTER or RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPCODE_REMOVE_FROM_FILTER |
| [in] | p_addr_list | Pointer to list of address to be added/deleted. And count of addresses present in the provided List. |

◆ startProxyServerAdv

```
fsp_err_t(* rm_ble_mesh_network_api_t::startProxyServerAdv) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, rm_ble_mesh_network_gatt_proxy_adv_mode_t proxy_adv_mode)
```

Start connectable advertisements for a proxy server.

Parameters

| | | |
|------|----------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Subnet handle which the proxy server is part of network. |
| [in] | proxy_adv_mode | Mode of proxy advertisements. This could be of two types RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NET_ID or RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NO_DE_ID |

◆ stopProxyServerAdv

```
fsp_err_t(* rm_ble_mesh_network_api_t::stopProxyServerAdv) (rm_ble_mesh_network_ctrl_t *const p_ctrl)
```

Stop connectable advertisements for a proxy server.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ allocateSeqNumber

```
fsp_err_t(* rm_ble_mesh_network_api_t::allocateSeqNumber) (rm_ble_mesh_network_ctrl_t *const p_ctrl, uint32_t *const p_seq_num)
```

To allocate sequence number.

Parameters

| | | |
|-------|-----------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_seq_num | Location where sequence number to be filled. |

◆ **getSeqNumberState**

```
fsp_err_t(* rm_ble_mesh_network_api_t::getSeqNumberState) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_seq_number_state_t *const p_seq_num_state)
```

To get current sequence number state.

Parameters

| | | |
|-------|-----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_seq_num_state | Location where sequence number state to be filled. |

◆ **setSeqNumberState**

```
fsp_err_t(* rm_ble_mesh_network_api_t::setSeqNumberState) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_seq_number_state_t const *const p_seq_num_state)
```

To set current sequence number state.

Parameters

| | | |
|------|-----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_seq_num_state | Location from where sequence number state to be taken. |

◆ **resetNetCache**

```
fsp_err_t(* rm_ble_mesh_network_api_t::resetNetCache) (rm_ble_mesh_network_ctrl_t *const p_ctrl)
```

To reinitialize all Network Layer cache entries.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_ble_mesh_network_instance_t**

```
struct rm_ble_mesh_network_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-----------------------------------|--------|---|
| rm_ble_mesh_network_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_network_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_network_api_t const * | p_api | Pointer to the API structure for this instance. |

Macro Definition Documentation

◆ RM_BLE_MESH_NETWORK_UNASSIGNED_ADDRESS

```
#define RM_BLE_MESH_NETWORK_UNASSIGNED_ADDRESS
```

Unassigned Address.

◆ RM_BLE_MESH_NETWORK_PRIMARY_SUBNET

```
#define RM_BLE_MESH_NETWORK_PRIMARY_SUBNET
```

Primary Subnet - NetKey Index is 0x000

◆ RM_BLE_MESH_NETWORK_INVALID_SUBNET_HANDLE

```
#define RM_BLE_MESH_NETWORK_INVALID_SUBNET_HANDLE
```

Invalid Subnet Handle

◆ RM_BLE_MESH_NETWORK_INVALID_APPKEY_HANDLE

```
#define RM_BLE_MESH_NETWORK_INVALID_APPKEY_HANDLE
```

Invalid AppKey Handle

◆ RM_BLE_MESH_NETWORK_INVALID_NID

```
#define RM_BLE_MESH_NETWORK_INVALID_NID
```

Invalid NID Identifier. The NID is a 7-bit value that identifies the security material that is used to secure Network PDUs. Treating 0xFF as Invalid NID value.

Typedef Documentation

◆ rm_ble_mesh_network_address_t

```
typedef uint16_t rm_ble_mesh_network_address_t
```

Network Address Type

◆ rm_ble_mesh_network_subnet_handle_t

```
typedef uint16_t rm_ble_mesh_network_subnet_handle_t
```

Subnet Handle

◆ **rm_ble_mesh_network_appkey_handle_t**typedef uint16_t [rm_ble_mesh_network_appkey_handle_t](#)

AppKey Handle

◆ **rm_ble_mesh_network_proxy_address_t**typedef uint16_t [rm_ble_mesh_network_proxy_address_t](#)

Proxy Address

◆ **rm_ble_mesh_network_interface_handle_t**typedef uint8_t [rm_ble_mesh_network_interface_handle_t](#)

Network Interface Handle

◆ **rm_ble_mesh_network_ctrl_t**typedef void [rm_ble_mesh_network_ctrl_t](#)

BLE MESH NETWORK control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Enumeration Type Documentation◆ **rm_ble_mesh_network_old_packet_treatment_t**enum [rm_ble_mesh_network_old_packet_treatment_t](#)

Ignore network cache wrapping.

Enumerator

RM_BLE_MESH_NETWORK_OLD_PACKET_TREATMENT_DROPPED

Old packets will be dropped.

RM_BLE_MESH_NETWORK_OLD_PACKET_TREATMENT_PROCESSED

Ignores cache wrapping. Old packets will be processed.

◆ **rm_ble_mesh_network_rx_state_event_t**

| | |
|---|----------------------------|
| enum <code>rm_ble_mesh_network_rx_state_event_t</code> | |
| Whether to enable the RX callback event or not. | |
| Enumerator | |
| <code>RM_BLE_MESH_NETWORK_RX_STATE_EVENT_DISABLE</code> | RX state callback disable. |
| <code>RM_BLE_MESH_NETWORK_RX_STATE_EVENT_ENABLE</code> | RX state callback enable. |

◆ **rm_ble_mesh_network_tx_state_event_t**

| | |
|---|----------------------------|
| enum <code>rm_ble_mesh_network_tx_state_event_t</code> | |
| Whether to enable the TX callback event or not. | |
| Enumerator | |
| <code>RM_BLE_MESH_NETWORK_TX_STATE_EVENT_DISABLE</code> | TX state callback disable. |
| <code>RM_BLE_MESH_NETWORK_TX_STATE_EVENT_ENABLE</code> | TX state callback enable. |

◆ **rm_ble_mesh_network_address_type_t**

| | |
|---|----------------------|
| enum <code>rm_ble_mesh_network_address_type_t</code> | |
| Address Type | |
| Enumerator | |
| <code>RM_BLE_MESH_NETWORK_ADDRESS_TYPE_INVALID</code> | Invalid address type |
| <code>RM_BLE_MESH_NETWORK_ADDRESS_TYPE_UNICAST</code> | Unicast address type |
| <code>RM_BLE_MESH_NETWORK_ADDRESS_TYPE_VIRTUAL</code> | Virtual address type |
| <code>RM_BLE_MESH_NETWORK_ADDRESS_TYPE_GROUP</code> | Group address type |

◆ **rm_ble_mesh_proxy_filter_type_t**

| enum <code>rm_ble_mesh_proxy_filter_type_t</code> | |
|--|-------------------------------------|
| Data structures for filter type and address list | |
| Enumerator | |
| <code>RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_WHITELIST</code> | GATT Proxy Filter Types - Whitelist |
| <code>RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_BLACKLIST</code> | GATT Proxy Filter Type - Blacklist |

◆ **rm_ble_mesh_proxy_config_opcode_t**

| enum <code>rm_ble_mesh_proxy_config_opcode_t</code> | |

| Enumerator | |
| <code>RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NET_ID</code> | Network ID Type |
| <code>RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NODE_ID</code> | Node Identity Type |

◆ **rm_ble_mesh_network_event_t**

| enum <code>rm_ble_mesh_network_event_t</code> | |
|---|-----------------------------------|
| GATT Proxy Events | |
| Enumerator | |
| <code>RM_BLE_MESH_NETWORK_EVENT_PROXY_UP</code> | GATT Proxy Event - Interface Up |
| <code>RM_BLE_MESH_NETWORK_EVENT_PROXY_DOWN</code> | GATT Proxy Event - Interface Down |
| <code>RM_BLE_MESH_NETWORK_EVENT_PROXY_STATUS</code> | GATT Proxy Event - Status |
| <code>RM_BLE_MESH_NETWORK_EVENT_RECEIVE</code> | GATT Proxy Event - Receive |
| <code>RM_BLE_MESH_NETWORK_EVENT_TX_QUEUE_EMPTY</code> | GATT Proxy Event - TX queue empty |

BLE Mesh Provision Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Provision functions.

Summary

The BLE Mesh Provision interface for the BLE Mesh Provision (BLE MESH PROVISION) peripheral provides BLE Mesh Provision functionality.

Data Structures

struct [rm_ble_mesh_provision_device_t](#)

Data Structure Documentation

◆ rm_ble_mesh_provision_device_t

| struct rm_ble_mesh_provision_device_t | | |
|--|--|---|
| Device Information used for Provisioning | | |
| Data Fields | | |
| uint8_t | uuid[RM_BLE_MESH_DEVICE_UUID_SIZE] | Device UUID - Used in unprovisioned device beacon and Provisioning Invite |
| uint16_t | oob | OOB Information |
| rm_ble_mesh_buffer_t * | uri | URI if any, to be given in encoded form |

◆ rm_ble_mesh_provision_oob_info_t

| struct rm_ble_mesh_provision_oob_info_t | | |
|---|--------|------------------------|
| OOB type for provisioning | | |
| Data Fields | | |
| uint16_t | action | OOB Action information |
| uint8_t | size | OOB Size information |

◆ rm_ble_mesh_provision_capabilities_t

| struct rm_ble_mesh_provision_capabilities_t | | |
|---|----------------------|------------------------|
| Device capabilities used for Provisioning | | |
| Data Fields | | |
| uint8_t | num_elements | Number of Elements |
| uint16_t | supported_algorithms | Supported algorithms |
| uint8_t | supported_pubkey | Public key type |
| uint8_t | supported_soob | Static OOB type |
| rm_ble_mesh_provision_oob_info_t | output_oob | Output OOB information |
| rm_ble_mesh_provision_oob_info_t | input_oob | Input OOB information |

◆ rm_ble_mesh_provision_method_t

| struct rm_ble_mesh_provision_method_t | | |
|---------------------------------------|--|--|
| Provisioning method information | | |

| Data Fields | | |
|----------------------------------|-----------|---------------------|
| uint8_t | algorithm | Algorithm selected |
| uint8_t | pubkey | Public key usage |
| uint8_t | auth | Authentication type |
| rm_ble_mesh_provision_oob_info_t | oob | OOB type |

◆ rm_ble_mesh_provision_data_t

| struct rm_ble_mesh_provision_data_t | | |
|--|--|--|
| Data exchanged during Provisioning procedure | | |
| Data Fields | | |
| uint8_t | netkey[RM_BLE_MESH_PROVISION_KEY_ _NETKEY_SIZE] | NetKey |
| uint16_t | keyid | Index of the NetKey |
| uint8_t | flags | Flags bit-mask bit 0: Key Refresh Flag. 0: Not-In-Phase2 1: In-Phase2 bit 1: IV Update Flag 0: Normal operation 1: IV Update active bits 2-7: RFU |
| uint32_t | iv_index | Current value of the IV index |
| uint16_t | unicast_addr | Unicast address of the primary element |

◆ rm_ble_mesh_provision_device_info_t

| struct rm_ble_mesh_provision_device_info_t | | |
|--|----------|---|
| Provisioning device information | | |
| Data Fields | | |
| rm_ble_mesh_provision_bearer_type_t | type | Provisioning Bearer Types. |
| rm_ble_mesh_provision_device_t * | p_device | Device Information used for Provisioning. |

◆ rm_ble_mesh_provision_callback_args_t

| struct rm_ble_mesh_provision_callback_args_t | | |
|---|----------|--|
| Mesh model client callback parameter definition | | |
| Data Fields | | |
| rm_ble_mesh_provision_handle_t * | p_handle | Handle to reference the active provisioning context. |

| | | |
|--|--------------|--------------------------|
| rm_ble_mesh_provision_event_type_t | event_type | Provisioning event type. |
| rm_ble_mesh_error_code_t | event_result | BLE MESH error code. |
| rm_ble_mesh_buffer_t | event_data | Payload type. |
| void const * | p_context | |

◆ [rm_ble_mesh_provision_cfg_t](#)

| | |
|--|---|
| struct rm_ble_mesh_provision_cfg_t | |
| BLE MESH PROVISION configuration parameters. | |
| Data Fields | |
| uint32_t | channel |
| | Select a channel corresponding to the channel number of the hardware. More... |
| rm_ble_mesh_provision_capabilities_t * | p_capabilities |
| | Device capabilities used for Provisioning. |
| rm_ble_mesh_instance_t const * | p_mesh_instance |
| | Instance structure of BLE Mesh. |
| void(* | p_callback)(rm_ble_mesh_provision_callback_args_t *p_args) |
| | Callback function. |
| void const * | p_context |
| | Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t . |
| void const * | p_extend |
| | Placeholder for user extension. |

Field Documentation

◆ channel

uint32_t rm_ble_mesh_provision_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.
the parameters for initialization.

◆ rm_ble_mesh_provision_api_t

struct rm_ble_mesh_provision_api_t

BLE MESH PROVISION functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------|--|
| fsp_err_t(*) | open)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_cfg_t const *const p_cfg) |

| fsp_err_t(*) | setAuthVal)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_buffer_t auth_value) |
| fsp_err_t(*) | abort)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_link_close_reason_t reason) |
| fsp_err_t(*) | getLocalPublicKey)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const public_key) |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>setLocalPublicKey)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t const *const public_key)</code> |
| <code>fsp_err_t(*</code> | <code>generateRandomizedNumber)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const p_key)</code> |
| <code>fsp_err_t(*</code> | <code>setOobPublicKey)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t const *const p_key, uint8_t size)</code> |
| <code>fsp_err_t(*</code> | <code>setOobAuthInfo)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t const *const p_auth_info, uint8_t size)</code> |
| <code>fsp_err_t(*</code> | <code>generateEcdhKey)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const p_public_key)</code> |

Field Documentation

◆ open

`fsp_err_t(* rm_ble_mesh_provision_api_t::open) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_cfg_t const *const p_cfg)`

Open access middleware.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to pin configuration structure. |

◆ close

`fsp_err_t(* rm_ble_mesh_provision_api_t::close) (rm_ble_mesh_provision_ctrl_t *const p_ctrl)`

Close access middleware.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
|------|---------------------|-------------------------------|

◆ **setup**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::setup) (rm_ble_mesh_provision_ctrl_t *const p_ctrl,
rm_ble_mesh_provision_role_t role, rm_ble_mesh_provision_device_info_t info, uint16_t timeout)
```

Setup the device for provisioning.

Parameters

| | | |
|------|---------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | role | Provisioning role to be setup - Device or Provisioner. |
| [in] | info | Device information. |
| [in] | timeout | The time period for which the setup shall be active. |

◆ **bind**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::bind) (rm_ble_mesh_provision_ctrl_t *const p_ctrl,
rm_ble_mesh_provision_device_info_t info, uint8_t attention, rm_ble_mesh_provision_handle_t
*const p_handle)
```

Bind to the peer device for provisioning

Parameters

| | | |
|-------|-----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | info | Device information. |
| [in] | attention | Attention duration. |
| [out] | p_handle | Pointer to handle. |

Note

This API is for use by the Provisioner application only upon reception of an Unprovisioned Device Beacon.

◆ **sendPdu**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::sendPdu) (rm_ble_mesh_provision_ctrl_t *const p_ctrl,
rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_pdu_type_t type,
rm_ble_mesh_buffer_t pdu_data)
```

Send provisioning PDUs to the peer.

Parameters

| | | |
|------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_handle | Pointer to provisioning context to be used. |
| [in] | type | Following PDU types are handled - RM_BLE_MESH_PROVISION_PDU_TYPE_START RM_BLE_MESH_PROVISION_PDU_TYPE_INPUT_COMPLETE RM_BLE_MESH_PROVISION_PDU_TYPE_DATA |
| [in] | pdu_data | Pointer to the data corresponding to the above PDUs. |

◆ **setAuthVal**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::setAuthVal) (rm_ble_mesh_provision_ctrl_t *const p_ctrl,
rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_buffer_t auth_value)
```

Set the display Auth-Value.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_handle | Pointer to provisioning context to be used. |
| [in] | auth_value | Pointer to the Authval (UINT32 *) or (uint8_t *). |

◆ **abort**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::abort) (rm_ble_mesh_provision_ctrl_t *const p_ctrl,
rm_ble_mesh_provision_handle_t const *const p_handle,
rm_ble_mesh_provision_link_close_reason_t reason)
```

Abort the provisioning procedure

Parameters

| | | |
|------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_handle | Pointer to provisioning context to be used. |
| [in] | reason | Reason for termination. |

◆ **getLocalPublicKey**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::getLocalPublicKey) (rm_ble_mesh_provision_ctrl_t *const
p_ctrl, uint8_t *const public_key)
```

Utility API to get current ECDH Public Key to be used for Provisioning

Parameters

| | | |
|-------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | public_key | To a pointer of uint8_t array of length RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE. |

◆ **setLocalPublicKey**

```
fsp_err_t(* rm_ble_mesh_provision_api_t::setLocalPublicKey) (rm_ble_mesh_provision_ctrl_t *const
p_ctrl, uint8_t const *const public_key)
```

Utility API to set current ECDH Public Key to be used for Provisioning

Parameters

| | | |
|-------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | public_key | To a pointer of uint8_t array of length RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE. |

◆ generateRandomizedNumber

```
fsp_err_t(* rm_ble_mesh_provision_api_t::generateRandomizedNumber)
(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const p_key)
```

Utility API to generate 128bits (16 bytes) randomized number to be used for provisioning.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_key | Pointer to buffer to store random number. |

◆ setOobPublicKey

```
fsp_err_t(* rm_ble_mesh_provision_api_t::setOobPublicKey) (rm_ble_mesh_provision_ctrl_t *const
p_ctrl, uint8_t const *const p_key, uint8_t size)
```

Utility API to set device out of band public key for provisioning.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_key | Pointer to public key. |
| [in] | size | Size of public key. |

◆ setOobAuthInfo

```
fsp_err_t(* rm_ble_mesh_provision_api_t::setOobAuthInfo) (rm_ble_mesh_provision_ctrl_t *const
p_ctrl, uint8_t const *const p_auth_info, uint8_t size)
```

Utility API to set device out of band authentication information for provisioning.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_auth_info | Pointer to authentication information. |
| [in] | size | Size of authentication information. |

◆ generateEcdhKey

```
fsp_err_t(* rm_ble_mesh_provision_api_t::generateEcdhKey) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const p_public_key)
```

Utility API to generate ECDH Public Key to be used for Provisioning

Parameters

| | | |
|-------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_public_key | Pointer to public key. Size of public key is RM_BLE_MESH_PROVISION_ECDH_KEY_SIZE . |

◆ rm_ble_mesh_provision_instance_t

```
struct rm_ble_mesh_provision_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---|--------|---|
| rm_ble_mesh_provision_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_provision_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_provision_api_t const * | p_api | Pointer to the API structure for this instance. |

Macro Definition Documentation

◆ RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE

```
#define RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE
```

Provisioning array size requirements Provisioning key NetKey size

◆ RM_BLE_MESH_PROVISION_ECDH_KEY_SIZE

```
#define RM_BLE_MESH_PROVISION_ECDH_KEY_SIZE
```

Provisioning ECDH Key size

◆ RM_BLE_MESH_PROVISION_OOB_VALUE_SIZE

```
#define RM_BLE_MESH_PROVISION_OOB_VALUE_SIZE
```

Provisioning OOB value size

◆ **RM_BLE_MESH_PROVISION_URI_HASH_SIZE**

```
#define RM_BLE_MESH_PROVISION_URI_HASH_SIZE
```

Provisioning URI hash size

◆ **RM_BLE_MESH_PROVISION_HANDLE_INVALID**

```
#define RM_BLE_MESH_PROVISION_HANDLE_INVALID
```

Invalid Provisioning Handle

Typedef Documentation◆ **rm_ble_mesh_provision_handle_t**

```
typedef uint8_t rm_ble_mesh_provision_handle_t
```

Handle to reference the active provisioning context

◆ **rm_ble_mesh_provision_ctrl_t**

```
typedef void rm_ble_mesh_provision_ctrl_t
```

BLE MESH PROVISION control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Enumeration Type Documentation◆ **rm_ble_mesh_provision_role_t**

```
enum rm_ble_mesh_provision_role_t
```

Provisioning Roles

Enumerator

RM_BLE_MESH_PROVISION_ROLE_DEVICE

Device role.

RM_BLE_MESH_PROVISION_ROLE_PROVISIONER

Provisioner role.

◆ **rm_ble_mesh_provision_bearer_type_t**

| enum <code>rm_ble_mesh_provision_bearer_type_t</code> | |
|---|--------------------------|
| Provisioning Bearer Types | |
| Enumerator | |
| <code>RM_BLE_MESH_PROVISION_BEARER_TYPE_ADV</code> | Advertising bearer type. |
| <code>RM_BLE_MESH_PROVISION_BEARER_TYPE_GATT</code> | GATT bearer type. |

◆ **rm_ble_mesh_provision_pdu_type_t**

| enum <code>rm_ble_mesh_provision_pdu_type_t</code> | |
|--|--------------------------|
| Provisioning PDU Types | |
| Enumerator | |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_INVITE</code> | Invite PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_CAPAB</code> | Capable PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_START</code> | Start PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_PUBKEY</code> | Public key PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_INPUT_COMPLETE</code> | Input complete PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_CONF</code> | Configuration PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_RAND</code> | Random PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_DATA</code> | Data PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_COMPLETE</code> | Complete PDU type. |
| <code>RM_BLE_MESH_PROVISION_PDU_TYPE_FAILED</code> | Failed PDU type. |

◆ **rm_ble_mesh_provision_pub_key_value_t**

| enum <code>rm_ble_mesh_provision_pub_key_value_t</code> | |
|---|--------------------|
| Provisioning public key values | |
| Enumerator | |
| <code>RM_BLE_MESH_PROVISION_PUBKEY_NO_OOB</code> | Public key no OOB. |
| <code>RM_BLE_MESH_PROVISION_PUBKEY_OOB</code> | Public key OOB. |

◆ **rm_ble_mesh_provision_auth_method_t**

| enum <code>rm_ble_mesh_provision_auth_method_t</code> | |
|---|-------------------------------|
| Provisioning authentication method values | |
| Enumerator | |
| <code>RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_NONE</code> | Authentication method none. |
| <code>RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_STATIC</code> | Authentication method static. |
| <code>RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_OUTPUT</code> | Authentication method output. |
| <code>RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_INPUT</code> | Authentication method input. |

◆ **rm_ble_mesh_provision_output_oob_action_t**

| enum <code>rm_ble_mesh_provision_output_oob_action_t</code> | |
|---|---------------------------------|
| Provisioning Output OOB action values | |
| Enumerator | |
| <code>RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_BLINK</code> | Output OOB action blink. |
| <code>RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_BEEP</code> | Output OOB action beep. |
| <code>RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_VIBRATE</code> | Output OOB action vibrate. |
| <code>RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_NUMERIC</code> | Output OOB action numeric. |
| <code>RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_ALPHANUMERIC</code> | Output OOB action alphanumeric. |

◆ **rm_ble_mesh_provision_input_oob_action_t**

| enum rm_ble_mesh_provision_input_oob_action_t | |
|---|--------------------------------|
| Provisioning Input OOB action values | |
| Enumerator | |
| RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_PUSH | Input OOB action push. |
| RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_TWIST | Input OOB action twist. |
| RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_NUMERIC | Input OOB action numeric. |
| RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_ALPHANUMERIC | Input OOB action alphanumeric. |

◆ **rm_ble_mesh_provision_adv_transport_opcode_t**

| enum rm_ble_mesh_provision_adv_transport_opcode_t | |
|---|-----------------------|
| Specification defined transport Opcodes for PB-ADV bearer | |
| Enumerator | |
| RM_BLE_MESH_PROVISION_ADV_TRANSPORT_OPCODE_OPEN_REQ | Link Open Request |
| RM_BLE_MESH_PROVISION_ADV_TRANSPORT_OPCODE_OPEN_CNF | Link Open Confirm |
| RM_BLE_MESH_PROVISION_ADV_TRANSPORT_OPCODE_CLOSE_IND | Link Close Indication |

◆ **rm_ble_mesh_provision_gatt_transport_opcode_t**

| enum rm_ble_mesh_provision_gatt_transport_opcode_t | |
|--|-----------------------|
| Implementation specific transport Opcodes for PB-GATT bearer | |
| Enumerator | |
| RM_BLE_MESH_PROVISION_GATT_TRANSPORT_OPCODE_OPEN_IND | Link Open Indication |
| RM_BLE_MESH_PROVISION_GATT_TRANSPORT_OPCODE_CLOSE_IND | Link Close Indication |

◆ **rm_ble_mesh_provision_error_code_t**

| enum <code>rm_ble_mesh_provision_error_code_t</code> | |
|---|---|
| Provisioning Failure Error Codes | |
| Enumerator | |
| <code>RM_BLE_MESH_PROVISION_ERROR_CODE_PROHIBITED</code> | Failure error code prohibited. |
| <code>RM_BLE_MESH_PROVISION_ERROR_CODE_INVALID_PDU</code> | Failure error code invalid PDU. |
| <code>RM_BLE_MESH_PROVISION_ERROR_CODE_INVALID_FORMAT</code> | Failure error code invalid format. |
| <code>RM_BLE_MESH_PROVISION_ERROR_CODE_UNEXPECTED_PDU</code> | Failure error code unexpected PDU. |
| <code>RM_BLE_MESH_PROVISION_ERROR_CODE_CONFIRMATION_FAILED</code> | Failure error code confirmation failed. |
| <code>RM_BLE_MESH_PROVISION_ERROR_CODE_OUT_OF_RESOURCES</code> | Failure error code out of resources. |

BLE Mesh Scene Server Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Model Scene Server functions.

Summary

The BLE Mesh interface for the BLE Mesh Model Scene Server (BLE MESH HEALTH SERVER) middleware provides BLE Mesh Model Scene Server functionality.

Data Structures

struct [rm_ble_mesh_scene_server_callback_args_t](#)

struct [rm_ble_mesh_scene_server_timeout_callback_args_t](#)

struct [rm_ble_mesh_scene_server_cfg_t](#)

struct [rm_ble_mesh_scene_server_api_t](#)

struct [rm_ble_mesh_scene_server_instance_t](#)

Typedefs

typedef void [rm_ble_mesh_scene_server_ctrl_t](#)

Enumerations

enum [rm_ble_mesh_scene_srv_event_t](#)

Data Structure Documentation

◆ [rm_ble_mesh_scene_server_callback_args_t](#)

| Data Fields | | |
|---|------------|----------------------------|
| void const * | p_context | Placeholder for user data. |
| rm_ble_mesh_access_model_handle_t * | p_handle | Access Model handle. |
| rm_ble_mesh_scene_srv_event_t | event_type | Scene event types. |
| | | |

| | | |
|-----------|-------------------|------------------------|
| uint8_t * | p_event_data | Pointer to event data. |
| uint16_t | event_data_length | Event data length. |

◆ rm_ble_mesh_scene_server_timeout_callback_args_t

| | | |
|---|-----------|----------------------------|
| struct rm_ble_mesh_scene_server_timeout_callback_args_t | | |
| Mesh model scene server publication timeout callback. Access Layer calls the registered callback to indicate Publication Timeout for the associated model. | | |
| Parameters | | |
| | p_context | User data. |
| | p_handle | Model Handle. |
| | p_blob | Blob if any or NULL. |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. |
| rm_ble_mesh_access_model_handle_t * | p_handle | Access Model handle. |
| void * | p_blob | Binary Large Object. |

◆ rm_ble_mesh_scene_server_cfg_t

| | | |
|---|--|--|
| struct rm_ble_mesh_scene_server_cfg_t | | |
| BLE mesh model scene server configuration parameters. | | |
| Data Fields | | |
| rm_ble_mesh_access_instance_t const * | p_access_instance | |
| | | Access Layer instance structure. More... |
| rm_ble_mesh_access_model_handle_t | model_handle | |
| | | Access Model handle. |
| rm_ble_mesh_access_model_handle_t | setup_server_handle | |
| | | Access Model handle for setup server. |
| | void(* p_callback)(rm_ble_mesh_scene_server_callback_args_t *p_args) | |

| | |
|--------------|--|
| | Mesh model scene server callback. |
| void(* | p_timeout_callback)(rm_ble_mesh_scene_server_timeout_callback_args_t *p_args) |
| | Mesh model scene server publication timeout callback. |
| void const * | p_context |
| | Placeholder for user data. |
| void const * | p_extend |
| | Placeholder for user extension. |

Field Documentation

◆ [p_access_instance](#)

[rm_ble_mesh_access_instance_t](#) const* [rm_ble_mesh_scene_server_cfg_t::p_access_instance](#)

Access Layer instance structure.

the parameters for initialization.

◆ [rm_ble_mesh_scene_server_api_t](#)

struct [rm_ble_mesh_scene_server_api_t](#)

Shared Interface definition for BLE MESH

Data Fields

[fsp_err_t](#)(* [open](#))([rm_ble_mesh_scene_server_ctrl_t](#) *const p_ctrl,
[rm_ble_mesh_scene_server_cfg_t](#) const *const p_cfg)

[fsp_err_t](#)(* [close](#))([rm_ble_mesh_scene_server_ctrl_t](#) *const p_ctrl)

[fsp_err_t](#)(* [stateUpdate](#))([rm_ble_mesh_access_ctrl_t](#) *const p_ctrl,
[rm_ble_mesh_access_server_state_t](#) const *const p_state)

Field Documentation

◆ **open**

```
fsp_err_t(* rm_ble_mesh_scene_server_api_t::open) (rm_ble_mesh_scene_server_ctrl_t *const p_ctrl,
rm_ble_mesh_scene_server_cfg_t const *const p_cfg)
```

API to open scene server model.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_scene_server_api_t::close) (rm_ble_mesh_scene_server_ctrl_t *const
p_ctrl)
```

API to close scene server model.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **stateUpdate**

```
fsp_err_t(* rm_ble_mesh_scene_server_api_t::stateUpdate) (rm_ble_mesh_access_ctrl_t *const
p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)
```

API to send reply or to update state change.

Parameters

| | | |
|------|---------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_state | Pointer to model specific current/target state parameters. |

◆ **rm_ble_mesh_scene_server_instance_t**

```
struct rm_ble_mesh_scene_server_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--|--------|---|
| rm_ble_mesh_scene_server_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_scene_server_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_scene_server_api_t | p_api | Pointer to the API structure for this instance. |

| | | |
|---------|--|--|
| const * | | |
|---------|--|--|

Typedef Documentation

◆ rm_ble_mesh_scene_server_ctrl_t

```
typedef void rm_ble_mesh_scene_server_ctrl_t
```

BLE MESH SCENE SERVER control block. Allocate an instance specific control block to pass into the BLE mesh model scene server API calls.

Enumeration Type Documentation

◆ rm_ble_mesh_scene_srv_event_t

```
enum rm_ble_mesh_scene_srv_event_t
```

Scene Event Types

Enumerator

| Enumerator | |
|--|--------------------------------|
| RM_BLE_MESH_SCENE_SRV_EVENT_STORE | Scene Event - Store |
| RM_BLE_MESH_SCENE_SRV_EVENT_DELETE | Scene Event - Delete |
| RM_BLE_MESH_SCENE_SRV_EVENT_RECALL_START | Scene Event - Recall Start |
| RM_BLE_MESH_SCENE_SRV_EVENT_RECALL_COMPLETE | Scene Event - Recall Complete |
| RM_BLE_MESH_SCENE_SRV_EVENT_RECALL_IMMEDIATE | Scene Event - Recall Immediate |

BLE Mesh Upper Trans Interface

[Interfaces](#) » [Networking](#) » [BLE Mesh Network Interfaces](#)

Detailed Description

Interface for BLE Mesh Upper Trans functions.

Summary

The BLE Mesh Upper Trans middleware provides a high-level transfer interface for BLE Mesh services.

Data Structures

```
struct rm_ble_mesh_upper_trans_access_layer_pdu_t
```

```
struct rm_ble_mesh_upper_trans_control_pdu_t
```

```
struct rm_ble_mesh_upper_trans_friendship_setting_t
```

```
struct rm_ble_mesh_upper_trans_friendship_info_t
```

```
struct rm_ble_mesh_upper_trans_heartbeat_publication_info_t
```

```
struct rm_ble_mesh_upper_trans_heartbeat_subscription_info_t
```

```
struct rm_ble_mesh_upper_trans_callback_args_t
```

```
struct rm_ble_mesh_upper_trans_cfg_t
```

```
struct rm_ble_mesh_upper_trans_api_t
```

```
struct rm_ble_mesh_upper_trans_instance_t
```

Typedefs

```
typedef void rm_ble_mesh_upper_trans_ctrl_t
```

Enumerations

```
enum rm_ble_mesh_upper_trans_access_message_evnet_t
```

```
enum rm_ble_mesh_upper_trans_control_message_evnet_t
```

```
enum rm_ble_mesh_upper_trans_control_opcode_t
```

```
enum rm_ble_mesh_upper_trans_friend_role_t
```

```
enum rm_ble_mesh_upper_trans_event_t
```

Data Structure Documentation

◆ rm_ble_mesh_upper_trans_access_layer_pdu_t

| struct rm_ble_mesh_upper_trans_access_layer_pdu_t | | |
|---|----------|----------------------------------|
| Access PDU | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | src_addr | Source address. |
| rm_ble_mesh_network_address_t | dst_addr | Destination address. |
| uint8_t * | p_label | Label UUID, representing Virtual |

| | | |
|---|---------------|--|
| | | Address of Destination. |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Handle identifying the subnet. |
| rm_ble_mesh_network_appkey_handle_t | appkey_handle | Handle identifying the AppKey to be used for Transport Layer encryption. |
| uint8_t | ttl | Time to Live. |
| void * | p_parameter | Transport parameter, based on the type and header. |

◆ [rm_ble_mesh_upper_trans_control_pdu_t](#)

| | | |
|--|---------------|--|
| struct rm_ble_mesh_upper_trans_control_pdu_t | | |
| Control PDU | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | src_addr | Source address. |
| rm_ble_mesh_network_address_t | dst_addr | Destination address. |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Handle identifying the subnet. |
| uint8_t | ttl | Time to Live. |
| rm_ble_mesh_upper_trans_control_opcode_t | opcode | Control Packet Opcode. |
| void * | p_parameter | Transport parameter, based on the type and header. |

◆ [rm_ble_mesh_upper_trans_friendship_setting_t](#)

| | | |
|---|---------------|--|
| struct rm_ble_mesh_upper_trans_friendship_setting_t | | |
| Low Power Node setting | | |
| Data Fields | | |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | The subnet to initiate the friendship procedure |
| uint8_t | criteria | Friend criteria that is required. RSSI, Receive Window, MessageQueue size requirements can be established. |
| uint8_t | rx_delay | Receive delay in milliseconds that the LPN will wait before listening to response for any request. |
| uint32_t | poll_timeout | Timeout in milliseconds after |

| | | |
|----------|---------------|--|
| | | which the LPN will send Poll PDU to check for data from the friend. |
| uint32_t | setup_timeout | Timeout in milliseconds for which the Friend Establishment procedure is to be tried. |

◆ rm_ble_mesh_upper_trans_friendship_info_t

| | | |
|--|----------------|-----------------------------------|
| struct rm_ble_mesh_upper_trans_friendship_info_t | | |
| Low Power Node element information | | |
| Data Fields | | |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Main subnet handle of the element |
| rm_ble_mesh_network_address_t | addr | Peer LPN/Friend Address |
| uint16_t | lpn_counter | Low Power Node Counter |
| uint16_t | friend_counter | Friend Counter |

◆ rm_ble_mesh_upper_trans_heartbeat_publication_info_t

| | | |
|---|--------------|---|
| struct rm_ble_mesh_upper_trans_heartbeat_publication_info_t | | |
| Heartbeat Publication state | | |
| Data Fields | | |
| rm_ble_mesh_network_address_t | daddr | Destination address for heartbeat messages |
| uint8_t | count_log | Count to control the number of periodic heartbeat transport messages to be sent |
| uint8_t | period_log | Period to control the cadence of periodic heartbeat transport messages |
| uint8_t | ttl | TTL value to be used when sending heartbeat messages |
| uint16_t | features | Features that trigger sending heartbeat messages when changed |
| uint16_t | netkey_index | Global NetKey index of the NetKey to be used to send heartbeat messages |

◆ rm_ble_mesh_upper_trans_heartbeat_subscription_info_t

| | | |
|--|--|--|
| struct rm_ble_mesh_upper_trans_heartbeat_subscription_info_t | | |
| Heartbeat Subscription state | | |

| Data Fields | | |
|---|------------|--|
| rm_ble_mesh_network_address_t | saddr | Source address for heartbeat messages that a node shall process |
| rm_ble_mesh_network_address_t | daddr | Destination address for heartbeat messages |
| uint8_t | count_log | Counter that tracks the number of periodic heartbeat transport message received since receiving the most recent configure heartbeat Subscription Set message |
| uint8_t | period_log | Period that controls the period for processing periodical heartbeat transport control messages |
| uint16_t | min_hops | Minimum hops value registered when receiving heartbeat messages since receiving the most recent configure heartbeat Subscription Set message |
| uint16_t | max_hops | Maximum hops value registered when receiving heartbeat messages since receiving the most recent configure heartbeat Subscription Set message |

◆ [rm_ble_mesh_upper_trans_callback_args_t](#)

| Data Fields | | |
|--|---------------|---------------------------------|
| struct rm_ble_mesh_upper_trans_callback_args_t | | |
| BLE Mesh Network callback parameter definition | | |
| rm_ble_mesh_upper_trans_event_t | event | Event code. |
| rm_ble_mesh_network_header_t * | p_header | Event code. |
| rm_ble_mesh_network_subnet_handle_t | subnet_handle | Associated Subnet Handle. |
| rm_ble_mesh_network_appkey_handle_t | appkey_handle | Associated AppKey Handle. |
| rm_ble_mesh_error_code_t | result | Event result. |
| rm_ble_mesh_buffer_t | event_data | |
| void const * | p_context | Context provided to user during |

callback.

◆ **rm_ble_mesh_upper_trans_cfg_t**

struct rm_ble_mesh_upper_trans_cfg_t

BLE MESH configuration parameters.

Data Fields

| | |
|---|---|
| uint32_t | channel |
| | Select a channel corresponding to the channel number of the hardware. More... |
| rm_ble_mesh_upper_trans_control_message_evnet_t | control_message_evnet |
| | Whether to enable the control message event or not. |
| rm_ble_mesh_upper_trans_access_message_evnet_t | access_message_evnet |
| | Whether to enable the access message event or not. |
| rm_ble_mesh_lower_trans_instance_t const * | p_mesh_lower_trans_instance |
| | Instance structure of BLE Mesh Bearer. |
| void(* | p_callback)(rm_ble_mesh_upper_trans_callback_args_t *p_args) |
| | Callback. |
| void const * | p_context |
| | Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t . |
| void const * | p_extend |
| | Placeholder for user extension. |

Field Documentation

◆ channel

uint32_t rm_ble_mesh_upper_trans_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.
the parameters for initialization.

◆ rm_ble_mesh_upper_trans_api_t

struct rm_ble_mesh_upper_trans_api_t

BLE MESH functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------|---|
| fsp_err_t(*) | open)(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_cfg_t const *const p_cfg) |

Field Documentation

◆ **open**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::open) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_cfg_t const *const p_cfg)
```

Register interface with Transport Layer.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **close**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::close) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl)
```

Unregister interface with Transport Layer.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **sendAccessPdu**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::sendAccessPdu) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl, rm_ble_mesh_upper_trans_access_layer_pdu_t const *const p_access_layer_pdu,
rm_ble_mesh_lower_trans_reliable_t reliable)
```

API to send Access Layer PDUs.

Parameters

| | | |
|------|--------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_access_layer_pdu | Pointer to Access Layer PDUs. |
| [in] | reliable | If requires lower transport ACK, set reliable as <code>RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE</code> . |

◆ **sendControlPdu**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::sendControlPdu) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl, rm_ble_mesh_upper_trans_control_pdu_t const *const p_control_pdu)
```

API to send transport Control PDUs.

Parameters

| | | |
|------|---------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_control_pdu | Pointer to control PDUs. |

◆ **lpnSetupFriendship**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnSetupFriendship) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl, rm_ble_mesh_upper_trans_friendship_setting_t const *const p_setting)
```

API to setup Friendship.

Parameters

| | | |
|------|-----------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_setting | Pointer to friendship settings. |

◆ **lpnClearFriendship**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnClearFriendship) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl)
```

API to terminate friendship.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ IpnManageSubscription

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::IpnManageSubscription)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_control_opcode_t action,
uint16_t const *const p_addr_list, uint16_t count)
```

API to manage friend subscription list.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | action | Will be one of RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_ADD or RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_REMOVE. |
| [in] | p_addr_list | Pointer to the packed list of addresses to be managed. |
| [in] | count | Number of addresses given. |

◆ IpnPoll

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::IpnPoll) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl)
```

To trigger Friend Poll from application.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ isValidLpnElementAddress

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::isValidLpnElementAddress)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr,
rm_ble_mesh_lower_trans_lpn_handle_t *const p_lpn_handle)
```

To check if address matches with any of the LPN.

Parameters

| | | |
|-------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | Unicast address to search. |
| [out] | p_lpn_handle | Pointer to an LPN Handle, which will be filled if match found. |

◆ isValidLpnSubscriptionAddress

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::isValidLpnSubscriptionAddress)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr,
rm_ble_mesh_lower_trans_lpn_handle_t *const p_lpn_handle)
```

To check if valid subscription address of an LPN to receive a packet.

Parameters

| | | |
|-------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | addr | Address to search. |
| [out] | p_lpn_handle | Pointer to an LPN Handle, which will be filled if match found. |

◆ getLpnPolltimeout

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getLpnPolltimeout) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl, rm_ble_mesh_network_address_t lpn_addr, uint32_t *const p_poll_timeout)
```

To get Poll Timeout of an LPN.

Parameters

| | | |
|-------|----------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | lpn_addr | LPN address to search. |
| [out] | p_poll_timeout | Pointer to a memory where poll timeout of the LPN to be filled (if match found). |

◆ getFriendshipInfo

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getFriendshipInfo) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl, rm_ble_mesh_upper_trans_friend_role_t role, uint16_t lpn_index,
rm_ble_mesh_upper_trans_friendship_info_t *const p_node)
```

To get the LPN node information.

Parameters

| | | |
|-------|-----------|----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | role | Local friendship role. |
| [in] | lpn_index | Index of the LPN element. |
| [out] | p_node | Pointer to copy the information. |

◆ IpnRegisterSecurityUpdate

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::IpnRegisterSecurityUpdate)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t
subnet_handle, uint8_t flag, uint32_t ivindex)
```

To add the security update information.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | subnet_handle | Handle to identify the network. |
| [in] | flag | Flag indicating the Key Refresh and IV Update state. |
| [in] | ivindex | Current IV index of the network. |

◆ clearAllLpn

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::clearAllLpn) (rm_ble_mesh_upper_trans_ctrl_t *const
p_ctrl)
```

To clear information related to all LPNs.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ setHeartbeatPublication

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::setHeartbeatPublication)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_publication_info_t *const p_info)
```

To set the heartbeat publication data.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_publication_info_t . |

◆ **getHeartbeatPublication**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getHeartbeatPublication)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_publication_info_t *const p_info)
```

To get the heartbeat publication data.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_publication_info_t . |

◆ **setHeartbeatSubscription**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::setHeartbeatSubscription)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const p_info)
```

To set the heartbeat subscription data.

Parameters

| | | |
|-------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_subscription_info_t . |

◆ **getHeartbeatSubscription**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getHeartbeatSubscription)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const p_info)
```

To get the heartbeat subscription data.

Parameters

| | | |
|-------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_subscription_info_t . |

◆ **triggerHeartbeat**

```
fsp_err_t(* rm_ble_mesh_upper_trans_api_t::triggerHeartbeat) (rm_ble_mesh_upper_trans_ctrl_t
*const p_ctrl, uint8_t change_in_feature_bit)
```

To trigger heartbeat send on change in feature.

Parameters

| | | |
|------|-----------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | change_in_feature_bit | Bit mask of the changed feature field. |

◆ **rm_ble_mesh_upper_trans_instance_t**

```
struct rm_ble_mesh_upper_trans_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------------------|--------|---|
| rm_ble_mesh_upper_trans_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_ble_mesh_upper_trans_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_ble_mesh_upper_trans_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **rm_ble_mesh_upper_trans_ctrl_t**

```
typedef void rm_ble_mesh_upper_trans_ctrl_t
```

BLE MESH control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Enumeration Type Documentation◆ **rm_ble_mesh_upper_trans_access_message_evnet_t**

```
enum rm_ble_mesh_upper_trans_access_message_evnet_t
```

Whether to enable the access message event or not.

Enumerator

| | |
|--|--------------------------------|
| RM_BLE_MESH_UPPER_TRANS_ACCESS_MESSAGE_EVENT_DISABLE | Access state callback disable. |
| RM_BLE_MESH_UPPER_TRANS_ACCESS_MESSAGE_EVENT_ENABLE | Access state callback enable. |

◆ **rm_ble_mesh_upper_trans_control_message_evnet_t**

| | |
|--|---------------------------------|
| enum <code>rm_ble_mesh_upper_trans_control_message_evnet_t</code> | |
| Whether to enable the control message event or not. | |
| Enumerator | |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_MESSAGE_EVENT_DISABLE</code> | Control state callback disable. |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_MESSAGE_EVENT_ENABLE</code> | Control state callback enable. |

◆ **rm_ble_mesh_upper_trans_control_opcode_t**

| enum <code>rm_ble_mesh_upper_trans_control_opcode_t</code> | |
|--|---|
| Transport Layer Control Packet Opcodes | |
| RFU: 0x02 - 0x0F | |
| Enumerator | |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_POLL</code> | Sent by a Low Power node to its Friend node to request any messages that it has cached for the Low Power node |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_UPDATE</code> | Sent by a Friend node to a Low Power node to inform it about cache and/or security updates |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_REQ</code> | Broadcast by a Low Power node to start to find a friend |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_OFFER</code> | Sent by a Friend node to a Low Power node to offer to become its friend |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_CLEAR</code> | Sent to a Friend node to inform a previous friend of a Low Power node about the removal of a friendship |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_CLEAR_CNF</code> | Sent from a previous friend to Friend node to confirm that a prior friend relationship has been removed |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_ADD</code> | Sent to a Friend node to add one or more addresses to the Friend Subscription List |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_REMOVE</code> | Sent to a Friend node to remove one or more addresses from the Friend Subscription List |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_CNF</code> | Sent by a Friend node to confirm Friend Subscription List updates |
| <code>RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_HEARTBEAT</code> | Sent by a node to let other nodes determine topology of a Subnet |

◆ **rm_ble_mesh_upper_trans_friend_role_t**

| enum <code>rm_ble_mesh_upper_trans_friend_role_t</code> | |
|---|--------------|
| Friend role | |
| Enumerator | |
| <code>RM_BLE_MESH_UPPER_TRANS_FRIEND_ROLE_FRIEND</code> | Friend role. |
| <code>RM_BLE_MESH_UPPER_TRANS_FRIEND_ROLE_LP_N</code> | LPN role. |

◆ **rm_ble_mesh_upper_trans_event_t**

| enum <code>rm_ble_mesh_upper_trans_event_t</code> | |
|---|--|
| Callback Event | |
| Enumerator | |
| <code>RM_BLE_MESH_UPPER_TRANS_EVENT_ACCESS</code> | BLE Mesh Upper Trans Event - Access. |
| <code>RM_BLE_MESH_UPPER_TRANS_EVENT_CONTROL</code> | BLE Mesh Upper Trans Event - Control. |
| <code>RM_BLE_MESH_UPPER_TRANS_EVENT_FRIENDSHIP_SETUP</code> | BLE Mesh Upper Trans Event - Friendship setup. |
| <code>RM_BLE_MESH_UPPER_TRANS_EVENT_FRIENDSHIP_SUBSCRIPTION_LIST</code> | BLE Mesh Upper Trans Event - Friendship subscription list. |
| <code>RM_BLE_MESH_UPPER_TRANS_EVENT_FRIENDSHIP_CLEAR</code> | BLE Mesh Upper Trans Event - Friendship clear. |
| <code>RM_BLE_MESH_UPPER_TRANS_EVENT_FRIENDSHIP_TERMINATE</code> | BLE Mesh Upper Trans Event - Friendship terminate. |

5.3.11.4 DA16XXX AT Command Transport Layer[Interfaces](#) » [Networking](#)**Detailed Description**

Abstraction interface for DA16XXX AT Command functions.

Summary

The DA16XXX AT Command Transport Layer interface provides functions for data communication and buffer handling over multiple communications interfaces.

Data Structures

struct [at_transport_da16xxx_callback_args_t](#)

struct [at_transport_da16xxx_cfg_t](#)

struct [at_transport_da16xxx_data_t](#)

struct [at_transport_da16xxx_status_t](#)

struct [at_transport_da16xxx_api_t](#)

struct [at_transport_da16xxx_instance_t](#)

Typedefs

typedef void [at_transport_da16xxx_ctrl_t](#)

Enumerations

enum [at_transport_da16xxx_event_t](#)

Data Structure Documentation

◆ [at_transport_da16xxx_callback_args_t](#)

struct [at_transport_da16xxx_callback_args_t](#)

DA16xxx middleware callback parameter definition

◆ [at_transport_da16xxx_cfg_t](#)

struct [at_transport_da16xxx_cfg_t](#)

DA16xxx middleware configuration block

Data Fields

void const * [p_extend](#)

Pointer to extended configuration by instance of interface.

void const * [p_context](#)

Pointer to the user-provided context.

bool(* [p_callback](#))(at_transport_da16xxx_callback_args_t *p_args)

| | |
|--|-------------------------------|
| | Pointer to callback function. |
|--|-------------------------------|

◆ at_transport_da16xxx_data_t

| | | |
|------------------------------------|----------------------|--|
| struct at_transport_da16xxx_data_t | | |
| DA16xxx data structure | | |
| Data Fields | | |
| uint8_t * | p_at_cmd_string | Pointer to ATCMD string. |
| uint32_t | at_cmd_string_length | ATCMD string length. |
| uint8_t * | p_response_buffer | Pointer to ATCMD response buffer. |
| uint32_t | response_buffer_size | ATCMD response buffer string length. |
| uint32_t | timeout_ms | ATCMD timeout in ms. |
| const char * | p_expect_code | Expected string in the ATCMD response. |
| uint32_t | comm_ch_id | Communication channel ID. |

◆ at_transport_da16xxx_status_t

| | | |
|--------------------------------------|------|-------------------------|
| struct at_transport_da16xxx_status_t | | |
| DA16xxx status indicators | | |
| Data Fields | | |
| bool | open | True if driver is open. |

◆ at_transport_da16xxx_api_t

| | | |
|-----------------------------------|---|--|
| struct at_transport_da16xxx_api_t | | |
| AT Command APIs | | |
| Data Fields | | |
| fsp_err_t(*) | open)(at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_cfg_t const *const p_cfg) | |
| fsp_err_t(*) | close)(at_transport_da16xxx_ctrl_t *const p_ctrl) | |
| fsp_err_t(*) | atCommandSendThreadSafe)(at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_data_t *p_at_cmd) | |
| fsp_err_t(*) | atCommandSend)(at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_data_t *p_at_cmd) | |

| | |
|-------------|---|
| fsp_err_t(* | giveMutex)(at_transport_da16xxx_ctrl_t *const p_ctrl, uint32_t mutex_flag) |
| fsp_err_t(* | takeMutex)(at_transport_da16xxx_ctrl_t *const p_ctrl, uint32_t mutex_flag) |
| fsp_err_t(* | statusGet)(at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_status_t *p_status) |
| size_t(* | bufferRecv)(at_transport_da16xxx_ctrl_t *const p_ctrl, const char *p_data, uint32_t length, uint32_t rx_timeout) |

Field Documentation

◆ open

fsp_err_t(* at_transport_da16xxx_api_t::open) (at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_cfg_t const *const p_cfg)

Open at cmd instance.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ close

fsp_err_t(* at_transport_da16xxx_api_t::close) (at_transport_da16xxx_ctrl_t *const p_ctrl)

Close at cmd instance.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **atCommandSendThreadSafe**

```
fsp_err_t(* at_transport_da16xxx_api_t::atCommandSendThreadSafe) (at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_data_t *p_at_cmd)
```

at cmd send thread safe.

Parameters

| | | |
|------|----------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_at_cmd | Pointer to AT command data structure. |

◆ **atCommandSend**

```
fsp_err_t(* at_transport_da16xxx_api_t::atCommandSend) (at_transport_da16xxx_ctrl_t *const p_ctrl, at_transport_da16xxx_data_t *p_at_cmd)
```

at cmd send.

Parameters

| | | |
|------|----------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_at_cmd | Pointer to AT command data structure. |

◆ **giveMutex**

```
fsp_err_t(* at_transport_da16xxx_api_t::giveMutex) (at_transport_da16xxx_ctrl_t *const p_ctrl, uint32_t mutex_flag)
```

Give the mutex.

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to Transport layer instance control structure. |
| [in] | mutex_flag | TX/RX Flags for the mutex. |

◆ **takeMutex**

```
fsp_err_t(* at_transport_da16xxx_api_t::takeMutex) (at_transport_da16xxx_ctrl_t *const p_ctrl, uint32_t mutex_flag)
```

Take the mutex .

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to Transport layer instance control structure. |
| [in] | mutex_flag | TX/RX Flags for the mutex. |

◆ **statusGet**

```
fsp_err_t(* at_transport_da16xxx_api_t::statusGet) (at_transport_da16xxx_ctrl_t *const p_ctrl,
at_transport_da16xxx_status_t *p_status)
```

Gets the status of the configured DA16xxx transport.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to the to Transport layer instance control structure. |
| [out] | p_status | Pointer to store current status. |

◆ **bufferRecv**

```
size_t(* at_transport_da16xxx_api_t::bufferRecv) (at_transport_da16xxx_ctrl_t *const p_ctrl, const
char *p_data, uint32_t length, uint32_t rx_timeout)
```

Receive data from stream buffer.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to Transport layer instance control structure. |
| [in] | p_data | Pointer to data. |
| [in] | length | Data length. |
| [in] | rx_timeout | Timeout for receiving data on the buffer. |
| [in] | trigger_level | Trigger level for stream buffer. |

◆ **at_transport_da16xxx_instance_t**

```
struct at_transport_da16xxx_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Typedef Documentation◆ **at_transport_da16xxx_ctrl_t**

```
typedef void at_transport_da16xxx_ctrl_t
```

At transport control block. Allocate an instance specific control block to pass into the Communications API calls.

Enumeration Type Documentation

◆ `at_transport_da16xxx_event_t`

```
enum at_transport_da16xxx_event_t
```

Event in the callback function

5.3.11.5 Ethernet Interface

[Interfaces](#) » [Networking](#)

Detailed Description

Interface for Ethernet functions.

Summary

The Ethernet interface provides Ethernet functionality. The Ethernet interface supports the following features:

- Transmit/receive processing (Blocking and Non-Blocking)
- Callback function with returned event code
- Magic packet detection mode support
- Auto negotiation support
- Flow control support
- Multicast filtering support

Data Structures

```
struct ether_callback_args_t
```

```
struct ether_cfg_t
```

```
struct ether_api_t
```

```
struct ether_instance_t
```

Typedefs

```
typedef void ether_ctrl_t
```

Enumerations

```
enum ether_wake_on_lan_t
```

```
enum ether_flow_control_t
```

```
enum ether_multicast_t
```

enum [ether_promiscuous_t](#)enum [ether_zerocopy_t](#)enum [ether_event_t](#)

Data Structure Documentation

◆ ether_callback_args_t

| struct ether_callback_args_t | | |
|----------------------------------|-------------|---|
| Callback function parameter data | | |
| Data Fields | | |
| uint32_t | channel | Device channel number. |
| ether_event_t | event | Event code. |
| uint32_t | status_ecsr | ETHERC status register for interrupt handler. |
| uint32_t | status_eesr | ETHERC/EDMAC status register for interrupt handler. |
| void const * | p_context | Placeholder for user data. Set in ether_api_t::open function in ether_cfg_t . |

◆ ether_cfg_t

| struct ether_cfg_t | | |
|-------------------------------------|-----------------------------|---|
| Configuration parameters. | | |
| Data Fields | | |
| uint8_t | channel | |
| | | Channel. |
| ether_zerocopy_t | zerocopy | |
| | | Zero copy enable or disable in Read/Write function. |
| ether_multicast_t | multicast | |
| | | Multicast enable or disable. |
| ether_promiscuous_t | promiscuous | |

| | |
|--------------------------------------|--|
| | Promiscuous mode enable or disable. |
| ether_flow_control_t | flow_control |
| | Flow control functionally enable or disable. |
| ether_padding_t | padding |
| | Padding length inserted into the received Ethernet frame. |
| uint32_t | padding_offset |
| | Offset of the padding inserted into the received Ethernet frame. |
| uint32_t | broadcast_filter |
| | Limit of the number of broadcast frames received continuously. |
| uint8_t * | p_mac_address |
| | Pointer of MAC address. |
| uint8_t | num_tx_descriptors |
| | Number of transmission descriptor. |
| uint8_t | num_rx_descriptors |
| | Number of receive descriptor. |
| uint8_t ** | pp_ether_buffers |
| | Transmit and receive buffer. |
| uint32_t | ether_buffer_size |
| | Size of transmit and receive buffer. |

| | |
|------------------------------|---|
| IRQn_Type | irq |
| | Interrupt number. |
| uint32_t | interrupt_priority |
| | Interrupt priority. |
| void(* | p_callback)(ether_callback_args_t *p_args) |
| | Callback provided when an ISR occurs. |
| ether_phy_instance_t const * | p_ether_phy_instance |
| | Pointer to ETHER_PHY instance. |
| void const * | p_context |
| | Placeholder for user data. More... |
| void const * | p_extend |
| | Placeholder for user extension. |

Field Documentation

◆ p_context

void const* ether_cfg_t::p_context

Placeholder for user data.

Placeholder for user data. Passed to the user callback in [ether_callback_args_t](#).

◆ ether_api_t

struct ether_api_t

Functions implemented at the HAL layer will follow this API.

Data Fields

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>open)(ether_ctrl_t *const p_ctrl, ether_cfg_t const *const p_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>close)(ether_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>read)(ether_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t *const length_bytes)</code> |
| <code>fsp_err_t(*</code> | <code>bufferRelease)(ether_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>rxBufferUpdate)(ether_ctrl_t *const p_ctrl, void *const p_buffer)</code> |
| <code>fsp_err_t(*</code> | <code>write)(ether_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t const frame_length)</code> |
| <code>fsp_err_t(*</code> | <code>linkProcess)(ether_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>wakeOnLANEnable)(ether_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>txStatusGet)(ether_ctrl_t *const p_ctrl, void *const p_buffer_address)</code> |
| <code>fsp_err_t(*</code> | <code>callbackSet)(ether_ctrl_t *const p_ctrl, void(*p_callback)(ether_callback_args_t *), void const *const p_context, ether_callback_args_t *const p_callback_memory)</code> |

Field Documentation

◆ open

`fsp_err_t(* ether_api_t::open) (ether_ctrl_t *const p_ctrl, ether_cfg_t const *const p_cfg)`

Open driver.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to pin configuration structure. |

◆ **close**

```
fsp_err_t(* ether_api_t::close) (ether_ctrl_t *const p_ctrl)
```

Close driver.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **read**

```
fsp_err_t(* ether_api_t::read) (ether_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t *const length_bytes)
```

Read packet if data is available.

Parameters

| | | |
|------|--------------|--------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buffer | Pointer to where to store read data. |
| [in] | length_bytes | Number of bytes in buffer |

◆ **bufferRelease**

```
fsp_err_t(* ether_api_t::bufferRelease) (ether_ctrl_t *const p_ctrl)
```

Release rx buffer from buffer pool process in zero-copy read operation.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rxBufferUpdate**

```
fsp_err_t(* ether_api_t::rxBufferUpdate) (ether_ctrl_t *const p_ctrl, void *const p_buffer)
```

Update the buffer pointer in the current receive descriptor.

Parameters

| | | |
|------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buffer | New address to write into the rx buffer descriptor. |

◆ **write**

```
fsp_err_t(* ether_api_t::write) (ether_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t const frame_length)
```

Write packet.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_buffer | Pointer to data to write. |
| [in] | frame_length | Send ethernet frame size (without 4 bytes of CRC data size). |

◆ **linkProcess**

```
fsp_err_t(* ether_api_t::linkProcess) (ether_ctrl_t *const p_ctrl)
```

Process link.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **wakeOnLANEnable**

```
fsp_err_t(* ether_api_t::wakeOnLANEnable) (ether_ctrl_t *const p_ctrl)
```

Enable magic packet detection.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **txStatusGet**

```
fsp_err_t(* ether_api_t::txStatusGet) (ether_ctrl_t *const p_ctrl, void *const p_buffer_address)
```

Get the address of the most recently sent buffer.

Parameters

| | | |
|-------|------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_buffer_address | Pointer to the address of the most recently sent buffer. |

◆ **callbackSet**

```
fsp_err_t(* ether_api_t::callbackSet) (ether_ctrl_t *const p_ctrl,
void(*p_callback)(ether_callback_args_t *), void const *const p_context, ether_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the ETHER control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **ether_instance_t**

```
struct ether_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------|--------|---|
| ether_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| ether_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| ether_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **ether_ctrl_t**

```
typedef void ether_ctrl_t
```

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ ether_wake_on_lan_t

| | |
|---------------------------|----------------------|
| enum ether_wake_on_lan_t | |
| Wake on LAN | |
| Enumerator | |
| ETHER_WAKE_ON_LAN_DISABLE | Disable Wake on LAN. |
| ETHER_WAKE_ON_LAN_ENABLE | Enable Wake on LAN. |

◆ ether_flow_control_t

| | |
|----------------------------|--|
| enum ether_flow_control_t | |
| Flow control functionality | |
| Enumerator | |
| ETHER_FLOW_CONTROL_DISABLE | Disable flow control functionality. |
| ETHER_FLOW_CONTROL_ENABLE | Enable flow control functionality with pause frames. |

◆ ether_multicast_t

| | |
|-------------------------|--|
| enum ether_multicast_t | |
| Multicast Filter | |
| Enumerator | |
| ETHER_MULTICAST_DISABLE | Disable reception of multicast frames. |
| ETHER_MULTICAST_ENABLE | Enable reception of multicast frames. |

◆ ether_promiscuous_t

| | |
|---------------------------|--|
| enum ether_promiscuous_t | |
| Promiscuous Mode | |
| Enumerator | |
| ETHER_PROMISCUOUS_DISABLE | Only receive packets with current MAC address, multicast, and broadcast. |
| ETHER_PROMISCUOUS_ENABLE | Receive all packets. |

◆ **ether_zerocopy_t**

| | |
|-------------------------------------|---|
| enum <code>ether_zerocopy_t</code> | |
| Zero copy | |
| Enumerator | |
| <code>ETHER_ZEROCOPY_DISABLE</code> | Disable zero copy in Read/Write function. |
| <code>ETHER_ZEROCOPY_ENABLE</code> | Enable zero copy in Read/Write function. |

◆ **ether_event_t**

| | |
|-------------------------------------|-------------------------------|
| enum <code>ether_event_t</code> | |
| Event code of callback function | |
| Enumerator | |
| <code>ETHER_EVENT_WAKEON_LAN</code> | Magic packet detection event. |
| <code>ETHER_EVENT_LINK_ON</code> | Link up detection event. |
| <code>ETHER_EVENT_LINK_OFF</code> | Link down detection event. |
| <code>ETHER_EVENT_INTERRUPT</code> | Interrupt event. |

5.3.11.6 Ethernet PHY Interface[Interfaces](#) » [Networking](#)**Detailed Description**

Interface for Ethernet PHY functions.

Summary

The Ethernet PHY module (`r_ether_phy`) provides an API for standard Ethernet PHY communications applications that use the ETHERC peripheral.

The Ethernet PHY interface supports the following features:

- Auto negotiation support
- Flow control support
- Link status check support

Data Structures

struct [ether_phy_cfg_t](#)

struct [ether_phy_api_t](#)

struct [ether_phy_instance_t](#)

Typedefs

typedef void [ether_phy_ctrl_t](#)

Enumerations

enum [ether_phy_flow_control_t](#)

enum [ether_phy_link_speed_t](#)

enum [ether_phy_mii_type_t](#)

Data Structure Documentation

◆ ether_phy_cfg_t

| struct ether_phy_cfg_t | | |
|--|--------------------------|--|
| Configuration parameters. | | |
| Data Fields | | |
| uint8_t | channel | Channel. |
| uint8_t | phy_lsi_address | Address of PHY-LSI. |
| uint32_t | phy_reset_wait_time | Wait time for PHY-LSI reboot. |
| int32_t | mii_bit_access_wait_time | Wait time for MII/RMII access. |
| ether_phy_lsi_type_t | phy_lsi_type | Phy LSI type. |
| ether_phy_flow_control_t | flow_control | Flow control functionally enable or disable. |
| ether_phy_mii_type_t | mii_type | Interface type is MII or RMII. |
| void const * | p_context | Placeholder for user data. Passed to the user callback in ether_phy_callback_args_t. |
| void const * | p_extend | Placeholder for user extension. |

◆ ether_phy_api_t

| struct ether_phy_api_t | |
|--|--|
| Functions implemented at the HAL layer will follow this API. | |

| Data Fields | | |
|--|---|---|
| <code>fsp_err_t(*</code> | <code>open</code>)(ether_phy_ctrl_t *const p_ctrl, ether_phy_cfg_t const *const p_cfg) | |
| <code>fsp_err_t(*</code> | <code>close</code>)(ether_phy_ctrl_t *const p_ctrl) | |
| <code>fsp_err_t(*</code> | <code>chipInit</code>)(ether_phy_ctrl_t *const p_ctrl, ether_phy_cfg_t const *const p_cfg) | |
| <code>fsp_err_t(*</code> | <code>read</code>)(ether_phy_ctrl_t *const p_ctrl, uint32_t reg_addr, uint32_t *const p_data) | |
| <code>fsp_err_t(*</code> | <code>write</code>)(ether_phy_ctrl_t *const p_ctrl, uint32_t reg_addr, uint32_t data) | |
| <code>fsp_err_t(*</code> | <code>startAutoNegotiate</code>)(ether_phy_ctrl_t *const p_ctrl) | |
| <code>fsp_err_t(*</code> | <code>linkPartnerAbilityGet</code>)(ether_phy_ctrl_t *const p_ctrl, uint32_t *const p_line_speed_duplex, uint32_t *const p_local_pause, uint32_t *const p_partner_pause) | |
| <code>fsp_err_t(*</code> | <code>linkStatusGet</code>)(ether_phy_ctrl_t *const p_ctrl) | |
| Field Documentation | | |
| ◆ open | | |
| <code>fsp_err_t(* ether_phy_api_t::open</code>)(ether_phy_ctrl_t *const p_ctrl, ether_phy_cfg_t const *const p_cfg) | | |
| Open driver. | | |
| Parameters | | |
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **close**

```
fsp_err_t(* ether_phy_api_t::close) (ether_phy_ctrl_t *const p_ctrl)
```

Close driver.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **chipInit**

```
fsp_err_t(* ether_phy_api_t::chipInit) (ether_phy_ctrl_t *const p_ctrl, ether_phy_cfg_t const *const p_cfg)
```

Initialize PHY-LSI.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **read**

```
fsp_err_t(* ether_phy_api_t::read) (ether_phy_ctrl_t *const p_ctrl, uint32_t reg_addr, uint32_t *const p_data)
```

Read register value of PHY-LSI.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | reg_addr | Register address. |
| [out] | p_data | Pointer to the location to store read data. |

◆ **write**

```
fsp_err_t(* ether_phy_api_t::write) (ether_phy_ctrl_t *const p_ctrl, uint32_t reg_addr, uint32_t data)
```

Write data to register of PHY-LSI.

Parameters

| | | |
|------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | reg_addr | Register address. |
| [in] | data | Data written to register. |

◆ **startAutoNegotiate**

```
fsp_err_t(* ether_phy_api_t::startAutoNegotiate) (ether_phy_ctrl_t *const p_ctrl)
```

Start auto negotiation.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **linkPartnerAbilityGet**

```
fsp_err_t(* ether_phy_api_t::linkPartnerAbilityGet) (ether_phy_ctrl_t *const p_ctrl, uint32_t *const p_line_speed_duplex, uint32_t *const p_local_pause, uint32_t *const p_partner_pause)
```

Get the partner ability.

Parameters

| | | |
|-------|---------------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_line_speed_duplex | Pointer to the location of both the line speed and the duplex. |
| [out] | p_local_pause | Pointer to the location to store the local pause bits. |
| [out] | p_partner_pause | Pointer to the location to store the partner pause bits. |

◆ **linkStatusGet**

```
fsp_err_t(* ether_phy_api_t::linkStatusGet) (ether_phy_ctrl_t *const p_ctrl)
```

Get Link status from PHY-LSI interface.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **ether_phy_instance_t**

```
struct ether_phy_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------------|--------|---|
| ether_phy_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| ether_phy_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| ether_phy_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ ether_phy_ctrl_t

typedef void ether_phy_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ ether_phy_lsi_type_t

enum ether_phy_lsi_type_t

Phy LSI

Enumerator

| | |
|-------------------------------|--|
| ETHER_PHY_LSI_TYPE_DEFAULT | Select default configuration. This type dose not change Phy LSI default setting by strapping option. |
| ETHER_PHY_LSI_TYPE_KSZ8091RNB | Select configuration for KSZ8091RNB. |
| ETHER_PHY_LSI_TYPE_KSZ8041 | Select configuration for KSZ8041. |
| ETHER_PHY_LSI_TYPE_DP83620 | Select configuration for DP83620. |
| ETHER_PHY_LSI_TYPE_IC51894 | Select configuration for ICS1894. |
| ETHER_PHY_LSI_TYPE_CUSTOM | Select configuration for User custom. |

◆ ether_phy_flow_control_t

enum ether_phy_flow_control_t

Flow control functionality

Enumerator

| | |
|--------------------------------|--|
| ETHER_PHY_FLOW_CONTROL_DISABLE | Disable flow control functionality. |
| ETHER_PHY_FLOW_CONTROL_ENABLE | Enable flow control functionality with pause frames. |

◆ ether_phy_link_speed_t

| enum ether_phy_link_speed_t | |
|------------------------------|--|
| Link speed | |
| Enumerator | |
| ETHER_PHY_LINK_SPEED_NO_LINK | Link is not established. |
| ETHER_PHY_LINK_SPEED_10H | Link status is 10Mbit/s and half duplex. |
| ETHER_PHY_LINK_SPEED_10F | Link status is 10Mbit/s and full duplex. |
| ETHER_PHY_LINK_SPEED_100H | Link status is 100Mbit/s and half duplex. |
| ETHER_PHY_LINK_SPEED_100F | Link status is 100Mbit/s and full duplex. |
| ETHER_PHY_LINK_SPEED_1000H | Link status is 1000Mbit/s and half duplex. |
| ETHER_PHY_LINK_SPEED_1000F | Link status is 1000Mbit/s and full duplex. |

◆ ether_phy_mii_type_t

| enum ether_phy_mii_type_t | |
|-----------------------------|--------|
| Media-independent interface | |
| Enumerator | |
| ETHER_PHY_MII_TYPE_MII | MII. |
| ETHER_PHY_MII_TYPE_RMII | RMII. |
| ETHER_PHY_MII_TYPE_GMII | GMII. |
| ETHER_PHY_MII_TYPE_RGMII | RGMII. |

Data Structure Documentation

◆ ptp_clock_properties_t

```
struct ptp_clock_properties_t
```

Clock properties used in the best master clock algorithm (BMCA) in order to determine the grandmaster clock.

In master mode, these properties will be advertised in announce messages.

Note: The final property used in BMCA is the clock ID. This is usually configured at runtime because it is often based on the hardware address.

| Data Fields | | |
|-------------|-----------|--|
| uint8_t | priority1 | Priority1 value used in best master calculation. |
| uint8_t | cclass | Class value. |
| uint8_t | accuracy | Accuracy of the clock. |
| uint16_t | variance | Variance of the clock. |
| uint8_t | priority2 | Priority2 value used as secondary priority in best master calculation. |

◆ ptp_time_t

| struct ptp_time_t | | |
|--|---------------|-------------------------------|
| Structure for storing time with nanosecond precision . | | |
| Data Fields | | |
| uint16_t | seconds_upper | Upper 16 bits of the seconds. |
| uint32_t | seconds_lower | Lower 32 bits of the seconds. |
| uint32_t | nanoseconds | Nanoseconds. |

◆ ptp_message_flags_t

| struct ptp_message_flags_t | |
|------------------------------------|--|
| Flags field in PTP message header. | |

◆ ptp_message_header_t

| struct ptp_message_header_t | | |
|-----------------------------|------------------|--|
| Common PTP Message Header. | | |
| Data Fields | | |
| uint8_t | message_type: 4 | The message type. |
| uint8_t | sdoid_major: 4 | Standard Organization ID Major. |
| uint8_t | version: 4 | PTP Version. |
| uint8_t | minor_version: 4 | PTP Minor Version. |
| uint16_t | message_length | The total message length (Including the header). |
| uint8_t | domain | The clock domain. |

| | | |
|-------------------------------------|----------------------|---|
| uint8_t | sdoid_minor: 8 | Standard Organization ID minor. |
| ptp_message_flags_t | flags | Flags set in the message. |
| uint64_t | correction_field | Correction Field that is updated when a message passes through a transparent clock. |
| uint32_t | reserved | |
| uint8_t | clock_id[8] | Clock ID that the message was sent from. |
| uint16_t | source_port_id | Port ID that the message was sent from. |
| uint16_t | sequence_id | Sequence ID of the message. |
| ptp_ctrl_field_t | control_field | Control field (Message specific). |
| uint8_t | log_message_interval | Logbase2 of the message period. |

◆ **ptp_message_sync_t**

| | | |
|----------------------------|------------------|---|
| struct ptp_message_sync_t | | |
| Sync Message Type (0x00). | | |
| Data Fields | | |
| ptp_time_t | origin_timestamp | Timestamp when the message was transmitted. |

◆ **ptp_message_pdelay_req_t**

| | | |
|---------------------------------|------------------|---|
| struct ptp_message_pdelay_req_t | | |
| PDelay_req Message Type (0x02). | | |
| Data Fields | | |
| ptp_time_t | origin_timestamp | Timestamp when the message was transmitted. |
| uint8_t | reserved[10] | |

◆ **ptp_message_pdelay_resp_t**

| | | |
|----------------------------------|--------------------------|---|
| struct ptp_message_pdelay_resp_t | | |
| PDelay_resp Message Type (0x03). | | |
| Data Fields | | |
| ptp_time_t | origin_timestamp | Timestamp when the message was transmitted. |
| uint8_t | source_port_identity[10] | Clock ID + sourcePortId. |

◆ **ptp_message_announce_t**

| | | |
|--|--|--|
| | | |
|--|--|--|

| struct ptp_message_announce_t | | |
|-------------------------------|--------------------|---|
| Announce Message Type (0x0B). | | |
| Data Fields | | |
| ptp_time_t | origin_timestamp | Timestamp when the message was transmitted. |
| uint16_t | current_utc_offset | Offset from UTC in seconds. |
| uint8_t | reserved | |
| ptp_clock_properties_t | clock_properties | Clock properties used in Best Master Clock Algorithm. |
| uint8_t | clock_id[8] | Clock ID that the message was sent from. |
| uint16_t | steps_removed | The number of boundary clocks between the clock and the grand master clock. |
| uint8_t | time_source | The source of time (Eg. INTERNAL_OSC). |

◆ ptp_message_signaling_t

| struct ptp_message_signaling_t | | |
|--------------------------------|--------------------|----------------------------------|
| Signaling Message Type (0x0C). | | |
| Data Fields | | |
| uint8_t | target_clock_id[8] | ID of the target PTP instance. |
| uint16_t | target_port_id | Port of the target PTP instance. |

◆ ptp_message_management_t

| struct ptp_message_management_t | | |
|---------------------------------|------------------------|---|
| Management Message Type (0x0D). | | |
| Data Fields | | |
| uint8_t | target_clock_id[8] | ID of the target PTP instance. |
| uint16_t | target_port_id | Port of the target PTP instance. |
| uint8_t | starting_boundary_hops | The starting number of times the message is retransmitted by boundary clocks. |
| uint8_t | boundary_hops | The remaining number of retransmissions. |
| uint8_t | action | The action that will be taken on reception of the message. |
| uint8_t | reserved | |

◆ ptp_message_t

| | | |
|-----------------------|-------------|------------------------|
| struct ptp_message_t | | |
| Complete PTP Message. | | |
| Data Fields | | |
| ptp_message_header_t | header | Header of the message. |
| union ptp_message_t | __unnamed__ | |

◆ ptp_callback_args_t

| | | |
|-------------------------------------|---------------------|---|
| struct ptp_callback_args_t | | |
| Arguments passed to p_ptp_callback. | | |
| Data Fields | | |
| ptp_event_t | event | Event that caused the callback. |
| ptp_message_t const * | p_message | The message received (PTP message fields will be little endian). |
| uint8_t const * | p_tlv_data | Start of TLV data (TLV data will be big endian). |
| uint16_t | tlv_data_size | Total bytes of TLV data. |
| uint32_t | pulse_timer_channel | Channel of the pulse timer that caused ptp_event_t::PTP_EVENT_PULSE_TIMER_MINT_RISING_EDGE . |
| void const * | p_context | Context value set in the configuration. |

◆ ptp_pulse_timer_common_cfg_t

| | | |
|--|-----------------------------|---|
| struct ptp_pulse_timer_common_cfg_t | | |
| Structure for configuring the IPLS IRQ settings that are common to all pulse timer channels. | | |
| Data Fields | | |
| ptp_enable_t | ipls_rising_irq | Enable the IPLS IRQ when a rising edge is detected. |
| ptp_enable_t | ipls_falling_irq | Enable the IPLS IRQ when a falling edge is detected. |
| ptp_enable_t | ipls_rising_irq_auto_clear | Auto disable the rising edge IRQ after the first rising edge is detected. |
| ptp_enable_t | ipls_falling_irq_auto_clear | Auto disable the falling edge IRQ after the first falling edge is detected. |

◆ ptp_pulse_timer_cfg_t

| | | |
|------------------------------|--|--|
| struct ptp_pulse_timer_cfg_t | | |
|------------------------------|--|--|

Structure for configuring a pulse timer channel.

| Data Fields | | |
|----------------------------|-------------------------------|---|
| ptp_time_t | start_time | The exact time when the timer will start. |
| uint32_t | period | The period of the timer in nanoseconds. |
| uint32_t | pulse | The pulse width of the timer in nanoseconds. |
| ptp_enable_t | mint_rising_irq | Enable MINT rising edge IRQ. |
| ptp_enable_t | ipls_rising_event | Enable IPLS rising edge ELC event. |
| ptp_enable_t | ipls_falling_event | Enable IPLS falling edge ELC event. |
| ptp_enable_t | ipls_rising_event_auto_clear | Enable IPLS rising edge ELC event. |
| ptp_enable_t | ipls_falling_event_auto_clear | Enable IPLS falling edge ELC event. |
| ptp_enable_t | ipls_irq_source | Enable using this channel as a source for the IPLS IRQ. |

◆ ptp_sync_state_cfg_t

| Data Fields | | |
|-------------|-----------|--|
| uint64_t | threshold | The maximum clock offset required to transition between synchronization states. |
| uint8_t | count | The number of times the clock must be above the threshold in order to transition between synchronization states. |

◆ ptp_synfp_cfg_t

| Data Fields | | |
|--|------------------------|---|
| ptp_ethernet_phy_interface_t | ethernet_phy_interface | The type of interface used to communicate with the PHY. |
| ptp_frame_format_t | frame_format | Frame format used to transport PTP messages. |
| ptp_frame_filter_mode_t | frame_filter | Frame filter mode. |

| | | |
|------------------------|-------------------------|--|
| uint8_t | clock_domain | Clock domain that the clock operates in. |
| ptp_enable_t | clock_domain_filter | Filter out messages from other clock domains. |
| ptp_message_interval_t | announce_interval | Interval for transmitting announce messages. |
| ptp_message_interval_t | sync_interval | Interval for transmitting sync messages. |
| ptp_message_interval_t | delay_req_interval | Interval for transmitting delay_req messages. |
| uint32_t | message_timeout | Timeout in milliseconds for receiving PTP messages. |
| ptp_clock_properties_t | clock_properties | Clock properties used in announce messages. |
| uint8_t | timesource | TimeSource field used in announce messages. |
| uint8_t * | p_multicast_addr_filter | Filter for multicast packets. |
| struct ptp_synfp_cfg_t | ether | Valid if frame_format is set to Ethernet II or IEEE 802.3. |
| struct ptp_synfp_cfg_t | ipv4 | Valid if frame_format is set to IPV4_UDP. |

◆ ptp_synfp_cfg_t.ether

| | | |
|--|--------------------|---|
| struct ptp_synfp_cfg_t.ether | | |
| Valid if frame_format is set to Ethernet II or IEEE 802.3. | | |
| Data Fields | | |
| uint8_t * | p_primary_mac_addr | The MAC address to send primary messages. |
| uint8_t * | p_pdelay_mac_addr | The MAC address to send p2p messages. |

◆ ptp_synfp_cfg_t.ipv4

| | | |
|---|-----------------|--|
| struct ptp_synfp_cfg_t.ipv4 | | |
| Valid if frame_format is set to IPV4_UDP. | | |
| Data Fields | | |
| uint32_t | primary_ip_addr | The IP address to send primary messages. |
| uint32_t | pdelay_ip_addr | The IP address to send pdelay messages. |
| uint8_t | event_tos | Type of service for event messages. |

| | | |
|----------|------------------|---------------------------------------|
| uint8_t | general_tos | Type of service for general messages. |
| uint8_t | primary_ttl | Time to live for primary messages. |
| uint8_t | pdelay_ttl | Time to live for pdelay messages. |
| uint16_t | event_udp_port | The port to send event messages. |
| uint16_t | general_udp_port | The port to send general messages. |

◆ ptp_stca_cfg_t

| | | |
|--------------------------------------|---------------------------|---|
| struct ptp_stca_cfg_t | | |
| Configuration settings for the STCA. | | |
| Data Fields | | |
| ptp_stca_clock_freq_t | clock_freq | Select the clock frequency of the STCA. |
| ptp_stca_clock_sel_t | clock_sel | Select the input clock to the STCA. |
| ptp_clock_correction_mode_t | clock_correction_mode | Select the clock correction mode. |
| uint8_t | gradient_worst10_interval | Select the interval for the gradient worst10 acquisition. |
| ptp_sync_state_cfg_t | sync_threshold | Configure the synchronization threshold. |
| ptp_sync_state_cfg_t | sync_loss_threshold | Configure the SYNchronization lost threshold. |

◆ ptp_cfg_t

| | | |
|---|-------|---------------------------------------|
| struct ptp_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| ptp_synfp_cfg_t | synfp | Configuration settings for the SYNFP. |
| | | |
| ptp_stca_cfg_t | stca | Configuration settings for the STCA. |
| | | |

| | |
|---------------------------------|---|
| <code>edmac_instance_t *</code> | p_edmac_instance |
| | Pointer to PTP edmac instance. |
| <code>uint16_t</code> | buffer_size |
| | The maximum Ethernet packet size that can be transmitted or received. |
| <code>uint8_t **</code> | p_rx_buffers |
| | Pointer to list of buffers used to receive PTP packets. |
| <code>uint8_t **</code> | p_tx_buffers |
| | Pointer to list of buffers used to transmit PTP packets. |
| <code>IRQn_Type</code> | mint_irq |
| | Interrupt number for PTP event IRQ. |
| <code>IRQn_Type</code> | ipls_irq |
| | Interrupt number for PTP timer IRQ. |
| <code>uint8_t</code> | mint_ipl |
| | Interrupt priority of the PTP event IRQ. |
| <code>uint8_t</code> | ipls_ipl |
| | Interrupt priority of the PTP timer IRQ. |
| <code>void(*</code> | p_callback)(ptp_callback_args_t *p_args) |
| Field Documentation | |

◆ **p_callback**

```
void(* ptp_cfg_t::p_callback) (ptp_callback_args_t *p_args)
```

Callback for handling received PTP events.

◆ **ptp_api_t**

```
struct ptp_api_t
```

Timer API structure. General timer functions implemented at the HAL layer follow this API.

Data Fields

| | |
|--------------|--|
| fsp_err_t(*) | open)(ptp_ctrl_t *const p_ctrl, ptp_cfg_t const *const p_cfg) |

Field Documentation

◆ open

`fsp_err_t(* ptp_api_t::open) (ptp_ctrl_t *const p_ctrl, ptp_cfg_t const *const p_cfg)`

Initial configuration.

Note

To reconfigure after calling this function, call `ptp_api_t::close` first.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to pin configuration structure. |

◆ macAddrSet

`fsp_err_t(* ptp_api_t::macAddrSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_mac_addr)`

Set the MAC address for the PTP.

Parameters

| | | |
|------|------------------------|------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_hw_addr</code> | Pointer to the 6 byte MAC address. |

◆ **ipAddrSet**

```
fsp_err_t(* ptp_api_t::ipAddrSet) (ptp_ctrl_t *const p_ctrl, uint32_t ip_addr)
```

Set the IP address for the PTP.

Parameters

| | | |
|------|---------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | ip_addr | 32 bit IPv4 address of the PTP. |

◆ **localClockIdSet**

```
fsp_err_t(* ptp_api_t::localClockIdSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id)
```

Set the local clock ID (Usually based off of the PTP MAC address).

Parameters

| | | |
|------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_clock_id | Pointer to 8 byte clock ID. |

◆ **masterClockIdSet**

```
fsp_err_t(* ptp_api_t::masterClockIdSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id, uint16_t port_id)
```

Set the master clock ID (Usually obtained from previously received announce message).

Parameters

| | | |
|------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_clock_id | Pointer to 8 byte clock ID. |
| [in] | port_id | The port on the master clock. |

◆ **messageFlagsSet**

```
fsp_err_t(* ptp_api_t::messageFlagsSet) (ptp_ctrl_t *const p_ctrl, ptp_message_type_t message_type, ptp_message_flags_t flags)
```

Set the flags field for the given message type.

Parameters

| | | |
|------|--------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | message_type | The message type. |
| [in] | flags | Flags to set. |

◆ **currentUtcOffsetSet**

```
fsp_err_t(* ptp_api_t::currentUtcOffsetSet) (ptp_ctrl_t *const p_ctrl, uint16_t offset)
```

Sets the offsetFromMaster field in announce messages.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | offset | New currentUtcOffset value. |

◆ **portStateSet**

```
fsp_err_t(* ptp_api_t::portStateSet) (ptp_ctrl_t *const p_ctrl, uint32_t state)
```

Transition to a new clock state.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | state | The state to transition into. |

◆ **messageSend**

```
fsp_err_t(* ptp_api_t::messageSend) (ptp_ctrl_t *const p_ctrl, ptp_message_t const *const p_message, uint8_t const *const p_tlv_data, uint16_t tlv_data_size)
```

Send a PTP message. Appropriate fields in the PTP message will be endian swapped. The application must ensure that the TLV data is in big endian format.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_message | Pointer to a PTP message. |
| [in] | p_tlv_data | Pointer to TLV data that is appended to the end of the PTP message. |
| [in] | tlv_data_size | Size of the TLV data in bytes. |

◆ **localClockValueSet**

```
fsp_err_t(* ptp_api_t::localClockValueSet) (ptp_ctrl_t *const p_ctrl, ptp_time_t const *const p_time)
```

Set the local clock value.

Parameters

| | | |
|------|--------|----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_time | Pointer to the new time setting. |

◆ **localClockValueGet**

```
fsp_err_t(* ptp_api_t::localClockValueGet) (ptp_ctrl_t *const p_ctrl, ptp_time_t *const p_time)
```

Get the local clock value.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_time | Pointer to store the current time setting. |

◆ **pulseTimerCommonConfig**

```
fsp_err_t(* ptp_api_t::pulseTimerCommonConfig) (ptp_ctrl_t *const p_ctrl, ptp_pulse_timer_common_cfg_t *p_timer_cfg)
```

Configuration that is common to all of the pulse timers.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_timer_cfg | Pointer to the pulse timer common configuration. |

◆ **pulseTimerEnable**

```
fsp_err_t(* ptp_api_t::pulseTimerEnable) (ptp_ctrl_t *const p_ctrl, uint32_t channel,
ptp_pulse_timer_cfg_t *const p_timer_cfg)
```

Setup a pulse timer.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | channel | The pulse timer channel to setup. |
| [in] | p_timer_cfg | Pointer to the pulse timer configuration. |

◆ **pulseTimerDisable**

```
fsp_err_t(* ptp_api_t::pulseTimerDisable) (ptp_ctrl_t *const p_ctrl, uint32_t channel)
```

Stop a pulse timer.

Parameters

| | | |
|------|---------|----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | channel | The pulse timer channel to stop. |

◆ **close**

```
fsp_err_t(* ptp_api_t::close) (ptp_ctrl_t *const p_ctrl)
```

Stop PTP operation.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **ptp_instance_t**

```
struct ptp_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| ptp_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| ptp_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| ptp_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `ptp_ctrl_field_t`

```
typedef enum PTP_PACKED e_ptp_ctrl_field ptp_ctrl_field_t
```

The control field for PTP message header.

◆ `ptp_message_delay_req_t`

```
typedef ptp_message_sync_t ptp_message_delay_req_t
```

Delay_req Message Type (0x01).

◆ `ptp_message_follow_up_t`

```
typedef ptp_message_sync_t ptp_message_follow_up_t
```

Follow_up Message Type (0x08).

◆ `ptp_message_delay_resp_t`

```
typedef ptp_message_pdelay_resp_t ptp_message_delay_resp_t
```

Delay_resp Message Type (0x09).

◆ `ptp_message_pdelay_resp_follow_up_t`

```
typedef ptp_message_delay_resp_t ptp_message_pdelay_resp_follow_up_t
```

PDelay_resp_follow_up Message Type (0x0A).

Enumeration Type Documentation

◆ **ptp_message_type_t**

| enum <code>ptp_message_type_t</code> | |
|---|-------------------------------------|
| Standard PTP message types. | |
| Enumerator | |
| <code>PTP_MESSAGE_TYPE_SYNC</code> | Sync Message Type. |
| <code>PTP_MESSAGE_TYPE_DELAY_REQ</code> | Delay_req Message Type. |
| <code>PTP_MESSAGE_TYPE_PDELAY_REQ</code> | PDelay_req Message Type. |
| <code>PTP_MESSAGE_TYPE_PDELAY_RESP</code> | PDelay_resp Message Type. |
| <code>PTP_MESSAGE_TYPE_FOLLOW_UP</code> | Follow_up Message Type. |
| <code>PTP_MESSAGE_TYPE_DELAY_RESP</code> | Delay_resp Message Type. |
| <code>PTP_MESSAGE_TYPE_PDELAY_RESP_FOLLOW_UP</code> | PDelay_resp_follow_up Message Type. |
| <code>PTP_MESSAGE_TYPE_ANNOUNCE</code> | Announce Message Type. |
| <code>PTP_MESSAGE_TYPE_SIGNALING</code> | Signaling Message Type. |
| <code>PTP_MESSAGE_TYPE_MANAGEMENT</code> | Management Message Type. |

◆ **ptp_port_state_t**

| enum ptp_port_state_t | |
|--|---|
| Possible states that the PTP instance can be in. | |
| Enumerator | |
| PTP_PORT_STATE_GENERATE_ANNOUNCE | Generate Announce Messages. |
| PTP_PORT_STATE_GENERATE_SYNC | Generate Sync Messages. |
| PTP_PORT_STATE_GENERATE_DELAY_REQ | Generate Delay_req Messages. |
| PTP_PORT_STATE_GENERATE_PDELAY_REQ | Generate PDelay_req Messages. |
| PTP_PORT_STATE_RECEIVE_ANNOUNCE | Receive Announce Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_SYNC | Receive Sync Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_FOLLOW_UP | Receive Follow_up Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_DELAY_REQ | Receive Delay_req Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_DELAY_RESP | Receive Delay_resp Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_PDELAY_REQ | Receive PDelay_req Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_PDELAY_RESP | Receive PDelay_resp Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_PDELAY_RESP_FOLLOW_UP | Receive PDelay_resp_follow_up Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_MANAGEMENT | Receive Management Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_RECEIVE_SIGNALING | Receive Signaling Messages from ptp_cfg_t::p_callback . |
| PTP_PORT_STATE_PROCESS_SYNC | Enable Sync Message processing. |
| PTP_PORT_STATE_PROCESS_FOLLOW_UP | Enable Follow_up Message processing. |
| | |

| | |
|--|--|
| PTP_PORT_STATE_PROCESS_DELAY_REQ | Enable Delay_req Message processing. |
| PTP_PORT_STATE_PROCESS_DELAY_RESP | Enable Delay_resp Message processing. |
| PTP_PORT_STATE_PROCESS_PDELAY_REQ | Enable PDelay_req Message processing. |
| PTP_PORT_STATE_PROCESS_PDELAY_RESP | Enable PDelay_resp Message processing. |
| PTP_PORT_STATE_PROCESS_PDELAY_RESP_FOLLOW_UP | Enable PDelay_resp_follow_up Message processing. |
| PTP_PORT_STATE_PASSIVE | Configure the PTP instance to only receive Announce, Management, and Signaling Messages. |
| PTP_PORT_STATE_E2E_MASTER | Configure the PTP instance to operate as a E2E Master. |
| PTP_PORT_STATE_E2E_SLAVE | Configure the PTP instance to operate as a E2E Slave. |
| PTP_PORT_STATE_P2P_MASTER | Configure the PTP instance to operate as a P2P Master. |
| PTP_PORT_STATE_P2P_SLAVE | Configure the PTP instance to operate as a P2P Slave. |
| PTP_PORT_STATE_RECEIVE_ALL | Configure the PTP instance to receive all messages. |
| PTP_PORT_STATE_DISABLE | Disable all PTP message generation, processing, and reception. |

◆ ptp_clock_delay_mechanism_t

| | |
|--|-------------------------------|
| enum ptp_clock_delay_mechanism_t | |
| The mechanism used for delay messages. | |
| Enumerator | |
| PTP_CLOCK_DELAY_MECHANISM_E2E | End to end delay mechanism. |
| PTP_CLOCK_DELAY_MECHANISM_P2P | Peer to peer delay mechanism. |

◆ **ptp_frame_format_t**

| enum <code>ptp_frame_format_t</code> | |
|---|---|
| Frame formats that PTP messages can be encapsulated in. | |
| Enumerator | |
| <code>PTP_FRAME_FORMAT_ETHERII</code> | Send PTP messages using Ethernet II frames. |
| <code>PTP_FRAME_FORMAT_IEEE802_3</code> | Send PTP messages using IEEE802_3 frames. |
| <code>PTP_FRAME_FORMAT_ETHERII_IPV4_UDP</code> | Send PTP messages using Ethernet II frames with an IP and UDP header. |
| <code>PTP_FRAME_FORMAT_IEEE802_3_IPV4_UDP</code> | Send PTP messages using IEEE802.3 frames with an IP and UDP header. |

◆ **ptp_frame_filter_mode_t**

| enum <code>ptp_frame_filter_mode_t</code> | |
|--|---|
| Filter PTP messages based on destination MAC address. Messages that pass the filter will be transferred to the ETHERC EDMAC. | |
| Enumerator | |
| <code>PTP_FRAME_FILTER_MODE_EXT_PROMISCUOUS_MODE</code> | Receive all packets. |
| <code>PTP_FRAME_FILTER_MODE_UNICAST_MULTICAST</code> | Receive all unicast packets destined for the PTP and all multicast packets. |
| <code>PTP_FRAME_FILTER_MODE_UNICAST_MULTICAST_FILTERED</code> | Receive Unicast packets destined for the PTP and filter configured multicast packets. |
| <code>PTP_FRAME_FILTER_MODE_UNICAST</code> | Receive unicast packets destined for the PTP. |

◆ **ptp_stca_clock_freq_t**

| enum <code>ptp_stca_clock_freq_t</code> | |
|---|---------------------|
| STCA input clock frequency. | |
| Enumerator | |
| <code>PTP_STCA_CLOCK_FREQ_20MHZ</code> | 20 Mhz Input Clock |
| <code>PTP_STCA_CLOCK_FREQ_25MHZ</code> | 25 Mhz Input Clock |
| <code>PTP_STCA_CLOCK_FREQ_50MHZ</code> | 50 Mhz Input Clock |
| <code>PTP_STCA_CLOCK_FREQ_100MHZ</code> | 100 Mhz Input Clock |

◆ **ptp_stca_clock_sel_t**

| enum <code>ptp_stca_clock_sel_t</code> | |
|---|---|
| STCA input clock selection. | |
| Enumerator | |
| <code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_1</code> | PCLKA. |
| <code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_2</code> | PCLKA Divided by 2. |
| <code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_3</code> | PCLKA Divided by 3. |
| <code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_4</code> | PCLKA Divided by 4. |
| <code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_5</code> | PCLKA Divided by 5. |
| <code>PTP_STCA_CLOCK_SEL_PCLKA_DIV_6</code> | PCLKA Divided by 6. |
| <code>PTP_STCA_CLOCK_SEL_REF50CK0</code> | 50-MHz Reference Signal for timing in RMII mode (STCA clock frequency is 25 Mhz when REF50CK0 is used). |

◆ **ptp_message_interval_t**

| enum <code>ptp_message_interval_t</code> | |
|---|-----------------|
| Message interval for transmitting PTP messages. | |
| Enumerator | |
| <code>PTP_MESSAGE_INTERVAL_1_128</code> | 1 / 128 seconds |
| <code>PTP_MESSAGE_INTERVAL_1_64</code> | 1 / 64 seconds |
| <code>PTP_MESSAGE_INTERVAL_1_32</code> | 1 / 32 seconds |
| <code>PTP_MESSAGE_INTERVAL_1_16</code> | 1 / 16 seconds |
| <code>PTP_MESSAGE_INTERVAL_1_8</code> | 1 / 8 seconds |
| <code>PTP_MESSAGE_INTERVAL_1_4</code> | 1 / 4 seconds |
| <code>PTP_MESSAGE_INTERVAL_1_2</code> | 1 / 2 seconds |
| <code>PTP_MESSAGE_INTERVAL_1</code> | 1 seconds |
| <code>PTP_MESSAGE_INTERVAL_2</code> | 2 seconds |
| <code>PTP_MESSAGE_INTERVAL_4</code> | 4 seconds |
| <code>PTP_MESSAGE_INTERVAL_8</code> | 8 seconds |
| <code>PTP_MESSAGE_INTERVAL_16</code> | 16 seconds |
| <code>PTP_MESSAGE_INTERVAL_32</code> | 32 seconds |
| <code>PTP_MESSAGE_INTERVAL_64</code> | 64 seconds |

◆ **ptp_clock_correction_mode_t**

| enum <code>ptp_clock_correction_mode_t</code> | |
|---|--|
| Clock correction mode. | |
| Enumerator | |
| <code>PTP_CLOCK_CORRECTION_MODE1</code> | Correct the local clock using the current <code>offsetFromMaster</code> value. |
| <code>PTP_CLOCK_CORRECTION_MODE2</code> | Correct the local clock using the calculated clock gradient. |

◆ **ptp_event_t**

| enum <code>ptp_event_t</code> | |
|---|---|
| PTP events provided by <code>ptp_cfg_t::p_callback</code> . | |
| Enumerator | |
| <code>PTP_EVENT_SYNC_ACQUIRED</code> | The local clock is synchronized to the master clock. |
| <code>PTP_EVENT_SYNC_LOST</code> | The local clock is not synchronized to the master clock. |
| <code>PTP_EVENT_SYNC_MESSAGE_TIMEOUT</code> | A sync message has not been received for the configured time. |
| <code>PTP_EVENT_WORST10_ACQUIRED</code> | Gradient worst10 values has been calculated. |
| <code>PTP_EVENT_OFFSET_FROM_MASTER_UPDATED</code> | The offset from the master clock has been updated. |
| <code>PTP_EVENT_LOG_MESSAGE_INT_CHANGED</code> | The message interval was changed. |
| <code>PTP_EVENT_MEAN_PATH_DELAY_UPDATED</code> | The mean path delay has been updated. |
| <code>PTP_EVENT_DELAY_RESP_TIMEOUT</code> | A <code>delay_resp</code> has not been received for the configured time. |
| <code>PTP_EVENT_LOG_MESSAGE_INT_OUT_OF_RANGE</code> | The updated message interval is out of range. |
| <code>PTP_EVENT_DELAY_REQ_FIFO_OVERFLOW</code> | The FIFO buffer for storing information from received <code>Delay_Req</code> messages holds 32 or more entries. |
| <code>PTP_EVENT_LOOP_RECEPTION_DETECTED</code> | A packet with the same sourcePortIdentity as the local clock was received. |
| <code>PTP_EVENT_CTRL_INFO_ABNORMALITY</code> | A malformed frame was received (EDMAC, ETHERC, and EPTPC must be reset). |
| <code>PTP_EVENT_DELAY_RESP_PROCESSING_HALTED</code> | Processing of <code>delay_resp</code> messages has been halted. |
| <code>PTP_EVENT_MESSAGE_GENERATION_HALTED</code> | Generation of messages has been halted. |
| <code>PTP_EVENT_MESSAGE_RECEIVED</code> | A PTP message was received from the EDMAC. |
| <code>PTP_EVENT_MESSAGE_TRANSMIT_COMPLETE</code> | A PTP message has been transmitted. |
| | |

| | |
|--|---|
| PTP_EVENT_PULSE_TIMER_MINT_RISING_EDGE | A rising edge occurred on a pulse timer channel. |
| PTP_EVENT_PULSE_TIMER_IPLS_COMMON | A rising or falling edge occurred on any pulse timer channel. |

◆ ptp_ethernet_phy_interface_t

| | |
|-----------------------------------|--------------------------------------|
| enum ptp_ethernet_phy_interface_t | |
| The Ethernet PHY interface type. | |
| Enumerator | |
| PTP_ETHERNET_PHY_INTERFACE_MII | Media-independant interface. |
| PTP_ETHERNET_PHY_INTERFACE_RMII | Reduced media-independant interface. |

Variable Documentation

◆ e_ptp_ctrl_field

| |
|---|
| enum PTP_PACKED e_ptp_ctrl_field |
| The control field for PTP message header. |

5.3.11.8 WiFi Interface

[Interfaces](#) » [Networking](#)

Functions

WiFiReturnCode_t WiFi_On (void)
Turns on Wi-Fi. [More...](#)

WiFiReturnCode_t WiFi_Off (void)
Turns off Wi-Fi. [More...](#)

WiFiReturnCode_t WiFi_ConnectAP (const WiFiNetworkParams_t *const
pxNetworkParams)
Connects to the Wi-Fi Access Point (AP) specified in the input. [More...](#)

WiFiReturnCode_t WiFi_Disconnect (void)

Disconnects from the currently connected Access Point. [More...](#)

[WIFIReturnCode_t](#) [WIFI_Reset](#) (void)
Resets the Wi-Fi Module. [More...](#)

[WIFIReturnCode_t](#) [WIFI_SetMode](#) ([WIFIDeviceMode_t](#) xDeviceMode)
Sets the Wi-Fi mode. [More...](#)

[WIFIReturnCode_t](#) [WIFI_GetMode](#) ([WIFIDeviceMode_t](#) *pxDeviceMode)
Gets the Wi-Fi mode. [More...](#)

[WIFIReturnCode_t](#) [WIFI_NetworkAdd](#) (const [WIFINetworkProfile_t](#) *const
pxNetworkProfile, [uint16_t](#) *pusIndex)
Add a Wi-Fi Network profile. [More...](#)

[WIFIReturnCode_t](#) [WIFI_NetworkGet](#) ([WIFINetworkProfile_t](#) *pxNetworkProfile, [uint16_t](#)
usIndex)
Get a Wi-Fi network profile. [More...](#)

[WIFIReturnCode_t](#) [WIFI_NetworkDelete](#) ([uint16_t](#) usIndex)
Delete a Wi-Fi Network profile. [More...](#)

[WIFIReturnCode_t](#) [WIFI_Ping](#) ([uint8_t](#) *pucIPAddr, [uint16_t](#) usCount, [uint32_t](#)
uIntervalMS)
Ping an IP address in the network. [More...](#)

[WIFIReturnCode_t](#) [WIFI_GetIPInfo](#) ([WIFIIPConfiguration_t](#) *pxIPInfo)
Get IP configuration (IP address, NetworkMask, Gateway and DNS
server addresses). [More...](#)

[WIFIReturnCode_t](#) [WIFI_GetMAC](#) ([uint8_t](#) *pucMac)
Retrieves the Wi-Fi interface's MAC address. [More...](#)

[WIFIReturnCode_t](#) [WIFI_GetHostIP](#) (char *pcHost, [uint8_t](#) *pucIPAddr)
Retrieves the host IP address from a host name using DNS. [More...](#)

WiFiReturnCode_t **WiFi_Scan** (WiFiScanResult_t *pxBuffer, uint8_t ucNumNetworks)
Perform a Wi-Fi network Scan. [More...](#)

WiFiReturnCode_t **WiFi_StartAP** (void)
Start SoftAP mode. [More...](#)

WiFiReturnCode_t **WiFi_StopAP** (void)
Stop SoftAP mode. [More...](#)

WiFiReturnCode_t **WiFi_ConfigureAP** (const WiFiNetworkParams_t *const pxNetworkParams)
Configure SoftAP. [More...](#)

WiFiReturnCode_t **WiFi_SetPMMMode** (WiFiPMMMode_t xPMMModeType, const void *pvOptionValue)
Set the Wi-Fi power management mode. [More...](#)

WiFiReturnCode_t **WiFi_GetPMMMode** (WiFiPMMMode_t *pxPMMModeType, void *pvOptionValue)
Get the Wi-Fi power management mode. [More...](#)

WiFiReturnCode_t **WiFi_RegisterEvent** (WiFiEventType_t xEventType, WiFiEventHandler_t xHandler)
Register a Wi-Fi event Handler. [More...](#)

BaseType_t **WiFi_IsConnected** (const WiFiNetworkParams_t *pxNetworkParams)
Check if the Wi-Fi is connected and the AP configuration matches the query. [More...](#)

WiFiReturnCode_t **WiFi_StartScan** (WiFiScanConfig_t *pxScanConfig)
Start a Wi-Fi scan. [More...](#)

WiFiReturnCode_t **WiFi_GetScanResults** (const WiFiScanResult_t **pxBuffer, uint16_t *ucNumNetworks)
Get Wi-Fi scan results. It should be called only after scan is completed. Scan results are sorted in decreasing rssi order. [More...](#)

WiFiReturnCode_t [WIFI_StartConnectAP](#) (const [WIFINetworkParams_t](#) *pxNetworkParams)
Connect to the Wi-Fi Access Point (AP) specified in the input. [More...](#)

WiFiReturnCode_t [WIFI_StartDisconnect](#) (void)
Wi-Fi station disconnects from AP. [More...](#)

WiFiReturnCode_t [WIFI_GetConnectionInfo](#) ([WIFIConnectionInfo_t](#) *pxConnectionInfo)
Get Wi-Fi info of the connected AP. [More...](#)

WiFiReturnCode_t [WIFI_GetRSSI](#) (int8_t *pcRSSI)
Get the RSSI of the connected AP. [More...](#)

WiFiReturnCode_t [WIFI_GetStationList](#) ([WIFIStationInfo_t](#) *pxStationList, uint8_t *pcStationListSize)
SoftAP mode get connected station list. [More...](#)

WiFiReturnCode_t [WIFI_StartDisconnectStation](#) (uint8_t *pucMac)
AP mode disconnecting a station. [More...](#)

WiFiReturnCode_t [WIFI_SetMAC](#) (uint8_t *pucMac)
Set Wi-Fi MAC addresses. [More...](#)

WiFiReturnCode_t [WIFI_SetCountryCode](#) (const char *pcCountryCode)
Set country based configuration (including channel list, power table)
[More...](#)

WiFiReturnCode_t [WIFI_GetCountryCode](#) (char *pcCountryCode)
Get the currently configured country code. [More...](#)

WiFiReturnCode_t [WIFI_GetStatistic](#) ([WIFIStatisticInfo_t](#) *pxStats)
Get the Wi-Fi statistics. [More...](#)

WiFiReturnCode_t [WIFI_GetCapability](#) ([WIFICapabilityInfo_t](#) *pxCaps)

Get the Wi-Fi capability. [More...](#)

Detailed Description

Interface for common WiFi APIs.

Note

This API has been moved over from the deprecated AWS `iot_wifi` API. It may not fully conform to FSP standards.

Data Structures

struct [WIFIWEPKey_t](#)

struct [WIFIWPA passphrase_t](#)

struct [WIFINetworkParams_t](#)

struct [WIFIScanConfig_t](#)

struct [WIFIScanResult_t](#)

enum [WIFIBandwidth_t](#)

Data Structure Documentation

◆ [WIFIWEPKey_t](#)

struct [WIFIWEPKey_t](#)

| | | |
|--|--------------------------------|--------------------------------------|
| Wi-Fi WEP keys (64- and 128-bit keys only) | | |
| Data Fields | | |
| char | cKey[wificonfigMAX_WEPKEY_LEN] | WEP key (binary array, not C-string) |
| uint8_t | ucLength | Key length. |

◆ WIFIWPA passphrase_t

| | | |
|-----------------------------|---|--|
| struct WIFIWPA passphrase_t | | |
| Wi-Fi WPA/WPA2 passphrase | | |
| Data Fields | | |
| char | cPassphrase[wificonfigMAX_PASSPHRASE_LEN] | WPA passphrase (binary array, not C-string) |
| uint8_t | ucLength | Passphrase length (must be between 8 and 64 inclusive) |

◆ WIFINetworkParams_t

| | | |
|--|--------------------------------|--|
| struct WIFINetworkParams_t | | |
| Parameters passed to the WIFI_ConnectAP API for connection | | |
| Data Fields | | |
| uint8_t | ucSSID[wificonfigMAX_SSID_LEN] | SSID of the Wi-Fi network (binary array, not C-string) |
| uint8_t | ucSSIDLength | SSID length. |
| WIFISecurity_t | xSecurity | Wi-Fi Security. |
| union WIFINetworkParams_t | xPassword | |
| uint8_t | ucDefaultWEPKeyIndex | Default WEP key index. |
| uint8_t | ucChannel | Channel number. |

◆ WIFIScanConfig_t

| | | |
|--------------------------|--------------------------------|---|
| struct WIFIScanConfig_t | | |
| Wi-Fi scan configuration | | |
| Data Fields | | |
| uint8_t | ucSSID[wificonfigMAX_SSID_LEN] | SSID for targeted scan (binary array, not C-string) |
| uint8_t | ucSSIDLength | SSID length, 0 if broadcast scan. |
| uint8_t | ucChannel | Channel to scan (0 means all channels) |

◆ WIFIScanResult_t

| struct WIFIScanResult_t | | |
|-------------------------|----------------------------------|---|
| Wi-Fi scan results | | |
| Data Fields | | |
| uint8_t | ucSSID[wificonfigMAX_SSID_LEN] | SSID of the Wi-Fi network (binary array, not C-string) |
| uint8_t | ucSSIDLength | SSID length. |
| uint8_t | ucBSSID[wificonfigMAX_BSSID_LEN] | BSSID of the Wi-Fi network (binary array, not C-string) |
| WIFISecurity_t | xSecurity | Security type of the Wi-Fi network. |
| int8_t | cRSSI | Signal strength of the Wi-Fi network. |
| uint8_t | ucChannel | Channel of the Wi-Fi network. |

◆ WIFIStationInfo_t

| struct WIFIStationInfo_t | | |
|-------------------------------------|--------------------------------|-------------------------------|
| Wi-Fi SoftAP connected station info | | |
| Data Fields | | |
| uint8_t | ucMAC[wificonfigMAX_BSSID_LEN] | MAC address of Wi-Fi station. |

◆ WIFINetworkProfile_t

| struct WIFINetworkProfile_t | | |
|--|---|--|
| Wi-Fi network parameters passed to the WIFI_NetworkAdd API | | |
| Data Fields | | |
| uint8_t | ucSSID[wificonfigMAX_SSID_LEN] | SSID of the Wi-Fi network to join with a NULL termination. |
| uint8_t | ucSSIDLength | SSID length not including NULL termination. |
| uint8_t | ucBSSID[wificonfigMAX_BSSID_LEN] | BSSID of the Wi-Fi network. |
| char | cPassword[wificonfigMAX_PASSPHRASE_LEN] | Password needed to join the AP. |
| uint8_t | ucPasswordLength | Password length not including null termination. |
| WIFISecurity_t | xSecurity | Wi-Fi Security. See also WIFISecurity_t |

◆ **WIFIIPAddress_t**

| | | |
|---------------------------------|-----------------------|--|
| struct WIFIIPAddress_t | | |
| Wi-Fi station IP address format | | |
| Data Fields | | |
| WIFIIPAddressType_t | xType | IP address type (only eWiFiIPAddressTypeV4 is currently supported) |
| uint32_t | uAddress[IPV6_LENGTH] | IP address in binary form, use inet_ntop/inet_pton for conversion. |

◆ **WIFIIPConfiguration_t**

| | | |
|------------------------------|------------|-------------------------------|
| struct WIFIIPConfiguration_t | | |
| IP address configuration | | |
| Data Fields | | |
| WIFIIPAddress_t | xIPAddress | IP address. |
| WIFIIPAddress_t | xNetMask | Network mask. |
| WIFIIPAddress_t | xGateway | Gateway IP address. |
| WIFIIPAddress_t | xDns1 | First DNS server IP address. |
| WIFIIPAddress_t | xDns2 | Second DNS server IP address. |

◆ **WiFiConnectionInfo_t**

| | | |
|--------------------------------|----------------------------------|---|
| struct WiFiConnectionInfo_t | | |
| Wi-Fi info of the connected AP | | |
| Data Fields | | |
| uint8_t | ucSSID[wificonfigMAX_SSID_LEN] | SSID of the Wi-Fi network (binary array, not C-string) |
| uint8_t | ucSSIDLength | SSID length. |
| uint8_t | ucBSSID[wificonfigMAX_BSSID_LEN] | BSSID of the Wi-Fi network (binary array, not C-string) |
| WiFiSecurity_t | xSecurity | Wi-Fi Security. |
| uint8_t | ucChannel | Channel info. |

◆ **WiFiEventInfoReady_t**

| | | |
|----------------------------------|--|--|
| struct WiFiEventInfoReady_t | | |
| Wi-Fi event info for WI-FI ready | | |

◆ **WiFiEventInfoScanDone_t**

| | | |
|--------------------------------|--|--|
| struct WiFiEventInfoScanDone_t | | |
|--------------------------------|--|--|

| |
|--------------------------------|
| Wi-Fi event info for scan done |
|--------------------------------|

◆ WiFiEventInfoConnected_t

| |
|---------------------------------|
| struct WiFiEventInfoConnected_t |
|---------------------------------|

| |
|--|
| Wi-Fi event info for station connected to AP |
|--|

◆ WiFiEventInfoDisconnected_t

| |
|------------------------------------|
| struct WiFiEventInfoDisconnected_t |
|------------------------------------|

| |
|---|
| Wi-Fi event info for station disconnected from AP |
|---|

| | | |
|-------------|--|--|
| Data Fields | | |
|-------------|--|--|

| | | |
|--------------|---------|--|
| WiFiReason_t | xReason | Reason code for station disconnection. |
|--------------|---------|--|

◆ WiFiEventInfoConnectionFailed_t

| |
|--|
| struct WiFiEventInfoConnectionFailed_t |
|--|

| |
|---|
| Wi-Fi event info for station connection failure |
|---|

| | | |
|-------------|--|--|
| Data Fields | | |
|-------------|--|--|

| | | |
|--------------|---------|-------------------------------------|
| WiFiReason_t | xReason | Reason code for connection failure. |
|--------------|---------|-------------------------------------|

◆ WiFiEventInfoIPReady_t

| |
|-------------------------------|
| struct WiFiEventInfoIPReady_t |
|-------------------------------|

| |
|-------------------------------|
| Wi-Fi event info for IP ready |
|-------------------------------|

| | | |
|-------------|--|--|
| Data Fields | | |
|-------------|--|--|

| | | |
|-----------------|------------|-------------------------------|
| WiFiIPAddress_t | xIPAddress | Station IP address from DHCP. |
|-----------------|------------|-------------------------------|

◆ WiFiEventInfoAPStateChanged_t

| |
|--------------------------------------|
| struct WiFiEventInfoAPStateChanged_t |
|--------------------------------------|

| |
|--------------------------------------|
| Wi-Fi event info for AP state change |
|--------------------------------------|

| | | |
|-------------|--|--|
| Data Fields | | |
|-------------|--|--|

| | | |
|---------|---------|-----------------------------|
| uint8_t | ucState | AP state: 0 = DOWN, 1 = UP. |
|---------|---------|-----------------------------|

◆ WiFiEventInfoAPStationConnected_t

| |
|--|
| struct WiFiEventInfoAPStationConnected_t |
|--|

| |
|---|
| Wi-Fi event info for AP got a connected station |
|---|

| | | |
|-------------|--|--|
| Data Fields | | |
|-------------|--|--|

| | | |
|---------|------------------------------------|-----------------------------------|
| uint8_t | ucMac[wificonfigMAX_BSSID_LEN] | MAC address of connected station. |
|---------|------------------------------------|-----------------------------------|

◆ **WiFiEventInfoAPStationDisconnected_t**

| | | |
|--|------------------------------------|--------------------------------------|
| struct WiFiEventInfoAPStationDisconnected_t | | |
| Wi-Fi event info for AP got a disconnected station | | |
| Data Fields | | |
| uint8_t | ucMac[wificonfigMAX_BSSID_LEN] | MAC address of disconnected station. |
| WIFIRReason_t | xReason | Reason code for the disconnection. |

◆ **WiFiEventInfoRxDone_t**

| | | |
|--|----------|------------------------------------|
| struct WiFiEventInfoRxDone_t | | |
| Wi-Fi event info for receiving a frame in monitor mode (or normal mode with RX filter) | | |
| Data Fields | | |
| uint8_t * | pucData | Data buffer of received raw frame. |
| uint32_t | ulLength | Length of the raw frame. |

◆ **WiFiEventInfoTxDone_t**

| | | |
|--|--|--|
| struct WiFiEventInfoTxDone_t | | |
| Wi-Fi event info for finishing transmitting an injection frame | | |

◆ **WIFIEvent_t**

| | | |
|-------------------------------------|--|--|
| struct WIFIEvent_t | | |
| Wi-Fi combined event data structure | | |

◆ **WIFIStatisticInfo_t**

| | | |
|----------------------------|-------------------|--|
| struct WIFIStatisticInfo_t | | |
| Wi-Fi Statistic info | | |
| Data Fields | | |
| uint32_t | ulTxSuccessCount | Number of TX successes, 0 if unavailable. |
| uint32_t | ulTxRetryCount | Number of TX retries, 0 if unavailable. |
| uint32_t | ulTxFailCount | Number of TX failures, 0 if unavailable. |
| uint32_t | ulRxSuccessCount | Number of RX successes, 0 if unavailable. |
| uint32_t | ulRxCRCErrorCount | Number of RX FCS errors, 0 if unavailable. |

| | | |
|----------|-----------------|--|
| uint32_t | ulMICErrorCount | Number of MIC errors, 0 if unavailable. |
| int8_t | cNoise | Average noise level in dBm, -128 if unavailable. |
| uint16_t | usPhyRate | Maximum used PHY rate, 0 if unavailable. |
| uint16_t | usTxRate | Average used TX rate, 0 if unavailable. |
| uint16_t | usRxRate | Average used RX rate, 0 if unavailable. |
| int8_t | cRssi | Average beacon RSSI in dBm, -128 if unavailable. |
| uint8_t | ucBandwidth | Average used bandwidth, 0 if unavailable. |
| uint8_t | ucIdleTimePer | Percent of idle time, 0 if unavailable. |

◆ WIFICapabilityInfo_t

| | | |
|-----------------------------|---------------------|--|
| struct WIFICapabilityInfo_t | | |
| Wi-Fi capabilities | | |
| Data Fields | | |
| WIFIBand_t | xBand | Supported band. |
| WIFIPhyMode_t | xPhyMode | Supported PHY mode. |
| WIFIBandwidth_t | xBandwidth | Supported bandwidth. |
| uint32_t | ulMaxAggr | Max aggregation length, 0 if no aggregation support. |
| uint16_t | usSupportedFeatures | Supported features bitmap, e.g., WIFI_WPS_SUPPORTED. |

Macro Definition Documentation

◆ WIFI_WPS_SUPPORTED

| |
|---|
| #define WIFI_WPS_SUPPORTED |
| Wi-Fi lower level supported feature mask. |
| See also WIFICapabilityInfo_t . |

Typedef Documentation

◆ **WiFiEventHandler_t**

```
typedef void(* WiFiEventHandler_t) (WiFiEvent_t *xEvent)
```

Wi-Fi event handler definition.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | xEvent | - Wi-Fi event data structure. |
|------|--------|-------------------------------|

Returns

None.

Enumeration Type Documentation◆ **WiFiReturnCode_t**

```
enum WiFiReturnCode_t
```

Return code denoting API status.

Enumerator

| | |
|-------------------|----------------|
| eWiFiSuccess | Success. |
| eWiFiFailure | Failure. |
| eWiFiTimeout | Timeout. |
| eWiFiNotSupported | Not supported. |

◆ **WiFiSecurity_t**

| enum WiFiSecurity_t | |
|---------------------------|---------------------------|
| Wi-Fi Security types | |
| Enumerator | |
| eWiFiSecurityOpen | Open - No Security. |
| eWiFiSecurityWEP | WEP Security. |
| eWiFiSecurityWPA | WPA Security. |
| eWiFiSecurityWPA2 | WPA2 Security. |
| eWiFiSecurityWPA2_ent | WPA2 Enterprise Security. |
| eWiFiSecurityWPA3 | WPA3 Security. |
| eWiFiSecurityNotSupported | Unknown Security. |

◆ **WiFiDeviceMode_t**

| enum WiFiDeviceMode_t | |
|-----------------------|-----------------------------|
| Wi-Fi device modes | |
| Enumerator | |
| eWiFiModeStation | Station mode. |
| eWiFiModeAP | Access point mode. |
| eWiFiModeP2P | P2P mode. |
| eWiFiModeAPStation | AP+Station (repeater) mode. |
| eWiFiModeNotSupported | Unsupported mode. |

◆ **WIFIPMMode_t**

| enum WIFIPMMode_t | |
|-------------------------------------|----------------------|
| Wi-Fi device power management modes | |
| Enumerator | |
| eWiFiPMNormal | Normal mode. |
| eWiFiPMLowPower | Low Power mode. |
| eWiFiPMAwaysOn | Always On mode. |
| eWiFiPMNotSupported | Unsupported PM mode. |

◆ **WIFIIPAddressType_t**

| enum WIFIIPAddressType_t |
|--|
| Wi-Fi station IP address type |

◆ **WIFIReason_t**

| enum WIFIReason_t | |
|-----------------------------------|---------------------------------|
| Wi-Fi protocol reason codes | |
| Enumerator | |
| eWiFiReasonUnspecified | Unspecified error. |
| eWiFiReasonAPNotFound | Cannot find the target AP. |
| eWiFiReasonAuthExpired | Previous auth invalid. |
| eWiFiReasonAuthLeaveBSS | Deauth leaving BSS. |
| eWiFiReasonAuthFailed | All other AUTH errors. |
| eWiFiReasonAssocExpired | Disassoc due to inactivity. |
| eWiFiReasonAssocTooMany | AP is overloaded. |
| eWiFiReasonAssocPowerCapBad | Power capability unacceptable. |
| eWiFiReasonAssocSupChanBad | Supported channel unacceptable. |
| eWiFiReasonAssocFailed | |

| | |
|----------------------------------|----------------------------------|
| | All other ASSOC errors. |
| eWiFiReasonIEInvalid | Management frame IE invalid. |
| eWiFiReasonMICFailure | MIC failure detected. |
| eWiFiReason4WayTimeout | 4WAY handshake timeout |
| eWiFiReason4WayIEDiffer | 4WAY handshake IE error |
| eWiFiReason4WayFailed | All other 4WAY errors. |
| eWiFiReasonAKMPInvalid | AKMP invalid. |
| eWiFiReasonPairwiseCipherInvalid | Pairwise cipher invalid. |
| eWiFiReasonGroupCipherInvalid | Group cipher invalid. |
| eWiFiReasonRSNVersionInvalid | RSN version invalid. |
| eWiFiReasonRSNCapInvalid | RSN capability invalid. |
| eWiFiReasonGroupKeyUpdateTimeout | Group key update timeout. |
| eWiFiReasonCipherSuiteRejected | Cipher violates security policy. |
| eWiFiReason8021XAuthFailed | 802.1X auth errors |
| eWiFiReasonBeaconTimeout | Beacon timeout. |
| eWiFiReasonLinkFailed | All other link errors. |
| eWiFiReasonDHCPExpired | DHCP license expired. |
| eWiFiReasonDHCPFailed | All other DHCP errors. |

◆ **WIFIEventType_t**

| enum WIFIEventType_t | |
|---------------------------------|---|
| Wi-Fi event types | |
| Enumerator | |
| eWiFiEventReady | Wi-Fi is initialized or was reset in the lower layer. |
| eWiFiEventScanDone | Scan is finished. |
| eWiFiEventConnected | Station is connected to the AP. |
| eWiFiEventDisconnected | Station is disconnected from the AP. |
| eWiFiEventConnectionFailed | Station connection has failed. |
| eWiFiEventIPReady | DHCP is successful. |
| eWiFiEventAPStateChanged | SoftAP state changed. |
| eWiFiEventAPStationConnected | SoftAP got a new station. |
| eWiFiEventAPStationDisconnected | SoftAP lost a new station. |
| eWiFiEventWPSSuccess | WPS is completed successfully. |
| eWiFiEventWPSFailed | WPS has failed. |
| eWiFiEventWPSTimeout | WPS has timeout. |

◆ **WIFIBand_t**

| enum WIFIBand_t | |
|-----------------|--------------|
| Wi-Fi band | |
| Enumerator | |
| eWiFiBand2G | 2.4G band |
| eWiFiBand5G | 5G band |
| eWiFiBandDual | Dual band. |
| eWiFiBandMax | Unsupported. |

◆ **WIFIPhyMode_t**

| enum WIFIPhyMode_t | |
|--------------------|--------------|
| Wi-Fi PHY mode | |
| Enumerator | |
| eWiFiPhy11b | 11B |
| eWiFiPhy11g | 11G |
| eWiFiPhy11n | 11N |
| eWiFiPhy11ac | 11AC |
| eWiFiPhy11ax | 11AX |
| eWiFiPhyMax | Unsupported. |

◆ **WIFIBandwidth_t**

| enum WIFIBandwidth_t | |
|----------------------|----------------------|
| Wi-Fi bandwidth | |
| Enumerator | |
| eWiFiBW20 | 20MHz only |
| eWiFiBW40 | Max 40MHz. |
| eWiFiBW80 | Max 80MHz. |
| eWiFiBW160 | Max 80+80 or 160MHz. |
| eWiFiBWMax | Unsupported. |

Function Documentation

◆ WIFI_On()**WiFiReturnCode_t** WIFI_On (void)

Turns on Wi-Fi.

This function turns on Wi-Fi module, initializes the drivers and must be called before calling any other Wi-Fi API

Returns

[eWiFiSuccess](#) if Wi-Fi module was successfully turned on, failure code otherwise.

Turns on Wi-Fi.

This function turns on Wi-Fi module, initializes the drivers and must be called before calling any other Wi-Fi API

Returns

[eWiFiSuccess](#) if Wi-Fi module was successfully turned on, failure code otherwise.

◆ WIFI_Off()**WiFiReturnCode_t** WIFI_Off (void)

Turns off Wi-Fi.

This function turns off the Wi-Fi module. The Wi-Fi peripheral should be put in a low power or off state in this routine.

Returns

[eWiFiSuccess](#) if Wi-Fi module was successfully turned off, failure code otherwise.

Turns off Wi-Fi.

This function turns off the Wi-Fi module. The Wi-Fi peripheral should be put in a low power or off state in this routine.

Returns

[eWiFiSuccess](#) if Wi-Fi module was successfully turned off, failure code otherwise.

◆ **WIFI_ConnectAP()**

`WIFIReturnCode_t` WIFI_ConnectAP (const `WIFINetworkParams_t` *const `pxNetworkParams`)

Connects to the Wi-Fi Access Point (AP) specified in the input.

The Wi-Fi should stay connected when the same Access Point it is currently connected to is specified. Otherwise, the Wi-Fi should disconnect and connect to the new Access Point specified. If the new Access Point specified has invalid parameters, then the Wi-Fi should be disconnected.

Parameters

| | | |
|------|------------------------------|---------------------------|
| [in] | <code>pxNetworkParams</code> | Configuration to join AP. |
|------|------------------------------|---------------------------|

Returns

`eWiFiSuccess` if connection is successful, failure code otherwise.

Example

```
WIFINetworkParams_t xNetworkParams;
WIFIReturnCode_t xWifiStatus;
xNetworkParams.pcSSID = "SSID String";
xNetworkParams.ucSSIDLength = SSIDLen;
xNetworkParams.pcPassword = "Password String";
xNetworkParams.ucPasswordLength = PassLength;
xNetworkParams.xSecurity = eWiFiSecurityWPA2;
xWifiStatus = WIFI_ConnectAP( &( xNetworkParams ) );
if(xWifiStatus == eWiFiSuccess)
{
    //Connected to AP.
}
```

See also

[WIFINetworkParams_t](#)

Connects to the Wi-Fi Access Point (AP) specified in the input.

The Wi-Fi should stay connected when the same Access Point it is currently connected to is specified. Otherwise, the Wi-Fi should disconnect and connect to the new Access Point specified. If the new Access Point specified has invalid parameters, then the Wi-Fi should be disconnected.

Parameters

| | | |
|------|------------------------------|---------------------------|
| [in] | <code>pxNetworkParams</code> | Configuration to join AP. |
|------|------------------------------|---------------------------|

Returns

`eWiFiSuccess` if connection is successful, failure code otherwise.

```
WIFINetworkParams_t xNetworkParams;
WIFIReturnCode_t xWifiStatus;
```

```

xNetworkParams.pcSSID = "SSID String";
xNetworkParams.ucSSIDLength = SSIDLen;
xNetworkParams.pcPassword = "Password String";
xNetworkParams.ucPasswordLength = PassLength;
xNetworkParams.xSecurity = eWiFiSecurityWPA2;
xWifiStatus = WIFI_ConnectAP( &( xNetworkParams ) );
if(xWifiStatus == eWiFiSuccess)
{
    //Connected to AP.
}

```

See also[WIFINetworkParams_t](#)**◆ WiFi_Disconnect()****WiFiReturnCode_t** WiFi_Disconnect (void)

Disconnects from the currently connected Access Point.

Returns

[eWiFiSuccess](#) if disconnection was successful or if the device is already disconnected, failure code otherwise.

Disconnects from the currently connected Access Point.

Returns

[eWiFiSuccess](#) if disconnection was successful or if the device is already disconnected, failure code otherwise.

◆ WiFi_Reset()**WiFiReturnCode_t** WiFi_Reset (void)

Resets the Wi-Fi Module.

Returns

[eWiFiSuccess](#) if Wi-Fi module was successfully reset, failure code otherwise.

Resets the Wi-Fi Module.

Returns

[eWiFiSuccess](#) if Wi-Fi module was successfully reset, failure code otherwise.

◆ **WIFI_SetMode()**

WIFIReturnCode_t WIFI_SetMode (WIFIDeviceMode_t xDeviceMode)

Sets the Wi-Fi mode.

Parameters

| | | |
|------|-------------|---|
| [in] | xDeviceMode | - Mode of the device Station / Access Point /P2P. |
|------|-------------|---|

Example

```
WIFIReturnCode_t xWifiStatus;
xWifiStatus = WIFI_SetMode(eWiFiModeStation);
if(xWifiStatus == eWiFiSuccess)
{
    //device Set to station mode
}
```

Returns

eWiFiSuccess if Wi-Fi mode was set successfully, failure code otherwise.

◆ **WIFI_GetMode()**

WIFIReturnCode_t WIFI_GetMode (WIFIDeviceMode_t* pxDeviceMode)

Gets the Wi-Fi mode.

Parameters

| | | |
|-------|--------------|---|
| [out] | pxDeviceMode | - return mode Station / Access Point /P2P |
|-------|--------------|---|

Example

```
WIFIReturnCode_t xWifiStatus;
WIFIDeviceMode_t xDeviceMode;
xWifiStatus = WIFI_GetMode(&xDeviceMode);
if(xWifiStatus == eWiFiSuccess)
{
    //device mode is xDeviceMode
}
```

Returns

eWiFiSuccess if Wi-Fi mode was successfully retrieved, failure code otherwise.

◆ WiFi_NetworkAdd()

```
WiFiReturnCode_t WiFi_NetworkAdd ( const WiFiNetworkProfile_t *const pxNetworkProfile, uint16_t * pusIndex )
```

Add a Wi-Fi Network profile.

Adds a Wi-fi network to the network list in Non Volatile memory.

Parameters

| | | |
|-------|------------------|------------------------------------|
| [in] | pxNetworkProfile | - Network profile parameters |
| [out] | pusIndex | - Network profile index in storage |

Returns

Index of the profile storage on success, or failure return code on failure.

Example

```
WiFiNetworkProfile_t xNetworkProfile = {0};
WiFiReturnCode_t xWiFiStatus;
uint16_t usIndex;
strncpy( xNetworkProfile.cSSID, "SSID_Name", SSIDLen);
xNetworkProfile.ucSSIDLength = SSIDLen;
strncpy( xNetworkProfile.cPassword, "PASSWORD",PASSLen );
xNetworkProfile.ucPasswordLength = PASSLen;
xNetworkProfile.xSecurity = eWiFiSecurityWPA2;
WiFi_NetworkAdd( &xNetworkProfile, &usIndex );
```

◆ WiFi_NetworkGet()

```
WiFiReturnCode_t WiFi_NetworkGet ( WiFiNetworkProfile_t* pxNetworkProfile, uint16_t usIndex )
```

Get a Wi-Fi network profile.

Gets the Wi-Fi network parameters at the given index from network list in non-volatile memory.

Note

The `WiFiNetworkProfile_t` data returned must have the the SSID and Password lengths specified as the length without a null terminator.

Parameters

| | | |
|-------|------------------|---|
| [out] | pxNetworkProfile | - pointer to return network profile parameters |
| [in] | usIndex | - Index of the network profile, must be between 0 to wificonfigMAX_NETWORK_PROFILES |

Returns

`eWiFiSuccess` if the network profile was successfully retrieved, failure code otherwise.

See also

`WiFiNetworkProfile_t`

Example

```
WiFiNetworkProfile_t xNetworkProfile = {0};
uint16_t usIndex = 3; //Get profile stored at index 3.
WiFi_NetworkGet( &xNetworkProfile, usIndex );
```

◆ WiFi_NetworkDelete()

```
WiFiReturnCode_t WiFi_NetworkDelete ( uint16_t usIndex)
```

Delete a Wi-Fi Network profile.

Deletes the Wi-Fi network profile from the network profile list at given index in non-volatile memory

Parameters

| | | |
|------|---------|--|
| [in] | usIndex | - Index of the network profile, must be between 0 to wificonfigMAX_NETWORK_PROFILES. |
|------|---------|--|

If wificonfigMAX_NETWORK_PROFILES is the index, then all network profiles will be deleted.

Returns

[eWiFiSuccess](#) if successful, failure code otherwise. If successful, the interface IP address is copied into the IP address buffer.

Example

```
uint16_t usIndex = 2; //Delete profile at index 2
WiFi_NetworkDelete( usIndex );
```

◆ **WiFi_Ping()**

```
WiFiReturnCode_t WiFi_Ping ( uint8_t* pucIPAddr, uint16_t usCount, uint32_t ullIntervalMS )
```

Ping an IP address in the network.

Parameters

| | | |
|------|---------------|---|
| [in] | pucIPAddr | IP Address array to ping. |
| [in] | usCount | Number of times to ping |
| [in] | ullIntervalMS | Interval in mili-seconds for ping operation |

Returns

[eWiFiSuccess](#) if ping was successful, other failure code otherwise.

Ping an IP address in the network.

Parameters

| | | |
|------|---------------|---|
| [in] | pucIPAddr | IP Address array to ping. |
| [in] | usCount | Number of times to ping |
| [in] | ullIntervalMS | Interval in milliseconds for ping operation |

Returns

[eWiFiSuccess](#) if ping was successful, other failure code otherwise.

◆ **WiFi_GetIPInfo()**

```
WiFiReturnCode_t WiFi_GetIPInfo ( WiFiIPConfiguration_t* pxIPInfo)
```

Get IP configuration (IP address, NetworkMask, Gateway and DNS server addresses).

Parameters

| | | |
|-------|----------|-----------------------------|
| [out] | pxIPInfo | - Current IP configuration. |
|-------|----------|-----------------------------|

Returns

[eWiFiSuccess](#) if successful and IP Address buffer has the interface's IP address, failure code otherwise.

Example

```
WiFiIPConfiguration_t xIPInfo;
WiFi_GetIPInfo( &xIPInfo );
```

This is a synchronous call.

Parameters

| | | |
|-------|----------|-----------------------------|
| [out] | pxIPInfo | - Current IP configuration. |
|-------|----------|-----------------------------|

Returns

eWiFiSuccess if connection info was got successfully, failure code otherwise.

Parameters

| | | |
|-------|----------|-----------------------------|
| [out] | pxIPInfo | - Current IP configuration. |
|-------|----------|-----------------------------|

Returns

eWiFiSuccess if successful and IP Address buffer has the interface's IP address, failure code otherwise.

Example

```
WiFiIPConfiguration_t xIPInfo;
WiFi_GetIPInfo( &xIPInfo );
```

This is a synchronous call.

Parameters

| | | |
|-------|----------|-----------------------------|
| [out] | pxIPInfo | - Current IP configuration. |
|-------|----------|-----------------------------|

Returns

eWiFiSuccess if connection info was got successfully, failure code otherwise.

Parameters

| | | |
|-------|----------|-----------------------------|
| [out] | pxIPInfo | - Current IP configuration. |
|-------|----------|-----------------------------|

Returns

eWiFiSuccess if successful and IP Address buffer has the interface's IP address, failure code otherwise.

Example

```
WiFiIPConfiguration_t xIPInfo;
WiFi_GetIPInfo( &xIPInfo );
```

◆ **WIFI_GetMAC()**

```
WIFIReturnCode_t WIFI_GetMAC ( uint8_t* pucMac)
```

Retrieves the Wi-Fi interface's MAC address.

Parameters

| | | |
|-------|--------|-----------------------------------|
| [out] | pucMac | MAC Address buffer sized 6 bytes. |
|-------|--------|-----------------------------------|

Example

```
uint8_t ucMacAddressVal[ wificonfigMAX_BSSID_LEN ];
WIFI_GetMAC( &ucMacAddressVal[0] );
```

Returns

eWiFiSuccess if the MAC address was successfully retrieved, failure code otherwise. The returned MAC address must be 6 consecutive bytes with no delimiters.

Retrieves the Wi-Fi interface's MAC address.

Parameters

| | | |
|-------|--------|-----------------------------------|
| [out] | pucMac | MAC Address buffer sized 6 bytes. |
|-------|--------|-----------------------------------|

```
uint8_t ucMacAddressVal[ wificonfigMAX_BSSID_LEN ];
WIFI_GetMAC( &ucMacAddressVal[0] );
```

Returns

eWiFiSuccess if the MAC address was successfully retrieved, failure code otherwise. The returned MAC address must be 6 consecutive bytes with no delimiters.

◆ **WIFI_GetHostIP()**

```
WiFiReturnCode_t WIFI_GetHostIP ( char * pchost, uint8_t* puIPAddr )
```

Retrieves the host IP address from a host name using DNS.

Parameters

| | | |
|------|----------|----------------------|
| [in] | pcHost | - Host (node) name. |
| [in] | puIPAddr | - IP Address buffer. |

Returns

`eWiFiSuccess` if the host IP address was successfully retrieved, failure code otherwise.

Example

```
uint8_t ucIPAddr[ 4 ];
WIFI_GetHostIP( "amazon.com", &ucIPAddr[0] );
```

Retrieves the host IP address from a host name using DNS.

Parameters

| | | |
|------|----------|----------------------|
| [in] | pcHost | - Host (node) name. |
| [in] | puIPAddr | - IP Address buffer. |

Returns

`eWiFiSuccess` if the host IP address was successfully retrieved, failure code otherwise.

```
uint8_t ucIPAddr[ 4 ];
WIFI_GetHostIP( "amazon.com", &ucIPAddr[0] );
```

◆ **WIFI_Scan()**

```
WiFiReturnCode_t WIFI_Scan ( WiFiScanResult_t* pBuffer, uint8_t ucNumNetworks )
```

Perform a Wi-Fi network Scan.

Parameters

| | | |
|------|---------------|--|
| [in] | pBuffer | - Buffer for scan results. |
| [in] | ucNumNetworks | - Number of networks to retrieve in scan result. |

Returns

eWiFiSuccess if the Wi-Fi network scan was successful, failure code otherwise.

Note

The input buffer will have the results of the scan.

Example

```
const uint8_t ucNumNetworks = 10; //Get 10 scan results
WiFiScanResult_t xScanResults[ ucNumNetworks ];
WIFI_Scan( xScanResults, ucNumNetworks );
```

Perform a Wi-Fi network Scan.

Parameters

| | | |
|------|---------------|--|
| [in] | pBuffer | - Buffer for scan results. |
| [in] | ucNumNetworks | - Number of networks to retrieve in scan result. |

Returns

eWiFiSuccess if the Wi-Fi network scan was successful, failure code otherwise.

Note

The input buffer will have the results of the scan.

```
const uint8_t ucNumNetworks = 10; //Get 10 scan results
WiFiScanResult_t xScanResults[ ucNumNetworks ];
WIFI_Scan( xScanResults, ucNumNetworks );
```

◆ **WIFI_StartAP()**

```
WiFiReturnCode_t WIFI_StartAP ( void )
```

Start SoftAP mode.

Returns

eWiFiSuccess if SoftAP was successfully started, failure code otherwise.

◆ **WIFI_StopAP()**

WIFIReturnCode_t WIFI_StopAP (void)

Stop SoftAP mode.

Returns

eWiFiSuccess if the SoftAP was successfully stopped, failure code otherwise.

◆ **WIFI_ConfigureAP()**

WIFIReturnCode_t WIFI_ConfigureAP (const WIFINetworkParams_t *const pxNetworkParams)

Configure SoftAP.

Parameters

| | | |
|------|-----------------|---------------------------------------|
| [in] | pxNetworkParams | - Network parameters to configure AP. |
|------|-----------------|---------------------------------------|

Returns

eWiFiSuccess if SoftAP was successfully configured, failure code otherwise.

Example

```
WIFINetworkParams_t xNetworkParams;
xNetworkParams.pcSSID = "SSID_Name";
xNetworkParams.pcPassword = "PASSWORD";
xNetworkParams.xSecurity = eWiFiSecurityWPA2;
xNetworkParams.cChannel = ChannelNum;
WIFI_ConfigureAP( &xNetworkParams );
```

◆ **WIFI_SetPMMode()**

WIFIReturnCode_t WIFI_SetPMMode (WIFIPMMode_t xPMModeType, const void * pvOptionValue)

Set the Wi-Fi power management mode.

Parameters

| | | |
|------|---------------|--|
| [in] | xPMModeType | - Power mode type. |
| [in] | pvOptionValue | - A buffer containing the value of the option to set depends on the mode type example - beacon interval in sec |

Returns

eWiFiSuccess if the power mode was successfully configured, failure code otherwise.

◆ **WIFI_GetPMMode()**

```
WiFiReturnCode_t WIFI_GetPMMode ( WiFiPMMode_t* pxPMModeType, void* pvOptionValue )
```

Get the Wi-Fi power management mode.

Parameters

| | | |
|-------|---------------|--|
| [out] | pxPMModeType | - pointer to get current power mode set. |
| [out] | pvOptionValue | - optional value |

Returns

eWiFiSuccess if the power mode was successfully retrieved, failure code otherwise.

◆ **WIFI_RegisterEvent()**

```
WiFiReturnCode_t WIFI_RegisterEvent ( WiFiEventType_t xEventType, WiFiEventHandler_t xHandler )
```

Register a Wi-Fi event Handler.

Parameters

| | | |
|------|------------|------------------------|
| [in] | xEventType | - Wi-Fi event type. |
| [in] | xHandler | - Wi-Fi event handler. |

Returns

eWiFiSuccess if registration is successful, failure code otherwise.

◆ **WIFI_IsConnected()**

```
BaseType_t WIFI_IsConnected ( const WiFiNetworkParams_t* pxNetworkParams)
```

Check if the Wi-Fi is connected and the AP configuration matches the query.

param[in] pxNetworkParams - Network parameters to query, if NULL then just check the Wi-Fi link status.

◆ **WiFi_StartScan()**

`WiFiReturnCode_t WiFi_StartScan (WiFiScanConfig_t * pxScanConfig)`

Start a Wi-Fi scan.

This is an asynchronous call, the result will be notified by an event.

See also

[WiFiEventInfoScanDone_t](#).

Parameters

| | | |
|------|--------------|--|
| [in] | pxScanConfig | - Parameters for scan, NULL if default scan (i.e. broadcast scan on all channels). |
|------|--------------|--|

Returns

eWiFiSuccess if scan was started successfully, failure code otherwise.

◆ **WiFi_GetScanResults()**

`WiFiReturnCode_t WiFi_GetScanResults (const WiFiScanResult_t ** pBuffer, uint16_t * ucNumNetworks)`

Get Wi-Fi scan results. It should be called only after scan is completed. Scan results are sorted in decreasing rssi order.

Parameters

| | | |
|-------|---------------|--|
| [out] | pBuffer | - Handle to the READ ONLY scan results buffer. |
| [out] | ucNumNetworks | - Actual number of networks in the scan results. |

Returns

eWiFiSuccess if the scan results were got successfully, failure code otherwise.

◆ **WIFI_StartConnectAP()**

WIFIReturnCode_t WIFI_StartConnectAP (const WIFINetworkParams_t * pxNetworkParams)

Connect to the Wi-Fi Access Point (AP) specified in the input.

This is an asynchronous call, the result will be notified by an event.

See also

[WiFiEventInfoConnected_t](#).

The Wi-Fi should stay connected when the specified AP is the same as the currently connected AP. Otherwise, the Wi-Fi should disconnect and connect to the specified AP. If the specified AP has invalid parameters, the Wi-Fi should be disconnected.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | pxNetworkParams | - Configuration of the targeted AP. |
|------|-----------------|-------------------------------------|

Returns

eWiFiSuccess if connection was started successfully, failure code otherwise.

◆ **WIFI_StartDisconnect()**

WIFIReturnCode_t WIFI_StartDisconnect (void)

Wi-Fi station disconnects from AP.

This is an asynchronous call. The result will be notified by an event.

See also

[WiFiEventInfoDisconnected_t](#).

Returns

eWiFiSuccess if disconnection was started successfully, failure code otherwise.

◆ **WIFI_GetConnectionInfo()**

WIFIReturnCode_t WIFI_GetConnectionInfo (WIFIConnectionInfo_t * pxConnectionInfo)

Get Wi-Fi info of the connected AP.

This is a synchronous call.

Parameters

| | | |
|-------|------------------|-----------------------------------|
| [out] | pxConnectionInfo | - Wi-Fi info of the connected AP. |
|-------|------------------|-----------------------------------|

Returns

eWiFiSuccess if connection info was got successfully, failure code otherwise.

◆ **WIFI_GetRSSI()**

WIFIReturnCode_t WIFI_GetRSSI (int8_t * pcRSSI)

Get the RSSI of the connected AP.

This only works when the station is connected.

Parameters

| | | |
|-------|--------|-----------------------------|
| [out] | pcRSSI | - RSSI of the connected AP. |
|-------|--------|-----------------------------|

Returns

eWiFiSuccess if RSSI was got successfully, failure code otherwise.

◆ **WIFI_GetStationList()**

WIFIReturnCode_t WIFI_GetStationList (WiFiStationInfo_t * pxStationList, uint8_t * pcStationListSize)

SoftAP mode get connected station list.

Parameters

| | | |
|----------|-------------------|--|
| [out] | pxStationList | - Buffer for station list, supplied by the caller. |
| [in,out] | pcStationListSize | - Input size of the list, output number of connected stations. |

Returns

eWiFiSuccess if stations were got successfully (maybe none), failure code otherwise.

◆ **WIFI_StartDisconnectStation()**

WIFIReturnCode_t WIFI_StartDisconnectStation (uint8_t * pucMac)

AP mode disconnecting a station.

This is an asynchronous call, the result will be notified by an event.

See also

[WiFiEventInfoAPStationDisconnected_t](#).

Parameters

| | | |
|------|--------|--|
| [in] | pucMac | - MAC Address of the station to be disconnected. |
|------|--------|--|

Returns

eWiFiSuccess if disconnection was started successfully, failure code otherwise.

◆ **WIFI_SetMAC()**

WIFIReturnCode_t WIFI_SetMAC (uint8_t * pucMac)

Set Wi-Fi MAC addresses.

The given MAC address will become the station MAC address. The AP MAC address (i.e. BSSID) will be the same MAC address but with the local bit set.

Parameters

| | | |
|------|--------|------------------------|
| [in] | pucMac | - Station MAC address. |
|------|--------|------------------------|

Returns

eWiFiSuccess if MAC address was set successfully, failure code otherwise.

Note

On some platforms the change of MAC address can only take effect after reboot.

◆ **WIFI_SetCountryCode()**

WIFIReturnCode_t WIFI_SetCountryCode (const char * pcCountryCode)

Set country based configuration (including channel list, power table)

Parameters

| | | |
|------|---------------|---|
| [in] | pcCountryCode | - Country code (null-terminated string, e.g. "US", "CN". See ISO-3166). |
|------|---------------|---|

Returns

eWiFiSuccess if Country Code is set successfully, failure code otherwise.

◆ **WIFI_GetCountryCode()**

WIFIReturnCode_t WIFI_GetCountryCode (char * pcCountryCode)

Get the currently configured country code.

Parameters

| | | |
|-------|---------------|---|
| [out] | pcCountryCode | - Null-terminated string to hold the country code (see ISO-3166). Must be at least 4 bytes. |
|-------|---------------|---|

Returns

eWiFiSuccess if Country Code is retrieved successfully, failure code otherwise.

◆ **WIFI_GetStatistic()**

WIFIReturnCode_t WIFI_GetStatistic (WiFiStatisticInfo_t * pxStats)

Get the Wi-Fi statistics.

Parameters

| | | |
|-------|---------|--|
| [out] | pxStats | - Structure to hold the WiFi statistics. |
|-------|---------|--|

Returns

eWiFiSuccess if statistics are retrieved successfully, failure code otherwise.

◆ **WIFI_GetCapability()**

WIFIReturnCode_t WIFI_GetCapability (WiFiCapabilityInfo_t * pxCaps)

Get the Wi-Fi capability.

Parameters

| | | |
|-------|--------|---|
| [out] | pxCaps | - Structure to hold the Wi-Fi capabilities. |
|-------|--------|---|

Returns

eWiFiSuccess if capabilities are retrieved successfully, failure code otherwise.

5.3.12 Power**Interfaces****Detailed Description**

Power Interfaces.

Modules

[Low Power Modes Interface](#)

Interface for accessing low power modes.

5.3.12.1 Low Power Modes Interface**Interfaces » Power**

Detailed Description

Interface for accessing low power modes.

Summary

This section defines the API for the LPM (Low Power Mode) Driver. The LPM Driver provides functions for controlling power consumption by configuring and transitioning to a low power mode. The LPM driver supports configuration of MCU low power modes using the LPM hardware peripheral. The LPM driver supports low power modes deep standby, standby, sleep, and snooze.

Note

Not all low power modes are available on all MCUs.

Data Structures

Data Structure Documentation

◆ lpm_ram_retention_t

| struct lpm_ram_retention_t | | |
|---|---------------|---|
| RAM Retention Configuration for deep sleep and standby modes. | | |
| Data Fields | | |
| uint16_t | ram_retention | Configure RAM retention in software standby mode. |
| bool | tcm_retention | Enable or disable TCM retention in deep sleep and software standby modes. |

◆ lpm_ldo_standby_cfg_t

| struct lpm_ldo_standby_cfg_t | | |
|---|----------|--|
| Configure LDO operation in standby mode. | | |
| Data Fields | | |
| lpm_ldo_standby_operation_t | pll1_ldo | Configure the state of PLL1 LDO in standby mode. |
| lpm_ldo_standby_operation_t | pll2_ldo | Configure the state of PLL2 LDO in standby mode. |
| lpm_ldo_standby_operation_t | hoco_ldo | Configure the state of HOCO LDO in standby mode. |

◆ lpm_cfg_t

| struct lpm_cfg_t | | |
|---|-----------------------|--|
| User configuration structure, used in open function | | |
| Data Fields | | |
| lpm_mode_t | low_power_mode | Low Power Mode |
| lpm_standby_wake_source_bits_t | standby_wake_sources | Bitwise list of sources to wake from deep sleep and standby mode |
| lpm_snooze_request_t | snooze_request_source | Snooze request source |
| lpm_snooze_end_bits_t | snooze_end_sources | Bitwise list of snooze end sources |
| lpm_snooze_cancel_t | snooze_cancel_sources | List of snooze cancel sources |
| lpm_snooze_dtc_t | dtc_state_in_snooze | State of DTC in snooze mode, |

| | | |
|---|----------------------------|--|
| | | enabled or disabled |
| lpm_output_port_enable_t | output_port_enable | Output port enabled/disabled in standby and deep standby |
| lpm_io_port_t | io_port_state | IO port state in deep standby (maintained or reset) |
| lpm_power_supply_t | power_supply_state | Internal power supply state in standby and deep standby (deepcut) |
| lpm_deep_standby_cancel_source_bits_t | deep_standby_cancel_source | Sources that can trigger exit from deep standby |
| lpm_deep_standby_cancel_edge_bits_t | deep_standby_cancel_edge | Signal edges for the sources that can trigger exit from deep standby |
| lpm_ram_retention_t | ram_retention_cfg | RAM retention configuration for deep sleep and standby modes. |
| lpm_ldo_standby_cfg_t | ldo_standby_cfg | Configure LDOs that are disabled in standby mode. |
| void const * | p_extend | Placeholder for extension. |

◆ [lpm_api_t](#)

| | |
|--|--|
| struct lpm_api_t | |
| LPM driver structure. General LPM functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(lpm_ctrl_t *const p_ctrl, lpm_cfg_t const *const p_cfg) |
| fsp_err_t (* | close)(lpm_ctrl_t *const p_ctrl) |
| fsp_err_t (* | lowPowerReconfigure)(lpm_ctrl_t *const p_ctrl, lpm_cfg_t const *const p_cfg) |
| fsp_err_t (* | lowPowerModeEnter)(lpm_ctrl_t *const p_ctrl) |
| fsp_err_t (* | ioKeepClear)(lpm_ctrl_t *const p_ctrl) |
| Field Documentation | |
| | |

◆ **open**

```
fsp_err_t(* lpm_api_t::open) (lpm_ctrl_t *const p_ctrl, lpm_cfg_t const *const p_cfg)
```

Initialization function

◆ **close**

```
fsp_err_t(* lpm_api_t::close) (lpm_ctrl_t *const p_ctrl)
```

Initialization function

◆ **lowPowerReconfigure**

```
fsp_err_t(* lpm_api_t::lowPowerReconfigure) (lpm_ctrl_t *const p_ctrl, lpm_cfg_t const *const p_cfg)
```

Configure a low power mode.

Parameters

| | | |
|------|-------|---|
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |
|------|-------|---|

◆ **lowPowerModeEnter**

```
fsp_err_t(* lpm_api_t::lowPowerModeEnter) (lpm_ctrl_t *const p_ctrl)
```

Enter low power mode (sleep/standby/deep standby) using WFI macro. Function will return after waking from low power mode.

◆ **ioKeepClear**

```
fsp_err_t(* lpm_api_t::ioKeepClear) (lpm_ctrl_t *const p_ctrl)
```

Clear the IOKEEP bit after deep software standby.

◆ **lpm_instance_t**

```
struct lpm_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------|--------|---|
| lpm_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| lpm_cfg_t const *const | p_cfg | Pointer to the configuration structure for this instance. |
| lpm_api_t const *const | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **lpm_ctrl_t**

```
typedef void lpm_ctrl_t
```

LPM control block. Allocate an instance specific control block to pass into the LPM API calls.

Enumeration Type Documentation◆ **lpm_mode_t**

```
enum lpm_mode_t
```

Low power modes

Enumerator

| | |
|-------------------------|---|
| LPM_MODE_SLEEP | Sleep mode. |
| LPM_MODE_DEEP_SLEEP | Deep Sleep mode. |
| LPM_MODE_STANDBY | Software Standby mode. |
| LPM_MODE_STANDBY_SNOOZE | Software Standby mode with Snooze mode enabled. |
| LPM_MODE_DEEP | Deep Software Standby mode. |

◆ **lpm_snooze_request_t**

| enum <code>lpm_snooze_request_t</code> | |
|--|---|
| Snooze request sources | |
| Enumerator | |
| <code>LPM_SNOOZE_REQUEST_RXD0_FALLING</code> | Enable RXD0 falling edge snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ0</code> | Enable IRQ0 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ1</code> | Enable IRQ1 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ2</code> | Enable IRQ2 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ3</code> | Enable IRQ3 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ4</code> | Enable IRQ4 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ5</code> | Enable IRQ5 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ6</code> | Enable IRQ6 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ7</code> | Enable IRQ7 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ8</code> | Enable IRQ8 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ9</code> | Enable IRQ9 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ10</code> | Enable IRQ10 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ11</code> | Enable IRQ11 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ12</code> | Enable IRQ12 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ13</code> | Enable IRQ13 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ14</code> | Enable IRQ14 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_IRQ15</code> | Enable IRQ15 pin snooze request. |
| <code>LPM_SNOOZE_REQUEST_KEY</code> | Enable KR snooze request. |
| <code>LPM_SNOOZE_REQUEST_ACMPS0</code> | Enable High-speed analog comparator 0 snooze request. |
| <code>LPM_SNOOZE_REQUEST_RTC_ALARM1</code> | Enable RTC alarm 1 snooze request. |

| | |
|------------------------------------|--|
| LPM_SNOOZE_REQUEST_RTC_ALARM | Enable RTC alarm snooze request. |
| LPM_SNOOZE_REQUEST_RTC_PERIOD | Enable RTC period snooze request. |
| LPM_SNOOZE_REQUEST_AGT1_UNDERFLOW | Enable AGT1 underflow snooze request. |
| LPM_SNOOZE_REQUEST_AGTW1_UNDERFLOW | Enable AGTW1 underflow snooze request. |
| LPM_SNOOZE_REQUEST_AGT1_COMPARE_A | Enable AGT1 compare match A snooze request. |
| LPM_SNOOZE_REQUEST_AGTW1_COMPARE_A | Enable AGTW1 compare match A snooze request. |
| LPM_SNOOZE_REQUEST_AGT1_COMPARE_B | Enable AGT1 compare match B snooze request. |
| LPM_SNOOZE_REQUEST_AGTW1_COMPARE_B | Enable AGTW1 compare match B snooze request. |
| LPM_SNOOZE_REQUEST_AGT3_UNDERFLOW | Enable AGT3 underflow snooze request. |
| LPM_SNOOZE_REQUEST_AGT3_COMPARE_A | Enable AGT3 compare match A snooze request. |
| LPM_SNOOZE_REQUEST_AGT3_COMPARE_B | Enable AGT3 compare match B snooze request. |

◆ **lpm_snooze_end_t**

| enum <code>lpm_snooze_end_t</code> | |
|--|---|
| Snooze end control | |
| Enumerator | |
| <code>LPM_SNOOZE_END_STANDBY_WAKE_SOURCES</code> | Transition from Snooze to Normal mode directly. |
| <code>LPM_SNOOZE_END_AGT1_UNDERFLOW</code> | AGT1 underflow. |
| <code>LPM_SNOOZE_END_AGTW1_UNDERFLOW</code> | AGTW1 underflow. |
| <code>LPM_SNOOZE_END_DTC_TRANS_COMPLETE</code> | Last DTC transmission completion. |
| <code>LPM_SNOOZE_END_DTC_TRANS_COMPLETE_NEGATED</code> | Not Last DTC transmission completion. |
| <code>LPM_SNOOZE_END_ADC0_COMPARE_MATCH</code> | ADC Channel 0 compare match. |
| <code>LPM_SNOOZE_END_ADC0_COMPARE_MISMATCH</code> | ADC Channel 0 compare mismatch. |
| <code>LPM_SNOOZE_END_ADC1_COMPARE_MATCH</code> | ADC 1 compare match. |
| <code>LPM_SNOOZE_END_ADC1_COMPARE_MISMATCH</code> | ADC 1 compare mismatch. |
| <code>LPM_SNOOZE_END_SCI0_ADDRESS_MATCH</code> | SCI0 address mismatch. |
| <code>LPM_SNOOZE_END_AGT3_UNDERFLOW</code> | AGT3 underflow. |

◆ **lpm_snooze_cancel_t**

| enum <code>lpm_snooze_cancel_t</code> | |
|--|--|
| Snooze cancel control | |
| Enumerator | |
| <code>LPM_SNOOZE_CANCEL_SOURCE_NONE</code> | No snooze cancel source. |
| <code>LPM_SNOOZE_CANCEL_SOURCE_ADC0_WCMPPM</code> | ADC Channel 0 window compare match. |
| <code>LPM_SNOOZE_CANCEL_SOURCE_ADC0_WCMPUM</code> | ADC Channel 0 window compare mismatch. |
| <code>LPM_SNOOZE_CANCEL_SOURCE_DTC_COMPLETE</code> | DTC transfer completion. |
| <code>LPM_SNOOZE_CANCEL_SOURCE_DOC_DOPCI</code> | Data operation circuit interrupt. |

◆ **lpm_snooze_dtc_t**

| enum lpm_snooze_dtc_t | |
|---------------------------|------------------------|
| DTC Enable in Snooze Mode | |
| Enumerator | |
| LPM_SNOOZE_DTC_DISABLE | Disable DTC operation. |
| LPM_SNOOZE_DTC_ENABLE | Enable DTC operation. |

◆ **lpm_standby_wake_source_t**

| enum lpm_standby_wake_source_t | |
|---|---|
| Wake from deep sleep or standby mode sources, does not apply to sleep or deep standby modes | |
| Enumerator | |
| LPM_STANDBY_WAKE_SOURCE_IWDT | Independent watchdog interrupt. |
| LPM_STANDBY_WAKE_SOURCE_LVD1 | Low Voltage Detection 1 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_IRQ0 | IRQ0. |
| LPM_STANDBY_WAKE_SOURCE_IRQ1 | IRQ1. |
| LPM_STANDBY_WAKE_SOURCE_IRQ2 | IRQ2. |
| LPM_STANDBY_WAKE_SOURCE_IRQ3 | IRQ3. |
| LPM_STANDBY_WAKE_SOURCE_IRQ4 | IRQ4. |
| LPM_STANDBY_WAKE_SOURCE_IRQ5 | IRQ5. |
| LPM_STANDBY_WAKE_SOURCE_DTC | DTC Transfer Complete Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_SPI00RX | SPI00 Transfer End or Buffer Empty Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_UART0ERR | UART0 Reception Communication Error Occurrence Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_IICA0 | I2CA 0 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_UART0RXE | UART0 Reception Transfer End Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ADC | A/D Conversion Interrupt. |
| | |

| | |
|-------------------------------|---|
| LPM_STANDBY_WAKE_SOURCE_RTC | RTC interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ITL | Interval signal of 32-bit interval timer Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_URE0 | UARTA0 reception communication error Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_UT0 | UARTA0 transmission transfer end or buffer empty Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_UR0 | UARTA0 reception transfer end Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_IRQ0 | IRQ0. |
| LPM_STANDBY_WAKE_SOURCE_IRQ1 | IRQ1. |
| LPM_STANDBY_WAKE_SOURCE_IRQ2 | IRQ2. |
| LPM_STANDBY_WAKE_SOURCE_IRQ3 | IRQ3. |
| LPM_STANDBY_WAKE_SOURCE_IRQ4 | IRQ4. |
| LPM_STANDBY_WAKE_SOURCE_IRQ5 | IRQ5. |
| LPM_STANDBY_WAKE_SOURCE_IRQ6 | IRQ6. |
| LPM_STANDBY_WAKE_SOURCE_IRQ7 | IRQ7. |
| LPM_STANDBY_WAKE_SOURCE_IRQ8 | IRQ8. |
| LPM_STANDBY_WAKE_SOURCE_IRQ9 | IRQ9. |
| LPM_STANDBY_WAKE_SOURCE_IRQ10 | IRQ10. |
| LPM_STANDBY_WAKE_SOURCE_IRQ11 | IRQ11. |
| LPM_STANDBY_WAKE_SOURCE_IRQ12 | IRQ12. |
| LPM_STANDBY_WAKE_SOURCE_IRQ13 | IRQ13. |
| LPM_STANDBY_WAKE_SOURCE_IRQ14 | IRQ14. |
| LPM_STANDBY_WAKE_SOURCE_IRQ15 | IRQ15. |
| LPM_STANDBY_WAKE_SOURCE_IWDT | Independent watchdog interrupt. |
| LPM_STANDBY_WAKE_SOURCE_KEY | Key interrupt. |

| | |
|----------------------------------|--|
| LPM_STANDBY_WAKE_SOURCE_LVD1 | Low Voltage Detection 1 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_LVD2 | Low Voltage Detection 2 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_VBATT | VBATT Monitor interrupt. |
| LPM_STANDBY_WAKE_SOURCE_VRTC | LVDVRTC interrupt. |
| LPM_STANDBY_WAKE_SOURCE_EXLVD | LVDEXLVD interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ACMPS0 | Analog Comparator High-speed 0 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ACMPLP0 | Analog Comparator Low-speed 0 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_RTCALM1 | RTC Alarm interrupt 1. |
| LPM_STANDBY_WAKE_SOURCE_RTCALM | RTC Alarm interrupt. |
| LPM_STANDBY_WAKE_SOURCE_RTCPRD | RTC Period interrupt. |
| LPM_STANDBY_WAKE_SOURCE_USBHS | USB High-speed interrupt. |
| LPM_STANDBY_WAKE_SOURCE_USBFS | USB Full-speed interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGTW0UD | AGTW0 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGTW1UD | AGTW1 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGTW1CA | AGTW1 Compare Match A interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGTW1CB | AGTW1 Compare Match B interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT1UD | AGT1 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT1CA | AGT1 Compare Match A interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT1CB | AGT1 Compare Match B interrupt. |
| LPM_STANDBY_WAKE_SOURCE_IIC0 | I2C 0 interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT0UD | AGT0 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT3UD | AGT3 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT1UD_S | AGT1 Underflow interrupt for specific board. |
| LPM_STANDBY_WAKE_SOURCE_AGT3CA | AGT3 Compare Match A interrupt. |

| | |
|----------------------------------|--|
| LPM_STANDBY_WAKE_SOURCE_AGT2UD | AGT2 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT3CB | AGT3 Compare Match B interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT3UD_S | AGT3 Underflow interrupt for specific board. |
| LPM_STANDBY_WAKE_SOURCE_COMPHS0 | Comparator-HS0 Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT4UD | AGT4 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT5UD | AGT5 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT6UD | AGT6 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_AGT7UD | AGT7 Underflow interrupt. |
| LPM_STANDBY_WAKE_SOURCE_SOSTD | SOSTD interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ULP0U | ULPT0 Underflow Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ULP0A | ULPT0 Compare Match A Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ULP0B | ULPT0 Compare Match B Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_I3C0 | I3C0 address match interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ULP1U | ULPT1 Underflow Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ULP1A | ULPT1 Compare Match A Interrupt. |
| LPM_STANDBY_WAKE_SOURCE_ULP1B | ULPT1 Compare Match B Interrupt. |

◆ lpm_io_port_t

| | |
|---|---|
| enum lpm_io_port_t | |
| I/O port state after Deep Software Standby mode | |
| Enumerator | |
| LPM_IO_PORT_RESET | When the Deep Software Standby mode is canceled, the I/O ports are in the reset state |
| LPM_IO_PORT_NO_CHANGE | When the Deep Software Standby mode is canceled, the I/O ports are in the same state as in the Deep Software Standby mode |

◆ **lpm_power_supply_t**

| enum <code>lpm_power_supply_t</code> | |
|--|---|
| Power supply control | |
| Enumerator | |
| <code>LPM_POWER_SUPPLY_DEEPCUT0</code> | Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is supplied in deep software standby mode |
| <code>LPM_POWER_SUPPLY_DEEPCUT1</code> | Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is not supplied in deep software standby mode |
| <code>LPM_POWER_SUPPLY_DEEPCUT3</code> | Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is not supplied in deep software standby mode. In addition, LVD is disabled and the low power function in a poweron reset circuit is enabled |
| <code>LPM_POWER_SUPPLY_DEEP_STANDBY_MODE1</code> | Power to the standby RAM, Low-speed on-chip oscillator, Programmable Voltage Detection Unit 0, and USBFS/HS resume detecting unit is supplied in deep software standby mode. |
| <code>LPM_POWER_SUPPLY_DEEP_STANDBY_MODE2</code> | Power to standby RAM, USBFS/HS resume detecting unit, Low-speed on-chip oscillator, and IWDT is disabled in deep software standby mode. Power to the Programmable Voltage Detection Unit 0 is supplied in deep software standby mode. |
| <code>LPM_POWER_SUPPLY_DEEP_STANDBY_MODE3</code> | Power to standby RAM, Programmable Voltage Detection Unit 0, USBFS/HS resume detecting unit, Low-speed on-chip oscillator, and IWDT is disabled in deep software standby mode. |

◆ **lpm_deep_standby_cancel_edge_t**

| enum <code>lpm_deep_standby_cancel_edge_t</code> | |
|--|--|
| Deep Standby Interrupt Edge | |
| Enumerator | |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_EDGE_N ONE</code> | No options for a deep standby cancel source. |

| | |
|---|---------------------------|
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0_RISING | IRQ0-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0_FALLING | IRQ0-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1_RISING | IRQ1-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1_FALLING | IRQ1-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2_RISING | IRQ2-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2_FALLING | IRQ2-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3_RISING | IRQ3-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3_FALLING | IRQ3-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4_RISING | IRQ4-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4_FALLING | IRQ4-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5_RISING | IRQ5-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5_FALLING | IRQ5-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6_RISING | IRQ6-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6_FALLING | IRQ6-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7_RISING | IRQ7-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7_FALLING | IRQ7-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8_RISING | IRQ8-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8_FALLING | IRQ8-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9_RISING | IRQ9-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9_FALLING | IRQ9-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10_RISING | IRQ10-DS Pin Rising Edge. |

| | |
|--|----------------------------|
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10_FALLING | IRQ10-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11_RISING | IRQ11-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11_FALLING | IRQ11-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12_RISING | IRQ12-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12_FALLING | IRQ12-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13_RISING | IRQ13-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13_FALLING | IRQ13-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14_RISING | IRQ14-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14_FALLING | IRQ14-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15_RISING | IRQ14-DS Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15_FALLING | IRQ14-DS Pin Falling Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1_RISING | LVD1 Rising Slope. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1_FALLING | LVD1 Falling Slope. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2_RISING | LVD2 Rising Slope. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2_FALLING | LVD2 Falling Slope. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI_RISING | NMI Pin Rising Edge. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI_FALLING | NMI Pin Falling Edge. |

◆ **lpm_deep_standby_cancel_source_t**

| enum <code>lpm_deep_standby_cancel_source_t</code> | |
|--|------------------------------------|
| Deep Standby cancel sources | |
| Enumerator | |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_RESET_ONLY</code> | Cancel deep standby only by reset. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0</code> | IRQ0. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1</code> | IRQ1. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2</code> | IRQ2. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3</code> | IRQ3. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4</code> | IRQ4. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5</code> | IRQ5. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6</code> | IRQ6. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7</code> | IRQ7. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8</code> | IRQ8. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9</code> | IRQ9. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10</code> | IRQ10. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11</code> | IRQ11. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12</code> | IRQ12. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13</code> | IRQ13. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14</code> | IRQ14. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15</code> | IRQ15. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1</code> | LVD1. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2</code> | LVD2. |
| <code>LPM_DEEP_STANDBY_CANCEL_SOURCE_RTC_INTERVAL</code> | RTC Interval Interrupt. |
| | |

| | |
|--|-------------------------|
| LPM_DEEP_STANDBY_CANCEL_SOURCE_RTC_ALARM | RTC Alarm Interrupt. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI | NMI. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_USBFS | USBFS Suspend/Resume. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_USBHS | USBHS Suspend/Resume. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_AGT1 | AGT1 Underflow. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_AGT3 | AGT3 Underflow. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_ULPT0 | ULPT0 Overflow. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_ULPT1 | ULPT1 Overflow. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_IWDT | IWDT Underflow. |
| LPM_DEEP_STANDBY_CANCEL_SOURCE_VBATT | VBATT Tamper Detection. |

◆ `lpm_output_port_enable_t`

| | |
|--|---|
| enum <code>lpm_output_port_enable_t</code> | |
| Output port enable | |
| Enumerator | |
| LPM_OUTPUT_PORT_ENABLE_HIGH_IMPEDANCE | 0: In Software Standby Mode or Deep Software Standby Mode, the address output pins, data output pins, and other bus control signal output pins are set to the high-impedance state. In Snooze, the status of the address bus and bus control signals are same as before entering Software Standby Mode. |
| LPM_OUTPUT_PORT_ENABLE_RETAIN | 1: In Software Standby Mode, the address output pins, data output pins, and other bus control signal output pins retain the output state. |

◆ `lpm_ldo_standby_operation_t`

| enum <code>lpm_ldo_standby_operation_t</code> | |
|--|--|
| Configure the behavior of an oscillator's LDO in standby mode. | |
| Enumerator | |
| <code>LPM_LDO_STANDBY_OPERATION_DISABLED</code> | The LDO is disabled in standby mode. |
| <code>LPM_LDO_STANDBY_OPERATION_RETAINED</code> | The LDO state is retained during standby mode. |

5.3.13 Security

Interfaces

Detailed Description

Security Interfaces.

Modules

[RSIP key injection Interface](#)

Interface for key injection by Renesas Secure IP (RSIP) functions.

[SCE Interface](#)

Interface for Secure Crypto Engine (SCE) functions.

[SCE key injection Interface](#)

Interface for key injection by Secure Crypto Engine (SCE) functions.

5.3.13.1 RSIP key injection Interface

[Interfaces](#) » [Security](#)

Detailed Description

Interface for key injection by Renesas Secure IP (RSIP) functions.

Summary

The RSIP key injection interface provides RSIP functionality.

◆ AES128_InitialKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::AES128_InitialKeyWrap) (rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_aes_wrapped_key_t *const
p_wrapped_key)
```

This API outputs 128-bit AES wrapped key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 128-bit AES wrapped key |

◆ AES256_InitialKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::AES256_InitialKeyWrap) (rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_aes_wrapped_key_t *const
p_wrapped_key)
```

This API outputs 256-bit AES wrapped key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit AES wrapped key |

◆ RSA2048_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::RSA2048_InitialPublicKeyWrap) (rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa2048_public_wrapped_key_t *const
p_wrapped_key)
```

This API outputs 2048-bit RSA wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 2048-bit RSA wrapped public key |

◆ RSA2048_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::RSA2048_InitialPrivateKeyWrap) (rsip_key_injection_type_t
const key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t
const *const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa2048_private_wrapped_key_t
*const p_wrapped_key)
```

This API outputs 2048-bit RSA wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 2048-bit RSA wrapped private key |

◆ RSA3072_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::RSA3072_InitialPublicKeyWrap) (rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa3072_public_wrapped_key_t *const
p_wrapped_key)
```

This API outputs 3072-bit RSA wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 3072-bit RSA wrapped public key |

◆ RSA3072_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::RSA3072_InitialPrivateKeyWrap) (rsip_key_injection_type_t
const key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t
const *const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa3072_private_wrapped_key_t
*const p_wrapped_key)
```

This API outputs 3072-bit RSA wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 3072-bit RSA wrapped private key |

◆ RSA4096_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::RSA4096_InitialPublicKeyWrap) (rsip_key_injection_type_t const
key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t const
*const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa4096_public_wrapped_key_t *const
p_wrapped_key)
```

This API outputs 4096-bit RSA wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 4096-bit RSA wrapped public key |

◆ RSA4096_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::RSA4096_InitialPrivateKeyWrap) (rsip_key_injection_type_t
const key_injection_type, uint8_t const *const p_wrapped_user_factory_programming_key, uint8_t
const *const p_initial_vector, uint8_t const *const p_user_key, rsip_rsa4096_private_wrapped_key_t
*const p_wrapped_key)
```

This API outputs 4096-bit RSA wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 4096-bit RSA wrapped private key |

◆ ECC_secp256r1_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_secp256r1_InitialPublicKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_public_wrapped_key_t *const p_wrapped_key)
```

This API outputs 256-bit ECC wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit ECC wrapped public key |

◆ ECC_secp256r1_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_secp256r1_InitialPrivateKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_private_wrapped_key_t *const p_wrapped_key)
```

This API outputs 256-bit ECC wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit ECC wrapped private key |

◆ ECC_secp384r1_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_secp384r1_InitialPublicKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_public_wrapped_key_t *const p_wrapped_key)
```

This API outputs 384-bit ECC wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 384-bit ECC wrapped public key |

◆ ECC_secp384r1_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_secp384r1_InitialPrivateKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_private_wrapped_key_t *const p_wrapped_key)
```

This API outputs 384-bit ECC wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 384-bit ECC wrapped private key |

◆ ECC_secp256k1_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_secp256k1_InitialPublicKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_public_wrapped_key_t *const p_wrapped_key)
```

This API outputs 256-bit ECC wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit ECC wrapped public key |

◆ ECC_secp256k1_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_secp256k1_InitialPrivateKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_private_wrapped_key_t *const p_wrapped_key)
```

This API outputs 256-bit ECC wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit ECC wrapped private key |

◆ ECC_brainpoolP256r1_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_brainpoolP256r1_InitialPublicKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_public_wrapped_key_t *const p_wrapped_key)
```

This API outputs 256-bit brainpool ECC wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit ECC wrapped public key |

◆ ECC_brainpoolP256r1_InitialPrivateKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_brainpoolP256r1_InitialPrivateKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_private_wrapped_key_t *const p_wrapped_key)
```

This API outputs 256-bit brainpool ECC wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 256-bit ECC wrapped private key |

◆ ECC_brainpoolP384r1_InitialPublicKeyWrap

```
fsp_err_t(* rsip_key_injection_api_t::ECC_brainpoolP384r1_InitialPublicKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_public_wrapped_key_t *const p_wrapped_key)
```

This API outputs 384-bit brainpool ECC wrapped public key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 384-bit ECC wrapped public key |

◆ **ECC_brainpoolP384r1_InitialPrivateKeyWrap**

```
fsp_err_t(* rsip_key_injection_api_t::ECC_brainpoolP384r1_InitialPrivateKeyWrap)
(rsip_key_injection_type_t const key_injection_type, uint8_t const *const
p_wrapped_user_factory_programming_key, uint8_t const *const p_initial_vector, uint8_t const
*const p_user_key, rsip_ecc_private_wrapped_key_t *const p_wrapped_key)
```

This API outputs 384-bit brainpool ECC wrapped private key.

Parameters

| | | |
|-------|--|--|
| [in] | key_injection_type | Selection key injection type when generating wrapped key |
| [in] | p_wrapped_user_factory_programming_key | Wrapped user factory programming key by the Renesas Key Wrap Service. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_initial_vector | Initialization vector when generating encrypted key. When key injection type is plain, this is not required and any value can be specified. |
| [in] | p_user_key | User key. If key injection type is not plain, it must be encrypted and have MAC appended. |
| [out] | p_wrapped_key | 384-bit ECC wrapped private key |

Enumeration Type Documentation◆ **rsip_key_injection_type_t**

```
enum rsip_key_injection_type_t
```

Key injection type.

Enumerator

| | |
|-----------------------------------|---------------------------|
| RSIP_KEY_INJECTION_TYPE_ENCRYPTED | Input encrypted user key. |
| RSIP_KEY_INJECTION_TYPE_PLAIN | Input plain user key. |

5.3.13.2 SCE Interface

[Interfaces](#) » [Security](#)

Detailed Description

Interface for Secure Crypto Engine (SCE) functions.

Summary

The SCE interface provides SCE functionality.

The SCE interface can be implemented by:

- [SCE Protected Mode](#)

Data Structures

struct [sce_byte_data_t](#)

struct [sce_aes_wrapped_key_t](#)

struct [sce_hmac_sha_wrapped_key_t](#)

struct [sce_rsa1024_public_wrapped_key_t](#)

struct [sce_rsa1024_private_wrapped_key_t](#)

struct [sce_rsa2048_public_wrapped_key_t](#)

struct [sce_rsa2048_private_wrapped_key_t](#)

struct [sce_rsa3072_public_wrapped_key_t](#)

struct [sce_rsa4096_public_wrapped_key_t](#)

Data Structure Documentation

◆ [sce_byte_data_t](#)

| Data Fields | | |
|-------------|-------------|-------------|
| uint8_t * | pdata | pointer |
| uint32_t | data_length | data_length |
| uint32_t | data_type | data type |

◆ **sce_aes_wrapped_key_t**

| | | |
|--|---|---|
| struct sce_aes_wrapped_key_t | | |
| AES wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | key type |
| uint32_t | value[SCE_TLS_AES256_KEY_INDEX_WORD_SIZE] | wrapped key value |
| | | <i>Note</i> The size of the "value" array and the definition name depends on the used SCE. See the header file for detail. |

◆ **sce_hmac_sha_wrapped_key_t**

| | | |
|---|---|-------------------|
| struct sce_hmac_sha_wrapped_key_t | | |
| HMAC-SHA wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | key type |
| uint32_t | value[SCE_TLS_HMAC_KEY_INDEX_WORD_SIZE] | wrapped key value |

◆ **sce_rsa1024_public_wrapped_key_t**

| | | |
|---|-------|----------|
| struct sce_rsa1024_public_wrapped_key_t | | |
| RSA 1024bit public wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | key type |
| struct sce_rsa1024_public_wrapped_key_t | value | |

◆ **sce_rsa1024_private_wrapped_key_t**

| | | |
|--|-------|----------|
| struct sce_rsa1024_private_wrapped_key_t | | |
| RSA 1024bit private wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | key type |
| struct sce_rsa1024_private_wrapped_key_t | value | |

◆ **sce_rsa2048_public_wrapped_key_t**

| | | |
|---|--|--|
| struct sce_rsa2048_public_wrapped_key_t | | |
|---|--|--|

| | | |
|---|-------|-----------|
| RSA 2048bit public wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | Key type. |
| struct sce_rsa2048_public_wrapped_key_t | value | |

◆ [sce_rsa2048_private_wrapped_key_t](#)

| | | |
|--|-------|----------|
| struct sce_rsa2048_private_wrapped_key_t | | |
| RSA 2048bit private wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | key type |
| struct sce_rsa2048_private_wrapped_key_t | value | |

◆ [sce_rsa3072_public_wrapped_key_t](#)

| | | |
|---|-------|-----------|
| struct sce_rsa3072_public_wrapped_key_t | | |
| RSA 3072bit public wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | Key type. |
| struct sce_rsa3072_public_wrapped_key_t | value | |

◆ [sce_rsa4096_public_wrapped_key_t](#)

| | | |
|---|-------|-----------|
| struct sce_rsa4096_public_wrapped_key_t | | |
| RSA 4096bit public wrapped key data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | Key type. |
| struct sce_rsa4096_public_wrapped_key_t | value | |

◆ [sce_rsa1024_wrapped_pair_key_t](#)

| | | |
|--|----------|-----------------------------------|
| struct sce_rsa1024_wrapped_pair_key_t | | |
| RSA 1024bit wrapped key pair structure. DO NOT MODIFY. | | |
| Data Fields | | |
| sce_rsa1024_private_wrapped_key_t | priv_key | RSA 1024-bit private wrapped key. |

| | | |
|--|---------|----------------------------------|
| sce_rsa1024_public_wrapped_key_t | pub_key | RSA 1024-bit public wrapped key. |
|--|---------|----------------------------------|

◆ [sce_rsa2048_wrapped_pair_key_t](#)

| | | |
|--|----------|-----------------------------------|
| struct sce_rsa2048_wrapped_pair_key_t | | |
| RSA 2048bit wrapped key pair structure. DO NOT MODIFY. | | |
| Data Fields | | |
| sce_rsa2048_private_wrapped_key_t | priv_key | RSA 2048-bit private wrapped key. |
| sce_rsa2048_public_wrapped_key_t | pub_key | RSA 2048-bit public wrapped key. |

◆ [sce_ecc_public_wrapped_key_t](#)

| | | |
|---|-------|----------|
| struct sce_ecc_public_wrapped_key_t | | |
| ECC P-192/224/256 public wrapped key data structure | | |
| Data Fields | | |
| uint32_t | type | key type |
| struct sce_ecc_public_wrapped_key_t | value | |

◆ [sce_ecc_private_wrapped_key_t](#)

| | | |
|--|---|-------------------|
| struct sce_ecc_private_wrapped_key_t | | |
| ECC P-192/224/256 private wrapped key data structure | | |
| Data Fields | | |
| uint32_t | type | key type |
| uint32_t | value[HW_SCE_ECC_PRIVATE_KEY_MANAGEMENT_INFO_WORD_SIZE] | wrapped key value |

◆ [sce_ecc_wrapped_pair_key_t](#)

| | | |
|---|----------|--------------------------|
| struct sce_ecc_wrapped_pair_key_t | | |
| ECC P-192/224/256 wrapped key pair structure | | |
| Data Fields | | |
| sce_ecc_private_wrapped_key_t | priv_key | ECC private wrapped key. |
| sce_ecc_public_wrapped_key_t | pub_key | ECC public wrapped key. |

◆ [sce_ecdh_wrapped_key_t](#)

| | | |
|---------------------------------|--|--|
| struct sce_ecdh_wrapped_key_t | | |
| ECDH wrapped key data structure | | |
| Data Fields | | |

| | | |
|----------|---|-------------------|
| uint32_t | type | key type |
| uint32_t | value[HW_SCE_SHARED_SECRET_KEY_INDEX_WORD_SIZE] | wrapped key value |

◆ **sce_key_update_key_t**

| | | |
|--|---|---|
| struct sce_key_update_key_t | | |
| Update key ring index data structure. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | type | key type |
| uint32_t | value[HW_SCE_UPDATE_KEY_RING_INDEX_WORD_SIZE] | wrapped key value |
| | | <i>Note</i> The size of the "value" array and the definition name depends on the used SCE. See the header file for detail. |

◆ **sce_aes_handle_t**

| | | |
|---------------------------------------|---|--|
| struct sce_aes_handle_t | | |
| The work area for AES. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| sce_aes_wrapped_key_t | wrapped_key | wrapped key |
| uint32_t | current_input_data_size | text size under encryption / decryption |
| uint8_t | last_1_block_as_fraction[HW_SCE_AES_BLOCK_BYTE_SIZE] | text array less than the block long |
| uint8_t | last_2_block_as_fraction[HW_SCE_AES_BLOCK_BYTE_SIZE *2] | reserved |
| uint8_t | current_initial_vector[HW_SCE_AES_CBC_IV_BYTE_SIZE] | current initialization vector used in CBC mode |
| uint8_t | flag_call_init | control flag of calling function |

◆ **sce_gcm_handle_t**

| | | |
|---------------------------------------|-------------|------------------------------|
| struct sce_gcm_handle_t | | |
| The work area for GCM. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| sce_aes_wrapped_key_t | wrapped_key | wrapped key |
| | | |

| | | |
|----------|--|--|
| uint8_t | gcm_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE] | text array less than the block long |
| uint8_t | gcm_aad_buffer[HW_SCE_AES_GCM_AAD_BLOCK_BYTE_SIZE] | AAD array less than the block long. |
| uint32_t | all_received_length | entire length of text |
| uint32_t | all_received_aad_length | entire length of text |
| uint32_t | buffering_length | text array length less than the block long |
| uint32_t | buffering_aad_length | AAD array length less than the block long. |
| uint8_t | flag_call_init | control flag of calling function |
| uint8_t | flag_update_input_data | control flag of next input data |

◆ sce_ccm_handle_t

| | | |
|---------------------------------------|---|--|
| struct sce_ccm_handle_t | | |
| The work area for CCM. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| sce_aes_wrapped_key_t | wrapped_key | wrapped key |
| uint8_t | formatted_data[HW_SCE_AES_CCM_B_FORMAT_BYTE_SIZE] | formatted data area |
| uint8_t | counter[HW_SCE_AES_CCM_COUNTER_BYTE_SIZE] | counter of CTR mode |
| uint8_t | ccm_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE] | text array less than the block long |
| uint32_t | all_received_length | entire length of text |
| uint32_t | buffering_length | text array length less than the block long |
| uint8_t | flag_call_init | control flag of calling function |

◆ sce_cmac_handle_t

| | | |
|--|---|--|
| struct sce_cmac_handle_t | | |
| The work area for CMAC. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| sce_aes_wrapped_key_t | wrapped_key | wrapped key |
| uint8_t | cmac_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE] | message array less than the block long |
| uint32_t | all_received_length | entire length of message |

| | | |
|----------|------------------|---|
| uint32_t | buffering_length | message array length less than the block long |
| uint8_t | flag_call_init | control flag of calling function |

◆ sce_sha_md5_handle_t

| | | |
|---------------------------------------|--|---|
| struct sce_sha_md5_handle_t | | |
| The work area for SHA. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| uint8_t | sha_buffer[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE *4] | message array length less than the block long |
| uint32_t | all_received_length | entire length of message |
| uint32_t | buffering_length | message array length less than the block long |
| uint8_t | current_hash[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE] | last hash value |
| uint8_t | flag_call_init | control flag of calling function |

◆ sce_hmac_sha_handle_t

| | | |
|--|---|---|
| struct sce_hmac_sha_handle_t | | |
| The work area for HMAC-SHA. DO NOT MODIFY. | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| sce_hmac_sha_wrapped_key_t | wrapped_key | wrapped key |
| uint8_t | hmac_buffer[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE *4] | message array length less than the block long |
| uint32_t | all_received_length | entire length of message |
| uint32_t | buffering_length | message array length less than the block long |
| uint8_t | flag_call_init | control flag of calling function |

◆ sce_ecdh_handle_t

| | | |
|--------------------------|-----------------|--|
| struct sce_ecdh_handle_t | | |
| The work area for ECDH | | |
| Data Fields | | |
| uint32_t | id | serial number of this handle |
| uint32_t | flag_use_key_id | control frag that the key_id has already used or not |
| uint32_t | key_id | serial number of the wrapped |

| | | key |
|----------|-------------------------|----------------------------------|
| uint32_t | key_type | key type |
| uint8_t | flag_call_init | control flag of calling function |
| uint8_t | flag_call_make_public | control flag of calling function |
| uint8_t | flag_call_read_public | control flag of calling function |
| uint8_t | flag_call_shared_secret | control flag of calling function |

◆ **sce_cfg_t**

| struct sce_cfg_t | | |
|---|-----------|-----------------|
| User configuration structure, used in open function | | |
| Data Fields | | |
| lifecycle_t | lifecycle | Data lifecycle. |

◆ **sce_api_t**

| struct sce_api_t | |
|--|--|
| Functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t(*) | open)(sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg) |
| fsp_err_t(*) | close)(sce_ctrl_t *const p_ctrl) |

| Field Documentation | |

◆ **open**

`fsp_err_t(* sce_api_t::open) (sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg)`

Enables use of SCE functionality.

Implemented as

- `R_SCE_Open()`

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration structure. |

◆ **close**

`fsp_err_t(* sce_api_t::close) (sce_ctrl_t *const p_ctrl)`

Stops supply of power to the SCE.

Implemented as

- `R_SCE_Close()`

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **softwareReset**

`fsp_err_t(* sce_api_t::softwareReset) (void)`

Software reset to SCE.

Implemented as

- `R_SCE_SoftwareReset()`

◆ **randomNumberGenerate**

`fsp_err_t(* sce_api_t::randomNumberGenerate) (uint32_t *random)`

Generates 4 words random number.

Implemented as

- `R_SCE_RandomNumberGenerate()`

Parameters

| | | |
|----------|--------|---------------------------------------|
| [in,out] | random | Stores 4words (16 bytes) random data. |
|----------|--------|---------------------------------------|

◆ AES128_WrappedKeyGenerate

`fsp_err_t(* sce_api_t::AES128_WrappedKeyGenerate) (sce_aes_wrapped_key_t *wrapped_key)`

This API outputs 128-bit AES wrapped key.

Implemented as

- `R_SCE_AES128_WrappedKeyGenerate()`

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | wrapped_key | 128-bit AES wrapped key |
|----------|-------------|-------------------------|

◆ AES256_WrappedKeyGenerate

`fsp_err_t(* sce_api_t::AES256_WrappedKeyGenerate) (sce_aes_wrapped_key_t *wrapped_key)`

This API outputs 256-bit AES wrapped key.

Implemented as

- `R_SCE_AES256_WrappedKeyGenerate()`

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | wrapped_key | 256-bit AES wrapped key |
|----------|-------------|-------------------------|

◆ AES128_EncryptedKeyWrap

`fsp_err_t(* sce_api_t::AES128_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_aes_wrapped_key_t *wrapped_key)`

This API outputs 128-bit AES wrapped key.

Implemented as

- `R_SCE_AES128_EncryptedKeyWrap()`

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 128-bit AES wrapped key |

◆ AES256_EncryptedKeyWrap

`fsp_err_t(*sce_api_t::AES256_EncryptedKeyWrap)(uint8_t*initial_vector, uint8_t*encrypted_key, sce_key_update_key_t*key_update_key, sce_aes_wrapped_key_t*wrapped_key)`

This API outputs 256-bit AES wrapped key.

Implemented as

- `R_SCE_AES256_EncryptedKeyWrap()`

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit AES wrapped key |

◆ AES128_RFC3394KeyWrap

`fsp_err_t(*sce_api_t::AES128_RFC3394KeyWrap)(sce_aes_wrapped_key_t*master_key, uint32_t target_key_type, sce_aes_wrapped_key_t*target_key, uint32_t*rfc3394_wrapped_key)`

This API outputs 128-bit AES wrapped key.

Implemented as

- `R_SCE_AES128_RFC3394KeyWrap()`

Parameters

| | | |
|-------|---------------------|--------------------------------|
| [in] | master_key | AES-128 key used for wrapping. |
| [in] | target_key_type | Selects key to be wrapped. |
| [in] | target_key | Key to be wrapped. |
| [out] | rfc3394_wrapped_key | Wrapped key. |

◆ AES256_RFC3394KeyWrap

```
fsp_err_t(* sce_api_t::AES256_RFC3394KeyWrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, sce_aes_wrapped_key_t *target_key, uint32_t *rfc3394_wrapped_key)
```

This API outputs 256-bit AES wrapped key.

Implemented as

- R_SCE_AES256_RFC3394KeyWrap()

Parameters

| | | |
|-------|---------------------|--------------------------------|
| [in] | master_key | AES-256 key used for wrapping. |
| [in] | target_key_type | Selects key to be wrapped. |
| [in] | target_key | Key to be wrapped. |
| [out] | rfc3394_wrapped_key | Wrapped key. |

◆ AES128_RFC3394KeyUnwrap

```
fsp_err_t(* sce_api_t::AES128_RFC3394KeyUnwrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, uint32_t *rfc3394_wrapped_key, sce_aes_wrapped_key_t *target_key)
```

This API outputs 128-bit AES unwrapped key.

Implemented as

- R_SCE_AES128_RFC3394KeyUnwrap()

Parameters

| | | |
|-------|---------------------|----------------------------------|
| [in] | master_key | AES-128 key used for unwrapping. |
| [in] | target_key_type | Selects key to be unwrapped. |
| [in] | rfc3394_wrapped_key | Wrapped key. |
| [out] | target_key | Key to be unwrapped. |

◆ AES256_RFC3394KeyUnwrap

`fsp_err_t(* sce_api_t::AES256_RFC3394KeyUnwrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, uint32_t *rfc3394_wrapped_key, sce_aes_wrapped_key_t *target_key)`

This API outputs 256-bit AES unwrapped key.

Implemented as

- `R_SCE_AES256_RFC3394KeyUnwrap()`

Parameters

| | | |
|-------|---------------------|----------------------------------|
| [in] | master_key | AES-256 key used for unwrapping. |
| [in] | target_key_type | Selects key to be unwrapped. |
| [in] | rfc3394_wrapped_key | Wrapped key. |
| [out] | target_key | Key to be unwrapped. |

◆ AES128ECB_EncryptInit

`fsp_err_t(* sce_api_t::AES128ECB_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES128ECB encryption.

Implemented as

- `R_SCE_AES128ECB_EncryptInit()`

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |

◆ AES128ECB_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128ECB_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES128ECB encryption.

Implemented as

- [R_SCE_AES128ECB_EncryptUpdate\(\)](#)

Parameters

| | | |
|----------|--------------|--|
| [in,out] | handle | AES handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in,out] | plain_length | plaintext data length (must be a multiple of 16) |

◆ AES128ECB_EncryptFinal

`fsp_err_t(* sce_api_t::AES128ECB_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES128ECB encryption.

Implemented as

- [R_SCE_AES128ECB_EncryptFinal\(\)](#)

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

◆ AES128ECB_DecryptInit

`fsp_err_t(* sce_api_t::AES128ECB_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES128ECB decryption.

Implemented as

- [R_SCE_AES128ECB_DecryptInit\(\)](#)

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |

◆ AES128ECB_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128ECB_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES128ECB decryption.

Implemented as

- `R_SCE_AES128ECB_DecryptUpdate()`

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

◆ AES128ECB_DecryptFinal

`fsp_err_t(* sce_api_t::AES128ECB_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES128ECB decryption.

Implemented as

- `R_SCE_AES128ECB_DecryptFinal()`

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

◆ AES256ECB_EncryptInit

`fsp_err_t(* sce_api_t::AES256ECB_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256ECB encryption.

Implemented as

- `R_SCE_AES256ECB_EncryptInit()`

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |

◆ AES256ECB_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256ECB_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES256ECB encryption.

Implemented as

- [R_SCE_AES256ECB_EncryptUpdate\(\)](#)

Parameters

| | | |
|----------|--------------|--|
| [in,out] | handle | AES handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in,out] | plain_length | plaintext data length (must be a multiple of 16) |

◆ AES256ECB_EncryptFinal

`fsp_err_t(* sce_api_t::AES256ECB_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES256ECB encryption.

Implemented as

- [R_SCE_AES256ECB_EncryptFinal\(\)](#)

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

◆ AES256ECB_DecryptInit

`fsp_err_t(* sce_api_t::AES256ECB_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256ECB decryption.

Implemented as

- [R_SCE_AES256ECB_DecryptInit\(\)](#)

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |

◆ AES256ECB_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256ECB_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES256ECB decryption.

Implemented as

- `R_SCE_AES256ECB_DecryptUpdate()`

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

◆ AES256ECB_DecryptFinal

`fsp_err_t(* sce_api_t::AES256ECB_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES256ECB decryption.

Implemented as

- `R_SCE_AES256ECB_DecryptFinal()`

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

◆ AES128CBC_EncryptInit

`fsp_err_t(* sce_api_t::AES128CBC_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES128CBC encryption.

Implemented as

- `R_SCE_AES128CBC_EncryptInit()`

Parameters

| | | |
|----------|----------------|------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | initial_vector | initial vector area (16byte) |

◆ AES128CBC_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128CBC_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES128CBC encryption.

Implemented as

- `R_SCE_AES128CBC_EncryptUpdate()`

Parameters

| | | |
|----------|--------------|--|
| [in,out] | handle | AES handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in,out] | plain_length | plaintext data length (must be a multiple of 16) |

◆ AES128CBC_EncryptFinal

`fsp_err_t(* sce_api_t::AES128CBC_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES128CBC encryption.

Implemented as

- `R_SCE_AES128CBC_EncryptFinal()`

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

◆ AES128CBC_DecryptInit

`fsp_err_t(* sce_api_t::AES128CBC_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES128CBC decryption.

Implemented as

- `R_SCE_AES128CBC_DecryptInit()`

Parameters

| | | |
|----------|----------------|------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | initial_vector | initial vector area (16byte) |

◆ AES128CBC_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128CBC_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES128CBC decryption.

Implemented as

- `R_SCE_AES128CBC_DecryptUpdate()`

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

◆ AES128CBC_DecryptFinal

`fsp_err_t(* sce_api_t::AES128CBC_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES128CBC decryption.

Implemented as

- `R_SCE_AES128CBC_DecryptFinal()`

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

◆ AES256CBC_EncryptInit

`fsp_err_t(* sce_api_t::AES256CBC_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES256CBC encryption.

Implemented as

- `R_SCE_AES256CBC_EncryptInit()`

Parameters

| | | |
|----------|----------------|------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | initial_vector | initial vector area (16byte) |

◆ AES256CBC_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256CBC_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES256CBC encryption.

Implemented as

- `R_SCE_AES256CBC_EncryptUpdate()`

Parameters

| | | |
|----------|--------------|--|
| [in,out] | handle | AES handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in,out] | plain_length | plaintext data length (must be a multiple of 16) |

◆ AES256CBC_EncryptFinal

`fsp_err_t(* sce_api_t::AES256CBC_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)`

Finalize AES256CBC encryption.

Implemented as

- `R_SCE_AES256CBC_EncryptFinal()`

Parameters

| | | |
|----------|---------------|--|
| [in,out] | handle | AES handler (work area) |
| [in,out] | cipher | ciphertext data area (nothing ever written here) |
| [in,out] | cipher_length | ciphertext data length (0 always written here) |

◆ AES256CBC_DecryptInit

`fsp_err_t(* sce_api_t::AES256CBC_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)`

Initialize AES256CBC decryption.

Implemented as

- `R_SCE_AES256CBC_DecryptInit()`

Parameters

| | | |
|----------|----------------|------------------------------|
| [in,out] | handle | AES handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | initial_vector | initial vector area (16byte) |

◆ AES256CBC_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256CBC_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES256CBC decryption.

Implemented as

- `R_SCE_AES256CBC_DecryptUpdate()`

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in,out] | cipher_length | ciphertext data length (must be a multiple of 16) |

◆ AES256CBC_DecryptFinal

`fsp_err_t(* sce_api_t::AES256CBC_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)`

Finalize AES256CBC decryption.

Implemented as

- `R_SCE_AES256CBC_DecryptFinal()`

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES handler (work area) |
| [in,out] | plain | plaintext data area (nothing ever written here) |
| [in,out] | plain_length | plaintext data length (0 always written here) |

◆ AES128GCM_EncryptInit

`fsp_err_t(* sce_api_t::AES128GCM_EncryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES128GCM encryption.

Implemented as

- `R_SCE_AES128GCM_EncryptInit()`

Parameters

| | | |
|----------|-----------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | initial_vector | initialization vector area (initial_vector_length byte) |
| [in] | initial_vector_length | initialization vector length (1 or more bytes) |

◆ AES128GCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128GCM_EncryptUpdate) (sce_gcm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES128GCM encryption.

Implemented as

- `R_SCE_AES128GCM_EncryptUpdate()`

Parameters

| | | |
|----------|-------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_data_length | plaintext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

◆ AES128GCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES128GCM_EncryptFinal) (sce_gcm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_data_length, uint8_t *atag)`

Finalize AES128GCM encryption.

Implemented as

- `R_SCE_AES128GCM_EncryptFinal()`

Parameters

| | | |
|----------|--------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area (cipher_data_length byte) |
| [in,out] | cipher_data_length | ciphertext data length (0 always written here) |
| [in,out] | atag | authentication tag area |

◆ AES128GCM_DecryptInit

`fsp_err_t(* sce_api_t::AES128GCM_DecryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES128GCM decryption.

Implemented as

- `R_SCE_AES128GCM_DecryptInit()`

Parameters

| | | |
|----------|-----------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | initial_vector | initialization vector area (initial_vector_length byte) |
| [in] | initial_vector_length | initialization vector length (1 or more bytes) |

◆ AES128GCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128GCM_DecryptUpdate) (sce_gcm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES128GCM decryption.

Implemented as

- `R_SCE_AES128GCM_DecryptUpdate()`

Parameters

| | | |
|----------|--------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in] | plain | plaintext data area |
| [in] | cipher_data_length | ciphertext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

◆ AES128GCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES128GCM_DecryptFinal) (sce_gcm_handle_t *handle, uint8_t *plain, uint32_t *plain_data_length, uint8_t *atag, uint32_t atag_length)`

Finalize AES128GCM decryption.

Implemented as

- `R_SCE_AES128GCM_DecryptFinal()`

Parameters

| | | |
|----------|-------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | plain | plaintext data area (cipher_data_length byte) |
| [in,out] | plain_data_length | plaintext data length (0 always written here) |
| [in,out] | atag | authentication tag area (atag_length byte) |
| [in] | atag_length | authentication tag length (4,8,12,13,14,15,16 bytes) |

◆ AES256GCM_EncryptInit

`fsp_err_t(* sce_api_t::AES256GCM_EncryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES256GCM encryption.

Implemented as

- `R_SCE_AES256GCM_EncryptInit()`

Parameters

| | | |
|----------|-----------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | initial_vector | initialization vector area (initial_vector_length byte) |
| [in] | initial_vector_length | initialization vector length (1 or more bytes) |

◆ AES256GCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256GCM_EncryptUpdate) (sce_gcm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES256GCM encryption.

Implemented as

- `R_SCE_AES256GCM_EncryptUpdate()`

Parameters

| | | |
|----------|-------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_data_length | plaintext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

◆ AES256GCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES256GCM_EncryptFinal) (sce_gcm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_data_length, uint8_t *atag)`

Finalize AES256GCM encryption.

Implemented as

- `R_SCE_AES256GCM_EncryptFinal()`

Parameters

| | | |
|----------|--------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area (cipher_data_length byte) |
| [in,out] | cipher_data_length | ciphertext data length (0 always written here) |
| [in,out] | atag | authentication tag area |

◆ AES256GCM_DecryptInit

`fsp_err_t(* sce_api_t::AES256GCM_DecryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)`

Initialize AES256GCM decryption.

Implemented as

- `R_SCE_AES256GCM_DecryptInit()`

Parameters

| | | |
|----------|-----------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | initial_vector | initialization vector area (initial_vector_length byte) |
| [in] | initial_vector_length | initialization vector length (1 ore more bytes) |

◆ AES256GCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256GCM_DecryptUpdate) (sce_gcm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_data_length, uint8_t *aad, uint32_t aad_length)`

Update AES256GCM decryption.

Implemented as

- `R_SCE_AES256GCM_DecryptUpdate()`

Parameters

| | | |
|----------|--------------------|---|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in] | plain | plaintext data area |
| [in] | cipher_data_length | ciphertext data length (0 or more bytes) |
| [in] | aad | additional authentication data (aad_length byte) |
| [in] | aad_length | additional authentication data length (0 or more bytes) |

◆ AES256GCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES256GCM_DecryptFinal) (sce_gcm_handle_t *handle, uint8_t *plain, uint32_t *plain_data_length, uint8_t *atag, uint32_t atag_length)`

Finalize AES256GCM decryption.

Implemented as

- `R_SCE_AES256GCM_DecryptFinal()`

Parameters

| | | |
|----------|-------------------|--|
| [in,out] | handle | AES-GCM handler (work area) |
| [in,out] | plain | plaintext data area (cipher_data_length byte) |
| [in,out] | plain_data_length | plaintext data length (0 always written here) |
| [in,out] | atag | authentication tag area (atag_length byte) |
| [in] | atag_length | authentication tag length (4,8,12,13,14,15,16 bytes) |

◆ AES128CCM_EncryptInit

`fsp_err_t(* sce_api_t::AES128CCM_EncryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES128CCM encryption.

Implemented as

- `R_SCE_AES128CCM_EncryptInit()`

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES128CCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES128CCM_EncryptUpdate) (sce_ccm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES128CCM encryption.

Implemented as

- `R_SCE_AES128CCM_EncryptUpdate()`

Parameters

| | | |
|----------|--------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_length | plaintext data length |

◆ AES128CCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES128CCM_EncryptFinal) (sce_ccm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES128CCM encryption.

Implemented as

- [R_SCE_AES128CCM_EncryptFinal\(\)](#)

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in,out] | cipher_length | ciphertext data length |
| [in,out] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES128CCM_DecryptInit

`fsp_err_t(* sce_api_t::AES128CCM_DecryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES128CCM decryption.

Implemented as

- [R_SCE_AES128CCM_DecryptInit\(\)](#)

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES128CCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES128CCM_DecryptUpdate) (sce_ccm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES128CCM decryption.

Implemented as

- `R_SCE_AES128CCM_DecryptUpdate()`

Parameters

| | | |
|----------|---------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in] | cipher_length | ciphertext data length |

◆ AES128CCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES128CCM_DecryptFinal) (sce_ccm_handle_t *handle, uint8_t *plain, uint32_t *plain_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES128CCM decryption.

Implemented as

- `R_SCE_AES128CCM_DecryptFinal()`

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | plain | plaintext data area |
| [in,out] | plain_length | plaintext data length |
| [in] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES256CCM_EncryptInit

`fsp_err_t(* sce_api_t::AES256CCM_EncryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES256CCM encryption.

Implemented as

- `R_SCE_AES256CCM_EncryptInit()`

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES256CCM_EncryptUpdate

`fsp_err_t(* sce_api_t::AES256CCM_EncryptUpdate) (sce_ccm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)`

Update AES256CCM encryption.

Implemented as

- `R_SCE_AES256CCM_EncryptUpdate()`

Parameters

| | | |
|----------|--------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | plain | plaintext data area |
| [in,out] | cipher | ciphertext data area |
| [in] | plain_length | plaintext data length |

◆ AES256CCM_EncryptFinal

`fsp_err_t(* sce_api_t::AES256CCM_EncryptFinal) (sce_ccm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES256CCM encryption.

Implemented as

- [R_SCE_AES256CCM_EncryptFinal\(\)](#)

Parameters

| | | |
|----------|---------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | cipher | ciphertext data area |
| [in,out] | cipher_length | ciphertext data length |
| [in,out] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES256CCM_DecryptInit

`fsp_err_t(* sce_api_t::AES256CCM_DecryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)`

Initialize AES256CCM decryption.

Implemented as

- [R_SCE_AES256CCM_DecryptInit\(\)](#)

Parameters

| | | |
|----------|----------------|--|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |
| [in] | nonce | Nonce |
| [in] | nonce_length | Nonce data length (7 to 13 bytes) |
| [in] | adata | additional authentication data |
| [in] | a_length | additional authentication data length (0 to 110 bytes) |
| [in] | payload_length | Payload length (any number of bytes) |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES256CCM_DecryptUpdate

`fsp_err_t(* sce_api_t::AES256CCM_DecryptUpdate) (sce_ccm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)`

Update AES256CCM decryption.

Implemented as

- `R_SCE_AES256CCM_DecryptUpdate()`

Parameters

| | | |
|----------|---------------|-----------------------------|
| [in,out] | handle | AES-CCM handler (work area) |
| [in] | cipher | ciphertext data area |
| [in,out] | plain | plaintext data area |
| [in] | cipher_length | ciphertext data length |

◆ AES256CCM_DecryptFinal

`fsp_err_t(* sce_api_t::AES256CCM_DecryptFinal) (sce_ccm_handle_t *handle, uint8_t *plain, uint32_t *plain_length, uint8_t *mac, uint32_t mac_length)`

Finalize AES256CCM decryption.

Implemented as

- `R_SCE_AES256CCM_DecryptFinal()`

Parameters

| | | |
|----------|--------------|---|
| [in,out] | handle | AES-CCM handler (work area) |
| [in,out] | plain | plaintext data area |
| [in,out] | plain_length | plaintext data length |
| [in] | mac | MAC area |
| [in] | mac_length | MAC length (4, 6, 8, 10, 12, 14, or 16 bytes) |

◆ AES128CMAC_GenerateInit

`fsp_err_t(* sce_api_t::AES128CMAC_GenerateInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES128CMAC generation.

Implemented as

- `R_SCE_AES128CMAC_GenerateInit()`

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |

◆ AES128CMAC_GenerateUpdate

`fsp_err_t(* sce_api_t::AES128CMAC_GenerateUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update AES128CMAC generation.

Implemented as

- `R_SCE_AES128CMAC_GenerateUpdate()`

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

◆ AES128CMAC_GenerateFinal

`fsp_err_t(* sce_api_t::AES128CMAC_GenerateFinal) (sce_cmac_handle_t *handle, uint8_t *mac)`

Finalize AES128CMAC generation.

Implemented as

- `R_SCE_AES128CMAC_GenerateFinal()`

Parameters

| | | |
|----------|--------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (16byte) |

◆ AES128CMAC_VerifyInit

```
fsp_err_t(* sce_api_t::AES128CMAC_VerifyInit) (sce_cmac_handle_t *handle,
sce_aes_wrapped_key_t *wrapped_key)
```

Initialize AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyInit()

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | wrapped_key | 128-bit AES wrapped key |

◆ AES128CMAC_VerifyUpdate

```
fsp_err_t(* sce_api_t::AES128CMAC_VerifyUpdate) (sce_cmac_handle_t *handle, uint8_t *message,
uint32_t message_length)
```

Update AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyUpdate()

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

◆ AES128CMAC_VerifyFinal

`fsp_err_t(* sce_api_t::AES128CMAC_VerifyFinal) (sce_cmac_handle_t *handle, uint8_t *mac, uint32_t mac_length)`

Finalize AES128CMAC verification.

Implemented as

- `R_SCE_AES128CMAC_VerifyFinal()`

Parameters

| | | |
|----------|------------|---------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (mac_length byte) |
| [in,out] | mac_length | MAC data length (2 to 16 bytes) |

◆ AES256CMAC_GenerateInit

`fsp_err_t(* sce_api_t::AES256CMAC_GenerateInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256CMAC generation.

Implemented as

- `R_SCE_AES256CMAC_GenerateInit()`

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |

◆ AES256CMAC_GenerateUpdate

`fsp_err_t(* sce_api_t::AES256CMAC_GenerateUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update AES256CMAC generation.

Implemented as

- [R_SCE_AES256CMAC_GenerateUpdate\(\)](#)

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

◆ AES256CMAC_GenerateFinal

`fsp_err_t(* sce_api_t::AES256CMAC_GenerateFinal) (sce_cmac_handle_t *handle, uint8_t *mac)`

Finalize AES256CMAC generation.

Implemented as

- [R_SCE_AES256CMAC_GenerateFinal\(\)](#)

Parameters

| | | |
|----------|--------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (16byte) |

◆ AES256CMAC_VerifyInit

`fsp_err_t(* sce_api_t::AES256CMAC_VerifyInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)`

Initialize AES256CMAC verification.

Implemented as

- [R_SCE_AES256CMAC_VerifyInit\(\)](#)

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | wrapped_key | 256-bit AES wrapped key |

◆ AES256CMAC_VerifyUpdate

`fsp_err_t(* sce_api_t::AES256CMAC_VerifyUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update AES256CMAC verification.

Implemented as

- [R_SCE_AES256CMAC_VerifyUpdate\(\)](#)

Parameters

| | | |
|----------|----------------|---|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in] | message | message data area (message_length byte) |
| [in] | message_length | message data length (0 or more bytes) |

◆ AES256CMAC_VerifyFinal

`fsp_err_t(* sce_api_t::AES256CMAC_VerifyFinal) (sce_cmac_handle_t *handle, uint8_t *mac, uint32_t mac_length)`

Finalize AES256CMAC verification.

Implemented as

- [R_SCE_AES256CMAC_VerifyFinal\(\)](#)

Parameters

| | | |
|----------|------------|---------------------------------|
| [in,out] | handle | AES-CMAC handler (work area) |
| [in,out] | mac | MAC data area (mac_length byte) |
| [in,out] | mac_length | MAC data length (2 to 16 bytes) |

◆ SHA256_Init

`fsp_err_t(* sce_api_t::SHA256_Init) (sce_sha_md5_handle_t *handle)`

Initialize SHA-256 Calculation.

Implemented as

- [R_SCE_SHA256_Init\(\)](#)

Parameters

| | | |
|----------|--------|-------------------------|
| [in,out] | handle | SHA handler (work area) |
|----------|--------|-------------------------|

◆ **SHA256_Update**

`fsp_err_t(* sce_api_t::SHA256_Update) (sce_sha_md5_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update SHA-256 Calculation.

Implemented as

- `R_SCE_SHA256_Update()`

Parameters

| | | |
|----------|----------------|-------------------------|
| [in,out] | handle | SHA handler (work area) |
| [in] | message | message data area |
| [in] | message_length | message data length |

◆ **SHA256_Final**

`fsp_err_t(* sce_api_t::SHA256_Final) (sce_sha_md5_handle_t *handle, uint8_t *digest, uint32_t *digest_length)`

Finalize SHA-256 Calculation.

Implemented as

- `R_SCE_SHA256_Final()`

Parameters

| | | |
|----------|---------------|----------------------------|
| [in,out] | handle | SHA handler (work area) |
| [in,out] | digest | hasha data area |
| [in,out] | digest_length | hash data length (32bytes) |

◆ **RSA1024_WrappedKeyPairGenerate**

`fsp_err_t(* sce_api_t::RSA1024_WrappedKeyPairGenerate) (sce_rsa1024_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs 1024-bit RSA wrapped pair key.

Implemented as

- `R_SCE_RSA1024_WrappedKeyPairGenerate()`

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | wrapped_key | 128-bit AES wrapped key |
|----------|-------------|-------------------------|

◆ RSA2048_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::RSA2048_WrappedKeyPairGenerate) (sce_rsa2048_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs 2048-bit RSA wrapped pair key.

Implemented as

- `R_SCE_RSA2048_WrappedKeyPairGenerate()`

Parameters

| | | |
|----------|-------------|-------------------------|
| [in,out] | wrapped_key | 128-bit AES wrapped key |
|----------|-------------|-------------------------|

◆ RSA1024_EncryptedPublicKeyWrap

`fsp_err_t(* sce_api_t::RSA1024_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa1024_public_wrapped_key_t *wrapped_key)`

This API outputs 1024-bit RSA public wrapped key.

Implemented as

- `R_SCE_RSA1024_EncryptedPublicKeyWrap()`

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 1024-bit RSA public wrapped key |

◆ RSA1024_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::RSA1024_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa1024_private_wrapped_key_t
*wrapped_key)
```

This API outputs 1024-bit RSA private wrapped key.

Implemented as

- R_SCE_RSA1024_EncryptedPrivateKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 1024-bit RSA private wrapped key |

◆ RSA2048_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::RSA2048_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa2048_public_wrapped_key_t
*wrapped_key)
```

This API outputs 2048-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA2048_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 2048-bit RSA public wrapped key |

◆ RSA2048_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::RSA2048_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa2048_private_wrapped_key_t
*wrapped_key)
```

This API outputs 2048-bit RSA private wrapped key.

Implemented as

- R_SCE_RSA2048_EncryptedPrivateKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 2048-bit RSA private wrapped key |

◆ RSA3072_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::RSA3072_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa3072_public_wrapped_key_t
*wrapped_key)
```

This API outputs 3072-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA3072_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 3072-bit RSA public wrapped key |

◆ RSA4096_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::RSA4096_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa4096_public_wrapped_key_t
*wrapped_key)
```

This API outputs 4096-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA4096_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 4096-bit RSA public wrapped key |

◆ RSASSA_PKCS1024_SignatureGenerate

```
fsp_err_t(* sce_api_t::RSASSA_PKCS1024_SignatureGenerate) (sce_rsa_byte_data_t *message_hash,
sce_rsa_byte_data_t *signature, sce_rsa1024_private_wrapped_key_t *wrapped_key, uint8_t
hash_type)
```

RSASSA-PKCS1-V1_5 signature generation.

Implemented as

- R_SCE_RSASSA_PKCS1024_SignatureGenerate()

Parameters

| | | |
|----------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature |
| [in,out] | signature | Signature text storage destination information |
| [in] | wrapped_key | Inputs the 1024-bit RSA private wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

◆ RSASSA_PKCS2048_SignatureGenerate

`fsp_err_t(* sce_api_t::RSASSA_PKCS2048_SignatureGenerate) (sce_rsa_byte_data_t *message_hash, sce_rsa_byte_data_t *signature, sce_rsa2048_private_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature generation.

Implemented as

- `R_SCE_RSASSA_PKCS2048_SignatureGenerate()`

Parameters

| | | |
|----------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature |
| [in,out] | signature | Signature text storage destination information |
| [in] | wrapped_key | Inputs the 2048-bit RSA private wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

◆ RSASSA_PKCS1024_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS1024_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa1024_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS1024_SignatureVerify()`

Parameters

| | | |
|------|--------------|---|
| [in] | signature | Signature text information to verify |
| [in] | message_hash | Message text or hash value to verify |
| [in] | wrapped_key | Inputs the 1024-bit RSA public wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

◆ RSASSA_PKCS2048_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS2048_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa2048_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS2048_SignatureVerify()`

Parameters

| | | |
|------|--------------|---|
| [in] | signature | Signature text information to verify |
| [in] | message_hash | Message text or hash value to verify |
| [in] | wrapped_key | Inputs the 2048-bit RSA public wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

◆ RSASSA_PKCS3072_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS3072_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa3072_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS3072_SignatureVerify()`

Parameters

| | | |
|------|--------------|---|
| [in] | signature | Signature text information to verify |
| [in] | message_hash | Message text or hash value to verify |
| [in] | wrapped_key | Inputs the 3072-bit RSA public wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

◆ RSASSA_PKCS4096_SignatureVerify

`fsp_err_t(* sce_api_t::RSASSA_PKCS4096_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa4096_public_wrapped_key_t *wrapped_key, uint8_t hash_type)`

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- `R_SCE_RSASSA_PKCS4096_SignatureVerify()`

Parameters

| | | |
|------|--------------|---|
| [in] | signature | Signature text information to verify |
| [in] | message_hash | Message text or hash value to verify |
| [in] | wrapped_key | Inputs the 4096-bit RSA public wrapped key. |
| [in] | hash_type | Only HW_SCE_RSA_HASH_SHA256 is supported |

◆ RSAES_PKCS1024_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS1024_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa1024_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS1024_Encrypt()`

Parameters

| | | |
|----------|-------------|---|
| [in] | plain | plaintext |
| [in,out] | cipher | ciphertext |
| [in] | wrapped_key | Inputs the 1024-bit RSA public wrapped key. |

◆ RSAES_PKCS2048_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS2048_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa2048_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS2048_Encrypt()`

Parameters

| | | |
|----------|-------------|---|
| [in] | plain | plaintext |
| [in,out] | cipher | ciphertext |
| [in] | wrapped_key | Inputs the 2048-bit RSA public wrapped key. |

◆ RSAES_PKCS3072_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS3072_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa3072_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS3072_Encrypt()`

Parameters

| | | |
|----------|-------------|---|
| [in] | plain | plaintext |
| [in,out] | cipher | ciphertext |
| [in] | wrapped_key | Inputs the 3072-bit RSA public wrapped key. |

◆ RSAES_PKCS4096_Encrypt

`fsp_err_t(* sce_api_t::RSAES_PKCS4096_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa4096_public_wrapped_key_t *wrapped_key)`

RSAES-PKCS1-V1_5 encryption.

Implemented as

- `R_SCE_RSAES_PKCS4096_Encrypt()`

Parameters

| | | |
|----------|-------------|---|
| [in] | plain | plaintext |
| [in,out] | cipher | ciphertext |
| [in] | wrapped_key | Inputs the 4096-bit RSA public wrapped key. |

◆ RSAES_PKCS1024_Decrypt

```
fsp_err_t(* sce_api_t::RSAES_PKCS1024_Decrypt) (sce_rsa_byte_data_t *cipher, sce_rsa_byte_data_t *plain, sce_rsa1024_private_wrapped_key_t *wrapped_key)
```

RSAES-PKCS1-V1_5 decryption.

Implemented as

- R_SCE_RSAES_PKCS1024_Decrypt()

Parameters

| | | |
|----------|-------------|--|
| [in] | cipher | ciphertext |
| [in,out] | plain | plaintext |
| [in] | wrapped_key | Inputs the 1024-bit RSA private wrapped key. |

◆ RSAES_PKCS2048_Decrypt

```
fsp_err_t(* sce_api_t::RSAES_PKCS2048_Decrypt) (sce_rsa_byte_data_t *cipher, sce_rsa_byte_data_t *plain, sce_rsa2048_private_wrapped_key_t *wrapped_key)
```

RSAES-PKCS1-V1_5 decryption.

Implemented as

- R_SCE_RSAES_PKCS2048_Decrypt()

Parameters

| | | |
|----------|-------------|--|
| [in] | cipher | ciphertext |
| [in,out] | plain | plaintext |
| [in] | wrapped_key | Inputs the 2048-bit RSA private wrapped key. |

◆ SHA256HMAC_EncryptedKeyWrap

```
fsp_err_t(* sce_api_t::SHA256HMAC_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_hmac_sha_wrapped_key_t
*wrapped_key)
```

This API outputs HMAC-SHA256 wrapped key.

Implemented as

- R_SCE_SHA256HMAC_EncryptedKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | HMAC-SHA256 wrapped key |

◆ SHA256HMAC_GenerateInit

```
fsp_err_t(* sce_api_t::SHA256HMAC_GenerateInit) (sce_hmac_sha_handle_t *handle,
sce_hmac_sha_wrapped_key_t *wrapped_key)
```

Initialize HMAC-SHA256 generation.

Implemented as

- R_SCE_SHA256HMAC_GenerateInit()

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | SHA-HMAC handler (work area) |
| [in] | wrapped_key | MAC wrapped key |

◆ SHA256HMAC_GenerateUpdate

`fsp_err_t(* sce_api_t::SHA256HMAC_GenerateUpdate) (sce_hmac_sha_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update HMAC-SHA256 generation.

Implemented as

- `R_SCE_SHA256HMAC_GenerateUpdate()`

Parameters

| | | |
|----------|----------------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in] | message | Message area |
| [in] | message_length | Message length |

◆ SHA256HMAC_GenerateFinal

`fsp_err_t(* sce_api_t::SHA256HMAC_GenerateFinal) (sce_hmac_sha_handle_t *handle, uint8_t *mac)`

Finalize HMAC-SHA256 generation.

Implemented as

- `R_SCE_SHA256HMAC_GenerateFinal()`

Parameters

| | | |
|----------|--------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in,out] | mac | HMAC area (32 bytes) |

◆ SHA256HMAC_VerifyInit

`fsp_err_t(* sce_api_t::SHA256HMAC_VerifyInit) (sce_hmac_sha_handle_t *handle, sce_hmac_sha_wrapped_key_t *wrapped_key)`

Initialize HMAC-SHA256 verification.

Implemented as

- `R_SCE_SHA256HMAC_VerifyInit()`

Parameters

| | | |
|----------|-------------|------------------------------|
| [in,out] | handle | SHA-HMAC handler (work area) |
| [in] | wrapped_key | MAC wrapped key |

◆ SHA256HMAC_VerifyUpdate

`fsp_err_t(* sce_api_t::SHA256HMAC_VerifyUpdate) (sce_hmac_sha_handle_t *handle, uint8_t *message, uint32_t message_length)`

Update HMAC-SHA256 verification.

Implemented as

- `R_SCE_SHA256HMAC_VerifyUpdate()`

Parameters

| | | |
|----------|----------------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in] | message | Message area |
| [in] | message_length | Message length |

◆ SHA256HMAC_VerifyFinal

`fsp_err_t(* sce_api_t::SHA256HMAC_VerifyFinal) (sce_hmac_sha_handle_t *handle, uint8_t *mac, uint32_t mac_length)`

Finalize HMAC-SHA256 verification.

Implemented as

- `R_SCE_SHA256HMAC_VerifyFinal()`

Parameters

| | | |
|----------|------------|-----------------------------|
| [in,out] | handle | SHA-HMAC handle (work area) |
| [in] | mac | HMAC area |
| [in] | mac_length | HMAC length |

◆ ECC_secp192r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp192r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp192r1 wrapped pair key.

Implemented as

- `R_SCE_ECC_secp192r1_WrappedKeyPairGenerate()`

Parameters

| | | |
|----------|------------------|--|
| [in,out] | wrapped_pair_key | Wrapped pair key for secp192r1 public key and private key pair |
|----------|------------------|--|

◆ ECC_secp224r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp224r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp224r1 wrapped pair key.

Implemented as

- [R_SCE_ECC_secp224r1_WrappedKeyPairGenerate\(\)](#)

Parameters

| | | |
|----------|------------------|--|
| [in,out] | wrapped_pair_key | Wrapped pair key for secp224r1 public key and private key pair |
|----------|------------------|--|

◆ ECC_secp256r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp256r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp256r1 wrapped pair key.

Implemented as

- [R_SCE_ECC_secp256r1_WrappedKeyPairGenerate\(\)](#)

Parameters

| | | |
|----------|------------------|--|
| [in,out] | wrapped_pair_key | Wrapped pair key for secp256r1 public key and private key pair |
|----------|------------------|--|

◆ ECC_secp384r1_WrappedKeyPairGenerate

`fsp_err_t(* sce_api_t::ECC_secp384r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)`

This API outputs secp384r1 wrapped pair key.

Implemented as

- [R_SCE_ECC_secp384r1_WrappedKeyPairGenerate\(\)](#)

Parameters

| | | |
|----------|------------------|--|
| [in,out] | wrapped_pair_key | Wrapped pair key for secp384r1 public key and private key pair |
|----------|------------------|--|

◆ ECC_secp192r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp192r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp192r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp192r1 public wrapped key |

◆ ECC_secp224r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp224r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp224r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp224r1 public wrapped key |

◆ ECC_secp256r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp256r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp256r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp256r1 public wrapped key |

◆ ECC_secp384r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp384r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)
```

This API outputs secp384r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp384r1 public wrapped key |

◆ ECC_secp192r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp192r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t *wrapped_key)
```

This API outputs secp192r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp192r1 private wrapped key |

◆ ECC_secp224r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp224r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t *wrapped_key)
```

This API outputs secp224r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp224r1 private wrapped key |

◆ ECC_secp256r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp256r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t
*wrapped_key)
```

This API outputs secp256r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp256r1 private wrapped key |

◆ ECC_secp384r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_api_t::ECC_secp384r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t
*encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t
*wrapped_key)
```

This API outputs secp384r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap()

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | secp384r1 private wrapped key |

◆ ECDSA_secp192r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp192r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

◦ `R_SCE_ECDSA_secp192r1_SignatureGenerate()`

Parameters

| | | |
|----------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature |
| [in,out] | signature | Signature text storage destination information |
| [in] | wrapped_key | Input wrapped key of secp192r1 private key. |

◆ ECDSA_secp224r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp224r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

◦ `R_SCE_ECDSA_secp224r1_SignatureGenerate()`

Parameters

| | | |
|----------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature |
| [in,out] | signature | Signature text storage destination information |
| [in] | wrapped_key | Input wrapped key of secp224r1 private key. |

◆ ECDSA_secp256r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp256r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

- `R_SCE_ECDSA_secp256r1_SignatureGenerate()`

Parameters

| | | |
|----------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature |
| [in,out] | signature | Signature text storage destination information |
| [in] | wrapped_key | Input wrapped key of secp256r1 private key. |

◆ ECDSA_secp384r1_SignatureGenerate

`fsp_err_t(* sce_api_t::ECDSA_secp384r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

ECDSA signature generation.

Implemented as

- `R_SCE_ECDSA_secp384r1_SignatureGenerate()`

Parameters

| | | |
|----------|--------------|--|
| [in] | message_hash | Message or hash value to which to attach signature |
| [in,out] | signature | Signature text storage destination information |
| [in] | wrapped_key | Input wrapped key of secp384r1 private key. |

◆ ECDSA_secp192r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp192r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp192r1_SignatureVerify()`

Parameters

| | | |
|----------|--------------|--|
| [in] | signature | Signature text information to be verified |
| [in,out] | message_hash | Message or hash value to be verified |
| [in] | wrapped_key | Input wrapped key of secp192r1 public key. |

◆ ECDSA_secp224r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp224r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp224r1_SignatureVerify()`

Parameters

| | | |
|----------|--------------|--|
| [in] | signature | Signature text information to be verified |
| [in,out] | message_hash | Message or hash value to be verified |
| [in] | wrapped_key | Input wrapped key of secp224r1 public key. |

◆ ECDSA_secp256r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp256r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp256r1_SignatureVerify()`

Parameters

| | | |
|----------|--------------|--|
| [in] | signature | Signature text information to be verified |
| [in,out] | message_hash | Message or hash value to be verified |
| [in] | wrapped_key | Input wrapped key of secp256r1 public key. |

◆ ECDSA_secp384r1_SignatureVerify

`fsp_err_t(* sce_api_t::ECDSA_secp384r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)`

ECDSA signature verification.

Implemented as

- `R_SCE_ECDSA_secp384r1_SignatureVerify()`

Parameters

| | | |
|----------|--------------|--|
| [in] | signature | Signature text information to be verified |
| [in,out] | message_hash | Message or hash value to be verified |
| [in] | wrapped_key | Input wrapped key of secp384r1 public key. |

◆ ECDH_secp256r1_Init

`fsp_err_t(* sce_api_t::ECDH_secp256r1_Init) (sce_ecdh_handle_t *handle, uint32_t key_type, uint32_t use_key_id)`

secp256r1 ECDH Initialization.

Implemented as

- `R_SCE_ECDH_secp256r1_Init()`

Parameters

| | | |
|----------|------------|--------------------------|
| [in,out] | handle | ECDH handler (work area) |
| [in] | key_type | Key exchange type |
| [in] | use_key_id | use key_id or not |

◆ ECDH_secp256r1_PublicKeySign

`fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeySign) (sce_ecdh_handle_t *handle, sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t *ecc_private_wrapped_key, uint8_t *public_key, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)`

secp256r1 ECDH public key Signature.

Implemented as

- `R_SCE_ECDH_secp256r1_PublicKeySign()`

Parameters

| | | |
|----------|-------------------------|---|
| [in,out] | handle | ECDH handler (work area) |
| [in] | ecc_public_wrapped_key | For ECDHE, input a null pointer. For ECDH, input the wrapped key of a secp256r1 public key. |
| [in] | ecc_private_wrapped_key | secp256r1 private key for signature generation |
| [in,out] | public_key | User secp256r1 public key (512-bit) for key exchange. |
| [in,out] | signature | Signature text storage destination information |
| [in,out] | wrapped_key | For ECDHE, a private wrapped key generated from a random number. Not output for ECDH. |

◆ ECDH_secp256r1_PublicKeyVerify

```
fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeyVerify) (sce_ecdh_handle_t *handle,
sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, uint8_t *public_key_data,
sce_ecdsa_byte_data_t *signature, sce_ecc_public_wrapped_key_t *wrapped_key)
```

secp256r1 ECDH public key verification.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeyVerify()

Parameters

| | | |
|----------|------------------------|---|
| [in,out] | handle | ECDH handler (work area) |
| [in] | ecc_public_wrapped_key | Public wrapped key area for signature verification |
| [in] | public_key_data | secp256r1 public key (512-bit) |
| [in] | signature | ECDSA secp256r1 signature of ecc_public_wrapped_key |
| [in,out] | wrapped_key | wrapped key of ecc_public_wrapped_key |

◆ ECDH_secp256r1_PublicKeyReadWithoutSignature

```
fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeyReadWithoutSignature) (sce_ecdh_handle_t
*handle, uint8_t *public_key_data, sce_ecc_public_wrapped_key_t *wrapped_key)
```

Output the key index of QeU without signature verification.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature()

Parameters

| | | |
|----------|-----------------|---|
| [in,out] | handle | ECDH handler (work area) |
| [in] | public_key_data | secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) public key (512-bit) |
| [in,out] | wrapped_key | wrapped key of ecc_public_wrapped_key |

◆ ECDH_secp256r1_SharedSecretCalculate

```
fsp_err_t(* sce_api_t::ECDH_secp256r1_SharedSecretCalculate) (sce_ecdh_handle_t *handle,
sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t
*ecc_private_wrapped_key, sce_ecdh_wrapped_key_t *shared_secret_wrapped_key)
```

secp256r1 ECDH shared secret calculation.

Implemented as

- R_SCE_ECDH_secp256r1_SharedSecretCalculate()

Parameters

| | | |
|----------|---------------------------|--|
| [in,out] | handle | ECDH handler (work area) |
| [in] | ecc_public_wrapped_key | Public wrapped key |
| [in] | ecc_private_wrapped_key | Private wrapped key |
| [in,out] | shared_secret_wrapped_key | Wrapped key of shared secret Z calculated by ECDH key exchange |

◆ ECDH_secp256r1_KeyDerivation

```
fsp_err_t(* sce_api_t::ECDH_secp256r1_KeyDerivation) (sce_ecdh_handle_t *handle,
sce_ecdh_wrapped_key_t *shared_secret_wrapped_key, uint32_t key_type, uint32_t kdf_type,
uint8_t *other_info, uint32_t other_info_length, sce_hmac_sha_wrapped_key_t *salt_wrapped_key,
sce_aes_wrapped_key_t *wrapped_key)
```

secp256r1 ECDH key derivation.

Implemented as

- R_SCE_ECDH_secp256r1_KeyDerivation()

Parameters

| | | |
|----------|---------------------------|--|
| [in,out] | handle | ECDH handler (work area) |
| [in] | shared_secret_wrapped_key | Z wrapped key calculated by R_SCE_ECDH_secp256r1_SharedSecretCalculate |
| [in] | key_type | Derived key type |
| [in] | kdf_type | Algorithm used for key derivation calculation |
| [in] | other_info | Additional data used for key derivation calculation |
| [in] | other_info_length | Data length of other_info |
| [in] | salt_wrapped_key | Salt wrapped key |
| [in,out] | wrapped_key | Wrapped key corresponding to key_type. |

◆ TLS_RootCertificateRSA2048PublicKeyInstall

```
fsp_err_t(* sce_api_t::TLS_RootCertificateRSA2048PublicKeyInstall) (uint8_t
*encrypted_provisioning_key, uint8_t *initial_vector, uint8_t *encrypted_key,
sce_tls_ca_certification_public_wrapped_key_t *wrapped_key)
```

Generate TLS RSA Public key index data

Implemented as

- [R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall\(\)](#)

Parameters

| | | |
|-------|----------------------------|--|
| [in] | encrypted_provisioning_key | the provisioning key includes encrypted CBC/CBC-MAC key for user key |
| [in] | initial_vector | the initial_vector for user key CBC encrypt |
| [in] | encrypted_key | the user key encrypted with AES128-ECB mode |
| [out] | wrapped_key | the user Key Generation Information (141 words) of RSA2048 bit |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate

```
fsp_err_t(* sce_api_t::TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate)
(sce_tls_p256_ecc_wrapped_key_t *tls_p256_ecc_wrapped_key, uint8_t
*ephemeral_ecdh_public_key)
```

Generate TLS ECC key pair

Implemented as

- R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate()

Parameters

| | | |
|------|---------------------------|----------------------------|
| [in] | tls_p256_ecc_wrapped_key | P256 ECC key index for TLS |
| [in] | ephemeral_ecdh_public_key | ephemeral ECDH public key |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_RootCertificateVerify

```
fsp_err_t(* sce_api_t::TLS_RootCertificateVerify) (uint32_t public_key_type, uint8_t *certificate,
uint32_t certificate_length, uint32_t public_key_n_start_position, uint32_t
public_key_n_end_position, uint32_t public_key_e_start_position, uint32_t
public_key_e_end_position, uint8_t *signature, uint32_t *encrypted_root_public_key)
```

Verify root CA certificate.

Implemented as

- R_SCE_TLS_RootCertificateVerify()

Parameters

| | | |
|-------|-----------------------------|---------------------------------|
| [in] | public_key_type | key type |
| [in] | certificate | certificates. |
| [in] | certificate_length | byte size of certificates. |
| [in] | public_key_n_start_position | start position of public key n. |
| [in] | public_key_n_end_position | end position of public key n. |
| [in] | public_key_e_start_position | start position of public key e. |
| [in] | public_key_e_end_position | end position of public key e. |
| [in] | signature | signature for certificates. |
| [out] | encrypted_root_public_key | public key for RSA 2048bit. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_CertificateVerify

```
fsp_err_t(* sce_api_t::TLS_CertificateVerify) (uint32_t public_key_type, uint32_t
*encrypted_input_public_key, uint8_t *certificate, uint32_t certificate_length, uint8_t *signature,
uint32_t public_key_n_start_position, uint32_t public_key_n_end_position, uint32_t
public_key_e_start_position, uint32_t public_key_e_end_position, uint32_t
*encrypted_output_public_key)
```

Verify server certificate and intermediate certificate.

Implemented as

- R_SCE_TLS_CertificateVerify()

Parameters

| | | |
|-------|-----------------------------|---------------------------------|
| [in] | public_key_type | key type |
| [in] | input_public_key | public key. |
| [in] | certificate | certificates. |
| [in] | certificate_length | byte size of certificates. |
| [in] | signature | signature for certificates. |
| [in] | public_key_n_start_position | start position of public key n. |
| [in] | public_key_n_end_position | end position of public key n. |
| [in] | public_key_e_start_position | start position of public key e. |
| [in] | public_key_e_end_position | end position of public key e. |
| [out] | encrypted_output_public_key | public key for RSA 2048bit. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_PreMasterSecretGenerateForRSA2048

`fsp_err_t(* sce_api_t::TLS_PreMasterSecretGenerateForRSA2048) (uint32_t *sce_pre_master_secret)`

Generate encrypted pre-master secret.

Implemented as

- [R_SCE_TLS_PreMasterSecretGenerateForRSA2048\(\)](#)

Parameters

| | | |
|-------|-----------------------|----------------------------------|
| [out] | sce_pre_master_secret | pre-master secret value for SCE. |
|-------|-----------------------|----------------------------------|

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |

◆ TLS_MasterSecretGenerate

```
fsp_err_t(* sce_api_t::TLS_MasterSecretGenerate) (uint32_t select_cipher_suite, uint32_t
*sce_pre_master_secret, uint8_t *client_random, uint8_t *server_random, uint32_t
*sce_master_secret)
```

Generate encrypted master secret.

Implemented as

- R_SCE_TLS_MasterSecretGenerate()

Parameters

| | | |
|-------|-----------------------|---|
| [in] | select_cipher_suite | cipher suite type |
| [in] | sce_pre_master_secret | pre-master secret value for SCE. |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [out] | sce_master_secret | master secret value with SCE-specific conversion. |

Return values

| | |
|---------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTTO_SCE_FAIL | An internal error occurred. |

◆ TLS_PreMasterSecretEncryptWithRSA2048

`fsp_err_t(*sce_api_t::TLS_PreMasterSecretEncryptWithRSA2048)(uint32_t *encrypted_public_key, uint32_t *sce_pre_master_secret, uint8_t *encrypted_pre_master_secret)`

Output the result encrypted pre-master secret with RSA 2048bit

Implemented as

- `R_SCE_TLS_PreMasterSecretEncryptWithRSA2048()`

Parameters

| | | |
|-------|-----------------------------|--|
| [in] | encrypted_public_key | public key data. |
| [in] | sce_pre_master_secret | pre-master secret value. |
| [out] | encrypted_pre_master_secret | the value encrypted pre-master secret. |

Return values

| | |
|--------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTO_SCE_FAIL | An internal error occurred. |

◆ TLS_SessionKeyGenerate

`fsp_err_t(*sce_api_t::TLS_SessionKeyGenerate)(uint32_t select_cipher_suite, uint32_t *sce_master_secret, uint8_t *client_random, uint8_t *server_random, uint8_t *nonce_explicit, sce_hmac_sha_wrapped_key_t *client_mac_wrapped_key, sce_hmac_sha_wrapped_key_t *server_mac_wrapped_key, sce_aes_wrapped_key_t *client_crypto_wrapped_key, sce_aes_wrapped_key_t *server_crypto_wrapped_key, uint8_t *client_initial_vector, uint8_t *server_initial_vector)`

Output various key information.

Implemented as

- `R_SCE_TLS_SessionKeyGenerate()`

Parameters

| | | |
|------|---------------------|------------------------------------|
| [in] | select_cipher_suite | Key suite information number. |
| [in] | sce_master_secret | master secret value. |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [in] | nonce_explicit | nonce value |

| | | |
|-------|---------------------------|--|
| [out] | client_mac_wrapped_key | the mac key during communication from client to server. |
| [out] | server_mac_wrapped_key | the mac key during communication from server to client. |
| [out] | client_crypto_wrapped_key | the crypto key during communication from client to server. |
| [out] | server_crypto_wrapped_key | the crypto key during communication from server to client. |
| [in] | client_initial_vector | not use. |
| [in] | server_initial_vector | not use. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_VerifyDataGenerate

`fsp_err_t(* sce_api_t::TLS_VerifyDataGenerate) (uint32_t select_verify_data, uint32_t *sce_master_secret, uint8_t *hand_shake_hash, uint8_t *verify_data)`

Generate verify data.

Implemented as

- `R_SCE_TLS_VerifyDataGenerate()`

Parameters

| | | |
|-------|--------------------|---|
| [in] | select_verify_data | Select Client/Server data. |
| [in] | sce_master_secret | master secret data. |
| [in] | hand_shake_hash | TLS hand shake message SHA256 HASH value. |
| [out] | verify_data | verify data. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_ServerKeyExchangeVerify

```
fsp_err_t(* sce_api_t::TLS_ServerKeyExchangeVerify) (uint32_t public_key_type, uint8_t
*client_random, uint8_t *server_random, uint8_t *server_ephemeral_ecdh_public_key, uint8_t
*server_key_exchange_signature, uint32_t *encrypted_public_key, uint32_t
*encrypted_ephemeral_ecdh_public_key)
```

Retrives ECDH public key.

Implemented as

- R_SCE_TLS_ServerKeyExchangeVerify()

Parameters

| | | |
|-------|-------------------------------------|--|
| [in] | public_key_type | key type |
| [in] | client_random | random value reported ClientHello. |
| [in] | server_random | random value reported ServerHello. |
| [in] | server_ephemeral_ecdh_public_key | Ephemeral ECDH public key from Server. |
| [in] | server_key_exchange_signature | Server Key Exchange signature. |
| [in] | encrypted_public_key | encrypted public key. |
| [out] | encrypted_ephemeral_ecdh_public_key | encrypted Ephemeral ECDH public key. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ TLS_PreMasterSecretGenerateForECC_secp256r1

```
fsp_err_t(* sce_api_t::TLS_PreMasterSecretGenerateForECC_secp256r1) (uint32_t
*encrypted_public_key, sce_tls_p256_ecc_wrapped_key_t *tls_p256_ecc_wrapped_key, uint32_t
*sce_pre_master_secret)
```

Generate encrypted pre-master secret.

Implemented as

- R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1()

Parameters

| | | |
|-------|--------------------------|--|
| [in] | encrypted_public_key | encrypted public key |
| [in] | tls_p256_ecc_wrapped_key | P-256 ECC key index. |
| [out] | sce_pre_master_secret | encrypted pre-master secret value for SCE. |

Return values

| | |
|-------------------------------------|---|
| FSP_SUCCESS | Normal termination |
| FSP_ERR_CRYPTOSCE_RESOURCE_CONFLICT | A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine. |
| FSP_ERR_CRYPTOSCE_FAIL | An internal error occurred. |

◆ sce_instance_t

```
struct sce_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| sce_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| sce_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| sce_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ sce_rsa_byte_data_t

```
typedef sce_byte_data_t sce_rsa_byte_data_t
```

byte data

RSA byte data structure

◆ `sce_ecdsa_byte_data_t`

```
typedef sce\_byte\_data\_t sce_ecdsa_byte_data_t
```

byte data

ECDSA byte data structure

◆ `sce_ctrl_t`

```
typedef void sce_ctrl_t
```

SCE Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- [sce_instance_ctrl_t](#)

Enumeration Type Documentation

◆ `lifecycle_t`

```
enum lifecycle_t
```

Data lifecycle

5.3.13.3 SCE key injection Interface

[Interfaces](#) » [Security](#)

Detailed Description

Interface for key injection by Secure Crypto Engine (SCE) functions.

Summary

The SCE key injection interface provides SCE functionality.

Data Structures

```
struct sce\_key\_injection\_api\_t
```

Data Structure Documentation

◆ `sce_key_injection_api_t`

Field Documentation

◆ AES128_InitialKeyWrap

`fsp_err_t(* sce_key_injection_api_t::AES128_InitialKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_aes_wrapped_key_t *const wrapped_key)`

This API outputs 128-bit AES wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 128-bit AES wrapped key |

◆ AES192_InitialKeyWrap

`fsp_err_t(* sce_key_injection_api_t::AES192_InitialKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_aes_wrapped_key_t *const wrapped_key)`

This API outputs 192-bit AES wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 192-bit AES wrapped key |

◆ AES256_InitialKeyWrap

`fsp_err_t(* sce_key_injection_api_t::AES256_InitialKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_aes_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit AES wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit AES wrapped key |

◆ KeyUpdateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::KeyUpdateKeyWrap) (const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_key_update_key_t *const key_update_key)`

This API outputs key update key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | key_update_key | Key update key |

◆ AES128_EncryptedKeyWrap

`fsp_err_t(* sce_key_injection_api_t::AES128_EncryptedKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_aes_wrapped_key_t *const wrapped_key)`

This API updates 128-bit AES wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 128-bit AES wrapped key |

◆ AES192_EncryptedKeyWrap

`fsp_err_t(* sce_key_injection_api_t::AES192_EncryptedKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_aes_wrapped_key_t *const wrapped_key)`

This API updates 192-bit AES wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 192-bit AES wrapped key |

◆ AES256_EncryptedKeyWrap

`fsp_err_t(* sce_key_injection_api_t::AES256_EncryptedKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_aes_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit AES wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit AES wrapped key |

◆ RSA2048_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::RSA2048_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_rsa2048_public_wrapped_key_t *const wrapped_key)`

This API outputs 2048-bit RSA public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

◆ RSA3072_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::RSA3072_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_rsa3072_public_wrapped_key_t *const wrapped_key)`

This API outputs 3072-bit RSA public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 3072-bit RSA wrapped key |

◆ RSA4096_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::RSA4096_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_rsa4096_public_wrapped_key_t *const wrapped_key)`

This API outputs 4096-bit RSA public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 4096-bit RSA wrapped key |

◆ RSA2048_InitialPrivateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::RSA2048_InitialPrivateKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_rsa2048_private_wrapped_key_t *const wrapped_key)`

This API outputs 2048-bit RSA private wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

◆ RSA2048_EncryptedPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::RSA2048_EncryptedPublicKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_rsa2048_public_wrapped_key_t *const wrapped_key)`

This API outputs 2048-bit RSA public wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 2048-bit RSA wrapped key |

◆ RSA2048_EncryptedPrivateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::RSA2048_EncryptedPrivateKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_rsa2048_private_wrapped_key_t *const wrapped_key)`

This API outputs 2048-bit RSA private wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit RSA wrapped key |

◆ ECC_secp256r1_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp256r1_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit ECC public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp256k1_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp256k1_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit ECC public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp384r1_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp384r1_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 384-bit ECC public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

◆ ECC_secp256r1_InitialPrivateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp256r1_InitialPrivateKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit ECC private wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp256k1_InitialPrivateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp256k1_InitialPrivateKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit ECC private wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp384r1_InitialPrivateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp384r1_InitialPrivateKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key)`

This API outputs 384-bit ECC private wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

◆ ECC_secp256r1_EncryptedPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp256r1_EncryptedPublicKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit ECC public wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp256k1_EncryptedPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp256k1_EncryptedPublicKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit ECC public wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp384r1_EncryptedPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_secp384r1_EncryptedPublicKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 384-bit ECC public wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

◆ ECC_secp256r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_secp256r1_EncryptedPrivateKeyWrap) (const uint8_t
*const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key)
```

This API outputs 256-bit ECC private wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp256k1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_secp256k1_EncryptedPrivateKeyWrap) (const uint8_t
*const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key)
```

This API outputs 256-bit ECC private wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_secp384r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_secp384r1_EncryptedPrivateKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key)
```

This API outputs 384-bit ECC private wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

◆ ECC_brainpoolP256r1_InitialPublicKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP256r1_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key)
```

This API outputs 256-bit Brainpool ECC public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_brainpoolP256r1_InitialPrivateKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP256r1_InitialPrivateKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const wrapped_key)`

This API outputs 256-bit Brainpool ECC private wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_brainpoolP384r1_InitialPublicKeyWrap

`fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP384r1_InitialPublicKeyWrap) (const uint8_t *const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t *const initial_vector, const uint8_t *const encrypted_key, sce_ecc_public_wrapped_key_t *const wrapped_key)`

This API outputs 384-bit Brainpool ECC public wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

◆ ECC_brainpoolP384r1_InitialPrivateKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP384r1_InitialPrivateKeyWrap) (const uint8_t
*const key_type, const uint8_t *const wrapped_user_factory_programming_key, const uint8_t
*const initial_vector, const uint8_t *const encrypted_key, sce_ecc_private_wrapped_key_t *const
wrapped_key)
```

This API outputs 384-bit Brainpool ECC private wrapped key.

Parameters

| | | |
|----------|--------------------------------------|---|
| [in] | key_type | Key type whether encrypted_key or plain key |
| [in] | wrapped_user_factory_programming_key | Provisioning key wrapped by the DLM server |
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

◆ ECC_brainpoolP256r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP256r1_EncryptedPublicKeyWrap) (const uint8_t
*const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key)
```

This API outputs 256-bit ECC public wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_brainpoolP256r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP256r1_EncryptedPrivateKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key)
```

This API outputs 256-bit ECC private wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_brainpoolP384r1_EncryptedPublicKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP384r1_EncryptedPublicKeyWrap) (const uint8_t *const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const key_update_key, sce_ecc_public_wrapped_key_t *const wrapped_key)
```

This API outputs 384-bit ECC public wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 256-bit ECC wrapped key |

◆ ECC_brainpoolP384r1_EncryptedPrivateKeyWrap

```
fsp_err_t(* sce_key_injection_api_t::ECC_brainpoolP384r1_EncryptedPrivateKeyWrap) (const uint8_t
*const initial_vector, const uint8_t *const encrypted_key, const sce_key_update_key_t *const
key_update_key, sce_ecc_private_wrapped_key_t *const wrapped_key)
```

This API outputs 384-bit ECC private wrapped key.

Parameters

| | | |
|----------|----------------|---|
| [in] | initial_vector | Initialization vector when generating encrypted_key |
| [in] | encrypted_key | User key encrypted and MAC appended |
| [in] | key_update_key | Key update keyring |
| [in,out] | wrapped_key | 384-bit ECC wrapped key |

5.3.14 Sensor

Interfaces

Detailed Description

Sensor Interfaces.

Modules

FSXXX Middleware Interface

Interface for FSXXX Middleware functions.

HS300X Middleware Interface

Interface for HS300X Middleware functions.

HS400X Middleware Interface

Interface for HS400X Middleware functions.

OB1203 Middleware Interface

Interface for OB1203 Middleware functions.

ZMOD4XXX Middleware Interface

Interface for ZMOD4XXX Middleware functions.

5.3.14.1 FSXXXX Middleware Interface

[Interfaces](#) » [Sensor](#)

Detailed Description

Interface for FSXXXX Middleware functions.

Summary

The FSXXXX interface provides FSXXXX functionality.

Data Structures

|--------------------------------|--------------|------------------------|
| struct rm_fsxxxx_sensor_data_t | | |
| FSXXXX sensor data block | | |
| Data Fields | | |
| int16_t | integer_part | |
| int16_t | decimal_part | To two decimal places. |

◆ **rm_fsxxxx_data_t**

| |
|-------------------------|
| struct rm_fsxxxx_data_t |
| FSXXXX data block |

◆ **rm_fsxxxx_cfg_t**

| | |
|-----------------------------|---|
| struct rm_fsxxxx_cfg_t | |
| FSXXXX Configuration | |
| Data Fields | |
| rm_comms_instance_t const * | p_instance |
| | Pointer to Communications Middleware instance. |
| void const * | p_context |
| | Pointer to the user-provided context. |
| void const * | p_extend |
| | Pointer to extended configuration by instance of interface. |
| void(* | p_callback)(rm_fsxxxx_callback_args_t *p_args) |
| | Pointer to callback function. |

◆ **rm_fsxxxx_api_t**

| struct rm_fsxxxx_api_t | | |
|---|----------------------|---|
| FSXXXX APIs | | |
| Data Fields | | |
| fsp_err_t(*) | open | (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_cfg_t const *const p_cfg) |
| | | |
| fsp_err_t(*) | read | (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data) |
| | | |
| fsp_err_t(*) | dataCalculate | (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fsxxxx_data) |
| | | |
| fsp_err_t(*) | close | (rm_fsxxxx_ctrl_t *const p_ctrl) |
| | | |
| Field Documentation | | |
| ◆ open | | |
| fsp_err_t(*) rm_fsxxxx_api_t::open (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_cfg_t const *const p_cfg) | | |
| Open sensor. | | |
| Parameters | | |
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |
| | | |
| ◆ read | | |
| fsp_err_t(*) rm_fsxxxx_api_t::read (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data) | | |
| Read ADC data from FSXXXX. | | |
| Parameters | | |
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |

◆ **dataCalculate**

```
fsp_err_t(* rm_fsxxxx_api_t::dataCalculate) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fsxxxx_data)
```

Calculate flow values from ADC data.

Parameters

| | | |
|------|---------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_fsxxxx_data | Pointer to FSXXXX data structure. |

◆ **close**

```
fsp_err_t(* rm_fsxxxx_api_t::close) (rm_fsxxxx_ctrl_t *const p_ctrl)
```

Close FSXXXX.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_fsxxxx_instance_t**

```
struct rm_fsxxxx_instance_t
```

FSXXXX instance

Data Fields

| | | |
|-------------------------|--------|--|
| rm_fsxxxx_ctrl_t * | p_ctrl | Pointer to the control structure for this instance |
| rm_fsxxxx_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance |
| rm_fsxxxx_api_t const * | p_api | Pointer to the API structure for this instance |

Typedef Documentation◆ **rm_fsxxxx_ctrl_t**

```
typedef void rm_fsxxxx_ctrl_t
```

FSXXXX control block. Allocate an instance specific control block to pass into the FSXXXX API calls.

Enumeration Type Documentation

◆ `rm_fsxxxx_event_t`

| |
|-------------------------------------|
| enum <code>rm_fsxxxx_event_t</code> |
| Event in the callback function |

5.3.14.2 HS300X Middleware Interface

[Interfaces](#) » [Sensor](#)

Detailed Description

Interface for HS300X Middleware functions.

Summary

The HS300X interface provides HS300X functionality.

Data Structures

struct `rm_hs300x_callback_args_t`

struct `rm_hs300x_raw_data_t`

struct `rm_hs300x_sensor_data_t`

struct `rm_hs300x_data_t`

struct `rm_hs300x_cfg_t`

struct `rm_hs300x_api_t`

struct `rm_hs300x_instance_t`

Typedefs

typedef void `rm_hs300x_ctrl_t`

Enumerations

enum `rm_hs300x_event_t`

enum `rm_hs300x_data_type_t`

enum `rm_hs300x_resolution_t`

Data Structure Documentation

◆ **rm_hs300x_callback_args_t**

| |
|--------------------------------------|
| struct rm_hs300x_callback_args_t |
| HS300X callback parameter definition |

◆ **rm_hs300x_raw_data_t**

| | | |
|-----------------------------|----------------|--|
| struct rm_hs300x_raw_data_t | | |
| HS300X raw data | | |
| Data Fields | | |
| uint8_t | humidity[2] | Upper 2 bits of 0th element are data status. |
| uint8_t | temperature[2] | Lower 2 bits of 1st element are mask. |

◆ **rm_hs300x_sensor_data_t**

| | | |
|--------------------------------|--------------|------------------------|
| struct rm_hs300x_sensor_data_t | | |
| HS300X sensor data block | | |
| Data Fields | | |

| fsp_err_t (* | close)(rm_hs300x_ctrl_t *const p_ctrl) |

Field Documentation

◆ open

```
fsp_err_t(* rm_hs300x_api_t::open) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_cfg_t const *const p_cfg)
```

Open sensor.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ measurementStart

```
fsp_err_t(* rm_hs300x_api_t::measurementStart) (rm_hs300x_ctrl_t *const p_ctrl)
```

Start a measurement.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ read

```
fsp_err_t(* rm_hs300x_api_t::read) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data)
```

Read ADC data from HS300X.

Parameters

| | | |
|------|------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |

◆ **dataCalculate**

```
fsp_err_t(* rm_hs300x_api_t::dataCalculate) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)
```

Calculate humidity and temperature values from ADC data.

Parameters

| | | |
|------|---------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_hs300x_data | Pointer to HS300X data structure. |

◆ **programmingModeEnter**

```
fsp_err_t(* rm_hs300x_api_t::programmingModeEnter) (rm_hs300x_ctrl_t *const p_ctrl)
```

Enter the programming mode.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **resolutionChange**

```
fsp_err_t(* rm_hs300x_api_t::resolutionChange) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)
```

Change the sensor resolution.

Parameters

| | | |
|------|------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | data_type | Data type of HS300X. |
| [in] | resolution | Resolution type of HS300X. |

◆ **sensorIdGet**

```
fsp_err_t(* rm_hs300x_api_t::sensorIdGet) (rm_hs300x_ctrl_t *const p_ctrl, uint32_t *const p_sensor_id)
```

Get the sensor ID.

Parameters

| | | |
|------|-------------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_sensor_id | Pointer to sensor ID of HS300X. |

◆ **programmingModeExit**

```
fsp_err_t(* rm_hs300x_api_t::programmingModeExit) (rm_hs300x_ctrl_t *const p_ctrl)
```

Exit the programming mode.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **close**

```
fsp_err_t(* rm_hs300x_api_t::close) (rm_hs300x_ctrl_t *const p_ctrl)
```

Close HS300X.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_hs300x_instance_t**

```
struct rm_hs300x_instance_t
```

HS300X instance

Data Fields

| | | |
|-------------------------|--------|--|
| rm_hs300x_ctrl_t * | p_ctrl | Pointer to the control structure for this instance |
| rm_hs300x_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance |
| rm_hs300x_api_t const * | p_api | Pointer to the API structure for this instance |

Typedef Documentation◆ **rm_hs300x_ctrl_t**

```
typedef void rm_hs300x_ctrl_t
```

HS300X control block. Allocate an instance specific control block to pass into the HS300X API calls.

Enumeration Type Documentation◆ **rm_hs300x_event_t**

```
enum rm_hs300x_event_t
```

Event in the callback function

◆ `rm_hs300x_data_type_t`

| |
|---|
| enum <code>rm_hs300x_data_type_t</code> |
| Data type of HS300X |

◆ `rm_hs300x_resolution_t`

| |
|--|
| enum <code>rm_hs300x_resolution_t</code> |
| Resolution type of HS300X |

5.3.14.3 HS400X Middleware Interface

| fsp_err_t(*) | dataCalculate | (rm_hs400x_ctrl_t *const p_ctrl, rm_hs400x_raw_data_t *const p_raw_data, rm_hs400x_data_t *const p_hs400x_data) |
| fsp_err_t(*) | close | (rm_hs400x_ctrl_t *const p_ctrl) |
| Field Documentation | | |
| ◆ open | | |
| fsp_err_t(*) rm_hs400x_api_t::open (rm_hs400x_ctrl_t *const p_ctrl, rm_hs400x_cfg_t const *const p_cfg) | | |
| Open sensor. | | |
| Parameters | | |
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |
| ◆ measurementStart | | |
| fsp_err_t(*) rm_hs400x_api_t::measurementStart (rm_hs400x_ctrl_t *const p_ctrl) | | |
| Start one shot measurement. | | |
| Parameters | | |
| [in] | p_ctrl | Pointer to control structure. |

◆ **measurementStop**

```
fsp_err_t(* rm_hs400x_api_t::measurementStop) (rm_hs400x_ctrl_t *const p_ctrl)
```

Stop a period measurement.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **read**

```
fsp_err_t(* rm_hs400x_api_t::read) (rm_hs400x_ctrl_t *const p_ctrl, rm_hs400x_raw_data_t *const p_raw_data)
```

Read ADC data from HS400X.

Parameters

| | | |
|------|------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |

◆ **dataCalculate**

```
fsp_err_t(* rm_hs400x_api_t::dataCalculate) (rm_hs400x_ctrl_t *const p_ctrl, rm_hs400x_raw_data_t *const p_raw_data, rm_hs400x_data_t *const p_hs400x_data)
```

Calculate humidity and temperature values from ADC data.

Parameters

| | | |
|------|---------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_hs400x_data | Pointer to HS400X data structure. |

◆ **close**

```
fsp_err_t(* rm_hs400x_api_t::close) (rm_hs400x_ctrl_t *const p_ctrl)
```

Close HS400X.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_hs400x_instance_t**

```
struct rm_hs400x_instance_t
```

HS400X instance

| Data Fields | | |
|--------------------------------------|---------------------|--|
| <code>rm_hs400x_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance |
| <code>rm_hs400x_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance |
| <code>rm_hs400x_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance |

Typedef Documentation

◆ `rm_hs400x_ctrl_t`

```
typedef void rm_hs400x_ctrl_t
```

HS400X control block. Allocate an instance specific control block to pass into the HS400X API calls.

Enumeration Type Documentation

◆ `rm_hs400x_event_t`

```
enum rm_hs400x_event_t
```

Event in the callback function

◆ `rm_hs400x_temperature_resolution_t`

```
enum rm_hs400x_temperature_resolution_t
```

Resolution type for temperature

◆ `rm_hs400x_humidity_resolution_t`

```
enum rm_hs400x_humidity_resolution_t
```

Resolution type for humidity

◆ **rm_hs400x_periodic_measurement_frequency_t**

| enum <code>rm_hs400x_periodic_measurement_frequency_t</code> | |
|--|---------------------------|
| Frequency of periodic measurement | |
| Enumerator | |
| <code>RM_HS400X_PERIODIC_MEASUREMENT_FREQUENCY_2HZ</code> | A measurement every 0.5s. |
| <code>RM_HS400X_PERIODIC_MEASUREMENT_FREQUENCY_1HZ</code> | A measurement every 1s. |
| <code>RM_HS400X_PERIODIC_MEASUREMENT_FREQUENCY_0P4HZ</code> | A measurement every 2.5s. |

| struct <code>rm_ob1203_light_data_t</code> | | |
| OB1203 light data structure | | |
| Data Fields | | |
| <code>uint32_t</code> | <code>clear_data</code> | Clear channel data (20bits). |
| <code>uint32_t</code> | <code>green_data</code> | Green channel data (20bits). |
| <code>uint32_t</code> | <code>blue_data</code> | Blue channel data (20bits). |
| <code>uint32_t</code> | <code>red_data</code> | Red channel data (20bits). |
| <code>uint32_t</code> | <code>comp_data</code> | Temperature compensation (Comp) channel data (20bits). |

◆ `rm_ob1203_prox_data_t`

| | | |
|---|-----------------------------|-----------------|
| struct <code>rm_ob1203_prox_data_t</code> | | |
| OB1203 proximity data structure | | |
| Data Fields | | |
| <code>uint16_t</code> | <code>proximity_data</code> | Proximity data. |

◆ **rm_ob1203_ppg_data_t**

| | | |
|-----------------------------|--------------|--------------------|
| struct rm_ob1203_ppg_data_t | | |
| OB1203 PPG data structure | | |
| Data Fields | | |
| uint32_t | ppg_data[32] | PPG data (18bits). |

◆ **rm_ob1203_device_interrupt_cfg_t**

| | | |
|---|-----------------|--|
| struct rm_ob1203_device_interrupt_cfg_t | | |
| OB1203 device interrupt configuration structure | | |
| Data Fields | | |
| rm_ob1203_operation_mode_t | light_prox_mode | Light Proximity mode only. If Light mode uses IRQ, set RM_OB1203_OPERATION_MODE_LIGHT. If Proximity mode uses IRQ, set RM_OB1203_OPERATION_MODE_PROXIMITY. |
| rm_ob1203_light_interrupt_type_t | light_type | Light mode interrupt type. |
| rm_ob1203_light_interrupt_source_t | light_source | Light mode interrupt source. |
| rm_ob1203_prox_interrupt_type_t | prox_type | Proximity mode interrupt type. |
| uint8_t | persist | The number of similar consecutive Light mode or Proximity interrupt events that must occur before the interrupt is asserted (4bits). |
| rm_ob1203_ppg_interrupt_type_t | ppg_type | PPG mode interrupt type. |

◆ **rm_ob1203_device_status_t**

| | | |
|----------------------------------|----------------------------|-----------------------------|
| struct rm_ob1203_device_status_t | | |
| OB1203 device status | | |
| Data Fields | | |
| bool | power_on_reset_occur | |
| bool | light_interrupt_occur | |
| bool | light_measurement_complete | |
| bool | ts_measurement_complete | |
| bool | fifo_full_interrupt_occur | FIFO almost full interrupt. |
| bool | ppg_measurement_complete | |
| | | |

| | | |
|------|---------------------------|--|
| bool | object_near | |
| bool | prox_interrupt_occur | |
| bool | prox_measurement_complete | |

◆ **rm_ob1203_gain_t**

| | | |
|---------------------------|----------|---------------------------------------|
| struct rm_ob1203_gain_t | | |
| OB1203 Gain structure | | |
| Data Fields | | |
| rm_ob1203_light_gain_t | light | Gain for Light mode. |
| rm_ob1203_ppg_prox_gain_t | ppg_prox | Gain for PPG mode and Proximity mode. |

◆ **rm_ob1203_led_current_t**

| | | |
|--------------------------------|---------|------------------|
| struct rm_ob1203_led_current_t | | |
| OB1203 LED currents structure | | |
| Data Fields | | |
| uint16_t | ir_led | IR LED current. |
| uint16_t | red_led | Red LED current. |

◆ **rm_ob1203_fifo_info_t**

| | | |
|-----------------------------------|------------------|--|
| struct rm_ob1203_fifo_info_t | | |
| OB1203 FIFO information structure | | |
| Data Fields | | |
| uint8_t | write_index | The FIFO index where the next sample of PPG data will be written in the FIFO. |
| uint8_t | read_index | The index of the next sample to be read from the FIFO_DATA register. |
| uint8_t | overflow_counter | If the FIFO Rollover Enable bit is set, the FIFO overflow counter counts the number of old samples (up to 15) which are overwritten by new data. |
| uint8_t | unread_samples | The number of unread samples calculated from the write index and the read index. |

◆ **rm_ob1203_cfg_t**

| | | |
|------------------------|--|--|
| struct rm_ob1203_cfg_t | | |
| OB1203 Configuration | | |

| Data Fields | |
|--|---|
| <code>rm_ob1203_semaphore_t const *</code> | p_semaphore |
| | The semaphore to wait for callback. This is used for another data read/write after a communication. |
| <code>uint32_t</code> | semaphore_timeout |
| | timeout for callback. |
| <code>rm_comms_instance_t const *</code> | p_comms_instance |
| | Pointer to Communications Middleware instance. |
| <code>void const *</code> | p_irq_instance |
| | Pointer to IRQ instance. |
| <code>void const *</code> | p_context |
| | Pointer to the user-provided context. |
| <code>void const *</code> | p_extend |
| | Pointer to extended configuration by instance of interface. |
| <code>void(*</code> | p_comms_callback)(rm_ob1203_callback_args_t *p_args) |
| | I2C Communications callback. |
| <code>void(*</code> | p_irq_callback)(rm_ob1203_callback_args_t *p_args) |
| | IRQ callback. |

◆ `rm_ob1203_api_t`

```
struct rm_ob1203_api_t
```

| OB1203 APIs | |
|--------------|---|
| Data Fields | |

Field Documentation

◆ open

`fsp_err_t(* rm_ob1203_api_t::open) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_cfg_t const *const p_cfg)`

Open sensor.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ measurementStart

`fsp_err_t(* rm_ob1203_api_t::measurementStart) (rm_ob1203_ctrl_t *const p_ctrl)`

Start measurement.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>mode</code> | Sensor mode. |

◆ measurementStop

`fsp_err_t(* rm_ob1203_api_t::measurementStop) (rm_ob1203_ctrl_t *const p_ctrl)`

Stop measurement.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>mode</code> | Sensor mode. |

◆ **lightRead**

```
fsp_err_t(* rm_ob1203_api_t::lightRead) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_light_data_type_t type)
```

Read Light ADC data from OB1203.

Parameters

| | | |
|------|------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |
| [in] | type | Light data type. |

◆ **lightDataCalculate**

```
fsp_err_t(* rm_ob1203_api_t::lightDataCalculate) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_light_data_t *const p_ob1203_data)
```

Calculate Light data from raw data.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |
| [in] | p_ob1203_data | Pointer to OB1203 Light data structure. |

◆ **proxRead**

```
fsp_err_t(* rm_ob1203_api_t::proxRead) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_raw_data_t *const p_raw_data)
```

Read Proximity ADC data from OB1203.

Parameters

| | | |
|------|------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |

◆ proxDataCalculate

```
fsp_err_t(* rm_ob1203_api_t::proxDataCalculate) (rm_ob1203_ctrl_t *const p_ctrl,
rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_prox_data_t *const p_ob1203_data)
```

Calculate Proximity data from raw data.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |
| [in] | p_ob1203_data | Pointer to OB1203 Proximity data structure. |

◆ ppgRead

```
fsp_err_t(* rm_ob1203_api_t::ppgRead) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_raw_data_t
*const p_raw_data, uint8_t const number_of_samples)
```

Read PPG ADC data from OB1203.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |
| [in] | number_of_samples | Number of PPG samples. One sample is 3 bytes. |

◆ ppgDataCalculate

```
fsp_err_t(* rm_ob1203_api_t::ppgDataCalculate) (rm_ob1203_ctrl_t *const p_ctrl,
rm_ob1203_raw_data_t *const p_raw_data, rm_ob1203_ppg_data_t *const p_ob1203_data)
```

Calculate PPG data from raw data.

Parameters

| | | |
|------|---------------|---------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |
| [in] | p_ob1203_data | Pointer to OB1203 PPG data structure. |

◆ **deviceStatusGet**

```
fsp_err_t(* rm_ob1203_api_t::deviceStatusGet) (rm_ob1203_ctrl_t *const p_ctrl,
rm_ob1203_device_status_t *const p_status)
```

Get device status. Read STATUS_0 and STATUS_1 registers.

Parameters

| | | |
|------|----------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_status | Pointer to device status. |

◆ **deviceInterruptCfgSet**

```
fsp_err_t(* rm_ob1203_api_t::deviceInterruptCfgSet) (rm_ob1203_ctrl_t *const p_ctrl,
rm_ob1203_device_interrupt_cfg_t const interrupt_cfg)
```

Set device interrupt configuration.

Parameters

| | | |
|------|---------------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | interrupt_cfg | Device interrupt configuration. |

◆ **gainSet**

```
fsp_err_t(* rm_ob1203_api_t::gainSet) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_gain_t const gain)
```

Set gain.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | gain | Gain configuration. |

◆ **ledCurrentSet**

```
fsp_err_t(* rm_ob1203_api_t::ledCurrentSet) (rm_ob1203_ctrl_t *const p_ctrl,
rm_ob1203_led_current_t const led_current)
```

Set LED current value.

Parameters

| | | |
|------|-------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | led_current | Current value structure. |

◆ **fifoInfoGet**

```
fsp_err_t(* rm_ob1203_api_t::fifoInfoGet) (rm_ob1203_ctrl_t *const p_ctrl, rm_ob1203_fifo_info_t *const p_fifo_info)
```

Get FIFO information.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_fifo_info | Pointer to FIFO information (write index, read index and overflow counter). |

◆ **close**

```
fsp_err_t(* rm_ob1203_api_t::close) (rm_ob1203_ctrl_t *const p_ctrl)
```

Close OB1203.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_ob1203_instance_t**

```
struct rm_ob1203_instance_t
```

OB1203 instance

Data Fields

| | | |
|-------------------------|--------|--|
| rm_ob1203_ctrl_t * | p_ctrl | Pointer to the control structure for this instance |
| rm_ob1203_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance |
| rm_ob1203_api_t const * | p_api | Pointer to the API structure for this instance |

Typedef Documentation◆ **rm_ob1203_ctrl_t**

```
typedef void rm_ob1203_ctrl_t
```

OB1203 control block. Allocate an instance specific control block to pass into the OB1203 API calls.

Enumeration Type Documentation

◆ **rm_ob1203_event_t**

| |
|-------------------------------------|
| enum <code>rm_ob1203_event_t</code> |
| Event in the callback function |

◆ **rm_ob1203_operation_mode_t**

| | |
|---|-----------------|
| enum <code>rm_ob1203_operation_mode_t</code> | |
| Operation mode of OB1203 | |
| Enumerator | |
| <code>RM_OB1203_OPERATION_MODE_STANDBY</code> | Standby. |
| <code>RM_OB1203_OPERATION_MODE_LIGHT</code> | Light mode. |
| <code>RM_OB1203_OPERATION_MODE_PROXIMITY</code> | Proximity mode. |
| <code>RM_OB1203_OPERATION_MODE_PPG</code> | PPG mode. |

◆ **rm_ob1203_light_sensor_mode_t**

| | |
|---|--|
| enum <code>rm_ob1203_light_sensor_mode_t</code> | |
| Light sensor mode of OB1203 | |
| Enumerator | |
| <code>RM_OB1203_LIGHT_SENSOR_MODE_LS</code> | Light sensor LS mode (Green, Clear, Comp) |
| <code>RM_OB1203_LIGHT_SENSOR_MODE_CS</code> | Light sensor CS mode (Red, Green, Blue, Clear, Comp) |

◆ **rm_ob1203_ppg_sensor_mode_t**

| | |
|---|-----------------------|
| enum <code>rm_ob1203_ppg_sensor_mode_t</code> | |
| PPG sensor mode of OB1203 | |
| Enumerator | |
| <code>RM_OB1203_PPG_SENSOR_MODE_PPG1</code> | PPG sensor PPG1 mode. |
| <code>RM_OB1203_PPG_SENSOR_MODE_PPG2</code> | PPG sensor PPG2 mode. |

◆ **rm_ob1203_light_data_type_t**

| enum <code>rm_ob1203_light_data_type_t</code> | |
|---|--|
| Data type of Light | |
| Enumerator | |
| <code>RM_OB1203_LIGHT_DATA_TYPE_ALL</code> | Common. |
| <code>RM_OB1203_LIGHT_DATA_TYPE_CLEAR</code> | Common. |
| <code>RM_OB1203_LIGHT_DATA_TYPE_GREEN</code> | Common. |
| <code>RM_OB1203_LIGHT_DATA_TYPE_BLUE</code> | CS mode only. |
| <code>RM_OB1203_LIGHT_DATA_TYPE_RED</code> | CS mode only. |
| <code>RM_OB1203_LIGHT_DATA_TYPE_COMP</code> | Common. Temperature compensation data. |

◆ **rm_ob1203_light_gain_t**

| enum <code>rm_ob1203_light_gain_t</code> | |
|--|--------------|
| Light gain range. Gain scales the ADC output and noise | |
| Enumerator | |
| <code>RM_OB1203_LIGHT_GAIN_1</code> | Gain mode 1. |
| <code>RM_OB1203_LIGHT_GAIN_3</code> | Gain mode 3. |
| <code>RM_OB1203_LIGHT_GAIN_6</code> | Gain mode 6. |

◆ **rm_ob1203_ppg_prox_gain_t**

| | |
|--|----------------|
| enum rm_ob1203_ppg_prox_gain_t | |
| PPG and proximity gain range. Gain scales the ADC output and noise | |
| Enumerator | |
| RM_OB1203_PPG_PROX_GAIN_1 | Gain mode 1. |
| RM_OB1203_PPG_PROX_GAIN_1P5 | Gain mode 1.5. |
| RM_OB1203_PPG_PROX_GAIN_2 | Gain mode 2. |
| RM_OB1203_PPG_PROX_GAIN_4 | Gain mode 4. |

◆ **rm_ob1203_led_order_t**

| | |
|---|---|
| enum rm_ob1203_led_order_t | |
| LED order. Controls which LED is activated (PS, PPG1) or in which order the LEDs are activated (PPG2) | |
| Enumerator | |
| RM_OB1203_LED_IR_FIRST_RED_SECOND | First LED : IR LED, second LED : red LED. |
| RM_OB1203_LED_RED_FIRST_IR_SECOND | First LED : red LED, second LED : IR LED. |

◆ **rm_ob1203_light_interrupt_type_t**

| | |
|---|----------------------------|
| enum rm_ob1203_light_interrupt_type_t | |
| Light interrupt type | |
| Enumerator | |
| RM_OB1203_LIGHT_INTERRUPT_TYPE_THRESHOLD | Light threshold interrupt. |
| RM_OB1203_LIGHT_INTERRUPT_TYPE_VARIATION | Light variation interrupt. |

◆ **rm_ob1203_light_interrupt_source_t**

| enum <code>rm_ob1203_light_interrupt_source_t</code> | |
|---|-----------------------------|
| Light interrupt source | |
| Enumerator | |
| <code>RM_OB1203_LIGHT_INTERRUPT_SOURCE_CLEAR_CHANNEL</code> | Clear channel. |
| <code>RM_OB1203_LIGHT_INTERRUPT_SOURCE_GREEN_CHANNEL</code> | Green channel. |
| <code>RM_OB1203_LIGHT_INTERRUPT_SOURCE_RED_CHANNEL</code> | Red channel. CS mode only. |
| <code>RM_OB1203_LIGHT_INTERRUPT_SOURCE_BLUE_CHANNEL</code> | Blue channel. CS mode only. |

◆ **rm_ob1203_prox_interrupt_type_t**

| enum <code>rm_ob1203_prox_interrupt_type_t</code> | |
|---|-----------------------------------|
| Proximity interrupt type | |
| Enumerator | |
| <code>RM_OB1203_PROX_INTERRUPT_TYPE_NORMAL</code> | Proximity normal interrupt. |
| <code>RM_OB1203_PROX_INTERRUPT_TYPE_LOGIC</code> | Proximity logic output interrupt. |

◆ **rm_ob1203_ppg_interrupt_type_t**

| enum <code>rm_ob1203_ppg_interrupt_type_t</code> | |
|--|---------------------------------|
| PPG interrupt type | |
| Enumerator | |
| <code>RM_OB1203_PPG_INTERRUPT_TYPE_DATA</code> | PPG data interrupt. |
| <code>RM_OB1203_PPG_INTERRUPT_TYPE_FIFO_AFULL</code> | PPG FIFO almost full interrupt. |

◆ **rm_ob1203_variance_threshold_t**

| enum rm_ob1203_variance_threshold_t | |
|---|--|
| Variance threshold | |
| Enumerator | |
| RM_OB1203_VARIANCE_THRESHOLD_8_COUNTS | New LS_DATA varies by ± 8 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_16_COUNTS | New LS_DATA varies by ± 16 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_32_COUNTS | New LS_DATA varies by ± 32 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_64_COUNTS | New LS_DATA varies by ± 64 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_128_COUNTS | New LS_DATA varies by ± 128 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_256_COUNTS | New LS_DATA varies by ± 256 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_512_COUNTS | New LS_DATA varies by ± 512 counts compared to previous result. |
| RM_OB1203_VARIANCE_THRESHOLD_1024_COUNTS | New LS_DATA varies by ± 1024 counts compared to previous result. |

◆ **rm_ob1203_sleep_after_interrupt_t**

| enum rm_ob1203_sleep_after_interrupt_t | |
|--|--|
| Sleep after interrupt | |
| Enumerator | |
| RM_OB1203_SLEEP_AFTER_INTERRUPT_DISABLE | Disable sleep after interrupt. |
| RM_OB1203_SLEEP_AFTER_INTERRUPT_ENABLE | Stop measurement after an interrupt occurs. After STATUS_0/STATUS_1 register is read, start measurement. |

◆ **rm_ob1203_moving_average_t**

| enum <code>rm_ob1203_moving_average_t</code> | |
|---|---|
| Moving average | |
| Enumerator | |
| <code>RM_OB1203_MOVING_AVERAGE_DISABLE</code> | Moving average is disabled for Proximity mode. |
| <code>RM_OB1203_MOVING_AVERAGE_ENABLE</code> | Moving average is enabled for Proximity mode. Proximity data is the average of the current and previous measurement. The moving average is applied after digital offset cancellation. |

◆ **rm_ob1203_power_save_mode_t**

| enum <code>rm_ob1203_power_save_mode_t</code> | |
|--|--|
| Power save mode | |
| Enumerator | |
| <code>RM_OB1203_POWER_SAVE_MODE_DISABLE</code> | Power save mode is disabled for PPG mode. |
| <code>RM_OB1203_POWER_SAVE_MODE_ENABLE</code> | Power save mode is enabled for PPG mode. On power save mode, some analog circuitry powers down between individual PPG measurements if the idle time. |

◆ **rm_ob1203_analog_cancellation_t**

| enum <code>rm_ob1203_analog_cancellation_t</code> | |
|--|------------------------------------|
| Analog cancellation | |
| Enumerator | |
| <code>RM_OB1203_ANALOG_CANCELLATION_DISABLE</code> | No offset cancellation. |
| <code>RM_OB1203_ANALOG_CANCELLATION_ENABLE</code> | 50% offset of the full-scale value |

◆ **rm_ob1203_number_led_pulses_t**

| enum <code>rm_ob1203_number_led_pulses_t</code> | |
|---|------------|
| Number of LED pulses | |
| Enumerator | |
| <code>RM_OB1203_NUM_LED_PULSES_1</code> | 1 pulse. |
| <code>RM_OB1203_NUM_LED_PULSES_2</code> | 2 pulses. |
| <code>RM_OB1203_NUM_LED_PULSES_4</code> | 4 pulses. |
| <code>RM_OB1203_NUM_LED_PULSES_8</code> | 8 pulses. |
| <code>RM_OB1203_NUM_LED_PULSES_16</code> | 16 pulses. |
| <code>RM_OB1203_NUM_LED_PULSES_32</code> | 32 pulses. |

◆ **rm_ob1203_number_averaged_samples_t**

| enum <code>rm_ob1203_number_averaged_samples_t</code> | |
|---|---------------------------------------|
| Number of averaged samples | |
| Enumerator | |
| <code>RM_OB1203_NUM_AVERAGED_SAMPLES_1</code> | 1 (No averaging). |
| <code>RM_OB1203_NUM_AVERAGED_SAMPLES_2</code> | 2 consecutives samples are averaged. |
| <code>RM_OB1203_NUM_AVERAGED_SAMPLES_4</code> | 4 consecutives samples are averaged. |
| <code>RM_OB1203_NUM_AVERAGED_SAMPLES_8</code> | 8 consecutives samples are averaged. |
| <code>RM_OB1203_NUM_AVERAGED_SAMPLES_16</code> | 16 consecutives samples are averaged. |
| <code>RM_OB1203_NUM_AVERAGED_SAMPLES_32</code> | 32 consecutives samples are averaged. |

| RM_OB1203_PPG_WIDTH_949US_PERIOD_20MS | Pulse width : 949us, measurement period : 20ms. |

◆ **rm_ob1203_fifo_rollover_t**

| enum <code>rm_ob1203_fifo_rollover_t</code> | |
|--|--|
| FIFO Rollover | |
| Enumerator | |
| <code>RM_OB1203_FIFO_ROLLOVER_DISABLE</code> | In the event of a full FIFO, no more samples of PPG data are written into the FIFO; the samples from new measurements are lost. |
| <code>RM_OB1203_FIFO_ROLLOVER_ENABLE</code> | New PPG data will always be written to the FIFO, and the FIFO Write Pointer is incremented (rollover). If the FIFO is full, old data will be overwritten. The FIFO Overflow Counter counts the number of lost (overwritten) and respectively the number of new samples. The FIFO Read Pointer remains unchanged. |

5.3.14.5 ZMOD4XXX Middleware Interface[Interfaces](#) » [Sensor](#)**Detailed Description**

Interface for ZMOD4XXX Middleware functions.

Summary

The ZMOD4XXX interface provides ZMOD4XXX functionality.

Data Structures

```
struct rm\_zmod4xxx\_callback\_args\_t
```

```
struct rm\_zmod4xxx\_raw\_data\_t
```

```
struct rm\_zmod4xxx\_iaq\_1st\_data\_t
```

```
struct rm\_zmod4xxx\_iaq\_2nd\_data\_t
```

```
struct rm\_zmod4xxx\_odor\_data\_t
```

```
struct rm\_zmod4xxx\_sulfur\_odor\_data\_t
```

```
struct rm_zmod4xxx_oaq_1st_data_t
```

```
struct rm_zmod4xxx_oaq_2nd_data_t
```

```
struct rm_zmod4xxx_raq_data_t
```

```
struct rm_zmod4xxx_rel_iaq_data_t
```

```
struct rm_zmod4xxx_pbaq_data_t
```

```
struct rm_zmod4xxx_cfg_t
```

```
struct rm_zmod4xxx_api_t
```

```
struct rm_zmod4xxx_instance_t
```

Typedefs

```
typedef void rm_zmod4xxx_ctrl_t
```

Enumerations

```
enum rm_zmod4xxx_event_t
```

```
enum rm_zmod4xxx_sulfur_odor_t
```

Data Structure Documentation

◆ rm_zmod4xxx_callback_args_t

```
struct rm_zmod4xxx_callback_args_t
```

ZMOD4XXX sensor API callback parameter definition

◆ rm_zmod4xxx_raw_data_t

```
struct rm_zmod4xxx_raw_data_t
```

ZMOD4XXX raw data structure

◆ rm_zmod4xxx_iaq_1st_data_t

```
struct rm_zmod4xxx_iaq_1st_data_t
```

ZMOD4XXX IAQ 1st gen data structure

Data Fields

| | | |
|-------|------|-----------------|
| float | rmox | MOx resistance. |
| float | rcda | CDA resistance. |
| float | iaq | IAQ index. |

| | | |
|-------|------|--|
| float | tvoc | TVOC concentration (mg/m ³). |
| float | etoh | EtOH concentration (ppm). |
| float | eco2 | eCO2 concentration (ppm). |

◆ **rm_zmod4xxx_iaq_2nd_data_t**

| | | |
|-------------------------------------|--------------------|--|
| struct rm_zmod4xxx_iaq_2nd_data_t | | |
| ZMOD4XXX IAQ 2nd gen data structure | | |
| Data Fields | | |
| float | rmox[13] | MOx resistance. |
| float | log_rcda | log10 of CDA resistance for IAQ 2nd Gen. |
| float | log_nonlog_rcda[3] | log10 of CDA resistance for IAQ 2nd Gen ULP. |
| float | iaq | IAQ index. |
| float | tvoc | TVOC concentration (mg/m ³). |
| float | etoh | EtOH concentration (ppm). |
| float | eco2 | eCO2 concentration (ppm). |

◆ **rm_zmod4xxx_odor_data_t**

| | | |
|--------------------------------|----------------|------------------------------------|
| struct rm_zmod4xxx_odor_data_t | | |
| ZMOD4XXX Odor structure | | |
| Data Fields | | |
| bool | control_signal | Control signal input for odor lib. |
| float | odor | Concentration ratio for odor lib. |

◆ **rm_zmod4xxx_sulfur_odor_data_t**

| | | |
|---|-----------|---|
| struct rm_zmod4xxx_sulfur_odor_data_t | | |
| ZMOD4XXX Sulfur-Odor structure | | |
| Data Fields | | |
| float | rmox[9] | MOx resistance. |
| float | intensity | odor intensity rating ranges from 0.0 to 5.0 for sulfur lib |
| rm_zmod4xxx_sulfur_odor_t | odor | sulfur_odor classification for lib |

◆ **rm_zmod4xxx_oaq_1st_data_t**

| | | |
|-------------------------------------|--|--|
| struct rm_zmod4xxx_oaq_1st_data_t | | |
| ZMOD4XXX OAQ 1st gen data structure | | |
| Data Fields | | |

| | | |
|-------|----------|-----------------|
| float | rmox[15] | MOx resistance. |
| float | aiq | Air Quality. |

◆ **rm_zmod4xxx_oaq_2nd_data_t**

| | | |
|-------------------------------------|---------------------|--|
| struct rm_zmod4xxx_oaq_2nd_data_t | | |
| ZMOD4XXX OAQ 2nd gen data structure | | |
| Data Fields | | |
| float | rmox[8] | MOx resistance. |
| float | ozone_concentration | The ozone concentration in part-per-billion. |
| uint16_t | fast_aqi | 1-minute average of the Air Quality Index according to the EPA standard based on ozone |
| uint16_t | epa_aqi | The Air Quality Index according to the EPA standard based on ozone. |

◆ **rm_zmod4xxx_raq_data_t**

| | | |
|-------------------------------|----------------|-----------------------------------|
| struct rm_zmod4xxx_raq_data_t | | |
| ZMOD4XXX RAQ structure | | |
| Data Fields | | |
| bool | control_signal | Control signal input for raq lib. |
| float | raq | Concentration ratio for raq lib. |

◆ **rm_zmod4xxx_rel_iaq_data_t**

| | | |
|--------------------------------------|----------|---------------------|
| struct rm_zmod4xxx_rel_iaq_data_t | | |
| ZMOD4XXX Relative IAQ data structure | | |
| Data Fields | | |
| float | rmox[13] | MOx resistances. |
| float | rhtr | heater resistance. |
| float | rel_iaq | relative IAQ index. |

◆ **rm_zmod4xxx_pbaq_data_t**

| | | |
|--------------------------------|----------|--------------------------|
| struct rm_zmod4xxx_pbaq_data_t | | |
| ZMOD4XXX PBAQ data structure | | |
| Data Fields | | |
| float | rmox[13] | MOx resistance. |
| float | log_rcda | log10 of CDA resistance. |
| float | rhtr | heater resistance. |

| | | |
|-------|-------------|--|
| float | temperature | ambient temperature (degC). |
| float | tvoc | TVOC concentration (mg/m ³). |
| float | etoh | EtOH concentration (ppm). |

◆ `rm_zmod4xxx_cfg_t`

| | |
|--|---|
| struct <code>rm_zmod4xxx_cfg_t</code> | |
| ZMOD4XXX configuration block | |
| Data Fields | |
| <code>rm_comms_instance_t</code> const * | <code>p_comms_instance</code> |
| | Pointer to Communications Middleware instance. |
| <code>void</code> const * | <code>p_irq_instance</code> |
| | Pointer to IRQ instance. |
| <code>void</code> const * | <code>p_context</code> |
| | Pointer to the user-provided context. |
| <code>void</code> const * | <code>p_extend</code> |
| | Pointer to extended configuration by instance of interface. |
| <code>void</code> (* <code>p_comms_callback</code>)(<code>rm_zmod4xxx_callback_args_t</code> * <code>p_args</code>) | |
| | I2C Communications callback. |
| <code>void</code> (* <code>p_irq_callback</code>)(<code>rm_zmod4xxx_callback_args_t</code> * <code>p_args</code>) | |
| | IRQ callback. |

◆ `rm_zmod4xxx_api_t`

| | |
|---------------------------------------|--|
| struct <code>rm_zmod4xxx_api_t</code> | |
| ZMOD4XXX APIs | |
| Data Fields | |

| | |
|-------------|--|
| fsp_err_t(* | open)(rm_zmod4xxx_ctrl_t *const p_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg) |
| fsp_err_t(* | measurementStart)(rm_zmod4xxx_ctrl_t *const p_ctrl) |

Field Documentation

◆ open

`fsp_err_t(* rm_zmod4xxx_api_t::open) (rm_zmod4xxx_ctrl_t *const p_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg)`

Open sensor.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ measurementStart

`fsp_err_t(* rm_zmod4xxx_api_t::measurementStart) (rm_zmod4xxx_ctrl_t *const p_ctrl)`

Start measurement

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
|------|---------------------|-------------------------------|

◆ **measurementStop**

```
fsp_err_t(* rm_zmod4xxx_api_t::measurementStop) (rm_zmod4xxx_ctrl_t *const p_ctrl)
```

Stop measurement

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **statusCheck**

```
fsp_err_t(* rm_zmod4xxx_api_t::statusCheck) (rm_zmod4xxx_ctrl_t *const p_ctrl)
```

Read status of the sensor

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **read**

```
fsp_err_t(* rm_zmod4xxx_api_t::read) (rm_zmod4xxx_ctrl_t *const p_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data)
```

Read ADC data.

Parameters

| | | |
|------|------------|--------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data structure. |

◆ **iaq1stGenDataCalculate**

```
fsp_err_t(* rm_zmod4xxx_api_t::iaq1stGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const p_zmod4xxx_data)
```

Calculate IAQ 1st Gen. values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ iaq2ndGenDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::iaq2ndGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const
p_zmod4xxx_data)
```

Calculate IAQ 2nd Gen. values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ odorDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::odorDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data)
```

Calculate Odor values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ sulfurOdorDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::sulfurOdorDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const
p_zmod4xxx_data)
```

Calculate Sulfur Odor values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ oaq1stGenDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::oaq1stGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const
p_zmod4xxx_data)
```

Calculate OAQ 1st Gen. values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ oaq2ndGenDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::oaq2ndGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const
p_zmod4xxx_data)
```

Calculate OAQ 2nd Gen. values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ raqDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::raqDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_raq_data_t *const p_zmod4xxx_data)
```

Calculate RAQ values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ rellaqDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::rellaqDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_rel_iaq_data_t *const
p_zmod4xxx_data)
```

Calculate Relative IAQ values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ pbaqDataCalculate

```
fsp_err_t(* rm_zmod4xxx_api_t::pbaqDataCalculate) (rm_zmod4xxx_ctrl_t *const p_ctrl,
rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_pbaq_data_t *const
p_zmod4xxx_data)
```

Calculate PBAQ values from ADC data.

Parameters

| | | |
|------|-----------------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_raw_data | Pointer to raw data. |
| [in] | p_zmod4xxx_data | Pointer to ZMOD4XXX data structure. |

◆ temperatureAndHumiditySet

```
fsp_err_t(* rm_zmod4xxx_api_t::temperatureAndHumiditySet) (rm_zmod4xxx_ctrl_t *const p_ctrl,
float temperature, float humidity)
```

Set temperature and humidity.

Parameters

| | | |
|------|-------------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | temperature | Temperature (deg C). |
| [in] | humidity | Humidity (percent). |

◆ **deviceErrorCheck**

```
fsp_err_t(* rm_zmod4xxx_api_t::deviceErrorCheck) (rm_zmod4xxx_ctrl_t *const p_ctrl)
```

Check device error event.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **close**

```
fsp_err_t(* rm_zmod4xxx_api_t::close) (rm_zmod4xxx_ctrl_t *const p_ctrl)
```

Close the sensor

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_zmod4xxx_instance_t**

```
struct rm_zmod4xxx_instance_t
```

ZMOD4XXX instance

Data Fields

| | | |
|---------------------------|--------|--|
| rm_zmod4xxx_ctrl_t * | p_ctrl | Pointer to the control structure for this instance |
| rm_zmod4xxx_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance |
| rm_zmod4xxx_api_t const * | p_api | Pointer to the API structure for this instance |

Typedef Documentation◆ **rm_zmod4xxx_ctrl_t**

```
typedef void rm_zmod4xxx_ctrl_t
```

ZMOD4xxx Control block. Allocate an instance specific control block to pass into the API calls.

Enumeration Type Documentation

◆ **rm_zmod4xxx_event_t**

| | |
|--|--|
| enum <code>rm_zmod4xxx_event_t</code> | |
| Event in the callback function | |
| Enumerator | |
| <code>RM_ZMOD4XXX_EVENT_DEV_ERR_POWER_ON_RESET</code> | Unexpected reset. |
| <code>RM_ZMOD4XXX_EVENT_DEV_ERR_ACCESS_CONFLICT</code> | Getting invalid results while results readout. |

◆ **rm_zmod4xxx_sulfur_odor_t**

| |
|---|
| enum <code>rm_zmod4xxx_sulfur_odor_t</code> |
| Sulfur-Odor status |

5.3.15 Storage

Interfaces

Detailed Description

Storage Interfaces.

Modules

Block Media Interface

Interface for block media memory access.

FileX Block Media Port Interface

Interface for FileX Block Media port.

Flash Interface

Interface for the Flash Memory.

FreeRTOS+FAT Port Interface

Interface for FreeRTOS+FAT port.

LittleFS Interface

Interface for LittleFS access.

[SD/MMC Interface](#)

Interface for accessing SD, eMMC, and SDIO devices.

[SPI Flash Interface](#)

Interface for accessing external SPI flash devices.

[Virtual EEPROM Interface](#)

Interface for Virtual EEPROM access.

5.3.15.1 Block Media Interface

[Interfaces](#) » [Storage](#)

Detailed Description

Interface for block media memory access.

Summary

The block media interface supports reading, writing, and erasing media devices. All functions are non-blocking if possible. The callback is used to determine when an operation completes.

Data Structures

struct [rm_block_media_info_t](#)

struct [rm_block_media_callback_args_t](#)

struct [rm_block_media_cfg_t](#)

struct [rm_block_media_status_t](#)

struct [rm_block_media_api_t](#)

struct [rm_block_media_instance_t](#)

Typedefs

typedef void [rm_block_media_ctrl_t](#)

Enumerations

enum [rm_block_media_event_t](#)

Data Structure Documentation

◆ [rm_block_media_info_t](#)

| | | |
|--|-----------------------------------|--|
| struct rm_block_media_info_t | | |
| Block media device information supported by the instance | | |
| Data Fields | | |
| uint32_t | sector_size_bytes | Sector size in bytes. |
| uint32_t | num_sectors | Total number of sectors. |
| bool | reentrant | True if connected block media driver is reentrant. |
| bool | write_protected | True if connected block media device is write protected. |

◆ [rm_block_media_callback_args_t](#)

| | | |
|---|---------------------------|---|
| struct rm_block_media_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| rm_block_media_event_t | event | The event can be used to identify what caused the callback. |
| void const * | p_context | Placeholder for user data. |

◆ [rm_block_media_cfg_t](#)

| | | |
|---|--|---|
| struct rm_block_media_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| void(*) | p_callback (rm_block_media_callback_args_t *p_args) | |
| | | Pointer to callback function. |
| void const * | p_context | |
| | | User defined context passed into callback function. |
| void const * | p_extend | |
| | | Extension parameter for hardware specific settings. |

| |
|--|
| |
|--|

◆ **rm_block_media_status_t**

| | | |
|--------------------------------|----------------|--|
| struct rm_block_media_status_t | | |
| Current status | | |
| Data Fields | | |
| bool | initialized | False if rm_block_media_api_t::mediaInit has not been called since media was inserted, true otherwise. |
| bool | busy | True if media is busy with a previous write/erase operation. |
| bool | media_inserted | Media insertion status, true if media is not removable. |

◆ **rm_block_media_api_t**

| | |
|-----------------------------|---|
| struct rm_block_media_api_t | |
| Block media interface API. | |
| Data Fields | |
| fsp_err_t(*) | open)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg) |
| fsp_err_t(*) | mediaInit)(rm_block_media_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | read)(rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks) |
| fsp_err_t(*) | write)(rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks) |
| fsp_err_t(*) | erase)(rm_block_media_ctrl_t *const p_ctrl, uint32_t const block_address, uint32_t const num_blocks) |
| fsp_err_t(*) | callbackSet)(rm_block_media_ctrl_t *const p_ctrl, void(*p_callback)(rm_block_media_callback_args_t *), void const *const p_context, rm_block_media_callback_args_t *const p_callback_memory) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>statusGet)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_status_t *const p_status)</code> |
| <code>fsp_err_t(*</code> | <code>infoGet)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)</code> |
| <code>fsp_err_t(*</code> | <code>close)(rm_block_media_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* rm_block_media_api_t::open) (rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_cfg_t const *const p_cfg)`

Initialize block media device. `rm_block_media_api_t::mediaInit` must be called to complete the initialization procedure.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ mediaInit

`fsp_err_t(* rm_block_media_api_t::mediaInit) (rm_block_media_ctrl_t *const p_ctrl)`

Initializes a media device. If the device is removable, it must be plugged in prior to calling this API. This function blocks until media initialization is complete.

Parameters

| | | |
|------|---------------------|--|
| [in] | <code>p_ctrl</code> | Control block set in <code>rm_block_media_api_t::open</code> call. |
|------|---------------------|--|

◆ read

```
fsp_err_t(* rm_block_media_api_t::read) (rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks)
```

Reads blocks of data from the specified memory device address to the location specified by the caller.

Parameters

| | | |
|-------|----------------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
| [out] | p_dest_address | Destination to read the data into. |
| [in] | block_address | Block address to read the data from. |
| [in] | num_blocks | Number of blocks of data to read. |

◆ write

```
fsp_err_t(* rm_block_media_api_t::write) (rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks)
```

Writes blocks of data to the specified device memory address.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
| [in] | p_src_address | Address to read the data to be written. |
| [in] | block_address | Block address to write the data to. |
| [in] | num_blocks | Number of blocks of data to write. |

◆ **erase**

```
fsp_err_t(* rm_block_media_api_t::erase) (rm_block_media_ctrl_t *const p_ctrl, uint32_t const
block_address, uint32_t const num_blocks)
```

Erases blocks of data from the memory device.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
| [in] | block_address | Block address to start the erase process at. |
| [in] | num_blocks | Number of blocks of data to erase. |

◆ **callbackSet**

```
fsp_err_t(* rm_block_media_api_t::callbackSet) (rm_block_media_ctrl_t *const p_ctrl, void(
*p_callback)(rm_block_media_callback_args_t *), void const *const p_context,
rm_block_media_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **statusGet**

```
fsp_err_t(* rm_block_media_api_t::statusGet) (rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_status_t *const p_status)
```

Get status of connected device.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
| [out] | p_status | Pointer to store current status. |

◆ **infoGet**

```
fsp_err_t(* rm_block_media_api_t::infoGet) (rm_block_media_ctrl_t *const p_ctrl,
rm_block_media_info_t *const p_info)
```

Returns information about the block media device.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
| [out] | p_info | Pointer to information structure. All elements of this structure will be set by the function. |

◆ **close**

```
fsp_err_t(* rm_block_media_api_t::close) (rm_block_media_ctrl_t *const p_ctrl)
```

Closes the module.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in rm_block_media_api_t::open call. |
|------|--------|---|

◆ **rm_block_media_instance_t**

```
struct rm_block_media_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---|--------|---|
| rm_block_media_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
|---|--------|---|

| | | |
|---|--------------------|---|
| <code>rm_block_media_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>rm_block_media_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `rm_block_media_ctrl_t`

| |
|--|
| <code>typedef void rm_block_media_ctrl_t</code> |
| Block media API control block. Allocate an instance specific control block to pass into the block media API calls. |

Enumeration Type Documentation

◆ `rm_block_media_event_t`

| | |
|--|---|
| <code>enum rm_block_media_event_t</code> | |
| Events that can trigger a callback function | |
| Enumerator | |
| <code>RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED</code> | Media removed event. |
| <code>RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED</code> | Media inserted event. |
| <code>RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE</code> | Read, write, or erase completed. |
| <code>RM_BLOCK_MEDIA_EVENT_ERROR</code> | Error on media operation. |
| <code>RM_BLOCK_MEDIA_EVENT_POLL_STATUS</code> | Poll <code>rm_block_media_api_t::statusGet</code> for write/erase completion. |
| <code>RM_BLOCK_MEDIA_EVENT_MEDIA_SUSPEND</code> | Media suspended event. |
| <code>RM_BLOCK_MEDIA_EVENT_MEDIA_RESUME</code> | Media resumed event. |
| <code>RM_BLOCK_MEDIA_EVENT_WAIT</code> | Indication to user that they should wait for an interrupt on a pending operation. |
| <code>RM_BLOCK_MEDIA_EVENT_WAIT_END</code> | Indication to user that interrupt has been received and waiting can end. |

5.3.15.2 FileX Block Media Port Interface

[Interfaces](#) » [Storage](#)

Detailed Description

Interface for FileX Block Media port.

Summary

The FileX block media port provides notifications for insertion and removal of removable media and provides initialization functions required by FileX.

Data Structures

struct [rm_filex_block_media_callback_args_t](#)

struct [rm_filex_block_media_cfg_t](#)

struct [rm_filex_block_media_api_t](#)

struct [rm_filex_block_media_instance_t](#)

Typedefs

typedef void [rm_filex_block_media_ctrl_t](#)

Enumerations

enum [rm_filex_block_media_partition_t](#)

Data Structure Documentation

◆ [rm_filex_block_media_callback_args_t](#)

| | | |
|---|-----------|---|
| struct rm_filex_block_media_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| rm_block_media_event_t | event | The event can be used to identify what caused the callback. |
| void const * | p_context | Placeholder for user data. |

◆ [rm_filex_block_media_cfg_t](#)

| | |
|---|---|
| struct rm_filex_block_media_cfg_t | |
| Block media configuration structure | |
| Data Fields | |
| rm_block_media_instance_t * | p_lower_lvl_block_media |

| | |
|---|---|
| | Lower level block media pointer. |
| <code>rm_filex_block_media_partition_t</code> | partition |
| | Partition to use for partitioned media. |
| <code>void(* p_callback)</code> | <code>(rm_filex_block_media_callback_args_t *p_args)</code> |
| | Pointer to callback function. |

◆ `rm_filex_block_media_api_t`

`struct rm_filex_block_media_api_t`

FileX block media functions implemented at the HAL layer will follow this API.

Data Fields

`fsp_err_t(* open)` `(rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg)`

`fsp_err_t(* close)` `(rm_filex_block_media_ctrl_t *const p_ctrl)`

Field Documentation

◆ `open`

`fsp_err_t(* rm_filex_block_media_api_t::open)` `(rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg)`

Open media device.

Parameters

| | | |
|------|---------------------|-------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to control structure. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* rm_filex_block_media_api_t::close) (rm_filex_block_media_ctrl_t *const p_ctrl)
```

Close media device.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_filex_block_media_instance_t**

```
struct rm_filex_block_media_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--|--------|---|
| rm_filex_block_media_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_filex_block_media_cfg_t const *const | p_cfg | Pointer to the configuration structure for this instance. |
| rm_filex_block_media_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **rm_filex_block_media_ctrl_t**

```
typedef void rm_filex_block_media_ctrl_t
```

Block media control structure

Enumeration Type Documentation

◆ `rm_filex_block_media_partition_t`

Data Structure Documentation

◆ flash_block_info_t

| struct flash_block_info_t | | |
|--|------------------------|---|
| Flash block details stored in factory flash. | | |
| Data Fields | | |
| uint32_t | block_section_st_addr | Starting address for this block section (blocks of this size) |
| uint32_t | block_section_end_addr | Ending address for this block section (blocks of this size) |
| uint32_t | block_size | Flash erase block size. |
| uint32_t | block_size_write | Flash write block size. |

◆ flash_regions_t

| struct flash_regions_t | | |
|----------------------------|---------------|--------------------------------|
| Flash block details | | |
| Data Fields | | |
| uint32_t | num_regions | Length of block info array. |
| flash_block_info_t const * | p_block_array | Block info array base address. |

◆ flash_info_t

| struct flash_info_t | | |
|------------------------------------|------------|---|
| Information about the flash blocks | | |
| Data Fields | | |
| flash_regions_t | code_flash | Information about the code flash regions. |

| | | |
|---------------------------------|------------|---|
| flash_regions_t | data_flash | Information about the code flash regions. |
|---------------------------------|------------|---|

◆ **flash_callback_args_t**

| | | |
|----------------------------------|-----------|---|
| struct flash_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| flash_event_t | event | Event can be used to identify what caused the callback (flash ready or error). |
| void const * | p_context | Placeholder for user data. Set in flash_api_t::open function in::flash_cfg_t. |

◆ **flash_cfg_t**

| | | |
|---------------------|---|---|
| struct flash_cfg_t | | |
| FLASH Configuration | | |
| Data Fields | | |
| bool | data_flash_bgo | |
| | | True if BGO (Background Operation) is enabled for Data Flash. |
| | | |
| void(* | p_callback)(flash_callback_args_t *p_args) | |
| | | Callback provided when a Flash interrupt ISR occurs. |
| | | |
| void const * | p_extend | |
| | | FLASH hardware dependent configuration. |
| | | |
| void const * | p_context | |
| | | Placeholder for user data. Passed to user callback in flash_callback_args_t . |
| | | |
| uint8_t | ipl | |
| | | Flash ready interrupt priority. |
| | | |
| | | |

| | |
|-----------|---|
| IRQn_Type | irq |
| | Flash ready interrupt number. |
| uint8_t | err_ipr |
| | Flash error interrupt priority (unused in r_flash_lp) |
| IRQn_Type | err_irq |
| | Flash error interrupt number (unused in r_flash_lp) |

◆ **flash_api_t**

| | |
|---------------------------------------|--|
| struct flash_api_t | |
| Shared Interface definition for FLASH | |
| Data Fields | |
| fsp_err_t (* | open)(flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg) |
| fsp_err_t (* | write)(flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes) |
| fsp_err_t (* | erase)(flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks) |
| fsp_err_t (* | blankCheck)(flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result) |
| fsp_err_t (* | infoGet)(flash_ctrl_t *const p_ctrl, flash_info_t *const p_info) |
| fsp_err_t (* | close)(flash_ctrl_t *const p_ctrl) |
| fsp_err_t (* | statusGet)(flash_ctrl_t *const p_ctrl, flash_status_t *const p_status) |
| fsp_err_t (* | accessWindowSet)(flash_ctrl_t *const p_ctrl, uint32_t const start_addr, uint32_t const end_addr) |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>accessWindowClear)(flash_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>idCodeSet)(flash_ctrl_t *const p_ctrl, uint8_t const *const p_id_bytes, flash_id_code_mode_t mode)</code> |
| <code>fsp_err_t(*</code> | <code>reset)(flash_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>updateFlashClockFreq)(flash_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>startupAreaSelect)(flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)</code> |
| <code>fsp_err_t(*</code> | <code>bankSwap)(flash_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>callbackSet)(flash_ctrl_t *const p_ctrl, void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const p_callback_memory)</code> |

Field Documentation

◆ open

`fsp_err_t(* flash_api_t::open) (flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg)`

Open FLASH device.

Parameters

| | | |
|-------|--------------------------|---|
| [out] | <code>p_ctrl</code> | Pointer to FLASH device control. Must be declared by user. Value set here. |
| [in] | <code>flash_cfg_t</code> | Pointer to FLASH configuration structure. All elements of this structure must be set by the user. |

◆ **write**

```
fsp_err_t(* flash_api_t::write) (flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes)
```

Write FLASH device.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Control for the FLASH device context. |
| [in] | src_address | Address of the buffer containing the data to write to Flash. |
| [in] | flash_address | Code Flash or Data Flash address to write. The address must be on a programming line boundary. |
| [in] | num_bytes | The number of bytes to write. This number must be a multiple of the programming size. For Code Flash this is FLASH_MIN_PGM_SIZE_CF. For Data Flash this is FLASH_MIN_PGM_SIZE_DF. |

Warning

Specifying a number that is not a multiple of the programming size will result in SF_FLASH_ERR_BYTES being returned and no data written.

◆ **erase**

```
fsp_err_t(* flash_api_t::erase) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks)
```

Erase FLASH device.

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Control for the FLASH device. |
| [in] | address | The block containing this address is the first block erased. |
| [in] | num_blocks | Specifies the number of blocks to be erased, the starting block determined by the block_erase_address. |

◆ **blankCheck**

```
fsp_err_t(* flash_api_t::blankCheck) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result)
```

Blank check FLASH device.

Parameters

| | | |
|-------|----------------------|--|
| [in] | p_ctrl | Control for the FLASH device context. |
| [in] | address | The starting address of the Flash area to blank check. |
| [in] | num_bytes | Specifies the number of bytes that need to be checked. See the specific handler for details. |
| [out] | p_blank_check_result | Pointer that will be populated by the API with the results of the blank check operation in non-BGO (blocking) mode. In this case the blank check operation completes here and the result is returned. In Data Flash BGO mode the blank check operation is only started here and the result obtained later when the supplied callback routine is called. In this case FLASH_RESULT_BGO_ACTIVE will be returned in p_blank_check_result. |

◆ **infoGet**

```
fsp_err_t(* flash_api_t::infoGet) (flash_ctrl_t *const p_ctrl, flash_info_t *const p_info)
```

Close FLASH device.

Parameters

| | | |
|-------|--------|----------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
| [out] | p_info | Pointer to FLASH info structure. |

◆ **close**

```
fsp_err_t(* flash_api_t::close) (flash_ctrl_t *const p_ctrl)
```

Close FLASH device.

Parameters

| | | |
|------|--------|----------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
|------|--------|----------------------------------|

◆ **statusGet**

```
fsp_err_t(* flash_api_t::statusGet) (flash_ctrl_t *const p_ctrl, flash_status_t *const p_status)
```

Get Status for FLASH device.

Parameters

| | | |
|-------|----------|--------------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
| [out] | p_status | Pointer to the current flash status. |

◆ **accessWindowSet**

```
fsp_err_t(* flash_api_t::accessWindowSet) (flash_ctrl_t *const p_ctrl, uint32_t const start_addr, uint32_t const end_addr)
```

Set Access Window for FLASH device.

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to FLASH device control. |
| [in] | start_addr | Determines the Starting block for the Code Flash access window. |
| [in] | end_addr | Determines the Ending block for the Code Flash access window. This address will not be within the access window. |

◆ **accessWindowClear**

`fsp_err_t(* flash_api_t::accessWindowClear) (flash_ctrl_t *const p_ctrl)`

Clear any existing Code Flash access window for FLASH device.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to FLASH device control. |
| [in] | start_addr | Determines the Starting block for the Code Flash access window. |
| [in] | end_addr | Determines the Ending block for the Code Flash access window. |

◆ **idCodeSet**

`fsp_err_t(* flash_api_t::idCodeSet) (flash_ctrl_t *const p_ctrl, uint8_t const *const p_id_bytes, flash_id_code_mode_t mode)`

Set ID Code for FLASH device. Setting the ID code can restrict access to the device. The ID code will be required to connect to the device. Bits 126 and 127 are set based on the mode.

For example, `uint8_t id_bytes[] = {0x00, 0x11, 0x22, 0x33, 0x44, 0x55, 0x66, 0x77, 0x88, 0x99, 0xaa, 0xbb, 0xcc, 0xdd, 0xee, 0x00};` with mode `FLASH_ID_CODE_MODE_LOCKED_WITH_ALL_ERASE_SUPPORT` will result in an ID code of `00112233445566778899aabbccddeec0`

With mode `FLASH_ID_CODE_MODE_LOCKED`, it will result in an ID code of `00112233445566778899aabbccdde80`

Parameters

| | | |
|------|------------|---------------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
| [in] | p_id_bytes | Pointer to the ID Code to be written. |
| [in] | mode | Mode used for checking the ID code. |

◆ **reset**

`fsp_err_t(* flash_api_t::reset) (flash_ctrl_t *const p_ctrl)`

Reset function for FLASH device.

Parameters

| | | |
|------|--------|----------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
|------|--------|----------------------------------|

◆ **updateFlashClockFreq**

```
fsp_err_t(* flash_api_t::updateFlashClockFreq) (flash_ctrl_t *const p_ctrl)
```

Update Flash clock frequency (FCLK) and recalculate timeout values

Parameters

| | | |
|------|--------|----------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
|------|--------|----------------------------------|

◆ **startupAreaSelect**

```
fsp_err_t(* flash_api_t::startupAreaSelect) (flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)
```

Select which block - Default (Block 0) or Alternate (Block 1) is used as the start-up area block.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to FLASH device control. |
| [in] | swap_type | FLASH_STARTUP_AREA_BLOCK0, FLASH_STARTUP_AREA_BLOCK1 or FLASH_STARTUP_AREA_BTFLG. |
| [in] | is_temporary | True or false. See table below. |

| swap_type | is_temporary | Operation |
|---------------------------|--------------|---|
| FLASH_STARTUP_AREA_BLOCK0 | false | On next reset Startup area will be Block 0. |
| FLASH_STARTUP_AREA_BLOCK1 | true | Startup area is immediately, but temporarily switched to Block 1. |
| FLASH_STARTUP_AREA_BTFLG | true | Startup area is immediately, but temporarily switched to the Block determined by the Configuration BTFLG. |

◆ **bankSwap**

```
fsp_err_t(* flash_api_t::bankSwap) (flash_ctrl_t *const p_ctrl)
```

Swap the bank used as the startup area. On Flash HP, need to change into dual bank mode to use this feature.

Parameters

| | | |
|------|--------|----------------------------------|
| [in] | p_ctrl | Pointer to FLASH device control. |
|------|--------|----------------------------------|

◆ **callbackSet**

```
fsp_err_t(* flash_api_t::callbackSet) (flash_ctrl_t *const p_ctrl,
void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const
p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in flash_api_t::open call for this timer. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **flash_instance_t**

```
struct flash_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------------------------|--------|---|
| flash_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| flash_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| flash_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **flash_ctrl_t**

```
typedef void flash_ctrl_t
```

Flash control block. Allocate an instance specific control block to pass into the flash API calls.

Enumeration Type Documentation

◆ **flash_result_t**

| enum <code>flash_result_t</code> | |
|--------------------------------------|---|
| Result type for certain operations | |
| Enumerator | |
| <code>FLASH_RESULT_BLANK</code> | Return status for Blank Check Function. |
| <code>FLASH_RESULT_NOT_BLANK</code> | Return status for Blank Check Function. |
| <code>FLASH_RESULT_BGO_ACTIVE</code> | Flash is configured for BGO mode. Result is returned in callback. |

◆ **flash_startup_area_swap_t**

| enum <code>flash_startup_area_swap_t</code> | |
|--|---|
| Parameter for specifying the startup area swap being requested by <code>startupAreaSelect()</code> | |
| Enumerator | |
| <code>FLASH_STARTUP_AREA_BTFLG</code> | Startup area will be set based on the value of the BTFLG. |
| <code>FLASH_STARTUP_AREA_BLOCK0</code> | Startup area will be set to Block 0. |
| <code>FLASH_STARTUP_AREA_BLOCK1</code> | Startup area will be set to Block 1. |

◆ **flash_event_t**

| enum flash_event_t | |
|---|---|
| Event types returned by the ISR callback when used in Data Flash BGO mode | |
| Enumerator | |
| FLASH_EVENT_ERASE_COMPLETE | Erase operation successfully completed. |
| FLASH_EVENT_WRITE_COMPLETE | Write operation successfully completed. |
| FLASH_EVENT_BLANK | Blank check operation successfully completed. Specified area is blank. |
| FLASH_EVENT_NOT_BLANK | Blank check operation successfully completed. Specified area is NOT blank. |
| FLASH_EVENT_ERR_DF_ACCESS | Data Flash operation failed. Can occur when writing an unerased section. |
| FLASH_EVENT_ERR_CF_ACCESS | Code Flash operation failed. Can occur when writing an unerased section. |
| FLASH_EVENT_ERR_CMD_LOCKED | Operation failed, FCU is in Locked state (often result of an illegal command) |
| FLASH_EVENT_ERR_FAILURE | Erase or Program Operation failed. |
| FLASH_EVENT_ERR_ONE_BIT | A 1-bit error has been corrected when reading the flash memory area by the sequencer. |

◆ **flash_id_code_mode_t**

| enum flash_id_code_mode_t | |
|--|---|
| ID Code Modes for writing to ID code registers | |
| Enumerator | |
| FLASH_ID_CODE_MODE_UNLOCKED | ID code is ignored. |
| FLASH_ID_CODE_MODE_LOCKED_WITH_ALL_ERASE_SUPPORT | ID code is checked. All erase is available. |
| FLASH_ID_CODE_MODE_LOCKED | ID code is checked. |

◆ **flash_status_t**

| | |
|----------------------------------|--|
| enum <code>flash_status_t</code> | |
| Flash status | |
| Enumerator | |
| <code>FLASH_STATUS_IDLE</code> | The flash is idle. |
| <code>FLASH_STATUS_BUSY</code> | The flash is currently processing a command. |

5.3.15.4 FreeRTOS+FAT Port Interface[Interfaces](#) » [Storage](#)**Detailed Description**

Interface for FreeRTOS+FAT port.

Summary

The FreeRTOS+FAT port provides notifications for insertion and removal of removable media and provides initialization functions required by FreeRTOS+FAT.

Data Structures

struct [rm_freertos_plus_fat_callback_args_t](#)

struct [rm_freertos_plus_fat_device_t](#)

struct [rm_freertos_plus_fat_api_t](#)

struct [rm_freertos_plus_fat_instance_t](#)

Enumerations

enum [rm_freertos_plus_fat_event_t](#)

enum [rm_freertos_plus_fat_type_t](#)

Data Structure Documentation◆ **rm_freertos_plus_fat_callback_args_t**

| |
|--|
| struct <code>rm_freertos_plus_fat_callback_args_t</code> |
| Callback function parameter data |

| Data Fields | | |
|--|-----------|---|
| rm_freertos_plus_fat_event_t | event | The event can be used to identify what caused the callback. |
| void const * | p_context | Placeholder for user data. |

◆ [rm_freertos_plus_fat_device_t](#)

| struct rm_freertos_plus_fat_device_t | | |
|--|-------------------|-----------------------|
| Information obtained from the media device. | | |
| Data Fields | | |
| uint32_t | sector_count | Sector count. |
| uint32_t | sector_size_bytes | Sector size in bytes. |

◆ [rm_freertos_plus_fat_api_t](#)

| struct rm_freertos_plus_fat_api_t | | |
|--|--|--|
| FreeRTOS plus Fat functions implemented at the HAL layer will follow this API. | | |
| Data Fields | | |
| fsp_err_t (* | open)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_cfg_t const *const p_cfg) | |
| fsp_err_t (* | mediaInit)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_device_t *const p_device) | |
| fsp_err_t (* | diskInit)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk) | |
| fsp_err_t (* | diskDeinit)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk) | |
| fsp_err_t (* | infoGet)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk, rm_freertos_plus_fat_info_t *const p_info) | |
| fsp_err_t (* | close)(rm_freertos_plus_fat_ctrl_t *const p_ctrl) | |
| Field Documentation | | |
| | | |

◆ **open**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::open) (rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_cfg_t const *const p_cfg)
```

Open media device.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **medialnit**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::medialnit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_device_t *const p_device)
```

Initializes a media device. If the device is removable, it must be plugged in prior to calling this API. This function blocks until media initialization is complete.

Parameters

| | | |
|------|----------|--------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_device | Pointer to store device information. |

◆ **diskInit**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::diskInit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl,
rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk)
```

Initializes a FreeRTOS+FAT FF_Disk_t structure.

Parameters

| | | |
|-------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_disk_cfg | Pointer to disk configurations |
| [out] | p_disk | Pointer to store FreeRTOS+FAT disk structure. |

◆ **diskDeinit**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::diskDeinit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl,
FF_Disk_t *const p_disk)
```

Deinitializes a FreeRTOS+FAT FF_Disk_t structure.

Parameters

| | | |
|-------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_disk_cfg | Pointer to disk configurations |
| [out] | p_disk | Pointer to store FreeRTOS+FAT disk structure. |

◆ **infoGet**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::infoGet) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t
*const p_disk, rm_freertos_plus_fat_info_t *const p_info)
```

Returns information about the media device.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [out] | p_info | Pointer to information structure. All elements of this structure will be set by the function. |

◆ **close**

```
fsp_err_t(* rm_freertos_plus_fat_api_t::close) (rm_freertos_plus_fat_ctrl_t *const p_ctrl)
```

Close media device.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **rm_freertos_plus_fat_instance_t**

```
struct rm_freertos_plus_fat_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--|--------|---|
| rm_freertos_plus_fat_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_freertos_plus_fat_cfg_t const *const | p_cfg | Pointer to the configuration structure for this instance. |

| | | |
|---|--------------------|---|
| <code>rm_freertos_plus_fat_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |
|---|--------------------|---|

Enumeration Type Documentation

◆ `rm_freertos_plus_fat_event_t`

| | |
|---|------------------------|
| enum <code>rm_freertos_plus_fat_event_t</code> | |
| Events that can trigger a callback function | |
| Enumerator | |
| <code>RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_REMOVED</code> | Media removed event. |
| <code>RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED</code> | Media inserted event. |
| <code>RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_SUSPENDED</code> | Media suspended event. |
| <code>RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_RESUMED</code> | Media resumed event. |

◆ `rm_freertos_plus_fat_type_t`

| | |
|---|-------------|
| enum <code>rm_freertos_plus_fat_type_t</code> | |
| Enumerator | |
| <code>RM_FREERTOS_PLUS_FAT_TYPE_FAT32</code> | FAT32 disk. |
| <code>RM_FREERTOS_PLUS_FAT_TYPE_FAT16</code> | FAT16 disk. |
| <code>RM_FREERTOS_PLUS_FAT_TYPE_FAT12</code> | FAT12 disk. |

5.3.15.5 LittleFS Interface

[Interfaces](#) » [Storage](#)

Detailed Description

Interface for LittleFS access.

Summary

The LittleFS Port configures a fail-safe filesystem designed for microcontrollers on top of a lower level storage device.

Data Structures

struct [rm_littlefs_cfg_t](#)

struct [rm_littlefs_api_t](#)

struct [rm_littlefs_instance_t](#)

Typedefs

typedef void [rm_littlefs_ctrl_t](#)

Data Structure Documentation

◆ [rm_littlefs_cfg_t](#)

| | | |
|---|---------------------------|--|
| struct rm_littlefs_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| struct lfs_config const * | p_lfs_cfg | Pointer LittleFS configuration structure. |
| void const * | p_extend | Pointer to hardware dependent configuration. |

◆ [rm_littlefs_api_t](#)

| | | |
|--|---|--|
| struct rm_littlefs_api_t | | |
| LittleFS Port interface API. | | |
| Data Fields | | |
| fsp_err_t (* | open)(rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg) | |
| fsp_err_t (* | close)(rm_littlefs_ctrl_t *const p_ctrl) | |

Field Documentation

◆ open

```
fsp_err_t(* rm_littlefs_api_t::open) (rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)
```

Initialize The lower level storage device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ close

```
fsp_err_t(* rm_littlefs_api_t::close) (rm_littlefs_ctrl_t *const p_ctrl)
```

Closes the module and lower level storage device.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in rm_littlefs_api_t::open call. |
|------|--------|--|

◆ rm_littlefs_instance_t

```
struct rm_littlefs_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------------------|--------|---|
| rm_littlefs_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_littlefs_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_littlefs_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ rm_littlefs_ctrl_t

```
typedef void rm_littlefs_ctrl_t
```

LittleFS Port API control block. Allocate an instance specific control block to pass into the LittleFS Port API calls.

5.3.15.6 SD/MMC Interface

[Interfaces](#) » [Storage](#)

Detailed Description

Interface for accessing SD, eMMC, and SDIO devices.

Summary

The `r_sdhi` interface provides standard SD and eMMC media functionality. This interface also supports SDIO.

Data Structures

struct `sdmmc_response_t.status_b`

struct `sdmmc_status_t`

Data Structure Documentation

◆ [sdmmc_response_t.status_b](#)

struct [sdmmc_response_t.status_b](#)

SDIO Card Status Register.

◆ [sdmmc_status_t](#)

struct [sdmmc_status_t](#)

Current status.

Data Fields

| | | |
|------|--------------------------------------|--|
| bool | initialized | False if card was removed (only applies if MCU supports card detection and SDnCD pin is connected), true otherwise. If ready is false, call sdmmc_api_t::medialnit to reinitialize it |
| bool | transfer_in_progress | true = Card is busy |
| bool | card_inserted | Card detect status, true if card detect is not used. |

◆ [sdmmc_device_t](#)

struct [sdmmc_device_t](#)

Information obtained from the media device.

Data Fields

| | | |
|-----------------------------------|-----------------------------------|--------------------------------|
| sdmmc_card_type_t | card_type | SD, eMMC, or SDIO. |
| bool | write_protected | true = Card is write protected |
| uint32_t | clock_rate | Current clock rate. |
| uint32_t | sector_count | Sector count. |
| uint32_t | sector_size_bytes | Sector size. |

| | | |
|----------|--------------------|---|
| uint32_t | erase_sector_count | Minimum erasable unit (in 512 byte sectors) |
|----------|--------------------|---|

◆ sdmmc_callback_args_t

| | | |
|----------------------------------|-----------|---|
| struct sdmmc_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| sdmmc_event_t | event | The event can be used to identify what caused the callback. |
| sdmmc_response_t | response | Response from card, only valid if SDMMC_EVENT_RESPONSE is set in event. |
| void const * | p_context | Placeholder for user data. |

◆ sdmmc_write_io_args_t

| | | |
|---|--|--|
| struct sdmmc_write_io_args_t | | |
| Non-secure arguments for writelo guard function | | |

◆ sdmmc_read_io_ext_args_t

| | | |
|---|--|--|
| struct sdmmc_read_io_ext_args_t | | |
| Non-secure arguments for readIoExt guard function | | |

◆ sdmmc_write_io_ext_args_t

| | | |
|--|--|--|
| struct sdmmc_write_io_ext_args_t | | |
| Non-secure arguments for writeloExt guard function | | |

◆ sdmmc_cfg_t

| | | |
|----------------------|-----------|--|
| struct sdmmc_cfg_t | | |
| SD/MMC Configuration | | |
| Data Fields | | |
| uint8_t | channel | |
| | | Channel of SD/MMC host interface. |
| sdmmc_bus_width_t | bus_width | |
| | | Device bus width is 1, 4 or 8 bits wide. |

| | |
|--|--|
| <code>transfer_instance_t</code> const * | <code>p_lower_lvl_transfer</code> |
| | Transfer instance used to move data with DMA or DTC. |
| <code>void(*</code> | <code>p_callback</code>)(sdmmc_callback_args_t *p_args) |
| | Pointer to callback function. |
| <code>void</code> const * | <code>p_context</code> |
| | User defined context passed into callback function. |
| <code>void</code> const * | <code>p_extend</code> |
| | SD/MMC hardware dependent configuration. |
| <code>uint32_t</code> | <code>block_size</code> |
| <code>sdmmc_card_detect_t</code> | <code>card_detect</code> |
| <code>sdmmc_write_protect_t</code> | <code>write_protect</code> |
| <code>IRQn_Type</code> | <code>access_irq</code> |
| | Access IRQ number. |
| <code>IRQn_Type</code> | <code>sdio_irq</code> |
| | SDIO IRQ number. |
| <code>IRQn_Type</code> | <code>card_irq</code> |
| | Card IRQ number. |
| <code>IRQn_Type</code> | <code>dma_req_irq</code> |

| | |
|---------|---------------------------------|
| | DMA request IRQ number. |
| uint8_t | access_ipl |
| | Access interrupt priority. |
| uint8_t | sdio_ipl |
| | SDIO interrupt priority. |
| uint8_t | card_ipl |
| | Card interrupt priority. |
| uint8_t | dma_req_ipl |
| | DMA request interrupt priority. |

Field Documentation

◆ **block_size**

[uint32_t sdmmc_cfg_t::block_size](#)

Block size in bytes. Block size must be 512 bytes for SD cards and eMMC devices. Block size can be 1-512 bytes for SDIO.

◆ **card_detect**

[sdmmc_card_detect_t sdmmc_cfg_t::card_detect](#)

Whether or not card detection is used.

◆ **write_protect**

[sdmmc_write_protect_t sdmmc_cfg_t::write_protect](#)

Select whether or not to use the write protect pin. Select Not Used if the MCU or device does not have a write protect pin.

◆ **sdmmc_api_t**

[struct sdmmc_api_t](#)

SD/MMC functions implemented at the HAL layer API.

Data Fields

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>open)(sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>medialnit)(sdmmc_ctrl_t *const p_ctrl, sdmmc_device_t *const p_device)</code> |
| <code>fsp_err_t(*</code> | <code>read)(sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count)</code> |

| <code>fsp_err_t(*</code> | <code>readloExt)(sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)</code> |
| <code>fsp_err_t(*</code> | <code>writeloExt)(sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)</code> |
| <code>fsp_err_t(*</code> | <code>ioIntEnable)(sdmmc_ctrl_t *const p_ctrl, bool enable)</code> |
| <code>fsp_err_t(*</code> | <code>statusGet)(sdmmc_ctrl_t *const p_ctrl, sdmmc_status_t *const p_status)</code> |
| <code>fsp_err_t(*</code> | <code>erase)(sdmmc_ctrl_t *const p_ctrl, uint32_t const start_sector, uint32_t const sector_count)</code> |
| <code>fsp_err_t(*</code> | <code>callbackSet)(sdmmc_ctrl_t *const p_ctrl, void(*p_callback)(sdmmc_callback_args_t *), void const *const p_context, sdmmc_callback_args_t *const p_callback_memory)</code> |

```
fsp_err_t(* close )(sdmmc_ctrl_t *const p_ctrl)
```

Field Documentation

◆ open

```
fsp_err_t(* sdmmc_api_t::open) (sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)
```

Open the SD/MMC driver.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to SD/MMC instance control block. |
| [in] | p_cfg | Pointer to SD/MMC instance configuration structure. |

◆ medialnit

```
fsp_err_t(* sdmmc_api_t::medialnit) (sdmmc_ctrl_t *const p_ctrl, sdmmc_device_t *const p_device)
```

Initializes an SD/MMC device. If the device is a card, the card must be plugged in prior to calling this API. This API blocks until the device initialization procedure is complete.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to SD/MMC instance control block. |
| [out] | p_device | Pointer to store device information. |

◆ read

```
fsp_err_t(*sdmmc_api_t::read)(sdmmc_ctrl_t*const p_ctrl, uint8_t*const p_dest, uint32_t const start_sector, uint32_t const sector_count)
```

Read data from an SD/MMC channel. This API is not supported for SDIO devices.

Parameters

| | | |
|-------|--------------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [out] | p_dest | Pointer to data buffer to read data to. |
| [in] | start_sector | First sector address to read. |
| [in] | sector_count | Number of sectors to read. All sectors must be in the range of sdmmc_device_t::sector_count . |

◆ write

```
fsp_err_t(*sdmmc_api_t::write)(sdmmc_ctrl_t*const p_ctrl, uint8_t const*const p_source, uint32_t const start_sector, uint32_t const sector_count)
```

Write data to SD/MMC channel. This API is not supported for SDIO devices.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [in] | p_source | Pointer to data buffer to write data from. |
| [in] | start_sector | First sector address to write to. |
| [in] | sector_count | Number of sectors to write. All sectors must be in the range of sdmmc_device_t::sector_count . |

◆ **readlo**

```
fsp_err_t(* sdmmc_api_t::readlo) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address)
```

Read one byte of I/O data from an SDIO device. This API is not supported for SD or eMMC memory devices.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [out] | p_data | Pointer to location to store data byte. |
| [in] | function | SDIO Function Number. |
| [in] | address | SDIO register address. |

◆ **writel0**

```
fsp_err_t(* sdmmc_api_t::writel0) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address, sdmmc_io_write_mode_t const read_after_write)
```

Write one byte of I/O data to an SDIO device. This API is not supported for SD or eMMC memory devices.

Parameters

| | | |
|----------|------------------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [in,out] | p_data | Pointer to data byte to write. Read data is also provided here if read_after_write is true. |
| [in] | function | SDIO Function Number. |
| [in] | address | SDIO register address. |
| [in] | read_after_write | Whether or not to read back the same register after writing |

◆ **readIoExt**

```
fsp_err_t(* sdmmc_api_t::readIoExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t
const function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t
transfer_mode, sdmmc_io_address_mode_t address_mode)
```

Read multiple bytes or blocks of I/O data from an SDIO device. This API is not supported for SD or eMMC memory devices.

Parameters

| | | |
|-------|---------------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [out] | p_dest | Pointer to data buffer to read data to. |
| [in] | function | SDIO Function Number. |
| [in] | address | SDIO register address. |
| [in] | count | Number of bytes or blocks to read, maximum 512 bytes or 511 blocks. |
| [in] | transfer_mode | Byte or block mode |
| [in] | address_mode | Fixed or incrementing address mode |

◆ **writeloExt**

```
fsp_err_t(* sdmmc_api_t::writeloExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source,
uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t
transfer_mode, sdmmc_io_address_mode_t address_mode)
```

Write multiple bytes or blocks of I/O data to an SDIO device. This API is not supported for SD or eMMC memory devices.

Parameters

| | | |
|------|-----------------|--|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [in] | p_source | Pointer to data buffer to write data from. |
| [in] | function_number | SDIO Function Number. |
| [in] | address | SDIO register address. |
| [in] | count | Number of bytes or blocks to write, maximum 512 bytes or 511 blocks. |
| [in] | transfer_mode | Byte or block mode |
| [in] | address_mode | Fixed or incrementing address mode |

◆ **ioIntEnable**

```
fsp_err_t(* sdmmc_api_t::ioIntEnable) (sdmmc_ctrl_t *const p_ctrl, bool enable)
```

Enables SDIO interrupt for SD/MMC instance. This API is not supported for SD or eMMC memory devices.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [in] | enable | Interrupt enable = true, interrupt disable = false. |

◆ **statusGet**

```
fsp_err_t(* sdmmc_api_t::statusGet) (sdmmc_ctrl_t *const p_ctrl, sdmmc_status_t *const p_status)
```

Get SD/MMC device status.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [out] | p_status | Pointer to current driver status. |

◆ **erase**

```
fsp_err_t(* sdmmc_api_t::erase) (sdmmc_ctrl_t *const p_ctrl, uint32_t const start_sector, uint32_t const sector_count)
```

Erase SD/MMC sectors. The sector size for erase is fixed at 512 bytes. This API is not supported for SDIO devices.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
| [in] | start_sector | First sector to erase. Must be a multiple of sdmmc_device_t::erase_sector_count . |
| [in] | sector_count | Number of sectors to erase. Must be a multiple of sdmmc_device_t::erase_sector_count . All sectors must be in the range of sdmmc_device_t::sector_count . |

◆ **callbackSet**

```
fsp_err_t(* sdmmc_api_t::callbackSet) (sdmmc_ctrl_t *const p_ctrl,
void(*p_callback)(sdmmc_callback_args_t *), void const *const p_context, sdmmc_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in sdmmc_api_t::open call. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* sdmmc_api_t::close) (sdmmc_ctrl_t *const p_ctrl)
```

Close open SD/MMC device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to an open SD/MMC instance control block. |
|------|--------|---|

◆ **sdmmc_instance_t**

```
struct sdmmc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------------------------|--------|---|
| sdmmc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| sdmmc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| sdmmc_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **sdmmc_ctrl_t**typedef void `sdmmc_ctrl_t`

SD/MMC control block. Allocate an instance specific control block to pass into the SD/MMC API calls.

Enumeration Type Documentation◆ **sdmmc_card_type_t**enum `sdmmc_card_type_t`

SD/MMC media uses SD protocol or MMC protocol.

Enumerator

| | |
|----------------------|------------------------------|
| SDMMC_CARD_TYPE_MMC | The media is an eMMC device. |
| SDMMC_CARD_TYPE_SD | The media is an SD card. |
| SDMMC_CARD_TYPE_SDIO | The media is an SDIO card. |

◆ **sdmmc_bus_width_t**enum `sdmmc_bus_width_t`

SD/MMC data bus is 1, 4 or 8 bits wide.

Enumerator

| | |
|------------------------|--------------------------|
| SDMMC_BUS_WIDTH_1_BIT | Data bus is 1 bit wide. |
| SDMMC_BUS_WIDTH_4_BITS | Data bus is 4 bits wide. |
| SDMMC_BUS_WIDTH_8_BITS | Data bus is 8 bits wide. |

◆ **sdmmc_io_transfer_mode_t**enum `sdmmc_io_transfer_mode_t`

SDIO transfer mode, configurable in SDIO read/write extended commands.

Enumerator

| | |
|------------------------------|---------------------------|
| SDMMC_IO_MODE_TRANSFER_BYTE | SDIO byte transfer mode. |
| SDMMC_IO_MODE_TRANSFER_BLOCK | SDIO block transfer mode. |

◆ **sdmmc_io_address_mode_t**

| enum sdmmc_io_address_mode_t | |
|---|---|
| SDIO address mode, configurable in SDIO read/write extended commands. | |
| Enumerator | |
| SDMMC_IO_ADDRESS_MODE_FIXED | Write all data to the same address. |
| SDMMC_IO_ADDRESS_MODE_INCREMENT | Increment destination address after each write. |

◆ **sdmmc_io_write_mode_t**

| enum sdmmc_io_write_mode_t | |
|---|-------------------------------------|
| Controls the RAW (read after write) flag of CMD52. Used to read back the status after writing a control register. | |
| Enumerator | |
| SDMMC_IO_WRITE_MODE_NO_READ | Write only (do not read back) |
| SDMMC_IO_WRITE_READ_AFTER_WRITE | Read back the register after write. |

◆ **sdmmc_event_t**

| enum sdmmc_event_t | |
|---|--|
| Events that can trigger a callback function | |
| Enumerator | |
| SDMMC_EVENT_CARD_REMOVED | Card removed event. |
| SDMMC_EVENT_CARD_INSERTED | Card inserted event. |
| SDMMC_EVENT_RESPONSE | Response event. |
| SDMMC_EVENT_SDIO | IO event. |
| SDMMC_EVENT_TRANSFER_COMPLETE | Read or write complete. |
| SDMMC_EVENT_TRANSFER_ERROR | Read or write failed. |
| SDMMC_EVENT_ERASE_COMPLETE | Erase completed. |
| SDMMC_EVENT_ERASE_BUSY | Erase timeout, poll sdmmc_api_t::statusGet . |

◆ **sdmmc_card_detect_t**

| enum sdmmc_card_detect_t | |
|--|----------------------------------|
| Card detection configuration options. | |
| Enumerator | |
| SDMMC_CARD_DETECT_NONE | Card detection unused. |
| SDMMC_CARD_DETECT_CD | Card detection using the CD pin. |

◆ **sdmmc_write_protect_t**

| enum sdmmc_write_protect_t | |
|--|--------------------------------|
| Write protection configuration options. | |
| Enumerator | |
| SDMMC_WRITE_PROTECT_NONE | Write protection unused. |
| SDMMC_WRITE_PROTECT_WP | Write protection using WP pin. |

◆ **sdmmc_r1_state_t**

| enum <code>sdmmc_r1_state_t</code> | |
|--|---|
| Card state when receiving the prior command. | |
| Enumerator | |
| <code>SDMMC_R1_STATE_IDLE</code> | Idle State. |
| <code>SDMMC_R1_STATE_READY</code> | Ready State. |
| <code>SDMMC_R1_STATE_IDENT</code> | Identification State. |
| <code>SDMMC_R1_STATE_STBY</code> | Stand-by State. |
| <code>SDMMC_R1_STATE_TRAN</code> | Transfer State. |
| <code>SDMMC_R1_STATE_DATA</code> | Sending-data State. |
| <code>SDMMC_R1_STATE_RCV</code> | Receive-data State. |
| <code>SDMMC_R1_STATE_PRG</code> | Programming State. |
| <code>SDMMC_R1_STATE_DIS</code> | Disconnect State (between programming and stand-by) |
| <code>SDMMC_R1_STATE_IO</code> | This is an I/O card and memory states do not apply. |

5.3.15.7 SPI Flash Interface[Interfaces](#) » [Storage](#)**Detailed Description**

Interface for accessing external SPI flash devices.

Summary

The SPI flash API provides an interface that configures, writes, and erases sectors in SPI flash devices.

Data Structures

```
struct spi\_flash\_erase\_command\_t
```

```
struct spi_flash_direct_transfer_t
```

```
struct spi_flash_cfg_t
```

```
struct spi_flash_status_t
```

```
struct spi_flash_api_t
```

```
struct spi_flash_instance_t
```

Typedefs

```
typedef void spi_flash_ctrl_t
```

Enumerations

```
enum spi_flash_read_mode_t
```

```
enum spi_flash_protocol_t
```

```
enum spi_flash_address_bytes_t
```

```
enum spi_flash_data_lines_t
```

```
enum spi_flash_dummy_clocks_t
```

```
enum spi_flash_direct_transfer_dir_t
```

Data Structure Documentation

◆ spi_flash_erase_command_t

| struct spi_flash_erase_command_t | | |
|---|---------|--|
| Structure to define an erase command and associated erase size. | | |
| Data Fields | | |
| uint16_t | command | Erase command. |
| uint32_t | size | Size of erase for associated command, set to SPI_FLASH_ERASE_SIZE_CHIP_ERASE for chip erase. |

◆ spi_flash_direct_transfer_t

| struct spi_flash_direct_transfer_t | | |
|--|-------------|--|
| Structure to define a direct transfer. | | |
| Data Fields | | |
| union spi_flash_direct_transfer_t | __unnamed__ | |

| | | |
|----------|----------------|-------------------------|
| uint32_t | address | Starting address. |
| uint16_t | command | Transfer command. |
| uint8_t | dummy_cycles | Number of dummy cycles. |
| uint8_t | command_length | Command length. |
| uint8_t | address_length | Address length. |
| uint8_t | data_length | Data length. |

◆ spi_flash_cfg_t

| | | |
|--|----------------------------|---|
| struct spi_flash_cfg_t | | |
| User configuration structure used by the open function | | |
| Data Fields | | |
| spi_flash_protocol_t | spi_protocol | Initial SPI protocol. SPI protocol can be changed in spi_flash_api_t::spiProtocolSet . |
| spi_flash_read_mode_t | read_mode | Read mode. |
| spi_flash_address_bytes_t | address_bytes | Number of bytes used to represent the address. |
| spi_flash_dummy_clocks_t | dummy_clocks | Number of dummy clocks to use for fast read operations. |
| spi_flash_data_lines_t | page_program_address_lines | Number of lines used to send address for page program command. This should either be 1 or match the number of lines used in the selected read mode. |
| uint8_t | write_status_bit | Which bit determines write status. |
| uint8_t | write_enable_bit | Which bit determines write status. |
| uint32_t | page_size_bytes | Page size in bytes (maximum number of bytes for page program). Used to specify single continuous write size (bytes) in case of OSPI RAM. |
| uint8_t | page_program_command | Page program command. |
| uint8_t | write_enable_command | Command to enable write or erase, typically 0x06. |
| uint8_t | status_command | Command to read the write status. |
| uint8_t | read_command | Read command - OSPI SPI mode only. |
| | | |

| | | |
|--------------------------------------|---------------------------|---|
| uint8_t | xip_enter_command | Command to enter XIP mode. |
| uint8_t | xip_exit_command | Command to exit XIP mode. |
| uint8_t | erase_command_list_length | Length of erase command list. |
| spi_flash_erase_command_t const * | p_erase_command_list | List of all erase commands and associated sizes. |
| void const * | p_extend | Pointer to implementation specific extended configurations. |

◆ spi_flash_status_t

| | | |
|---------------------------|-------------------|---|
| struct spi_flash_status_t | | |
| Status. | | |
| Data Fields | | |
| bool | write_in_progress | Whether or not a write is in progress. This is determined by reading the spi_flash_cfg_t::write_status_bit from the spi_flash_cfg_t::status_command . |

◆ spi_flash_api_t

| | | |
|--|--|--|
| struct spi_flash_api_t | | |
| SPI flash implementations follow this API. | | |
| Data Fields | | |
| fsp_err_t(* | open)(spi_flash_ctrl_t *const p_ctrl, spi_flash_cfg_t const *const p_cfg) | |
| fsp_err_t(* | directWrite)(spi_flash_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write) | |
| fsp_err_t(* | directRead)(spi_flash_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes) | |
| fsp_err_t(* | directTransfer)(spi_flash_ctrl_t *const p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction) | |
| fsp_err_t(* | spiProtocolSet)(spi_flash_ctrl_t *const p_ctrl, spi_flash_protocol_t spi_protocol) | |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>write)(spi_flash_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count)</code> |

Field Documentation

◆ open

`fsp_err_t(* spi_flash_api_t::open) (spi_flash_ctrl_t *const p_ctrl, spi_flash_cfg_t const *const p_cfg)`

Open the SPI flash driver module.

Parameters

| | | |
|------|---------------------|--------------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to a driver handle |
| [in] | <code>p_cfg</code> | Pointer to a configuration structure |

◆ **directWrite**

```
fsp_err_t(* spi_flash_api_t::directWrite) (spi_flash_ctrl_t *const p_ctrl, uint8_t const *const p_src,
uint32_t const bytes, bool const read_after_write)
```

Write raw data to the SPI flash.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to a driver handle |
| [in] | p_src | Pointer to raw data to write, must include any required command/address |
| [in] | bytes | Number of bytes to write |
| [in] | read_after_write | If true, the slave select remains asserted and the peripheral does not return to direct communications mode. If false, the slave select is deasserted and memory mapped access is possible after this function returns if the device is not busy. |

◆ **directRead**

```
fsp_err_t(* spi_flash_api_t::directRead) (spi_flash_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t
const bytes)
```

Read raw data from the SPI flash. Must follow a call to [spi_flash_api_t::directWrite](#).

Parameters

| | | |
|-------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
| [out] | p_dest | Pointer to read raw data into |
| [in] | bytes | Number of bytes to read |

◆ **directTransfer**

```
fsp_err_t(* spi_flash_api_t::directTransfer) (spi_flash_ctrl_t *const p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction)
```

Direct Read/Write raw data to the SPI flash.

Parameters

| | | |
|------|-----------|---|
| [in] | p_ctrl | Pointer to a driver handle |
| [in] | p_data | Pointer to command, address and data values and lengths |
| [in] | direction | Direct Read/Write |

◆ **spiProtocolSet**

```
fsp_err_t(* spi_flash_api_t::spiProtocolSet) (spi_flash_ctrl_t *const p_ctrl, spi_flash_protocol_t spi_protocol)
```

Change the SPI protocol in the driver. The application must change the SPI protocol on the device.

Parameters

| | | |
|------|--------------|----------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
| [in] | spi_protocol | Desired SPI protocol |

◆ **write**

```
fsp_err_t(* spi_flash_api_t::write) (spi_flash_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count)
```

Program a page of data to the flash.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to a driver handle |
| [in] | p_src | The memory address of the data to write to the flash device |
| [in] | p_dest | The location in the flash device address space to write the data to |
| [in] | byte_count | The number of bytes to write |

◆ **erase**

```
fsp_err_t(* spi_flash_api_t::erase) (spi_flash_ctrl_t *const p_ctrl, uint8_t *const p_device_address,
uint32_t byte_count)
```

Erase a certain number of bytes of the flash.

Parameters

| | | |
|------|------------------|--|
| [in] | p_ctrl | Pointer to a driver handle |
| [in] | p_device_address | The location in the flash device address space to start the erase from |
| [in] | byte_count | The number of bytes to erase. Set to SPI_FLASH_ERASE_SIZE_CHIP_ERASE to erase entire chip. |

◆ **statusGet**

```
fsp_err_t(* spi_flash_api_t::statusGet) (spi_flash_ctrl_t *const p_ctrl, spi_flash_status_t *const
p_status)
```

Get the write or erase status of the flash.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Pointer to a driver handle |
| [out] | p_status | Current status of the SPI flash device stored here. |

◆ **xipEnter**

```
fsp_err_t(* spi_flash_api_t::xipEnter) (spi_flash_ctrl_t *const p_ctrl)
```

Enter XIP mode.

Parameters

| | | |
|------|--------|----------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
|------|--------|----------------------------|

◆ **xipExit**

```
fsp_err_t(* spi_flash_api_t::xipExit) (spi_flash_ctrl_t *const p_ctrl)
```

Exit XIP mode.

Parameters

| | | |
|------|--------|----------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
|------|--------|----------------------------|

◆ **bankSet**

```
fsp_err_t(* spi_flash_api_t::bankSet) (spi_flash_ctrl_t *const p_ctrl, uint32_t bank)
```

Select the bank to access. See implementation for details.

Parameters

| | | |
|------|--------|----------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
| [in] | bank | The bank number |

◆ **autoCalibrate**

```
fsp_err_t(* spi_flash_api_t::autoCalibrate) (spi_flash_ctrl_t *const p_ctrl)
```

AutoCalibrate the SPI flash driver module. Expected to be used when auto-calibrating OSPI RAM device.

Parameters

| | | |
|------|--------|----------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
|------|--------|----------------------------|

◆ **close**

```
fsp_err_t(* spi_flash_api_t::close) (spi_flash_ctrl_t *const p_ctrl)
```

Close the SPI flash driver module.

Parameters

| | | |
|------|--------|----------------------------|
| [in] | p_ctrl | Pointer to a driver handle |
|------|--------|----------------------------|

◆ **spi_flash_instance_t**

```
struct spi_flash_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------------|--------|---|
| spi_flash_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| spi_flash_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| spi_flash_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **spi_flash_ctrl_t**

```
typedef void spi_flash_ctrl_t
```

SPI flash control block. Allocate an instance specific control block to pass into the SPI flash API calls.

Enumeration Type Documentation◆ **spi_flash_read_mode_t**

```
enum spi_flash_read_mode_t
```

Read mode.

Enumerator

| | |
|---|--|
| SPI_FLASH_READ_MODE_STANDARD | Standard Read Mode (no dummy cycles) |
| SPI_FLASH_READ_MODE_FAST_READ | Fast Read Mode (dummy cycles between address and data) |
| SPI_FLASH_READ_MODE_FAST_READ_DUAL_OUT PUT | Fast Read Dual Output Mode (data on 2 lines) |
| SPI_FLASH_READ_MODE_FAST_READ_DUAL_IO | Fast Read Dual I/O Mode (address and data on 2 lines) |
| SPI_FLASH_READ_MODE_FAST_READ_QUAD_OUT PUT | Fast Read Quad Output Mode (data on 4 lines) |
| SPI_FLASH_READ_MODE_FAST_READ_QUAD_IO | Fast Read Quad I/O Mode (address and data on 4 lines) |

◆ spi_flash_protocol_t

| enum spi_flash_protocol_t | |
|---------------------------------|--|
| SPI protocol. | |
| Enumerator | |
| SPI_FLASH_PROTOCOL_EXTENDED_SPI | Extended SPI mode (commands on 1 line) |
| SPI_FLASH_PROTOCOL_QPI | QPI mode (commands on 4 lines). Note that the application must ensure the device is in QPI mode. |
| SPI_FLASH_PROTOCOL_SOPI | SOPI mode (command and data on 8 lines). Note that the application must ensure the device is in SOPI mode. |
| SPI_FLASH_PROTOCOL_DOPI | DOPI mode (command and data on 8 lines, dual data rate). Note that the application must ensure the device is in DOPI mode. |
| SPI_FLASH_PROTOCOL_1S_1S_1S | 1S-1S-1S protocol mode |
| SPI_FLASH_PROTOCOL_4S_4D_4D | 4S-4D-4D protocol mode |
| SPI_FLASH_PROTOCOL_8D_8D_8D | 8D-8D-8D protocol mode |
| SPI_FLASH_PROTOCOL_1S_2S_2S | 1S-2S-2S protocol mode |
| SPI_FLASH_PROTOCOL_2S_2S_2S | 2S-2S-2S protocol mode |
| SPI_FLASH_PROTOCOL_1S_4S_4S | 1S-4S-4S protocol mode |
| SPI_FLASH_PROTOCOL_4S_4S_4S | 4S-4S-4S protocol mode |

◆ **spi_flash_address_bytes_t**

| enum <code>spi_flash_address_bytes_t</code> | |
|---|--|
| Number of bytes in the address. | |
| Enumerator | |
| <code>SPI_FLASH_ADDRESS_BYTES_3</code> | 3 address bytes |
| <code>SPI_FLASH_ADDRESS_BYTES_4</code> | 4 address bytes with standard commands. If this option is selected, the application must issue the EN4B command using <code>spi_flash_api_t::directWrite()</code> if required by the device. |
| <code>SPI_FLASH_ADDRESS_BYTES_4_4BYTE_READ_COMMAND</code> | 4 address bytes using standard 4-byte command set. |

◆ **spi_flash_data_lines_t**

| enum <code>spi_flash_data_lines_t</code> | |
|--|--------------|
| Number of data lines used. | |
| Enumerator | |
| <code>SPI_FLASH_DATA_LINES_1</code> | 1 data line |
| <code>SPI_FLASH_DATA_LINES_2</code> | 2 data lines |
| <code>SPI_FLASH_DATA_LINES_4</code> | 4 data lines |

◆ spi_flash_dummy_clocks_t

| enum spi_flash_dummy_clocks_t | |
|--|-----------------|
| Number of dummy cycles for fast read operations. | |
| Enumerator | |
| SPI_FLASH_DUMMY_CLOCKS_0 | 0 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_1 | 1 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_2 | 2 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_3 | 3 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_4 | 4 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_5 | 5 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_6 | 6 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_7 | 7 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_8 | 8 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_9 | 9 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_10 | 10 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_11 | 11 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_12 | 12 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_13 | 13 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_14 | 14 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_15 | 15 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_16 | 16 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_17 | 17 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_18 | 18 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_19 | 19 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_20 | 20 dummy clocks |

| | |
|---------------------------|-----------------|
| SPI_FLASH_DUMMY_CLOCKS_21 | 21 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_22 | 22 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_23 | 23 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_24 | 24 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_25 | 25 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_26 | 26 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_27 | 27 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_28 | 28 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_29 | 29 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_30 | 30 dummy clocks |
| SPI_FLASH_DUMMY_CLOCKS_31 | 31 dummy clocks |

◆ spi_flash_direct_transfer_dir_t

| |
|---|
| enum <code>spi_flash_direct_transfer_dir_t</code> |
| Direct Read and Write direction |

5.3.15.8 Virtual EEPROM Interface

[Interfaces](#) » [Storage](#)

Detailed Description

Interface for Virtual EEPROM access.

Summary

The Virtual EEPROM Port configures a fail-safe key value store designed for microcontrollers on top of a lower level storage device.

Data Structures

```
struct rm_vee_callback_args_t
```

```
struct rm_vee_cfg_t
```

```
struct rm_vee_api_t
```

```
struct rm_vee_instance_t
```

Typedefs

```
typedef void rm_vee_ctrl_t
```

Enumerations

```
enum rm_vee_state_t
```

Data Structure Documentation

◆ rm_vee_callback_args_t

| | | |
|---|-----------|---|
| struct rm_vee_callback_args_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| rm_vee_state_t | state | State of the Virtual EEPROM. |
| void const * | p_context | Placeholder for user data. Set in rm_vee_api_t::open function in in::rm_vee_cfg_t . |

◆ rm_vee_cfg_t

| | | |
|---|---------------|---|
| struct rm_vee_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| uint32_t | start_addr | |
| | | Start address to be used for Virtual EEPROM memory. |
| uint32_t | num_segments | |
| | | Number of segments to divide the volume into. |
| uint32_t | total_size | |
| | | Total size of the volume. |
| uint32_t | ref_data_size | |

| | |
|--------------|--|
| | Size of the reference data stored at the end of the segment. |
| uint32_t | record_max_id |
| | Maximum record ID that can be used. |
| uint16_t * | rec_offset |
| | Pointer to buffer used for record offset caching. |
| void(* | p_callback)(rm_vee_callback_args_t *p_args) |
| | Callback provided when a Virtual EEPROM event occurs. |
| void const * | p_context |
| | Placeholder for user data. |
| void const * | p_extend |
| | Pointer to hardware dependent configuration. |

◆ rm_vee_api_t

| | |
|-------------------------------|--|
| struct rm_vee_api_t | |
| Virtual EEPROM interface API. | |
| Data Fields | |
| fsp_err_t(* | open)(rm_vee_ctrl_t *const p_ctrl, rm_vee_cfg_t const *const p_cfg) |
| fsp_err_t(* | recordWrite)(rm_vee_ctrl_t *const p_ctrl, uint32_t const rec_id, uint8_t const *const p_rec_data, uint32_t num_bytes) |
| fsp_err_t(* | recordPtrGet)(rm_vee_ctrl_t *const p_ctrl, uint32_t rec_id, uint8_t **const pp_rec_data, uint32_t *const p_num_bytes) |
| fsp_err_t(* | refDataWrite)(rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>refDataPtrGet)(rm_vee_ctrl_t *const p_ctrl, uint8_t **const pp_ref_data)</code> |
| <code>fsp_err_t(*</code> | <code>statusGet)(rm_vee_ctrl_t *const p_ctrl, rm_vee_status_t *const p_status)</code> |
| <code>fsp_err_t(*</code> | <code>refresh)(rm_vee_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>format)(rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)</code> |
| <code>fsp_err_t(*</code> | <code>callbackSet)(rm_vee_ctrl_t *const p_ctrl, void(*p_callback)(rm_vee_callback_args_t *), void const *const p_context, rm_vee_callback_args_t *const p_callback_memory)</code> |
| <code>fsp_err_t(*</code> | <code>close)(rm_vee_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* rm_vee_api_t::open) (rm_vee_ctrl_t *const p_ctrl, rm_vee_cfg_t const *const p_cfg)`

Initializes the driver's internal structures and opens the Flash driver.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ recordWrite

```
fsp_err_t(* rm_vee_api_t::recordWrite) (rm_vee_ctrl_t *const p_ctrl, uint32_t const rec_id, uint8_t const *const p_rec_data, uint32_t num_bytes)
```

Writes a record to data flash.

Parameters

| | | |
|------|------------|----------------------------------|
| [in] | p_ctrl | Pointer to control block. |
| [in] | rec_id | ID of record to write. |
| [in] | p_rec_data | Pointer to record data to write. |
| [in] | num_bytes | Length of data to write. |

◆ recordPtrGet

```
fsp_err_t(* rm_vee_api_t::recordPtrGet) (rm_vee_ctrl_t *const p_ctrl, uint32_t rec_id, uint8_t **const pp_rec_data, uint32_t *const p_num_bytes)
```

This function gets the pointer to the most recent version of a record specified by ID.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control block. |
| [in] | rec_id | ID of record to locate. |
| [in] | pp_rec_data | Pointer to set to the most recent version of the record. |
| [in] | p_num_bytes | Variable to load with record length. |

◆ refDataWrite

```
fsp_err_t(* rm_vee_api_t::refDataWrite) (rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)
```

Writes new Reference data to the reference update area.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control block. |
| [in] | p_ref_data | Pointer to data to write to the reference data update area. |

◆ **refDataPtrGet**

```
fsp_err_t(* rm_vee_api_t::refDataPtrGet) (rm_vee_ctrl_t *const p_ctrl, uint8_t **const pp_ref_data)
```

Gets a pointer to the most recent reference data.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to control block. |
| [in] | pp_ref_data | Pointer to set to the most recent valid reference data. |

◆ **statusGet**

```
fsp_err_t(* rm_vee_api_t::statusGet) (rm_vee_ctrl_t *const p_ctrl, rm_vee_status_t *const p_status)
```

Get the current status of the VEE driver.

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Pointer to control block. |
| [in] | p_status | Pointer to store the current status of the VEE driver. |

◆ **refresh**

```
fsp_err_t(* rm_vee_api_t::refresh) (rm_vee_ctrl_t *const p_ctrl)
```

Manually start a refresh operation.

Parameters

| | | |
|------|--------|---------------------------|
| [in] | p_ctrl | Pointer to control block. |
|------|--------|---------------------------|

◆ **format**

```
fsp_err_t(* rm_vee_api_t::format) (rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)
```

Format the Virtual EEPROM.

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to control block. |
| [in] | p_ref_data | Optional pointer to reference data to write during format. |

◆ **callbackSet**

```
fsp_err_t(* rm_vee_api_t::callbackSet) (rm_vee_ctrl_t *const p_ctrl,
void(*p_callback)(rm_vee_callback_args_t*), void const *const p_context, rm_vee_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in rm_vee_api_t::open call. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* rm_vee_api_t::close) (rm_vee_ctrl_t *const p_ctrl)
```

Closes the module and lower level storage device.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in rm_vee_api_t::open call. |
|------|--------|---|

◆ **rm_vee_instance_t**

```
struct rm_vee_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--------------------------------------|--------|---|
| rm_vee_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rm_vee_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| rm_vee_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **rm_vee_ctrl_t**

```
typedef void rm_vee_ctrl_t
```

Virtual EEPROM API control block. Allocate an instance specific control block to pass into the VEE API calls.

Enumeration Type Documentation◆ **rm_vee_state_t**

```
enum rm_vee_state_t
```

| Enumerator | |
|----------------------------|---|
| RM_VEE_STATE_READY | Ready. |
| RM_VEE_STATE_BUSY | Operation in progress. |
| RM_VEE_STATE_REFRESH | Refresh operation in progress. |
| RM_VEE_STATE_OVERFLOW | The amount of data written exceeds the space available. |
| RM_VEE_STATE_HARDWARE_FAIL | Lower level hardware failure. |

5.3.16 System**Interfaces****Detailed Description**

System Interfaces.

Modules**CGC Interface**

Interface for clock generation.

ELC Interface

Interface for the Event Link Controller.

I/O Port Interface

Interface for accessing I/O ports and configuring I/O functionality.

5.3.16.1 CGC Interface

[Interfaces](#) » [System](#)

Detailed Description

Interface for clock generation.

Summary

The CGC interface provides the ability to configure and use all of the CGC module's capabilities. Among the capabilities is the selection of several clock sources to use as the system clock source. Additionally, the system clocks can be divided down to provide a wide range of frequencies for various system and peripheral needs.

Clock stability can be checked and clocks may also be stopped to save power when not needed. The API has a function to return the frequency of the system and system peripheral clocks at run time. There is also a feature to detect when the main oscillator has stopped, with the option of calling a user provided callback function.

Data Structure Documentation

◆ [cgc_callback_args_t](#)

| struct cgc_callback_args_t | | |
|--|-----------|---|
| Callback function parameter data | | |
| Data Fields | | |
| cgc_event_t | event | The event can be used to identify what caused the callback. |
| void const * | p_context | Placeholder for user data. |

◆ [cgc_pll_cfg_t](#)

| struct cgc_pll_cfg_t | | |
|---|--------------|--|
| Clock configuration structure - Used as an input parameter to the cgc_api_t::clockStart function for the PLL clock. | | |
| Data Fields | | |
| cgc_clock_t | source_clock | PLL source clock (main oscillator or HOCO) |
| cgc_pll_div_t | divider | PLL divider. |
| cgc_pll_mul_t | multiplier | PLL multiplier. |
| cgc_pll_out_div_t | out_div_p | PLL divisor for output clock P. |
| cgc_pll_out_div_t | out_div_q | PLL divisor for output clock Q. |
| cgc_pll_out_div_t | out_div_r | PLL divisor for output clock R. |

◆ [cgc_divider_cfg_t](#)

| struct cgc_divider_cfg_t | | |
|--|--|--|
| Clock configuration structure - Used as an input parameter to the cgc_api_t::systemClockSet and cgc_api_t::systemClockGet functions. | | |
| Data Fields | | |

| | | |
|---|--------------|--------------------------|
| cgc_sys_clock_div_t | moco_divider | MOCO divider. |
| cgc_sys_clock_div_t | hoco_divider | HOCO divider. |
| cgc_sys_clock_div_t | mosc_divider | Main oscillator divider. |
| union cgc_divider_cfg_t | __unnamed__ | |
| union cgc_divider_cfg_t | __unnamed__ | |

◆ **cgc_cfg_t**

| | | |
|----------------------------------|--------------------------|---|
| struct cgc_cfg_t | | |
| Configuration options. | | |
| Data Fields | | |
| void const * | p_extend | |
| | | Extension parameter for hardware specific settings. |

◆ **cgc_clocks_cfg_t**

| | | |
|---|---------------|----------------------------------|
| struct cgc_clocks_cfg_t | | |
| Clock configuration | | |
| Data Fields | | |
| cgc_clock_t | system_clock | System clock source enumeration. |
| cgc_pll_cfg_t | pll_cfg | PLL configuration structure. |
| cgc_pll_cfg_t | pll2_cfg | PLL2 configuration structure. |
| cgc_divider_cfg_t | divider_cfg | Clock dividers structure. |
| cgc_clock_change_t | loco_state | State of LOCO. |
| cgc_clock_change_t | moco_state | State of MOCO. |
| cgc_clock_change_t | hoco_state | State of HOCO. |
| cgc_clock_change_t | mainosc_state | State of Main oscillator. |
| cgc_clock_change_t | pll_state | State of PLL. |
| cgc_clock_change_t | pll2_state | State of PLL2. |
| cgc_clock_change_t | subosc_state | State of Sub oscillator. |

◆ **cgc_api_t**

| | | |
|---|---|--|
| struct cgc_api_t | | |
| CGC functions implemented at the HAL layer follow this API. | | |
| Data Fields | | |
| fsp_err_t (* | open)(cgc_ctrl_t *const p_ctrl, cgc_cfg_t const *const p_cfg) | |

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>clocksCfg)(cgc_ctrl_t *const p_ctrl, cgc_clocks_cfg_t const *const p_clock_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>clockStart)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_pll_cfg_t const *const p_pll_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>clockStop)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)</code> |
| <code>fsp_err_t(*</code> | <code>clockCheck)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)</code> |
| <code>fsp_err_t(*</code> | <code>systemClockSet)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_divider_cfg_t const *const p_divider_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>systemClockGet)(cgc_ctrl_t *const p_ctrl, cgc_clock_t *const p_clock_source, cgc_divider_cfg_t *const p_divider_cfg)</code> |
| <code>fsp_err_t(*</code> | <code>oscStopDetectEnable)(cgc_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>oscStopDetectDisable)(cgc_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>oscStopStatusClear)(cgc_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>callbackSet)(cgc_ctrl_t *const p_ctrl, void(*p_callback)(cgc_callback_args_t *), void const *const p_context, cgc_callback_args_t *const p_callback_memory)</code> |
| <code>fsp_err_t(*</code> | <code>close)(cgc_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ **open**

```
fsp_err_t(* cgc_api_t::open) (cgc_ctrl_t *const p_ctrl, cgc_cfg_t const *const p_cfg)
```

Initial configuration

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | p_cfg | Pointer to configuration |

◆ **clocksCfg**

```
fsp_err_t(* cgc_api_t::clocksCfg) (cgc_ctrl_t *const p_ctrl, cgc_clocks_cfg_t const *const p_clock_cfg)
```

Configure all system clocks.

Parameters

| | | |
|------|-------------|---|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | p_clock_cfg | Pointer to desired configuration of system clocks |

◆ **clockStart**

```
fsp_err_t(* cgc_api_t::clockStart) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_pll_cfg_t const *const p_pll_cfg)
```

Start a clock.

Parameters

| | | |
|------|--------------|--|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | clock_source | Clock source to start |
| [in] | p_pll_cfg | Pointer to PLL configuration, can be NULL if clock_source is not CGC_CLOCK_PLL or CGC_CLOCK_PLL2 |

◆ **clockStop**

```
fsp_err_t(* cgc_api_t::clockStop) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)
```

Stop a clock.

Parameters

| | | |
|------|--------------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | clock_source | The clock source to stop |

◆ **clockCheck**

```
fsp_err_t(* cgc_api_t::clockCheck) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)
```

Check the stability of the selected clock.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | clock_source | Which clock source to check for stability |

◆ **systemClockSet**

```
fsp_err_t(* cgc_api_t::systemClockSet) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_divider_cfg_t const *const p_divider_cfg)
```

Set the system clock.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Pointer to instance control block |
| [in] | clock_source | Clock source to set as system clock |
| [in] | p_divider_cfg | Pointer to the clock divider configuration |

◆ **systemClockGet**

`fsp_err_t(* cgc_api_t::systemClockGet) (cgc_ctrl_t *const p_ctrl, cgc_clock_t *const p_clock_source, cgc_divider_cfg_t *const p_divider_cfg)`

Get the system clock information.

Parameters

| | | |
|-------|----------------|---|
| [in] | p_ctrl | Pointer to instance control block |
| [out] | p_clock_source | Returns the current system clock |
| [out] | p_divider_cfg | Returns the current system clock dividers |

◆ **oscStopDetectEnable**

`fsp_err_t(* cgc_api_t::oscStopDetectEnable) (cgc_ctrl_t *const p_ctrl)`

Enable and optionally register a callback for Main Oscillator stop detection.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **oscStopDetectDisable**

`fsp_err_t(* cgc_api_t::oscStopDetectDisable) (cgc_ctrl_t *const p_ctrl)`

Disable Main Oscillator stop detection.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **oscStopStatusClear**

`fsp_err_t(* cgc_api_t::oscStopStatusClear) (cgc_ctrl_t *const p_ctrl)`

Clear the oscillator stop detection flag.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **callbackSet**

```
fsp_err_t(* cgc_api_t::callbackSet) (cgc_ctrl_t *const p_ctrl, void(*p_callback)(cgc_callback_args_t *),
void const *const p_context, cgc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to the CGC control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* cgc_api_t::close) (cgc_ctrl_t *const p_ctrl)
```

Close the CGC driver.

Parameters

| | | |
|------|--------|-----------------------------------|
| [in] | p_ctrl | Pointer to instance control block |
|------|--------|-----------------------------------|

◆ **cgc_instance_t**

```
struct cgc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| cgc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| cgc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| cgc_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **cgc_ctrl_t**

```
typedef void cgc_ctrl_t
```

CGC control block. Allocate an instance specific control block to pass into the CGC API calls.

Enumeration Type Documentation◆ **cgc_event_t**

```
enum cgc_event_t
```

Events that can trigger a callback function

Enumerator

CGC_EVENT_OSC_STOP_DETECT_NMI

Main oscillator stop detection has caused the NMI event.

CGC_EVENT_OSC_STOP_DETECT_MAIN_OSC

Main oscillator stop detection has caused the interrupt event.

CGC_EVENT_OSC_STOP_DETECT_SUBCLOCK

Subclock oscillator stop detection has caused the interrupt event.

◆ **cgc_clock_t**

```
enum cgc_clock_t
```

System clock source identifiers - The source of ICLK, BCLK, FCLK, PCLKS A-D and UCLK prior to the system clock divider

Enumerator

CGC_CLOCK_HOCO

The high speed on chip oscillator.

CGC_CLOCK_MOCO

The middle speed on chip oscillator.

CGC_CLOCK_LOCO

The low speed on chip oscillator.

CGC_CLOCK_MAIN_OSC

The main oscillator.

CGC_CLOCK_SUBCLOCK

The subclock oscillator.

CGC_CLOCK_PLL

The PLL oscillator.

CGC_CLOCK_PLL2

The PLL2 oscillator.

◆ **cgc_pll_div_t**

| enum <code>cgc_pll_div_t</code> | |
|---------------------------------|--------------------------------|
| PLL divider values | |
| Enumerator | |
| <code>CGC_PLL_DIV_1</code> | PLL divider of 1. |
| <code>CGC_PLL_DIV_2</code> | PLL divider of 2. |
| <code>CGC_PLL_DIV_3</code> | PLL divider of 3 (S7, S5 only) |
| <code>CGC_PLL_DIV_4</code> | PLL divider of 4 (S3 only) |

◆ **cgc_pll_out_div_t**

| enum <code>cgc_pll_out_div_t</code> | |
|-------------------------------------|---------------------------------|
| PLL clock output divisor. | |
| Enumerator | |
| <code>CGC_PLL_OUT_DIV_2</code> | PLL output clock divided by 2. |
| <code>CGC_PLL_OUT_DIV_3</code> | PLL output clock divided by 3. |
| <code>CGC_PLL_OUT_DIV_4</code> | PLL output clock divided by 4. |
| <code>CGC_PLL_OUT_DIV_5</code> | PLL output clock divided by 5. |
| <code>CGC_PLL_OUT_DIV_6</code> | PLL output clock divided by 6. |
| <code>CGC_PLL_OUT_DIV_8</code> | PLL output clock divided by 8. |
| <code>CGC_PLL_OUT_DIV_9</code> | PLL output clock divided by 9. |
| <code>CGC_PLL_OUT_DIV_16</code> | PLL output clock divided by 16. |

◆ **cgc_sys_clock_div_t**

| enum cgc_sys_clock_div_t | |
|--|---------------------------------------|
| System clock divider values - The individually selectable divider of each of the system clocks, ICLK, BCLK, FCLK, PCLKS A-D. | |
| Enumerator | |
| CGC_SYS_CLOCK_DIV_1 | System clock divided by 1. |
| CGC_SYS_CLOCK_DIV_2 | System clock divided by 2. |
| CGC_SYS_CLOCK_DIV_4 | System clock divided by 4. |
| CGC_SYS_CLOCK_DIV_8 | System clock divided by 8. |
| CGC_SYS_CLOCK_DIV_16 | System clock divided by 16. |
| CGC_SYS_CLOCK_DIV_32 | System clock divided by 32. |
| CGC_SYS_CLOCK_DIV_1 | System clock divided by 1. |
| CGC_SYS_CLOCK_DIV_2 | System clock divided by 2. |
| CGC_SYS_CLOCK_DIV_4 | System clock divided by 4. |
| CGC_SYS_CLOCK_DIV_8 | System clock divided by 8. |
| CGC_SYS_CLOCK_DIV_16 | System clock divided by 16. |
| CGC_SYS_CLOCK_DIV_32 | System clock divided by 32. |
| CGC_SYS_CLOCK_DIV_64 | System clock divided by 64. |
| CGC_SYS_CLOCK_DIV_3 | System clock divided by 3 (BCLK only) |

◆ **cgc_pin_output_control_t**

| enum cgc_pin_output_control_t | |
|--|---------------------|
| Pin output control enable/disable (SDCLK, BCLK). | |
| Enumerator | |
| CGC_PIN_OUTPUT_CONTROL_ENABLE | Enable pin output. |
| CGC_PIN_OUTPUT_CONTROL_DISABLE | Disable pin output. |

◆ **cgc_usb_clock_div_t**

| enum <code>cgc_usb_clock_div_t</code> | |
|---------------------------------------|-------------------------------|
| USB clock divider values | |
| Enumerator | |
| <code>CGC_USB_CLOCK_DIV_2</code> | Divide USB source clock by 2. |
| <code>CGC_USB_CLOCK_DIV_3</code> | Divide USB source clock by 3. |
| <code>CGC_USB_CLOCK_DIV_4</code> | Divide USB source clock by 4. |
| <code>CGC_USB_CLOCK_DIV_5</code> | Divide USB source clock by 5. |

◆ **cgc_clock_change_t**

| enum <code>cgc_clock_change_t</code> | |
|--------------------------------------|-------------------------|
| Clock options | |
| Enumerator | |
| <code>CGC_CLOCK_CHANGE_START</code> | Start the clock. |
| <code>CGC_CLOCK_CHANGE_STOP</code> | Stop the clock. |
| <code>CGC_CLOCK_CHANGE_NONE</code> | No change to the clock. |

5.3.16.2 ELC Interface[Interfaces](#) » [System](#)**Detailed Description**

Interface for the Event Link Controller.

Data Structures

struct [elc_cfg_t](#)

struct [elc_api_t](#)

struct [elc_instance_t](#)

Typedefs

```
typedef void elc_ctrl_t
```

Enumerations

```
enum elc_peripheral_t
```

```
enum elc_software_event_t
```

Data Structure Documentation

◆ elc_cfg_t

| | | |
|--|--------------------------|---|
| struct elc_cfg_t | | |
| Main configuration structure for the Event Link Controller | | |
| Data Fields | | |
| elc_event_t const | link[ELC_PERIPHERAL_NUM] | Event link register settings. |
| void const * | p_extend | Extension parameter for hardware specific settings. |

◆ elc_api_t

| | |
|---|--|
| struct elc_api_t | |
| ELC driver structure. General ELC functions implemented at the HAL layer follow this API. | |
| Data Fields | |
| fsp_err_t(*) | open)(elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg) |
| fsp_err_t(*) | close)(elc_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | softwareEventGenerate)(elc_ctrl_t *const p_ctrl, elc_software_event_t event_num) |
| fsp_err_t(*) | linkSet)(elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal) |
| fsp_err_t(*) | linkBreak)(elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral) |
| fsp_err_t(*) | enable)(elc_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | disable)(elc_ctrl_t *const p_ctrl) |
| Field Documentation | |

◆ **open**

```
fsp_err_t(* elc_api_t::open) (elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg)
```

Initialize all links in the Event Link Controller.

Parameters

| | | |
|------|--------|-------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ **close**

```
fsp_err_t(* elc_api_t::close) (elc_ctrl_t *const p_ctrl)
```

Disable all links in the Event Link Controller and close the API.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **softwareEventGenerate**

```
fsp_err_t(* elc_api_t::softwareEventGenerate) (elc_ctrl_t *const p_ctrl, elc_software_event_t event_num)
```

Generate a software event in the Event Link Controller.

Parameters

| | | |
|------|----------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | eventNum | Software event number to be generated. |

◆ **linkSet**

```
fsp_err_t(* elc_api_t::linkSet) (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal)
```

Create a single event link.

Parameters

| | | |
|------|------------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | peripheral | The peripheral block that will receive the event signal. |
| [in] | signal | The event signal. |

◆ **linkBreak**

```
fsp_err_t(* elc_api_t::linkBreak) (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral)
```

Break an event link.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | peripheral | The peripheral that should no longer be linked. |

◆ **enable**

```
fsp_err_t(* elc_api_t::enable) (elc_ctrl_t *const p_ctrl)
```

Enable the operation of the Event Link Controller.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **disable**

```
fsp_err_t(* elc_api_t::disable) (elc_ctrl_t *const p_ctrl)
```

Disable the operation of the Event Link Controller.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ **elc_instance_t**

```
struct elc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| elc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| elc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| elc_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ **elc_ctrl_t**typedef void [elc_ctrl_t](#)

ELC control block. Allocate an instance specific control block to pass into the ELC API calls.

Enumeration Type Documentation◆ **elc_peripheral_t**enum [elc_peripheral_t](#)

Possible peripherals to be linked to event signals (not all available on all MCUs)

◆ **elc_software_event_t**enum [elc_software_event_t](#)

Software event number

Enumerator

ELC_SOFTWARE_EVENT_0

Software event 0.

ELC_SOFTWARE_EVENT_1

Software event 1.

5.3.16.3 I/O Port Interface[Interfaces](#) » [System](#)**Detailed Description**

Interface for accessing I/O ports and configuring I/O functionality.

Summary

The IOPort shared interface provides the ability to access the IOPorts of a device at both bit and port level. Port and pin direction can be changed.

Data Structuresstruct [ioport_pin_cfg_t](#)struct [ioport_cfg_t](#)struct [ioport_api_t](#)

```
struct ioport_instance_t
```

Typedefs

```
typedef uint16_t ioport_size_t
                IO port size. More...
```

```
typedef void ioport_ctrl_t
```

Data Structure Documentation

◆ ioport_pin_cfg_t

| | | |
|--|---------|---|
| struct ioport_pin_cfg_t | | |
| Pin identifier and pin configuration value | | |
| Data Fields | | |
| uint32_t | pin_cfg | Pin configuration - Use ioport_cfg_options_t parameters to configure. |
| bsp_io_port_pin_t | pin | Pin identifier. |

◆ ioport_cfg_t

| | | |
|---|----------------|---|
| struct ioport_cfg_t | | |
| Multiple pin configuration data for loading into registers by R_IOPORT_Open() | | |
| Data Fields | | |
| uint16_t | number_of_pins | Number of pins for which there is configuration data. |
| ioport_pin_cfg_t const * | p_pin_cfg_data | Pin configuration data. |
| const void * | p_extend | Pointer to hardware extend configuration. |

◆ ioport_api_t

| | | |
|--|--|--|
| struct ioport_api_t | | |
| IOPort driver structure. IOPort functions implemented at the HAL layer will follow this API. | | |
| Data Fields | | |
| fsp_err_t (* | open)(ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg) | |
| fsp_err_t (* | close)(ioport_ctrl_t *const p_ctrl) | |
| fsp_err_t (* | pinsCfg)(ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg) | |

| | |
|----------------------------|--|
| <code>fsp_err_t(*</code> | <code>pinCfg)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg)</code> |
| <code>fsp_err_t(*</code> | <code>pinEventInputRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_event)</code> |
| <code>fsp_err_t(*</code> | <code>pinEventOutputWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t pin_value)</code> |
| <code>fsp_err_t(*</code> | <code>pinRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_value)</code> |
| <code>fsp_err_t(*</code> | <code>pinWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level)</code> |
| <code>fsp_err_t(*</code> | <code>portDirectionSet)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask)</code> |
| <code>fsp_err_t(*</code> | <code>portEventInputRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_event_data)</code> |
| <code>fsp_err_t(*</code> | <code>portEventOutputWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t event_data, ioport_size_t mask_value)</code> |
| <code>fsp_err_t(*</code> | <code>portRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_port_value)</code> |
| <code>fsp_err_t(*</code> | <code>portWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask)</code> |
| Field Documentation | |

◆ open

```
fsp_err_t(* ioport_api_t::open) (ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
```

Initialize internal driver data and initial pin configurations. Called during startup. Do not call this API during runtime. Use `ioport_api_t::pinsCfg` for runtime reconfiguration of multiple pins.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to pin configuration data array. |

◆ close

```
fsp_err_t(* ioport_api_t::close) (ioport_ctrl_t *const p_ctrl)
```

Close the API.

Parameters

| | | |
|------|--------|-------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
|------|--------|-------------------------------|

◆ pinsCfg

```
fsp_err_t(* ioport_api_t::pinsCfg) (ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
```

Configure multiple pins.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | p_cfg | Pointer to pin configuration data array. |

◆ pinCfg

```
fsp_err_t(* ioport_api_t::pinCfg) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg)
```

Configure settings for an individual pin.

Parameters

| | | |
|------|--------|------------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pin | Pin to be read. |
| [in] | cfg | Configuration options for the pin. |

◆ **pinEventInputRead**

```
fsp_err_t(* ioport_api_t::pinEventInputRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin,
bsp_io_level_t *p_pin_event)
```

Read the event input data of the specified pin and return the level.

Parameters

| | | |
|------|-------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pin | Pin to be read. |
| [in] | p_pin_event | Pointer to return the event data. |

◆ **pinEventOutputWrite**

```
fsp_err_t(* ioport_api_t::pinEventOutputWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin,
bsp_io_level_t pin_value)
```

Write pin event data.

Parameters

| | | |
|------|-----------|--|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pin | Pin event data is to be written to. |
| [in] | pin_value | Level to be written to pin output event. |

◆ **pinRead**

```
fsp_err_t(* ioport_api_t::pinRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t
*p_pin_value)
```

Read level of a pin.

Parameters

| | | |
|------|-------------|----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pin | Pin to be read. |
| [in] | p_pin_value | Pointer to return the pin level. |

◆ **pinWrite**

```
fsp_err_t(* ioport_api_t::pinWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level)
```

Write specified level to a pin.

Parameters

| | | |
|------|--------|---------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | pin | Pin to be written to. |
| [in] | level | State to be written to the pin. |

◆ **portDirectionSet**

```
fsp_err_t(* ioport_api_t::portDirectionSet) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask)
```

Set the direction of one or more pins on a port.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | port | Port being configured. |
| [in] | direction_values | Value controlling direction of pins on port. |
| [in] | mask | Mask controlling which pins on the port are to be configured. |

◆ **portEventInputRead**

```
fsp_err_t(* ioport_api_t::portEventInputRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_event_data)
```

Read captured event data for a port.

Parameters

| | | |
|------|--------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | port | Port to be read. |
| [in] | p_event_data | Pointer to return the event data. |

◆ **portEventOutputWrite**

```
fsp_err_t(* ioport_api_t::portEventOutputWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port,
ioport_size_t event_data, ioport_size_t mask_value)
```

Write event output data for a port.

Parameters

| | | |
|------|------------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | port | Port event data will be written to. |
| [in] | event_data | Data to be written as event data to specified port. |
| [in] | mask_value | Each bit set to 1 in the mask corresponds to that bit's value in event data. being written to port. |

◆ **portRead**

```
fsp_err_t(* ioport_api_t::portRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t
*p_port_value)
```

Read states of pins on the specified port.

Parameters

| | | |
|------|--------------|-----------------------------------|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | port | Port to be read. |
| [in] | p_port_value | Pointer to return the port value. |

◆ **portWrite**

```
fsp_err_t(* ioport_api_t::portWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t
value, ioport_size_t mask)
```

Write to multiple pins on a port.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control structure. |
| [in] | port | Port to be written to. |
| [in] | value | Value to be written to the port. |
| [in] | mask | Mask controlling which pins on the port are written to. |

◆ **ioport_instance_t**

| | | |
|--|--------|---|
| struct ioport_instance_t | | |
| This structure encompasses everything that is needed to use an instance of this interface. | | |
| Data Fields | | |
| ioport_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| ioport_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| ioport_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **ioport_size_t**

| |
|--------------------------------|
| typedef uint16_t ioport_size_t |
| IO port size. |
| IO port type used with ports |

◆ **ioport_ctrl_t**

| |
|--|
| typedef void ioport_ctrl_t |
| IOPORT control block. Allocate an instance specific control block to pass into the IOPORT API calls. |

5.3.17 Timers[Interfaces](#)**Detailed Description**

Timers Interfaces.

Modules[POEG Interface](#)

Interface for the Port Output Enable for GPT.

[RTC Interface](#)

Interface for accessing the Realtime Clock.

Three-Phase Interface

Interface for three-phase timer functions.

Timer Interface

Interface for timer functions.

5.3.17.1 POEG Interface

[Interfaces](#) » [Timers](#)

Detailed Description

Interface for the Port Output Enable for GPT.

Defines the API and data structures for the Port Output Enable for GPT (POEG) interface.

Summary

The POEG disables GPT output pins based on configurable events.

Data Structures

struct [poeg_status_t](#)

struct [poeg_callback_args_t](#)

struct [poeg_cfg_t](#)

struct [poeg_api_t](#)

struct [poeg_instance_t](#)

Typedefs

typedef void [poeg_ctrl_t](#)

Enumerations

enum [poeg_state_t](#)

enum [poeg_trigger_t](#)

enum [poeg_gtetrg_polarity_t](#)

enum [poeg_gtetrg_noise_filter_t](#)**Data Structure Documentation**◆ **poeg_status_t**

| | | |
|------------------------------|-------|------------------------|
| struct poeg_status_t | | |
| POEG status | | |
| Data Fields | | |
| poeg_state_t | state | Current state of POEG. |

◆ **poeg_callback_args_t**

| | | |
|-----------------------------------|-----------|--|
| struct poeg_callback_args_t | | |
| Callback function parameter data. | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data, set in poeg_cfg_t . |

◆ **poeg_cfg_t**

| | | |
|--|---|---|
| struct poeg_cfg_t | | |
| User configuration structure, used in the open function. | | |
| Data Fields | | |
| poeg_trigger_t | trigger | |
| | | Select one or more triggers for the POEG. |
| poeg_gtetrg_polarity_t | polarity | |
| | | Select the polarity for the GTETRG pin. |
| poeg_gtetrg_noise_filter_t | noise_filter | |
| | | Configure the GTETRG noise filter. |
| | | |
| | void(* p_callback)(poeg_callback_args_t *p_args) | |
| | | |
| | void const * | p_context |
| | | |
| | uint32_t | unit |

| | |
|-----------|--|
| | POEG unit to be used. |
| uint32_t | channel |
| | Channel 0 corresponds to GTETRGA, 1 to GTETRGB, etc. |
| IRQn_Type | irq |
| | Interrupt number assigned to this instance. |
| uint8_t | ipl |
| | POEG interrupt priority. |

Field Documentation

◆ p_callback

```
void(* poeg_cfg_t::p_callback) (poeg_callback_args_t *p_args)
```

Callback called when a POEG interrupt occurs.

◆ p_context

```
void const* poeg_cfg_t::p_context
```

Placeholder for user data. Passed to the user callback in `poeg_callback_args_t`.

◆ poeg_api_t

```
struct poeg_api_t
```

Port Output Enable for GPT (POEG) API structure. POEG functions implemented at the HAL layer will follow this API.

Data Fields

```
fsp_err_t(* open)(poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)
```

```
fsp_err_t(* statusGet)(poeg_ctrl_t *const p_ctrl, poeg_status_t *p_status)
```

```
fsp_err_t(* callbackSet)(poeg_ctrl_t *const p_ctrl, void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t *const p_callback_memory)
```

| | |
|--------------------------|---|
| <code>fsp_err_t(*</code> | <code>outputDisable)(poeg_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>reset)(poeg_ctrl_t *const p_ctrl)</code> |
| <code>fsp_err_t(*</code> | <code>close)(poeg_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* poeg_api_t::open) (poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)`

Initial configuration.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ statusGet

`fsp_err_t(* poeg_api_t::statusGet) (poeg_ctrl_t *const p_ctrl, poeg_status_t *p_status)`

Gets the current driver state.

Parameters

| | | |
|-------|-----------------------|--|
| [in] | <code>p_ctrl</code> | Control block set in <code>poeg_api_t::open</code> call. |
| [out] | <code>p_status</code> | Provides the current state of the POEG. |

◆ **callbackSet**

```
fsp_err_t(* poeg_api_t::callbackSet) (poeg_ctrl_t *const p_ctrl,
void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in poeg_api_t::open call for this timer. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **outputDisable**

```
fsp_err_t(* poeg_api_t::outputDisable) (poeg_ctrl_t *const p_ctrl)
```

Disables GPT output pins by software request.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in poeg_api_t::open call. |
|------|--------|---|

◆ **reset**

```
fsp_err_t(* poeg_api_t::reset) (poeg_ctrl_t *const p_ctrl)
```

Attempts to clear status flags to reenabte GPT output pins. Confirm all status flags are cleared after calling this function by calling [poeg_api_t::statusGet\(\)](#).

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in poeg_api_t::open call. |
|------|--------|---|

◆ **close**

```
fsp_err_t(* poeg_api_t::close) (poeg_ctrl_t *const p_ctrl)
```

Disables POEG interrupt.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in poeg_api_t::open call. |
|------|--------|---|

◆ **poeg_instance_t**

```
struct poeg_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|------------------------------------|--------|---|
| poeg_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| poeg_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| poeg_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **poeg_ctrl_t**

```
typedef void poeg_ctrl_t
```

POEG control block. Allocate an instance specific control block to pass into the POEG API calls.

Enumeration Type Documentation

◆ **poeg_state_t**

| enum <code>poeg_state_t</code> | |
|---|--|
| POEG states. | |
| Enumerator | |
| <code>POEG_STATE_NO_DISABLE_REQUEST</code> | GPT output is not disabled by POEG. |
| <code>POEG_STATE_PIN_DISABLE_REQUEST</code> | GPT output disabled due to GTETRGM pin level. |
| <code>POEG_STATE_GPT_OR_COMPARATOR_DISABLE_REQUEST</code> | GPT output disabled due to high speed analog comparator or GPT. |
| <code>POEG_STATE_OSCILLATION_STOP_DISABLE_REQUEST</code> | GPT output disabled due to main oscillator stop. |
| <code>POEG_STATE_SOFTWARE_STOP_DISABLE_REQUEST</code> | GPT output disabled due to <code>poeg_api_t::outputDisable()</code> |
| <code>POEG_STATE_PIN_DISABLE_REQUEST_ACTIVE</code> | GPT output disable request active from the GTETRGM pin. If a filter is used, this flag represents the state of the filtered input. |

◆ **poeg_trigger_t**

| enum <code>poeg_trigger_t</code> | |
|---|---|
| Triggers that will disable GPT output pins. | |
| Enumerator | |
| <code>POEG_TRIGGER_SOFTWARE</code> | Software disable is always supported with POEG. Select this option if no other triggers are used. |
| <code>POEG_TRIGGER_PIN</code> | Disable GPT output based on GTETRIG input level. |
| <code>POEG_TRIGGER_GPT_OUTPUT_LEVEL</code> | Disable GPT output based on GPT output pin levels. |
| <code>POEG_TRIGGER_OSCILLATION_STOP</code> | Disable GPT output based on main oscillator stop. |
| <code>POEG_TRIGGER_ACMPHS0</code> | Disable GPT output based on ACMPHS0 comparator result. |
| <code>POEG_TRIGGER_ACMPHS1</code> | Disable GPT output based on ACMPHS1 comparator result. |
| <code>POEG_TRIGGER_ACMPHS2</code> | Disable GPT output based on ACMPHS2 comparator result. |
| <code>POEG_TRIGGER_ACMPHS3</code> | Disable GPT output based on ACMPHS3 comparator result. |
| <code>POEG_TRIGGER_ACMPHS4</code> | Disable GPT output based on ACMPHS4 comparator result. |
| <code>POEG_TRIGGER_ACMPHS5</code> | Disable GPT output based on ACMPHS5 comparator result. |

◆ **poeg_gtetrg_polarity_t**

| enum poeg_gtetrg_polarity_t | |
|---|---|
| GTETRG polarity. | |
| Enumerator | |
| POEG_GTETRG_POLARITY_ACTIVE_HIGH | Disable GPT output based when GTETRG input level is high. |
| POEG_GTETRG_POLARITY_ACTIVE_LOW | Disable GPT output based when GTETRG input level is low. |

◆ **poeg_gtetrg_noise_filter_t**

| enum poeg_gtetrg_noise_filter_t | |
|---|---|
| GTETRG noise filter. For the input signal to pass through the noise filter, the active level set in poeg_gtetrg_polarity_t must be read 3 consecutive times at the sampling clock selected. | |
| Enumerator | |
| POEG_GTETRG_NOISE_FILTER_DISABLED | No noise filter applied to GTETRG input. |
| POEG_GTETRG_NOISE_FILTER_CLK_SOURCE_DIV_1 | Apply noise filter with sample clock equal to Clock source/1. |
| POEG_GTETRG_NOISE_FILTER_CLK_SOURCE_DIV_8 | Apply noise filter with sample clock equal to Clock source/8. |
| POEG_GTETRG_NOISE_FILTER_CLK_SOURCE_DIV_32 | Apply noise filter with sample clock equal to Clock source/32. |
| POEG_GTETRG_NOISE_FILTER_CLK_SOURCE_DIV_128 | Apply noise filter with sample clock equal to Clock source/128. |

5.3.17.2 RTC Interface[Interfaces](#) » [Timers](#)**Detailed Description**

Interface for accessing the Realtime Clock.

Summary

The RTC Interface is for configuring Real Time Clock (RTC) functionality including alarm, periodic notification and error adjustment.

Data Structures

struct [rtc_callback_args_t](#)

struct [rtc_error_adjustment_cfg_t](#)

struct [rtc_alarm_time_t](#)

struct [rtc_time_capture_t](#)

struct [rtc_info_t](#)

struct [rtc_cfg_t](#)

struct [rtc_api_t](#)

struct [rtc_instance_t](#)

Typedefs

typedef struct tm [rtc_time_t](#)

typedef void [rtc_ctrl_t](#)

Enumerations

enum [rtc_event_t](#)

enum [rtc_alarm_channel_t](#)

enum [rtc_clock_source_t](#)

enum [rtc_status_t](#)

enum [rtc_error_adjustment_t](#)

enum [rtc_error_adjustment_mode_t](#)

enum [rtc_error_adjustment_period_t](#)

enum [rtc_periodic_irq_select_t](#)

enum [rtc_time_capture_source_t](#)

enum [rtc_time_capture_noise_filter_t](#)

Data Structure Documentation

◆ **rtc_callback_args_t**

| | | |
|----------------------------------|-----------|--|
| struct rtc_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| rtc_event_t | event | The event can be used to identify what caused the callback (compare match or error). |
| void const * | p_context | Placeholder for user data. |

◆ **rtc_error_adjustment_cfg_t**

| | | |
|---|-------------------|--|
| struct rtc_error_adjustment_cfg_t | | |
| Time error adjustment value configuration | | |
| Data Fields | | |
| rtc_error_adjustment_mode_t | adjustment_mode | Automatic Adjustment Enable/Disable. |
| rtc_error_adjustment_period_t | adjustment_period | Error Adjustment period. |
| rtc_error_adjustment_t | adjustment_type | Time error adjustment setting. |
| uint32_t | adjustment_value | Value of the prescaler for error adjustment. |

◆ **rtc_alarm_time_t**

| | | |
|------------------------------|-----------------|---|
| struct rtc_alarm_time_t | | |
| Alarm time setting structure | | |
| Data Fields | | |
| rtc_time_t | time | Time structure. |
| bool | sec_match | Enable the alarm based on a match of the seconds field. |
| bool | min_match | Enable the alarm based on a match of the minutes field. |
| bool | hour_match | Enable the alarm based on a match of the hours field. |
| bool | mday_match | Enable the alarm based on a match of the days field. |
| bool | mon_match | Enable the alarm based on a match of the months field. |
| bool | year_match | Enable the alarm based on a match of the years field. |
| bool | dayofweek_match | Enable the alarm based on a |

| | | |
|---------------------|-----------------|--------------------------------|
| | | match of the dayofweek field. |
| bool | sunday_match | Enable the alarm on Sunday. |
| bool | monday_match | Enable the alarm on Monday. |
| bool | tuesday_match | Enable the alarm on Tuesday. |
| bool | wednesday_match | Enable the alarm on Wednesday. |
| bool | thursday_match | Enable the alarm on Thursday. |
| bool | friday_match | Enable the alarm on Friday. |
| bool | saturday_match | Enable the alarm on Saturday. |
| rtc_alarm_channel_t | channel | Select alarm 0 or alarm 1. |

◆ rtc_time_capture_t

| | | |
|--------------------------------------|--------------|------------------|
| struct rtc_time_capture_t | | |
| Time capture configuration structure | | |
| Data Fields | | |
| rtc_time_t | time | Time structure. |
| uint8_t | channel | Capture channel. |
| rtc_time_capture_source_t | source | Trigger source. |
| rtc_time_capture_noise_filter_t | noise_filter | Noise filter. |

◆ rtc_info_t

| | | |
|---|--------------|---------------------------------|
| struct rtc_info_t | | |
| RTC Information Structure for information returned by infoGet() | | |
| Data Fields | | |
| rtc_clock_source_t | clock_source | Clock source for the RTC block. |
| rtc_status_t | status | RTC run status. |

◆ rtc_cfg_t

| | | |
|---|--------------------|---------------------------------|
| struct rtc_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| rtc_clock_source_t | clock_source | Clock source for the RTC block. |
| | | |
| uint32_t | freq_compare_value | The frequency comparison value. |
| | | |

| | |
|---|--|
| <code>rtc_error_adjustment_cfg_t</code> const *const | <code>p_err_cfg</code> |
| | Pointer to Error Adjustment configuration. |
| <code>uint8_t</code> | <code>alarm_ipl</code> |
| | Alarm interrupt priority. |
| <code>IRQn_Type</code> | <code>alarm_irq</code> |
| | Alarm interrupt vector. |
| <code>uint8_t</code> | <code>periodic_ipl</code> |
| | Periodic interrupt priority. |
| <code>IRQn_Type</code> | <code>periodic_irq</code> |
| | Periodic interrupt vector. |
| <code>uint8_t</code> | <code>carry_ipl</code> |
| | Carry interrupt priority. |
| <code>IRQn_Type</code> | <code>carry_irq</code> |
| | Carry interrupt vector. |
| <code>void(*</code> | <code>p_callback</code>)(rtc_callback_args_t *p_args) |
| | Called from the ISR. |
| <code>void const *</code> | <code>p_context</code> |
| | User defined context passed into callback function. |

| | |
|--------------|---------------------------------------|
| void const * | p_extend |
| | RTC hardware dependant configuration. |
| | |

◆ **rtc_api_t**

| | |
|---|---|
| struct rtc_api_t | |
| RTC driver structure. General RTC functions implemented at the HAL layer follow this API. | |
| Data Fields | |
| fsp_err_t (* | open)(rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg) |
| fsp_err_t (* | close)(rtc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | clockSourceSet)(rtc_ctrl_t *const p_ctrl) |
| fsp_err_t (* | calendarTimeSet)(rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time) |
| fsp_err_t (* | calendarTimeGet)(rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time) |
| fsp_err_t (* | calendarAlarmSet)(rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm) |
| fsp_err_t (* | calendarAlarmGet)(rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm) |
| fsp_err_t (* | periodicIrqRateSet)(rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate) |
| fsp_err_t (* | errorAdjustmentSet)(rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg) |
| fsp_err_t (* | callbackSet)(rtc_ctrl_t *const p_ctrl, void(*p_callback)(rtc_callback_args_t *), void const *const p_context, rtc_callback_args_t *const p_callback_memory) |
| fsp_err_t (* | infoGet)(rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info) |

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>timeCaptureSet</code>)(<code>rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const p_time_capture</code>) |
|--------------------------|--|

| | |
|--------------------------|--|
| <code>fsp_err_t(*</code> | <code>timeCaptureGet</code>)(<code>rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const p_time_capture</code>) |
|--------------------------|--|

Field Documentation

◆ open

| |
|---|
| <code>fsp_err_t(* rtc_api_t::open)</code> (<code>rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg</code>) |
|---|

Open the RTC driver.

Parameters

| | | |
|------|---------------------|--|
| [in] | <code>p_ctrl</code> | Pointer to RTC device handle |
| [in] | <code>p_cfg</code> | Pointer to the configuration structure |

◆ close

| |
|--|
| <code>fsp_err_t(* rtc_api_t::close)</code> (<code>rtc_ctrl_t *const p_ctrl</code>) |
|--|

Close the RTC driver.

Parameters

| | | |
|------|---------------------|-------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to RTC device handle. |
|------|---------------------|-------------------------------|

◆ clockSourceSet

| |
|---|
| <code>fsp_err_t(* rtc_api_t::clockSourceSet)</code> (<code>rtc_ctrl_t *const p_ctrl</code>) |
|---|

Sets the RTC clock source.

Parameters

| | | |
|------|---------------------|------------------------------|
| [in] | <code>p_ctrl</code> | Pointer to RTC device handle |
|------|---------------------|------------------------------|

◆ **calendarTimeSet**

```
fsp_err_t(* rtc_api_t::calendarTimeSet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
```

Set the calendar time and start the calendar counter

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to RTC device handle |
| [in] | p_time | Pointer to a time structure that contains the time to set |

◆ **calendarTimeGet**

```
fsp_err_t(* rtc_api_t::calendarTimeGet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
```

Get the calendar time.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Pointer to RTC device handle |
| [out] | p_time | Pointer to a time structure that contains the time to get |

◆ **calendarAlarmSet**

```
fsp_err_t(* rtc_api_t::calendarAlarmSet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
```

Set the calendar alarm time and enable the alarm interrupt.

Parameters

| | | |
|------|---------|---|
| [in] | p_ctrl | Pointer to RTC device handle |
| [in] | p_alarm | Pointer to an alarm structure that contains the alarm time to set |

◆ **calendarAlarmGet**

```
fsp_err_t(* rtc_api_t::calendarAlarmGet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
```

Get the calendar alarm time.

Parameters

| | | |
|-------|---------|--|
| [in] | p_ctrl | Pointer to RTC device handle |
| [out] | p_alarm | Pointer to an alarm structure to fill up with the alarm time |

◆ **periodicIrqRateSet**

```
fsp_err_t(* rtc_api_t::periodicIrqRateSet) (rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate)
```

Set the periodic irq rate

Parameters

| | | |
|------|--------|------------------------------|
| [in] | p_ctrl | Pointer to RTC device handle |
| [in] | rate | Rate of periodic interrupts |

◆ **errorAdjustmentSet**

```
fsp_err_t(* rtc_api_t::errorAdjustmentSet) (rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg)
```

Set time error adjustment.

Parameters

| | | |
|------|-------------|--|
| [in] | p_ctrl | Pointer to control handle structure |
| [in] | err_adj_cfg | Pointer to the Error Adjustment Config |

◆ **callbackSet**

```
fsp_err_t(* rtc_api_t::callbackSet) (rtc_ctrl_t *const p_ctrl, void(*p_callback)(rtc_callback_args_t *), void const *const p_context, rtc_callback_args_t *const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|--|
| [in] | p_ctrl | Pointer to the RTC control block. |
| [in] | p_callback | Callback function |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated |

◆ **infoGet**

```
fsp_err_t(* rtc_api_t::infoGet) (rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info)
```

Return the currently configure clock source for the RTC

Parameters

| | | |
|-------|------------|--------------------------------------|
| [in] | p_ctrl | Pointer to control handle structure |
| [out] | p_rtc_info | Pointer to RTC information structure |

◆ **timeCaptureSet**

```
fsp_err_t(* rtc_api_t::timeCaptureSet) (rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const p_time_capture)
```

Config Time capture

Parameters

| | | |
|------|----------------|---|
| [in] | p_ctrl | Pointer to RTC device handle |
| [in] | p_time_capture | Pointer to a time capture structure that contains the configuration |

◆ **timeCaptureGet**

```
fsp_err_t(* rtc_api_t::timeCaptureGet) (rtc_ctrl_t *const p_ctrl, rtc_time_capture_t *const p_time_capture)
```

Get the capture time and clear bit status.

Parameters

| | | |
|-------|----------------|--|
| [in] | p_ctrl | Pointer to RTC device handle |
| [out] | p_time_capture | Pointer to a time capture structure to fill up with the time capture |

◆ **rtc_instance_t**

```
struct rtc_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------|--------|---|
| rtc_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| rtc_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |

| | | |
|--------------------------------|--------------------|---|
| <code>rtc_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |
|--------------------------------|--------------------|---|

Typedef Documentation

◆ `rtc_time_t`

| |
|--|
| typedef struct tm <code>rtc_time_t</code> |
| Date and time structure defined in C standard library <time.h> |

◆ `rtc_ctrl_t`

| |
|--|
| typedef void <code>rtc_ctrl_t</code> |
| RTC control block. Allocate an instance specific control block to pass into the RTC API calls. |

Enumeration Type Documentation

◆ `rtc_event_t`

| | |
|---|-------------------------------|
| enum <code>rtc_event_t</code> | |
| Events that can trigger a callback function | |
| Enumerator | |
| <code>RTC_EVENT_ALARM_IRQ</code> | Real Time Clock ALARM 0 IRQ. |
| <code>RTC_EVENT_ALARM1_IRQ</code> | Real Time Clock ALARM 1 IRQ. |
| <code>RTC_EVENT_PERIODIC_IRQ</code> | Real Time Clock PERIODIC IRQ. |

◆ `rtc_alarm_channel_t`

| |
|---------------------------------------|
| enum <code>rtc_alarm_channel_t</code> |
| RTC alarm channel |

◆ **rtc_clock_source_t**

| | |
|---------------------------------------|-------------------------------|
| enum <code>rtc_clock_source_t</code> | |
| Clock source for the RTC block | |
| Enumerator | |
| <code>RTC_CLOCK_SOURCE_SUBCLK</code> | Sub-clock oscillator. |
| <code>RTC_CLOCK_SOURCE_LOCO</code> | Low power On Chip Oscillator. |
| <code>RTC_CLOCK_SOURCE_MAINCLK</code> | Main clock oscillator. |

◆ **rtc_status_t**

| | |
|---------------------------------|-------------------------|
| enum <code>rtc_status_t</code> | |
| RTC run state | |
| Enumerator | |
| <code>RTC_STATUS_STOPPED</code> | RTC counter is stopped. |
| <code>RTC_STATUS_RUNNING</code> | RTC counter is running. |

◆ **rtc_error_adjustment_t**

| | |
|--|--|
| enum <code>rtc_error_adjustment_t</code> | |
| Time error adjustment settings | |
| Enumerator | |
| <code>RTC_ERROR_ADJUSTMENT_NONE</code> | Adjustment is not performed. |
| <code>RTC_ERROR_ADJUSTMENT_ADD_PRESCALER</code> | Adjustment is performed by the addition to the prescaler. |
| <code>RTC_ERROR_ADJUSTMENT_SUBTRACT_PRESCALER</code> | Adjustment is performed by the subtraction from the prescaler. |

◆ **rtc_error_adjustment_mode_t**

| | |
|--|--------------------------------------|
| enum <code>rtc_error_adjustment_mode_t</code> | |
| Time error adjustment mode settings | |
| Enumerator | |
| <code>RTC_ERROR_ADJUSTMENT_MODE_MANUAL</code> | Adjustment mode is set to manual. |
| <code>RTC_ERROR_ADJUSTMENT_MODE_AUTOMATIC</code> | Adjustment mode is set to automatic. |

◆ **rtc_error_adjustment_period_t**

| | |
|--|---|
| enum <code>rtc_error_adjustment_period_t</code> | |
| Time error adjustment period settings | |
| Enumerator | |
| <code>RTC_ERROR_ADJUSTMENT_PERIOD_1_MINUTE</code> | Adjustment period is set to every one minute. |
| <code>RTC_ERROR_ADJUSTMENT_PERIOD_10_SECOND</code> | Adjustment period is set to every ten second. |
| <code>RTC_ERROR_ADJUSTMENT_PERIOD_NONE</code> | Adjustment period not supported in manual mode. |
| <code>RTC_ERROR_ADJUSTMENT_PERIOD_20_SECOND</code> | Adjustment period is set to every twenty seconds. |

◆ **rtc_periodic_irq_select_t**

| enum <code>rtc_periodic_irq_select_t</code> | |
|---|---|
| Periodic Interrupt select | |
| Enumerator | |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_256_SECONDS</code> | A periodic irq is generated every 1/256 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_128_SECONDS</code> | A periodic irq is generated every 1/128 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_64_SECONDS</code> | A periodic irq is generated every 1/64 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_32_SECONDS</code> | A periodic irq is generated every 1/32 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_16_SECONDS</code> | A periodic irq is generated every 1/16 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_8_SECONDS</code> | A periodic irq is generated every 1/8 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_4_SECONDS</code> | A periodic irq is generated every 1/4 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_2_SECONDS</code> | A periodic irq is generated every 1/2 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_SECOND</code> | A periodic irq is generated every 1 second. |
| <code>RTC_PERIODIC_IRQ_SELECT_2_SECONDS</code> | A periodic irq is generated every 2 seconds. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_MINUTE</code> | A periodic irq is generated every 1 minute. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_HOUR</code> | A periodic irq is generated every 1 hour. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_DAY</code> | A periodic irq is generated every 1 day. |
| <code>RTC_PERIODIC_IRQ_SELECT_1_MONTH</code> | A periodic irq is generated every 1 month. |

◆ **rtc_time_capture_source_t**

| enum <code>rtc_time_capture_source_t</code> | |
|--|---------------------------|
| Time capture trigger source | |
| Enumerator | |
| <code>RTC_TIME_CAPTURE_SOURCE_DISABLED</code> | Disable trigger. |
| <code>RTC_TIME_CAPTURE_SOURCE_PIN_RISING</code> | Rising edge pin trigger. |
| <code>RTC_TIME_CAPTURE_SOURCE_PIN_FALLING</code> | Falling edge pin trigger. |
| <code>RTC_TIME_CAPTURE_SOURCE_PIN_BOTH</code> | Both edges pin trigger. |

◆ **rtc_time_capture_noise_filter_t**

| enum <code>rtc_time_capture_noise_filter_t</code> | |
|--|--|
| Time capture noise filter control | |
| Enumerator | |
| <code>RTC_TIME_CAPTURE_NOISE_FILTER_OFF</code> | Turn noise filter off. |
| <code>RTC_TIME_CAPTURE_NOISE_FILTER_ON</code> | Turn noise filter on (count source) |
| <code>RTC_TIME_CAPTURE_NOISE_FILTER_ON_DIVIDER_32</code> | Turn noise filter on (count source by divided by 32) |
| <code>RTC_TIME_CAPTURE_NOISE_FILTER_ON_DIVIDER_4096</code> | Turn noise filter on (count source by divided by 4096) |
| <code>RTC_TIME_CAPTURE_NOISE_FILTER_ON_DIVIDER_8192</code> | Turn noise filter on (count source by divided by 8192) |

5.3.17.3 Three-Phase Interface[Interfaces](#) » [Timers](#)**Detailed Description**

Interface for three-phase timer functions.

Summary

The Three-Phase interface provides functionality for synchronous start/stop/reset control of three timer channels for use in 3-phase motor control applications.

Data Structures

struct [three_phase_duty_cycle_t](#)

struct [three_phase_cfg_t](#)

struct [three_phase_api_t](#)

struct [three_phase_instance_t](#)

Typedefs

typedef void [three_phase_ctrl_t](#)

Enumerations

enum [three_phase_channel_t](#)

enum [three_phase_buffer_mode_t](#)

Data Structure Documentation

◆ [three_phase_duty_cycle_t](#)

| struct three_phase_duty_cycle_t | | |
|---|----------------|--|
| Struct for passing duty cycle values to three_phase_api_t::dutyCycleSet | | |
| Data Fields | | |
| uint32_t | duty[3] | Duty cycle. Note: When the GPT instances are configured in <code>TIMER_MODE_TRIANGLE_WAVE_AS_YMMETRIC_PWM_MODE3</code> , this value sets the duty cycle count that is transferred to GTCCRA/B at the trough. |
| uint32_t | duty_buffer[3] | Double-buffer for duty cycle values. Note: When the GPT instances are configured in <code>TIMER_MODE_TRIANGLE_WAVE_AS_YMMETRIC_PWM_MODE3</code> , this value sets the duty cycle count that is transferred to GTCCRA/B at the crest. |

◆ [three_phase_cfg_t](#)

| struct three_phase_cfg_t |
|---|
| User configuration structure, used in open function |

| Data Fields | | |
|---|---------------------|---|
| three_phase_buffer_mode_t | buffer_mode | Single or double-buffer mode. |
| timer_instance_t const * | p_timer_instance[3] | Pointer to the timer instance structs. |
| three_phase_channel_t | callback_ch | Channel to enable callback when using three_phase_api_t::callbackSet . |
| uint32_t | channel_mask | Bitmask of timer channels used by this module. |
| void const * | p_context | Placeholder for user data. Passed to the user callback in timer_callback_args_t . |
| void const * | p_extend | Extension parameter for hardware specific settings. |

◆ three_phase_api_t

| | |
|------------------------------|---|
| struct three_phase_api_t | |
| Three-Phase API structure. | |
| Data Fields | |
| fsp_err_t (* | open)(three_phase_ctrl_t *const p_ctrl, three_phase_cfg_t const *const p_cfg) |
| fsp_err_t (* | start)(three_phase_ctrl_t *const p_ctrl) |
| fsp_err_t (* | stop)(three_phase_ctrl_t *const p_ctrl) |
| fsp_err_t (* | reset)(three_phase_ctrl_t *const p_ctrl) |
| fsp_err_t (* | dutyCycleSet)(three_phase_ctrl_t *const p_ctrl, three_phase_duty_cycle_t *const p_duty_cycle) |
| fsp_err_t (* | callbackSet)(three_phase_ctrl_t *const p_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory) |
| fsp_err_t (* | close)(three_phase_ctrl_t *const p_ctrl) |
| Field Documentation | |

◆ **open**

```
fsp_err_t(* three_phase_api_t::open) (three_phase_ctrl_t *const p_ctrl, three_phase_cfg_t const *const p_cfg)
```

Initial configuration.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ **start**

```
fsp_err_t(* three_phase_api_t::start) (three_phase_ctrl_t *const p_ctrl)
```

Start all three timers synchronously.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in three_phase_api_t::open call for this timer. |
|------|--------|---|

◆ **stop**

```
fsp_err_t(* three_phase_api_t::stop) (three_phase_ctrl_t *const p_ctrl)
```

Stop all three timers synchronously.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in three_phase_api_t::open call for this timer. |
|------|--------|---|

◆ **reset**

```
fsp_err_t(* three_phase_api_t::reset) (three_phase_ctrl_t *const p_ctrl)
```

Reset all three timers synchronously.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in three_phase_api_t::open call for this timer. |
|------|--------|---|

◆ **dutyCycleSet**

```
fsp_err_t(* three_phase_api_t::dutyCycleSet) (three_phase_ctrl_t *const p_ctrl,
three_phase_duty_cycle_t *const p_duty_cycle)
```

Sets the duty cycle match values. If the timer is counting, the updated duty cycle is reflected after the next timer expiration.

Parameters

| | | |
|------|--------------|---|
| [in] | p_ctrl | Control block set in three_phase_api_t::open call for this timer. |
| [in] | p_duty_cycle | Duty cycle values for all three timer channels. |

◆ **callbackSet**

```
fsp_err_t(* three_phase_api_t::callbackSet) (three_phase_ctrl_t *const p_ctrl,
void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in three_phase_api_t::open call. |
| [in] | p_callback | Callback function to register with GPT U-channel |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* three_phase_api_t::close) (three_phase_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in three_phase_api_t::open call for this timer. |
|------|--------|---|

◆ **three_phase_instance_t**

| | | |
|--|---------------------|---|
| struct <code>three_phase_instance_t</code> | | |
| This structure encompasses everything that is needed to use an instance of this interface. | | |
| Data Fields | | |
| <code>three_phase_ctrl_t *</code> | <code>p_ctrl</code> | Pointer to the control structure for this instance. |
| <code>three_phase_cfg_t const *</code> | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>three_phase_api_t const *</code> | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation◆ **three_phase_ctrl_t**

| |
|--|
| typedef void <code>three_phase_ctrl_t</code> |
| Three-Phase control block. Allocate an instance specific control block to pass into the timer API calls. |

Enumeration Type Documentation◆ **three_phase_channel_t**

| | |
|---|------------------|
| enum <code>three_phase_channel_t</code> | |
| Timer channel indices | |
| Enumerator | |
| <code>THREE_PHASE_CHANNEL_U</code> | U-channel index. |
| <code>THREE_PHASE_CHANNEL_V</code> | V-channel index. |
| <code>THREE_PHASE_CHANNEL_W</code> | W-channel index. |

◆ **three_phase_buffer_mode_t**

| | |
|---|---------------------|
| enum <code>three_phase_buffer_mode_t</code> | |
| Buffering mode | |
| Enumerator | |
| <code>THREE_PHASE_BUFFER_MODE_SINGLE</code> | Single-buffer mode. |
| <code>THREE_PHASE_BUFFER_MODE_DOUBLE</code> | Double-buffer mode. |

5.3.17.4 Timer Interface

[Interfaces](#) » [Timers](#)

Detailed Description

Interface for timer functions.

Summary

The general timer interface provides standard timer functionality including periodic mode, one-shot mode, PWM output, and free-running timer mode. After each timer cycle (overflow or underflow), an interrupt can be triggered.

If an instance supports output compare mode, it is provided in the extension configuration `timer_on_<instance>_cfg_t` defined in `r_<instance>.h`.

Data Structures

struct [timer_callback_args_t](#)

struct [timer_info_t](#)

struct [timer_status_t](#)

struct [timer_cfg_t](#)

struct [timer_api_t](#)

struct [timer_instance_t](#)

Typedefs

typedef void [timer_ctrl_t](#)

Enumerations

enum [timer_event_t](#)

enum [timer_variant_t](#)

enum [timer_state_t](#)

enum [timer_mode_t](#)

enum [timer_direction_t](#)

enum [timer_source_div_t](#)

Data Structure Documentation

◆ timer_callback_args_t

| | | |
|----------------------------------|-----------|--|
| struct timer_callback_args_t | | |
| Callback function parameter data | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. Set in timer_api_t::open function in timer_cfg_t . |
| timer_event_t | event | The event can be used to identify what caused the callback. |
| uint32_t | capture | Most recent capture, only valid if event is <code>TIMER_EVENT_CAPTURE_A</code> or <code>TIMER_EVENT_CAPTURE_B</code> . |

◆ timer_info_t

| | | |
|---|-----------------|---|
| struct timer_info_t | | |
| Timer information structure to store various information for a timer resource | | |
| Data Fields | | |
| timer_direction_t | count_direction | Clock counting direction of the timer. |
| uint32_t | clock_frequency | Clock frequency of the timer counter. |
| uint32_t | period_counts | Period in raw timer counts. <i>Note</i> <i>For triangle wave PWM modes, the full period is double this value.</i> |

◆ timer_status_t

| | | |
|-------------------------------|---------|--|
| struct timer_status_t | | |
| Current timer status. | | |
| Data Fields | | |
| uint32_t | counter | Current counter value. |
| timer_state_t | state | Current timer state (running or stopped) |

◆ timer_cfg_t

| | | |
|--------------------|--|--|
| struct timer_cfg_t | | |
|--------------------|--|--|

| User configuration structure, used in open function | |
|---|--|
| Data Fields | |
| timer_mode_t | mode |
| | Select enumerated value from timer_mode_t . |
| uint32_t | period_counts |
| | Period in raw timer counts. |
| timer_source_div_t | source_div |
| | Source clock divider. |
| uint32_t | duty_cycle_counts |
| | Duty cycle in counts. |
| uint8_t | channel |
| uint8_t | cycle_end_ipl |
| | Cycle end interrupt priority. |
| IRQn_Type | cycle_end_irq |
| | Cycle end interrupt. |
| void(* | p_callback)(timer_callback_args_t *p_args) |
| void const * | p_context |
| void const * | p_extend |
| | Extension parameter for hardware specific settings. |

Field Documentation

◆ channel

uint8_t timer_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

◆ p_callback

void(* timer_cfg_t::p_callback) (timer_callback_args_t *p_args)

Callback provided when a timer ISR occurs. Set to NULL for no CPU interrupt.

◆ p_context

void const* timer_cfg_t::p_context

Placeholder for user data. Passed to the user callback in [timer_callback_args_t](#).

◆ timer_api_t

struct timer_api_t

Timer API structure. General timer functions implemented at the HAL layer follow this API.

Data Fields

| | |
|--------------|--|
| fsp_err_t(*) | open)(timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg) |
|--------------|--|

| | |

| <code>fsp_err_t(*</code> | <code>callbackSet)(timer_ctrl_t *const p_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory)</code> |
| <code>fsp_err_t(*</code> | <code>close)(timer_ctrl_t *const p_ctrl)</code> |

Field Documentation

◆ open

`fsp_err_t(* timer_api_t::open) (timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg)`

Initial configuration.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | <code>p_cfg</code> | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ start

`fsp_err_t(* timer_api_t::start) (timer_ctrl_t *const p_ctrl)`

Start the counter.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Control block set in timer_api_t::open call for this timer. |
|------|---------------------|---|

◆ stop

`fsp_err_t(* timer_api_t::stop) (timer_ctrl_t *const p_ctrl)`

Stop the counter.

Parameters

| | | |
|------|---------------------|---|
| [in] | <code>p_ctrl</code> | Control block set in timer_api_t::open call for this timer. |
|------|---------------------|---|

◆ **reset**

```
fsp_err_t(* timer_api_t::reset) (timer_ctrl_t *const p_ctrl)
```

Reset the counter to the initial value.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
|------|--------|---|

◆ **enable**

```
fsp_err_t(* timer_api_t::enable) (timer_ctrl_t *const p_ctrl)
```

Enables input capture.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
|------|--------|---|

◆ **disable**

```
fsp_err_t(* timer_api_t::disable) (timer_ctrl_t *const p_ctrl)
```

Disables input capture.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
|------|--------|---|

◆ **periodSet**

```
fsp_err_t(* timer_api_t::periodSet) (timer_ctrl_t *const p_ctrl, uint32_t const period)
```

Set the time until the timer expires. See implementation for details of period update timing.

Note

Timer expiration may or may not generate a CPU interrupt based on how the timer is configured in [timer_api_t::open](#).

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
| [in] | period | Time until timer should expire. |

◆ **dutyCycleSet**

```
fsp_err_t(* timer_api_t::dutyCycleSet) (timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts,
uint32_t const pin)
```

Sets the number of counts for the pin level to be high. If the timer is counting, the updated duty cycle is reflected after the next timer expiration.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
| [in] | duty_cycle_counts | Time until duty cycle should expire. |
| [in] | pin | Which output pin to update. See implementation for details. |

◆ **infoGet**

```
fsp_err_t(* timer_api_t::infoGet) (timer_ctrl_t *const p_ctrl, timer_info_t *const p_info)
```

Stores timer information in p_info.

Parameters

| | | |
|-------|--------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
| [out] | p_info | Collection of information for this timer. |

◆ **statusGet**

```
fsp_err_t(* timer_api_t::statusGet) (timer_ctrl_t *const p_ctrl, timer_status_t *const p_status)
```

Get the current counter value and timer state and store it in p_status.

Parameters

| | | |
|-------|----------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
| [out] | p_status | Current status of this timer. |

◆ **callbackSet**

```
fsp_err_t(* timer_api_t::callbackSet) (timer_ctrl_t *const p_ctrl,
void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|------------------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_working_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **close**

```
fsp_err_t(* timer_api_t::close) (timer_ctrl_t *const p_ctrl)
```

Allows driver to be reconfigured and may reduce power consumption.

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in timer_api_t::open call for this timer. |
|------|--------|---|

◆ **timer_instance_t**

```
struct timer_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|-------------------------------------|--------|---|
| timer_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| timer_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| timer_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation

◆ timer_ctrl_t

```
typedef void timer_ctrl_t
```

Timer control block. Allocate an instance specific control block to pass into the timer API calls.

Enumeration Type Documentation

◆ timer_event_t

| enum timer_event_t | |
|---|---|
| Events that can trigger a callback function | |
| Enumerator | |
| TIMER_EVENT_CYCLE_END | Requested timer delay has expired or timer has wrapped around. |
| TIMER_EVENT_HIGHER_8BIT_CYCLE_END | Requested higher 8-bit timer has expired. |
| TIMER_EVENT_CAPTURE_EDGE | A capture has occurred when detecting edge. |
| TIMER_EVENT_SLAVE_CYCLE_END | Requested timer pulse width (One-shot) or duty cycle (PWM) has expired. |
| TIMER_EVENT_MASTER_CYCLE_END | Requested timer delay (One-shot) or period (PWM) has expired. |
| TIMER_EVENT_CYCLE_END | Requested timer delay has expired or timer has wrapped around. |
| TIMER_EVENT_CREST | Timer crest event (counter is at a maximum, triangle-wave PWM only) |
| TIMER_EVENT_CAPTURE_A | A capture has occurred on signal A. |
| TIMER_EVENT_CAPTURE_B | A capture has occurred on signal B. |
| TIMER_EVENT_TROUGH | Timer trough event (counter is 0, triangle-wave PWM only). |
| TIMER_EVENT_COMPARE_A | A compare has occurred on signal A. |
| TIMER_EVENT_COMPARE_B | A compare has occurred on signal B. |
| TIMER_EVENT_COMPARE_C | A compare has occurred on signal C. |
| TIMER_EVENT_COMPARE_D | A compare has occurred on signal D. |
| TIMER_EVENT_COMPARE_E | A compare has occurred on signal E. |
| TIMER_EVENT_COMPARE_F | A compare has occurred on signal F. |
| TIMER_EVENT_DEAD_TIME | Dead time event. |

◆ **timer_variant_t**

| | |
|-----------------------------------|--------------|
| enum <code>timer_variant_t</code> | |
| Timer variant types. | |
| Enumerator | |
| <code>TIMER_VARIANT_32_BIT</code> | 32-bit timer |
| <code>TIMER_VARIANT_16_BIT</code> | 16-bit timer |

◆ **timer_state_t**

| | |
|--|-------------------|
| enum <code>timer_state_t</code> | |
| Possible status values returned by <code>timer_api_t::statusGet</code> . | |
| Enumerator | |
| <code>TIMER_STATE_STOPPED</code> | Timer is stopped. |
| <code>TIMER_STATE_COUNTING</code> | Timer is running. |

◆ **timer_mode_t**

| enum timer_mode_t | |
|---|---|
| Timer operational modes | |
| Enumerator | |
| TIMER_MODE_PERIODIC | Timer restarts after period elapses. |
| TIMER_MODE_ONE_SHOT | Timer stops after period elapses. |
| TIMER_MODE_PWM | Timer generates saw-wave PWM output. |
| TIMER_MODE_ONE_SHOT_PULSE | Saw-wave one-shot pulse mode (fixed buffer operation). |
| TIMER_MODE_TRIANGLE_WAVE_SYMMETRIC_PWM | Timer generates symmetric triangle-wave PWM output. |
| TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM | Timer generates asymmetric triangle-wave PWM output. |
| TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM_MODE3 | Timer generates Asymmetric Triangle-wave PWM output. In PWM mode 3, the duty cycle does not need to be updated at each trough/crest interrupt. Instead, the trough and crest duty cycle values can be set once and only need to be updated when the application needs to change the duty cycle. |

◆ **timer_direction_t**

| enum timer_direction_t | |
|--|------------------------|
| Direction of timer count | |
| Enumerator | |
| TIMER_DIRECTION_DOWN | Timer count goes up. |
| TIMER_DIRECTION_UP | Timer count goes down. |

◆ timer_source_div_t

| enum timer_source_div_t | |
|-------------------------|--------------------------------------|
| Clock source divisors | |
| Enumerator | |
| TIMER_SOURCE_DIV_1 | Timer clock source divided by 1. |
| TIMER_SOURCE_DIV_2 | Timer clock source divided by 2. |
| TIMER_SOURCE_DIV_4 | Timer clock source divided by 4. |
| TIMER_SOURCE_DIV_8 | Timer clock source divided by 8. |
| TIMER_SOURCE_DIV_16 | Timer clock source divided by 16. |
| TIMER_SOURCE_DIV_32 | Timer clock source divided by 32. |
| TIMER_SOURCE_DIV_64 | Timer clock source divided by 64. |
| TIMER_SOURCE_DIV_128 | Timer clock source divided by 128. |
| TIMER_SOURCE_DIV_256 | Timer clock source divided by 256. |
| TIMER_SOURCE_DIV_512 | Timer clock source divided by 512. |
| TIMER_SOURCE_DIV_1024 | Timer clock source divided by 1024. |
| TIMER_SOURCE_DIV_2048 | Timer clock source divided by 2048. |
| TIMER_SOURCE_DIV_4096 | Timer clock source divided by 4096. |
| TIMER_SOURCE_DIV_8192 | Timer clock source divided by 8192. |
| TIMER_SOURCE_DIV_16384 | Timer clock source divided by 16384. |
| TIMER_SOURCE_DIV_32768 | Timer clock source divided by 32768. |
| TIMER_SOURCE_DIV_1 | Timer clock source divided by 1. |
| TIMER_SOURCE_DIV_2 | Timer clock source divided by 2. |
| TIMER_SOURCE_DIV_4 | Timer clock source divided by 4. |
| TIMER_SOURCE_DIV_8 | Timer clock source divided by 8. |
| TIMER_SOURCE_DIV_16 | Timer clock source divided by 16. |

| | |
|-----------------------|-------------------------------------|
| TIMER_SOURCE_DIV_32 | Timer clock source divided by 32. |
| TIMER_SOURCE_DIV_64 | Timer clock source divided by 64. |
| TIMER_SOURCE_DIV_128 | Timer clock source divided by 128. |
| TIMER_SOURCE_DIV_256 | Timer clock source divided by 256. |
| TIMER_SOURCE_DIV_512 | Timer clock source divided by 512. |
| TIMER_SOURCE_DIV_1024 | Timer clock source divided by 1024. |

5.3.18 Transfer

Interfaces

Detailed Description

Transfer Interfaces.

Modules

Transfer Interface

Interface for data transfer functions.

5.3.18.1 Transfer Interface

Interfaces » Transfer

Detailed Description

Interface for data transfer functions.

Summary

The transfer interface supports background data transfer (no CPU intervention).

Data Structures

struct [transfer_callback_args_t](#)

struct [transfer_properties_t](#)

```
struct transfer_info_t
```

```
struct transfer_cfg_t
```

```
struct transfer_api_t
```

```
struct transfer_instance_t
```

Typedefs

```
typedef void transfer_ctrl_t
```

Enumerations

```
enum transfer_mode_t
```

```
enum transfer_size_t
```

```
enum transfer_addr_mode_t
```

```
enum transfer_repeat_area_t
```

```
enum transfer_chain_mode_t
```

```
enum transfer_irq_t
```

```
enum transfer_start_mode_t
```

Data Structure Documentation

◆ transfer_callback_args_t

| | | |
|-----------------------------------|-----------|---|
| struct transfer_callback_args_t | | |
| Callback function parameter data. | | |
| Data Fields | | |
| void const * | p_context | Placeholder for user data. Set in transfer_api_t::open function in transfer_cfg_t . |

◆ transfer_properties_t

| | | |
|------------------------------|-----------------------|-----------------------------|
| struct transfer_properties_t | | |
| Driver specific information. | | |
| Data Fields | | |
| uint32_t | block_count_max | Maximum number of blocks. |
| uint32_t | block_count_remaining | Number of blocks remaining. |
| | | |

| | | |
|----------|---------------------------|--------------------------------|
| uint32_t | transfer_length_max | Maximum number of transfers. |
| uint32_t | transfer_length_remaining | Number of transfers remaining. |

◆ transfer_info_t

| | | |
|---|-------------|---|
| struct transfer_info_t | | |
| This structure specifies the properties of the transfer. | | |
| <p>Warning</p> <p>When using DTC, this structure corresponds to the descriptor block registers required by the DTC. The following components may be modified by the driver: p_src, p_dest, num_blocks, and length.</p> <p>When using DTC, do NOT reuse this structure to configure multiple transfers. Each transfer must have a unique transfer_info_t.</p> <p>When using DTC, this structure must not be allocated in a temporary location. Any instance of this structure must remain in scope until the transfer it is used for is closed.</p> | | |
| <p><i>Note</i></p> <p>When using DTC, consider placing instances of this structure in a protected section of memory.</p> | | |
| Data Fields | | |
| union transfer_info_t | __unnamed__ | |
| void const *volatile | p_src | Source pointer. |
| void *volatile | p_dest | Destination pointer. |
| volatile uint16_t | num_blocks | Number of blocks to transfer when using TRANSFER_MODE_BLOCK (both DTC and DMAC) or TRANSFER_MODE_REPEAT (DMAC only) or TRANSFER_MODE_REPEAT_BLOCK (DMAC only), unused in other modes. |
| volatile uint16_t | length | Length of each transfer. Range limited for TRANSFER_MODE_BLOCK , TRANSFER_MODE_REPEAT , and TRANSFER_MODE_REPEAT_BLOCK see HAL driver for details. |

◆ transfer_cfg_t

| | | |
|---|--------|--|
| struct transfer_cfg_t | | |
| Driver configuration set in transfer_api_t::open . All elements except p_extend are required and must be initialized. | | |
| Data Fields | | |
| transfer_info_t * | p_info | Pointer to transfer configuration options. If using chain transfer (DTC only), this can be a pointer to an array of chained transfers that will be completed |

| | | |
|--------------|----------|---|
| | | in order. |
| void const * | p_extend | Extension parameter for hardware specific settings. |

◆ transfer_api_t

| | |
|---|---|
| struct transfer_api_t | |
| Transfer functions implemented at the HAL layer will follow this API. | |
| Data Fields | |
| fsp_err_t(*) | open)(transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg) |
| fsp_err_t(*) | reconfigure)(transfer_ctrl_t *const p_ctrl, transfer_info_t *p_info) |
| fsp_err_t(*) | reset)(transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint16_t const num_transfers) |
| fsp_err_t(*) | enable)(transfer_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | disable)(transfer_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | softwareStart)(transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode) |
| fsp_err_t(*) | softwareStop)(transfer_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | infoGet)(transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_properties) |
| fsp_err_t(*) | close)(transfer_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | reload)(transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t const num_transfers) |
| fsp_err_t(*) | callbackSet)(transfer_ctrl_t *const p_ctrl, void(*p_callback)(transfer_callback_args_t *), void const *const p_context, transfer_callback_args_t *const p_callback_memory) |
| Field Documentation | |

◆ **open**

```
fsp_err_t(* transfer_api_t::open) (transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg)
```

Initial configuration.

Parameters

| | | |
|----------|--------|---|
| [in,out] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_cfg | Pointer to configuration structure. All elements of this structure must be set by user. |

◆ **reconfigure**

```
fsp_err_t(* transfer_api_t::reconfigure) (transfer_ctrl_t *const p_ctrl, transfer_info_t *p_info)
```

Reconfigure the transfer. Enable the transfer if p_info is valid.

Parameters

| | | |
|----------|--------|--|
| [in,out] | p_ctrl | Pointer to control block. Must be declared by user. Elements set here. |
| [in] | p_info | Pointer to a new transfer info structure. |

◆ **reset**

```
fsp_err_t(* transfer_api_t::reset) (transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest,
uint16_t const num_transfers)
```

Reset source address pointer, destination address pointer, and/or length, keeping all other settings the same. Enable the transfer if p_src, p_dest, and length are valid.

Parameters

| | | |
|------|---------------|--|
| [in] | p_ctrl | Control block set in transfer_api_t::open call for this transfer. |
| [in] | p_src | Pointer to source. Set to NULL if source pointer should not change. |
| [in] | p_dest | Pointer to destination. Set to NULL if destination pointer should not change. |
| [in] | num_transfers | Transfer length in normal mode or number of blocks in block mode. In DMAC only, resets number of repeats (initially stored in transfer_info_t::num_blocks) in repeat mode. Not used in repeat mode for DTC. |

◆ **enable**

```
fsp_err_t(* transfer_api_t::enable) (transfer_ctrl_t *const p_ctrl)
```

Enable transfer. Transfers occur after the activation source event (or when [transfer_api_t::softwareStart](#) is called if no peripheral event is chosen as activation source).

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in transfer_api_t::open call for this transfer. |
|------|--------|---|

◆ **disable**

`fsp_err_t(* transfer_api_t::disable) (transfer_ctrl_t *const p_ctrl)`

Disable transfer. Transfers do not occur after the activation source event (or when `transfer_api_t::softwareStart` is called if no peripheral event is chosen as the DMAC activation source).

Note

If a transfer is in progress, it will be completed. Subsequent transfer requests do not cause a transfer.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in <code>transfer_api_t::open</code> call for this transfer. |
|------|--------|--|

◆ **softwareStart**

`fsp_err_t(* transfer_api_t::softwareStart) (transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode)`

Start transfer in software.

Warning

Only works if no peripheral event is chosen as the DMAC activation source.

Note

Not supported for DTC.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in <code>transfer_api_t::open</code> call for this transfer. |
| [in] | mode | Select mode from <code>transfer_start_mode_t</code> . |

◆ **softwareStop**

`fsp_err_t(* transfer_api_t::softwareStop) (transfer_ctrl_t *const p_ctrl)`

Stop transfer in software. The transfer will stop after completion of the current transfer.

Note

Not supported for DTC.

Only applies for transfers started with `TRANSFER_START_MODE_REPEAT`.

Warning

Only works if no peripheral event is chosen as the DMAC activation source.

Parameters

| | | |
|------|--------|--|
| [in] | p_ctrl | Control block set in <code>transfer_api_t::open</code> call for this transfer. |
|------|--------|--|

◆ infoGet

```
fsp_err_t(* transfer_api_t::infoGet) (transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_properties)
```

Provides information about this transfer.

Parameters

| | | |
|-------|--------------|---|
| [in] | p_ctrl | Control block set in transfer_api_t::open call for this transfer. |
| [out] | p_properties | Driver specific information. |

◆ close

```
fsp_err_t(* transfer_api_t::close) (transfer_ctrl_t *const p_ctrl)
```

Releases hardware lock. This allows a transfer to be reconfigured using [transfer_api_t::open](#).

Parameters

| | | |
|------|--------|---|
| [in] | p_ctrl | Control block set in transfer_api_t::open call for this transfer. |
|------|--------|---|

◆ reload

```
fsp_err_t(* transfer_api_t::reload) (transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t const num_transfers)
```

To update next transfer information without interruption during transfer. Allow further transfer continuation.

Parameters

| | | |
|------|---------------|---|
| [in] | p_ctrl | Control block set in transfer_api_t::open call for this transfer. |
| [in] | p_src | Pointer to source. Set to NULL if source pointer should not change. |
| [in] | p_dest | Pointer to destination. Set to NULL if destination pointer should not change. |
| [in] | num_transfers | Transfer length in normal mode or block mode. |

◆ **callbackSet**

```
fsp_err_t(* transfer_api_t::callbackSet)(transfer_ctrl_t *const p_ctrl,
void(*p_callback)(transfer_callback_args_t *), void const *const p_context, transfer_callback_args_t
*const p_callback_memory)
```

Specify callback function and optional context pointer and working memory pointer.

Parameters

| | | |
|------|-------------------|---|
| [in] | p_ctrl | Control block set in transfer_api_t::open call for this transfer. |
| [in] | p_callback | Callback function to register |
| [in] | p_context | Pointer to send to callback function |
| [in] | p_callback_memory | Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback. |

◆ **transfer_instance_t**

```
struct transfer_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|--|--------|---|
| transfer_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
| transfer_cfg_t const * | p_cfg | Pointer to the configuration structure for this instance. |
| transfer_api_t const * | p_api | Pointer to the API structure for this instance. |

Typedef Documentation◆ **transfer_ctrl_t**

```
typedef void transfer_ctrl_t
```

Transfer control block. Allocate an instance specific control block to pass into the transfer API calls.

Enumeration Type Documentation

◆ **transfer_mode_t**

| enum <code>transfer_mode_t</code> | |
|--|--|
| Transfer mode describes what will happen when a transfer request occurs. | |
| Enumerator | |
| <code>TRANSFER_MODE_NORMAL</code> | In normal mode, each transfer request causes a transfer of <code>transfer_size_t</code> from the source pointer to the destination pointer. The transfer length is decremented and the source and address pointers are updated according to <code>transfer_addr_mode_t</code> . After the transfer length reaches 0, transfer requests will not cause any further transfers. |
| <code>TRANSFER_MODE_REPEAT</code> | Repeat mode is like normal mode, except that when the transfer length reaches 0, the pointer to the repeat area and the transfer length will be reset to their initial values. If DMAC is used, the transfer repeats only <code>transfer_info_t::num_blocks</code> times. After the transfer repeats <code>transfer_info_t::num_blocks</code> times, transfer requests will not cause any further transfers. If DTC is used, the transfer repeats continuously (no limit to the number of repeat transfers). |
| <code>TRANSFER_MODE_BLOCK</code> | In block mode, each transfer request causes <code>transfer_info_t::length</code> transfers of <code>transfer_size_t</code> . After each individual transfer, the source and destination pointers are updated according to <code>transfer_addr_mode_t</code> . After the block transfer is complete, <code>transfer_info_t::num_blocks</code> is decremented. After the <code>transfer_info_t::num_blocks</code> reaches 0, transfer requests will not cause any further transfers. |
| <code>TRANSFER_MODE_REPEAT_BLOCK</code> | In addition to block mode features, repeat-block mode supports a ring buffer of blocks and offsets within a block (to split blocks into arrays of their first data, second data, etc.) |

◆ **transfer_size_t**

| enum transfer_size_t | |
|--|---|
| Transfer size specifies the size of each individual transfer. Total transfer length = <code>transfer_size_t * transfer_length_t</code> | |
| Enumerator | |
| TRANSFER_SIZE_1_BYTE | Each transfer transfers a 8-bit value. |
| TRANSFER_SIZE_2_BYTE | Each transfer transfers a 16-bit value. |
| TRANSFER_SIZE_4_BYTE | Each transfer transfers a 32-bit value. |

◆ **transfer_addr_mode_t**

| enum transfer_addr_mode_t | |
|--|---|
| Address mode specifies whether to modify (increment or decrement) pointer after each transfer. | |
| Enumerator | |
| TRANSFER_ADDR_MODE_FIXED | Address pointer remains fixed after each transfer. |
| TRANSFER_ADDR_MODE_OFFSET | Offset is added to the address pointer after each transfer. |
| TRANSFER_ADDR_MODE_INCREMENTED | Address pointer is incremented by associated transfer_size_t after each transfer. |
| TRANSFER_ADDR_MODE_DECREMENTED | Address pointer is decremented by associated transfer_size_t after each transfer. |

◆ **transfer_repeat_area_t**

| enum transfer_repeat_area_t | |
|--|--|
| Repeat area options (source or destination). In TRANSFER_MODE_REPEAT , the selected pointer returns to its original value after transfer_info_t::length transfers. In TRANSFER_MODE_BLOCK and TRANSFER_MODE_REPEAT_BLOCK , the selected pointer returns to its original value after each transfer. | |
| Enumerator | |
| TRANSFER_REPEAT_AREA_DESTINATION | Destination area repeated in TRANSFER_MODE_REPEAT or TRANSFER_MODE_BLOCK or TRANSFER_MODE_REPEAT_BLOCK . |
| TRANSFER_REPEAT_AREA_SOURCE | Source area repeated in TRANSFER_MODE_REPEAT or TRANSFER_MODE_BLOCK or TRANSFER_MODE_REPEAT_BLOCK . |

◆ **transfer_chain_mode_t**

| enum transfer_chain_mode_t | |
|--|--|
| Chain transfer mode options. | |
| <i>Note</i> <i>Only applies for DTC.</i> | |
| Enumerator | |
| TRANSFER_CHAIN_MODE_DISABLED | Chain mode not used. |
| TRANSFER_CHAIN_MODE_EACH | Switch to next transfer after a single transfer from this transfer_info_t . |
| TRANSFER_CHAIN_MODE_END | Complete the entire transfer defined in this transfer_info_t before chaining to next transfer. |

◆ **transfer_irq_t**

| enum <code>transfer_irq_t</code> | |
|----------------------------------|---|
| Interrupt options. | |
| Enumerator | |
| <code>TRANSFER_IRQ_END</code> | <p>Interrupt occurs only after last transfer. If this transfer is chained to a subsequent transfer, the interrupt will occur only after subsequent chained transfer(s) are complete.</p> <p>Warning DTC triggers the interrupt of the activation source. Choosing <code>TRANSFER_IRQ_END</code> with DTC will prevent activation source interrupts until the transfer is complete.</p> |
| <code>TRANSFER_IRQ_EACH</code> | <p>Interrupt occurs after each transfer.</p> <p><i>Note</i> <i>Not available in all HAL drivers. See HAL driver for details.</i></p> |

◆ **transfer_start_mode_t**

| enum <code>transfer_start_mode_t</code> | |
|--|---|
| Select whether to start single or repeated transfer with software start. | |
| Enumerator | |
| <code>TRANSFER_START_MODE_SINGLE</code> | Software start triggers single transfer. |
| <code>TRANSFER_START_MODE_REPEAT</code> | Software start transfer continues until transfer is complete. |

5.3.19 RSIP Interface

Interfaces

Detailed Description

Interface for Renesas Secure IP (RSIP) functions.

Summary

The RSIP interface provides RSIP functionality.

Data Structures

struct `rsip_wrapped_key_t`

struct `rsip_key_update_key_t`

struct `rsip_sha_handle_t`

struct `rsip_hmac_handle_t`

struct `rsip_cfg_t`

struct `rsip_api_t`

struct `rsip_instance_t`

Typedefs

typedef void `rsip_ctrl_t`

Enumerations

enum `rsip_alg_t`

enum `rsip_key_subtype_t`

enum `rsip_key_type_t`

enum `rsip_key_pair_type_t`

enum `rsip_byte_size_wrapped_key_t`

enum `rsip_aes_cipher_mode_t`

enum `rsip_aes_aead_mode_t`

enum `rsip_aes_mac_mode_t`

enum `rsip_hash_type_t`

enum `rsip_mgf_type_t`

enum `rsip_rsa_salt_length_t`

Data Structure Documentation

◆ **rsip_wrapped_key_t**

| | | |
|---|---------|---|
| struct rsip_wrapped_key_t | | |
| Wrapped key structure for all supported algorithms. The struct length of each algorithm is defined by RSIP_BYTE_SIZE_WRAPPED_KEY macro. | | |
| Data Fields | | |
| uint8_t | alg | Key algorithm. |
| uint8_t | subtype | Key sub type. |
| uint8_t | info[2] | Reserved area. |
| uint8_t | value[] | Variable length array to store the key value. |

◆ **rsip_key_update_key_t**

| | | |
|------------------------------|--|--|
| struct rsip_key_update_key_t | | |
| Key Update Key (KUK) | | |

◆ **rsip_sha_handle_t**

| | | |
|--|--|--|
| struct rsip_sha_handle_t | | |
| Working area for SHA functions. DO NOT MODIFY. | | |

◆ **rsip_hmac_handle_t**

| | | |
|---|--|--|
| struct rsip_hmac_handle_t | | |
| Working area for HMAC functions. DO NOT MODIFY. | | |

◆ **rsip_cfg_t**

| | | |
|---|----------|-----------------------------------|
| struct rsip_cfg_t | | |
| User configuration structure, used in open function | | |
| Data Fields | | |
| void const * | p_extend | Hardware-dependent configuration. |

◆ **rsip_api_t**

| | | |
|---|--|--|
| struct rsip_api_t | | |
| RSIP driver structure. General RSIP functions implemented at the HAL layer follow this API. | | |
| Data Fields | | |
| fsp_err_t(* open)(rsip_ctrl_t *const p_ctrl, rsip_cfg_t const *const p_cfg) | | |
| | | |
| | | |

| | |
|--------------|--|
| fsp_err_t(*) | close)(rsip_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | randomNumberGenerate)(rsip_ctrl_t *const p_ctrl, uint8_t *const p_random) |
| fsp_err_t(*) | keyGenerate)(rsip_ctrl_t *const p_ctrl, rsip_key_type_t const key_type, rsip_wrapped_key_t *const p_wrapped_key) |
| fsp_err_t(*) | keyPairGenerate)(rsip_ctrl_t *const p_ctrl, rsip_key_pair_type_t const key_pair_type, rsip_wrapped_key_t *const p_wrapped_public_key, rsip_wrapped_key_t *const p_wrapped_private_key) |
| fsp_err_t(*) | encryptedKeyWrap)(rsip_ctrl_t *const p_ctrl, rsip_key_update_key_t const *const p_key_update_key, uint8_t const *const p_initial_vector, rsip_key_type_t const key_type, uint8_t const *const p_encrypted_key, rsip_wrapped_key_t *const p_wrapped_key) |
| fsp_err_t(*) | publicKeyExport)(rsip_wrapped_key_t const *const p_wrapped_public_key, uint8_t *const p_raw_public_key) |
| fsp_err_t(*) | aesCipherInit)(rsip_ctrl_t *const p_ctrl, rsip_aes_cipher_mode_t const mode, rsip_wrapped_key_t const *const p_wrapped_key, uint8_t const *const p_initial_vector) |
| fsp_err_t(*) | aesCipherUpdate)(rsip_ctrl_t *const p_ctrl, uint8_t const *const p_input, uint8_t *const p_output, uint32_t const length) |
| fsp_err_t(*) | aesCipherFinish)(rsip_ctrl_t *const p_ctrl) |
| fsp_err_t(*) | aesAeadInit)(rsip_ctrl_t *const p_ctrl, rsip_aes_aead_mode_t const mode, rsip_wrapped_key_t const *const p_wrapped_key, uint8_t const *const p_nonce, uint32_t const nonce_length) |
| fsp_err_t(*) | aesAeadLengthsSet)(rsip_ctrl_t *const p_ctrl, uint32_t const total_aad_length, uint32_t const total_text_length, uint32_t const tag_length) |
| fsp_err_t(*) | aesAeadAadUpdate)(rsip_ctrl_t *const p_ctrl, uint8_t const *const p_aad, uint32_t const aad_length) |

| | |

Field Documentation

◆ open

`fsp_err_t(* rsip_api_t::open) (rsip_ctrl_t *const p_ctrl, rsip_cfg_t const *const p_cfg)`

Enables use of Renesas Secure IP functionality.

Parameters

| | | |
|----------|--------|-------------------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_cfg | Pointer to configuration structure. |

◆ close

`fsp_err_t(* rsip_api_t::close) (rsip_ctrl_t *const p_ctrl)`

Disables use of Renesas Secure IP functionality.

Parameters

| | | |
|----------|--------|---------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
|----------|--------|---------------------------|

◆ randomNumberGenerate

`fsp_err_t(* rsip_api_t::randomNumberGenerate) (rsip_ctrl_t *const p_ctrl, uint8_t *const p_random)`

Generates a 128-bit random number.

Parameters

| | | |
|----------|----------|---------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_random | 128bit random numbers. |

◆ **keyGenerate**

```
fsp_err_t(* rsip_api_t::keyGenerate) (rsip_ctrl_t *const p_ctrl, rsip_key_type_t const key_type,
rsip_wrapped_key_t *const p_wrapped_key)
```

Generate a wrapped symmetric key from a random number. In this API, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Parameters

| | | |
|----------|---------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | key_type | Outputs key type. |
| [out] | p_wrapped_key | Pointer to destination of wrapped key. The length depends on key type. Refer "Key Size Table". |

◆ **keyPairGenerate**

```
fsp_err_t(* rsip_api_t::keyPairGenerate) (rsip_ctrl_t *const p_ctrl, rsip_key_pair_type_t const
key_pair_type, rsip_wrapped_key_t *const p_wrapped_public_key, rsip_wrapped_key_t *const
p_wrapped_private_key)
```

Generate a wrapped asymmetric key pair from a random number. In this API, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Parameters

| | | |
|----------|-----------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | key_pair_type | Output key pair type. |
| [out] | p_wrapped_public_key | Key index for Public Key. The length depends on the key type. Refer "Key Size Table". |
| [out] | p_wrapped_private_key | Key index for Private Key. The length depends on the key type. Refer "Key Size Table". |

◆ encryptedKeyWrap

```
fsp_err_t(* rsip_api_t::encryptedKeyWrap) (rsip_ctrl_t *const p_ctrl, rsip_key_update_key_t const *const p_key_update_key, uint8_t const *const p_initial_vector, rsip_key_type_t const key_type, uint8_t const *const p_encrypted_key, rsip_wrapped_key_t *const p_wrapped_key)
```

Decrypt the encrypted user key with Key Update Key (KUK) and wrap it with the Hardware Unique Key (HUK).

Parameters

| | | |
|----------|------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_key_update_key | Pointer to Key Update Key. |
| [in] | p_initial_vector | Initialization vector when generating encrypted_key. The length is 16 bytes. |
| [in] | key_type | Inputs/Outputs key type. |
| [in] | p_encrypted_key | Encrypted user key. The length depends on the key type. Refer "Key Size Table". |
| [out] | p_wrapped_key | Pointer to destination of wrapped key. The length depends on key type. Refer "Key Size Table". |

◆ publicKeyExport

```
fsp_err_t(* rsip_api_t::publicKeyExport) (rsip_wrapped_key_t const *const p_wrapped_public_key, uint8_t *const p_raw_public_key)
```

Exports public key parameters from a wrapped key.

Parameters

| | | |
|-------|----------------------|---|
| [in] | p_wrapped_public_key | Key index for Public Key. The length depends on the key type. Refer "Key Size Table". |
| [out] | p_raw_public_key | Pointer to destination of raw public key. The length depends on the key length. |

◆ aesCipherInit

```
fsp_err_t(* rsip_api_t::aesCipherInit) (rsip_ctrl_t *const p_ctrl, rsip_aes_cipher_mode_t const mode,
rsip_wrapped_key_t const *const p_wrapped_key, uint8_t const *const p_initial_vector)
```

Set parameters of AES cipher.

Parameters

| | | |
|----------|------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | mode | Block cipher modes of operation for AES. |
| [in] | p_wrapped_key | Pointer to wrapped key of AES or XTS-AES key. |
| [in] | p_initial_vector | Pointer to initialization vector (IV) or nonce. The length is 16 bytes. <ul style="list-style-type: none"> • [ECB] Not required • [CBC][XTS] IV • [CTR] Nonce |

◆ **aesCipherUpdate**

```
fsp_err_t(* rsip_api_t::aesCipherUpdate) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_input,
uint8_t *const p_output, uint32_t const length)
```

Encrypt plaintext.

Parameters

| | | |
|----------|----------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_input | Pointer to input text. The length is given as the argument. |
| [out] | p_output | Pointer to destination of output text. The length is given as the argument. |
| [in] | length | Byte length of input and output. <ul style="list-style-type: none"> • [ECB][CBC][CTR] Must be 0 or a multiple of 16. • [XTS] Must be 0 or greater than or equal to 16. After an integer not divisible by 16 is input, update can no longer be executed. |

◆ **aesCipherFinish**

```
fsp_err_t(* rsip_api_t::aesCipherFinish) (rsip_ctrl_t *const p_ctrl)
```

Finalize AES operation.

Parameters

| | | |
|----------|--------|---------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
|----------|--------|---------------------------|

◆ **aesAeadInit**

```
fsp_err_t(* rsip_api_t::aesAeadInit) (rsip_ctrl_t *const p_ctrl, rsip_aes_aead_mode_t const mode,
rsip_wrapped_key_t const *const p_wrapped_key, uint8_t const *const p_nonce, uint32_t const
nonce_length)
```

Prepares an AES-AEAD function.

Parameters

| | | |
|----------|---------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | mode | AEAD mode of operation. |
| [in] | p_wrapped_key | Pointer to wrapped key of AES key. |
| [in] | p_nonce | Pointer to nonce. The length is nonce_length. |
| [in] | nonce_length | Byte length of nonce. Input 1 or more. |

◆ **aesAeadLengthsSet**

```
fsp_err_t(* rsip_api_t::aesAeadLengthsSet) (rsip_ctrl_t *const p_ctrl, uint32_t const total_aad_length,
uint32_t const total_text_length, uint32_t const tag_length)
```

Set text and tag lengths for specific mode.

Parameters

| | | |
|----------|-------------------|-------------------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | total_aad_length | Total AAD length. |
| [in] | total_text_length | Total input and output text length. |
| [in] | tag_length | Input or output tag length. |

◆ **aesAeadAadUpdate**

```
fsp_err_t(* rsip_api_t::aesAeadAadUpdate) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_aad,
uint32_t const aad_length)
```

Inputs additional authentication data.

Parameters

| | | |
|----------|------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_aad | Additional authentication data. The length depends on aad_length. |
| [in] | aad_length | Byte length of additional authentication data (0 or more bytes). After starting input of plaintext, this value must always be 0. |

◆ **aesAeadUpdate**

```
fsp_err_t(* rsip_api_t::aesAeadUpdate) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_input,
uint32_t const input_length, uint8_t *const p_output, uint32_t *const p_output_length)
```

Inputs test and executes encryption and decryption.

Parameters

| | | |
|----------|-----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_input | Pointer to input text. The length is input_length. |
| [in] | input_length | Byte length of input text (0 or more bytes). |
| [out] | p_output | Pointer to destination of output text. The length is p_output_length. |
| [out] | p_output_length | Pointer to destination of output text length. |

◆ aesAeadFinish

```
fsp_err_t(* rsip_api_t::aesAeadFinish) (rsip_ctrl_t *const p_ctrl, uint8_t *const p_output, uint32_t *const p_output_length, uint8_t *const p_tag)
```

Finalizes an AES-GCM encryption.

If there is 16-byte fractional data indicated by the total data length of the value of p_plain that was input by R_RSIP_AES_GCM_EncryptUpdate(), this API will output the result of encrypting that fractional data to p_cipher. Here, the portion that does not reach 16 bytes will be padded with zeros.

Parameters

| | | |
|----------|-----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_output | Pointer to destination of output text. The fractional block is output. |
| [out] | p_output_length | Pointer to destination of output text length. |
| [out] | p_tag | Pointer to destination of tag for authentication. GCM : The length is 16 bytes. *If a different tag length is required, truncate the 16-byte tag to the required tag length (NIST SP800-38D 7.1). CCM : The length is the value set by the API R_RSIP_AES_AEAD_LengthsSet() . |

◆ **aesAeadVerify**

```
fsp_err_t(* rsip_api_t::aesAeadVerify) (rsip_ctrl_t *const p_ctrl, uint8_t *const p_output, uint32_t *const p_output_length, uint8_t const *const p_tag, uint32_t const tag_length)
```

Finalizes an AES-GCM decryption.

If there is 16-byte fractional data indicated by the total data length of the value of p_cipher that was input by R_RSIP_AES_GCM_DecryptUpdate(), this API will output the result of decrypting that fractional data to p_cipher. Here, the portion that does not reach 16 bytes will be padded with zeros.

Parameters

| | | |
|----------|-----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_output | Pointer to destination of decrypted data. |
| [out] | p_output_length | Pointer to destination of decrypted data length. |
| [in] | p_tag | Pointer to destination of tag for authentication. The length depends on tag_length. |
| [in] | tag_length | Byte length of tag. Must be 1 to 16. |

◆ **aesMacInit**

```
fsp_err_t(* rsip_api_t::aesMacInit) (rsip_ctrl_t *const p_ctrl, rsip_aes_mac_mode_t const mode, rsip_wrapped_key_t const *const p_wrapped_key)
```

Prepares an AES-MAC generation and verification.

Parameters

| | | |
|----------|---------------|------------------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | mode | MAC mode of operation |
| [in] | p_wrapped_key | Pointer to wrapped key of AES key. |

◆ **aesMacUpdate**

```
fsp_err_t(* rsip_api_t::aesMacUpdate) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_message,
uint32_t const message_length)
```

Input message. Inside this function, the data that is input by the user is buffered until the input value of p_message exceeds 16 bytes. If the input value, p_message, is not a multiple of 16 bytes, it will be padded within the function.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_message | Pointer to message. The length is message_length. |
| [in] | message_length | Byte length of message (0 or more bytes). |

◆ **aesMacSignFinish**

```
fsp_err_t(* rsip_api_t::aesMacSignFinish) (rsip_ctrl_t *const p_ctrl, uint8_t *const p_mac)
```

Finalizes an AES-CMAC generation.

Parameters

| | | |
|----------|--------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_mac | Pointer to destination of MAC. The length is 16 bytes. |

◆ **aesMacVerifyFinish**

```
fsp_err_t(* rsip_api_t::aesMacVerifyFinish) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_mac,
uint32_t const mac_length)
```

Finalizes an AES-CMAC verification.

Parameters

| | | |
|----------|------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_mac | Pointer to MAC. The length depends on mac_length. |
| [in] | mac_length | Byte length of MAC. Must be 2 to 16. |

◆ **ecdsaSign**

```
fsp_err_t(* rsip_api_t::ecdsaSign) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, uint8_t const *const p_hash, uint8_t *const p_signature)
```

Signs a hashed message. The message hash should be generated in advance.

Parameters

| | | |
|----------|-----------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_private_key | Pointer to wrapped key of ECC private key. |
| [in] | p_hash | Pointer to hash value. The length is as same as the key length. |
| [out] | p_signature | Pointer to destination of signature (r, s). The length is twice as long as the key length. |

◆ **ecdsaVerify**

```
fsp_err_t(* rsip_api_t::ecdsaVerify) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, uint8_t const *const p_hash, uint8_t const *const p_signature)
```

Verifies a hashed message. The message hash should be generated in advance.

Parameters

| | | |
|----------|----------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_public_key | Pointer to wrapped key of ECC public key. |
| [in] | p_hash | Pointer to hash value. The length is as same as the key length. |
| [in] | p_signature | Pointer to signature (r, s).The length is twice as long as the key length. |

◆ **rsaEncrypt**

```
fsp_err_t(* rsip_api_t::rsaEncrypt) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const p_wrapped_public_key, uint8_t const *const p_plain, uint8_t *const p_cipher)
```

Encrypts plaintext with raw RSA.

Parameters

| | | |
|----------|----------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_public_key | Pointer to wrapped key of RSA public key. |
| [in] | p_plain | Pointer to plaintext. The length is as same as the key length. |
| [out] | p_cipher | Pointer to destination of ciphertext. The length is as same as the key length. |

◆ **rsaDecrypt**

```
fsp_err_t(* rsip_api_t::rsaDecrypt) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const p_wrapped_private_key, uint8_t const *const p_cipher, uint8_t *const p_plain)
```

Decrypts ciphertext with raw RSA.

Parameters

| | | |
|----------|-----------------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_private_key | Pointer to wrapped key of RSA private key. |
| [in] | p_cipher | Pointer to ciphertext. The length is as same as the key length. |
| [out] | p_plain | Pointer to destination of plaintext. The length is as same as the key length. |

◆ **rsaesPkcs1V15Encrypt**

```
fsp_err_t(* rsip_api_t::rsaesPkcs1V15Encrypt) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_public_key, uint8_t const *const p_plain, uint32_t const plain_length, uint8_t
*const p_cipher)
```

Encrypts plaintext with RSAES-PKCS1-v1_5.

Parameters

| | | |
|----------|----------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_public_key | Pointer to wrapped key of RSA public key. |
| [in] | p_plain | Pointer to plaintext. |
| [in] | plain_length | Length of plaintext. |
| [out] | p_cipher | Pointer to destination of ciphertext. The length is as same as the key length. |

◆ **rsaesPkcs1V15Decrypt**

```
fsp_err_t(* rsip_api_t::rsaesPkcs1V15Decrypt) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_private_key, uint8_t const *const p_cipher, uint8_t *const p_plain, uint32_t
*const p_plain_length, uint32_t const plain_buffer_length)
```

Decrypts with RSAES-PKCS1-v1_5.

Parameters

| | | |
|----------|-----------------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_private_key | Pointer to wrapped key of RSA private key. |
| [in] | p_cipher | Pointer to ciphertext. The length is as same as the key length. |
| [out] | p_plain | Pointer to destination of plaintext. |
| [out] | p_plain_length | Pointer to destination of actual plaintext length. |
| [in] | plain_buffer_length | Length of plaintext destination. It must be equal to or greater than *p_plain_length. |

◆ rsaesOaepEncrypt

```
fsp_err_t(* rsip_api_t::rsaesOaepEncrypt) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint8_t const *const p_label, uint32_t const label_length, uint8_t const
*const p_plain, uint32_t const plain_length, uint8_t *const p_cipher)
```

Encrypts plaintext with RSAES-OAEP.

Parameters

| | | |
|----------|--------------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_public_key | Pointer to wrapped key of RSA public key. |
| [in] | hash_function | Hash function for label. |
| [in] | mask_generation_function | Mask generation function in EME-OAEP encoding. |
| [in] | p_label | Pointer to label. If label_length != 0, p_label must not be NULL. |
| [in] | label_length | Length of label. Please set 0 or more. |
| [in] | p_plain | Pointer to plaintext. |
| [in] | plain_length | Length of plaintext. |
| [out] | p_cipher | Pointer to destination of ciphertext. The length is as same as the key length. |

◆ rsaesOaepDecrypt

```
fsp_err_t(* rsip_api_t::rsaesOaepDecrypt) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint8_t const *const p_label, uint32_t const label_length, uint8_t const
*const p_cipher, uint8_t *const p_plain, uint32_t *const p_plain_length, uint32_t const
plain_buffer_length)
```

Decrypts ciphertext with RSAES-OAEP.

Parameters

| | | |
|----------|--------------------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_private_key | Pointer to wrapped key of RSA private key. |
| [in] | hash_function | Hash function for label. |
| [in] | mask_generation_function | Mask generation function in EME-OAEP encoding. |
| [in] | p_label | Pointer to label. If label_length != 0, p_label must not be NULL. |
| [in] | label_length | Length of label. Please set 0 or more. |
| [in] | p_cipher | Pointer to ciphertext. The length is as same as the key length. |
| [out] | p_plain | Pointer to destination of plaintext. |
| [out] | p_plain_length | Pointer to destination of actual plaintext length. |
| [in] | plain_buffer_length | Length of plaintext destination. It must be equal to or greater than *p_plain_length. |

◆ **rsassaPkcs1V15Sign**

```
fsp_err_t(* rsip_api_t::rsassaPkcs1V15Sign) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_private_key, rsip_hash_type_t const hash_function, uint8_t const *const p_hash,
uint8_t *const p_signature)
```

Signs message with RSASSA-PKCS1-v1_5.

Parameters

| | | |
|----------|-----------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_private_key | Pointer to wrapped key of RSA private key. |
| [in] | hash_function | Hash function in EMSA-PKCS1-v1_5. |
| [in] | p_hash | Pointer to input hash. |
| [out] | p_signature | Pointer to destination of signature. |

◆ **rsassaPkcs1V15Verify**

```
fsp_err_t(* rsip_api_t::rsassaPkcs1V15Verify) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const
*const p_wrapped_public_key, rsip_hash_type_t const hash_function, uint8_t const *const p_hash,
uint8_t const *const p_signature)
```

Verifies signature with RSASSA-PKCS1-v1_5.

Parameters

| | | |
|----------|----------------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_public_key | Pointer to wrapped key of RSA public key. |
| [in] | hash_function | Hash function in EMSA-PKCS1-v1_5. |
| [in] | p_hash | Pointer to input hash. |
| [in] | p_signature | Pointer to input signature. |

◆ **rsassaPssSign**

```
fsp_err_t(* rsip_api_t::rsassaPssSign) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_private_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint32_t const salt_length, uint8_t const *const p_hash, uint8_t *const
p_signature)
```

Signs message with RSASSA-PSS.

Parameters

| | | |
|----------|--------------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_private_key | Pointer to wrapped key of RSA private key. |
| [in] | hash_function | Hash function in EMSA-PSS-ENCODE. |
| [in] | mask_generation_function | Mask generation function in EMSA-PSS-ENCODE. |
| [in] | salt_length | Salt length. |
| [in] | p_hash | Pointer to input hash. |
| [out] | p_signature | Pointer to destination of signature. |

◆ **rsassaPssVerify**

```
fsp_err_t(* rsip_api_t::rsassaPssVerify) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const
p_wrapped_public_key, rsip_hash_type_t const hash_function, rsip_mgf_type_t const
mask_generation_function, uint32_t const salt_length, uint8_t const *const p_hash, uint8_t const
*const p_signature)
```

Verifies signature with RSASSA-PSS.

Parameters

| | | |
|----------|--------------------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_public_key | Pointer to wrapped key of RSA public key. |
| [in] | hash_function | Hash function in EMSA-PSS-VERIFY. |
| [in] | mask_generation_function | Mask generation function in EMSA-PSS-VERIFY. |
| [in] | salt_length | Salt length. |
| [in] | p_hash | Pointer to input hash. |
| [in] | p_signature | Pointer to input signature. |

◆ shaCompute

```
fsp_err_t(* rsip_api_t::shaCompute) (rsip_ctrl_t *const p_ctrl, rsip_hash_type_t const hash_type,
uint8_t const *const p_message, uint32_t const message_length, uint8_t *const p_digest)
```

Generates SHA message digest.

Parameters

| | | |
|----------|----------------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | hash_type | Generating hash type. |
| [in] | p_message | Pointer to message. The length is message_length. |
| [in] | message_length | Byte length of message (0 or more bytes). |
| [out] | p_digest | Pointer to destination of message digest. The length depends on hash type. |

◆ shaInit

```
fsp_err_t(* rsip_api_t::shaInit) (rsip_ctrl_t *const p_ctrl, rsip_hash_type_t const hash_type)
```

Prepares a SHA generation.

Parameters

| | | |
|----------|-----------|---------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | hash_type | Generating hash type. |

◆ shaUpdate

```
fsp_err_t(* rsip_api_t::shaUpdate) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_message,
uint32_t const message_length)
```

Inputs message.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_message | Pointer to message. The length is message_length. |
| [in] | message_length | Byte length of message (0 or more bytes). |

◆ shaFinish

```
fsp_err_t(* rsip_api_t::shaFinish) (rsip_ctrl_t *const p_ctrl, uint8_t *const p_digest)
```

Finalizes a SHA generation.

Parameters

| | | |
|----------|----------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_digest | Pointer to destination of message digest. The length depends on hash type. |

◆ shaSuspend

```
fsp_err_t(* rsip_api_t::shaSuspend) (rsip_ctrl_t *const p_ctrl, rsip_sha_handle_t *const p_handle)
```

Suspend SHA generation. This API allows you to suspend processing, for example, if you are in the middle of computing digest value for successive chunks of the message and need to perform another process.

Parameters

| | | |
|----------|----------|--|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_handle | Pointer to destination of SHA control block. |

◆ shaResume

```
fsp_err_t(* rsip_api_t::shaResume) (rsip_ctrl_t *const p_ctrl, rsip_sha_handle_t const *const p_handle)
```

Resume SHA generation. This API allows you to resume a process that has been suspended by [R_RSIP_SHA_Suspend\(\)](#) API.

Parameters

| | | |
|----------|----------|-------------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_handle | Pointer to SHA control block. |

◆ **hmacCompute**

```
fsp_err_t(* rsip_api_t::hmacCompute) (rsip_ctrl_t *const p_ctrl, const rsip_wrapped_key_t
*p_wrapped_key, uint8_t const *const p_message, uint32_t const message_length, uint8_t *const
p_mac)
```

Generates HMAC.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_key | Pointer to wrapped key of HMAC key. |
| [in] | p_message | Pointer to message. The length is message_length. |
| [in] | message_length | Byte length of message (0 or more bytes). |
| [out] | p_mac | Pointer to destination of message digest. The length depends on MAC type. |

◆ **hmacVerify**

```
fsp_err_t(* rsip_api_t::hmacVerify) (rsip_ctrl_t *const p_ctrl, const rsip_wrapped_key_t
*p_wrapped_key, uint8_t const *const p_message, uint32_t const message_length, uint8_t const
*const p_mac, uint32_t const mac_length)
```

Verifies HMAC.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_key | Pointer to wrapped key of HMAC key. |
| [in] | p_message | Pointer to message. The length is message_length. |
| [in] | message_length | Byte length of message (0 or more bytes). |
| [in] | p_mac | Pointer to MAC. The length depends on mac_length. |
| [in] | mac_length | Byte length of MAC. |

◆ **hmacInit**

```
fsp_err_t(* rsip_api_t::hmacInit) (rsip_ctrl_t *const p_ctrl, rsip_wrapped_key_t const *const p_wrapped_key)
```

Prepares a HMAC generation.

Parameters

| | | |
|----------|---------------|-------------------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_wrapped_key | Pointer to wrapped key of HMAC key. |

◆ **hmacUpdate**

```
fsp_err_t(* rsip_api_t::hmacUpdate) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_message, uint32_t const message_length)
```

Inputs message.

Parameters

| | | |
|----------|----------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_message | Pointer to message. The length is message_length. |
| [in] | message_length | Byte length of message (0 or more bytes). |

◆ **hmacSignFinish**

```
fsp_err_t(* rsip_api_t::hmacSignFinish) (rsip_ctrl_t *const p_ctrl, uint8_t *const p_mac)
```

Finalizes a HMAC generation.

Parameters

| | | |
|----------|--------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_mac | Pointer to destination of message digest. The length depends on MAC type. |

◆ **hmacVerifyFinish**

```
fsp_err_t(* rsip_api_t::hmacVerifyFinish) (rsip_ctrl_t *const p_ctrl, uint8_t const *const p_mac,
uint32_t const mac_length)
```

Finalizes a HMAC verification.

Parameters

| | | |
|----------|------------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_mac | Pointer to MAC. The length depends on mac_length. |
| [in] | mac_length | Byte length of MAC. |

◆ **hmacSuspend**

```
fsp_err_t(* rsip_api_t::hmacSuspend) (rsip_ctrl_t *const p_ctrl, rsip_hmac_handle_t *const p_handle)
```

Suspend HMAC generation. This API allows you to suspend processing, for example, if you are in the middle of computing HMAC for successive chunks of the message and need to perform another process.

Parameters

| | | |
|----------|----------|---|
| [in,out] | p_ctrl | Pointer to control block. |
| [out] | p_handle | Pointer to destination of HMAC control block. |

◆ **hmacResume**

```
fsp_err_t(* rsip_api_t::hmacResume) (rsip_ctrl_t *const p_ctrl, rsip_hmac_handle_t const *const
p_handle)
```

Resume HMAC generation. This API allows you to resume a process that has been suspended by [R_RSIP_HMAC_Suspend\(\)](#) API.

Parameters

| | | |
|----------|----------|--------------------------------|
| [in,out] | p_ctrl | Pointer to control block. |
| [in] | p_handle | Pointer to HMAC control block. |

◆ **rsip_instance_t**

```
struct rsip_instance_t
```

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

| | | |
|---------------|--------|---|
| rsip_ctrl_t * | p_ctrl | Pointer to the control structure for this instance. |
|---------------|--------|---|

| | | |
|---------------------------------|--------------------|---|
| <code>rsip_cfg_t</code> const * | <code>p_cfg</code> | Pointer to the configuration structure for this instance. |
| <code>rsip_api_t</code> const * | <code>p_api</code> | Pointer to the API structure for this instance. |

Typedef Documentation

◆ `rsip_ctrl_t`

```
typedef void rsip_ctrl_t
```

RSIP Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- `rsip_instance_ctrl_t`

Enumeration Type Documentation

◆ `rsip_alg_t`

```
enum rsip_alg_t
```

Key algorithms

Enumerator

| | |
|-----------------------------------|------------------|
| <code>RSIP_ALG_INVALID</code> | Invalid. |
| <code>RSIP_ALG_AES</code> | AES. |
| <code>RSIP_ALG_XTS_AES</code> | XTS-AES. |
| <code>RSIP_ALG_CHACHA</code> | ChaCha. |
| <code>RSIP_ALG_ECC_PUBLIC</code> | ECC public key. |
| <code>RSIP_ALG_ECC_PRIVATE</code> | ECC private key. |
| <code>RSIP_ALG_RSA_PUBLIC</code> | RSA public key. |
| <code>RSIP_ALG_RSA_PRIVATE</code> | RSA private key. |
| <code>RSIP_ALG_HMAC</code> | HMAC. |

◆ rsip_key_subtype_t

| enum rsip_key_subtype_t | |
|------------------------------|-----------------|
| Key sub type | |
| Enumerator | |
| RSIP_KEY_INVALID | Invalid key. |
| RSIP_KEY_AES_128 | AES-128. |
| RSIP_KEY_AES_192 | AES-192. |
| RSIP_KEY_AES_256 | AES-256. |
| RSIP_KEY_CHACHA_CHACHA20 | ChaCha20. |
| RSIP_KEY_ECC_SECP256R1 | secp256r1 |
| RSIP_KEY_ECC_SECP384R1 | secp384r1 |
| RSIP_KEY_ECC_SECP521R1 | secp521r1 |
| RSIP_KEY_ECC_SECP256K1 | secp256k1 |
| RSIP_KEY_ECC_BRAINPOOLP256R1 | brainpoolP256r1 |
| RSIP_KEY_ECC_BRAINPOOLP384R1 | brainpoolP384r1 |
| RSIP_KEY_ECC_BRAINPOOLP512R1 | brainpoolP512r1 |
| RSIP_KEY_ECC_EDWARDS25519 | edwards25519 |
| RSIP_KEY_RSA_1024 | RSA-1024. |
| RSIP_KEY_RSA_2048 | RSA-2048. |
| RSIP_KEY_RSA_3072 | RSA-3072. |
| RSIP_KEY_RSA_4096 | RSA-4096. |
| RSIP_KEY_HMAC_SHA1 | HMAC-SHA1. |
| RSIP_KEY_HMAC_SHA224 | HMAC-SHA224. |
| RSIP_KEY_HMAC_SHA256 | HMAC-SHA256. |

◆ rsip_key_type_t

| enum rsip_key_type_t | |
|---|--|
| Key types | |
| Enumerator | |
| RSIP_KEY_TYPE_INVALID | Invalid key. |
| RSIP_KEY_TYPE_AES_128 | AES-128. |
| RSIP_KEY_TYPE_AES_192 | AES-192. |
| RSIP_KEY_TYPE_AES_256 | AES-256. |
| RSIP_KEY_TYPE_RSA_2048_PUBLIC | RSA-2048 public key. |
| RSIP_KEY_TYPE_RSA_2048_PRIVATE | RSA-2048 private key. |
| RSIP_KEY_TYPE_RSA_3072_PUBLIC | RSA-2048 public key. |
| RSIP_KEY_TYPE_RSA_3072_PRIVATE | RSA-2048 private key. |
| RSIP_KEY_TYPE_RSA_4096_PUBLIC | RSA-2048 public key. |
| RSIP_KEY_TYPE_RSA_4096_PRIVATE | RSA-2048 private key. |
| RSIP_KEY_TYPE_ECC_SECP256R1_PUBLIC | secp256r1 public key (also known as NIST P-256, prime256v1) |
| RSIP_KEY_TYPE_ECC_SECP256R1_PRIVATE | secp256r1 private key (also known as NIST P-256, prime256v1) |
| RSIP_KEY_TYPE_ECC_SECP384R1_PUBLIC | secp384r1 public key (also known as NIST P-256, prime256v1) |
| RSIP_KEY_TYPE_ECC_SECP384R1_PRIVATE | secp384r1 private key (also known as NIST P-256, prime256v1) |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP256R1_PUBLIC | brainpool256r1 public key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP256R1_PRIVATE | brainpool256r1 private key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP384R1_PUBLIC | brainpool256r1 public key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP384R1_PRIVATE | brainpool256r1 private key |
| RSIP_KEY_TYPE_ECC_SECP256K1_PUBLIC | secp256k1 public key |

| | |
|---|--|
| RSIP_KEY_TYPE_ECC_SECP256K1_PRIVATE | secp256k1 private key |
| RSIP_KEY_TYPE_INVALID | Invalid key. |
| RSIP_KEY_TYPE_AES_128 | AES-128. |
| RSIP_KEY_TYPE_AES_192 | AES-192. |
| RSIP_KEY_TYPE_AES_256 | AES-256. |
| RSIP_KEY_TYPE_XTS_AES_128 | XTS-AES-128. |
| RSIP_KEY_TYPE_XTS_AES_256 | XTS-AES-256. |
| RSIP_KEY_TYPE_CHACHA20 | ChaCha20. |
| RSIP_KEY_TYPE_ECC_SECP256R1_PUBLIC | secp256r1 public key (also known as NIST P-256, prime256v1) |
| RSIP_KEY_TYPE_ECC_SECP384R1_PUBLIC | secp384r1 public key (also known as NIST P-384) |
| RSIP_KEY_TYPE_ECC_SECP521R1_PUBLIC | secp521r1 public key (also known as NIST P-521) |
| RSIP_KEY_TYPE_ECC_SECP256K1_PUBLIC | secp256k1 public key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP256R1_PUBLIC | brainpoolP256r1 public key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP384R1_PUBLIC | brainpoolP384r1 public key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP512R1_PUBLIC | brainpoolP512r1 public key |
| RSIP_KEY_TYPE_ECC_EDWARDS25519_PUBLIC | edwards25519 public key |
| RSIP_KEY_TYPE_ECC_SECP256R1_PRIVATE | secp256r1 private key (also known as NIST P-256, prime256v1) |
| RSIP_KEY_TYPE_ECC_SECP384R1_PRIVATE | secp384r1 private key (also known as NIST P-384) |
| RSIP_KEY_TYPE_ECC_SECP521R1_PRIVATE | secp521r1 private key (also known as NIST P-521) |
| RSIP_KEY_TYPE_ECC_SECP256K1_PRIVATE | secp256k1 private key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP256R1_PRIVATE | brainpoolP256r1 private key |
| | |

| | |
|---|-----------------------------|
| RSIP_KEY_TYPE_ECC_BRAINPOOLP384R1_PRIVATE | brainpoolP384r1 private key |
| RSIP_KEY_TYPE_ECC_BRAINPOOLP512R1_PRIVATE | brainpoolP512r1 private key |
| RSIP_KEY_TYPE_ECC_EDWARDS25519_PRIVATE | edwards25519 private key |
| RSIP_KEY_TYPE_RSA_1024_PUBLIC | RSA-1024 public key. |
| RSIP_KEY_TYPE_RSA_2048_PUBLIC | RSA-2048 public key. |
| RSIP_KEY_TYPE_RSA_3072_PUBLIC | RSA-3072 public key. |
| RSIP_KEY_TYPE_RSA_4096_PUBLIC | RSA-4096 public key. |
| RSIP_KEY_TYPE_RSA_1024_PRIVATE | RSA-1024 private key. |
| RSIP_KEY_TYPE_RSA_2048_PRIVATE | RSA-2048 private key. |
| RSIP_KEY_TYPE_RSA_3072_PRIVATE | RSA-3072 private key. |
| RSIP_KEY_TYPE_RSA_4096_PRIVATE | RSA-4096 private key. |
| RSIP_KEY_TYPE_HMAC_SHA1 | HMAC-SHA1. |
| RSIP_KEY_TYPE_HMAC_SHA224 | HMAC-SHA224. |
| RSIP_KEY_TYPE_HMAC_SHA256 | HMAC-SHA256. |

◆ **rsip_key_pair_type_t**

| enum <code>rsip_key_pair_type_t</code> | |
|---|---|
| Key pair types | |
| Enumerator | |
| <code>RSIP_KEY_PAIR_TYPE_INVALID</code> | Invalid key pair type. |
| <code>RSIP_KEY_PAIR_TYPE_ECC_SECP256R1</code> | secp256r1 key pair (also known as NIST P-256, prime256v1) |
| <code>RSIP_KEY_PAIR_TYPE_ECC_SECP384R1</code> | secp384r1 key pair (also known as NIST P-384) |
| <code>RSIP_KEY_PAIR_TYPE_ECC_SECP521R1</code> | secp521r1 key pair (also known as NIST P-521) |
| <code>RSIP_KEY_PAIR_TYPE_ECC_SECP256K1</code> | secp256k1 key pair |
| <code>RSIP_KEY_PAIR_TYPE_ECC_BRAINPOOLP256R1</code> | brainpoolP256r1 key pair |
| <code>RSIP_KEY_PAIR_TYPE_ECC_BRAINPOOLP384R1</code> | brainpoolP384r1 key pair |
| <code>RSIP_KEY_PAIR_TYPE_ECC_BRAINPOOLP512R1</code> | brainpoolP512r1 key pair |
| <code>RSIP_KEY_PAIR_TYPE_ECC_EDWARDS25519</code> | edwards25519 key pair |
| <code>RSIP_KEY_PAIR_TYPE_RSA_1024</code> | RSA-1024 key pair. |
| <code>RSIP_KEY_PAIR_TYPE_RSA_2048</code> | RSA-2048 key pair. |
| <code>RSIP_KEY_PAIR_TYPE_RSA_3072</code> | RSA-3072 key pair. |
| <code>RSIP_KEY_PAIR_TYPE_RSA_4096</code> | RSA-4096 key pair. |

◆ **rsip_byte_size_wrapped_key_t**

| enum <code>rsip_byte_size_wrapped_key_t</code> | |
|---|-----------------------------|
| Byte size of wrapped key | |
| Enumerator | |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_AES_128</code> | AES-128. |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_AES_192</code> | AES-192. |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_AES_256</code> | AES-256. |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_XTS_AES_128</code> | XTS-AES-128. |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_XTS_AES_256</code> | XTS-AES-256. |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP256R1_PUBLIC</code> | secp256r1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP384R1_PUBLIC</code> | secp384r1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP521R1_PUBLIC</code> | secp521r1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP256K1_PUBLIC</code> | secp256k1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_BRAINPOOLP256R1_PUBLIC</code> | brainpoolP256r1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_BRAINPOOLP384R1_PUBLIC</code> | brainpoolP384r1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_BRAINPOOLP512R1_PUBLIC</code> | brainpoolP512r1 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_EDWARDS25519_PUBLIC</code> | edwards25519 public key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP256R1_PRIVATE</code> | secp256r1 private key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP384R1_PRIVATE</code> | secp384r1 private key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP521R1_PRIVATE</code> | secp521r1 private key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_SECP256K1_PRIVATE</code> | secp256k1 private key |
| <code>RSIP_BYTE_SIZE_WRAPPED_KEY_ECC_BRAINPOOLP256R1_PRIVATE</code> | brainpoolP256r1 private key |

| RSIP_BYTE_SIZE_WRAPPED_KEY_HMAC_SHA256 | HMAC-SHA256 private key. |

◆ **rsip_aes_cipher_mode_t**

| enum rsip_aes_cipher_mode_t | |
|---|--|
| Block cipher modes of operation for AES | |
| Enumerator | |
| RSIP_AES_CIPHER_MODE_ECB_ENC | Electronic Codebook (ECB) encryption. |
| RSIP_AES_CIPHER_MODE_ECB_DEC | Electronic Codebook (ECB) decryption. |
| RSIP_AES_CIPHER_MODE_CBC_ENC | Cipher Block Chaining (CBC) mode encryption. |
| RSIP_AES_CIPHER_MODE_CBC_DEC | Cipher Block Chaining (CBC) mode decryption. |
| RSIP_AES_CIPHER_MODE_CTR | Counter (CTR) encryption and decryption. |
| RSIP_AES_CIPHER_MODE_XTS_ENC | XEX-based tweaked-codebook mode with ciphertext stealing (XTS) encryption. |
| RSIP_AES_CIPHER_MODE_XTS_DEC | XEX-based tweaked-codebook mode with ciphertext stealing (XTS) decryption. |

◆ **rsip_aes_aead_mode_t**

| enum rsip_aes_aead_mode_t | |
|---|--|
| AEAD modes of operation for AES | |
| Enumerator | |
| RSIP_AES_AEAD_MODE_GCM_ENC | Galois/Counter Mode (GCM) encryption. |
| RSIP_AES_AEAD_MODE_GCM_DEC | Galois/Counter Mode (GCM) decryption. |
| RSIP_AES_AEAD_MODE_CCM_ENC | Counter with CBC-MAC (CCM) encryption. |
| RSIP_AES_AEAD_MODE_CCM_DEC | Counter with CBC-MAC (CCM) decryption. |

◆ **rsip_aes_mac_mode_t**

| enum rsip_aes_mac_mode_t | |
|--|-------------------------|
| MAC modes of operation for AES | |
| Enumerator | |
| RSIP_AES_MAC_MODE_CMAC | Cipher-based MAC (CMAC) |

◆ **rsip_hash_type_t**

| enum <code>rsip_hash_type_t</code> | |
|--|--------------|
| Hash type | |
| Enumerator | |
| <code>RSIP_HASH_TYPE_SHA1</code> | SHA-1. |
| <code>RSIP_HASH_TYPE_SHA224</code> | SHA-224. |
| <code>RSIP_HASH_TYPE_SHA256</code> | SHA-256. |
| <code>RSIP_HASH_TYPE_SHA384</code> | SHA-384. |
| <code>RSIP_HASH_TYPE_SHA512</code> | SHA-512. |
| <code>RSIP_HASH_TYPE_SHA512_224</code> | SHA-512/224. |
| <code>RSIP_HASH_TYPE_SHA512_256</code> | SHA-512/256. |

◆ **rsip_mgf_type_t**

| enum <code>rsip_mgf_type_t</code> | |
|--|------------------------|
| MGF type | |
| Enumerator | |
| <code>RSIP_MGF_TYPE_MGF1_SHA1</code> | MGF1 with SHA-1. |
| <code>RSIP_MGF_TYPE_MGF1_SHA224</code> | MGF1 with SHA-224. |
| <code>RSIP_MGF_TYPE_MGF1_SHA256</code> | MGF1 with SHA-256. |
| <code>RSIP_MGF_TYPE_MGF1_SHA384</code> | MGF1 with SHA-384. |
| <code>RSIP_MGF_TYPE_MGF1_SHA512</code> | MGF1 with SHA-512. |
| <code>RSIP_MGF_TYPE_MGF1_SHA512_224</code> | MGF1 with SHA-512/224. |
| <code>RSIP_MGF_TYPE_MGF1_SHA512_256</code> | MGF1 with SHA-512/256. |

◆ **rsip_rsa_salt_length_t**

| enum rsip_rsa_salt_length_t | |
|---|--|
| RSA salt length | |
| Enumerator | |
| RSIP_RSA_SALT_LENGTH_AUTO | When signing, the salt length is set to RSIP_RSA_SALT_LENGTH_MAX or RSIP_RSA_SALT_LENGTH_HASH , whichever is shorter. When verifying, the salt length is detected automatically. |
| RSIP_RSA_SALT_LENGTH_HASH | The salt length is set to the hash length. |
| RSIP_RSA_SALT_LENGTH_MAX | The salt length is set to $emLen - hLen - 2$, where $emLen$ is the same as the key length and $hLen$ is the hash length. |

Detailed Description

Data Structures

struct [lvd_instance_ctrl_t](#)

Data Structure Documentation

◆ **lvd_instance_ctrl_t**

```
struct lvd_instance_ctrl_t
```

LVD instance control structure

Function Documentation

◆ R_LVD_Open()

```
fsp_err_t R_LVD_Open ( lvd_ctrl_t*const p_api_ctrl, lvd_cfg_t const*const p_cfg )
```

Initializes a voltage monitor and detector according to the passed-in configuration structure.

Parameters

| | | |
|------|------------|--|
| [in] | p_api_ctrl | Pointer to the control structure for the driver instance |
| [in] | p_cfg | Pointer to the configuration structure for the driver instance |

Note

Digital filter is not to be used with standby modes.

Startup time can take on the order of milliseconds for some configurations.

Example:

```
fsp_err_t err = R_LVD_Open(&g_lvd_ctrl, &g_lvd_cfg);
```

Return values

| | |
|----------------------|---|
| FSP_SUCCESS | Successful |
| FSP_ERR_ASSERTION | Requested configuration was invalid |
| FSP_ERR_ALREADY_OPEN | The instance was already opened |
| FSP_ERR_IN_USE | Another instance is already using the desired monitor |
| FSP_ERR_UNSUPPORTED | Digital filter was enabled on a device that does not support it |

◆ R_LVD_StatusGet()

```
fsp_err_t R_LVD_StatusGet ( lvd_ctrl_t *const p_api_ctrl, lvd_status_t * p_lvd_status )
```

Get the current state of the monitor (threshold crossing detected, voltage currently above or below threshold).

Parameters

| | | |
|-------|--------------|--|
| [in] | p_api_ctrl | Pointer to the control structure for the driver instance |
| [out] | p_lvd_status | Pointer to status structure |

Example:

```
err = R_LVD_StatusGet(&g_lvd_ctrl, &status);
```

Return values

| | |
|-------------------|----------------------|
| FSP_SUCCESS | Successful |
| FSP_ERR_ASSERTION | An argument was NULL |
| FSP_ERR_NOT_OPEN | Driver is not open |

◆ R_LVD_StatusClear()

```
fsp_err_t R_LVD_StatusClear ( lvd_ctrl_t *const p_api_ctrl)
```

Clears the latched status of the monitor.

Parameters

| | | |
|------|------------|--|
| [in] | p_api_ctrl | Pointer to the control structure for the driver instance |
|------|------------|--|

Return values

| | |
|-------------------|----------------------|
| FSP_SUCCESS | Successful |
| FSP_ERR_ASSERTION | An argument was NULL |
| FSP_ERR_NOT_OPEN | Driver is not open |

◆ **R_LVD_CallbackSet()**

```
fsp_err_t R_LVD_CallbackSet ( lvd_ctrl_t *const p_api_ctrl, void(*)(lvd_callback_args_t *)
p_callback, void const *const p_context, lvd_callback_args_t *const p_callback_memory )
```

Updates the user callback and has option of providing memory for callback structure. Implements `lvd_api_t::callbackSet`

Return values

| | |
|----------------------------|--|
| FSP_SUCCESS | Callback updated successfully. |
| FSP_ERR_ASSERTION | A required pointer is NULL. |
| FSP_ERR_NOT_OPEN | The control block has not been opened. |
| FSP_ERR_NO_CALLBACK_MEMORY | <code>p_callback</code> is non-secure and <code>p_callback_memory</code> is either secure or NULL. |

◆ **R_LVD_Close()**

```
fsp_err_t R_LVD_Close ( lvd_ctrl_t *const p_api_ctrl)
```

Disables the LVD peripheral. Closes the driver instance.

Parameters

| | | |
|------|-------------------------|--|
| [in] | <code>p_api_ctrl</code> | Pointer to the control block structure for the driver instance |
|------|-------------------------|--|

Return values

| | |
|-------------------|----------------------|
| FSP_SUCCESS | Successful |
| FSP_ERR_ASSERTION | An argument was NULL |
| FSP_ERR_NOT_OPEN | Driver is not open |
