1 Application

This release notes is applicable to the following parts of the E8a emulator software.

- R8C E8a Emulator Debugger V.1.05.01

2 System Requirements

2.1 Operating Environment (Windows® 7, Windows Vista® or, Windows® XP)

PC Environment	
PC	IBM PC/AT compatible
OS	Windows® 7 ^{*1} 32-bit editions of Windows Vista® ^{*1 *3} 32-bit editions of Windows® XP ^{*1 *2}
CPU	Pentium 4 running at 3 GHz or more recommended
Memory	Windows® 7, Windows Vista®: 1.5 Gbytes or larger (more than 10 times the file size of the load module) recommended Windows® XP: 768 Mbytes or larger (more than 10 times the file size of the load module) recommended
Hard disk	Installation of the simulator debugger requires free space of 200 Mbytes or larger. Also keep additional free space that is at least twice the memory capacity (four times or larger recommended) for use as swap space.
Display resolution	1024 × 768 or higher recommended

*1: Windows and Windows Vista are either registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.

*2: The 64-bit editions of Windows® XP is not supported.

*3: The 64-bit edition of Windows Vista® is not supported.

4 Notes

This document is supplementary information for the E8a Emulator Additional Document for User's Manual.

4.1 Note on rewriting flash memory

Do not execute debugging operations when rewriting the flash memory. Flash memory rewrite ends when the "Flash memory write end" is displayed in the output window of the High-performance Embedded Workshop. Flash memory rewrite occurs:

- When downloading the user program
- After setting PC breaks in the flash memory and executing the user program
- After canceling PC breaks in the flash memory and executing the user program
- After rewriting the value of the flash memory in the memory window and executing the user program

4.2 Notes on using automatic memory update

- If the automatic memory update is enabled in the Memory or Watch window, do not reset the MCU.
- When automatic memory update is enabled, do not execute Step Out or Multiple-steps.

4.3 Note on memory verification

- As the E8a emulator debugger does not support the following memory verification, the emulator always runs without verifying memory.
 - Memory Setting (e.g. [Set] popup menu in the Memory window)
 - Memory Fill (e.g. [Fill] popup menu in the Memory window)
 - Memory Copy (e.g. [Move] popup menu in the Memory window)
 - Loading a memory area from a file (e.g. [Load] popup menu in the Memory window)
- The E8a emulator debugger does not support "Perform memory verify during download" and "Access size" of the Download Module dialog box. Please run the debugger without memory verification and with access size set to 1.
- From [Debug] > [Verify Memory] you cannot select any format containing debug information. Though an option may appear in [File format] drop-down list, do not select it.

4.4 The function to apply the settings selected in creating a new workspace

The Settings ("CPU Group", "firmware Address" and "WorkRAM Address") selected in creating a new workspace can be applied to the emulator setting dialog box. This function had been added since the R8C E8a emulator debugger V.1.03.00.

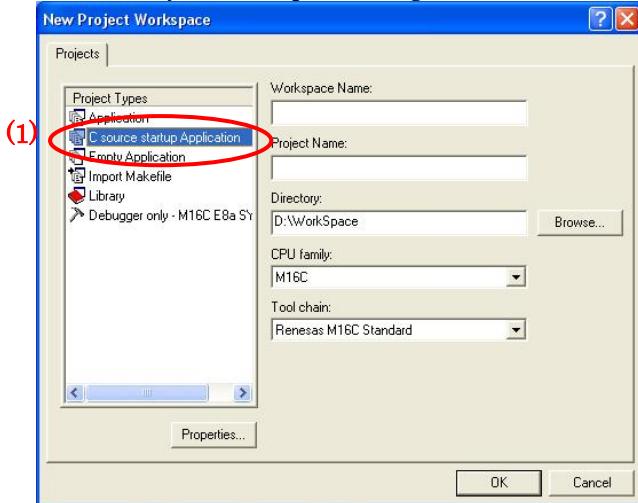

This function can run if the following conditions are all satisfied:

- Install the following software:

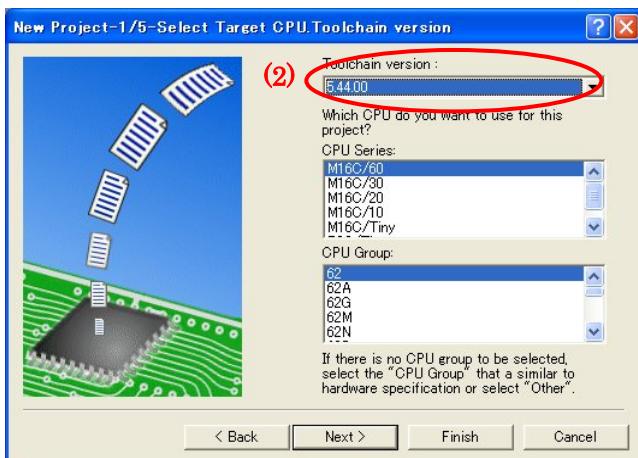

software name	version
High-performance Embedded Workshop	V.4.05.00 or later
C Compiler Package M3T-NC30WA	V.5.42 Release 00 or later

- Create a new workspace with the following settings:

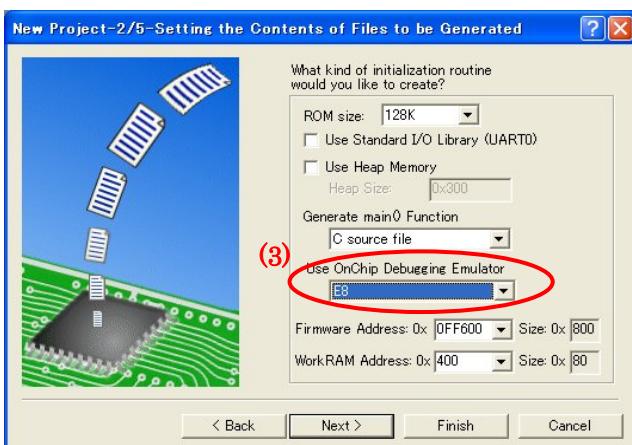

(1) In the New Project Workspace dialog box, select “C source startup Application” in project type.

(2) In the “TargetCPU Toolchain version” page of the wizard dialog box, select “5.42.00” or later in Toolchain version.

(3) In the “Setting the Contents of Files to be Generated” page of the wizard dialog box, select “E8” in Use Onchip Debugging Emulator.

*Note:

The E8a emulator debugger supports the selected MCUs, however, you might not be able to select “E8” in the above list box.

This problem will be solved by the revision of the M16C tool chain in the future.

4.5 Note on using Windows Vista® and Windows® 7

- Low power mode in Windows Vista® and Windows® 7

When Windows Vista® and Windows® 7 goes into sleep mode or suspend mode, a communication error may occur in the USB communication between the host machine and the emulator. Therefore, configure Windows Vista® and Windows® 7 not to enter sleep mode or suspend mode.

- No Help (including the context-sensitive help) may be displayed.

Install the Windows Help file (WinHlp32.exe file) from Microsoft Corporation's Web site.

4.6 Note on I/O Files

- In this product, the following I/O files are not attached.

R8C/32G group R8C/32H group R8C/33G group R8C/33H group R8C/34P group

R8C/34R group and R8C/LAPR group

We will release them after their hardware manual Rev.1.00 has been released.

- The incorrect descriptions in the I/O window might be solved by correcting the I/O files.

- You can make or edit the I/O file with a text editor. For details, please refer to "I/O File Format" in High-performance Embedded Workshop Help.

5 Version Report

This section describes the specification of the changed software.

5.1 R8C E8a Emulator Debugger V.1.05.01

In this version, the following specifications were changed from the previous version R8C E8a Emulator Debugger V.1.05.00.

5.2.2 Problems Fixed

1. The following problems have been fixed:
With debugging systems designed with MCUs of the R8C/M11A or /M12A group (RENESAS TOOL NEWS Document No. 101101/tn3)
2. The following problems have been fixed:
With downloading programs extending over the data flash area and the program ROM or program ROM2 area; or manipulating data on memory in those areas (RENESAS TOOL NEWS Document No. 101201/tn4)

5.2.3 Functional Extensions and Modifications

1. The debuggers can run on Windows ® 7 with your user rights.
2. The following command to set the event break point of the R8C/3x series, the R8C/Mx series, and the R8C/Lx series was added. Please refer to the Help file of the emulator for details.
 - EVENT_SET
 - EVENT_DISPLAY
 - EVENT_BREAK_POINT
 - EVENT_TRACE_POINT

5.3 R8C E8a Emulator Debugger V.1.04.00

In this version, the following specifications were changed from the previous version R8C E8a Emulator Debugger V.1.03.03.

This version supports all of the function extensions and the revisions to the restrictions in the High-performance Embedded Workshop V.4.06.00 and V.4.07.00. For more details, please refer to the RENESAS TOOL NEWS "090701/tn1" issued on July 1st, 2009 and "091001/tn1" issued on October 1st, 2010.

5.3.1 Supported MCUs Increased

5.3.2 Functional Extensions and Modifications

1. Up to now, it was necessary to end the debugger for "Communication timeout error" to occur if there is no response from MCU, and to recover the state. In this version, the state can be recovered without ending the debugger..
2. Trouble shoot collections of E8a emulators can be opened from the following error message display dialog box.
 - "Boot failed"
 - "Communication timeout Error"
 - "ID code error!"
3. In the following MCU of the R8C/3x series, the firmware can be arranged in not only the program flash area but also the data flash area.

5.7.2 Functional Extensions and Modifications

1. The debuggers can run on Windows Vista® with your user rights.
Note, however, the 64-bit Windows Vista has not been supported.
2. The settings selected in creating a new workspace can be applied to the emulator setting dialog box.

5.8 R8C E8a Emulator Debugger V.1.02.00

In this version, the following specifications were changed from the previous version R8C E8a Emulator Debugger V.1.01.00.

This version supports all of the function extensions and the revisions to the restrictions in the High-performance Embedded Workshop V.4.04.00 and V.4.04.01. For more details, please refer to the RENESAS TOOL NEWS “071216/tn5” issued on December 16th, 2007 and “080118/tn1” issued on January 18th, 2008.

5.8.1 Supported MCUs Increased

- R8C/28, /29 group:
R5F21286, R5F21296
- R8C/32A, /33A, /35A group:
R5F21321A, R5F21322A, R5F21324A
R5F21331A, R5F21332A, R5F21334A, R5F21335A, R5F21336A
R5F21354A, R5F21355A, R5F21356A

5.8.2 Problems Fixed

3. The following problems have been fixed:
With debugging target systems designed with MCUs of the R8C/2G or R8C/2H group (RENESAS TOOL NEWS Document No. 080216/tn3)
4. The following problems have been fixed:
With using the IO files for the R8C/2A, /2B, /2C, and /2D groups included in the debuggers for the R8C/Tiny MCU Series (RENESAS TOOL NEWS Document No. 080616/tn8)

5.8.3 Functional Extensions and Modifications

1. Debug functions that R8C/3x have been supported.
2. The automatic sampling period of the watch-points was sped up.
3. MR window has been supported.
4. OS Object window has been supported.

5.9 R8C E8a Emulator Debugger V.1.01.00

In this version, the following specifications were changed from the previous version R8C E8a Emulator Debugger V.1.00.00.

This version supports all of the function extensions and the revisions to the restrictions in the High-performance Embedded Workshop V.4.03.00. For more details, please refer to the RENESAS TOOL NEWS “070701/tn1” issued on July 1st, 2007.

5.9.1 Supported MCUs Increased

- R8C/2E, /2F group:
R5F212E2, R5F212E4
R5F212F2, R5F212F4
- R8C/2G, /2H, /2J group:
R5F212G4, R5F212G5, R5F212G6
R5F212H1, R5F212H2
R5F212J0, R5F212J1
- R8C/2K, /2L group:
R5F212J0, R5F212J1
R5F212L2, R5F212L4

5.9.2 Problems Fixed

1. The following problems have been fixed:
With debugging systems designed with a member of the R8C/22 group of MCUs (RENESAS TOOL NEWS Document No. 071001/tn7)
2. The following problems have been fixed:
 - If you select the Debugging of CPU rewrite mode in the Emulator Setting dialog box that appears when the debugger is invoked, and if you modify values in the data flash area in the Memory or Watch window, the contents of the un-modified data flash area will resume those before CPU reprogramming is performed by the user program.
 - When you load the user program into the target system, no error message may be dispatched even if the user program area overlaps the area occupied by the emulator debugger.
