

Customer Notification

μPD78F0714TM

Motor ASSP

Preliminary Operating Precautions

Target Devices

μPD78F0714 DS1.3

DISCLAIMER

The related documents in this customer notification may include preliminary versions. However, preliminary versions may not have been marked as such.

The information in this customer notification is current as of its date of publication. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data books, etc., for the most up-to-date specifications of NEC PRODUCT(S). Not all PRODUCT(S) and/or types are available in every country. Please check with an NEC sales representative for availability and additional information.

No part of this customer notification may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this customer notification. NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC PRODUCT(S) listed in this customer notification or any other liability arising from the use of such PRODUCT(S).

No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC or others. Descriptions of circuits, software and other related information in this customer notification are provided for illustrative purposes of PRODUCT(S) operation and/or application examples only. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.

While wherever feasible, NEC endeavors to enhance the quality, reliability and safe operation of PRODUCT(S) the customer agree and acknowledge that the possibility of defects and/or erroneous thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects and/or errors in PRODUCT(S) the customer must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.

The customer agrees to indemnify NEC against and hold NEC harmless from any and all consequences of any and all claims, suits, actions or demands asserted against NEC made by a third party for damages caused by one or more of the items listed in the enclosed table of content of this customer notification for PRODUCT(S) supplied after the date of publication.

Applicable Law:

The law of the Federal Republic of Germany applies to all information provided by NEC to the Customer under this Operating Precaution document without the possibility of recourse to the Conflicts Law or the law of 5th July 1989 relating to the UN Convention on Contracts for the International Sale of Goods (the Vienna CISG agreement).

Düsseldorf is the court of jurisdiction for all legal disputes arising directly or indirectly from this information. NEC is also entitled to make a claim against the Customer at his general court of jurisdiction.

If the supplied goods/information are subject to German, European and/or North American export controls, the Customer shall comply with the relevant export control regulations in the event that the goods are exported and/or re-exported. If deliveries are exported without payment of duty at the request of the Customer, the Customer accepts liability for any subsequent customs administration claims with respect to NEC.

Notes: (1) "**NEC**" as used in this statement means NEC Corporation and also includes its direct or indirect owned or controlled subsidiaries.

(2) "**PRODUCT(S)**" means 'NEC semiconductor products' (*NEC semiconductor products* means any semiconductor product developed or manufactured by or for NEC) and/or 'TOOLS' (*TOOLS* means 'hardware and/or software development tools' for NEC semiconductor products' developed, manufactured and supplied by 'NEC' and/or 'hardware and/or software development tools' supplied by NEC but developed and/or manufactured by independent 3rd Party vendors worldwide as their own product or on contract from NEC)

Motor ASSP D78F0714

(A) Table of Operating Precautions

[illegible]

✓ : Not applicable

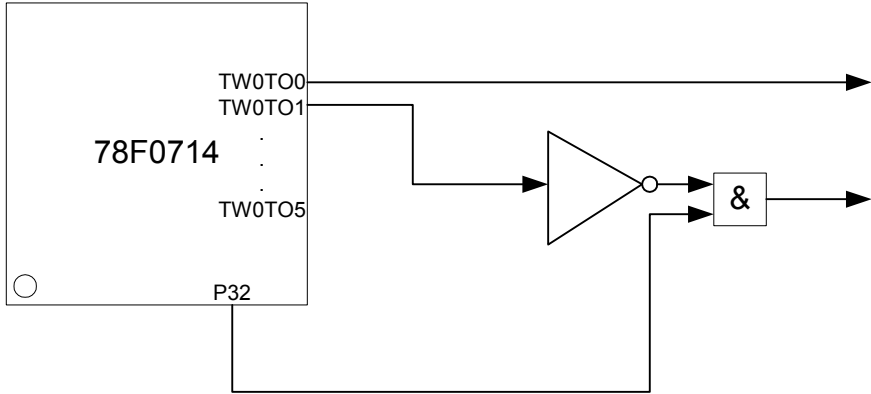

X : Applicable

- : Specification is not supported

: Not tested

Note: The control code is the **fifth character** from the left of the 9 digit serial number (version that have not been upgraded).

(B) Description of Operating Precautions

| | |
|-------|---|
| No. 1 | 10-bit TMW Timer (Technical Limitation) |
| | <p><u>Detail1</u> The Output TW0TO1 of the TMW timer is not inverted to its pair signal TW0TO0. These two outputs are identical and there is no dead time inserted.</p> <p>Workaround:</p> <p>Connect the TW0TO1 output to an external Inverter to get the inverted signal to TW0TO0 and use an AND Gate (Figure 1.0) to insert the dead time between the signals. The dead time definition can be realized either with the compare registers CM4 or CM5 of the TMW timer. The generated interrupt caused by either CM4 or CM5 can be used to toggle the port pin e.g. P32, that is connected to the AND Gate (Figure1.0).</p>  <p>Figure 1.0: Proposed Workaround circuit</p> <p>CAUTION: Please be aware that the above proposed Workaround will maybe not fulfill all application requirements.</p> <p><u>Detail2</u> The software control of the TMW timer output doesn't work while timer is running. The responsible register for this function (SFR: TW0OC) can not be rewritten while timer TMW is running.</p> <p>Workaround:</p> <p>Stop the TMW Timer beforehand and set than the desired output of the TMW Timer to HiZ state. Start the Timer again.</p> <p><u>Detail3</u> The Real Time Output Port RTP1 have to be initialized to get the output signal of the TMW Timer.</p> |

| | |
|-------|--|
| | |
| No. 2 | Real Time Output Port RTP1 (Technical Limitation) |
| | <p><u>Details</u> The actual configuration of the RTP1 port doesn't allow generating the required pattern signals for controlling a BLDC motor.</p> <p>Workaround: The TMW Output software control function of the TMW Timer can be used to generate the required pattern signals for the BLDC control. Please refer to No.1, <u>Detail2</u> of the TMW Timer.</p> |
| No. 3 | Serial Interface CSI10 (Technical Limitation) |
| | <p><u>Details</u> The SCK10 pin can not be used. Therefore the master mode of this serial interface is not given.</p> |
| No. 4 | UART 00 (Technical Limitation) |
| | <p><u>Details</u> Serial Interface UART00 can not be used.</p> |
| No. 5 | Port 1.4 and 1.5 (Technical Limitation) |
| | <p><u>Details</u> Port 14 and 15 can not be used.</p> |
| No. 6 | Input Port 2 (Technical Limitation) |
| | <p><u>Details</u> The entire Port 2 can not be used.</p> |
| No. 7 | 10-bit AD Converter (Technical Limitation) |
| | <p><u>Details</u> The entire 10-bit AD Converter can not be used.</p> |
| No. 8 | 10-bit AD Converter (Technical Limitation) |
| | <p><u>Details</u> The Timer trigger mode can not be used. The compare register CM4 and CM5 of the inverter timer TMW can not be used to generate especially the timer trigger signal for the ADC.</p> <p>Workaround: The CM4 register of the TMW timer can be used to generate the signal for the external trigger of the ADC.</p> |
| No. 9 | External Interrupt INTP1 (Technical Limitation) |
| | <p><u>Details</u> The INTP1 can not be used as an external interrupt source.</p> |
